**Ory′za.** A genus of grasses. **O. sati′va**, rice, fam. *Gramineæ;* a plant, almost aquatic, indigenous in China and growing in the warmer regions of the globe; the grain enclosed in the husk is called by the Malays *paddy, padi*, or *paddie;* when deprived of the husk, *bras;* and when boiled, *nasi.*

**Os** (gen. *ossis*, pl. *ossa*). Bone. **Os** (gen. *oris*, pl. *ora*). Mouth. **O. acetab′uli**, acetabulum. **O. acromia′le**, distinct bone sometimes formed by failure of the acromion process to unite with the rest of the scapula. **O. acro′mii**, acromion. **O. adjuto′rium**, humerus. **O. Æthi′opum**, negro mouth; peculiar appearance of the mouth, dependent on the projection of the canine and incisor teeth. **O. alæfor′me**, sphenoid. **O. al′agas**, coccyx, sacrum. **O. ala′tum**, sphenoid bone. **O. amphid′eon**, os uteri. **O. anon′ymum**, innominatum os. **O. anti′cum**, mouth, especially the portion between the lips and teeth. **O. antiepilep′ticum**, Wormian bone formed in the anterior fontanelle. **O. ap′icis squa′mæ** (occipitalis), triangular Wormian bone formed from the upper angle of the occipital; interparietal bone. **O. arcua′le**, temporal bone. **O. arma′le**, temporal bone. **O. as′ser**, sternum. **O. az′ygos**, sphenoid. **O. ballis′tæ**, astragalus. **O. basila′re**, occipital bone; palate bone; sacrum; sphenoid. **O. baxilla′re**, sphenoid. **O. bicor′ne**, hyoid bone. **O. brachia′le**, humerus. **O. bra′chii**, humerus. **O. breg′matis**, parietal bone. **O. cal′cis**, calcaneum. **O. cana′lis nasolacryma′lis**, os lacrymalis externum. **O. capita′tum**, os magnum. **O. cau′dæ**, occipital bone. **O. centra′le**, centrale. **O. clu′nium**, sacrum. **O. coccy′gis**, coccyx. **O. cogitatio′nis**, parietal bone. **O. colato′rii**, sphenoid bone. **O. colifor′me**, ethmoid bone. **O. convolu′tum supe′rius**, middle turbinated bone. **O. coracoi′deum**, coracoid bone; in man, element forming the coracoid process, distinct until the seventeenth year. **O. cor′dis**, bone found in the fibrocartilaginous tissue at the base of the ventricles of the heart in some animals. **O. corona′le**, frontal bone. **O. cox′æ**, innominate bone. **O. coxen′dicis**, ischium. **O. cribrifor′me**, ethmoid. **O. cribro′sum**, ethmoid. **O. crista′tum**, ethmoid. **O. crotaphit′icum**, temporal bone. **O. cu′bicum**, ethmoid bone. **O. ad cubita′le**, radius. **O. cu′biti infe′rius**, ulna. **O. cuneifor′me**, cuneiform bone of the wrist; sphenoid. **O. cu′neo-compara′tum**, sphenoid. **O. cymbifor′me**, scaphoid bone. **O. discifor′me**, patella. **O. du′rum**, temporal bone. **O. ensifor′me**, sternum. **O. epacta′le pro′prium**, interparietal bone. **O. epitympan′icum**, posterior part of the squamous portion of the temporal bone, assisting in the formation of the mastoid cells; a separate bone in early fetal life. **O. exter′num**, the entrance into the vagina, in contradistinction to the *os internum* or *os uteri.* **O. ex′tra or′dinem car′pi**, os pisiforme. **O. fem′oris**, femur. **O. fibro′sum**, occipital bone. **O. fonticula′re poste′rius** or **quadra′tum**, lambdoid bone. **O. foraminulen′tum**, ethmoid. **O. fron′tis**, frontal bone. **O. ge′næ**, malar bone. **O. gladi′oli**, sternum. **O. grandino′sum**, cuboid. **O. gut′turis**, hyoid bone. **O. hama′tum**, os unciforme. **O. hu′meri**, humerus. **O. hyoi′des**, hyoid bone. **O. hypo′pium**, malar bone. **O. hyseloi′des**, hyoid. **O. il′ei**, ileum. **O. in′cæ**, interparietal bone. **O. incisi′vum**, intermaxillary bone. **O. inconjuga′tum**, sphenoid. **O. in′cudi sim′ilis**, incus. **O. infe′rius ventric′uli**, pylorus. **O. innomina′tum**, hip-bone. **O. interme′dium**, element of primitive carpus and tarsus, lying between the distal extremities of the radius and ulna or tibia and fibula; becomes in carpus semilunar, in tarsus unites with the tibiale to form the astragalus. **O. inter′num**, see *Uterus.* **O. interparieta′le**, interparietal bone. **O. invercun′dum**, frontal bone. **O. is′chii**, ischium. **O. japon′icum**, superior zygomatic. **O. juga′le**, malar bone. **O. jugamen′tum**, malar bone. **O. ju′guli**, clavicle. **O. lacryma′le**, unguis os. **O. l. accesso′rium** or **ante′rius**, independent bone sometimes found at the extremity of the superior maxilla, caused by the persistence of the sutura imperfecta of Weber. **O. l. exter′num**, small bone sometimes found in the lacrymal notch and groove of the superior maxilla in young subjects; later, unites with the superior maxilla or palate bone; also called *o. lacrymale laterale.* **O. l.**

**poste′rius**, separate ossification of the orbital plate of the ethmoid. **O. lamb′dæ**, occipital bone. **O. lambdoi′des**, hyoid bone, occipital bone. **O. lapid′eum**, temporal bone. **O. lapido′sum**, temporal bone. **O. la′tum**, sacrum. **O. l. hu′meri**, scapula. **O. lenticula′re**, os orbiculare, os pisiforme. **O. lepidoi′des**, temporal bone. **O. lin′guæ**, hyoid. **O. lingua′le**, hyoid. **O. lithoi′des**, temporal bone. **O. luna′tum**, semilunar bone. **O. mag′num**, the third bone of the lower row of the carpus. **O. mala′re**, malar bone. **O. maxil′læ**, superior maxilla. **O. m. superio′ris undec′imum**, vomer. **O. maxillotempora′le**, inferior zygomatic. **O. memen′to mo′ri**, temporal bone. **O. memo′riæ**, occipital bone. **O. mendo′sum**, temporal bone. **O. mor′sus Adam′i**, thyroid cartilage. **O. mucrona′tum**, xiphoid cartilage. **O. multan′gulum ma′jus**, trapezium. **O. m. mi′nus**, trapezoid bone. **O. multifor′me**, ethmoid, sphenoid. **O. navicula′re**, scaphoid bone. **O. nerva′le**, temporal bone. **O. nervo′sum**, occipital bone. **O. occip′iti**, occipital bone. **O. odontoi′deum**, odontoid process of the axis, considered as a separate bone. **O. orbicula′re**, os pisiforme; also small spherical bone, separate in fetal life, but united after birth to the long process of the incus. **O. orbita′le**, superior zygomatic. **O. pala′ti**, palate bone. **O. papilla′re**, sesamoid bone sometimes found at the tip of the olecranon. **O. parieta′le infe′rius**, temporal bone. **O. paxilla′re**, sphenoid. **O. pec′tinis**, pubic bone. **O. pec′toris**, sternum. **O. pelvicephal′icum**, occipital bone. **O. pel′vis latera′le**, innominate bone. **O. pero′ne**, fibula. **O. petro′sum**, temporal bone. **O. pisifor′me**, pisiform bone. **O. pla′num**, orbital plate of the ethmoid. **O. polygo′num ma′jus**, trapezium. **O. p. mi′nus**, trapezoid bone. **O. polymor′phon**, sphenoid. **O. pos′terum**, pharynx. **O. premaxilla′re**, intermaxillary bone. **O. prærup′tæ ru′pi assimula′tum**, temporal bone. **O. pri′api**, penis bone. **O. procubita′le**, ulna. **O. pro′ræ**, frontal bone, occipital bone. **O. pterygoi′deum**, sphenoid. **O. pu′bis**, see *Pubis*. **O. puboischiad′icum**, puboischiatic bone. **O. pudi′cum**, malar bone. **O. pup′pis**, frontal bone, occipital bone. **O. pyramida′le car′pi**, trapezoid. **O. pyx′idis**, occipital bone. **O. quadra′tum**, see *Palate bone*. **O. raplogem′mans os′sis petro′si** or **O. Riola′ni**, ossiculum Riolani. **O. ratio′nis**, frontal bone. **O. rhomboi′des**, trapezium. **O. rotun′dum**, pisiform bone. **O. sac′rum**, sacrum. **O. sagitta′le**, interparietal bone. **O. sax′eum**, temporal bone. **O. scutifor′me**, patella. **O. sedenta′rium**, see *Ischiatic*. **O. semiluna′re**, the second bone in the upper row of the carpus. **O. seni′le**, senile mouth; a peculiar appearance of the mouth, resembling that seen in old persons, in which the chin projects very much and the lips are retracted. **O. se′piæ**, cuttle-fish bone. **O. sex′tum cra′nii**, occipital bone. **O. sincip′itis**, frontal bone. **O. Sömmerin′gii**, processus marginalis; malar bone. **O. sphænobasila′re**, occipital bone. **O. sphecoi′deum**, sphenoid. **O. sphenoida′le**, sphenoid. **O. sphenoi′des**, sphenoid. **O. s. ante′rius**, presphenoid. **O. s. poste′rius**, basisphenoid. **O. spongio′sum**, ethmoid. **O. s. infe′rius**, inferior turbinated bone. **O. s. me′dium**, middle turbinated bone. **O. s. supe′rius**, middle turbinated bone; superior turbinated bone. **O. spongoi′des**, ethmoid. **O. squamo′sum**, temporal bone. **O. subocula′re**, malar bone. **O. subrotun′dum**, pisiform. **O. Syl′vii**, os orbiculare. **O. syncip′itis**, frontal bone. **O. ta′li**, calcaneum. **O. tem′poris**, temporal bone. **O. tes′seræ**, astragalus; cuboid. **O. tetrago′num**, parietal bone. **O. thyroi′des**, patella. **O. tib′iæ mi′nus**, fibula. **O. tin′cæ**, os uteri. **O. trape′zium mi′nus**, trapezoid. **O. trapezoi′des**, trapezoid; trapezium. **O. triangula′re**, cuneiform bone of wrist. **O. tribasila′re**, spheno-occipital bone. **O. trique′trum**, o. triangulare. **O. t. squa′mæ (parieta′lis)**, os apicis squamæ. **O. turbina′tum**, middle turbinated bone. **O. t. infe′rius**, inferior turbinated bone. **O. tympan′icum**, tympanic portion of temporal. **O. uncina′tum**, os unciforme. **O. un′guis**, see *Unguis os*. **O. un′guis mi′nus**, external lacrymal. **O. upsiloi′des**, hyoid bone. **O. us′tum**, bone-ash. **O. u′teri**, the mouth of the womb; see *Uterus*. **O. u′teri exter′num**, see *Uterus*. **O. u′teri inter′num**, see *Uterus*. **O. va′rium**, cuboid. **O. ver′ticis**, parietal bone. **O. vespertilio′nis** or **vespifor′me**, sphenoid. **O. vo′meris**, vomer. **O. xiphoi′des**, sternum. **O. ypseloi′des**, hyoid bone. **O. zygomat′icum**, malar bone. **O. z. accesso′rium**, superior zygomatic bone. **O. z. infe′rius** and **supe′rius**, two portions into which the malar bone is sometimes divided by a horizontal suture.

**O′sazone.** Compound resulting from the action of phenylhydrazin and acetic acid on sugar.

**Osbeck′ia octan′dra.** A shrub possessing astringent properties. **O. wrightia′na**, leaves of this shrub are employed in stomatitis and inflammation of the intestines.

**Osce′do** (*os*, mouth, *cieo*, to move). Yawning.

**Oscheal**, os′ke-al. Pertaining to the scrotum.

**Oschei′tis** (*oscheon*, scrotum). Inflammation of the scrotum.

**Oschelephanti′asis.** Elephantiasis of the scrotum.

**Oscheocarcino′ma.** Chimney-sweep's cancer; epithelioma of the scrotum.

**Os′cheocele** (*oscheon*, scrotum, *kele*, tumor). Oscheocele, scrotocele, scrotal hernia; see *Bubonocele*. Dropsy of the scrotum; see *Hydrocele*. **O. aquo′sa**, collection of water in the scrotum; hydroscheocele. **O. cruen′ta**, tumor formed by blood; hæmatocele. **O. flatulen′ta**, emphysematous tumor of the scrotum; physocele. **O. hydatido′sa**, hydatidocele. **O. œdemat′ica**, oscheocele with œdema of the scrotum. **O. sanguin′ea**, hæmatocele. **O. semina′lis**, spermatocele. **O. urina′lis**, urocele. **O. varico′sa**, varicocele.

**Oscheochal′asis** (*oscheon*, scrotum, *chalasis*, relaxation). Tumor resulting from hypertrophy of the areolar tissue of the scrotum and excessive extension of the skin of the part—an affection which has been confounded with sarcocele.

**Oscheohy′drocele.** Hernial hydrocele.

**Os′cheolith.** Calculus of the scrotum.

**Oscheoma**, os-ke-o′mah. Tumor of the scrotum.

**Os′cheon.** Scrotum.

**Oscheon′cus** (*onkos*, swelling). Tumor of the scrotum.

**Oscheophy′ma** (*phyma*, swelling). Tumor of the scrotum.

**Oscheoplas′tic** (*oscheon*, scrotum, *plasso*, to form). An epithet applied to the operation for restoring the scrotum when lost—*oscheoplasty*.

**Oscheopyœde′ma.** Purulent infiltration of the scrotum.

**Os′chion.** Raised margin of the os uteri; excrescence from the os uteri.

**Oschi′tis.** Oscheitis; inflammation of the scrotum.

**Oschocarcino′ma.** Chimney-sweep's cancer.

**Os′chocele.** Oscheocele.

**Oschon′cus.** Preternatural swelling or tumor of the scrotum.

**Oschophy′ma** (*phyma*, swelling). Oschoncus.

**Oschopyœde′ma.** Oscheopyœdema.

**Oschurœde′ma** (*ouron*, urine, *oidema*, œdema). Extravasation of urine into the scrotum.

**Oscilla′ria al′ba** (Vaucher). Beggiatoa alba. **O. arachnoi′dea** (Agardh), Beggiatoa arachnoidea. **O. leptomitifor′mis** (Meneghi), Beggiatoa leptomitiformis. **O. mala′riæ**, see *Plasmodium*. **O. tigri′na**, Beggiatoa tigrina. **O. versat′ilis** (Kützing), Beggiatoa arachnoidea.

**Oscilla′tion** (*oscillo*, to swing). Vibration. Also a partial rotatory movement of the eyeball to and from its anteroposterior axis.

**Oscine′.** Pseudotropine.

**Os′citancy** (*oscito*, to yawn). Tendency to yawn.

**Os′citant fe′ver** (*oscito*, to yawn). A fever in which the patient is continually yawning.

**Oscita′tion.** Yawning.

**Os′culate.** Having little mouths or suckers, as *Tænia osculata*.

**Oscula'tion.** Kissing. Anastomosis of vessels.

**Osculato'rius** (*osculum*, little mouth). Orbicularis oris.

**O'sier.** Salix alba. **Red o.,** Cornus sericea.

**Os'ler's disease'.** Polycythæmia with persistent cyanosis, associated with enlarged spleen and obstinate constipation. **O.'s phenom'enon,** agglutination of blood-disks or platelets in the blood, noticed when it is taken from the vessel.

**Osman'thus fra'grans.** Ord. *Oleaceæ*, native of China and Japan; used by Chinese to flavor tea.

**Os'mate.** Salt of osmic acid.

**Osmat'ic** (*osme*, smell). Possessing the sense of smell; an animal in which the sense of smell is strongly developed (Broca).

**Os'mazome** (*osme*, smell, *zomos*, soup). Extractive matter in muscular flesh and in the blood of animals; has an agreeable smell and taste, and is found in *bouillon* in the proportion of one part to seven of gelatin. Vauquelin discovered it in some fungi. It gives the flavor of meat to soups. It has been prescribed in the dose of ʒss to ʒj (2.0–4.0), in broth or in powder, with aromatics, as a stimulant to the digestive actions and a restorer of appetite in convalescence. An *osmazone chocolate* is used as an analeptic article of diet. It consists of *chocolate*, lb. j, to *osmazome*, ℥j.

**Os'me.** Odor.

**Osme'sis.** Olfaction.

**Os'mic acid.** $OsO_4$. Osmium tetroxide, perosmic or hyperosmic acid; crystalline, volatile substance, subliming at ordinary temperatures, slowly soluble in about 50 parts of water; obtained by heating metallic osmium in a current of oxygen. The vapor is exceedingly pungent and poisonous. Used for hardening tissues for microscopic investigation; has been injected subcutaneously for neuralgia, sciatica, and sarcomatous tumors.

**Osmidro'sis** (*osme*, smell, *hidros*, sweat). Perspiration of an unusual odor.

**Osmitop'sis asteriscoi'des.** A plant of the Cape of Good Hope which, from its smell and taste, seems to contain camphor, hence its antispasmodic virtues. In infusion said to be beneficially employed in cough, hoarseness, and diseases of the chest generally, and to be serviceable in flatulent colic. It has been used externally in paralysis.

**Os'mium.** Rare metal, symbol Os; sp. gr. 21.4, infusible; occurs associated with platinum. **O. tetrox'ide,** osmic acid.

**Osmodyspho'ria** (*osme*, odor, *dysphoreo*, to bear ill). Condition of being intolerant of certain odors.

**Osmol'ogy** (*osme*, odor, *logos*, treatise). Treatise on olfaction and odors.

**Osmom'eter** (*osmos*, impulsion, *metron*, measure). Instrument, consisting of a long glass tube over which a membrane is firmly tied, to measure the extent of osmosis in different fluids. Also apparatus to measure acuteness of sense of smell (*osme*, odor).

**Osmomet'ric sense.** Olfaction; power of appreciating different odors.

**Osmon'osus** (*nosos*, disease). Disease of olfaction.

**Osmorrhi'za longis'tylis.** Sweet Cicely. An indigenous plant, ord. *Umbelliferæ*, which flowers in May and June. An agreeable aromatic, carminative, and expectorant, having much of the flavor of anise.

**Os'mose** or **Osmo'sis** (*osmos*, impulse). Force by which fluids are impelled through moist membranes and other porous septa in endosmotic and exosmotic actions. Passage of crystalloids in solution through organic membranes, whereby they may be separated from colloid bodies.

**Osmot'ic.** Relating or belonging to osmosis, as osmotic force, the force which induces osmosis.

**Os'mozome.** Osmazome.

**Os'mund royal.** Osmunda regalis.

**Osmun'da cinnamo'mea.** Cinnamon fern, an indigenous plant, ord. *Filices;* demulcent, subastringent, and tonic. Boiled in milk, it yields a fine mucilage, which is used in diarrhœa. **O. luna'ria** Ophioglossum lunaria. **O. rega'lis,** flowering fern, osmund royal; once thought to possess astringent and emmenagogue virtues. **O. spectab'ilis,** O. regalis.

**Osphran'tic** (*osphrainomai*, to scent). Olfactory.

**Osphra'sia** (*osphra*, smell). Olfaction.

**Osphresiol'ogy** (*osphresis*, olfaction, *logos*, a discourse). Treatise on olfaction and odors.

**Osphresom'eter** (*osphresis*, olfaction, *metron*, measure). Instrument to determine the acuteness of the sense of smell.

**Osphret'ic.** Olfactory.

**Osphyalge'ma** (*osphys*, hip or loins, *algema*, pain). Coxalgia.

**Osphyal'gia** (*osphys*, loins, *algos*, pain). Coxalgia. Pain in the loins.

**Osphyarthri'tis** (*osphys*, loins). Inflammation of the parts about the hip.

**Osphyi'tis.** Osphyarthritis.

**Osphyomyeli'tis** (*osphys*, loins, *myelos*, marrow). Lumbar myelitis.

**Osphyorrheu'ma** (*osphys*, loins, *rheuma*, rheumatism). Lumbago.

**Osphy'tis.** Osphyitis.

**Os'sa** (pl. of *os*, bone) **anon'yma.** Innominate bones. **O. breg'matis,** parietal bones. **O. carpa'lia,** bones of wrist. **O. convolu'ta,** turbinated bones. **O. costa'lia,** ribs. **O. digito'rum ma'nûs,** phalanges of the fingers. **O. digito'rum pe'dis,** phalanges of the toes. **O. epacta'lia,** Wormian bones. **O. episterna'lia,** suprasternal bones. **O. innomina'ta,** irregular bones forming sides and anterior wall of pelvis. **O. internasa'lia** or **prenasa'lia,** independent bones sometimes found at the anterior superior angle of the perpendicular plate of the ethmoid. **O. la'ta,** broad or flat bones, in distinction from **O. lon'ga,** long bones. **O. nasa'lia,** nasal bones. **O. na'si,** nasal bones. **O. nerva'lia,** parietal bones. **O. pisifor'mia lingua'lia,** see *Hyoid bone*. **O. raphogeminan'tia,** Wormian bones. **O. sesamoide'a,** sesamoid bones. **O. sincip'itis,** parietal bones. **O. sphenoide'a tar'si,** cuneiform bones of tarsus. **O. spongio'sa,** turbinated bones. **O. sutura'rum,** Wormian bones. **O. ter'tia maxil'læ superio'ris,** turbinated bones. **O. tetrago'na,** parietal bones. **O. triangula'ria,** sphenoidal cornua. **O. triangula'ria Bla'sii,** Wormian bones. **O. trique'tra,** Wormian bones. **O. tritic'ea,** see *Hyoid bone*. **O. turbina'ta,** turbinated bones. **O. vertica'lia,** parietal bones. **O. Wormia'na,** Wormian bones.

**Os'sagen.** Salt formed by combination of fatty acids of red bone-marrow with calcium.

**Ossein'** (*os*, bone). Ostein. Albuminoid of bone connective tissue.

**Os'seo-aponeurot'ic.** A combination of bone and aponeurosis.

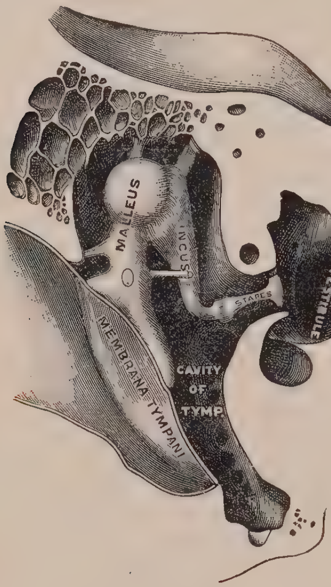
**Osseomu'coid.** Mucoid present in bone tissue; it appears to be identical with the other connective-tissue mucoids.

**Os'seous** (*os*, bone). Bony. Resembling bone. **O. lab'yrinth,** series of cavities within the petrous portion of the temporal bone, containing parts to which the auditory nerve is distributed. It comprises vestibule, semicircular canals, and cochlea. **O. tu'mors,** see *Osteoma*.

**Os'sicles.** Ossicula. See also *Ossiculum*. **An'dernach's o.,** Wormian bones. **Bertin's' o.,** see *Bertin*. **O. of ear,** ossicula auditûs. **Kerk'ring's o.,** see *Kerkring*. **O. of tym'panum,** ossicula auditûs.

**Ossic'ula** (pl. of ossiculum) **audi'tûs.** Small bones or ossicles situated in the cavity of the tympanum, and forming an uninterrupted chain from the membrane of the tympanum to that of the fenestra ovalis; three in number: malleus, incus (os orbiculare), and stapes (see cut on page 806). **O. Berti'ni,** sphenoidal cornua. **O. epacta'lia,** Wormian bones. **O. episterna'lia,** episternal bones. **O. innomina'ta,** innominata minora ossa. **O. intercala'ria,** or **raphogeminan'tia,** or **sutura'rum,** or **trique'tra,** or **Wormia'na,** Wormian bones. **O. n'asi,** nasal bones. **O.**

**sesamoide′a,** sesamoid bones. **O. tritic′ea,** see *Hyoid bone.*



Chain of ossicles and their ligaments, seen from the front in a vertical, transverse section of the tympanum. (Testut.)

**Ossiculec′tomy** (*ektome,* excision). Excision of the ossicles of the ear.

**Ossiculot′omy** (*tome,* cut). Division of one or more of the ossicles of the ear.

**Ossic′ulum.** A small bone. **O. cochlea′re,** orbicular bone. **O. foram′inis lac′eri posterio′ris,** o. jugulare. **O. in′cudi compara′tum,** incus. **O. jugula′re,** small bone, rarely found in the jugular foramen; probably a result of the separate ossification of the intrajugular process. **O. lenticula′re,** os orbiculare. **O. malle′olo-assimila′tum,** malleus. **O. mola′ri den′ti compara′tum,** incus. **O. orbicula′re,** orbicular bone. **O. quar′tum,** orbicular bone. **O. Riola′ni,** small bone occasionally found lying free in the Glaserian fissure; also called *o. sesamoideum Cortesii.* **O. squamo′sum,** orbicular bone. **O. subrotun′dum,** orbicular bone. **O. Syl′vii,** orbicular bone. **O. tegmen′ti tym′pani cuneifor′me,** small bone occasionally found on the anterior surface of the petrous portion of the temporal bone, being a separate ossification of the cuneiform portion of the tegmen tympani. **O. termina′le,** separate ossification of the tip of the odontoid process of the axis, considered as an epiphysis of the body of the first cervical vertebra.

**Ossif′erous** (*os,* bone, *phero,* to bear). Bearing or producing bone-tissue.

**Ossif′ic.** Bone-forming.

**Ossifica′tion** (*os,* bone, *facio,* to make). Formation of bone; development or increase of the osseous system. Ossification takes place in the same manner as the nutrition of other parts. Bones are at first mucous, and afterward cartilaginous; the cartilage at length receives the phosphate of lime, and is at the same time replaced by a gelatinous parenchyma, when the bone has acquired the whole of its development. **Points of o.,** points where the ossification of a bone commences, whence it extends to other parts. Almost all the bones present a greater or less number of points of ossification. Besides the natural ossification which we observe in the fœtus and in the first periods of life, there are also *accidental ossifications,* such as those frequently remarked after the inflammation of serous membranes in the parietes of the arteries, and to which the terms osthexia, incrustation, and petrifaction have sometimes been applied.

**Os′sified** (*os,* bone, *facio,* to make). Changed into bone.

**Ossif′luent** (*os,* bone, *fluo,* to flow). Softening and disintegration of bone.

**Os′siform.** Having the shape or appearance of bone.

**Ossif′raga** (*os,* bone, *frango,* to break). Osteocolla.

**Os′sifying.** Ossific.

**Os′sis sa′cri acu′men** (point of the sacrum). Coccyx.

**Ossiv′orous** (*os,* bone, *voro,* to devour). Species of tumor destructive of bone.

**Ostæ′mia** (*osteon,* bone, *haima,* blood). Morbid hyperæmia of bone.

**Ostag′ra** (*osteon,* bone, *agra,* seizure). Gouty pain in a bone. Also bone forceps.

**Ostal′gia** (*osteon,* bone, *algos,* pain). Pain in a bone.

**Ostalgi′tis** (*osteon,* bone, *algos,* pain). Painful inflammation of a bone.

**Osta′rium** (*ostarion,* bone). Ossiculum.

**Ostarthri′tis.** Arthrophlogosis.

**Osteæ′mia.** Ostæmia.

**Osteag′ra.** Ostagra.

**Os′teal.** Relating to bone. **O. cells,** osteoblasts.

**Osteal′gia.** Pain in the bones. See *Osteocopus.*

**Osteanaphy′sis** (*osteon,* bone, *physis,* growth). Growth or regeneration of osseous tissue.

**Ostearthri′tis.** Chronic rheumatoid arthritis.

**Ostearthrot′omy.** Excision of the articular extremity of a bone.

**Osteaux′e** (*osteon,* bone, *auxe,* growth). Pathological enlargement of a bone.

**Ostec′tomy** or **Osteëc′tomy** (*osteon,* bone, *ektome,* excision). Excision of bone tissue.

**Ostec′topy.** Bony displacement.

**Ostein′.** Ossein. Animal matter of bone.

**Osteï′tis.** Ostitis. Inflammation of bone, characterized by violent shooting and lancinating pains in the bone. *Osteitis interna* or caries centralis is a form of the disease occurring deep in the bone. When accompanied with a deposit of bony matter in the medullary cavity it is generally described as *condensing* or *ossifying osteitis,* sclerosis ossium or diffuse hypertrophy of bone. In *osteitis fungosa* interstitial granulations cause the bone to be entirely absorbed. Those forms of osteitis which are attended with softening of the bone substance have been called *rarefying osteitis.* **Acute′ o.,** osteomyelitis. **Albu′minous o.,** o. characterized by the presence of a considerable amount of albuminous liquid. **Artic′ular o.,** see *Rheumatism.* **Cen′tral o.,** o. about the medullary cavity, constituting endosteitis. **Chron′ic o.,** see *Caries.* **Conden′sing o.,** o. in which the earthy salts are deposited in excess, rendering the bone hard like ivory, the process being generally called *eburnation;* see also the prime. **Cor′tical o.,** periostitis. **O. defor′mans,** o. in which the bones become twisted and deformed. **Form′ative o.,** eburnation. **O. fungo′sa,** see *Osteitis.* **Gum′matous o.,** chronic osteitis caused by syphilis, and characterized by gummata. **O. inter′na,** see *Osteitis.* **O. i. osteoplas′tica,** see *Osteitis.* **O. os′sificans,** see *Osteitis.* **Rar′efying o.,** see *Osteitis.* **Sclero′sing o.,** condensing osteitis. **Sec′ondary hyperplas′tic o.,** hypertrophic pulmonary osteoarthropathy.

**Ostem′bryon** (*embryon,* embryo). Lithopædion.

**Ostempye′sis** or **Ostempyo′sis** (*empyesis,* effusion of pus). Abscess in the interior of a bone.

**Osteoanabro′sis.** See *Osteonabrosis.*

**Osteoan′eurysm.** Expansion of a bone from aneurysmal dilatation of its vessels; may be sarcomatous or erectile.

**Osteoarthri′tis.** Joint inflammation involving also the contiguous portions of bone. **Chron′ic o.,** affection of joints resulting in the destruction of the cartilage, roughening of the articulating surfaces, thickening of the ligaments, and deformity.

**Osteoarthrop'athy** (*osteon*, bone, *arthron*, joint, *pathos*, disease). Disease involving the bones and joints. **Hypertroph'ic pneu'mic** or **pul'monary o.**, disease intercurrent with some constitutional pulmonary affections, characterized by enlargement and deformity of various bones and joints, curvature of the spine, and tumefaction of the knee-joint; it resembles acromegaly, but differs from it in the fact that the changes which take place in the extremities are secondary to pulmonary or bronchial disease.

**Osteoarthrot'omy** (*osteon*, bone, *arthron*, joint, *tome*, incision). Osteotomy in which the section of bone is performed entirely or partially inside a joint; excision of the articular end of a bone.

**Os'teoblast** (*osteon*, bone, *blastos*, bud). One of the young cells, osteal cells, which aid in the formation of the osseous tissue, whether in cartilage, membrane, or periosteum.

**Osteoblas'tic.** Relating to osteoblasts.

**Osteocachex'ia.** Cachexia induced by bone suppuration.

**Osteocamp'sia** (*osteon*, bone, *kampto*, to bend). Curvature of bones.

**Osteocan'cer** or **Osteocarcino'ma.** Carcinoma which has undergone ossification; carcinoma of bone.

**Osteocartilag'inous tu'mor.** Osteochondroma.

**Os'teocele** (*osteon*, bone, *kele*, rupture). Hernia in which the sac is cartilaginous and bony—a rare case. Also osseous induration of one or both testicles.

**Osteocephalo'ma** (*osteon*, bone, *kephaloma*, encephaloid). Osteocancer, malignant osteoid. Malignant disease of bone, arising from the medullary canal or affecting the compact substance; chiefly encephaloid; usually attacks the head of the tibia and the lower extremity of the thigh-bone.

**Osteochondri'tis** (*osteon*, bone, *chondros*, cartilage). Chondritis involving adjacent bone.

**Osteochondro'ma** (*osteon*, bone, *chondros*, cartilage). Osteocartilaginous tumor. A variety of enchondroma resembling bone rather than cartilage, being made up of an osteoid tissue, composed of trabeculæ and medullary spaces, with a small proportion of cartilage; commonly attacks the ends of the long bones.

**Osteochon'drophyte** (*osteon*, bone, *chondros*, cartilage, *phyo*, to grow). Chondroma.

**Osteocla'sia** or **Osteocla'sis** (*osteon*, bone, *klasis*, a fracture). Fracture of a bone for the purpose of correcting deformity.

**Os'teoclast.** Robin's myeloplax; giant cell of bone-marrow; large multinuclear, granular body, supposed to effect resorption of growing bone. Also apparatus for the performance of osteoclasis.

**Osteoclas'tic.** Relating to osteoclasis or osteoclasts.

**Osteoclas'ty.** Osteoclasis.

**Osteocol'la** (*osteon*, bone, *kolla*, glue). Glue-bone, stone or bone binder. Name given to carbonate of calcium, found in some parts of Germany and other portions of the globe; so called because it has been supposed to possess the power of favoring the formation of callus in fractures. Also glue made from bones.

**Os'teocope.** Osteocopus.

**Osteocop'ic.** Pertaining to osteocopus.

**Osteoc'opus** (*osteon*, bone, *kopos*, fatigue). Osteocope, bone-ache, bone-ague. Pain in the bones, as in syphilis. Such pains are said to be *osteocopic* (bone-tiring).

**Osteocra'nium.** The fully ossified cranium.

**Osteocys'tis.** Osteocystoid.

**Osteocys'toid** (*osteon*, bone, *kystis*, cyst, *eidos*, appearance). Morbid growth in bone, characterized by the formation of cysts filled with puriform or other fluid.

**Osteocysto'ma.** Osteocystoid.

**Osteocystosarco'ma.** Cystosarcoma commencing in a bone.

**Osteoden'tinal.** Relating to osteodentine.

**Osteoden'tine.** Hard substance sometimes found in the pulp-cavity of a tooth, resembling bone in structure, but having branched tubules like dentine. See *Tooth*.

**Osteodermatoplas'tic** (*osteon*, bone, *derma*, skin, *plasso*, to form). Term applied to partial amputation of the foot in which bone and skin are utilized to form a useful stump.

**Osteoder'mia** (*osteon*, bone, *derma*, skin). Osseous formation in the outer integument, normal in some animals.

**Osteodias'tasis** (*osteon*, bone, *diastasis*, standing apart). Separation of bones, as of the epiphyses of the long bones.

**Osteod'iclis.** Ossification occurring in the valves of the veins.

**Osteodyn'ia.** Pain in the bones.

**Osteoepiph'ysis.** Bony epiphysis. **Ante'rior o.**, epiphysis which forms the point of the acromion. **Me'dian o.**, epiphysis supporting the acromial surface, which connects with the clavicle by an articulation, and later forms a union with the scapula. **Poste'rior o.**, epiphysis situated between the spine of the scapula and the acromion, which subsequently forms a union with the spine.

**Osteofibrolipo'ma** (*lipos*, fat). Tumor consisting of bony, fibrous, and fatty elements.

**Osteofibro'ma.** Tumor made up of osseous and fibrous structures. A combination of osteoma and fibroma.

**Osteogangræ'na.** Necrosis of bone.

**Os'teogen** (*osteon*, bone, *gennao*, to beget). Soft, transparent substance, noted in the formation of bone, which afterward becomes ossified; osteogenic substance or tissue; see *Ossification*.

**Osteogen'esis** (*osteon*, bone, *genesis*, formation). Formation of bone.

**Osteogenet'ic** or **Osteogen'ic.** Pertaining to osteogenesis; producing bone.

**Osteogen'ic sub'stance** or **tis'sue.** Osteogen.

**Osteogeny**, os-te-oj'en-e. Osteogenesis.

**Osteog'raphy** (*osteon*, bone, *grapho*, to describe). Description of the bones.

**Osteohalistere'sis** (*osteon*, bone, *hals*, salt, *stereo*, to deprive). Deprivation of mineral constituents of osseous tissue, with consequent curvature.

**Osteohelco'sis** (*osteon*, bone, *helcos*, ulcer). Caries.

**Os'teoid** (*osteon*, bone, *eidos*, appearance). Resembling bone. **O. can'cer**, ossified fibrous or medullary cancer, most frequent about the femur. **O. tu'mor**, an accidental bony production, or more frequently a calcareous incrustation of the normal tissue or of a fibrous tumor. A tumor composed of the cement of a tooth.

**Osteol'ogy** (*osteon*, bone, *logos*, discourse). Part of anatomy treating of bones.

**Osteol'ysis** (*osteon*, bone, *lyo*, to dissolve). Necrosis or death of bone, as in hospital gangrene, in which the dead parts are of soft consistence. Dissolution and absorption of bone.

**Osteo'ma** (*osteon*, bone). Tumor consisting of osseous tissue, osseous tumor. It is formed of newly developed connective tissue. Several forms are described, the *eburnated*, *compact*, and *cancellous*, according to the nature of the structure composing them. Osteomata include *exostoses* and *osteophytes*, the former being outgrowths from pre-existing bone, the latter growing from cartilage or connective tissue. **O. cu'tis**, osseous tumor of the skin. **Den'tate o.**, inordinate development of tooth-cement. **O. du'rum**, tumor of hard, bony tissue or of tissue resembling bone. **O. ebur'neum**, o. durum. **O. medullo'sum**, tumor composed of medullary or cancellous tissue. **O. spongio'sum**, o. medullosum.

**Osteomala'cia** (*osteon*, bone, *malakia*, softness). Mollities ossium; the softening being dependent on loss of earthy matter. **O. apsath'yros**, osteomalacia characterized by an exceedingly flexible condition of the bones, resembling wax. **O. carcinomato'sa**, in this form of osteomalacia the osseous marrow is infiltrated with cancer, and softening takes place. **O. infan'tum**, rachitis.

**Osteomala′cic.** Relating to osteomalacia. **O. pel′vis,** distortion causing lessening of the transverse and oblique diameters, with great increase of the anteroposterior diameter. See *Pelvis.*

**Osteomalaco′sis.** Mollities ossium.

**Osteomyeli′tis** (*osteomyelon,* bone-marrow). Medullitis or inflammation of the marrow of bone, usually traumatic. **O. gummo′sa,** syphilitic o. with formation of gummata. **O. infectio′sa,** suppurative infectious o. **O. malleo′sa,** o. due to presence of Bacillus malleus.

**Osteomy′elon** or **Ostomy′elum** (*osteon,* bone, *myelos,* marrow). Marrow.

**Os′teon.** Bone. **O. hi′eron,** sacrum.

**Osteonabro′sis** or **Osteoanabro′sis** (*osteon,* bone, *a,* priv., *brosis,* nutriment). Atrophy of the osseous texture marked by diminution of volume.

**Osteon′cus** (*onkos,* tumor). Bony tumor. Exostosis.

**Osteonecro′sis.** Necrosis of bone.

**Osteoneural′gia.** Severe pain in the bones.

**Osteon′osus** (*nosos,* disease). Disease of bones.

**Osteopæ′dion** (*paidion,* small child). Lithopædion.

**Osteopalincla′sis** (*osteon,* bone, *palin,* again, *klasis,* fracture). Refracture of a badly united bone.

**Osteoparec′tasis** (*parektasis,* lengthening). Abnormal lengthening of bone.

**Osteop′athist.** One who believes in or practises osteopathy.

**Osteop′athy** (*osteon,* bone, *pathos,* disease). Disease of bony structures. A system of medical practice founded on the assumption that many diseases are the result of morbid conditions of the bones and joints, and that treatment should be based on this view of their pathology.

**Osteoperios′teal.** Relating to bone and periosteum.

**Osteoperiosti′tis.** Periostitis involving bone.

**Osteopha′ges** (*osteon,* bone, *phago,* to eat). Myeloplaxes.

**Osteophlebi′tis** (*osteon,* bone, *phleps,* vein). Inflammation of the veins in bone.

**Os′teophone** (*osteon,* bone, *phone,* voice). Audiphone.

**Osteoph′ony** (*osteon,* bone, *phone,* voice). Bone conduction of sounds.

**Os′teophor.** Forceps used to crush and separate bone.

**Osteophtho′ria** (*phthora,* corruption). Bone caries.

**Osteophy′ma** (*phyma,* swelling). Bony tumor or swelling; sometimes used in the sense of exostosis. Also a bony production originating in the deep-seated layers of the periosteum in the vicinity of carious bone, and which seems to be intended to obviate the weakness resulting from the destruction of the bone.

**Os′teophyte** (*osteon,* bone, *phyton,* growth). Exostosis; circumscribed hyperostosis. Tumor of bone.

**Os′teoplaque.** Bony plate formed in muscle or other abnormal situation; flat osteoma.

**Osteoplas′tic.** See *Osteoplasty.*

**Os′teoplasts** (*osteon,* bone, *plasso,* to form). Cells concerned in the formation and growth of bone. Those which form cartilaginous structures are called *chondroplasts.*

**Os′teoplasty** (*plasso,* to form). An operation by which the total or partial loss of bone is remedied by transplantation of bone covered with periosteum. Also restoration to original site of bone temporarily removed, with or without complete severance of periosteum. The filling of a cavity of a tooth with some appropriate substance; hence termed osteoplastic filling.

**Osteopleu′ra** (*pleuron,* rib). Ossification of the cartilages of the ribs.

**Osteoporo′ma.** Condition due to osteoporosis.

**Osteoporo′sis** (*poros,* a passage). Interstitial absorption, producing spongy condition or rarefaction in bones. **Fat′ty o.,** o in which there is an abundance of adipose cells in the medullary spaces and Haversian canals.

**Osteopsathyro′sis** (*psathyros,* friable). Fragilitas ossium. **Arthrit′ic o.,** chronic rheumatic arthritis.

**Os′teopyr** (*osteon,* bone, *pyr,* fever). Gangrene of bone.

**Osteorrha′gia.** Hemorrhage from bones.

**Osteor′rhaphy** (*osteon,* bone, *rhaphe,* suture). Operation of suturing bone, as for fractured patella.

**Osteosarco′ma.** Disease of the bony tissue, consisting in softening of its laminæ and their transformation into a fleshy substance, accompanied with general symptoms of cancerous affection. A sarcoma containing bony elements. Often also used synonymously with spina ventosa. **Benign′ o.,** chondroma.

**Osteosarco′sis.** Osteosarcoma. Ossification of a sarcoma.

**Osteoscirrhus,** os-te-o-skir′rus (*osteon,* bone, *scirrhus,* hard tumor). Loosely applied to cancer of bone.

**Osteosclero′sis** (*skleros,* hard). Induration of bone.

**Osteosec′tion.** The correction of the deformity, in a case of badly united fracture, while the callus is still soft and before ossification is complete.

**Osteo′sis** (*osteon,* bone). Ossification.

**Osteospongio′ma** or **Osteospongio′sis** (*spongus,* sponge). Fungous condition of bone. See *Spina ventosa.*

**Osteosteato′ma** (*stear,* suet or fat). A hard, fatty tumor with osseous elements.

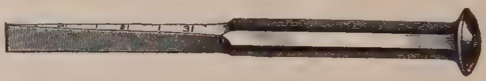
**Osteostix′is** (*stixis,* puncture). Boring into bone.

**Osteosu′ture.** Osteorrhaphy.

**Osteoteleangiec′tasis** (*osteon,* bone, *telos,* end, *angeion,* vessel, *ektasis,* stretching). Teleangiectasis of osseous capillaries. Also an osteosarcoma in which numerous blood-vessels of large size are present.

**Osteotenor′rhaphy** (*osteon,* bone, *tenon,* tendon, *rhaphe,* suture). Operation for attaching a ruptured tendon to a bone.

**Os′teotome.** Instrument, shaped like a chisel, for cutting bone.



Osteotome.

**Osteot′omy** (*osteon,* bone, *tome,* incision). Cutting of bone. **Cu′neiform o.,** the cutting out of a wedge-shaped piece of bone. **Lin′ear o.,** the division of bone lengthwise. **Macew′en's o.,** see *Macewen.*

**Osteot′ophus.** Tophus.

**Os′teotribe** or **Os′teotrite** (*osteon,* bone, *tribo,* to rub). An instrument for removing carious bone, consisting of a shank having a conical head with spiral cutting edges.

**Osteot′ylus** (*osteon,* bone, *tylos,* callus). Callus.

**Osteotympan′ic.** Relating to the bony cranium and the tympanum. Craniotympanic.

**Os′teum.** Bone.

**Osthel′cus** (*osteon,* bone, *helkos,* ulcer). Caries.

**Osthex′ia** (*osteon,* bone, *hexis,* habit). Ossification.

**Osthis′tos** (*osteon,* bone, *histos,* tissue). Bony tissue.

**Os′tial** (*ostium,* door). Relating to an orifice.

**Ostia′rius** (Lat., doorkeeper). Pylorus.

**Os′tiary.** Ostial.

**Osti′ola** (pl. of ostiolum) **cor′dis.** Valves of the heart.

**Osti′olum** (dim. of ostium). A term applied to any anatomical structure resembling a small door or gate. See *Ostiola.*

**Osti′tis.** Osteitis.

**Os′tium** (*os,* mouth). Orifice; a door or gate—of the heart, for example; the opening—*ostium atrioventriculare* or *ventriculi venosum*—between the auricle and ventricle of each side. *Ostium ventriculi arteriosum* is the opening at the origin of the pulmonary artery and aorta. **O. abdomina′le,** the ovarian extremity of the oviduct. **O. arterio′sum,** see *Ostium.* **O. a. aort′icum,** aortic opening of the heart. **O. a. pulmona′le,** opening into the pulmonary artery from the right ventricle. **O. atrioventricula′re,** see *Ostium.* **O. cuta′neum,** see *Urethra.* **O. duodena′le ventric′uli,** pylorus. **O. fronta′le,** opening from the middle meatus of the nose into the infundibulum. **O. inter′num,** minute orifice at the beginning of the oviduct; see *O. uteri.* **O. maxilla′re,** opening from the middle meatus of the nose into the antrum of Highmore. **O. m. accesso′rium,** second opening into the antrum found in about 10 per cent. of subjects. **O. oa′ricum,** o. abdominale. **O. œsophage′um,** cardia. **O. pharynge′um,** pharyngeal orifice of the Eustachian tube. **O. p. laryn′gis,** see *Larynx.* **O. p. tu′bæ,** the pharyngeal extremity of the Eustachian tube. **O. si′nûs,** ampullæ of the inner ear, opening toward the utricle. **O. tu′bæ abdomina′le,** abdominal orifice of the Fallopian tube. **O. t. Eusta′chii pharynge′um,** pharyngeal orifice of the Eustachian tube. **O. t. uteri′num,** uterine orifice of the Fallopian tube. **O. tu′buli,** ampullæ of the inner ear, opening toward the semicircular canals. **O. tympan′icum,** tympanic orifice of the Eustachian tube. **O. u′rachi,** small opening often found at the vertex of the bladder leading into the urachus. **O. ureter′icum,** opening of the ureter into the bladder. **O. urethra′le,** opening of the urethra into the bladder. **O. u′teri,** vulva; vagina. The term *ostium internum* has been applied to the inferior opening of the uterus, which establishes a free communication between the cavities of the body and neck, and which is often obliterated in old women. Neck of the uterus; mouth of the uterus; see *Uterus.* **O. uteri′num,** uterine extremity of the oviduct. **O. vagi′næ,** external opening of the vagina. **O. vagina′le ure′thræ,** see *Urethra.* **O. veno′sum,** see *Ostium.* **O. v. cor′dis,** left auriculoventricular opening. **O. ventric′uli arterio′sum,** the opening from the ventricle of the heart into the aorta or the pulmonary artery. **O. v. dex′trum** or **duodena′le** or **infe′rius** or **pylor′icum,** pylorus. **O. vesica′le,** see *Urethra.*

**Os′toid.** Osseous; osteoid.

**Osto′ma** (*osteon,* bone). Exostosis, osteoma.

**Osto′sis** (*osteon,* bone). Ossification.

**Ostraco′sis** (*ostrakon,* shell). Desiccation and conversion of parts of bone, especially of the cranium, into a substance like oyster-shell.

**Os′trea.** Oyster. **O. edu′lis,** edible oyster of Europe. **O. virginia′na,** common oyster of the Atlantic coast of U. S. Oyster-shells, *testæ ostreæ,* have been used medicinally. Their virtues are similar to those of carbonate of calcium. See *Creta.*

**Ostrein′** (*ostrea*). Substance containing nitrogen derived from the fleshy part of oysters.

**Ostrei′os** (*ostrea,* oyster, *ios,* poison). Poisonous substance existing in certain oysters and mussels.

**Ostreotox′icum.** Ostreios.

**Ostreotoxis′mus.** Oyster poisoning.

**Ostruthin′.** Substance derived from the root of Imperatoria ostruthium.

**Ostru′thium.** Imperatoria.

**Oswe′go tea.** Monarda coccinea.

**Osy′ris.** Antirhinum linaria.

**Otacous′tian** or **Otacous′tic** (*akouo,* to listen). Improving the sense of hearing, such as the different species of ear-trumpets.

**Otag′ra** (*ous,* ear, *agra,* seizure). Otalgia.

**Otal′gia** (*ous,* ear, *algos,* pain). Otalgy; earache.

**Otal′gic.** Relating to earache, as a remedy therefor.

**Otanthe′ra molucca′na.** Shrub growing in the Moluccas. Root is antiabortifacient, and berries are used in nocturnal enuresis.

**O′taphone** (*ous,* ear, *phone,* voice). Small clamp fastened behind the auricle, causing it to project from the head, thus increasing its power of collecting sound-waves. Ear-trumpet.

**Ote′chus** (*echos,* sound). Tinnitus aurium.

**Othæmato′ma** (*ous,* ear, *hæmatoma,* blood tumor). Hæmatoma oris. Effusion of blood or sanguineous fluid under the perichondrium of the auricle; it may result from perichondritis. Occurring in the insane it indicates disease at the base of the brain, hence has been called the *insane ear.*

**Othæmorrhœ′a.** Discharge of blood from the ear.

**Othelco′sis** (*ous,* ear, *helkosis,* ulceration). Ulceration or suppuration of the ear.

**O′thydrops** (*hydrops,* dropsy). Dropsical condition of middle ear.

**Otiat′ric.** Relating to otiatrics.

**Otiat′rics** (*ous,* ear, *iatrikos,* medical). The specialty which has to do with ear diseases.

**Otiat′ry.** Otiatrics.

**O′tic** (*ous, otos,* ear). Relating to the ear. **O. gan′glion,** auricular ganglion, ganglion of Arnold; a small oval body, more than double the size of the ophthalmic ganglion, containing multipolar ganglion cells, ash-colored and pulpy like the ganglions of the sympathetic; situated in advance of the ganglion of Gasser, on the lower surface of the inferior maxillary nerve, at the inner margin of the foramen ovale of the sphenoid bone. **O. ves′icles,** auditory vesicles.

**Oticodin′ia** (*dine,* vertigo). Vertigo consequent upon disease of the ear.

**O′tion** (dim. of *ous,* ear). External ear.

**Otirrhœ′a.** Otorrhœa.

**Oti′tes.** The little finger.

**Otit′ic.** Relating to otitis.

**Oti′tis** (*ous,* ear). Inflammation of the ear. Inflammation of the mucous membrane of the ear, characterized by excruciating pain, intolerable humming in the ear, with a discharge of mucus generally from the meatus externus or from the Eustachian tube. Otitis is divided into *external, middle,* and *internal,* according as it effects the meatus auditorius, etc., the cavity of the tympanum, including the mastoid cells, or the internal ear or labyrinth. It may be acute or chronic. *Acute otitis* commonly terminates in a few days in a favorable manner by the aid of antiphlogistics. *Chronic otitis* is almost always accompanied by a purulent discharge from the meatus auditorius; it is often incurable, and may ultimately give occasion to disease of the internal ear and even of the brain. **Catar′rhal o.,** o. with simple mucous discharge, or no discharge, not advancing to suppuration. **O. croupo′sa,** inflammation of the ear, with formation of a false or fibrinous membrane. **Desquam′ative o.,** a form of external or middle otitis in which there is a considerable amount of desquamation of epithelium. **Diphther′ic** or **diphtherit′ic o.,** o. resulting from diphtheria. **O. exter′na,** inflammation of the external ear. Several forms are recognized, as *o. e. circumscripta,* circumscribed or limited in extent; *o. e. diffusa,* involving the greater part of the external auditory meatus; *o. e. furunculosa,* furuncular form of inflammation. **Fun′gous o.,** o. mycotica; o. due to fungi otomycosis. **O. hæmorrhag′ica,** o. accompanied or produced by hemorrhage. **O. inter′na,** inflammation of the internal ear, either by extension of the disease from the middle ear, or by syphilitic or other infectious disease. **O. labyrin′thica,** inflammation of labyrinth of ear. **O. mastoide′a,** mastoid disease; may occur from involvement of the mastoid cells by extension of different forms of otitis from other parts of the ear; and abscesses, thrombosis, and other morbid conditions may follow. **O. me′dia,** inflammation of the middle ear; several varieties of this are recognized, as *o. m. catarrhalis acuta,* acute catarrhal inflammation of the middle ear; *o. m. c. chronica,* chronic catarrhal inflammation; *o. m. c. serosa,* in which there is serous exudation; *o. m. c. sicca,* in which there is structural change without exudation; *o. m. purulenta acuta,* in which there is acute suppurative inflammation; *o. m. p. chronica,* o. with chronic suppurative inflammation, or otorrhœa. **O. mycot′ica,** o. due to a fungus. **O. parasit′ica,** o. due to a parasitic fungus; myringomycosis. **O. scarlatino′sa,** o. resulting from scarlatina. **O. sclerot′ica,** inflammation of the inner ear with hardening. **O. syphilit′ica,** o. resulting from syphilitic infection.

**O′tium** (*otion*, little ear). A small ear. Auricle or pavilion of the ear.

**Otiyndim′ba.** Painful pustular skin disease, endemic in Damaraland, Africa, during hot weather.

**Oto-** (*ous*, ear). In composition, ear.

**Oto′ba but′ter.** Concrete oil expressed from seeds of Myristica otoba.

**Otoblennorrhœ′a** (*ous*, ear, *blenna*, mucus, *rheo*, to flow). Abnormal flow of mucus from the ear.

**Otoceph′alus** (*ous*, ear, *kephale*, head). Monster whose ears are in contact or united into one beneath the chin, with very rudimentary condition or absence of the lower jaw—synotus.

**Otoclei′sis** (*kleio*, to close). Closure of the auditory meatus or Eustachian tube, one or both.

**Otoco′nia** (*konia*, dust). Small collections of carbonate and phosphate of lime, finer than otoliths, and amorphous, found in the membranous labyrinth of the inner ear.

**Otoc′onite.** Otoconia; otolith.

**O′tocrane** or **Otocra′nium** (*kranion*, skull). Cavity in petrosal bone for reception of osteocartilaginous capsule of aural labyrinth.

**O′tocyst.** Embryonic epithelial sac which develops into the membranous labyrinth of the adult.

**Otodyn′ia** (*odyne*, pain). Otalgia.

**Otogan′glium.** Otic ganglion.

**Otogenous,** o-toj′e-nus. Of aural origin.

**Otog′lyphis** or **Otog′lyphum** (*otoglyphon*). Ear-pick.

**Otog′raphy.** Description of the ear.

**O′toliths** (*lithos*, stone). Otolites, ear-stones. White, crystalline particles of calcium carbonate and phosphate found in the membranous vestibule, and seeming to be suspended in the fluid of the vestibule by means of a number of nervous filaments proceeding from the auditory nerve. Their universal presence in the ear of the mammalia would seem to show that they are inservient to audition. When the substance is of a looser consistence it is called otoconia, otoconite, ear-powder, ear-sand.

**Otological,** o-to-loj′i-cal. Relating to otology.

**Otol′ogist.** One skilled in otology.

**Otol′ogy** (*logos*, discourse). The specialty dealing with diseases of the ear.

**Otomassage′.** Massage of the ear.

**Otomyasthe′nia.** A paretic state of the intrinsic muscles of the ear causing a loss of auditory acumen.

**Otomy′ces** (*ous*, ear, *mykes*, fungus). Fungus growing in the ear. **O. purpu′reus,** form characterized by presence of coloring-matter resembling blood.

**Otomyco′sis.** Presence of fungus, usually *Aspergillus nigricans*, in the auditory meatus.

**Oton′cus** (*onkos*, swelling). Tumor of the ear.

**Otoneural′gia.** Neuralgia of the ear.

**Otoneurasthe′nia.** Tire or weakness in the organs of hearing.

**Otopathe′ma.** Otopathy.

**Otop′athy** (*pathos*, affection). Disease of the ear.

**Otopharyn′geal.** Pertaining to the ear and pharynx. **O. tube,** Eustachian tube.

**Otophleg′mon.** Otitis.

**O′tophone** (*ous*, ear, *phone*, sound). Ear-trumpet.

**Otopi′esis** (*piesis*, a squeezing). Depression of the tympanic membrane by air pressure, due to a partial or complete vacuum being created within the tympanum. Compression of the labyrinth, producing deafness.

**O′toplasty** (*plastikos*, forming). Operation for restoring a lost ear or a portion of it.

**Otopol′ypus.** Polypus of the ear.

**Otopyorrhœ′a.** Discharge of pus from the ear.

**Otopyo′sis** (*pyon*, pus). Suppuration in the ear.

**Otorrha′gia.** Bleeding from the ear.

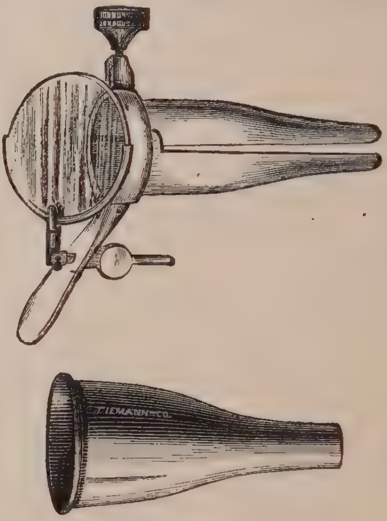
**Otorrheumatis′mus.** Rheumatic earache.

**Otorrhœ′a.** A discharge from the ear, usually purulent in character and associated with chronic otitis media.

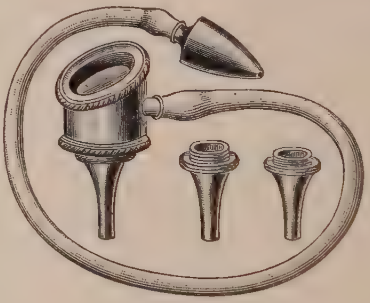
**Otosal′pinx.** Eustachian tube.

**Otoscleronec′tomy** (*ous*, ear, *skleros*, hard, *ektome*, excision). Removal by operation of sclerosed and ankylosed sound-conductors in catarrhal inflammation of the middle ear.

**O′toscope** (*skopeo*, to examine). Instrument for examining the condition of the ear. An aural speculum formed on the principle of the laryngoscope. **Sie′gle's o.,** an ear speculum so constructed that the air pressure can be varied, the drum membrane being in consequence drawn out or in while being inspected. **Toyn′bee's o.,** an aural stethoscope; elastic stethoscope, the ends of which are tipped with ivory, one to be inserted into the meatus of the patient and the other applied to the ear of the examiner.



Otoscopes.



Siegle's otoscope.

**Otos′copy.** Examination by means of the otoscope.

**Otos′teal** (*ous*, ear, *osteon*, bone). Relating to the bones of the ear. Applied by Owen to homologue of the aural ossicles.

**Otos′teon.** Ear-stone; otolith. An ossicle of the ear.

**Otosty′lic** (*stylos*, process). Relating to the ear and styloid process.

**Otot′omy.** Part of practical anatomy which teaches the mode of dissecting and preparing the ear.

**Ot′to** or **Ot′tar of ro′ses.** See *Rosa centifolia*.

**Ot′toway disease′.** Mal de la Baie de Saint Paul, a syphilitic affection which prevailed in Canada from 1760 to 1780 and upward.

**Ouabaïn′.** $C_{30}H_{46}O_{12}$. Crystallized glucoside from ouabaio tree; aqueous extract from the root forms arrow poison of East Africa; hypodermically a heart poison; acts on the medulla, slowing both respiratory and heart action; no influence on sensation or mobility; a cardiac stimulant.

**Ouaba′io.** Arrow poison from the root of African tree Carissa schimperi. See *Ouabain.*

**Ou′la.** The gums.

**Oula′chan oil.** Amber-colored oil obtained from the oulachan, a small fish of British Columbia, proposed as a substitute for cod-liver oil; said to have the properties of the latter without its nauseous taste.

**Ouli′tis** (*oula*, gums). Inflammation of the gums.

**Ou′loid** (*oule*, a scar). Resembling a scar. **O. cica′trix,** a cicatrix described by Erasmus Wilson, without any open sore or ulcer or lesion of continuity, met with in lupus, syphilis, elephantiasis, etc., and dependent on disorganization and destruction of the skin beneath the epidermis.

**Oulorrhag′ia.** Bleeding from the gums.

**Ounce.** Uncia; a weight equal to the 16th part of a pound avoirdupois, the 12th of a pound troy; composed of 8 drachms. See *Weights and Measures.*

**Oura′ri.** Curare.

**Oure′ma.** Urine.

**Ourol′ogy** (*ouron*, urine, *logos*, discourse). Urology. That part of medicine which treats of the urine.

**Our′on.** Urine.

**Ouros′copy** (*ouron*, urine, *skopeo*, to examine). Uroscopy. Examination of urine for clinical purposes.

**Ous.** Ear.

**Out-knee.** Cnemoscoliosis; bowleg.

**Out′let of pel′vis.** See *Pelvis.*

**Out′-patient.** A dispensary patient; one treated in a hospital or dispensary while living at home.

**Ou′vi-las′sa.** Purgative plant of Madagascar, from which scammony is obtained.

**O′va** (pl. of ovum) **graafia′na.** Folliculi graafiani. **O. Nabo′thi,** Nabothi glandulæ.

**O′val** (*ovum*, egg). Egg-shaped; elliptic; that which is round and oblong like an egg. **O. amputa′tion,** see *Amputation.* **O. fora′men,** obturator foramen. Also foramen in the inner wall of the middle ear, opening into the vestibule; the foramen in the sphenoid bone, through which the third branch of the fifth pair issues from the cranium; and the aperture in the fœtus between the auricles of the heart. See *Botal foramen.* **O. fos′sa,** a depression observed in the right auricle of the heart in the septum which separates it from the left auricle. It has thick and strong edges at its upper and forepart called *columnæ foraminis ovalis;* in the fœtus called *annulus foraminis.* The fossa ovalis in the adult replaces the interauricular aperture in the septum auricularum of the fœtus. **O. lob′ule,** paracentral gyrus.

**Ovalbu′men.** Albumin ovi.

**Ovara′den** (*aden*, gland). Powder obtained from the ovaries; used like ovarin.

**Ovaral′gia** or **Ovarial′gia.** Pain in the ovary.

**Ova′rial.** Ovarian.

**Ova′rian** (*ovarium*, ovary). Relating to the ovary, as ovarian pregnancy, ovarian tumors, etc. **O. ap′oplexy,** hemorrhage into the substance of an ovary through the rupture of a follicle. **O. ar′tery,** spermatic artery. **O. drop′sy,** hydroarion. **O. ex′tract,** a preparation from the ovary of the sheep administered in amenorrhœa and insanity. **O. lig′ament,** ligament of the ovary. **O. nerves,** spermatic plexus of nerves. **O. plex′us,** bulb of the ovary. **O. preg′nancy,** see *Pregnancy.* **O. tubes,** tube-like groups of egg-germs imbedded within the stroma of the ovary by infolding of the general epithelium. **O. tu′mors,** tumors of the ovary. **O. veins,** spermatic veins. **O. ves′icles,** folliculi graafiani.

**Ovar′ic.** Relating to the ovaries.

**Ovariec′tomy** (*ektome*, excision). Excision of the ovary.

**Ovariin′** or **Ovarii′num sic′cum.** Dried and powdered ovaries of cows; used in amenorrhœa due to atrophied genital organs, chlorosis, etc.

**Ovarin′.** Sterilized extract of ovaries of the pig, employed in diseases of women, sterility, chlorosis, etc.

**Ovar′iocele** (*kele*, tumor). Hernia of the ovary. **Vag′inal o.,** inversion of the vaginal wall produced by the ovary or ovaries.

**Ovariocente′sis** (*kenteo*, to pierce). Puncture of the ovary.

**Ovariocye′sis** (*kyesis*, pregnancy). Ovarian pregnancy.

**Ovariohysterec′tomy.** Excision of the uterus and ovaries.

**Ovarioma′nia.** Insanity associated with disorder of the ovaries.

**Ovarion′cus** (*onkos*, tumor). Ovarian tumor.

**Ovarioparec′tama** (*parektama*, overextension). Pathological enlargement of the ovary.

**Ovariophy′ma** (*phyma*, growth). Ovarian tumor.

**Ovariorrhex′is** (*rhexis*, rupture). Rupture of the ovary.

**Ovariostere′sis** (*steresis*, deprivation). Ovariotomy.

**Ovarios′tomy** (*stoma*, mouth). Operation for the purpose of draining a cyst of the ovary by means of a puncture, allowing the contents to escape, and cauterizing the edges of the opening.

**Ovariot′omist.** One performing the operation of ovariotomy.

**Ovariot′omy** (*tome*, section). Oöphorectomy, oäriotomy; operation for removing the ovary. It was first performed in 1809 by Dr. Ephraim McDowell, of Kentucky. As now practised it includes incision into the peritoneal cavity, exploration for adhesions, evacuation of the cyst, and the treatment of the pedicle, the latter including the employment of the ligature, torsion, acupressure, écraseur, clamp, etc. **Abdom′inal o.,** ovariotomy in which the abdominal wall is incised. **Nor′mal o.,** removal of an apparently healthy ovary. **Vag′inal o.,** o. in which the wall of the vagina is incised.

**Ovari′tis.** Oäritis; oöphoritis.

**Ova′rium.** Ovary. Egg-bed. **O. luxa′tum,** dislocation of the ovary. **O. masculi′num,** non-pedunculated hydatid; see *Morgagni's hydatid.* **O. Nabo′thi,** Nabothi glandulæ. **O. secunda′rium,** Nabothi glandulæ. **O. tu′midum,** swelling or tumor of the ovary.

**O′vary.** Ovarium. The ovaries are organs in which the ova are formed in oviparous animals. These are two ovoid bodies, almost as large as the testicles in man, placed on each side of the uterus, between the Fallopian tube and round ligament, and in the substance of the broad ligament. Their outer extremity gives attachment to one of the projections of the fimbriated extremity of the Fallopian tube, and the internal is fixed to the uterus by a small ligamentous cord called *ligament of the ovary.* Henle calls a ligament passing between the lateral top of the ovary and the ostium abdominale of the Fallopian tube *ligamentum infundibulo-ovaricum, tubo-ovarian ligament.* The *ligamentum infundibulo-pelvicum* passes between the infundibulum of the tube and the pelvis. The ovaries are composed of a very close, spongy texture, *stroma*, the condensed outer layer of which is the *tunica albuginea*, and of small vesicles, *folliculi graafiani*, filled with a clear fluid. These vesicles contain ovules, which detach themselves from the ovarium before and after fecundation, and are carried into the cavity of the uterus by the Fallopian tube. The ovary may be affected with apoplexy or sanguineous pelvic effusion, atrophy, dropsy, tumors, inflammation, neuralgia, cancer, cystic tumors of various kinds, as the multiple, proliferous, cystosarcomatous, dermoid, tubo-ovarian, etc. **Bulb of the o.,** spongy portion of ovary, collection of vessels communicating with the uterine plexus. **Prolap′sus of the o.,** painful displacement of the organ between the rectum and uterus from increase of bulk and weight due to inflammation or other disease. **Tu′mors of the o.,** these are either solid or cystic; the former including fibroma, carcinoma, enchondroma, etc.; the latter — *ovarian cysts*—simple cysts, or hydrops vesicularum, cystoma ovarii, and stroma ovarii. These cysts vary in color, size, and contents, the solid ingredients including fat-granules, epithelial cells, blood, pus, and, in dermoid cysts, hair, bones, sebaceous matter, etc. Treatment includes tapping, injection of iodine, ovariotomy, etc.

**Ovase′rum.** If crystals of egg albumen are injected repeatedly into the peritoneal cavity of an animal, in time the blood serum of that animal will acquire the property of causing a precipitate when added to a solution of crystals of egg albumen; the serum possessing this property is called ovaserum.

**O′vate.** Egg-shaped; oval.

**Ova′tion.** Laying of eggs by animals.

**Ov′en.** Apparatus employed in bacteriological investigations for sterilization of culture media, or for keeping them at a constant temperature by a self-working mechanism.

**O′verbite.** Overlapping of the upper teeth over the lower.

**Overcrowd′ing.** The crowding of a number of people together in an apartment, resulting in diseases peculiar to such faulty hygienic surroundings.

**Overexten′sion.** Extension of a joint beyond the normal or usual line or limit.

**Overfeed′ing.** Treatment by giving a large amount of food in excess of the patient's appetite.

**O′verflow.** Dribbling of urine from a full bladder.

**Overly′ing.** Cause of death of a child when lain upon in bed and smothered.

**O′vero bu′tua.** Pareira brava.

**Overpres′sure.** Demand for excessive exertion, particularly mental.

**Overreach′** Tread. A disease of the feet and ankles of horses and cattle, produced by the animal pressing one foot over the other.

**Overri′ding.** Overlapping of fractured extremities of a bone.

**Oversight′ed.** Hypermetropic.

**O′vi albu′min.** White of egg, albumen. **O. vitel′lus**, see *Ovum.*

**O′vic.** Of or pertaining to the ovum.

**Ovicap′sule.** See *Folliculi graafiani.*

**O′vicel** (*ovum*, egg, *cella*, cell). Ovisac.

**Ovidu′cal** (*duco*, to lead). Relating to an oviduct.

**O′viduct** (*ovum*, egg, *ductus*, duct). Fallopian tube. **Ampul′la** or **pavil′ion of the o.**, enlarged portion of the abdominal extremity of the oviduct, the fringed end of which is called the fimbriated extremity or fimbria.

**Ovif′erous.** Ovigerous.

**Ovifica′tion** (*facio*, to make). Generation of ova.

**O′viform.** Ovoid; egg-shaped.

**O′viger.** Ovigerous.

**O′vigerm.** Primitive ovum.

**Ovigerous,** o-vij′er-us (*ovum*, egg, *gero*, to bear). Containing or producing ova or eggs.

**Ovina′tion.** Inoculation of sheep with sheeppox virus.

**Ovip′ara** (*ovum*, egg, *pario*, to bring forth). Epithet applied to animals whose young are hatched from eggs outside of the maternal body.

**Ovip′arous.** Laying eggs; term applied to those animals, such as birds, which lay eggs from which the young are developed outside the body.

**O′vipont** (*ovum*, egg, *pono*, to lay). Escape of the ovum from the ovary. The term *ovulation* includes also the process of maturation of the ovum.

**Ovipos′it** (*ovum*, egg, *pono*, *positum*, to place). To lay eggs, said especially of insects.

**Oviposi′tion.** Act of depositing ova, or laying eggs.

**Ovipos′itor.** Projecting apparatus, formed by the last annuli of the abdomen, in certain insects for depositing their ova.

**O′vis a′ries.** The sheep.

**O′visac.** See *Folliculi graafiani.*

**Ovogenous,** o-voj′en-us (*ovum*, egg, *gennao*, to engender). Relating to the development of ova.

**O′void** (*ovum*, egg, *eidos*, like). Egg-shaped; oviform.

**Ovolem′ma.** Membrane surrounding the vitellus of the human ovum.

**Ovol′ogy** (*ovum*, egg, *logos*, a discourse). Science relating to the formation and maturation of ova or eggs, in both ovipara and vivipara.

**Ovovivip′arous** (*ovum*, egg, *vivus*, living, *pario*, to bring forth). Term applied to animals, such as vipers, whose ova are hatched within the body of the mother, but without placental attachment.

**O′vula** (pl. of ovulum) **graafia′na.** Folliculi graafiani. **O. Nabo′thi,** Nabothi glandulæ.

**O′vular.** Relating or belonging to the ovule. **O. abor′tion,** see *Abortion.*

**Ov′ulate.** Containing ovules.

**Ovula′tion.** Formation of ova in the ovary and the discharge of the same. Also the development of the embryo from the egg. See *Ovipont.* **Sponta′neous o.,** spontaneous formation and discharge of ova which takes place in the female of the mammalia. See *Heat* and *Menses.*

**O′vule.** Ovulum; unimpregnated ovum. **Exter′nal migra′tion of the o.,** passage of the ovisac from the ovary of one side to the oviduct of the opposite side. **Migra′tion of the o.,** passage of ovisac to oviduct. **O. of Na′both,** obstruction in the gland-ducts of the neck of the uterus. **Po′lar cells of the o.,** cells upon the outer surface of the yolk. **Primor′dial o.,** primitive ovule within the ovary.

**Ovulif′erous.** Ovulate.

**O′vuline** (*ovulum*). Decidua reflexa.

**O′vulum.** Ovule. A small egg, or structure resembling one.

**O′vum.** Egg. The egg of *Phasianus gallus*, the common hen, is chiefly used as food, but the different parts are likewise employed in medicine. The *shell*, calcined, is esteemed an absorbent. *Oil of egg* is emollient, used externally to burns. *Yolk* or *yelk of the egg—vitellum*—renders oils, etc., miscible with water. Anatomists apply the name ovum or ovule to one of the round vesicles containing a humor similar to the yolk of an egg, which are situated in the ovaries of the female, and when fecundated constitute the rudiments of the fœtus. During gestation the embryo and its enveloping membranes retain the name *ovum*. Ovum is sometimes employed also as synonymous with testicle. **Alec′ithal o.,** o. with little or no food-yolk. **Apoplec′tic o.,** o. in which blood extravasates between the membranes; usually the ovum perishes or is aborted. **Blight′ed o.,** o. devoid of the power of developing after it has been fecundated; generally it is aborted or is transformed into a mole. **Centrolec′ithal o.,** o. in which a regular layer of the yolk surrounds the ovum. **Fe′male o.,** cell in the female in an embryonic condition which at a later period forms the ovum. **Holoblas′tic o.,** o., the yolk of which undergoes segmentation. **O. gemellif′erum,** ovum in which two embryos are contained. **O. graafia′num,** see *Graafian vesicles.* **O. hyster′icum,** see *Clavus hystericus.* **Male o.,** cell present in certain parts of the tubuli seminiferi, thought to develop into spermatozoon. **Meroblas′tic o.,** o. having both a food-yolk and a germinal protoplasm. **Ova′rian o.,** name given to the ovum when in the Graafian vesicle. **Prim′itive** or **primor′dial o.,** see *Cell.* **Teleolec′ithal o.,** o. divided into two hemispheres.

**Oxacid,** ox-as′id. Acid containing oxygen, as distinguished from one formed with chlorine, etc.

**Oxalæ′mia** (*haima*, blood). An excess of oxalic acid in the system.

**Ox′alate.** Salt of oxalic acid.

**Oxalat′ic.** Relating to oxalates; hence oxalatic or oxalic-acid diathesis.

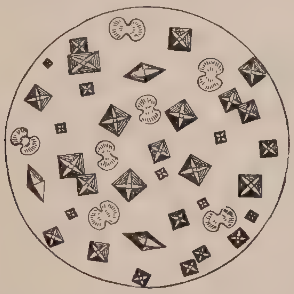
**Oxal′ic** (*oxalis*, sorrel). Relating to sorrel or to the peculiar acid contained therein. **O. acid,** acid of sugar or of sorrel, carbonous acid; an acid found in sorrel—oxalis—and several other vegetable substances; usually obtained by decomposing sugar with nitric acid; may also be obtained from molasses, rice, gum, etc.; it crystallizes in long, transparent, colorless, quadrangular prisms, soluble in water and alcohol, and is generally found in nature united with lime or potassa. It has been proposed in a diluted state as a refrigerant, but it is unnecessary, and besides in quantity it is a virulently acrid poison. It strongly resembles magnesium sulphate, and has often been mistaken for it; see *Poisons* (table). **O. a. diath′esis**, see *Oxalatic*. **O. cal′culi**, vesical calculi formed chiefly of calcium oxalate.

**Ox′alis.** Sorrel. **O. aceto′sa**, Rumex acetosus. **O. acetosel′la**, systematic name of the woodsorrel, cuckoobread, sour trefoil, white sorrel, mountain sorrel, alleluia; ord. *Oxalidaceæ*. This plant has a gratefully acid taste, and is used in salads. It has been esteemed astringent, antiscorbutic, and diuretic. **O. america′na**, O. acetosella. **O. stric′ta**, yellow woodsorrel; indigenous; has similar virtues to O. acetosella. **O. tubero′sa**, oca; a tuberous plant whose oval-shaped root is used as a food by the Peruvians; it is watery, has a sweetish taste, and is much liked.

**Oxal′ium.** Potassium oxalate.

**Oxalmethylin′.** Derived from dimethyloxamide; increases reflex irritability in animals.

**Oxalu′ria.** Condition in which the urine contains oxalic acid or oxalates.



Calcium oxalate crystals in the urine in oxaluria.

**Oxalu′ric acid.** Acid present in normal urine, combined with ammonia; closely related to uric acid, xanthin, guanin, and urea.

**Oxalylure′a.** $C_3O_3N_2H_2$. Parabanic acid, resulting from the oxidation of uric acid.

**Oxazot′ic.** Nitric.

**Oxaz′otite.** Nitrite.

**Ox′-bile.** Ox-gall.

**Ox-bot.** Hypoderma lineata, an insect infesting cattle.

**Oxeron′osus** (*oxeros*, vinegar, *nosos*, disease). Morbid condition due to excess of acid in the body.

**Ox′-eye.** Helenium autumnale. Buphthalmus.

**Ox′-gall.** Bile of the ox; fresh gall of *Bos taurus*, fel bovis (Ph. U. S), fel bovinum (Ph. Br.).

**Oxhy′dryl.** Hydroxyl.

**Oxichlo′ride.** Oxychloride.

**Ox′idated.** Combined with oxygen.

**Oxida′tion.** Oxidization, oxygenation. Action of oxidizing a body; that is, of combining it with oxygen, a combination from which results an oxide.

**Ox′ide.** Combination of a simple body with oxygen. **Cal′culous o.**, cystic oxide.

**Ox′idized.** Combined with oxygen.

**Oxid′ulated.** Containing oxygen.

**Ox′idum.** Oxide.

**Oxim′eter** (*metron*, measure). Measurer of oxygen.

**Oxi′odine.** Iodic acid; white, transparent solid, obtained by boiling iodine with nitric acid.

**Oxitriphyl′lum.** Oxalis acetosella.

**-oxol.** Terminal expression used to denote a mixture of hydrogen dioxide with other substances, as camphoxol, with camphor; menthoxol with menthol; naphthoxol, with naphthol, etc.

**Oxon′ic acid.** Acid, formula $C_4H_5N_3H_4$, which forms when uric acid oxidizes.

**Ox′ter.** Axilla.

**Ox-tongue.** Anchusa officinalis.

**Ox′urate.** Combination of oxuric acid with a base.

**Oxu′ric acid.** Superoxygenated uric acid of Vauquelin.

**Oxy-** (*oxys*, acute). In composition, acute, quick, pointed, sharp, acid. In the composition of chemical terms oxy- and ox- mean oxygen.

**Ox′ya.** Fagus sylvatica.

**Oxyacan′tha.** Mespilus oxyacantha. **O. gale′ni**, berberis, fam. *Berberideæ*. The fruit of the berries, barberries, is gratefully acid and moderately astringent. By preparing an alcoholic extract of the root, and adding water to it, a pulverulent brown substance is thrown down, which when dissolved in alcohol and evaporated yields the bitter principle *berberin*, which is an excellent stomachic in the dose of gr. ij.-x. (0.13-0.65). *Oxyacanthin*, *berbin*, and *vinetin* have also been extracted from it. The hydrochlorate of berberin has been employed in splenic enlargement from malaria. An extract from the wood or roots of berberis is used in India in affections of the eye under the name of rusot or ruswut. The American barberry, Berberis canadensis, pipperidge bush, sowberry, differs slightly from the European; it flourishes on mountains and hilly districts from Canada to Virginia.

**Oxyacanthin′.** See *Oxyacantha galeni*.

**Oxyacan′thous** (*oxys*, sharp, *akantha*, thorn). Having sharp prickles or thorns.

**Oxyacid**, ox-e-as′id. Oxacid, oxiacid; an acid containing oxygen.

**Oxyacu′sis.** Acute hearing; oxyakoia.

**Oxyæsthe′sia.** Exaggerated sensibility.

**Oxyakoi′a** (*akoue*, hearing). Acute sense of hearing.

**Oxyammo′nium chlo′ride.** See *Hydroxylamine hydrochloride*.

**Oxyamyg′dalic acid.** Acid, formula $C_8H_8O_4$, existing in urine in individuals suffering from acute atrophy of the liver.

**Oxyaph′e** or **Oxyaph′ia** (*haphe*, touch). Acuteness of touch.

**Oxyarteri′tis.** Acute inflammation of an artery.

**Oxyarthri′tis.** Acute inflammation of a joint.

**Oxyb′aphus.** Umbrella-wort, herb growing in America and India; roots are reputed to possess purgative properties.

**Oxybenzo′ic acid.** Hydroxybenzoic acid.

**Oxyben′zol.** Phenol.

**Oxyblep′sia** (*blepo*, to see). Acuteness of sight.

**Oxybo′lia** (*bole*, ejection). Too rapid emission of sperm.

**Oxybutyr′ia.** Presence of oxybutyric acid in urine, as in diabetes.

**Oxybutyr′ic acid.** An acid present in the urine of diabetes, leading to excessive elimination of ammonia. It indicates a severe type of the disease.

**Oxycam′phor.** White powder; has therapeutic action like that of morphine; but without its disagreeable after-effects. Dose, gr. v–xx (0.32–1.3), in dyspnœa particularly.

**Oxycannabin′.** Oxidation product of cannabin by hot nitric acid.

**Oxycanthin′.** Oxyacanthin.

**Oxycar′nic acid.** $C_{30}H_{41}N_9O_{10}$. Acid derivative of carnic acid.

**Oxycephal′ia** (*oxys*, sharp, *kephale*, head). Sugar-loaf head.

**Oxycephal′ic** or **oxyceph′alous.** Having a peaked cranium.

**Oxyceph′alus** (*oxys*, sharp, *kephale*, head). Monster with head in which there is synostosis of the parietal with the occipital and temporal bones, with compensatory development of the skull in the region of the anterior fontanelle, giving the appearance of a sugar-loaf.

**Oxychlo′ride.** Compound of oxygen and a chloride.

**Oxycinchonine′.** $C_{20}H_{24}N_2O_3$. Substance having the same composition as quinine.

**Oxycine′sis** (*kinesis*, motion). Rapidity of motion.

**Oxycoc′cos, O. macrocar′pus,** or **O. palus′tris.** Vaccinium oxycoccos.

**Oxycopai′vic acid.** Acid obtained from resin of copaiba.

**Oxycre′osol.** Guaiacol.

**Oxyc′terus.** Acute icterus or jaundice.

**Oxyda′tion.** Oxidation.

**Oxyden′dron arbo′reum.** Sorrel tree, sour-wood; indigenous tree with pleasantly acid leaves; used in decoction as a refrigerant drink.

**Oxyder′cia** (*derkomai*, to see). Sharpness of vision.

**Oxydimorphine′.** Pseudomorphine.

**Ox′ydoid.** Resembling an oxide.

**Oxyd′ulated.** Slightly oxidized.

**Oxyd′ulum.** Body in an inferior degree of oxidation.

**Ox′ydum.** Oxide.

**Oxyecoi′a.** Oxyacoia.

**Ox′ygen** (*oxys*, acid, *gennao*, to engender, that is, *generator of acids;* and such it was believed to be exclusively when the name was given to it; now known not to be the case). Dephlogisticated air. Chemical symbol, O. Colorless, invisible, tasteless, inodorous gas, sp. gr. 1.1056; slightly soluble in water; enters into combination with all other elements save fluorine, forming oxides. Oxygen is an elementary principle largely distributed in nature. It constitutes about 20 per cent. of atmospheric air and exists in combination in water, many acids, and the oxides. Obtained by decomposing manganese peroxide or potassium chlorate by heat in a closed vessel. The properties of oxygen are markedly stimulant; it increases the force and velocity of the pulse, and has accordingly been used in cases of chronic debility, chlorosis, asthma, scrofula, dropsy, paralysis, etc., and especially in pneumonia. See also *Ozone.*

**Ox′ygenated.** Containing oxygen. **O. wa′ter,** hydrogen peroxide in water.

**Oxygena′tion.** Oxidation. Impregnating with oxygen.

**Oxygen′ic.** Relating to oxygen.

**Ox′ygenized.** Oxygenated.

**Oxygeus′ia** (*oxys*, acute, *geusis*, taste). Excessive or exaggerated sense of taste.

**Oxyguanin′.** Product obtained by adding soda to solution of guanin and treating with permanganate of potassium.

**Oxyhæmoglobin′.** Unstable combination of hæmoglobin with oxygen in proportion of 1 to 1.59 when saturated. By this combination, largely, oxygen is conveyed from the lungs to the tissues.

**Oxyhy′drogen.** Relating to a mixture, not a chemical combination, of oxygen and hydrogen.

**Oxyi′odide.** Compound of oxygen with an iodide.

**Oxylap′athum.** Rumex acutus.

**Oxyleucotin′.** A proximate principle of paracoto-bark.

**Ox′ymel.** (Ph. Br.) Honey and vinegar boiled to a syrupy consistence. **O. col′chici,** made by macerating one ounce of colchicum root in one pound of vinegar and two pounds of honey; expectorant and diuretic; dose, ℥j (32.0). **O. scil′læ** (Ph. Br.), o. of squill; a mixture of vinegar of squill and clarified honey; dose, ʒss–j (2.0–4.0). **O. sim′plex,** oxymel. **O. urgin′eæ** (Ph. Br.), oxymel of Indian squill; dose, ʒss-j (2.0–4.0).

**Oxymercu′ric sul′phate.** Basic sulphate of mercury.

**Oxyme′trum.** Acidimeter.

**Oxymorphine′.** Pseudomorphine.

**Oxymu′riate.** Chloride.

**Oxymuriat′ic acid.** Term applied by Lavoisier to a substance supposed to be a compound of muriatic acid and oxygen; discovered by Sir Humphrey Davy to be the element *chlorine.*

**Oxymyeli′tis.** Acute myelitis.

**Oxymyohæm′atin.** An oxidized nitrogenous pigment contained in muscular tissue.

**Oxymyr′rhine.** Ruscus.

**Oxymyr′sine.** Ruscus.

**Oxynaphtho′ic acid.** Obtained by action of carbonic acid gas on sodium and naphthol; in colorless crystals; antiseptic and disinfectant; employed in skin diseases, applied externally with collodion or lanolin.

**Oxynaph′thol.** Dioxynaphthol, substance with the formula $C_{10}H_5(OH)_3$, occurring in yellow needles, possessing active reducing properties.

**Oxynarcotine′.** $C_{22}H_{23}NO_8$. Alkaloid accompanying narceine in opium, but not medicinally important.

**Oxyneurine′.** Betaine.

**Oxynose′ma** (*nosema*, disease) or **Oxyn′osus** (*nosos*, disease). Acute disease.

**Oxyn′tic.** Term applied to glands secreting the acid principle in the gastric juice. **O. cells,** delomorphous cells, parietal cells of cardiac glands of stomach, believed by Heidenhain to produce the hydrochloric acid of gastric juice.

**Oxynu′cleus.** Nucleus containing oxygen.

**Oxyoöphori′tis.** Acute ovarian inflammation.

**Oxyoph′ilous.** Oxyphilous.

**Oxyo′pia** (*ops*, sight). Acuteness of vision.

**Oxyosphre′sia** or **Oxyosphre′sis** (*osphresis*, smell). Excessive acuteness of the sense of smell.

**Oxyphenacetin′-sal′icylate.** Antipyretic and antiarthritic; made by action of bromophenacetin or chlorophenacetin on sodium salicylate.

**Oxyphen′ic acid.** Pyrocatechin.

**Oxyphen′yl.** Combination containing phenyl and oxygen.

**Ox′yphile** (*oxys*, acid, *phileo*, to love). Readily stained with acid dyes; eosinophile or eosinophilous.

**Oxyph′ilous.** Oxyphile.

**Oxyphlegma′sia.** A violent inflammation.

**Oxyphœ′nicon.** Tamarindus.

**Oxypho′nia** (*phone*, voice). Shrill, high-pitched voice.

**Oxypho′nic.** Relating to oxyphonia.

**Ox′yphony.** Oxyphonia.

**Oxyphos′phide.** Compound containing an element or radical in combination with oxygen and phosphorus.

**Oxyphyl′lon.** Oxalis acetosella.

**Oxypo′dia.** Clubfoot.

**Oxypropylendii′soamylamin′.** Synthetic alkaloid; a colorless, oily liquid, having a disagreeable odor. Causes epileptiform convulsions in animals; appears to paralyze the inhibitory fibres of the pneumogastric.

**Oxypro′tein.** Proteid rich in oxygen.

**Oxyquinasep′tol.** Diaphtherin.

**Oxyquinine′.** A substance obtained by boiling sulphate of quinine and solution of potassium nitrate together, differing from quinine in containing two additional equivalents of oxygen.

**Oxyquinolin′.** $C_6H_6(OH)N$. Quinolin in which the hydrogen is replaced by hydroxyl.

**Oxyreg′mia** (*oxys*, acid, *ereugo*, to belch). Acid eructation.

**Oxyr′ia renifor′mis.** Boreal sourdock, mountain sorrel, Welsh sorrel, ord. *Polyganaceæ.* Grows in the northern parts of America and Europe. Possesses the same properties as Oxalis acetosella.

**Oxyr′rhinus** (*rhis*, nose). Sharp-nosed.

**Oxysaccharum,** ox-e-sak′kar-um (*oxys*, acid, *saccharon*, sugar). Mixture of sugar and vinegar; formerly termed *oxysaccharum vomitivum* when it held in solution the glass of antimony, and *oxysaccharum scilliticum* when it contained squill.

**Ox′ysalt.** Salt of an oxyacid with a base.

**Oxysep′sin.** Antitoxin produced by the oxidation of tuberculous sputum.

**Oxysep′sis.** Putrefaction in which acid is developed.

**Oxysit'ia** (*sition,* food). A condition of the stomach in which acidity is apt to occur.

**Oxyspartein'.** $C_{15}H_{24}N_2O$. A soluble, crystallized substance, derived from spartein by oxidation. Used hypodermically as a cardiac stimulant; dose, gr. ss–j (0.032–0.065). The *hydrochlorate* is also given.

**Oxystel'ma ægypti'acum.** Herb growing in Egypt and south of Africa. Juice possesses purgative properties, and in a dried condition furnishes a kind of scammony.

**Oxystrychnine'.** $C_{21}H_{28}N_2O_7$. Produced by treating strychnine sulphate with a boiling solution of potassium nitrite.

**Oxysul'phide.** Compound of sulphur with metallic oxide, or mixture of oxide and sulphide of same metal.

**Oxysul'phuret.** Oxysulphide.

**Oxyto'cia** (*tokos,* bringing forth). Rapidity of parturition.

**Oxyto'cic.** An agent facilitating or hastening delivery.

**Oxytolu'ic acid.** Cresotic acid.

**Oxytol'uyl-tropine'.** Homatropine.

**Oxytox'ic** (*toxicon,* poison). Acutely poisonous.

**Oxytoxin'.** Antitoxin formed by the oxidation of a toxin.

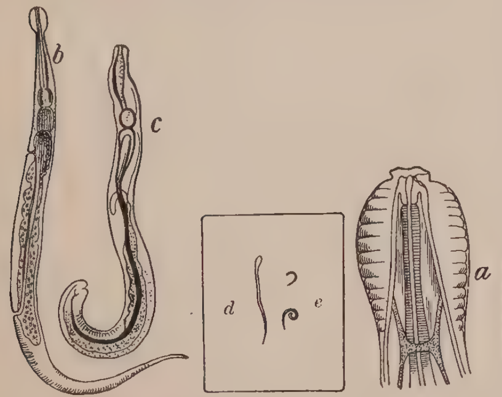
**Oxytriphyl'lon.** Oxalis acetosella.

**Oxyt'ropis campes'tris** and **O. lamber'ti.** Loco weed, crazy weed.

**Oxytuberculin'.** Oxytoxin employed hypodermically for the prevention of tuberculosis; it is obtained by treating tuberculin with hydrogen peroxide.

**Oxyu'ricide** (*cædo,* to kill). An anthelmintic, fatal more especially to Oxyuris vermicularis.

**Oxyu'ris.** A genus of nematoid worms, fam. *Ascaridæ.* **O. vermicula'ris,** pin-worm; seat-worm; a parasitic worm, half an inch or less in length, infesting the rectum, especially of children.



Oxyuris vermicularis or pin-worm. *a,* head; *b,* female; *c,* male (enlarged); *d,* female; *e,* male (natural size).

**Oxyvaselin'.** Vasogen.

**Oxyzy'mol.** Carvacrol.

**Oys'ter.** Ostrea. An edible mollusk. **Green o.,** Ulva latissima. **O. plant,** tragopogon; root is diuretic; cultivated for food. **O. shell,** ostrea testa. **O.-shuck'ers' kerati'tis,** see *Keratitis.* **Veg'etable o.,** tragopogon.

**Oz.** Abbreviation for *uncia,* an ounce.

**Ozæ'na** (*oze,* fetid smell). Ulceration of the nasal cavities, with fetid discharge, a symptom of atrophic rhinitis; supposed by Löwenberg to be due to a specific ozænacoccus—more probably to germs of putrefaction which find here suitable conditions for their development. An affection of the pituitary membrane, giving occasion to a disagreeable odor similar to that of a crushed bed-bug; hence the name *punais,* by which the French designate one laboring under ozæna. It is sometimes due to caries of the bones, but is perhaps most frequently dependent upon syphilitic ulceration of the pituitary membrane, with or without caries of the nose. **O. benig'na,** see *Coryza.* **Tra'cheal o.,** inflammation of the trachea in which crusts are formed, due to nasal ozæna invading this region.

**Ozænacoc'cus.** Micrococcus löwenbergii, the supposed specific microorganism of ozæna.

**Ozoce'rite.** Ozokerite.

**Ozochro'tia** (*oze,* stench, *chros,* skin). An offensive odor from the skin.

**Ozochro'tous.** Possessing a bad-smelling skin.

**Ozoke'rite.** Ozocerite, vegetable wax, fossil wax; a hydrocarbon found in a layer of bituminous slate in Moldavia, Wallachia, etc.; snowy white; when refined, acting like tar; when mixed with linseed oil, stimulating the diseased skin, as in chronic eczema.

**O'zone** (*ozo,* to smell). A modified form of oxygen produced when a current of electricity passes from pointed bodies into the air, or by placing phosphorus, partly covered with water, in a flask filled with atmospheric air and occasionally agitating the flask. Schönbein considers that oxygen exists in three different allotropic conditions, two of which are active and in opposition to each other. These are *ozone* and *antozone,* equal quantities of which neutralize each other and form inactive or *neutral oxygen.* Ozone is considered by some to be oxygen condensed to two-thirds its bulk, when it possesses remarkable oxidizing properties. Air containing ozone is said to be *ozonized.* **O. car'rier,** red blood corpuscle. **O. e'ther,** ozonic ether.

**Ozo'nic e'ther.** Solution of hydrogen dioxide in ether; has been used internally in diabetes and other diseases; locally antiseptic.

**O'zonized.** Containing ozone. **O. e'ther,** ozonic ether.

**Ozonom'eter** (*metron,* measure). Instrument for determining the presence and amount of ozone in the air. It consists of a scale of blue tints with which test paper turned blue by the ozone in the air is compared.

**Ozo'noscope.** A test paper used to determine the amount of ozone in the air. It is saturated with starch and iodide of potassium. Ozone sets free the iodine, which combines with the starch and turns the paper blue. The relative proportion of ozone in the atmosphere is then estimated by comparison with the ozonometer.

**Ozosto'mia** (*oze,* stench, *stoma,* mouth). Offensive breath.

# P.

**Pabulin′.** Substance present in blood, usually immediately following digestion, containing fat in emulsion with albumin.

**Pab′ulum.** Food; aliment.

**Pac′ay.** Prosopis dulcis.

**Pacchio′nian bod′ies, cor′puscles, glands,** or **granula′tions** (after Pacchioni, an Italian anatomist). Small whitish or yellowish bodies, sometimes separate, at others united like a bunch of grapes, observed in several parts of the dura and pia mater. They receive vessels, but apparently no nerves; their texture and uses are unknown. A considerable number is observed in the longitudinal sinus covered by the internal membrane. **P. depres′sions** or **fos′sæ,** small pit-like depressions for Pacchionian bodies found on the cerebral surface of the cranium near the longitudinal sinus. **P. fora′men,** foramen in the tentorium for the isthmus.

**Pachæ′mia** (*pachys,* thick, *haima,* blood). Too great thickness of the blood.

**Pach′etos.** See *Laqueus.*

**Pachira** (pak′ir-ah) **insig′nis.** Plant of Guiana; an infusion of the bark of the root is applied in toothache and in ulceration of the gums; the flowers and leaves possess emollient properties; the kernels of the fruit are edible.

**Pachom′eter.** An instrument for measuring the thickness of a part.

**Pachu′na.** Coccus cordifolia.

**Pachy-,** pak-e (*pachys,* thick). In composition, thick.

**Pachyac′ria** (*pachys,* thick, *akron,* extremity). Condition in which hypertrophy of the extremities exists; acromegaly.

**Pachyæ′mia.** Pachæmia.

**Pachybleph′aron** (*pachys,* thick, *blepharon,* eyelid). Thickening and hardening of the eyelids produced by tubercles or excrescences formed on their margins.

**Pachycepha′lia** (*pachys,* thick, *kephale,* head). Condition of the skull in which the walls are unusually thickened.

**Pachycephal′ic** or **Pachyceph′alous.** Having an unusually thick skull.

**Pachyceph′alus.** Thick head, due to synostosis of the parietal and occipital bones.

**Pachyceph′aly.** Pachycephalia.

**Pachychol′ia** (*pachys,* thick, *chole,* bile). Morbid thickness of the bile.

**Pachychy′mia** (*chymos,* juice). State in which the fluids of the body are thickened.

**Pachydac′tylous** (*pachys,* thick, *daktylos,* finger). Thick-fingered.

**Pachyder′ma** or **Pachyder′mia** (*pachys,* thick, *derma,* skin). Thickness of the skin. **P. lactif′lua,** elephantiasis with discharge of lymph. **P. l. scro′ti,** lymph-scrotum. **P. laryn′gis,** thickening of the mucous membrane of the larynx, giving it a resemblance to skin; due to chronic laryngitis. **P. lymphangiectat′ica,** lymph-scrotum. **P. verruco′sa,** thickened, warty growth. **P. vul′væ,** elephantiasis of the vulva.

**Pachydermat′ocele.** Disease of the dermoid tissue, apparently congenital, which increases at times from a small mole or spot to the size and appearance of a relaxed and very emaciated mamma.

**Pachyder′matous.** Having a thick skin.

**Pachygas′trous** (*gaster,* stomach). Having a large, heavy stomach or abdomen.

**Pachyglos′sia.** Morbid thickness of the tongue.

**Pachyglos′sous** (*glossa,* tongue). Having a large or thick tongue.

**Pachyhymen′ic** (*hymen,* membrane). Pachydermic.

**Pachyleptomeningi′tis.** Inflammation of all the cerebral or spinal membranes.

**Pachylo′sis** (*pachys,* thick). An inordinate production of the epidermis dependent upon hypertrophy of the papillæ of the skin. *Pachylosis epidermica* is a form of the disease attacking the palms and soles of the feet.

**Pach′yma co′cos.** Lycoperdon solidum.

**Pachyme′nia** (*pachys,* thick, *hymen,* membrane). Thickening of the skin.

**Pachymen′ic.** Thick-skinned; pachydermic.

**Pachymeningi′tis** (*pachymeninx,* dura mater). Perimeningitis. Inflammation of the dura mater of either the brain (*cerebral p.*) or the spinal cord (*spinal p.*). *Hæmatoma of the dura mater* is a blood sac resulting from chronic pachymeningitis, with hemorrhagic exudation. **P. acu′ta,** acute, usually suppurative form. **P. chron′ica** or **inter′na,** chronic form, causing thickening of membrane by new-formation of connective tissue. **P. c. hæmorrhag′ica,** chronic form, with hemorrhage from newly formed blood-vessels. **P. exter′na,** fibrous thickening of the dura mater, with adhesion to the skull. **P. hypertroph′ica,** chronic thickening of the dura mater, usually in the cervical portion of the spinal cord; hypertrophic cervical pachymeningitis. **P. inter′na,** p. chronica.

**Pachymen′inx** (*pachys,* thick, *meninx,* membrane). Dura mater.

**Pachyn′sis** (*pachyno,* to make thick). Thickening. Obesity.

**Pachyn′tic.** Relating to unnatural induration or thickening of a part or organ.

**Pach′yodont** (*pachys,* thick, *odous, odontos,* tooth). Having thick or massive teeth.

**Pachyo′tous** (*ous, otos,* ear). Having thick ear or ears.

**Pachypelviperitoni′tis.** Pelvic peritonitis with membranous deposits over the uterus.

**Pachyperitoni′tis** (*pachys,* thick, *peritonaion,* peritoneum). Peritonitis in which new membranes are formed and the peritoneum becomes thickened. **Hemorrhag′ic p.,** peritonitis in which vessels form in new membrane which rupture readily, thus giving rise to circumscribed hemorrhage.

**Pachyp′odous** or **Pach′ypous** (*pachys,* thick, *pous,* foot). Having a thick foot.

**Pachyrrhi′zus angula′tus.** Yaka or wayaka of the Fiji Islanders; the roots are edible and employed in the East Indies as refrigerant in febrile affections.

**Pachys′mus** (*pachys,* thick). Polysarcia adiposa.

**Pach′ytes** (*pachytes,* thickness). Pachyblepharon.

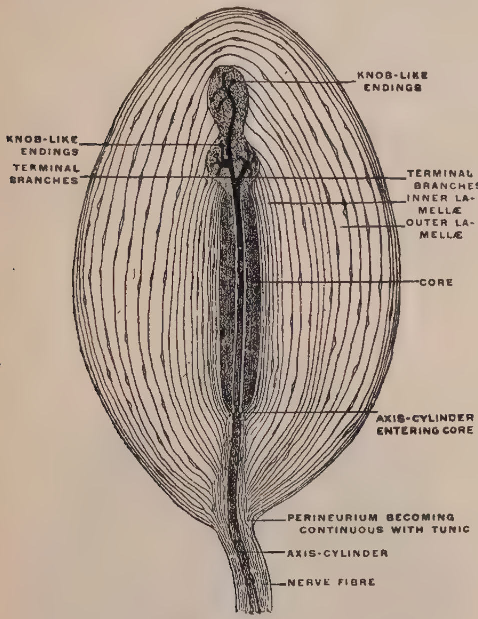
**Pachyt′ic.** Thick; obese.

**Pacinian** (pa-sin′e-an) **cor′puscles** (after Pacini). Terminal nerve-organs found in many situations, especially hands, feet, and mesentery; oval in form, composed of lamellæ of connective tissue surrounding a soft core where the axis-cylinder of the nerve ends in a bulbar enlargement. (See cut on opposite page.)

**Pacini′s** (pah-che′niz) **cor′puscles.** Pacinian corpuscles. **P.′s flu′id,** a solution of corrosive sublimate and common salt used, in counting the blood corpuscles, to dilute the blood. **P.′s meth′od,** means of reducing bodily temperature by closely enveloping the body in wet cloths with dry sheets or blankets outside of them.

**Pack.** Packing.

**Pack′ing.** Filling a wound or a cavity, as of the vagina; also the substance—gauze, cotton, etc.—employed for the purpose. Wrapping or packing in dry or wet blankets or sheets, to induce sweating. **Cold p.**, envelopment in cloths dipped in cold water or otherwise cooled. **Dry p.**, wrapping in cloths cooled or heated without being wet. **Hot p.** envelopment in cloths heated in the oven or wrung out of hot water, sometimes hot bottles being placed in the bed to maintain the heat. **Wet p.**, wrapping in cloths dipped in hot or cold water.



Pacinian corpuscles in vertical section. (Testut.)

**Pack'thread stric'ture.** See *Stricture*.

**Pack'wax.** See *Nucha*.

**Pacquelin's** (pak-lans') **caut'ery.** See *Cautery*.

**Pad.** A little cushion. Small bag filled with feathers, wool, hair, bran, chaff, etc., used to compress or support parts. In the treatment of certain fractures, soft pads or cushions are placed between the splint and the fractured limb, in order that the prominent parts may not be chafed by the splints. See *Truss*. **P. of cor'pus callo'sum**, posterior flexure of the corpus callosum.

**Pad'noon.** Bitnoben.

**Pa'dus.** Prunus padus. **P. a'vium**, Prunus padus. **P. laurocer'asus**, Prunus laurocerasus.

**P. æ.** An abbreviation of *partes æquales*, equal parts.

**Pædatroph'ia** (*pais*, child, *a*, priv., *trophe*, nourishment). Atrophy of children; tabes mesenterica. **P. glandulo'sa**, scrofula.

**Pæd'erast.** One who practises pæderasty. **Ac'tive p.**, one who practises pæderasty with another. **Pas'sive p.**, one who is practised upon by another. **Path'ic p.**, passive pæderast.

**Pæderas'tia** (*pais*, boy, *eros*, love). Pederasty; criminal love of boys.

**Pæderas'tic.** Relating or appertaining to pæderastia.

**Pæd'erasty.** Pæderastia.

**Pæde'ria fœ'tida.** Climbing shrub, ord. *Cinchonaceæ*, native of India, China, and Japan; fruit of an offensive odor when bruised; root is said to be emetic.

**Pædero'ta virgin'ica.** Leptandra virginica.

**Pædiatri'a** (*pais*, child, *iatreia*, medical management). Pediatrics. Treatment of the diseases and preservation of the health of children.

**Pædiat'rics.** Pædiatria.

**Pædiat'rist.** One versed in pediatrics or the treatment of diseases of children.

**Pæ'dion** or **Pæ'dium.** Young child.

**Pædiop'athy** (*paidion*, small child, *pathos*, disease). Pathology of children.

**Pædiot'rophy** (*paidion*, small child, *trophe*, nourishment). Pædotrophy.

**Pædo-** (*pais*, child). In composition, child, boy.

**Pædobaromacrom'eter.** Apparatus for measuring and weighing babies.

**Pædobarom'eter** (*pais*, child, *barys*, heavy, *metron*, measure). Apparatus for ascertaining the weight of a baby.

**Pædogen'esis** (*pais*, child, *genesis*, production). Sexual reproduction during larval state of parent.

**Pædol'ogy** (*pais*, child, *logos*, description). The science of childhood.

**Pædonosol'ogy** (*pais*, child, *nosos*, disease, *logos*, discourse). Science of the diseases of children.

**Pædon'osus** (*pais*, child, *nosos*, disease). A disease of childhood.

**Pædop'athy** (*pais*, child, *pathos*, disease). Pathology of children.

**Pædophthi'sis.** Marasmus or tabes in children.

**Pædop'yra america'na.** Cholera infantum.

**Pædot'rophy** (*pais*, child, *trophe*, nourishment). The part of hygiene which concerns the rearing of children.

**Pæo'nia.** Peony, ord. *Ranunculaceæ*. **P. moutan'**, Chinese species, used for congestions, hemorrhage, and menstrual disorders; believed to be abortifacient. **P. officina'lis**, common peony of Europe, cultivated for ornament; root, flower, and seeds are official in the French codex; ancient antispasmodic and emmenagogue remedy; used as a charm in epilepsy.

**Pæonin'.** $C_{19}H_{14}O_3$. A red dyestuff obtained from phenylic acid; employed as a test for alkalies and acids.

**Pagapoplex'ia** (*pagos*, icy coldness, *apoplexia*, apoplexy). Apoplexy from cold.

**Pag'enstecher's oint'ment.** Yellow oxide of mercury, gr. j–iij, to vaselin, ʒj. Employed in ophthalmic practice.

**Paget's** (paj'et's) **ab'scess.** A residual abscess; see *Abscess*. **P.'s disease'**, psorospermiasis of the nipple; parasitic disease resembling eczema, having a tendency to terminate in cancer of the breast. Hypertrophic osteitis deformans. **P.'s recur'rent fi'broid**, cone-shaped or spindle-shaped sarcoma of the subcutaneous tissue.

**Pagiorrheu'matism** (*pagios*, firm). Chronic rheumatism.

**Pa'gle.** Primula veris.

**Paglia'ri's flu'id, hæmostat'ic,** or **styp'tic.** A mixture of alum and benzoic acid in solution.

**Pagoplex'ia** (*pagos*, ice, *plege*, a stroke). Frostbite; pernio.

**Pa'gos.** Peritoneum; pellicle. Icy coldness.

**Pai'ca.** Chenopodium ambrosioides.

**Paidiaph'tha.** Aphthæ or thrush of infants.

**Paidol'ogy.** Pædology.

**Paidonosol'ogy.** Pædonosology.

**Pai'gil** or **Pai'gle.** Primula veris.

**Pail sys'tem.** Goux system, for collection and removal of night-soil.

**Pain.** Disagreeable sensation, difficult to define; generally symptomatic; called *acute* when sharp and violent; when short and sudden, a *twinge;* and when more violent, a *pang; pungent* when it resembles that which would be produced by a sharp instrument run into the part; *heavy*, when attended with a sensation of weight; *tensive*, when the part seems distended; *boring*, *terebrant*, or *terebrating*, when resembling that which might be caused by boring with a gimlet; *lancinating*, when occurring in shoots; *fulgurant* or *lightning*, when intense but momentary; *lacerating* or *tearing*, when the part seems to be tearing; *burning*, when resembling that produced by a burn; *throbbing*, when beating regularly like the pulse. See also *Pains*. **Bro'die's p.**, see *Brodie*. **Charcot's' p.**, see *Charcot*. **Gir'dle p.**, p. encircling the body or a lateral half of the body in the line of a belt or girdle. **Gnaw′ing p.**, pain resembling what might be produced by the gnawing of an animal. **Osteocop′ic p.**, aching pain in the bones, such as occurs in some cases of syphilis. **Sun p.**, hemicrania.

**Pain′ful.** Relating to, exciting, or suffering from pain. **P. point**, point on a neuralgic surface, along the course of the affected nerves, which is especially sensitive to pressure. **P. subcuta′neous tu′mor**, a small and very painful nodule beneath the skin, allied to neuromata.

**Pain′less.** Without pain, analgic, analgesic. **P. whit′low**, panaritium analgicum; Morvan's disease.

**Pains.** Labor-pains. Uneasy sensations accompanying labor, and owing to uterine contraction. Pains that precede actual delivery, and are simply employed in dilating the os uteri, are called *grinding;* those which extrude the child, *forcing*. Those which take place in the first days after delivery, and are employed in forcing away coagula, etc., are termed *after-pains*. "To take a pain," "to try a pain," is to make an examination per vaginam, during labor, to discover its progress, character, etc. **Bearing-down′ p.**, pains caused by the parturient efforts of the uterus; similar pains may occur in dysmenorrhœa, in fibroma of the uterus, and in other non-pregnant states. **Expul′sive p.**, hard pains, occurring after dilatation of the os, which effect the delivery of the child. **False p.**, p. that take place before delivery, and are not caused by parturient contractions of the uterus.

**Paint** (*pingo*, to paint). Name given to different substances employed for embellishing the complexion or rendering the skin softer. The substances most commonly used for this purpose are: subnitrate of bismuth, Spanish white; a spirituous solution of benzoin, precipitated by water and forming *virgin's milk;* the red or *rouge* of the carthamus; the oxides of lead, tin, and mercury, vermilion, red saunders, etc. All paints may be said to be noxious; they injure the skin, obstruct perspiration, and thus frequently lay the foundation for cutaneous affections. *To paint* a surface is to cover it with some topical application, as with iodine to an inflamed part. **In′dian p.**, Hydrastis canadensis, Sanguinaria canadensis. **Yel′low p.**, Hydrastis canadensis.

**Paint′ed tril′lium.** Trillium erythrocarpum.

**Paint′ers′ col′ic.** Lead colic in painters.

**Pajanel′ia rheed′ii.** Tree of south of India; the leaves and bark of the root and stem are used externally in abscesses and œdematous conditions.

**Pa′la.** Name given to syphilis in the Hawaiian Islands.

**Pal′ad.** Vertex.

**Pala′da.** Alopecia, especially that due to syphilis.

**Palæontol′ogy.** Paleontology.

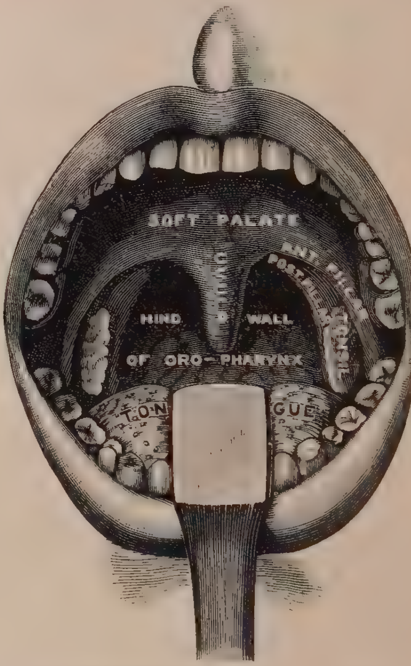
**Palamosyphilolep′sia** (*palame*, palm, *syphilis*, *lepis*, scale). Syphiloderm of the palm of the hand.

**Palampis′sa.** Black pitch.

**Pa′las ki′no.** Bengal kino.

**Pal′atal.** Palatine. **P. in′dex**, relation between the maximum breadth and maximum length of the hard palate, the latter taken as 100. **P. pro′cess**, ingrowth from the maxillary plate of the embryo, meeting its fellow on the median line to form the palate.

**Pal′ate.** Roof of the mouth; hard palate; popularly, the uvula. Upper part of the cavity of the mouth; a kind of parabolic vault formed by the two superior maxillæ and the two palate-bones, covered with a thick and dense mucous membrane; bounded before and at the sides by the superior dental arch, and behind by the velum palati. A whitish line runs along the middle from before backward, at the anterior extremity of which is a tubercle corresponding to the inferior orifice of the anterior palatine canal. The arteries of the palate and corresponding gums proceed from the palatine, alveolar, infraorbital, labial, and buccal branches. The veins follow a similar course. The nerves are given off from the palatine, facial, infraorbital, superior dental, and from the nasopalatine ganglion. **Artific′ial p.**, obturator for the palate; a plate of tortoise-shell, silver, vulcanite, etc., used to close a deficiency of the palate. **P.-bone**, small bone of an irregular shape, situated at the posterior part of the nasal fossæ and palate. It seems formed by the union of two bony plates joined at right angles to each other, so that one is inferior and horizontal, the other superior and vertical. The horizontal or palatine portion or plate, arch of the palate, os quadratum of the ancients, is quadrilateral. The upper surface forms part of the nasal fossæ; the lower forms part of the palatine arch and contains the inferior orifice of the posterior palatine canal. Its anterior edge is articulated with the palatine process of the superior maxilla; the posterior is free and sharp, gives attachment to the velum palati, and presents an eminence which when joined with one on the opposite side forms the posterior nasal spine. The inner edge is articulated with the corresponding bone; its outer is confounded with the vertical portion. The vertical or ascending portion has the form of a long square. The inner surface forms part of the outer wall of the nasal fossæ. The outer surface is unequal, and is articulated with the superior maxilla; behind it presents a vertical groove, which forms part of the posterior palatine canal, and, above all, a small, free surface which looks into the zygomatic fossa. Its anterior edge is united with the superior maxilla; the posterior is unequal, and rests on the internal ala of the pterygoid process. The angle which it forms by uniting with the posterior edge of the horizontal portion presents a very prominent pyramidal eminence, called the tuberosity of the palate-bone. Its upper margin is surmounted by two eminences: the one, anterior, orbital process; the other, posterior, sphenoid process. These two processes are separated by an almost circular notch, which the sphenoid bone forms into a foramen, the sphenopalatine. This bone appears to be developed from a single point of ossification. It is articulated with the sphenoid, ethmoid, the cornua sphenoidalia, superior maxilla, the inferior spongy bone, the vomer, and its fellow. **Bo′ny p.**, hard palate. **Cleft p.**, see *Harelip*. **Fis′sured p.**, see *Harelip*. **Hard p.**, roof of the mouth.



The palate and tonsillar regions. (Gerrish.)

**P. hook,** an instrument devised for hooking up the soft palate, to facilitate posterior rhinoscopic examination. **P. pro′cess,** part of the superior maxilla forming the anterior portion of the hard palate. **Soft p.,** velum pendulum palati. **Split p.,** see *Harelip.*

**Palat′iform.** Having the shape or formation of the palate.

**Pal′atine.** Palatal. Relating to the palate. **P. arch′es,** see *Arches of the palate.* **P. ar′teries,** two in number: 1. Superior palatal, palatine, or palato-maxillary artery, which leaves the internal maxillary behind the top of the orbit, descends into the pterygomaxillary fissure, and enters the posterior maxillary canal; its branches are distributed to the velum palati and the nasal fossæ. 2. The inferior or ascending palatine or palatal, which is very small, and separates from the facial near its origin, passes along the lateral and superior part of the pharynx, between the pillars of the velum palati, and divides into a number of ramusculi, which are distributed to the pharynx, the corresponding tonsil, the Eustachian tube, and the velum palati. **P. bone,** palate-bone. **P. but′tonhole,** an opening made in the soft palate for the removal of nasopharyngeal polypus. **P. canals′ or ducts,** two in number: the anterior *incisive canal,* situated at the anterior part of the palatine arch, and formed by the two superior maxillæ. It is single beneath, but opens above by two apertures, one into each nasal fossa (canals of Stenson). The foramen is called *foramen incisivum.* The posterior palatine canal, situated at the posterior part of the palate, is formed by the palate and superior maxilla, ascends between these two bones, and in its course gives rise to two or three small accessory palatine canals, which open above the tuberosity of the palate-bone, the outer being sometimes called external palatine canal. It transmits the nerves and vessels which bear its name. The foramen is called *f. palatinum posterius.* **P. cells,** ethmoid cells formed by union with the palate-bone. **P. fos′sæ,** inferior palatine canal. **P. glands,** numerous small racemose glands, which abound especially on the upper surface of the palate and also in the uvula. **P. mem′brane,** the fibromucous membrane lining the palate or roof of the mouth. **P. nerves,** three in number, arise from the inferior part of the sphenopalatine ganglion: 1. *Great palatine,* situated anteriorly to the two others, descends into the posterior palatine canal; gives a *nasal* filament and a *staphyline* filament, and is distributed on the palate. 2. *Middle palatine,* arising behind the preceding, enters one of the accessory palatine canals and is distributed to the tonsils and velum palati. 3. *Little palatine nerve,* situated still farther back than the last, which loses itself by several filaments in the uvula, tonsils, and follicles of the palatine membrane. **P. pro′cess of supe′rior maxil′la,** palate process. **P. ridg′es,** tense eminences on the mucous membrane of the hard palate, less marked in the adult than in the fœtus and lower animals, being in the latter important masticating organs; a median ridge is the raphe; others run obliquely backward from the incisor teeth. **P. sec′tor,** area in the median plane of the skull between lines drawn from the hormion to the staphylion and to the alveolar point (Lissauer). **P. spine,** posterior nasal spine; see *Nasal spine.* **P. ster′tor,** see *Stertor.* **P. su′ture,** suture formed by the union in the median line of the palate-bones behind and the palate processes of the superior maxillary in front. **P. s., transverse′,** between the horizontal plates of the palate-bones behind and the palate processes of the superior maxilla in front. **P. tri′gone,** small, triangular space at the junction of the zygomatic surface of the superior maxillary bone with the nasal and orbital surfaces, on which the orbital plate of the palate rests. **P. veins,** those supplying the soft palate; the *inferior* is tributary to the facial; the *superior,* to the internal maxillary.

**Palati′tis.** Inflammation of the palate.

**Palato-.** In composition, palate.

**Palatoglos′sal fold.** Anterior pillar of the fauces.

**Palatoglos′sus.** Glossostaphylinus muscle.

**Palatognath′us** (*gnathos,* jaw). One having congenital cleft palate.

**Pal′atograph** (*grapho,* to write). An instrument for recording the movements of the soft palate during phonation.

**Palatola′bial.** Relating to the palate and lips.

**Palatomax′illary arch.** Maxillary arch. **P. ar′tery,** superior palatine artery.

**Palatomy′ograph** (*mys,* muscle). Palatograph.

**Palatopharyn′geal.** Relating to palate and pharynx. **P. fold,** posterior pillar of the fauces.

**Palatopharynge′us** or **Palatopharyngolaryngе′us.** Membranous muscle, broader at its middle than at its extremities, situated vertically in the lateral wall of the pharynx and velum palati. It includes the peristaphylopharyngeus, pharyngostaphylinus, and thyrostaphylinus of Winslow. When the palatopharyngei contract together they depress the velum, elevate and shorten the pharynx, and act principally in deglutition.

**Pal′atoplasty** (*plasso,* to form). Operation for closing the palatine vault.

**Palatople′gia** (*plege,* stroke). Paralysis of the palate.

**Palator′rhaphy** (*rhaphe,* suture). Operation for uniting a cleft palate.

**Palatosalpinge′us.** Tensor palati muscle.

**Palatoschisis,** pal-at-os′ke-sis (*schisis,* cleft). Cleft palate.

**Palatostaphyli′ni.** See *Azygos muscle.*

**Pal′ato-uvula′ris.** Azygos uvulæ.

**Pala′tum.** Palate. **P. du′rum,** hard palate. **P. fis′sum,** fissure of the palate; see *Harelip.* **P. mo′bile,** velum pendulum palati. **P. mol′le,** velum pendulum palati. **P. os′seum,** hard palate. **P. pen′dulum,** velum pendulum palati.

**Pale.** Pallid, whitish. **P. bark,** pale cinchona. **P. cat′echu,** see *Gambier.* **P. cincho′na,** term applied on account of color of powder to several commercial varieties of cinchona bark, principally *Cinchona officinalis, C. nitida,* and *C. micrantha.* It contains a much larger proportion of cinchonine and quinidine or cinchonidine than of quinine. **P. lau′rel,** Kalmia glauca. **P. rose,** petals of Rosa centifolia, used in various forms as a fragrant vehicle.

**Pa′lea cabot′ii.** A fern of Java, the delicate filaments of which, derived from the stipes, act as mechanical styptics.

**Pale′ness.** Whiteness of complexion; pallor; it appears to be owing to a diminution or alteration of the blood circulating in the capillary vessels.

**Paleontol′ogy** (*palaios,* old, *onta,* beings, *logos,* discourse). Science dealing with ancient forms of life.

**Pa′li plague.** See *Plague.*

**Palicour′ea cro′cea.** Ord. *Cinchonaceæ,* a native of the West Indies; emetic. **P. diuret′ica,** native of Brazil; leaves are employed in dropsy and erysipelas; fruits are poisonous. **P. marcgrav′ii,** native of Brazil; poisonous, and employed there to kill rats and mice. **P. officina′lis,** native of Brazil; reputed to be a powerful diuretic in small doses. **P. speci′o′sa,** goldshrub, native of New Granada and Brazil; leaves are considered to be antisyphilitic; decoction in large doses is poisonous. **P. stre′pens,** native of Brazil; fruit is poisonous, and has diuretic properties; leaves are employed for the same purpose as those of Palicourea officinalis. **P. tincto′ria,** Psychotria tinctoria.

**Palicoureatan′nic acid.** Tannic acid derived from Palicourea marcgravii.

**Palicou′ric acid.** Acid derived from Palicourea marcgravii, with a sour taste, and occurring in needle shape; soluble in water, and non-toxic.

**Palil′lo.** Campomanesia lineatifolia.

**Palimpis′sa.** Pinus sylvestris.

**Palin′drome** or **Palindro′mia** (*palin,* again, *dromos,* course). Relapse; recurrence of a paroxysm or disease.

**Palindro′mic.** Recurring, relapsing.

**Palingen′esis** (*palin*, again, *genesis*, generation). Regeneration.

**Palinod′ia** (*palin*, again, *hodos*, way). Bending backward. Relapse.

**Palirrhœ′a** (*palin*, again, *rhoia*, discharge). Recurrence of a mucous flux. Regurgitation.

**Palla′dium.** Rare metal, symbol Pd, the chloride of which when given internally for a long time is said to produce albuminuria and renal disease.

**Pallia′tion** (*pallium*, cloak). Act of palliating; that is, of causing the symptoms of a disease to mitigate, without curing it. Amelioration, mitigation. The medical art can frequently only moderate the symptoms of a disease, prevent it from making progress, prolong the days of the patient, and diminish his suffering; this is palliative treatment.

**Pal′liative.** Antipathic, enantiopathic. Remedy or mode of treatment which only relieves a disease, without curing it. Opposed to radical treatment.

**Pal′lid.** Pale.

**Pallid′ulus** (dim. of *pallidus*, pale). Albino. Paleness of the skin or of a wound.

**Pal′lidus mor′bus.** Chlorosis.

**Pal′lium cer′ebri.** Mantle (of the brain). See *Mantle*.

**Pal′lor.** Paleness. **P. cu′tis,** pallor of the skin. **P. defec′tu san′guinis,** pallor resulting from loss of blood. **P. lu′teus,** chlorosis. **P. morbo′sus,** pallor caused by disease. **P. vir′ginum,** chlorosis.

**Palm.** Thenar. The hollow or inside of the hand; limited without by the thenar eminence, which answers to the thumb; within, by the hypothenar eminence, which answers to the little finger; above, by the wrist-joint; and below, by the four fingers. A tree of the order *Palmaceæ*. **P. but′ter** or **P. oil,** bland, butter-like fixed oil; orange-yellow, agreeable odor; from outer coating of fruit of *Elais guineensis;* see *Cocos butyracea*. **P. gomu′to,** see *Toddy*. **P. su′gar,** jaggery, made from the juice of various species of palm. **P. wax,** vegetable wax from the bark of *Ceroxylon andicola,* a South American palm.

**Pal′ma.** Palm. **P. Chris′ti** (palm of Christ), Ricinus communis. **P. co′cos,** Cocos nucifera. **P. dactylif′era,** date tree. **P. hu′milis,** Musa paradisiaca. **P. in′dica vina′ria secun′da,** see *Toddy*. **P. ma′nûs,** palm of the hand. **P. plica′ta,** arbor vitæ of the uterus. **P. unguentario′rum,** myrobalanus.

**Pal′mar** (*palma*, palm). Concerning the palm of the hand. The palm has sometimes been divided into three regions called: External palmar, corresponding to the thenar eminence; internal palmar, formed by the hypothenar eminence; and middle palmar, the hollow of the hand. **P. aponeuro′sis,** palmar fascia, strong, triangular aponeurosis arising from the inferior tendon of the palmaris brevis and the anterior annular ligament of the carpus; covering the whole palm of the hand, and adhering somewhat strongly to the skin of the part. It divides into processes which pass to the bases of all the digits; see *Sulcus digitalis anterior*, *Sulcus digitalis posterior*, *Sulcus longitudinalis*, and *Sulcus pollicis*. The *palmar ligaments* are small, very numerous fibrous fasciæ which unite the different bones of the carpus and metacarpus. **P. arch′es,** curved extremities of the radial and cubital arteries in the palm of the hand. There are two: the cubital or superficial furnishes at its convexity toward the fingers the collateral arteries of the fingers and the internal collateral of the thumb; the radial, profound or deep-seated, is deep in the palm of the hand, beneath the tendons of the flexor muscles of the finger, and gives some small branches only to the surrounding parts. The palmar veins accompany the corresponding arteries. **P. ar′teries,** see *Palmar arches*. **P. cuta′neous nerve,** branch from the median, arising above the wrist, supplies the integument of the palm. **P. dig′ital ar′teries,** branches from the superficial palmar arch, the inner supplying the ulnar side of the little finger, three others passing in the intermetacarpal spaces to the roots of the fingers, where they divide into collateral digital arteries. **P. fas′cia,** palmar aponeurosis. **P. folds,** lines upon the skin of the palm shaped like capital *M*, caused by the movement of the muscles of the hand. **P. interos′seous ar′teries,** branches of the deep palmar arch in the interosseous spaces, joining the palmar digital arteries. **P. i. mus′cles,** see *Interosseous muscles*. **P. lig′aments,** see *Palmar aponeurosis* and *Digital fibrocartilages*. **P. mus′cles,** three in number: 1. *Palmaris magnus*, long, fusiform muscle which passes obliquely from the inner tuberosity of the humerus to the upper extremity of the second metacarpal bone; it bends the hand. 2. *Palmaris longus*, situated on the inner side of the palmaris magnus; very slender, and passes from the inner tuberosity of the humerus to the anterior annular ligament of the carpus and to the palmar aponeurosis, which it seems to form by the vanishing of its fibres; stretches the palmar aponeurosis and bends the hand. 3. *Palmaris brevis*, small, thin, quadrilateral muscle, situated before the thenar eminence; passes from the annular ligament of the carpus to the integuments of the palm of the hand, which wrinkles by its contraction. **P. nerves,** branches of the ulnar, accompanying the deep palmar arch. **P. re′flex,** involuntary flexion of the fingers caused by tickling the palm. **P. veins,** see *Palmar arches*.

**Palma′res interos′sei.** See *Interosseous muscles*.

**Palma′ris anti′cus.** Palmaris magnus. **P. bre′vis** or **P. cuta′neus,** see *Palmar muscles*. **P. inter′nus,** p. longus. **P. lon′gus,** see *Palmar muscles*. **P. lon′gus bicauda′tus,** variation of p. longus, having two tendons of insertion. **P. mag′nus,** see *Palmar muscles*.

**Palmaro′sa oil.** Oil derived from Andropogon schœnanthus; is added to attar of roses for purposes of adulteration.

**Palma′ta.** Palma Christi.

**Palmatin′** or **Palmitin′.** Solid, crystallizable fat occurring in the medullary sheath of nerves.

**Pal′mature.** Condition in which the fingers are united, either as a congenital deformity or the result of burns or injuries.

**Palmel′la.** Algæ division of the *Cyanophyceæ*. **P. cruen′ta,** gory dew; alga growing on the sides of wells or on water. **P. febri′lis,** alga occurring on marshes; spores were formerly reputed to give rise to intermittent fever. **P. infusio′num** (Ehrenberg), Bacillus termo. **P. prodigio′sa,** Bacillus prodigiosus.

**Palmellin′.** Substance giving red color to palmella cruenta; it resembles hæmoglobin.

**Palmelli′na capillo′rum** (Radlkoffer and Bulh). Microorganism detected in the scalp.

**Palmet′to.** Genus of palms. **Saw p.,** Chamærops serratula.

**Pal′mic.** Pertaining to palpitation or pulsation.

**Palmil′la.** Palmella.

**Palmin′.** A substance formed by the action of hyponitrous acid on castor-oil.

**Pal′mipede** (*palma*, palm of hand, *pes*, foot). Web-footed.

**Palm′istry** (*palma*, palm of hand). Chiromancy; fortune-telling by means of the lines and other markings on the palm of the hand.

**Pal′mitate.** Salts of palmitic acid.

**Palmit′ic acid.** $C_{16}H_{32}O_2$. Colorless, odorless, tasteless solid, existing in free state in old palm oil, sometimes in pus from gangrenous parts, and in combination with glyceryl of palmitin.

**Palmitin′.** Tripalmitate of glyceryl; occurs in palm oil and other liquid oils, as well as in butter and human fat.

**Pal′mityl.** $C_{16}H_{33}O$. Radical of palmitic acid.

**Palmoplan′tar phenom′enon.** See *Filipowicz's sign*.

**Palmos′copy** (*palmos*, palpitation, *skopeo*, to view). Investigation of the beating of the heart and pulse.

**Palmospas′mus** (*palmos*, palpitation, *spasmos*, spasm). Violent clonic spasm. **Elec′tric p.,** palmospasmus following electrical stimulation, occurring in progressive muscular atrophy.

**Palmos′sei.** Palmar interosseous muscles. See *Interosseous muscles.*

**Pal′mus.** Palpitation; twitching; convulsive tic. Pulsation; subsultus. **P. cor′dis,** palpitation. **P. plumba′rius,** metallic colic. **P. vom′itus,** vomiting.

**Pa′lo armago′za.** Bitter tree of Texas. Roots and stems have been employed in diarrhœa and dysentery. **P. de calentu′ras,** fever wood, calenturas, cinchona. **P. de campe′che,** hæmatoxylon. **P. del muer′to,** Ipomœa muricoides. **P. san′to,** Guaiacum officinale. **P. de vac′ca,** galactodendron. **P. de ve′las,** Parmentiera cerifera.

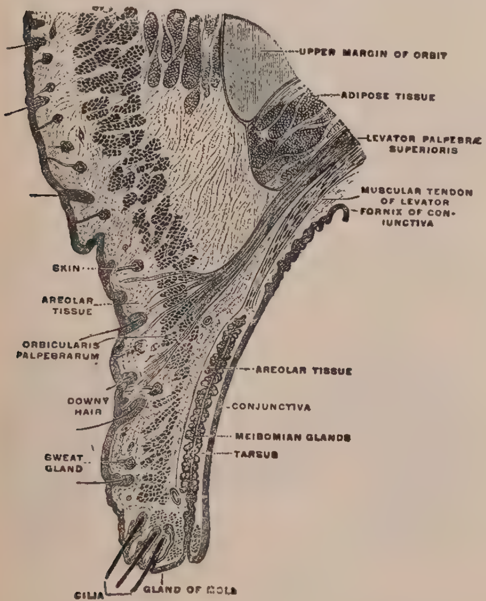
**Pal′pable.** Appreciable to the touch.

**Pal′pate.** To make palpation.

**Palpa′tion** (*palpo,* to feel). Sense of touch. Also the mode of exploring diseases by feeling or pressing upon the diseased organ with the fingers of one hand or of both hands. A delicate and discriminating touch—*tactus eruditus*—is important in the diagnosis of many morbid conditions. **Abdom′inovag′inal p.,** palpation of the pelvic organs by introducing a finger of one hand into the vagina and placing the other hand over the abdominal region. **Biman′ual p.,** abdominovaginal p.

**Palpatom′etry** (*palpo,* to feel, *metron,* measure). Estimation of degree of tenderness over particular areas by means of an instrument giving graduated pressure.

**Pal′pebra** (gen. and pl. palpebræ). Eyelid. Two movable vela situated in front of the eye which by their separation permit the organ to receive the impression of light, or by their greater or less occlusion protect it from the influence of too great light or from the action of extraneous bodies; separated above from the forehead by the eyebrows, and confounded below with the cheeks. The upper eyelid is much broader and more movable than the lower. They are separated by a transverse cleft, *fissura* or *rima palpebrarum,* and their edges are thick and furnished with the cilia or eyelashes. Supported by the tarsal cartilages, they unite at the extremities of the transverse diameter of the orbit, forming two angles, the innermost being called the *greater angle of the eye* or *inner* or *greater canthus;* the other, the *lesser* or *external angle* or *canthus.* When brought together a triangular space is left between their posterior surfaces and the conjunctiva, which has been called *rivus lacrymalis.* They are formed: 1, of a thin dermoid texture; 2, of a muscular membrane—a portion of the orbicularis; 3, of a particular fibrous membrane; 4, of the tarsi; 5, of a mucous membrane—a part of the tunica conjunctiva. Their vessels and nerves are called palpebral. **P. fico′sa,** old name for trachoma. **P. infe′rior extror′sum flex′a,** ectropion. **P. ter′tia,** valvula semilunaris.



Upper eyelid in sagittal section. (Meckel.)

**Pal′pebræ superio′ris pri′mus** (first muscle of the upper eyelid). Levator palpebræ superioris.

**Pal′pebral.** Belonging or relating to the eyelid. **P. ar′teries,** arteries distributed to the eyelids, two in number, an upper and a lower. The former arises from the ophthalmic, a little beyond the cartilaginous pulley of the greater oblique muscle, and descends toward the upper eyelid, over which it is distributed. The latter arises at the side of or a little behind the preceding, and sends its ramifications to the lower eyelid and the neighboring parts. **P. car′tilages,** tarsal cartilages. **P. conjuncti′va,** conjunctiva lining the eyelids. **P. fas′cia** limits the orbit in front, arises from the periorbital membrane, passes to the tarsi. **P. fis′sure,** slit separating the eyelids from each other. **P. flux,** a puriform discharge furnished by the glands of Meibomius when inflamed, and to which Scarpa attributed fistula lacrymalis in many cases. **P. folds,** formed by reflection of the conjunctiva from the lids to the eyeball. **P. fol′licles,** Meibomian glands. **P. lig′aments,** superior and inferior. Some anatomists, with Winslow, have described under this name the fibrous layer which is attached, on the one hand, to the outer part of the circumference of the orbit; on the other, to the tarsal cartilages. **P. mus′cles,** thin sheets of nonstriated muscle inserted upon the tarsi; the inferior p. muscle is connected behind with the facial process of the inferior rectus; the superior p. muscle is better known as the *orbitopalpebralis.* **P. nerves,** arise particularly from the frontal and lacrymal branches, from the ophthalmic nerve of Willis, and from the facial, nasal, and infraorbital branches of the superior maxillary nerve. **P. veins,** these accompany the arteries, except that some of them empty into the temporal, others into the labial, veins.

**Palpebra′lis.** Orbicularis palpebrarum; orbitopalpebralis; levator palpebræ superioris. **P. infe′rior** and **P. supe′rior,** see *Palpebral muscles.*

**Pal′pebrate.** To wink. Having eyelids.

**Palpebra′tion** (*palpebra*). Winking. Nictation.

**Palpebri′tis.** Inflammation of the eyelid.

**Pal′pitate.** To beat rapidly or flutter. See *Palpitation.*

**Palpita′tion** (*palpito,* to throb). A name given to the pulsations of the heart when they become stronger, more extensive, or more sensible to the individual than ordinarily. Palpitations occur in a number of affections; sometimes owing to organic diseases of the heart—hypertrophy, inflammation, etc.; at others, to a disease in some other viscus; while frequently they are merely nervous. Palpitation is sometimes felt in the arteries, constituting *palpitatio arteriosa,* arterial palpitation. **Cœ′liac p.,** palpitation of the abdominal aorta. **P. of the heart,** palpitation. **Symptomat′ic p.,** palpitation as a symptom of disease, not of the heart only, but of other conditions—tænia in the intestines, for example.

**Pal′sied.** Paralytic.

**Pal′sy.** Paralysis. **Bell's p.,** paralysis of the facial nerve. **Birth p.,** spastic diplegia; spasm of all the extremities at birth or soon afterward. **Creep′ing p.,** progressive muscular atrophy. **Crossed p.,** see *Hemiplegia.* **Crutch p.,** see *Crutch.* **P. of the extrem′ities;** paralysis of the upper or lower extremities. **Fa′cial p.,** or **mim′ic fa′cial p.,** see *Paralysis, Bell's.* **Ham′mer p.,** see *Hammer.* **Histrion′ic p.,** Bell's paralysis. **Hyster′ical p.,** paralysis, psychical. **Lead p.,** metallic palsy, painters' paralysis or palsy, lead tremor; paralysis of the upper extremities especially, induced by poison of lead.

**Mercu′rial p.**, mercurial tremor, mercurial shaking palsy, mercurial trade disease; paralysis induced by the poison of mercury. **Metal′lic p.**, see *Palsy, lead*, and *Tremor*. **Night p.**, perverted sensibility of the hands at night. **Paint′ers' p.**, lead p. **Panama′ p.**, beriberi. **Pen p.**, writers' cramp. **Psych′ical p.**, hysterical paralysis. **Seam′stress's p.**, sempstress's p. **Scriv′eners' p.**, writers' cramp. **Semp′stress's p.**, sempstress's cramp; an affection analogous to writers' cramp; usually consists in an entire or partial loss of sensation at the end of the right thumb and index finger, with inability to hold the needle. **Sha′king p.**, paralysis agitans; mercurial palsy; see also *Tremor*. **Transverse′ p.**, see *Hemiplegia*. **Trem′bling p.**, paralysis agitans. **Ves′ical p.**, paralysis of the bladder. **Wast′ing p.**, progressive muscular atrophy.

**Pal′sywort.** Primula veris.

**Pal′ta.** Persea gratissima.

**Palu′dal** or **Palus′tral** (*palus*, marsh). Relating to a marsh or to emanations from it. **P. fe′ver**, malarial fever.

**Paluda′pium** (marsh apium). Apium graveolens.

**Pal′udism.** Chronic malaria.

**Palu′dose** or **Palu′dous.** Paludal.

**Pa′lus.** Marsh. Penis. **P. sanc′tus**, guaiacum.

**Palus′tral** or **Palus′trine.** Paludal.

**Pambio′ma** (*pas*, all, *bios*, life). General principle of life.

**Pambota′no.** Native name of Mexican tree, Calliandra houstoni; used in decoction and alcoholic elixir in malarial poisoning.

**Pampha′gous** (*pas*, all, *phago*, to eat). Omnivorous.

**Pampho′bia.** Panophobia.

**Pampin′iform** (*pampinus*, tendril, *forma*, form). Of tendril shape. **P. plex′us**, corpus pampiniforme; much-convoluted portion of spermatic and ovarian veins, where they lie in the spermatic cord or broad ligament.

**Pampin′ocele.** Varicose condition of the pampiniform plexus.

**Pample′gia** or **Panple′gia** (*pas*, all, *plege*, a stroke). Paralysis of the whole body. Also bilateral hemiplegia, in which the upper and lower extremities on both sides are paralyzed from cerebral lesion.

**Pan-** (*pas, pasa, pan*, all). In composition, all.

**Pan.** An open vessel or anything shaped like it. **Brain p.**, cranium. **Knee p.**, patella.

**Panace′a** (*pan*, all, *akos*, cure). A pretended universal remedy or cure-all. **P. an′glica**, magnesia. **P. du′cis Holsa′tiæ**, potassi sulphas. **P. duplica′ta**, potassii sulphas. **P. lapso′rum**, Arnica montana. **P. mercuria′lis**, hydrargyri submurias. **P. mercu′rii ru′bri**, hydrargyri nitrico-oxidum. **P. pec′toris**, Glechoma hederacea. **P. universa′lis**, kermes mineral. **P. vegetab′ilis**, crocus.

**Pan′acon.** White, tasteless substance, obtained by the action of sulphuric acid upon panaquilon.

**Pana′da** (*panis*, bread). Bread boiled in water to the consistence of pap, sometimes administered to the sick.

**Pan′ais.** Pastinaca sativa.

**Panama′ fe′ver.** Malarial fever of the Isthmus; sometimes applied to yellow fever. **P. paral′ysis**, beriberi.

**Pana′quilon.** Amorphous sweet principle found in ginseng.

**Pan′aris.** Paronychia. **P. cuta′neum**, onychia. **P. gangræno′sum**, panaris septicum. **P. sep′ticum**, paronychia of septic origin. **P. subungua′le**, onychia.

**Panarit′ium.** Felon, whitlow, periphalangeal cellulitis. **P. anal′gicum**, painless whitlow; Morvan's disease. **P. tendino′sum**, acute infective inflammation of the sheath of a tendon, generally of a finger, more rarely of a toe.

**Pana′rium.** Paronychia.

**Panarthri′tis** (*pan*, all, *arthron*, joint). Inflammation of all the tissues of a joint. General inflammation of a joint. **P. u′rica**, arthritis uratica.

**Pan′a's solu′tion.** Mild, antiseptic collyrium used in conjunctivitis, blepharitis, etc., consisting of biniodide of mercury, 1 part; absolute alcohol, 400; distilled water to 20,000 parts.

**Pan′ax.** A genus of plants, ord. *Araliaceæ*. **P. cochlea′tus**, shrub growing in the Moluccas and Java; root is diuretic and diaphoretic; the young leaves are edible, and are applied externally as an application in mastitis. Gum-resin is obtained from the stem, resembling opopanax. **P. costi′num**, Pastinaca opopanax. **P. fructico′sum**, native of the Molucca Islands and certain parts of Asia; has diuretic and emmenagogue virtues. **P. heracle′um**, Pastinaca opopanax. **P. pastina′ca**, Pastinaca opopanax. **P. quinquefo′lium**, ginseng, redberry, five fingers; grows in North America. The root, *radix ginseng*, is about the thickness of the little finger, an inch or two in length, often dividing into two branches, of a whitish-yellow color, wrinkled on the surface, and of a compact, almost horny, texture; it has no smell, but a very sweet taste, combined with a slight degree of aromatic bitterness. It is a gentle and agreeable stimulant. **P. shin′seng**, Asiatic ginseng, a native of Asia, has been usually confounded with P. quinquefolium.

**Panbio′ma.** Pambioma.

**Panblas′tic** (*pan*, all, *blastos*, germ). Originating from all the germinal layers.

**Panbota′no.** Pambotano.

**Pancardi′tis.** Inflammation of the whole heart.

**Pan′coast's amputa′tion.** Amputation at the knee-joint; see *Amputation*.

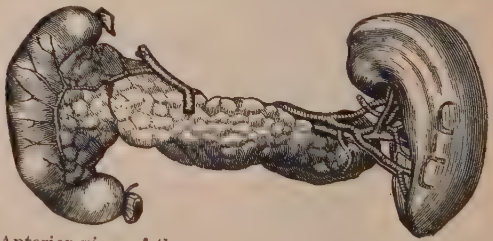
**Pancœ′nus** (*pan*, all, *koinos*, common). Pandemic.

**Pancrat′ic** (*pan*, all, *kratos*, power). All-powerful; very potent.

**Pancra′tium.** A genus of plants, ord. *Amaryllideæ*. **P. marit′imum**, bulbous plant, native of Europe; medicinal properties resemble those of squill; grows wild in Southern U. S., near the seacoast. **P. ve′rum**, Scilla maritima.

**Pancrea′den** (*aden*, gland). Preparation of pancreas for medical use.

**Pan′creas** (*pan*, all, *kreas*, flesh). Sweetbread. Gland, deeply seated in the abdomen and lying transversely on the vertical column, between the three curvatures of the duodenum, behind the stomach, and to the right of the spleen. Its left extremity, the tail, is smaller than the right, the head. The body and the tail are described under the name *portio gastrica*. At its right portion it has almost always a greater or less prolongation from the head, called by Winslow and some others the lesser pancreas, *pancreas minus* or *parvum*. It resembles the salivary glands in structure, and has been called the abdominal salivary gland; composed of lobes and granulated lobules, distinct, and united by areolar tissue. From each of the granulations of these lobes arise the radicles of its excretory duct, which are very delicate and united like veins. The duct itself, *pancreatic duct*, canal or duct of Wirsung, proceeds in a serpentine course through the substance of the organ; behind the second portion of the duodenum it becomes free, and is of the size of a crow's quill. It opens at an acute angle into the choledoch duct, or proceeds close to it, opening separately into



Anterior view of the pancreas, spleen, and duodenum with the blood-vessels injected.

the duodenum. At times there is another pancreatic duct, smaller, proceeding from the summit of the head of the gland, and opening separately into the duodenum above the choledoch duct in man. This has been named *ductus pancreaticus superior*.

The following are some of the measurements of this organ (Krause):

| | |
|---|---|
| Weight | 66–102 gm. |
| Length | 190–220 cm. |
| Thickness (in the middle) | 15 |
| Breadth | 40 (a little more at the head). |
| Diameter of pancreatic duct at the head | 2.3 |

The pancreatic arteries are very numerous and small. They proceed from the cœliac, splenic, superior mesenteric, right gastroepiploic, coronaria ventriculi, and left capsular. The veins open into the radicles of the vena porta, and particularly into the splenic and lesser mesenteric. Its nerves emanate from the solar plexus, and its lymphatics pass into the ganglions to which it gives its name. The pancreas secretes the *pancreatic juice*, which resembles the saliva and converts starch into dextrin and glucose. The quantity of pancreatic juice secreted is difficult to determine; it has been estimated at 200–350 grammes; in a woman, aged 78, suffering from a fistula, 80–125 c.c. were collected daily. Its great use appears to be to emulsify fatty matters by virtue of a peculiar albuminoid principle which it contains; it also dissolves albuminous substances. It contains four enzymes—an amylolytic, amylopsin; a proteolytic, trypsin; a fat-splitting, steapsin; and a milk-curdling. The pancreatic juice of the pig has been given in the form of emulsion —*pancreatic emulsion*—with the fat of beef, stirred in milk, to consumptive patients. An emulsion with cod-liver oil is similarly prescribed. **P. acces-so′rium**, pancreatic lobules detached from the main gland; have been found between the membranes of the stomach near the greater curvature in the wall of the jejunum, behind the superior mesenteric artery and vein, and even as far as the diverticulum ilei. **P. of Asel′li**, a collection of lymph glands at the root of the mesentery, sometimes regarded as an accessory pancreas. **P. divi′sum**, name given to the pancreas consisting of two divisions, which are united by Wirsung's canal. **P. mi′nus** or **par′vum**, the head of the pancreas, the duct of which sometimes empties into the duodenum independently of the common duct; also a partially detached portion lying behind the head. **Sec′ond p.**, Brunner's glands. **Small p.**, p. minus. **P. succenturia′tum** or **Supplemen′tary p.**, p. accessorium. **P. of Wins′low**, p. minus.

**Pancreatal′gia.** Neuralgic pain of the pancreas.

**Pancreatec′tomy** (*ektome*, excision). Excision of a portion or all of the pancreas.

**Pancreatemphrax′is** (*emphrasso*, to obstruct). Engorgement of the pancreas from obstruction of the duct.

**Pancreathelco′sis** (*helkos*, ulcer). Ulceration of the pancreas.

**Pancreat′ic.** Relating to the pancreas. **P. ar′teries**, see *Pancreas*. **P. col′ic**, abdominal pain due to obstruction of the pancreatic duct from concretions or calculi, and causing intestinal indigestion from non-action of the pancreatic juice on meat and fats. **P. di′astase**, amylopsin. **P. duct**, see *Pancreas*. **P. emul′sion**, see *Pancreas*. **P. juice**, see *Pancreas*. **P. nerves**, see *Pancreas*. **P. plex′us**, offshoot from the splenic plexus of sympathetic lying about the pancreatic vessels. **P. sarco′ma of Ab′ernethy**, tumor, in irregular masses, connected by loose fibrous substance, like the irregular masses of the pancreas; found in the areolar substance, but usually in the lymphatic glands, chiefly in the female breast. **P. veins**, see *Pancreas*.

**Pancreaticoduod′enal.** Relating to pancreas and duodenum. **P. ar′teries**, those supplying the pancreas and duodenum: *superior*, a branch of gastroduodenal; *inferior*, from superior mesenteric. **P. plex′us**, branches of hepatic plexus extending to p. artery. **P. vein**, tributary of portal, which gathers blood from the pancreas and duodenum.

**Pancreaticosplen′ic gland.** A lymphatic gland lying close to the splenic artery. **P. lig′ament**, fold of peritoneum extending from the tail of the pancreas to the spleen, connecting with the gastrosplenic omentum.

**Pancreatin′** or **Pancreati′num.** (Ph. U. S.) A mixture of the enzymes, or ferments, naturally existing in the pancreas of warm-blooded animals; usually obtained from the fresh pancreas of the hog. It has the property of emulsifying and decomposing fats, of converting starch into sugar, and of dissolving albumin, thus aiding the digestion of starchy, fatty, and albuminoid matters. Dose, gr. x–xxx (0.65–2.0).

**Pancreati′tis.** Inflammation of the pancreas. **Acute′ p.**, acute inflammation of the pancreas, characterized by severe abdominal pain and tenderness, vomiting, irregular pulse, and collapse; it is usually fatal. **Acute′ hemorrhag′ic p.**, apoplexy of the pancreas, acute pancreatitis in which hemorrhages occur into the tissue between the acini. **Chron′ic p.**, sclerosis of the pancreas, a secondary affection as a rule; usually attended by glycosuria.

**Pan′creatoid** (*pancreas*+*eidos*, appearance). Like the pancreas. A tumor resembling the pancreas in structure.

**Pancreat′olith** (*lithos*, stone). Calculus of the pancreas.

**Pancreat′omy** or **Pancreatot′omy** (*tome*, incision). Incision into the pancreas.

**Pancreaton′cus** (*onkos*, swelling). Tumor of the pancreas.

**Pancreatopty′alin.** Substance in pancreatic juice resembling ptyalin, but acting more energetically on starch.

**Pancreatorrha′gia.** Pancreatic hemorrhage.

**Pancreatot′omy** (*tome*, incision). Pancreatomy.

**Pancreazy′mase** (*zyme*, leaven). Ferment in the pancreas.

**Pancreëctomy** (*ektome*, excision). Pancreatectomy.

**Pancreolyt′ic.** Destructive to the cells of the pancreas.

**Pancreopath′ia** or **Pancreop′athy** (*pathos*, disease). Disease of the pancreas.

**Panda′nus.** Screw-pine of the Moluccas; leaves are used as an antidote to poisonous fish. **P. odoratis′simus**, screw-pine, fragrant Eastern species. Oil—keora oil—is obtained from the leaves; the fruit while still unripe is reputed to be used by the Chinese as an abortifacient; juice of the leaves is used in India in diarrhœa and dysenteric affections, and applied externally to wounds.

**Pande′mia.** Pandemic.

**Pandem′ic** (*pan*, all, *demos*, people). An epidemic which attacks the whole or a great part of the population of any locality; also one which is spread over the whole world.

**Pan′demy.** Pandemic.

**Pan′der's isl′ands.** Pigment patches, or corpuscles containing hæmoglobin, in Pander's layer. **P.'s lay′er**, layer of mesoderm made up of the wall of the alimentary tract.

**Pandicula′tion** (*pandiculo*, to stretch). Stretching; an action which consists in elevating the upper limbs and throwing the head and trunk backward at the same time that the lower limbs are extended. This series of motions of the extensor muscles is in some measure independent of the will, and is accompanied by yawning, which is equally involuntary. In health, stretching occurs before and after sleep, especially when we are fatigued. It is also observed at the onset of certain fevers, in hysteria, etc.

**Pa′ne's se′rum.** Antitoxic serum for pneumonia.

**Pang.** Brief but intense pain. See *Pain*. **Breast p.**, angina pectoris. **Brow p.**, frontal neuralgia.

**Pan′gen.** One of the active particles regarded as vehicles of hereditary characters in Darwin's hypothesis of pangenesis.

**Pangen′esis** (*pan,* all, *genesis,* generation). A provisional hypothesis advanced by Darwin to explain the phenomena of heredity; it assumes that the whole organization, in the sense of every atom or unit, reproduces itself; the fertilized egg or seed including and consisting of a multitude of gemmules thrown off from each separate part or unit of the parent organisms.

**Pangenet′ic.** Relating to pangenesis.

**Pan′gium edu′le** or **P. rum′phii.** Tree of East Indian Islands, known as the pangi; the whole tree has anthelmintic virtues and is narcotic.

**Panhidro′sis** (*pan,* all, *hidrosis,* sweating). Sweating over the whole body.

**Panhis′tophyton ova′tum.** Parasite of pebrine.

**Panhydrom′eter** (*pan,* all, *hydor,* water, *metron,* measure). Instrument to find specific gravity of any liquid.

**Panhyperæ′mia** (*pan,* all+*hyperæmia*). Plethora.

**Panhysterec′tomy** (*pan,* all, *hystera,* womb, *ektome,* excision). Total extirpation of the uterus.

**Pan′ic grass, Ital′ian.** Panicum italicum.

**Panic′ula.** Furuncle.

**Pan′icum dac′tylon.** Cynedon dactylon. **P. ital′icum,** Italian panic grass, Indian millet, Guinea corn, Barbadoes millet, sorghum, ord. *Gramineæ.* The seeds are much esteemed in Italy, being a constant ingredient in soups and made into a variety of forms for the table. **P. milia′ceum,** common millet; millet-seeds are esteemed a nutritious article of diet, and are often made into puddings. **P. mil′ium,** P. miliaceum.

**Panidro′sis** (*pan,* all, *hidros,* sweat). Panhidrosis.

**Pa′ni-gha′o.** Water itch.

**Pa′nis.** Bread. **P. canica′ceus,** bran bread. **P. ciba′rius,** syncomistos. **P. cucu′li,** Oxalis acetosella. **P. lax′ans,** biscuit prepared with jalap-resin in solution. **Mi′ca p.,** bread crumb. **P. porci′nus,** cyclamen.

**Paniv′orous** (*voro,* to devour). Subsisting on bread.

**Paniz′za's plex′uses.** Two plexuses of lymphatic vessels in the frænum of the prepuce.

**Panmeris′tic** (*pas,* all, *meros,* part). Made up of a multitude of units, as the ovum on the pangenetic theory.

**Panmix′ia.** Term applied to careless intercrossing, as in breeding of animals, or even in man.

**Pan′na.** Aspidium athamanticum. **P. root,** the rhizome used by natives of South Africa as a vermifuge.

**Pannecrot′omy** (*pas,* all, *nekros,* dead body, *tome,* cutting). Dissection of all bodies before interment, suggested as a means of preventing burying alive.

**Panneuri′tis.** Multiple neuritis. **P. epidem′ica,** beriberi.

**Pan′ni.** Swathing clothes.

**Pan′nicle.** Panniculus. Membrane.

**Pannic′ulus** (dim. of *pannus,* a web). A small membrane. Pterygion. **P. adipo′sus,** the general subcutaneous layer of fat. **P. carno′sus,** muscular web, mantle; a general covering found in the quadruped, and formed by a thin, subcutaneous muscle which serves to move the skin. It exists only in certain parts of the human body, as in the forehead, where it is formed by the occipitofrontalis; in the neck, by the platysma myoides; and in the scrotum, by the cremaster muscle. **P. cor′dis,** pericardium. **P. hymenæ′us,** hymen. **P. sub′tilis,** pia mater. **P. transver′sus,** diaphragm. **P. virgina′lis,** hymen.

**Pan′nikell.** Cranium.

**Panno′dic.** Panthodic.

**Pannos′ity** (*pannus,* a web). Softness of the skin.

**Pan′nus.** A piece of cloth; a web. A tent for a wound. An irregular nævus or mark on the skin. An opaque and vascular condition of the anterior membrane of the cornea, almost invariably produced by the continuance of purulent or strumous ophthalmia or by chronic inflammation of the cornea; this part becomes nebulous, covered with red vessels, and opaque; at times the sclerotic conjunctiva undergoes a similar change to that which occurs in the corneal portion. When the cornea is extremely vascular and opaque it is called *pannus crassus;* if the blood-vessels are few and scattered and the cloudiness is inconsiderable it is called *pannus tenuis.* When the disease is produced by external irritants, as by friction and irritation of the cornea, etc., the term *traumatic pannus* is applied to it. When pannus is attended with an extremely bloodshot condition of the eye it is called *pannus trachomatosus.* **P. cara′tus,** name applied to carate and mal del pinto. **P. carno′sus,** p. crassus. **P. cras′sus,** see *Pannus.* **P. hepat′icus,** chloasma. **P. herpet′icus,** herpes corneæ. **P. lenticula′ris,** ephelides. **P. lepro′sus,** pannus due to leprosy, affecting the palpebral conjunctiva. **P. lymphat′icus,** pannus phlyctænulosus. **P. phlyctænulo′sus,** opaque and vascular condition of the cornea due to inflammation of a phlyctenular type. **P. sarcomato′sus,** pannus crassus. **P. scrofulo′sus,** herpes corneæ. **P. sic′cus,** pannus associated with xerosis. **P. ten′uis,** see *Pannus.* **P. trachomato′sus,** see *Pannus.* **Traumat′ic p.,** see *Pannus.* **P. vesicato′rius,** blistering cloth; prepared by digesting powdered cantharides in sulphurous ether, evaporating, and spreading the oily mass remaining, melted with twice its weight of wax, on a cloth prepared with waxed plaster.

**Pano′chia.** Bubo.

**Panopep′tone** (*panis,* bread). A dietetic article composed of bread and peptonized meat.

**Panopho′bia** (*pan,* everything, *phobos,* fear). A morbid, apprehensive fear of impending evil.

**Panophthal′mia** or **Panophthalmi′tis** (*pas,* all, *ophthalmos,* eye). Inflammation of the whole eye, frequently producing loss of that organ. So many structures of the eye are involved in the suppurative form of choroiditis that by some the latter is considered synonymous with *panophthalmitis.*

**Panop′lites (Manso′nia) africa′nus** (Theobald). A mosquito, one of the carriers of the embryo of Filaria sanguinis hominis.

**Panosteï′tis** (*pas,* all, *osteon,* bone). Inflammation of the entire tissue of a bone.

**Panoti′tis** (*pas,* all, *ous,* ear). Inflammation of the whole ear, particularly the structures of the middle and internal portions.

**Panphar′macon.** Panacea.

**Panphleg′mon.** Gangrene characterized by great rapidity of development and termination.

**Panpho′bia.** Panophobia.

**Panple′gia.** Paralysis of the whole body.

**Pansclero′sis.** Complete induration of a part.

**Pansper′matism.** Panspermia.

**Pansper′mia** (*pan,* all, *sperma,* sperm). Theory of dissemination of germs, according to which ova or germs are disseminated over all space, undergoing development under favorable circumstances.

**Pansperm′ism.** Panspermia.

**Pansperm′y.** Panspermia.

**Pansphyg′mograph** (*pas,* all, *sphygmos,* pulse, *grapho,* to write). Cardiograph and sphygmograph combined.

**Pan′sy.** Viola tricolor.

**Pantad′enode** (*pas,* all, *aden,* gland). Consisting throughout of glandular tissue, the pancreas, for example.

**Pan′tagogue** (*pas,* all, *ago,* to drive out). Medicine that purges away all deleterious humors.

**Pantamor′phia.** General deformity.

**Pantamor′phic.** Generally amorphous or deformed.

**Pantanencepha′lia.** Entire absence of brain—the same as anencephalia; such a monster is said to be *pantanencephalic.*

**Pantankylobleph′aron** (*pas,* all, *ankyle,* stiff joint, *blepharon,* eyelid). Complete adhesion of eyelids to the eyeball and to each other.

**Pantapho′bia** (*pas,* all, *a,* priv., *phobos,* fear). Complete absence of fear.

**Pan′tas.** Dysentery in cattle.

**Pantatroph′ia** (*pas*, all, *atrophia*, atrophy). Universal atrophy.

**Pantat′rophous.** Total absence of nourishment.

**Panthod′ic** (*pas*, all, *hodos*, way). An epithet applied to a nervous action proceeding from one point and radiating in all directions.

**Pan′tices.** Ingluvies; intestines.

**Pant′ing.** Short and rapid breathing, as in asthma.

**Pantog′amy.** Promiscuous sexual connection.

**Pantoganglii′tis.** Cholera.

**Pantomor′phia** (*morphe*, shape). Perfect shape.

**Pantoph′agous.** Omnivorous.

**Pantopho′bia.** Panophobia.

**Pantopleth′ora.** Universal plethora.

**Pantoscop′ic** (*pas*, all, *skopeo*, to observe). Applying to all forms of vision, near and far, as a bifocal lens, so-called, arranged for distance or for reading.

**Pantozoö′tia.** Panzoötia.

**Panula′tus.** Resembling a weaver's shuttle; term applied to a furunculoid cutaneous lesion

**Pa′nus.** Non-suppurative inflammation of the lymphatic glands. See *Pannus.* **P. fau′cium,** tumefaction of the glands of the mouth. **P. inguina′lis,** bubo.

**Panyg′rous** (*pas*, all, *hygros*, moist). Wholly fluid.

**Panzoö′tia** or **Panzoöt′ic** (*pas*, all, *zoon*, animal). An endemic or epidemic disease of animals.

**Pa′o parei′ra.** Geissospermum læve.

**Pap** (*papilla*). Mamma; nipple. A soft food made of bread boiled or softened with water. **P. of the throat,** uvula.

**Papaïn′.** Albuminoid ferment from juice of the half-ripe fruit of Carica papaya, papaw tree; digests fibrin and albumin more readily than pepsin; recommended as a solvent of membrane in croup and diphtheria, also as a digestive in dyspepsia, gastric and intestinal catarrh, and as a galactagogue and anthelmintic.

**Pa′pas america′nus.** Solanum tuberosum, potato.

**Papa′ver.** White poppy, ord. *Papaveraceæ.* The nearly ripe capsule, *Papaverus capsulæ*, poppyhead, is used in fomentation as an anodyne and relaxant to inflamed or ulcerated parts. It is from the poppy that *opium* is procured. It is the concrete juice obtained after the flowering of the plant, by making longitudinal incisions in the unripe capsules, and is commonly obtained from the Levant or India, where the poppy grows abundantly. See *Opium.* **P. cerea′le,** P. rhœas. **P. cornicula′tum,** Chelidonium majus. **P. errat′icum,** P. rhœas. **P. lu′teum,** Chelidonium majus. **P. ni′grum,** variety of the white poppy producing black seeds. **P. rhœ′as,** systematic and pharmacopœial name of the red cornpoppy, cornrose, copper rose, red mailkes. Heads of this species contain a milky juice of a narcotic quality. A syrup of its flowers, *syrupus rhœados*, has been esteemed diaphoretic and slightly soothing, but the flower is more admired for its color than for any other property. **P. somnif′erum,** the source of opium; see *Papaver.*

**Papavera′ceous.** Resembling the poppy.

**Papavera′ceum** (*papaver*). Opiate.

**Papaveraldine′.** $C_{20}H_{18}NO_5$. Yellow, crystalline powder, derived from papaverine by oxidation.

**Papav′eric acid.** Coloring principle in red poppy petals.

**Papaverine′.** An alkaloid contained in opium.

**Papaverosine′.** Crystallizable alkaloid found in poppy capsules.

**Papaw′ tree** or **Papa′ya vulga′ris.** Carica papaya; fruit edible; juice of unripe fruit yields digestive ferment, papain. Papaw is also seed of Asmina triloba, having emetic properties.

**Papayin′.** Papain.

**Papayotin′.** Papain.

**Pa′per.** Charta. See *Blistering, Cantharides, Congo, Litmus, Medicated,* and *Turmeric paper.* **P. birch,** Betula papyracea. **Mus′tard p.,** charta sinapis.

**Papil′la** (pl. papillæ, which also see). End of the breast, the nipple. See *Nipple.* An eminence similar to a nipple. Name given to small eminences, more or less prominent, at the surface of several parts, particularly of the skin and mucous membranes, in which latter situation they are also called villi. See *Villous.* They contain the ultimate expansions of the vessels and nerves, and are susceptible in some cases of a kind of erection. They are also called *nervous papillæ.* **P. acus′tica basila′ris,** patch of nerve-endings on the wall of the cochlea; in amphibia and reptiles, a small, rounded eminence; in man, lengthened out to the organ of Corti. **P. basila′ris,** organ of Corti. **Conges′tion p.,** engorged papilla. **Den′tinal p.,** see *Tooth.* **Engorged′ p.,** congestion papilla; a swollen, prominent, and even bulging condition of the papilla of the optic nerve, seen in optic neuritis; see *Neuroretinitis.* **P. of the eye,** see *P., optic.* **Hair p.,** matrix pili. **P. of kid′ney,** conical projection of the apex of the pyramid of Malpighi into a calyx of the ureter; uriniferous tubules open upon it from the surface. **P. lacryma′lis,** see *Lacrymal puncta.* **Lin′gual p.,** see *Papillæ of the tongue.* **P. mam′mæ,** nipple. **P. ner′vi op′tici,** see *Optic nerve.* **Op′tic p.,** see *Optic papilla.* **P. palati′na,** eminence on the anterior portion of the palate, just behind the anterior palatine foramen. **P. pi′li,** see *Hair.* **P. ret′inæ,** optic disk. **P. saliva′lis bucca′lis,** eminence in the mouth opposite the second molar tooth of the upper jaw, where Stenon's duct discharges. **P. s. infe′rior,** sublingual caruncle. **P. s. supe′rior,** p. s. buccalis. **P. semiluna′ris,** crista acustica. **P. spira′lis,** projection made by the organ of Corti in preparation, showing cross-section of the ductus cochlearis. **P. sublingua′lis,** sublingual caruncle. **P. umbilica′lis,** rounded cicatricial stump remaining at the bottom of the umbilicus. **Va′ter's p.,** projection of the mucous membrane on the free edge of one of the valvulæ conniventes of the intestine.

**Papil′læ** (pl. of papilla, which also see). **P. calycifor′mes, P. capitat′æ, P. circumvalla′tæ, P. clava′tæ, P. con′icæ, Con′ical p., Conoi′dal p., P. conoi′deæ,** see *Papillæ of the tongue.* **P. corallifor′mes,** filiform papillæ. **P. co′rii,** papillæ of the skin. **P. cuta′neo-acust′icæ,** papilliform eminences. **P. cu′tis,** see *Cutis.* **Fil′iform p., Fun′giform p., Fun′goid p.,** see *Papillæ of the tongue.* **P. gus′tûs,** papillæ of the tongue. **P. of kid′ney,** see *Papilla of kidney.* **Lentic′ular p.,** see *Papillæ of the tongue.* **P. max′imæ, P. me′diæ, P. min′imæ, P. mino′res,** names given, from their size, to the various papillæ of the tongue. **Med′ullary p.,** small prominences on the medulla oblongata. **P. ner′veæ,** Pacinian corpuscles, see *Papilla.* **P. pyramida′les,** see *Papilla.* **P. re′num** or **rena′les,** see *Papilla of the kidney.* **P. semilenticula′res,** see *Papillæ of the tongue.* **P. tac′tûs** or **Tac′tile p.,** slight elevations of the skin containing the tactile corpuscles; for their dimensions, see *Cutis.* **P. of the tongue** are very numerous and marked. They are observed particularly at the upper surface of the organ, and are: 1. *Lenticular* or *semilenticular papillæ,* arranged at the base of the tongue in two oblique lines, having the shape of the letter V, and united angularly at the foramen cæcum. They have in general an ovoid or spherical shape, and seem to be mucous follicles similar to those of the palate, lips, etc. 2. *Fungiform* or *fungoid* or *capitate* or *clavate papillæ* are of indeterminate number, but always more numerous than the preceding. They are irregularly disseminated near the edge and the point of the tongue; have a rounded and flattened head, supported by a short and narrow footstalk. Their tint is whitish. *Conical, conoidal,* or *pyramidal papillæ* are the most numerous of all. Their arrangement is more regular in the forepart of the tongue than behind. They resemble small cones, the base being toward the tongue and the apex free. The anterior are very small, and have been called *filiform* or *villous papillæ*. They appear to be produced by the terminations of the filaments of the lingual nerve, and are surrounded by an evident vascular network. The *circumvallate, vallate, truncate,* or *calyciform papillæ* are a few large papillæ of the form of a truncated cone at the back part of the tongue; each is surrounded by a depressed ring with an elevated border. **Trun′cate p., P. valla′tæ, P. villo′sæ,** see *Papillæ of the tongue.*

**Pap′illar.** Papillary.

**Pap′illary.** Of or belonging to the nipple or to papillæ. **P. ar′teries,** main branches of the central artery of the retina; superior rises upward; inferior passes downward over the optic disk. **P. bod′y,** papillary layer of the corium. **P. lay′er of co′rium or skin,** external layer, containing papillæ. **P. mus′cles,** columnæ carneæ of the heart, attached only at their base to the wall. **P. tu′bercle of liv′er,** rounded projection from the Spigelian lobe opposite the transverse fissure. **P. tu′mor,** papilloma.

**Pap′illated.** Presenting papillæ, as the outer surface of the tongue.

**Papillec′tomy.** Excision of papillæ.

**Papil′liform** (*papilla + forma,* form). Having the appearance or shape of a papilla. **P. em′inences,** projections from the walls of the membranous semicircular canals, appearing to be similar to cutaneous papillæ.

**Papillifor′mis.** Mastoid. Papilliform.

**Papilli′tis.** Inflammation of the optic nerve entrance, not necessarily involving the rest of the nerve-trunk; usually symptomatic of lesions, particularly morbid growths in the brain; then commonly affects both eyes at once. See *Neuroretinitis.*

**Papillo′ma.** Papillary or villous tumor. Tumor whose specific elements are those of the papillæ of the normal skin, and which, consequently, is composed of a stem of fibrous or homogeneous connective tissue; is club-shaped, cylindrical, or acuminated, and covered with a layer of epithelial cells similar to those of the normal papillæ. **P. a′reo-eleva′tum,** mycosis fungoides. **Cys′tic p.,** see *Cystopapilloma.* **P. diffu′sum,** small tumors generally seen on the legs and buttocks, varying in diameter from 5 mm. to 2 cm. **P. mol′le,** p. mucosum. **P. muco′sum,** condyloma acuminatum. **P. neuropath′icum or neurot′icum,** unilateral papilloma along the course of a nerve. **P. papill′a,** strychnos ignatii. **P. of the skin,** corneous growths and even nævi are sometimes included under this head. **Ure′thral p.,** urethral caruncle or hemorrhoid. **Zymot′ic p.,** yaws.

**Papillomato′sis.** Condition characterized by the formation of papillomata. **P. universa′lis,** disease of the skin, occurring after an attack of variola, in which nearly the whole of the body is affected with papillomatous or verrucous lesions.

**Papillo′matous.** Relating to a papilloma.

**Papilloretini′tis.** Inflammation involving the optic disk and retina.

**Pap′illose.** Having the shape of papillæ or possessing papillæ.

**Papil′lous.** Papillary.

**Pap′in′s digest′er.** An iron vessel with air-tight lid in which substances can be boiled at a temperature much above that of boiling water.

**Pap′oid.** A digestive ferment from Carica papaya.

**Papoose′ root.** Caulophyllum thalictroides.

**Pap′pea capen′sis** (after a botanist of Leipzig). Small tree, ord. *Sapindaceæ,* common in Cafferland; the fruit is called wild plum. Furnishes a vinous beverage and excellent vinegar. Its kernel contains an oil which, although eatable, is somewhat cathartic, and is recommended as an external application in tinea capitis, alopecia, etc.

**Pappoose′ root.** Caulophyllum thalictroides.

**Pap′pose.** Covered with down or lanugo; downy.

**Pap′pus.** Down on the chin and cheeks. Lanugo.

**Pap′ula.** Small, acuminate elevation of the cuticle, with an inflamed base; very seldom containing a fluid or suppurating, and commonly terminating in scurf or desquamation. An eruption of pimples is called in Devonshire *murfles.* *Papulæ* is the first order of Willan and Bateman's arrangement of cutaneous diseases. **P. a′gria,** lichen agrius. **P. fe′ra,** lupus vulgaris, lichen agrius. **P. lenticula′ris,** lenticula. **P. mad′idans,** condyloma latum. **P. milia′ris,** miliary fever. **Moist p.,** condyloma latum. **P. muco′sa,** mucous patch. **P. typho′sa,** rose-colored eruption of typhoid fever.

**Pap′ulæ.** Lichen. **P. sic′cæ,** lichen. **P. sudora′les,** sudamina. **P. sudo′ris,** miliary fever. **P. syphilit′icæ hu′midæ,** condyloma latum.

**Papula′tion.** Formation and development of papules.

**Pap′ule.** Papula. **Moist or mu′cous p.,** condyloma.

**Pap′ulose.** Papulous, pimpled, papular. Of or belonging to, resembling, or covered with papulæ or pimples.

**Papulosquam′ous.** Papular and scaly.

**Papyra′ceous.** Paper-like or parchment-like; thin and dry. **P. fœ′tus,** mummified and compressed fœtus.

**Paquelin′s′ cau′tery.** Thermocautery in which the hollow, cauterized point is of platinum and contains spongy platinum. In use the point is first heated in the flame of a lamp, and heat is then maintained by forcing through spongy platinum vapor of benzol by means of hand spray-apparatus.

**Par.** Pair. **P. balnea′re,** trigeminal nerve. **P. facia′le,** p. septimum. **P. gustato′rium,** trigeminal nerve. **P. medul′læ pri′mum,** glossopharyngeal nerve. **P. m. secun′dum,** pneumogastric nerve. **P. nervo′rum,** pair of nerves. **P. no′num,** hypoglossus. **P. op′ticum nervo′rum,** optic nerve. **P. pri′mum nervo′rum cer′ebri,** olfactory nerves. **P. quar′tum,** pathetic nerve. **P. quin′tum nervo′rum cerebra′lium,** trigemini. **P. secun′dum nervo′rum,** optic nerve. **P. sep′timum,** facial or seventh nerve. **P. ter′tium,** motores oculorum. **P. trigem′inum,** gemini. **P. tri′um funiculo′rum,** trigemini. **P. va′gum,** pneumogastric. **P. visor′ium,** optic nerve.

**Para-.** Common prefix; by, near, contrary to, through (*per*); above and beyond (*ultra*); besides (*præter*). In certain terms, as in paracusis, parapsis, parabysma, etc., *para* means a defective or morbid condition.

**-para** (*pareo,* to bring forth). When joined to Latin numerals, as primipara, duipara or secundipara, tripara (contracted to I-para, II-para, III-para), etc., indicates the number of labors a woman has had.

**Para′ cress.** Spilanthes oleracea. **P. nut,** see *Pichurim beans.*

**Paraäcetamidophen′etol.** Phenacetin.

**Paraäcetanisidin′.** See *Methacetin.*

**Para-acetphenetidin′.** Phenacetin; colorless, inodorous, insipid crystals, readily soluble in alcohol, less so in water; melting-point 135.5° C.; antipyretic and analgesic in tuberculosis, peritonitis, typhoid fever, neuralgia, migraine, whooping-cough, epidemic influenza, etc.

**Paraæsthe′sia.** Paræsthesia.

**Paraæthoxyphenylureth′ane.** See *Thermodin.*

**Para-agam′macism** (*para,* beside, *gamma,* the Greek letter γ). Defect in speech, characterized by inability to pronounce *g,* and the use of other letters in place of it.

**Paraällylphenylmeth′yl e′ther.** See *Anethol.*

**Paraämidometaöxybenzo′ic acid meth′yl-es′ter.** Orthoform.

**Paraämidophe′nol.** Phenacetin.

**Para-anæsthe′sia.** Anæsthesia of the lower part of both sides of the body.

**Para-analge′sia.** Analgesia in a circumscribed form or involving the inferior half of the body.

**Paraäppendici′tis.** The last stages of appendicitis, in which the neighboring structures become involved.

**Parabal'anus** (*ballo*, to cast, to expose one's self). Name given by the ancients to a person who devoted himself to the service of the sick in hospitals, and particularly during epidemics and the plague.

**Paraban'ic acid.** Artificial derivative of uric acid by treatment with nitric acid (sp. gr. 1.3) at 70° C. Thin, colorless, sexagonal prisms.

**Parabin'.** See *Pararabin.*

**Par'ablast** (*para*, beside, *blastos*, germ). Nucleated layer of yolk immediately underlying the peripheral portions of the germinal area in the mesoblastic vertebrate ova.

**Parablas'tic.** Pertaining to or derived from the parablast; archiblastic.

**Parablasto'ma.** A tumor of parablastic tissue.

**Parablep'sis** (*blepo*, to see). False vision.

**Parabromacetan'ilid.** See *Antisepsin.*

**Parabu'lia** (*boule*, will). Disorder of the will.

**Parabuxine'.** Alkaloid found in the bark of Buxus sempervirens.

**Parabux'inide.** Crystallized alkaloid occurring in Buxus sempervirens.

**Parabys'ma** (*byo*, to stuff). Infarction or engorgement of an organ, as *parabysma lienis;* engorgement of the spleen. **P. mesenter'icum,** tabes mesenterica.

**Parabys'tia.** Engorgement or infarction of an organ with blood.

**Paracantho'ma** (*akantha*, thorn). Growth of the prickle-cell layer of the skin. **P. verruco'sum,** molluscum contagiosum.

**Paracantho'ses** (*para*, *akantha*, thorn). Diseases characterized by anomalies of growth of the prickle-cell layer of the skin.

**Par'acary.** Peltodon radicans.

**Paracaseïn'.** Substance resulting from the coagulation of caseinogen through the medium of the gastric juice or the enzyme of the pancreas.

**Paracel'sian.** Relating to, originating with, or called after Paracelsus, a Swiss chemist and physician of the sixteenth century. He counselled experiment and observation as a means of advancing medical science, and regarded organic chemistry as the basis of the same.

**Paracente'sis** (*para*, *kenteo*, to pierce). Operation of tapping to evacuate the collected fluid in ascites, ovarian dropsy, etc., receiving the names *p. capitis*, *p. abdominis*, *p. corneæ*, *p. vesicæ*, etc., according to the part selected for the operation. **P. thora'cis,** puncturing the thorax; thoracocentesis.

**Paracentete'rion** or **Paracentete'rium.** Small trocar employed by Nuck for puncturing the eye.

**Paracentet'ic.** Relating to paracentesis.

**Paracen'tral.** Close to or by the side of a centre. **P. gy'rus** or **lob'ule,** area between the callosomarginal and paracentral sulci on the median surface of the cerebral hemispheres. **P. sul'cus,** shallow furrow on the median surface of the cerebral hemispheres running upward from the callosomarginal sulcus.

**Paraceph'alus** (*para*, beside, abnormal, *kephale*, head). Monster with the head badly formed, but voluminous; face distinct, with a mouth, rudimental sensorial organs, and thoracic members. **P. a'pus,** variety of paracephalus in which the trunk and rudiments of the head are present, but limbs are absent. **P. di'pus,** paracephalus in which the limbs of the thorax may be lacking, but in which the limbs of the abdomen are present. **P. pseudo-acor'mus,** paracephalus with rudimentary trunk.

**Parachlorphe'nol.** A substitute derivative of phenol; active antiseptic; employed in tuberculous ulcerations, lupus, erysipelas, etc.

**Paracho'lia** (*chole*, bile). Morbid condition of the biliary apparatus or of the secretion of bile.

**Parachor'dal.** Applied to the cartilaginous mass investing the anterior extremity of the notochord in the embryo, subsequently forming part of the chondrocranium.

**Parachrœ'a** or **Parachroi'a** (*para*, beside, abnormal, *chroia*, color). Morbid change of color of the surface, especially of the face. **P. cærulo'sis,** cyanosis. **P. lap'idis inferna'lis,** argyria. **P. leuco'sis,** albinism. **P. melano'sis,** melanosis.

**Parachro'ma** (*chroma*, color). Parachrœa.

**Parachro'matin** (*chroma*, color). The portion of the groundwork of the nucleus of a cell which forms the cone-like or spindle-shaped figure.

**Parachro'matism.** Color-blindness.

**Parachromatoblep'sia** or **Parachromoblep'sia** (*blepo*, to see). False vision of colors.

**Parachromato'sis.** Pigmentary cutaneous affection.

**Parachromoph'orous** (*chroma*, color, *phoreo*, to bear) or **Parachromor'phous** (*morphe*, shape). Term applied to chromatogenous bacteria, the pigment being produced but continuing to be adherent to the cell-envelope.

**Parachro'sis.** Decoloration. Production of parachroma.

**Parachymosin'.** A form of rennet occurring in the human stomach and that of the pig.

**Parachymo'sis** (*chymos*, juice). Disorder of secretion.

**Paracine'ma.** Luxation.

**Paracine'sis** (*kinesis*, motion). Disease of the motor nerves; morbid movement of voluntary muscles.

**Paracinet'ic.** Relating to paracinesis or abnormal movements of the voluntary muscles.

**Paracit'ric acid.** Aconitic acid.

**Paraclo'nus.** Paramyoclonus.

**Parac'masis.** Decline, remission.

**Paracmas'tic** (*parakmazo*, to decrease). Epithet for a distemper which gradually decreases, or for the period of life when a person is said to grow old.

**Parac'me.** Decline, decadence, or involution.

**Paracne'mion.** Fibula.

**Parac'oe** (*akoe*, hearing). Perversion of hearing.

**Paracœ'le.** Lateral ventricle of the brain.

**Paracolpi'tis** (*para*, beside, *kolpos*, vagina). Inflammation of external coat of vagina or of parts around the vagina. **P. dis'secans,** variety of p. ending in suppuration and dissecting out of the entire vaginal tube.

**Paracol'pium.** Connective tissue about the vagina.

**Paracon'dyloid proc'ess.** Sometimes seen as a continuation, outward and downward, from the condyles of the occipital bone, articulating with the transverse process of the atlas.

**Par'acone.** Anterior outside cusp of a superior molar tooth.

**Paraco'nid.** Anterior inside cusp of an inferior molar tooth.

**Paraconine'.** Artificial alkaloid isomeric with natural conine and having its physiological properties.

**Parac'ope** (*parakopto*, to strike falsely). Slight delirium sometimes occurring in febrile diseases.

**Paracop'ic.** Slightly delirious.

**Paraco'to bark.** Bolivian bark; botanical origin undetermined; resembles coto bark in appearance and properties.

**Paracotoïn'.** $C_{19}H_{12}O_6$. Crystallizable, tasteless, proximate principle obtained from paracoto bark; dose, gr. ij (0.13) in diarrhœa and night-sweats.

**Paracoumar'ic acid.** Acid prepared by treating aloes with sulphuric acid.

**Paracou'sia** or **Paracou'sis.** Confused or disturbed hearing; see *Paracusis.*

**Paracreoso'tic acid.** Impurity in salicylic acid; thought to be cause of toxic action of the latter.

**Paracre'sol.** $C_7H_8O$. See *Metacresol.* **P. ben'zoate,** see *Benzoyl paracresol* and *Cresol.* **P. sal'icylate,** cresalol.

**Paracresotin'ic acid.** Cresotinic acid. **P. phe'nyl-es'ter,** methyl salol.

**Parac'rises** (*para*, beside, abnormal, *krisis*, secretion). Diseases of the secretory function.

**Paracru'sis** (*krouo*, to strike). Paracope.

**Paracrus'tic.** Slightly delirious.

**Paracu'sis** or **Paracu'sia** (*parakouo,* to hear wrong). Confusion or perversion of hearing; perverted audition. **P. a'cris,** painfully acute hearing and intolerance of the faintest sounds; symptom in otalgia, epilepsy, cephalitis, and febrile affections. **P. duplica'ta,** double hearing. **P. imagina'ria,** tinnitus aurium. **P. imperfec'ta,** double hearing. **P. lo'ci,** inability to tell whence sound proceeds. **P. obtu'sa,** hardness of hearing. **P. oxycoi'a,** p. acris. **P. perver'sa,** perverse hearing; the ear being sensible to articulate sounds only when excited by other and louder sounds intermixed with them. **P. willisia'na** or **willis'ii,** paracusis perversa.

**Paracus'ma.** Paracusis.

**Paracyan'ic acid.** Palurinic acid.

**Paracycle'sis** (*para,* beside, abnormal, *kyklesis,* circulation). Disease of the blood as regards its distribution and motion.

**Paracye'sis** (*para,* abnormal, *kyesis,* pregnancy). Morbid, preternatural, or extra-uterine pregnancy. **P. abor'tus,** abortion. **P. tuba'ria,** tubal pregnancy.

**Paracynanche,** par-ah-sin-an'ke (*para,* beside + *cynanche*). Inflammation of the external muscles of the larynx. A slight or unilateral cynanche.

**Paracys'tic.** Near or about the bladder.

**Paracys'tis** (*para,* beside, *kystis,* bladder). Connective tissue about the urinary bladder.

**Paracysti'tis.** Inflammation of tissues about the bladder.

**Paracys'tium.** Connective tissue about the bladder.

**Paracy'tic** (*kytos,* cell). Situated between cells.

**Paradeni'tis** (*para,* beside, *aden,* gland). Inflammation of the tissue around a gland.

**Paradesmo'sis** (*para,* beside, *desmos,* band). Irregular growth of connective tissue.

**Paradid'ymis.** Organ of Giraldès.

**Paradiethox'y-eth'enyl-diphe'nyl-am'idin.** Holocain.

**Paradioxyben'zene.** Hydroquinone.

**Paradioxyben'zol.** Hydroquinone.

**Paradiphe'nol.** Hydroquinone.

**Paradox'ia sexua'lis.** Appearance of sexual instincts before the genital organs are developed.

**Paradox'ical contrac'tion.** Contraction of muscle caused by passive approximation of its extremities. **P. deaf'ness,** paracusis willisiana. **P. pulse,** pulse that disappears during inspiration and returns during expiration, with no change in the action of the heart.

**Paraepidid'ymis.** Organ of Giraldès.

**Paræsthe'sia.** Abnormal or perverted sensation. **Ber'ger's p.,** see *Berger.* **Bern'hardt's p.,** see *Bernhardt.* **P. olfacto'ria,** parosmia. **P. sexua'lis,** disordered sexual instincts. **Vis'ceral p.,** abnormal sensibility referred to a viscus.

**Paræsthe'sis** (*para,* beside, *aisthesis,* sensation). Congenital malformation of any of the external parts of the organs of special sense. **P. audi'tus flac'ca,** broad, loose, and pendent lobe of the ear, congenital. Paræsthesia.

**Paræsthet'ic.** Having abnormal sensations.

**Para-ethox'y-phe'nyl-ureth'ane.** Thermodin.

**Par'affin** (*parum,* little, *affinis,* affinity). Solid or liquid product of destructive distillation of many organic substances, and a natural constitutent of petroleum, from which it is commercially prepared. It is a microcrystalline, inodorous mass, melting at 74° to 80° C. In chemistry, petroleum is a term applied to a series of hydrocarbons homologous with methane, having the general formula $CnH_2n +_2$. **P. jel'ly,** petrolatum. **P. oil,** limpid, oily liquid prepared from petroleum, sp. gr. not less than 0.84, boiling not below 360° (P. G.). **P. oint'ment,** solid paraffin. **Soft p.,** vaselin. **P. wax,** hard paraffin.

**Paraffi'num.** (Ph. Br.) Paraffin. **P. du'rum** (Ph. Br.), hard or solid paraffin; petrolatum spissum (Ph. U. S.). **P. liq'uidum** (Ph. Br.), paraffin oil; petrolatum liquidum (Ph. U. S.). **P. mol'le** (Ph. Br.), petrolatum molle (Ph. U. S.); vaselin. **P. sol'idum,** solid paraffin.

**Parafibrin'ogen.** A fibrin-like substance resulting from repeated action of salt on fibrinogen.

**Par'aform.** $C_3H_6O_3$. A white, crystalline powder, the polymerized form of formic aldehyde. Employed internally in intestinal antisepsis; also externally for sterilization of surgical instruments and disinfection of apartments.

**Paraformal'dehyde.** Triformol; antiseptic.

**Paragene'sia** or **Paragen'esis** (*para,* beside, *genesis,* production). Defective fecundity of a hybrid which is sterile with similar hybrids, but fertile when crossed with one of its parent race (Broca).

**Parageu'sia** or **Parageu'sis** (*para,* beside, *geusis,* taste). Depravation or perversion of taste.

**Paraglin'.** Smilacin.

**Paraglo'bin** or **Paraglob'ulin.** Form of globulin obtained from blood serum, supposed to exist in white blood corpuscles, and to be one constituent of plasmin; also called fibrinoplastin and seroglobulin.

**Paraglobulinu'ria.** Condition in which urine contains paraglobulin.

**Paraglos'sia** (*para,* beside, *glossa,* tongue). Parenchymatous inflammation of the tongue; also condition of hypertrophy of the tongue, usually congenital. **P. deglutito'ria,** pretended doubling of the tongue into the pharynx.

**Paraglossi'tis.** Inflammation of the tissues about the root of the tongue.

**Paragnath'us.** Double monster with a supernumerary lower jaw situated on the side. Epignathus.

**Paragompho'sis** (*gomphosis,* nailing). Incomplete wedging of the head of the child in the pelvis during labor.

**Paragraph'ia** (*para,* beside, *grapho,* to write). Manifestation of cerebral disorder by making mistakes in writing, as writing one word when another is intended.

**Par'aguay tea.** Maté, Jesuits' tea, St. Bartholomew's tea; leaves of Ilex paraguayensis; decoction of the roasted leaves is an habitual drink of certain South Americans; it contains caffeine.

**Parahæmoglo'bin.** Hæmoglobin modified by action of absolute alcohol on oxyhæmoglobin.

**Parahepat'ic.** About the liver.

**Parahypno'sis** (*para,* beside, *hypnos,* sleep). Abnormal sleep, as in hypnotism or somnambulism.

**Parakantho'ma.** Paracanthoma.

**Parakantho'sis.** Paracanthosis.

**Parakerato'sis** (*para,* beside, *keras,* horn). Disease of skin characterized by development of horny tissue. **P. scutula'ris,** condition of the skin in which thick, greasy crusts envelop bundles of hairs, the separate filaments having yellowish, horny cuffs which are confused with the crust. **P. variega'ta,** form of p. characterized especially by the varied color of the eruption, which is yellow, reddish, or purple.

**Parakine'sia** (*kinesis,* motion). Irregular movement.

**Paralac'tic acid.** Sarcolactic acid.

**Paralactophenetidin'.** Lactophenin.

**Parala'lia** (*para,* beside, *lalia,* speech). Defective or difficult articulation; impediment of speech. **P. litera'lis,** perversion of speech from inability to enunciate properly the sounds of some letters. **P. nasa'lis,** nasal voice.

**Paralamb'dacism** (*para,* beside, *lambda,* λ). Defect in speech with inability to pronounce *l* distinctly, or in which other letters are substituted.

**Paralamp'sis** (*paralampo,* to shine at the side of). Cicatrix on the transparent part of the eye.

**Paralbu'min.** Albuminous substance found only in ovarian cysts, and rarely alone.

**Paral'dehyde, Paraldehy'dum** (Ph. U. S. and Br.). $C_6H_{12}O_6$. Colorless liquid; below 50° F. crystalline solid, obtained by treating aldehyde with sulphuric or gaseous hydrochloric acid; hypnotic, anodyne, and sedative, and used as a substitute for chloral; dose, ʒss–j (2.0–4.0).

**Paraleip′sis.** Steatosis.

**Paralere′ma** or **Paralere′sis** (*para*, beside, *leros*, foolish talk). Delirium.

**Paralex′ia** (*para*, beside, *lego*, to read). Difficulty in reading, though patient may be able to write readily from dictation; aphasia with word-blindness.

**Paralge′sia** (*para*, beside, *algos*, pain). Abnormal or perverted sensation of pain; complete abolition of pain; anæsthesia.

**Paral′gia.** Disagreeable cutaneous sensations, such as formication, cold, burning, etc.

**Parallac′tic.** Relating to parallax.

**Parallag′ma.** Riding of one bone over another after fracture,

**Par′allax** (*parallasso*, to alter). Apparent displacement or difference of position of an object as seen from two points of view.

**Parallax′is** (*parallaxis*, aberration). Mental confusion.

**Par′allel fis′sure.** Parallel sulcus. **P. law**, announced by Dechner as parallel to Weber's law: When sensibility is equally altered for two stimuli, perceptibility of their difference remains unchanged —*i. e.*, the sensory surface may have become more or less sensitive, but this will not influence differential sensibility. **P. sul′cus**, superior temporal sulcus which is parallel to the Sylvian fissure.

**Paralle′la.** A kind of scurfy, cutaneous eruption affecting the palms of the hands in parallel lines, and thought to be symptomatic of venereal disease.

**Par′allelism of diseas′es.** See *Isopathia.*

**Paralo′gia** (*para*, beside, *logos*, discourse). Disorder of the reasoning power. **Themat′ic p.**, form of mental perversion in which some one subject is magnified into undue importance.

**Paral′ogism, Paral′ogy.** Faulty reasoning. The employment of senseless speech.

**Paraloph′ia** (*para*, beside, *lophia*, the mane of a horse). The lower and lateral part of the neck, near the vertebræ.

**Paralysin′.** Agglutinin.

**Paral′ysis** (*para*, beside, *lyo*, to loosen). Palsy. Abolition or great diminution of the power of voluntary or involuntary movement, and sometimes of sensation in one or more parts of the body. Palsy is said to be local when it affects only a few muscles. When it extends to half the body, vertically, it is called *hemiplegia;* or horizontally, *paraplegia.* It is commonly symptomatic of disease of the brain or spinal cord, or of the nerves themselves, and is a frequent accompaniment of apoplexy, the immediate cause being generally pressure, either by blood effused or by serum or by vascular turgescence. **Acute′ ascend′ing p.**, *Landry's p.*; an obscure variety of spinal disease, which is most frequent in males between twenty and forty years of age; characterized by rapid, progressive paraplegia and by the absence of any constant organic changes in the cord. **A. spi′nal p.**, infantile p.; anterior poliomyelitis or anterior cornual myelitis; disease chiefly of young children, characterized by suddenness of attack and by total or nearly total absence of reflexes. **P. ag′itans**, shaking palsy, trembling palsy; variety of tremor in which the muscles are in a perpetual alternation of contraction and relaxation, often accompanied by incoordination. **P. a. mercuria′lis**, mercurial palsy. **P. a. metal′lica**, tremor due to metallic poisoning, as by lead or mercury. **P. a. saturni′na**, lead palsy. **Alcohol′ic p.**, due to the excessive use of alcohol; a form of multiple neuritis. **Alter′nate p.**, p. of the face on one side and of the extremities on the other. **Ascend′ing p.**, p. beginning in the lower extremities and extending upward. **Atroph′ic spi′nal p.**, anterior poliomyelitis. **P. atroph′ica**, progressive muscular atrophy. **Bell's p.**, Bell's palsy, p. of the portio dura, histrionic paralysis or palsy, prosopoparalysis or palsy; paralysis of the face induced by a lesion of the portio dura, called Bell's palsy, owing to the fact that Sir Charles Bell was one of the first to investigate it minutely. **P. beriber′ia**, beriberi. **Birth p.**, obstetrical paralysis. **Bra′chial p.**, p. affecting one or both arms. **Brachiofa′cial p.**, p. involving the arm and face. **Brown-Séquard's′ p.**, see *Brown-Séquard.* **Bul′bar p.**, see *Bulbar.* **Cer′ebral p.**, p. due to lesion situated in the brain. **C. in′fantile p.**, form of spastic hemiplegia occurring in children. **Cerebrospi′nal p.**, p. in which the lesion is situated in the motor centres of the cortex of the brain or in the pyramidal tracts. **P. of conver′gence**, p. of the internal recti, so far as associated movements to produce convergence are concerned, while they act normally when the visual axes are parallel. **Cort′ical p.**, p. from lesion of the cortex of the cerebrum. **Crossed p.**, alternate paralysis. **Cru′ral p.**, p. involving the thigh or thighs particularly. **Crutch p.**, brachial paralysis due to the pressure of a crutch in the axilla. **Cruveilhier's′ p.**, progressive muscular atrophy. **Diphtherit′ic p.**, p. following an attack of diphtheria, usually appearing when the patient is convalescing or apparently well; it may affect only the palate or pharynx, or be more general. **Direct′ p.**, p. affecting the same side of the body as the causal cerebral lesion. **Di′vers' p.**, see *Caisson disease.* **Duchenne's′ p.**, pseudohypertrophic paralysis. **Erb's p.**, birth-palsy, paralysis of the infant caused by injury at the time of birth; paralysis of a part of the distribution of the nerves of the brachial plexus. **Essen′tial p.**, acute spinal paralysis. **P. extremita′tum**, acroparalysis. **P. facia′lis**, Bell's paralysis. **Fe′brile p.**, p. occurring in the course of fever. **P. festi′nans**, p. agitans, so called because in walking the patient is impelled to move quickly as if to preserve the balance, which tends to be thrown forward. **Func′tional p.**, p. not seemingly due to organic lesion, and usually disappearing in time; this includes the forms occurring after the taking of poison, during and after fevers, in epilepsy or hysteria, and those of a reflex character. **Gen′eral p. of the insane′**, p. of the insane. **Glossolabiolaryn′geal p.**, see *Bulbar.* **Glossopharyn′geal p.**, p. affecting the muscles of speech and deglutition. **Gub′ler's p.**, alternate paralysis. **Hemiple′gic p.**, see *Hemiplegia.* **Histrion′ic p.**, Bell's paralysis. **Hyster′ical p.**, psychical paralysis. **Incomplete′ p.**, paresis; paralysis in which there is not absolute loss of power. **In′fantile p.**, acute anterior poliomyelitis. **P. of the insane′**, general paralysis of the insane, general paresis, progressive paralysis of the insane; insanity combined with progressive paralysis of the muscular system. **Ischæ′mic p.**, Volkmann's paralysis. **P. jac′titans**, p. agitans. **Klump′ke's p.**, see *Klumpke.* **Kuss′maul's p.**, ascending paralysis. **Labioglossolaryn′geal p.**, bulbar paralysis. **Lan′dry's p.**, acute ascending paralysis. **Lit′tle's p.**, infantile muscular rigidity or spastic paralysis. **Lo′cal p.**, p. restricted to a single muscle or group of muscles. **P. medulla′ris**, paraplegia. **P. metal′lica**, palsy due to poisoning by one of the metals, as lead or mercury. **Mimet′ic p.**, Bell's paralysis. **Mus′cular progres′sive p.**, progressive muscular atrophy. **Myogen′ic p.**, infantile paralysis, essential paralysis of infants; partial muscular paralysis dating from very early life. **Myopath′ic p.**, p. in which the primary disease is situated in the muscle or muscles affected. **Myosclerot′ic p.**, pseudohypertrophic paralysis. **P. ner′vi hypoglos′si**, p. of the tongue. **Neuropath′ic p.**, p. in which the primary disease is seated in some part of the nervous system. **Neu′ral p.**, p. in which the lesion is situated in the peripheral nerves. **P. notario′rum**, writers' cramp. **Nu′clear p.**, p. due to disease or injury of a nucleus or nervous centre. **Obstet′rical p.**, p. of the infant due to injury received in its birth. **Organ′ic p.**, p. dependent upon organic lesion. **P. pal′pitans**, p. agitans. **Paraple′gic p.**, paraplegia. **Periph′eral** or **Peripher′ic p.**, progressive atrophy. **Phonet′ic p.**, paralytic aphonia or dysphonia. **P. ex plum′bo**, lead palsy. **P. of the por′tio du′ra**, Bell's paralysis. **Postepilep′tic p.**, p. occurring as a sequence of epilepsy. **Postfe′brile p.**, p. as a sequence of an attack of fever. **Pott's p.**, p. due to compression of the spinal cord in spondylitis or Pott's disease. **Progres′sive p. of the insane′,** p. of the insane. **Pseudobul′bar p.,** p. of the muscles of articulation, similar to that produced by lesion of the medulla, but caused by bilateral disease of the motor tracts or cortical centres of the cerebrum. **Pseudohypertroph′ic p.,** myosclerotic paralysis or palsy, Duchenne's paralysis; a condition characterized by diminution of the power, with augmentation of the volume of the paralyzed muscles. **Psych′ical p.,** hysterical paralysis or palsy, psychical palsy; paralysis associated with or dependent on hysteria; probably unconnected with organic disease of the nerve-centres or the motor nerves. **Re′flex p.,** palsy occasioned by irritation reflected through the excitomotory nerve system to parts in themselves healthy, as in the case of palsy from dentition, etc.; reflex paralysis at times assumes the paraplegic form—reflex paraplegia. **Regres′sive p.,** acute spinal paralysis. **Sat′urnine p.,** lead paralysis. **P. scorbu′tica,** pellagra. **Scriv′eners' p.,** writers' cramp. **Segmen′tal p.,** p. involving the portion of a limb under the influence of hypnotism. **Sen′sory p.,** anæsthesia. **Spasmod′ic p.,** spastic paralysis. **Spas′tic spi′nal p.,** p. in which there is progressive motor paresis, with an increase of the reflexes and a rigidity of the muscles; often connected with sclerosis of the lateral columns of the cord. **Spi′nal p.,** paraplegia. **S. atroph′ic p.,** poliomyelitis anterior. **Spinoneu′ral p.,** p. due to lesion of the anterior gray horns of the spinal cord and their upward prolongations, or of the fibres of the peripheral nerves connecting the ganglion cells of these horns with the muscles. **P. ex to′to,** p. of the insane. **Tox′ic p.,** p. from the effect of poisons. **Transverse′ p.,** alternate hemiplegia. **P. tre′mens** or **trem′ula,** p. agitans. **P. vac′illans,** chorea. **P. venena′ta,** p. caused by the action of poisons, such as lead, mercury, etc. **P. ventric′uli,** p. of the stomach. **Volk′mann's p.,** see *Volkmann.* **Wri′ters' p.,** writers' cramp. **Zen′ker's p.,** see *Zenker.*

**Paralyt′ic.** Paralyzed, palsied. Affected with or causing paralysis. **P. demen′tia,** general paresis; general paralysis of the insane. **P. flail-joint,** an abnormally movable joint due to paralysis. **P. stroke,** apoplexy.

**Paral′yzant.** Producing paralysis; a drug having such action.

**Par′alyzed.** Affected with paralysis; paralytic.

**Par′alyzing ver′tigo.** Gerlier's disease.

**Paramag′netism.** Property possessed by certain metals, when freely suspended between the poles of a magnet, of taking a position parallel to that of the magnetic force. The body is said to be *paramagnetic.* Fifteen metals, beside oxygen and nitrogen, possess this property.

**Paramasti′tis** (*para,* beside, *mastos,* breast). Inflammation of the connective tissue around the mammary gland.

**Paramas′toid.** Around the mastoid process. Jugular process of occipital bone; separate in some cases.

**Parame′cia** (*paramekos,* oblong). Longitudinal fissures.

**Parame′cium.** A genus of *Infusoria,* the slipper animalcule, some members of which have been found parasitic in the large intestine.

**Parame′dian.** Near or in the vicinity of the median line. **P. sul′cus,** furrow on cervical spinal cord near the posterior median fissure, separating the column of Goll from the funiculus cuneatus. An *anterior p. s.* is sometimes found near the anterior median fissure.

**Parame′nia** (*para,* beside, *men,* month). Mismenstruation; difficult or disordered menstruation. **P. diffic′ilis,** dysmenorrhœa. **P. error′is,** vicarious menstruation. **P. obstructio′nis,** amenorrhœa. **P. profu′sa** or **super′flua,** menorrhagia.

**Paramenispermin′.** Neutral principle, having the same composition as menispermin, derived from Cocculus indicus.

**Parame′ria.** Eastern shrub, reputed to yield pagularay balsam.

**Paramerid′ius.** Pertaining to the femur or thigh.

**Parame′sial.** Near the middle line.

**Param′esos** (*para,* beside, *mesos,* middle). Ring finger.

**Paramet′ric** (*metra,* womb). Near the uterus.

**Parametris′mus.** Painful, spasmodic action of smooth muscular fibres of the broad ligaments, observed in intraligamentary cellulitis.

**Parametri′tis** (*para,* beside, *metra,* uterus). Literally, inflammation of tissues in the immediate vicinity of the uterus; generally considered to denote an inflammation of the cellular tissue between the uterus and the peritoneum, although extended to include inflammation of any other portion of that tissue within the pelvis—as *parasalpingitis* and *paroöphoritis,* inflammation of the cellular tissue surrounding the Fallopian tube and ovary respectively. Periuterine phlegmon, pelvic cellulitis, subperitoneal inflammation, and inflammation of the uterine appendages may be regarded as synonymous with parametritis. When the disease terminates in suppuration it is called *pelviperitonitis* and *metroperitonitis,* though the terms are not strictly synonymous. **P. puerpera′lis,** parametritis during the puerperal state.

**Parame′trium.** Subserous tissue on lateral surface of the uterus and vagina and at the origin of the broad ligaments.

**Paramim′ia** (*mimeomai,* to mimic). Disordered expression; use of tone or gesture not in accord with words employed.

**Paramit′om** (*para,* beside, *mitos,* web). Fluid substance enveloping the ~~mitom~~, hyaloplasm, or euchylema. Heteroplasm.

**Paramne′sia** (*para,* beside, *a,* priv., *mnesis,* memory). Defective or false memory.

**Paramœ′cium.** Incorrect form of paramecium.

**Paramonobromoacetan′ilid.** Antisepsin; obtained by action of bromine on solution of acetanilid in glacial acetic acid; crystallizes in large, pearl-colored prisms, insoluble in cold water, odorless and tasteless; recommended as an antiseptic.

**Paramonochlorphe′nol.** Crystalline substance obtained by the chlorine substitution of phenol. A powerful antiseptic; used locally in ointment in erysipelas.

**Paramor′phia** (*para,* beside, *morphe,* form). Morbid form or structure.

**Paramorphine′.** Thebaine. Principle discovered in the precipitate thrown down from infusion of opium, treated with milk of lime; resembles narcotine.

**Paramucin′.** Mucoid substance occasionally found in ovarian cysts.

**Paramu′sia** (*mousike,* music). Perversion of the musical sense, the musical sounds being false or incomplete, confused, or entirely omitted.

**Param′ylum** (*amylon,* starch). Starch-like granules found in some infusoria.

**Paramyoclo′nus mul′tiplex** (*mys,* muscle, *klonos,* twitching). Convulsive tremor characterized by clonic spasms in a number of symmetrical muscles. The spasms cease during sleep, and do not interfere with voluntary movements.

**Paramyosin′ogen.** Proteid of muscle-plasma, coagulating at 47° C.; precipitated by magnesium sulphate or sodium chloride.

**Paramy′otone** (*mys,* muscle, *tonos,* tension). Morbid condition in which tonic spasms are a prominent symptom.

**Paramyoto′nia.** Paramyotone. **P. congen′ita,** curious and unusual familial affection, similar to Thomsen's disease in its symptoms, generally affecting the facial muscles, but often also those of the extremities.

**Paramyoto′nus.** Disordered muscular tonicity, causing liability to spasm on slight provocation.

**Paramyx′ia** (*myxa,* mucus). A condition in which the secretion from the muous membrane is altered in quality.

**Paranæsthe′sia.** Loss of sensation in the lower extremities and lower part of the abdomen.

**Paranephri′tis.** Inflammation of the connective tissue about the kidney, or of the suprarenal capsules.

**Paraneph′ros** or **Paraneph′rus** (*para*, beside, *nephros*, kidney). Suprarenal capsule.

**Paran′gi.** Epidemic skin disease of Ceylon, perhaps identical with yaws.

**Paranœ′a** or **Paranoi′a** (*para*, beside, *nous*, understanding). Unsoundness of mind; hereditary or acquired chronic mental instability; protopathic insanity; monomania with delusions.

**Paranœ′ic** or **Paranoi′ac.** Pertaining to or affected with paranoia. Person affected with paranoia.

**Parano′mia.** Condition in which the wrong name is assigned to objects.

**Paranucleïn′.** Substance similar to nuclein, resulting from digestion of nucleo-albumin with the gastric juice; it resembles chromatin.

**Paranu′cleus.** Name given to smaller nucleus of two contained in a cell.

**Paraoxyethylacetan′ilid.** Phenacetin.

**Paraoxyethylforman′ilid.** Formol phenetidin.

**Paraoxymethylacetan′ilid.** Methacetin.

**Parapar′esis.** Partial paraplegia.

**Par′apathy** (*para*, beside, *pathos*, affection). Pathomania; moral insanity.

**Parapechyon,** par-ah-pek′e-on (*pechys*, elbow). Radius.

**Parapectin′.** Substance found in fleshy fruits.

**Parapep′tone.** Body formed by digestion of albumin with an insufficiency of pepsin, or with dilute hydrochloric acid alone at 40° C.; insoluble in water, soluble in dilute acids and alkalies, and convertible into peptone only through tryptic digestion; identical with antialbumate.

**Parapha′sia** (*para*, beside, *aphasia*, speechlessness). Speaking one word when another is intended, or mispronunciation of words, due to cerebral disorder.

**Paraphen′etol car′bamide.** See *Sucrol*.

**Paraphenylendiam′ine.** Isomer of metaphenylendiamine; produces marked exophthalmus when injected into some animals.

**Paraphenylthi′onate of mer′cury.** Hydrargyrol.

**Paraph′ia** (*para*, beside, *haphe*, touch). Sense of touch or general feeling vitiated or lost.

**Paraphimo′sis** (*phimoo*, to bridle). Strangulation of the glans penis by the prepuce withdrawn behind it.

**Parapho′bia** (*phobos*, dread). Hydrophobia.

**Parapho′nia** (*para*, beside, *phone*, voice). Affection of the voice when its character or *timbre* is less agreeable; morbid alteration of the voice. **P. clan′gens,** sharp tone of voice. **P. guttura′lis,** defective articulation from diseased palate. **P. nasa′lis,** nasal voice. **P. palati′na,** abnormal voice due to malformation of palate. **P. pu′berum,** egophony. **P. rau′ca,** roughness of voice. **P. ulcero′sa,** shrill voice from ulceration of the larynx.

**Paraph′ora** (*para*, beside, *phero*, to carry). Paracope.

**Paraphra′sia** (*para*, beside, *phrasis*, telling). Disordered or incoherent speech. **Chore′ic p.,** a fault of speaking, in which words run together without regard to significance.

**Paraphrene′sis** (*para*, beside, *phren*, diaphragm). Paraphrenitis. **P. diaphragmat′ica,** inflammation of the diaphragm.

**Paraphre′nia** (*para*, beside, *phren*, mind). Delirium; mental disease. **P. gra′vis,** grave insanity, sometimes accompanying faulty or impaired mental development. **P. mi′tis,** mild form of mental perversion, possibly only eccentricity.

**Paraphreni′tis** (*para*, beside, *phren*, diaphragm). Inflammation of the tissues about the diaphragm, usually including the latter as well.

**Paraphrodi′asis.** Morbid or perverted sexual desire.

**Paraphrone′sis** or **Paraphros′yne** (*phronesis*, mental derangement). Delirium; mental disorder of mild or transitory type.

**Paraphy′mata** (*para*, beside, *phyma*, growth). Organic diseases with local manifestations.

**Par′aphyte.** Diseased condition due to or associated with proliferation.

**Par′aplasm** or **Paraplas′ma** (*para*, beside, *plasso*, to form). Abnormal or heteroplastic growth; malformation. Substance filling the meshes of the reticulum of protoplasm. Also any substance, other than protoplasm, contained in a cell; starch granules or fat globules, for example.

**Paraplas′tic** (*plastikos*, formative). Possessed of depraved formative powers; a term applied to cancer, melanosis, etc.

**Paraplec′tic.** Paraplegic; tending to produce paraplegia; paralyzed.

**Paraple′gia** (*para*, beside, *plesso*, to strike). Palsy of the lower half of the body, including the bladder and rectum; generally owing to disease of some part of the cerebrospinal axis, especially of the spinal portion. Apoplexy; some authors have made a distinction between *paraplegia* and *paraplexia*, using the former for partial apoplexy, the latter for general or complete apoplexy. **Alcohol′ic p.,** p. from chronic alcoholism, probably peripheral neuritis rather than a morbid condition of the spinal cord itself. **Atax′ic p.,** sclerosis of the posterior and lateral columns of the spinal cord, with symptoms of locomotor ataxia and spastic paraplegia. **Cer′ebral p.,** paralysis caused by lesion of the pons Varolii, medulla oblongata, or the cerebrum itself. **Cer′vical p.,** paralysis of the upper and lower extremities on both sides, due to spinal disease. **Congen′ital spas′tic p.,** p. due to meningeal hemorrhage at the time of birth. **P. doloro′sa,** p. attended with intense paroxysmal pain along the course of nerves, generally caused by tumor of the cord. **Hered′itary atax′ic p.,** hereditary ataxia. **Hysterotraumat′ic p.,** hysterical variety of paraplegia dependent in its origin on injury. **Ide′al p.,** reflex form of paraplegia produced by emotion. **Organ′ic p.,** p. from lesion of the great nervous centres. **Pain′ful p.,** p. dolorosa. **Periph′eral p.,** p. caused by the pressure of new-growths on the nerves. **Pott's p.,** Pott's paralysis. **Pri′mary spas′tic p.,** lateral sclerosis due to lesion of the spinal cord above the lumbar enlargement, tonic spasm being a chief symptom. **Re′flex p.,** see *Paralysis, reflex*. **Spasmod′ic, spas′tic,** or **tet′anoid p.,** p. from lateral sclerosis of the spinal cord.

**Paraple′gic.** Pertaining to or affected with paraplegia.

**Parapleuri′tis.** Pleurodynia; slight pleuritis.

**Paraplex′ia.** Paraplegia; apoplexy.

**Paraplex′us.** Choroid plexus.

**Parapoië′sis** or **Parapoë′sis** (*para*, beside, *poieo*, to do). Disturbance of function.

**Parapoph′ysis.** Process in lower animals corresponding with the lower transverse vertebral process.

**Parap′oplexy.** Slight apoplexy; a soporous state resembling apoplexy, and especially that which occurs in pernicious intermittents.

**Paraprocti′tis.** Phlegmonous inflammation of the connective tissue surrounding the rectum.

**Paraproc′tium** (*para*, beside, *proktos*, anus). Connective tissue surrounding the rectum.

**Parap′sis** (*para*, beside, *haptomai*, to touch). Loss, complete or partial, of the sense of touch or general sensation. **P. a′cris teneritu′do,** soreness. **P. ex′pers,** torpor; anæsthesia. **P. illuso′ria,** pseudoæsthesia. **P. pruri′tus,** itching.

**Parapyram′idal sul′cus.** Furrow in the medulla oblongata running obliquely from the anterior median fissure, upward and outward to the sulcus lateralis ventralis.

**Pararabin′.** Constituent of sugar-beet converted by boiling with alkalies into arabic acid.

**Pararec′tal pouch.** Depression in the peritoneum behind the broad ligament and at the sides of the rectum.

**Parareducin′.** Leucomain found in urine.

**Pararho′tacism** (*rho*, Greek letter $\rho$). Defect in speech from substitution of some other sound for that of *r*.

**Parar′ma.** Fimbria.

**Pararosol′ic acid.** Pæonin.

**Pararrhyth′mic** (*para*, beside, *rhythmos*, rhythm). An epithet applied to the pulse when it has not the rhythm proper to the age and constitution of the individual.

**Pararthre′ma** (*para*, beside, *arthron*, joint). Incomplete luxation; subluxation.

**Parar′thria** (*para*, beside, *arthroo*, to articulate). Disordered and difficult articulation. **P. litera′lis paret′ica**, stammering. **P. syllaba′ris spas′tica**, stuttering.

**Pararthro′sis.** Production of incomplete luxation or subluxation.

**Parasa′cral.** In the vicinity of the sacrum.

**Parasalpingi′tis** (*para*, beside, *salpinx*, a tube). Inflammation of the cellular tissue in immediate relation with the Fallopian tube. See *Parametritis*.

**Parasecre′tion.** Abnormal secretion as to quality, quantity, etc.

**Parase′mia.** Feigned asemia.

**Parasig′matism** (*para*, beside, *sigma*, Greek letter $\sigma$). Defective speech in which other letters are used in place of *s* or *sh*.

**Parasinoid′al spa′ces.** Hollow spaces in the dura mater near the superior longitudinal sinus, into which the cerebral veins discharge before reaching the sinus; Pacchionian bodies lie therein.

**Par′asite** (*parasiteo*, to eat in the house of). Organism, animal or vegetable, living during the whole or part of its existence in or on the body of some other organism, the latter being called the host. A fœtus or part of a fœtus living by means of the circulation of another fœtus.

Human parasites are both animal and vegetable. The former include *Entozoa* (animals living in the interior of the human body) and *Ectozoa* (those which infest the exterior). Vegetable parasites are the *Entophyta* and *Epiphyta*, the former existing in the interior of the body, the latter on the exterior. The simplest arrangement of entozoa includes *Cœlelmintha* (*koilos*, hollow, *helmins*, worm), hollow worms; *Stereimintha* (*stereos*, solid), solid worms; and *accidental parasites*.

The following table, made up from various sources, includes most of the human parasites worthy of mention, as well as the locality usually inhabited by them (Aitken).

### Table of Human Parasites.

#### I. Entozoa.

| | |
|---|---|
| Acephalocystis endogena | Liver. |
| “ multifida | Brain. |
| Ankylostoma | Intestines. |
| Anthomyia canicularis | “ |
| Ascaris alata | “ |
| “ lumbricoides | “ |
| “ mystax | “ |
| Bilharzia hæmatobia | Portal and venous system. |
| Bothriocephalus cordatus | Intestines. |
| “ latus | “ |
| Cysticercus cellulosæ or telæ cellulosæ (C. of tænia solium) | Muscles. |
| Cysticercus of tænia marginata (C. tenuicollis) | Intestines. |
| Dactylius aculeatus | Urinary bladder. |
| Diplosoma crenatus | “ “ |
| Distoma or Distomum crassum | Duodenum. |
| “ hæmatobium | Portal and venous system. |
| “ hepaticum | Gall-bladder. |
| “ heterophyes | Intestines. |
| “ lanceolatum | Hepatic duct. |
| “ oculi humani or ophthalmobium | Capsule of crystalline. |
| Ditrachyceras rudus | Intestines. |
| Dracunculus medinensis | Skin and areolar tissue. |
| Echinococcus hominis (hydatid of tænia echinococcus) | Liver, spleen, and omentum. |
| Eustrongylus bronchialis | Bronchial tubes. |
| “ gigas | Kidney, intestines. |
| Fasciola hepatica | Gall-bladder. |
| Filaria bronchialis or trachealis | Bronchial glands. |
| “ medinensis | Skin and areolar tissue. |
| “ oculi or lentis | Eye. |
| “ sanguinis hominis | Blood. |
| Hexathrydium pinguicola | Ovary. |
| “ venarum | Venous system. |
| Monostoma lentis | Crystalline. |
| Œstrus hominis | Intestines. |
| Oxyuris vermicularis | “ |
| Pentastoma constrictum | “ and liver. |
| “ denticulatum | “ “ |
| Polystoma pinguicola | Ovary. |
| “ sanguicola or venarum | Venous system. |
| Sclerostoma duodenale | Intestines. |
| Spiroptera hominis | Urinary bladder. |
| Strongylus bronchialis | Bronchial tubes. |
| “ gigas (Ascaris renalis) | Kidney, intestines. |
| Tænia acanthotrias | Intestines. |
| “ elliptica | “ |
| “ flavapuncta | “ |
| “ lophosoma | “ |
| “ mediocanellata | “ |
| “ nana | “ and liver. |
| “ solium | “ “ |
| Tetrastoma renale | Kidney. |
| Trichina spiralis | Muscles. |
| Trichocephalus dispar | Intestines. |

#### II. Ectozoa.

| | |
|---|---|
| Acarus or Demodex folliculorum | Sebaceous follicles. |
| Pediculus capitis (head-louse); | Skin, hair, and clothing. |
| “ corporis or vestimenti (body-louse); | |
| “ palpebrarum (brow-louse); | |
| “ pubis, Phthirius inguinalis (crab-louse) | |
| Pulex penetrans (chigoe) | Skin, cellular tissue. |
| Sarcoptes scabiei (itch-insect) | Skin. |

#### III. Entophyta and Epiphyta.

| | |
|---|---|
| Achorion lebertii (Trichophyton tonsurans) | Scalp. |
| “ schonleinii | Skin. |
| Chionyphe carteri (fungus of mycetoma) | Deep tissue, bones of hands and feet. |
| Leptothrix buccalis (alga of the mouth). | |
| Microsporon audouini | Scalp. |
| “ furfur | Skin. |
| “ mentagrophytes | Follicles of hair. |
| Oïdium albicans (thrush fungus) | Mouth, mucous and cutaneous surfaces. |
| Puccinia favi | Skin. |
| Sarcina ventriculi | Stomach. |
| Torula cerevisiæ (Cryptococcus cerevisiæ, yeast-plant) | Stomach, bladder, etc. |
| Trichophyton sporuloides | Scalp. |

To this table may be added the numerous micro-organisms, bacteria and protozoa, which have been revealed by modern investigations as parasitic in the human system. **Ectozo′an p.**, an animal surface parasite. **Entophyt′ic p.**, a vegetable parasite living within the body. **Entozo′an p.**, an animal parasite living within the body. **Epiphyt′ic p.**, a vegetable surface parasite. **Fac′ultative p.**, an animal or vegetable organism which is not necessarily a parasite, but occasionally lives as such. **Mi′cro-p.**, a parasitic bacterium or protozoon. **Ob′ligate** or **oblig′atory p.**, a parasite which cannot live apart from its host.

**Parasit′ia.** Parasitism.

**Parasit′ic.** Having the nature of or resembling a parasite—as parasitic growths. **P. diseas′es**, such as are induced by or connected with animal or vegetable parasites.

**Parasit′icide** (*cœdo*, to kill). Destructive to parasites; antiparasitic.

**Parasit′ifer** (*ferro*, to carry). The host of a parasite, on which the latter exists.

**Par′asitism.** Condition of an organized structure or body living on another organized body. **Intes′tinal p.**, helminthiasis. **Superfic′ial p.**, malis.

**Parasitogen'esis** or **Parasitogeny**, par-a-si-toj'-en-e (*gennao*, to beget). Corporeal condition which favors the development of parasites. The generation of parasites.

**Parasitogenet'ic.** Having origin from parasites.

**Par'asitoid** (*eidos*, resemblance). Parasitic.

**Parasitol'ogist.** One versed in parasitology.

**Parasitol'ogy.** Science of the structure and development of parasites and diseases caused by them.

**Parasor'bic acid.** Aromatic, oily liquid acid from mountain-ash berries.

**Paraspa'dia** (*para*, beside, *spao*, to draw). Preternatural opening of the urethra at the side of the penis. One whose urethra opens in this manner is called *paraspadiac.*

**Paraspha'gis** (*para*, beside, *sphage*, throat). Part of the neck contiguous to the clavicles.

**Paras'tata** (*para*, beside, *istemi* to stand). Prostate; oviduct; epididymis. The latter was called p. varicosa, to distinguish it from the prostate, called p. glandulosa. The Fallopian tubes were also called *p. varicosa.* **P. adenoi'des**, prostate. **P. cirsoi'des**, epididymis. **P. glandu'la**, prostate. **P. glandulo'sa**, prostate. **P. varico'sa**, epididymis, oviduct.

**Parastatadeni'tis.** Prostatitis.

**Parastati'tis.** Epididymitis. Prostatitis.

**Parasteato'sis** (*para*, beside, *stear*, fat). Steatosis characterized by altered secretion.

**Paraster'nal.** In the vicinity of the sternum. **P. line,** line drawn from the clavicle to the costal arch, parallel to the edge of the sternum and about 8 cm. from it. **P. re'gion,** region between the margin of the sternum and the parasternal line.

**Parastig'ma.** A spot on the wing of an insect.

**Parastrem'ma** (*para*, beside, *strepho*, to turn). Parastrophe. Distortion. Convulsive distortion, especially of the face, the soft parts being drawn laterally.

**Paras'trophe.** Parastremma.

**Parasynovi'tis** (*para*, beside+*synovia*). Inflammation of the tissue about a joint.

**Parasyph'ilis.** A sequel of syphilis, but not manifested by recognized syphilitic symptoms.

**Parasyphilit'ic.** Caused by syphilis, but indirectly, being related rather to a sequel of this disease.

**Parasyphilo'sis.** A parasyphilitic affection, such as tabes dorsalis is believed by many to be.

**Parasys'tole** (*para*, beside, *systole*, contraction). Interval between systole and diastole. Acinesia.

**Paratar'sia** (*para*, beside, *tarsos*, tarsus). Dislocation of the tarsal bones.

**Paratartar'ic acid.** Racemic acid.

**Parath'enar.** Winslow called the parathenar major a portion of the abductor of the little toe, musculus scandularius; and the parathenar minor the short flexor of that toe. **P. ma'jor,** abductor minimi digiti pedis. **P. mi'nor,** flexor brevis minimi digiti pedis.

**Parathioformal'dehyde.** $C_3H_6S_3$. Crystalline substance, identical with paraformaldehyde.

**Parathion'ic acid.** Acid ethyl sulphate.

**Parathy'mia** (*thymos*, mind). Mental overwork.

**Parathy'roid.** One of several small glands found in man, monkeys, rabbits, sheep, and probably all animals, in the vicinity of the thyroid gland.

**Parat'oloid.** Koch's lymph or tuberculin.

**Paratolu'idin.** A benzyl compound obtained from coal-tar, having some of the characteristics of toluidin.

**Paratol'yl.** Phosphin. Liquid with a very strong odor, which gives rise to headache and nose bleed.

**Paratolylacetam'ide.** See *Acetparatoluide.*

**Paratolyldimethylpyraz'olone.** See *Tolypyrin.*

**Parato'nia** (*tonos*, tension). Overstrain; excitement.

**Paratop'ia** (*para*, beside, *topos*, place). Luxation.

**Paratop'iæ.** Diseases in which organs are out of their proper position. See *Ectopia.*

**Paratricho'ses** (pl. of paratrichosis). Class of skin diseases, embracing trichorrhexis nodosa and trichoptilosis.

**Paratricho'sis** (*para*, beside, *thrix*, hair). Variety of trichosis in which the hair is of abnormal quality.

**Paratrim'ma** (*tribo*, to rub). Chafing. Intertrigo.

**Paratrip'sis.** Rubbing or friction, as of one part against another.

**Paratrip'tic.** Tending to produce paratrimma.

**Paratroph'ic.** Relating to paratrophy.

**Parat'rophy** (*para*, beside, *trophe*, nourishment). Abnormal or perverted nutrition; hypertrophy; dystrophy.

**Paratuberculo'ses.** A class of disorders in which the toxins of tuberculosis are recognized as responsible for a series of lesions and symptoms, but in which tubercle bacilli cannot be demonstrated. They are the dermatoses of scrofulous subjects.

**Paratu'do.** Gomphrena.

**Paratu'ra.** Plant, native of Brazil; root has tonic properties.

**Paratyphli'tis** (*para*, beside, *typhlitis*, inflammation of the cæcum). Inflammation of the connective tissue behind or in the vicinity of the cæcum. Appendicitis is a form of paratyphlitis.

**Paraty'phoid fe'ver.** A disease clinically resembling typhoid fever, but not responding to the Widal test for that disease; due possibly to the assumption of pathogenic activity by the colon bacillus, or perhaps to infection by some other related microorganism.

**Paratyp'ic.** Not corresponding to a regular type; said of diseases.

**Para-u'terine.** In the vicinity of the uterus. **P. celluli'tis,** parametritis.

**Paravagini'tis.** Paracolpitis or inflammation of the connective tissue behind or about the vagina.

**Paraver'tebral.** Situated beside or in the vicinity of the vertebral column.

**Paraves'ical pouch.** Peritoneal pocket on either side of the bladder.

**Paraxan'thin.** $C_7H_8N_4O_2$. Leucomain found in minute quantity in normal urine.

**Parax'ial.** Situated along the vertical axis. **P. mus'cles,** those along the vertebral axis, consisting of the outer part of the erector spinæ and its continuations, and the intercostal group (scaleni, abdominal muscles, etc.).

**Parax'on.** Minute collateral branch of an axon.

**Parazo'ön** (*zoon*, animal). Animal parasite.

**Parazygo'sis** (*para*, beside, *zygoo*, to join together). Condition of double monstrosity characterized by the union of trunks above the umbilicus. It includes xiphopagus, thoracopagus, and pleuropagus.

**Parch'ment skin.** Hard, dry, wrinkled condition of the skin, the result of diffuse idiopathic atrophy. Xeroderma of Hebra and Kaposi. It sometimes occurs in several children of the same family, and is fatal.

**Pardan'thus chinen'sis.** Leopard flower, native of China, where a decoction of the root is applied externally to poisoned wounds, and the pulp to bites of snakes.

**Pareccœlo'ma** (*para*, beside, *ek*, out, *koiloo*, to make hollow). Diverticulum; abnormal accessory cavity.

**Parec'crises** (pl. of pareccrisis). Diseases involving the secretions.

**Parec'tama** or **Parec'tasis** (*para*, beside, *ek*, out, *teino*, to stretch). Immoderate extension, distention, or dilatation of a part, as of the heart.

**Pared'ria** (*para*, beside, *hedra*, seat). Complications existing in a disease.

**Paregor'ic** (*paregoreo*, to soothe). That which soothes or assuages. An anodyne. Camphorated tincture of opium. **P. elix'ir,** tinctura opii camphorata. **P. root,** Myrrhis odorata.

**Pareira**, par-a'rah. (Ph. U. S.) A drug derived from P. brava, wild vine, velvet leaf; fam. *Menispermeæ;* the root of Chondodendron tomentosum, a tree of South America and the West Indies, has a sweet taste, with considerable bitterness and slight roughness. It has been recommended in nephritic and calculous affections. Tonic stimulant to the genito-urinary mucous membrane. The official preparation is *extractum pareiræ fluidum;* dose, ʒss–j 2.0–4 .0).

**Pareirine′.** Alkaloid, active principle of pareira; motor and respiratory paralyzant. **P. hydrochlo′rate,** salt of pareirine employed as an antiperiodic in malaria.

**Parelectron′omy.** Condition of diminished response of muscle to the electrical current.

**Parencepha′lia.** Defective development of the brain.

**Parencephali′tis.** Cerebellitis.

**Parenceph′alocele** (*parencephalon,* cerebellum, *kele,* rupture). Hernia of the cerebellum. A rare affection which occurs under the form of a soft, indolent, or slightly painful tumor, without change in the color of the skin, situated in the occipital region. It is constituted of the cerebellum, which escapes through an aperture in the occipital bone.

**Parenceph′alon.** Cerebellum.

**Parenceph′alus.** One with defective or unsymmetrical development of the encephalon.

**Paren′chyma** (*para,* beside, *enchyo,* to pour in). Texture of glandular and other organs, composed of agglomerated globules united by areolar tissue, and tearing with more or less facility. Such is the texture of the liver, kidneys, etc. It includes the peculiar constituents of an organ which give it its specific character, in contradistinction to the merely interstitial tissue. *Parenchyma* signifies, in Greek, effusion, and it was believed that this tissue consisted of effused blood or other fluid. **Gland′ular p.,** gland-substance. **P. tes′tis,** pulpa testis.

**Paren′chymal.** Relating to the parenchyma of an organ.

**Parenchymati′tis.** Inflammation of the substance of an organ.

**Parenchy′matous.** Parenchymal. **P. degenera′tion,** cloudy swelling. **P. inflamma′tion,** parenchymatitis. **P. neuri′tis,** neuritis in which nerve-elements are primarily involved.

**Parenchymepati′tis.** Parenchymatous hepatitis.

**Parencra′nis.** Cerebellum.

**Pa′rent cell.** See *Cell.*

**Parep′icœle.** Lateral recess of the fourth ventricle.

**Parepidid′ymis.** Organ of Giraldès.

**Parepithy′mia** (*epithymia,* desire). Morbid desire.

**Parereth′esis** or **Parer′ethism** (*para,* beside, *erethrizo,* to excite). Morbid excitement.

**Par′esifying.** Producing paralysis, as paresifying mental disease, general paralysis of the insane.

**Par′esis** (*pariemi,* to relax). Diminution of motor power; slight, incomplete paralysis, affecting motion, but not sensation, but by some regarded as synonymous with paralysis. **Can′tatory p.,** inability to use the voice by singers, due to overexertion of the muscles of the larynx. **Gen′eral p.,** general paralysis. **Sat′urnine p.,** lead palsy.

**Paresoanalge′sia.** Partial paralysis accompanied by insensibility to pain.

**Paresthe′sis.** Paræsthesia.

**Paret′ic.** Pertaining to or affected with paresis. One affected with paresis. **P. demen′tia,** general paralysis. **P. exarthro′sis,** luxation from relaxation of the ligaments of a joint.

**Pareu′nia** (*para,* beside, *eune,* bed). Coitus.

**Parhidro′sis.** Paridrosis.

**Paricine′.** $C_{16}H_{18}NO_2$. Alkaloid associated with quinamine in bark of Cinchona succirubra.

**Paridin′.** Glucoside, $C_{16}H_{28}O_7$, obtained from herb and root of Paris quadrifolia.

**Par′idol.** Decomposition product, $C_{26}H_{14}O_9$, of paridin.

**Paridro′sis** (*para,* beside, *hidrosis,* perspiration). Disordered condition of perspiration.

**Pa′ries** (pl. pari′etes). Wall or limiting structure of any hollow organ or cavity of the body, as the heart or thorax.

**Pari′etal** (*paries,* wall). Appertaining to the parietes or walls of an organ or to the parietal bones. **P. an′gle of Bro′ca,** angle between lines from auricular point to bregma and lambda. **P. an′gle of Lis′sauer,** angle between lines drawn in median plane of skull from parietal eminence to bregma and lambda. **P. an′gle of Quatrefages′,** angle expressive of projection of points on parietal bone with reference to zygomatic arch; the *anterior* is formed by the lines drawn from the most prominent part of the arch through the stephanion; the *posterior,* from the same point through the parietal protuberance. **P. arc,** on surface from bregma to lambda. **P. arch′es,** formed by convolutions of convex surface of cerebral hemisphere curving around end of Sylvian fissure; more apparent in the lower animals than in man. **P. a′rea,** see plate under *Region.* **P. ar′teries,** branches from middle cerebral supplying central convolutions, parietal lobe, and outer surface of temporal lobe. **P. bend** or **flex′ure,** flexure occurring at most projecting portion of mesencephalon in course of development of cerebrospinal axis. **P. bones** are two fellow-bones occupying the lateral and upper parts of the cranium, in the formation of which they assist. They have a quadrilateral shape; their external surface is convex, and presents at its middle part an eminence called the *parietal protuberance.* Their inner or cerebral surface, which is concave, has a depression that corresponds with the preceding eminence, and which is called the *parietal fossa.* Above and behind, near the superior edge of these bones, is a foramen, which does not always exist, called the *parietal foramen,* through which passes a vein—*parietal vein,* that opens into the superior longitudinal sinus of the dura mater, and an artery—*parietal artery.* Each parietal bone is articulated above with its fellow; below, with the temporal; before, with the frontal; behind, with the occipital; and by the anterior and inferior angle with the great ala of the sphenoid; and is developed from a single point of ossification. **P. cells,** cells which occupy the outer portions of the gland-lobules of the stomach. **P. convolu′tions,** situated upon the parietal lobe: *ascending,* passing up and back along the central sulcus; *superior* and *inferior,* separated by the intraparietal sulcus, and from the ascending by the postcentral. The superior appears on the median surface as the *quadrate lobule,* also called præcuneus; the inferior borders upon the posterior branch of the Sylvian fissure, and is there called *supramarginal gyrus;* posteriorly it winds around the end of the parallel sulcus connecting with middle temporal convolution, and is there known as *angular gyrus.* **P. diam′eters** relate to the parietal regions of the skull, usually *biparietal d.* or distance between the parietal protuberances; the maximum p. d. does not necessarily coincide with this; the inferior p. d., between points upon posterior root of zygoma, vertically, over upper edge of auricular foramen. **P. em′inence,** most prominent part of external surface of p. bone. **P. em′issary vein,** communication between the superior longitudinal sinus and the veins of the scalp through the parietal foramen. **P. eye,** eye-like extension of pineal gland, found between the parietal bones in certain lower vertebrates. **P. fora′men, P. fos′sa,** see *Parietal bone.* **P. lobe,** posterior upper portion of the two hemispheres; convex surface bounded in front by central sulcus, below by posterior branches of Sylvian fissure and temporal lobe, behind by parieto-occipital fissure, transverse occipital sulcus, and occipital lobe; median surface bounded in front by ascending part of the callosomarginal sulcus, below by the subparietal sulcus and falciform lobe, behind by the parieto-occipital sulcus. **P. lob′ules,** portions of parietal lobe situated behind ascending parietal convolution; the *superior* and *inferior* are separated by the intraparietal sulcus. **P. nerves,** branches from auriculotemporal to the parotid gland. **P. notch,** indentation between squamous and mastoid portions of temporal bone, into which fits the postero-inferior angle of the parietal bone. **P. perito′neum,** see *Peri-*

*toneum.* **P. pleu′ra,** see *Pleura.* **P. por′tion of pericar′dium,** outer portion separated from the heart by the pericardial cavity. **P. protu′berance,** parietal eminence. **P. quad′rangle,** formed by lines connecting two sphenia and two entomia. **P. sec′tion,** a section of the brain made through the ascending parietal convolution, parallel to the central fissure. **P. sec′tor,** area in median plane of skull between lines drawn from hormion to bregma and lambda. **P. seg′ment,** posterior segment of mitral valve. **P. sul′cus,** intraparietal sulcus. **P. ver′tebra,** the complex formed by basisphenoid, alisphenoid, and parietal bones; some include also the temporals. See *Vertebræ, cranial.*

**Parieta′ria.** Wall pellitory; ord. *Urticeæ.* This plant contains much nitrate of potassium, and was formerly largely employed as a diuretic and also as an emollient. **P. pennsylva′nica,** American pellitory; small weed, flowering from June to August; has been used, in juice or decoction, as a diuretic, deobstruent, and emmenagogue.

**Pariet′ic acid.** Chrysophanic acid.

**Parietin′ic acid.** Chrysophanic acid.

**Pari′etofron′tal.** Relating to parietal and frontal bones conjointly.

**Pari′etohæ′mal arch.** Hyoid arch.

**Pari′etoju′gal in′dex.** Ratio of greatest transverse and bizygomatic diameters of skull, latter being taken as 100.

**Pari′etomas′toid.** Belonging to the parietal bone and the mastoid process of the temporal bone, as the parietomastoid suture.

**Pari′eto-occip′ital.** Relating to the parietal and occipital bones or lobes. **P.-o. fis′sure,** deep cleft appearing mainly on the median surface of the cerebral hemispheres, where its upper end corresponds nearly to the vertex of the lambdoidal suture, whence it descends downward and a little forward and ends in the calcarine fissure. The small part continued upon the convex surface is sometimes called *external p.-o. fissure.* **P.-o. su′ture,** line of union of the parietal and occipital bones.

**Pari′etosphenoi′dal ar′tery.** Inferior parietal artery. **P. notch,** slight indentation of upper margin of squamous portion of temporal bone between the part which articulates with the parietal and that which articulates with the great wing of the sphenoid.

**Pari′etosplanch′nic.** Belonging to the abdominal or thoracic walls and the viscera.

**Pari′etotem′poral.** Relating to the parietal and temporal bones. **P. re′gion,** term applied to regions in the skull and in the brain embraced by the parietal and temporal bones. **P. su′ture,** suture between parietal and temporal bones, composed of squamoparietal and parietomastoid sutures.

**Pari′etovis′ceral.** Relating to the walls of a cavity—the thorax or abdomen, for instance—and the viscera contained within it.

**Pariglin′** or **Parillin′.** Smilacin; salseparin; crystallizable glucoside, active principle of sarsaparilla.

**Paril′ia malabar′ica.** Plant of Malabar; bark and leaves are used in decoction in hemorrhoids; root and leaves possess alterative properties.

**Paril′la yel′low.** Menispermum canadense.

**Parillin′.** A glucoside from sarsaparilla.

**Parin′.** Paridin.

**Parinaud's** (par-in-oze′) **conjunctivi′tis.** Serious form of the disease caused by infection from animals. **P.'s ophthalmople′gia,** paralysis of external rectus of the eye on one side, and spasm of internal rectus on the other side.

**Par′is.** A genus of plants, ord. *Liliaceæ.* **P. blue,** Prussian blue; ferric ferrocyanide. **P. green,** Scheele's green; aceto-arsenite of copper; used as an insecticide. **Plas′ter-of-p.,** gypsum, calcii sulphas. **P. quadrifo′lia,** oneberry, truelove; possesses narcotic properties, and was formerly considered a powerful philter; it is emetic, and is sometimes used externally as a resolvent and anodyne; the leaves are narcotic and diuretic. **P. red,** red sulphide of mercury; red lead; minium. **P. white,** very white and soft chalk reduced to fine powder by elutriation. **P. yel′low,** lead chromate.

**Parisac′tic.** Intussuscepted.

**Paristh′mia** (*para,* beside, *isthmos,* throat). Word employed to designate the tonsils, and likewise inflammation of the tonsils and sore throat in general.

**Paristh′mic.** Pertaining to the tonsils.

**Paristh′mion.** Tonsil.

**Paristhmi′tis.** Tonsillitis; Ludwig's angina.

**Paristh′mium.** Tonsil.

**Paristyphnin′.** $C_{38}H_{64}O_{18}$. Yellowish-white powder; glucoside obtained from root of Paris quadrifolia.

**Par′iswort.** Trillium latifolium.

**Par′ity.** Equality. Ability to bear children.

**Park's an′eurysm.** A form of arteriovenous aneurysm.

**Parkinso′nia aculea′ta.** Shrub; ord. *Leguminosæ;* South American and Mexican febrifuge and sudorific.

**Park′inson's disease.** Paralysis agitans. **P.'s fa′cies** or **mask,** the expressionless face of paralysis agitans.

**Parme′lia furfura′cea.** Lichen growing on trees; employed as a febrifuge. **P. island′ica,** Lichen islandicus. **P. parieti′na,** yellow wall lichen, common yellow wall moss, which grows abundantly on trees and walls; used in intermittent fever on account of its bitterness. **P. plica′ta,** Lichen plicatus. **P. pulmona′cea,** Lichen pulmonarius. **P. roccel′la,** Lichen roccella. **P. saxat′ilis,** Lichen saxatilis.

**Parmentier′a cerif′era** (after Parmentier). Candle tree; forest tree in the valley of the Chagres; ord. *Crescentiaceæ,* the long, cylindrical fruit of which, resembling candles, serves for food for cattle.

**Paroar′ion** (*oarion,* ovarium). Parovarium.

**Paroccip′ital.** Jugular process of occipital bone; separate in some apes. Mastoid apophysis. **P. fis′sure,** posterior part of interparietal fissure.

**Parodon′tid** or **Parodon′tis** (*para,* beside, *odous,* tooth). Tumor on the gum; parulis, etc.

**Parodonti′tis.** Inflammation of the parts about a tooth.

**Parodyn′ia** (*para,* abnormal, *odyne,* labor-pains). Dystocia. **P. perver′sa,** preternatural presentation.

**Parœ′nia** (*para,* beside, *oinos,* wine). Legal term denoting a tendency to crime caused by alcoholism.

**Parol′ivary.** Near the olive in the brain. **P. bod′y,** nucleus of anterior root-zone.

**Parom′phalocele** (*para,* beside, *omphalos,* navel, *kele,* rupture). Hernia near the navel.

**Paronir′ia** (*oneiron,* dream). Disturbed or morbid dreaming. **P. am′bulans,** somnambulism. **P. sa′lax,** pollution.

**Paronychia,** par-o-nik′e-ah (*para,* beside, *onyx,* nail). Inflammation about the nail; periphalangeal cellulitis, panaritium, felon, whitlow. Any phlegmonous tumor of the fingers or toes, and especially of the first phalanx. Four kinds of paroncyhia are commonly pointed out: 1. That seated between the epidermis and skin, called vulgarly, in this country, *runround.* 2. That seated in the subcutaneous areolar tissue. 3. That occupying the sheath of a tendon. 4. That considered to be seated between the periosteum and bone. The last three are only different degrees of the same disease, constituting *whitlow.* The worst kinds in English are called *felon.* The inflammation generally commences in the subcutaneous areolar tissue, and spreads to other parts, occasioning excessive lancinating pain, owing to the parts being put upon the stretch; hence the necessity of dividing them freely—even down to the bone when there is reason to believe that the affection belongs to the fourth division—making use of emollient applications, the antiphlogistic treatment, and opiates to relieve pain. Also Asplenium ruta muraria. **P. digi′tium,** desiccation or atrophy of the fingers. **P. latera′lis,** onychogryphosis. **P. syphilit′ica,** syphilitic dactylitis. **P. tendino′sa,** panaritium tendinosum. **P. ungula′ris o′vium malig′na,** foot rot.

**Paron'ychis** or **Paronychi'tis.** Paronychia.

**Paronycho'sis.** Abnormal nail growth.

**Paroöphori'tis.** Inflammation near the ovary. See *Parametritis.*

**Paroöph'oron.** Parovarium.

**Parophthal'mia** (*para,* beside, *ophthalmos,* eye). Inflammation of the tissues around the eye.

**Parophthalmon'cus** (*para,* beside, *ophthalmos,* eye, *onkos,* tumor). Swelling around the eye.

**Paro'pia** (*para,* beside, *ops,* eye). Lesser canthus.

**Paro'pium** (*para,* beside, *ops,* eye). Eye-shade.

**Parop'sis** (*para,* beside, *opsis,* sight). Vitiated or lost vision. **P. amauro'sis,** amaurosis. **P. catarac'ta,** cataract. **P. glauco'sis,** glaucoma. **P. illuso'ria,** pseudoblepsia. **P. latera'lis,** dysopia lateralis. **P. longin'qua,** presbytia. **P. lucifu'ga,** hemeralopia. **P. noctifu'ga,** nyctalopia. **P. propin'qua,** myopia. **P. staphylo'ma,** staphyloma. **P. s. purulen'tum,** hypopyon. **P. s. sim'plex,** hydrophthalmia. **P. strabis'mus,** strabismus. **P. synize'sis,** synizesis.

**Parora'sis** (*para,* beside, *orao,* to see). Color-blindness; achromatopsia; hallucination.

**Parorchid'ium** (*orchis,* testicle). Malposition or displacement of the testicle.

**Paror'chido-en'terocele.** Intestinal hernia complicated with displacement of the testicle.

**Parorex'ia** (*para,* beside, *orexia,* appetite). Perverted appetite; that is, for food that may not be nutritious, desirable, or assimilable.

**Paros'mia** (*osme,* odor). Anosmia; also perversion of smell.

**Parosphre'sia** or **Parosphre'sis** (*para,* beside, *osphresis,* smell). Parosmia.

**Parosteï'tis** (*para,* beside, *osteon,* bone). Inflammation around a bone.

**Parosto'sis** (*para,* beside, *osteon,* bone). Formation of bone outside the periosteum, as in the connective tissue, sheaths of the vessels, etc.

**Paro'tia** (*para,* beside, *ous,* ear). Parotitis.

**Paro'tic.** Near the ear; relating to the parotid gland.

**Parot'id** (*para,* beside, *ous,* ear). Largest of the salivary glands, seated under the ear, and near the angle of the lower jaw; composed of many separate lobes, giving rise to excretory ducts which unite to form one canal, called the parotid duct, Steno's or Stenon's or Stensen's canal or duct—the ductus superior or superior salivary canal of some. This duct, after having advanced horizontally into the substance of the cheek, proceeds through an opening in the buccinator muscle, and terminates in the mouth opposite the second upper molar. About the middle of its course it sometimes receives the excretory duct of a glandular body situated in its vicinity and called the *accessory gland of the parotid.* In the substance of the parotid are found a number of branches of the facial nerve, of the transverse arteries of the face, and the posterior auricular; it receives also some filaments from the inferior maxillary nerve, and from the ascending branches of the superficial cervical plexus. Its lymphatic vessels are somewhat numerous, and pass into ganglions situated at its surface or behind the angle of the jaw. The parotid secretes saliva and pours it copiously into the mouth. **Acces'sory p.,** see *Parotid.* **P. aponeuro'sis,** a sheath of great thickness, continuous below with the cervical fascia; forms a framework to the parotid by means of fibrous prolongations from its deep surface; its density accounts for the pain of parotitis and for the difficulty with which pus makes its way to the surface. **P. ar'teries,** see *Parotid.* **P. bu'bo,** parotitis. **P. duct,** see *Parotid.* **P. veins,** see *Parotid.*

**Parotid'ean.** Belonging or relating to the parotid. **P. plex'us,** see *Pes anserinus.*

**Parotidec'tomy** (*ektome,* excision). Operation for excision of the parotid gland.

**Parotide'omasseter'ic.** Relating to the vicinity of the parotid gland and the masseter muscle.

**Parotidi'tis.** Inflammation of the parotid gland, or mumps.

**Parotidon'cus** (*onkos,* a tumor). Swelling of the parotid. Mumps.

**Parotidoscir'rhus.** Scirrhus of the parotid gland.

**Paro'tis** (*para,* beside, *ous,* ear). Near the ear; parotid gland; also mumps. **P. accesso'ria,** accessory parotid gland; also a tumor seated under the ear, which is reddish, hard, and attended with obtuse pain, the progress to suppuration being slow and difficult; sometimes it is of a malignant character, sloughing, and long protracted. **P. contagio'sa,** or **epidem'ica,** mumps.

**Paroti'tis.** Inflammation of the parotid; mumps; cynanche parotidæa; parotiditis; parotis. **P. du'plex,** parotitis involving the parotid glands on both sides. **Metastat'ic p.,** attack of mumps in which metastasis to the testicles occurs. **P. symptomat'ica,** metastatic parotitis.

**Parou'lis.** See *Parulis.*

**Parova'rian.** Contiguous to the ovary. In the tissue surrounding the ovary. Relating to the parovarium or organ of Rosenmüller. **P. cyst,** a cyst near the ovary, or one of the parovarium.

**Parovariot'omy.** Removal of a parovarian cyst by excision.

**Parova'rium.** Paroarion, paroöphoron, organ or body of Rosenmüller, appendage to the ovary. Body closely analogous in structure to the epididymis, which is seated between the Fallopian tube and the ovary in the broad ligament. The corpus wolffianum concurs in its formation. The portion of the ovary in relation with the hilum of that organ is sometimes called the *paroöphoron,* and the excretory tubules and ducts attached to the ovary are known as the parovarium. The parovarium existing also in the adult female has been called *proövarium.*

**Paroxyn'tic** (*paroxyno,* to excite). Relating to a paroxysm.

**Paroxyquinoline' hydrochlo'rate.** $C_9H_7NO,HCl$. A powder, soluble in water, devoid of taste or smell; possessing antipyretic properties.

**Par'oxysm** (*paroxyno,* to irritate). Augmentation which supervenes at equal or unequal intervals in the symptoms of acute diseases. Also a periodical exacerbation or attack of a disease.

**Paroxys'mal.** Relating to a paroxysm or recurring in paroxysms.

**Paroxys'mus febri'lis.** Febrile paroxysm; pyrexia.

**Par'rot disease'.** Psittacosis.

**Par'rot's at'rophy.** Marasmus of the newborn. **P.'s disease',** syphilitic pseudoparalysis. **P.'s nodes,** syphilitic osteophytes of skull. **P.'s sign,** dilatation of the pupil when the skin is pinched; a symptom of meningitis. **P.'s ul'cers,** ulcerating patches seen in thrush.

**Par'ry's disease.** Exophthalmic goitre.

**Pars.** A part. **P. acetabula'ris,** acetabular bone. **P. ascen'dens,** vertical plate of palate-bone. **P. basila'ris os'sis occip'itis,** basilar process of occipital bone. **P. bulbo'sa ure'thræ,** bulbous urethra. **P. carno'sa ure'thræ,** membranous urethra. **P. cartilagin'ea tu'bæ,** cartilaginous portion of Eustachian tube, about two-thirds its length. **P. caverno'sa ure'thræ,** spongy urethra. **P. chorda'lis,** portion of base of skull occupied originally by chorda dorsalis, extending from the foramen magnum in the occipital and sphenoid bones as far forward as the sella turcica. **P. cilia'ris,** see *Retina.* **P. cilia'ris hyaloide'a,** ciliary zone. **P. conjunctiva'lis cor'neæ,** epithelial layer of cornea. **P. cor'poris,** genital organs. **P. cuneifor'mis tegmen'ti tym'pani,** anterior portion of tegmen. **P. descen'dens substan'tiæ perfora'tæ anti'cæ me'diæ,** lamina terminalis. **P. fronta'lis,** squama frontalis. **P. horizonta'lis,** horizontal plate of palate-bone. **P. horizonta'lis duode'ni,** horizontal portion of duodenum. **P. infe'rior pe'dis,** sole. **P. infundibula'ris,** the place of meeting of the mammary ducts. **P. interfascia'lis ure'thræ,** membranous urethra. **P. interme′dia,** intermediary nerve. **P. i. Wrisberg′ii,** the intermediate portion of the facial nerve. **P. irid′ica ret′inæ,** p. retinalis iridis. **P. i. u′veæ,** uveal tract. **P. mala′ris,** portion of malar bone forming prominence of cheek. **P. mastoide′a of tem′poral bone,** mastoid process. **P. membra′na sep′ti,** area at upper part of interventricular septum of the heart that remains thin and membranous. **P. membrana′cea,** membranous urethra. **P. membrano′sa ure′thræ,** membranous urethra. **P. muscula′ris,** see *Urethra.* **P. nasa′lis,** horizontal part of frontal bone between two orbital plates; vertical plate of ethmoid. **P. natura′lis medici′næ,** physiology. **P. nu′da,** membranous urethra. **P. obli′qua ascen′dens duode′ni,** transverse duodenum. **P. obscœ′na,** genital organs. **P. occipita′lis,** supraoccipital bone. **P. os′sea tu′bæ,** osseous portion of Eustachian tube, about one-third its length. **P. palati′na,** horizontal plate of palate-bone. **P. papilla′ris,** papillary layer of skin. **P. perinea′lis ure′thræ,** spongy urethra. **P. perpendicula′ris,** vertical plate of palate-bone. **P. petro′sa,** petrous portion of the temporal bone. **P. postrolan′dica,** the portion of the cerebrum lying posterior to the postcentral gyrus. **P. prærolan′dica,** the portion of the cerebrum lying anterior to the anterior central gyrus. **P. pri′ma as′peræ arte′riæ,** larynx. **P. prostat′ica,** prostatic portion of the urethra. **P. pylor′ica,** pyloric end of stomach. **P. reticula′ris,** reticular layer of skin. **P. retina′lis ir′idis,** epithelial portion of iris, formed originally from secondary optic vesicle. **P. rolan′dica,** the two central gyri of the cerebrum. **P. sclera′lis cor′neæ,** Bowman's membrane. **P. spongio′sa,** see *Urethra.* **P. squamo′sa,** squamous portion of the temporal bone. **P. transver′sa duode′ni,** transverse duodenum. **P. triangula′ris,** anterior portion of third frontal convolution. **P. tympan′ica,** tympanic portion of temporal bone. **P. urethra′lis levato′ris a′ni,** erroneous designation of fibres of inferior sheet of ischiorectalis, which loop around the urethra. **P. uvea′lis cor′neæ,** Descemet's membrane. **P. uvea′lis ir′idis,** connective-tissue portion of iris forming its external layer. **P. va′ga,** pneumogastric. **P. viri′lis,** penis.

**Pars′ley.** Apium petroselinum. **P. cam′phor,** stearopten obtained from volatile oil of parsley. **Fool's p.,** Æthusa cynapium. **P. fruit,** Petroselinum sativum, contains volatile oil and apiol; carminative, antiperiodic. **Hem′lock p.,** Conioselenium canadense. **Macedo′nian p.,** Bubon macedonicum. **Moun′tain p., black,** Athamanta aureoselinum. **Piert p.** (corr. from Fr. *percer la pierre,* to pierce the stone), Alchemella arvensis. **Poi′son p.,** Conium maculatum. **P. root,** carminative, diuretic, emmenagogue. **Wa′ter p.,** Cicuta maculata.

**Par′snip.** Peucedanum sativum. **Cow p.,** ord. *Umbelliferæ;* Heracleum sponylium; Heracleum lanatum. **Crow p.,** Leontodon taraxacum. **Gar′den p.,** Pastinaca sativa. **Mead′ow p.,** thaspium. **Wa′ter p.,** Sium latifolium.

**Par′sons′ disease.** Exophthalmic goitre.

**Part.** Pars. Member or organ of the body.

**Part. æq.** (abbr. for partes æquales). Equal parts.

**Part. aff.** (abbr. for partes affectæ). Parts affected.

**Part. dolent.** (abbr. for partes dolentes). Parts in pain.

**Part. vic.** (abbr. for partitis vicibus). In divided doses.

**Parthenei′a.** Virginity.

**Parthenicine′.** Parthenine.

**Parthenine′.** Alkaloid from Parthenium hysterophorum, said to be a substitute for quinine as a febrifuge.

**Parthen′ium.** A genus of plants, ord. *Compositæ.* **P. febrif′ugum,** matricaria. **P. hysteroph′orum,** broombrush, West Indian mugwort; has febrifuge properties, and is employed externally in cutaneous affections. **P. integrifo′lium,** prairie dock; an herbaceous perennial of the southwestern portions of the U. S., an infusion of the flowering tops of which is used as an antiperiodic. **P. mas,** tanacetum.

**Parthenochloro′sis** (*parthenos,* virgin, *chloros,* green). Chlorosis of girls.

**Parthenogalactoze′mia** (*parthenos,* virgin, *gala,* milk, *zemia,* loss). Discharge of milk from the breast occurring in the virgin.

**Parthenogen′esis** (*parthenos,* virgin, *genesis,* generation). Virginal generation; parthenogenetic reproduction; virgin birth. Asexual reproduction; reproduction of several successive generations without renewed fertilization by the male element.

**Parthenogenet′ic.** Relating to parthenogenesis.

**Parthenol′ogy** (*partheneia,* virginity, *logos,* description). Description or consideration of the state of virginity in health or disease.

**Par′tial** (*pars,* part). Comprising or affecting a part only, not total or general; as partial paralysis, etc. **P. aponeuro′sis,** aponeurosis of intersection; see *Aponeurosis.* **P. re′flexes,** movements in one muscle or one limited group of muscles from reflex irritation.

**Partia′lis** (*pars,* part). Local.

**Par′ticle.** A minute piece or portion. **Prim′itive p. of mus′cles,** sarcous element. **Red p. of the blood,** erythrocyte.

**Partic′ula femora′lis.** Nates.

**Par′tio** (*pario,* to bring forth). Parturition.

**Par′tite.** Divided nearly to the base.

**Part′ridge ber′ry.** Gaultheria; Mitchella repens. **P. pea,** Cassia chamæchrista.

**Partu′rial.** Relating to childbirth. **P. sep′sis,** puerperal fever.

**Partu′rient.** Bringing forth, or about to bring forth, or having recently brought forth, young. The parturient, puerperal, or lying-in state, childbed, confinement, puerperium, generally comprises the period from parturition to perfect recovery, which is usually a month. It requires careful management, and is subject to various diseases. A *parturient* or *parturifacient* is a medicine which induces or promotes labor, as ergot. **P. ap′oplexy,** puerperal disease of cows, characterized by arrest of lactation, fever, delirium, and brain congestion. **P. canal′,** channel, formed by the uterus with its dilated os and the vagina, through which the fœtus passes in the course of delivery.

**Parturifa′cient** (*parturio,* to bring forth, *facio,* to make). Parturient; abortive.

**Parturiom′eter.** Instrument which, applied to the presenting part of the fœtus during labor, indicates the expulsive contractile force of the uterus.

**Parturit′ion.** Delivery, labor, childbearing, childbirth, travail; expulsion of the fœtus at term. Act of delivery of the fœtus and its appendages; also the state during and immediately after delivery—childbed; see *Parturient.* Labor is the necessary consequence of conception, pregnancy, and the completion of gestation. It does not take place, at the full time, until after nine months, or forty weeks, of uterogestation, the causes producing it being the contraction of the uterus and abdominal muscles. By different authors the stages of labor have been variously divided. We may, perhaps, admit of four. The *first stage* comprises the precursory signs. One, two, or three days before labor, a mucous discharge, streaked with blood, takes place from the vagina, which is called *labor-show* or *show,* and along with this, trifling grinding pains, called by the French *mouches,* are felt in the loins and abdomen. The *second stage:* peculiar pains which extend from the lumbar region toward the uterus; tension and dilatation of the neck and orifice of that organ; protrusion into the vagina of the envelopes of the fœtus, forming the *bag of waters;* and rupture or breaking of the waters. *Third stage:* contractions of the uterus and abdominal muscles; forcing pains; the head of the fœtus becomes engaged in the pelvis; the occiput, being commonly situated above the left acetabulum, passes beneath the arch of the pubis.

*Fourth stage:* the head now presents at the vulva, the perineum being considerably distended; at length it clears the external parts, and the rest of the body is easily disengaged. The child still continues attached to the mother by the umbilical cord, which must be divided. In the course of fifteen or twenty minutes trifling pains occur, and the secundines are expelled. This completes delivery. In by far the majority of cases the head is the presenting part, the occiput directed anteriorly and the face posteriorly. Of 12,633 children born at *La Maternité*, in Paris, from the 10th of December, 1797, to the 31st of July, 1806, the following were the presentations:

| | |
|---|---|
| The head, with the face posteriorly | 12,120 |
| The head, " " anteriorly | 63 |
| The breech | 198 |
| The feet | 147 |
| The knees | 3 |
| Other positions | 102 |
| | 12,633 |

Labor has received different names according to the period of pregnancy at which it occurs and the mode in which it takes place. It is called *miscarriage* or *abortion* prior to the seventh month; *premature labor* or *parturition* between this and eight months and a half; and *labor at the full period* or *at term* when it happens at the end of nine months. Labors have likewise been variously divided by different authors. Perhaps the one into *natural* and *preternatural* is as good as any—natural labor meaning that which would occur without manual assistance; and preternatural, requiring the assistance of the accoucheur, using either the hand solely or instruments—*instrumental labor*. *Powerless labor* is that in which the muscular powers, from exhaustion, cannot accomplish delivery. *Precipitate labor* is one hastened by circumstances usually beyond control. *Forced labor* is labor or abortion produced by art. When accompanied with phenomena of a deranging character it is *complicated*. When the child cannot pass it is termed *impracticable*.

The term parturition is also applied to that which is brought forth at the time of labor. The laying of eggs by oviparous animals, corresponding in a way to parturition, is called *ovation;* that by insects *oviposition*.

The following table, from data furnished by Velpeau, gives an approximate view of the nature of the presentations in 1000 cases in the experience of each of the individuals mentioned. A second table presents a comprehensive sketch of the course and management of the different kinds of labor, natural and preternatural:

| | Madame Boivin. | Madame Lachapelle. |
|---|---|---|
| Regular, or of the vertex | 969 | 933 |
| 1. Occipito-anterior | 944 | 910 |
| *a.* Occipitocotyloid (left) | 760 | 717 |
| " (right) | 179 | 209 |
| *b.* Occipitopubian | 0.29 | |
| 2. Occipito-posterior | 9.4 | 9 |
| *a.* Frontocotyloid (left) | 5.3 | 7.3 |
| *b.* " (right) | 4 4 | 2.9 |
| Face presentation | 3.6 | 4.6 |
| Mentoïliac (right) | .... | 2.6 |

| Requiring forceps | 4.6 | 3.4 |
| " turning | .... | 7.8 |
| " cephalotomy | 4.77 | 0.53 |

## TABLE OF THE COURSE AND MANAGEMENT OF DIFFERENT KINDS OF LABOR.

### I. NATURAL LABORS,

*Or those in which Delivery can be effected without Assistance.*

| | | |
|---|---|---|
| **HEAD PRESENTING.**<br>(*Four Positions.*) | 1. *Occiput toward the left acetabulum.* | The head with the chin bent upon the breast clears the brim of the pelvis. Movement of rotation produced by the inclined planes of the pelvis; the occipital protuberance is carried behind the symphysis pubis, and the face toward the hollow of the sacrum. |
| | 2. *Occiput toward the right acetabulum.* | The head attains the outlet; clears it; the occiput being first disengaged, and the face afterward, which passes successively along the whole of the hollow of the sacrum. The shoulders enter the brim diagonally and execute the movement of rotation. The one behind first clears the outlet. The same thing occurs with the nates. |
| | 3. *Occiput toward the right sacro-iliac symphysis.* | The same course is here followed, except that after the rotary movement the face passes behind the symphysis pubis, and the occiput into the hollow of the sacrum. The occiput is first extruded, the face next. |
| | 4. *Occiput toward the left sacro-iliac symphysis.* | When the chin presents and is turned forward the face is first expelled; the head is thrown backward. This presentation is uncommon. If the chin present and be thrown backward, natural delivery cannot be effected. |
| **LOWER EXTREMITY PRESENTING.**<br>(*Four Positions of the Feet, Knees, and Breech.*) | 1. *Heel, tibia, or sacrum toward the left acetabulum.* | The nates enter the brim diagonally; movement of rotation; the one passes behind the symphysis pubis; the other toward the hollow of the sacrum. The one behind is first extruded. |
| | 2. *Heel, tibia, or sacrum toward the right acetabulum.* | The same thing happens to the shoulders. The chin is bent upon the chest to clear the brim; movement of rotation; the occiput passes behind the symphysis pubis, and the face toward the hollow of the sacrum. The face clears the outlet first; the occiput last. |
| | 3. *Heel, tibia, or sacrum toward the right sacro-iliac symphysis.*<br>4. *Heel, tibia, or sacrum toward the left sacro-iliac symphysis.* | The same progress, except that after the movement of rotation the face is toward the pubis, and the occiput toward the sacrum. The face is here again delivered first. |

### II. PRETERNATURAL LABORS.

#### 1. *Those which require Manual Assistance only.*

| | |
|---|---|
| **PRESENTATION OF THE HEAD, UPPER EXTREMITIES, BACK, ABDOMEN, ETC.** | 1. When the labor is without any serious complication and the head is not in a good position at the brim of the pelvis, endeavors are to be made to place it in its natural position: the hand to be introduced with the fingers united, and the long diameter of the head to be placed diagonally in the brim, if possible. Or the lever may be fixed over the occiput, and, by drawing it down, a closer approximation of the chin and chest may be effected; the position of the head to the pelvis being at the same time attended to. |

| | |
|---|---|
| Presentation of the Head, etc. (*Cont'd.*). | 2. If complicated with syncope, convulsions, hemorrhage, want of uterine action, etc., the feet must be laid hold of and the child *turned*. For this purpose, empty the rectum and bladder, and turn, if possible, prior to the escape of the liquor amnii. The female may be placed on her back or left side, with the breech over the edge of the bed. Use the right or left hand, according as the feet of the child are to the right or left side of the pelvis; always so introducing the hand that the child shall be in its palm, and the back of the hand opposed to the inner surface of the uterus. The hand and arm to be introduced during an interval of pain; and they must be flattened and tranquil while the uterus is contracting forcibly. If both feet cannot be readily brought down, seize one, and tie a fillet around it.<br>3. If the toes point to the vertebral column or to the abdomen of the mother, the head, in its descent, will not enter the pelvis: the chin and occiput will be hitched on the pubis and promontory of the sacrum. In such case, grasp the nates as soon as they have passed the os externum; and, during a pain, endeavor to direct the toes toward either sacro-iliac synchondrosis. When the fingers are passed along the body of the child and over the shoulders to the bend of the elbows, draw down the arms successively. When the body is expelled, and the head filling up the brim, the termination of labor must be accelerated by passing two fingers over the shoulder of the child, using moderate and steady extracting power, while one finger of the other hand, passed into the mouth, depresses the chin on the sternum. In this way the head may be extracted. |

2. *Those requiring the Assistance of Appropriate Instruments.*

| | |
|---|---|
| General Observations | If the pains become feeble, or inadequate from any cause, or if the presenting part be firmly wedged in the pelvis, or the woman be becoming exhausted, instrumental assistance may be required. In all such cases place the female on the back or left side, empty the bladder and rectum; wait till the os uteri is in a fit state; afford assistance during the pains; introduce the instrument during the intervals between the pains; have the patient on her left side (generally), and extract according to the axes of brim and outlet, as the case may be. |
| Use of Forceps, etc.<br>1. *Short Forceps* | Apply these to the sides of the head of the child, so that the ears and parietal protuberances may be within the fenestræ. Introduce the left-hand blade first, the index and middle fingers of the right hand guiding it to the ear. With the right hand pass the other in an opposite line, corresponding with the course of the first blade, guided by the fore and middle fingers of the left hand, the third and little fingers being employed to retain the left-hand blade in place: humor the instrument so as to allow the blades to lock. The handles may now be tied gently together. The force used must be from blade to blade, with a gentle, tractile effort. |
| 2. *Long forceps* | Applicable where the head has not entered the brim. The long forceps must be applied, in most cases, over the occiput and face of the child, so that the convex edges of the blades may be toward the hollow of the sacrum. When used, the power may be exerted from side to side, with moderate traction. |
| 3. *Lever* or *Vectis* | The lever is applicable to the same cases as the forceps. It must not be used strictly as a lever, but as a hook with which to draw downward. It may be applied to any part of the head, but is generally hitched on the occiput. |
| 4. *Fillet* and *Blunt Hook* | In certain cases of breech and knee presentation, where the hand is sufficient, it may be necessary to pass over the joint a fillet, or the blunt hook, with which to exert some force of traction. The operation is very simple. |
| Embryulcia | Disproportionate size of head or distorted or deformed pelvis may require the child to be destroyed and its bulk lessened; or the Cæsarean section or symphyseotomy, or the induction of premature labor, may be called for.<br>The instruments here are the *Perforator*, *Crotchet*, and *Craniotomy forceps*. Make a steady pressure on the abdomen; pass two fingers of the left hand up to the head; feel for a suture or fontanel; introduce the perforator, and bore through until the progress of the instrument is arrested by its *shoulders*. Open the handles, and turn the instrument in different directions, so that the opening may be large enough to admit the perforator, with which the brain must be broken down.<br>If, after, this, delivery cannot be accomplished without further aid, pass up the craniotomy forceps; open the handles slightly, and introduce the blade without teeth within the cranium. On closing the forceps, a hold is obtained, and a tractile force can now be exerted during the pains, and the extrusion of the child be effected.<br>Should great difficulty exist at the brim, the bones at the top of the head may have to be removed, until the base alone remains. The chin must then be brought through first.<br>The guarded crotchet is sometimes used instead of the craniotomy forceps, being passed into the opening made by the perforator, and hooked upon some bony projection in the interior of the skull; but it is not a good instrument. In presentations of the face demanding perforation of the cranium the perforator should be introduced just above the nose, in the sagittal suture.<br>When it is necessary to open the head after the lower extremities have been expelled, the perforation must be made behind the ear. |
| Symphyseotomy and Cæsarean Section. | In cases of great narrowness of the pelvis, the operation of *Symphyseotomy* has been adopted by the Italian and French practitioners—rarely by the British, much more frequently by the American; and, in extreme cases, recourse has been had to the *Cæsarean section*. |
| Separation of the Head of the Fœtus from the Body. | If the body of the fœtus has been forcibly separated and the head left in the uterus, it must be laid hold of with one hand and the forceps be applied; or the head be opened and delivered, as under Embryulcia. Should the head have been brought away and the body left behind, the feet must be brought down. |
| Induction of Premature Labor. | In cases of narrowness of the pelvis, where the fœtus, at the full term, cannot be born alive, delivery may be brought about at an earlier period, or as soon as the child is capable of carrying on its functions independently of the mother.<br>One plan for accomplishing this object is merely to pass the finger round and round within the os and cervix uteri, so as to detach the decidua, the membranes being thus left entire and the life of the child not as much endangered as where the membranes are punctured and the waters evacuated. Parturition usually follows within forty-eight hours. At the present day the introduction of a flexible bougie between the uterine wall and the membranes is the plan generally adopted. |

**Partu′rium va′num.** Abortion. Expulsion of products of false conceptions, as hydatids, clots, etc.

**Par′tus** (*pario*, to bring forth). Parturition. As an adjective, born. **P. abac′tio** or **abac′tus**, abortion. **P. æ′gre**, partus agrippinus. **P. agrippi′nus**, labor in which the breech presents. **P. cæsa′reus**, delivery by cæsarean section. **P. cap′ite præ′vio**, delivery by head presentation. **P. clu′nibus præ′viis**, delivery in which the breech presents. **P. diffic′ilis**, dystocia. **P. emor′tuus**, stillborn. **P. immatu′rus**, premature delivery. **P. imperfec′tus**, incomplete delivery. **P. intempesti′vus**, precipitate labor. **P. laborio′sus,** dystocia; difficult labor. **P. le′ge ar′tis procuran′dus,** induced premature delivery. **P. matu′rus,** parturition at full term. **P. præcipita′tus,** precipitate labor. **P. præ′cox** or **præmatu′rus,** premature delivery. **P. seroti′nus,** labor succeeding a pregnancy that has been extended beyond the usual period. **P. sic′cus,** dry labor or parturition; labor in which there is little or no discharge of liquor amnii. **P. per vi′as natura′les,** delivery through the vagina, in contradistinction to delivery by cæsarean operation.

**Paru′lis** (*para,* beside, *oulon,* gum). Gumboil, alveolar abscess. Small abscesses are so called which generally form in the alveoli and involve the gums, sometimes without any known cause, but which often depend upon carious teeth.

**Parumbil′ical.** Beside the umbilicus. **P. veins,** small vessels running from the portal vein along the round ligament of the liver to the umbilicus, and there connecting with the epigastric veins.

**Paru′ria** (*oureo,* to pass urine). Morbid secretion or discharge of urine. **P. incon′tinens,** enuresis. **P. i. aquo′sa,** see *Diabetes.* **P. in′ops,** false ischuria. **P. melli′ta,** diabetes. **P. retentio′nis rena′lis,** suppression of urine. **P. r. vesica′lis,** retention of urine. **P. stillati′tia,** strangury.

**Parvipso′as.** Psoas parvus muscle.

**Parvolin′.** First ptomain analyzed and chemically defined; discovered by Gautier and Etard in 1881; oily liquid, amber-colored, odor of hawthorn, boiling slightly below 200° C.; obtained from putrefying mackerel and horseflesh. Compound obtained from bituminous schists rich in animal fossils.

**Par′vule** (*parvus,* small). A small pill or pellet; granule.

**Pas′ma** (*passo,* to sprinkle). Catapasm.

**Pas′palum longiflo′rum.** Millet grass, the juice of which, added to rice and cocoanut oil, is employed locally as an anæsthetic.

**Pasque flow′er.** Anemone pulsatilla.

**Pass.** To discharge from the rectum or urethra.

**Pas′sage.** Dejection from the bowels. Canal. **Alve′olar ps.,** passages which originally were bronchioles, and which receive openings of the pulmonary infundibula. **Diges′tive ps.,** portion of the alimentary canal and its accessory parts concerned in digestion. **False p.,** a rupture in the wall of a canal, such as the œsophagus or urethra, made usually by the point of a sound passed too forcibly. **Lac′rymal p.,** see *Lacrymal.* **Lob′ular p. of lung,** alveolar passage. **Lymph p.,** lymph-sinus.

**Passavant's′ cush′ion.** Protrusion of the posterior wall of the pharynx during deglutition by the action of part of the superior constrictor muscle of the pharynx.

**Passeri′na tartonrai′ra.** Plant whose bark is possessed of epispastic properties; an ointment prepared from it, in the same manner as that of mezereon, is said to possess more activity than the latter. **P. tincto′ria,** shrub employed in dyeing wool in the south of Europe; bark possesses purgative properties.

**Passer′va.** Name given in the East Indies to sediment found in vessels in which opium-juice is stored.

**Passet's** (pas-saze′) **pu′trefying bacil′lus of pus.** Bacillus pyogenes fœtidus.

**Passiflo′ra laurifo′lia.** Bayleaved passion flower, ord. *Passifloreæ;* a native of Surinam; fruit has a delicious smell and flavor, and quenches thirst, abates heat of the stomach, increases the appetite, etc. **P. malifor′mis,** apple-shaped granadilla; fruit of this species is esteemed a delicacy in the West Indies, where it is served up at table in desserts. Some of the genus are said to possess narcotic and emetic properties.

**Passiflorine′.** Alkaloid from Passiflora quadrangularis, possessing virtues similar to morphine.

**Pas′sio** (*patior,* to suffer). Disease; passion.

**Pas′sion.** An active affection or emotion of the mind, as rage, terror, love, hatred, etc. Suffering from disease. Ardent sexual desire. **Cœ′liac p.,** cœliac flux. **P. flow′er, bay′leaved,** Passiflora laurifolia. **Hæmatocœ′liac p.,** dysentery in which bloody evacuations occur. **Hyster′ical p.,** hysteria. **Il′eac** or **Il′iac p.,** ileus.

**Pas′sive.** Epithet for affections which seem to be owing to a greater or less diminution of the strength, or which are without apparent reaction. Thus, passive hemorrhages are such as supervene in debilitated individuals or under conditions in which increased action of the arteries can scarcely be presumed. Term has also been given to dilatation of the heart with thinning of the parietes; in opposition to *active* dilatation with hypertrophy of the walls. *P. processes* are those which exhibit little cellular activity, with a tendency to degeneration. **P. insuffi′ciency of mus′cles,** see *Insufficiency.* **P. mo′tion,** motion caused by external force, not by muscular efforts of the patient.

**Pas′ta.** Paste. **P. gummo′sa,** gum paste. **P. re′gia,** almond confection. **P. zin′ci chlo′ridi,** Canquoin's paste.

**Paste.** A viscid, tenacious mixture; also a compound medicine like the pastil, but less consistent, flexible, less saccharine, and more mucilaginous. Pastes of opium, etc., are used by the dentist in dental caries to relieve pain; and similar preparations of astringents and aromatics are applied to the gums to give tone to them and improve the breath. They are used also in dermatology; either emollient in irritative skin affections, as eczema, or caustic in superficial cancers. A convenient paste for attaching labels to glass or for other services is made of gum tragacanth and water, to which alum is added. Another form is to make a solution of gum arabic, ʒj, boiling water, f℥ij, and glycerin, f℥ij; and another is made by mixing powdered gum arabic and powdered tragacanth, of each ʒss, water, f℥iss, acetic acid, ♏xx. **Arsen′ical p.,** a paste of arsenous acid, 30; plaster-of-Paris, 15; morphine sulphate, 20; cocaine, 5; eosine, ½; oil of cloves, 5; carbolic acid, 25; used in destroying a dental nerve. **Bougard's′ p.,** a paste containing arsenic, corrosive sublimate, zinc chloride, and mercuric sulphide; used as an application to superficial cancers. **Bourdin's′ p.,** composed of nitric acid and flowers of sulphur; escharotic. **Canquoin's′ p.,** a paste containing zinc chloride, 32; zinc oxide, 8; flour, 24; water, 4; escharotic and used as an application to cancers. **Cos′ter's p.,** iodine, 1; light oil of wood-tar, 4; used in ringworm. **Dupuytren's′ p.,** see *Dupuytren.* **Ihle's p.,** resorcin, 1 part, in 12 parts each of zinc oxide, starch, lanolin, and soft paraffin. **Las′sar's p.,** emollient paste composed of salicylic acid, zinc oxide, and starch. **Lon′don p.,** caustic soda and unslaked lime, equal parts; escharotic. **Llandol′fi's p.,** a caustic paste of chloride of bromine, either alone or combined with other caustic chlorides. **Manec's′ p.,** a powerful paste employed for the removal of epithelial growths, composed of white arsenic, gr. xv, cinnabar, gr. lxxv, burnt sponge, gr. xxxv, made into a thick paste with a few drops of water. **Michel's′ p.,** fuming sulphuric acid, 3; powdered asbestos, 1; escharotic. **Se′rum p.,** see *Serum.* **Sulphuric-ac′id p.,** equal parts of sulphuric acid and saffron; caustic. **Tooth p.,** dentifrice. **Vien′na p.,** equal parts of caustic potash and quicklime made into a paste with alcohol; caustic. **Ward's p.,** confection of black pepper; made of pepper, caraway, and clarified honey.

**Pastel′.** Isatis tinctoria.

**Pas′tern.** Part between the fetlock joint and the hoof in the horse; homologue of the phalanges.

**Pasteur's′ flu′id.** Cane-sugar, 108 gm.; ammonium tartrate, 10 gm.; ashes of yeast, 0.75 gm.; distilled water, 1000 c.c. Used as a culture medium.

**Pasteuriza′tion.** Prevention of decomposition in fluids, as in milk or wine, by destroying the micro-organisms contained therein by keeping the liquid for at least thirty minutes at a temperature of 70° C. (158° F.); this does not kill spores.

**Pastil′** or **Pastille′**. A compound of aromatic substances with nitre; used as a fumigating material. Also a small lozenge or troche.

**Pastina′ca.** An old name for *peucedanum.* **P. altiss′ima,** P. opopanax. **P. ane′thum,** Anethum graveolens. **P. grave′olens,** Anethum graveolens. **P. opa′ca,** P. sativa. **P. opop′anax,** ord. *Umbilliferæ;* furnishes the opopanax; this exudes from the roots when wounded; its odor is strong and peculiar, taste bitter and acrid; met with in the shops in lumps of a reddish-yellow color without, white within; has been recommended as an antispasmodic and emmenagogue. **P. praten′sis** or **P. sati′va,** garden parsnip; root sweet and nutritious, in esteem as an article of food; has been used as a diuretic and demulcent in calculous affections, etc. **P. sylves′tris,** P. sativa. **P. s. tenuifo′lia officina′rum,** Caucus carota.

**Pas′ture-e′vil.** See *Milk sickness.*

**Patch.** A flattened, irregular spot or space on the skin or mucous membrane, sometimes slightly elevated and discolored. **Moth p.,** chloasma. **Mu′cous p.,** see *Condyloma.* **O′paline p.,** an appearance seen in the second stage of syphilis on mucous surfaces; if the patch be detached, a red, raw, bleeding surface results. **Pey′er's p.,** one of numerous oblong aggregations of lymph follicles in the intestinal mucous membrane. **White p.,** milky stain; smooth patches seen in the third stage of syphilis, resulting from the peeling off of opaque epithelium over a syphilitic lymph deposit.

**Patchou′li.** Pogostemon patchouli.

**Patel′la** (diminutive of *patera,* a bowl, so called from its shape). Knee-pan or knee-cap. A sort of sesamoid, flat, short, thick, rounded bone, situated in front of the knee, and enveloped in the substance of the tendon common to the extensor muscles of the leg. The posterior surface of the patella is divided into two facettes, united angularly, which are encrusted with cartilages, and each of which is articulated with one of the condyles of the femur. When fractured it is difficult to produce bony union. This can be accomplished only by keeping the fractured extremities closely in apposition. The ligamentum patellæ is a strong, flat tendon attached to the lower extremity of the patella and the anterior tubercle of the tibia. It may be considered a part of the tendon of the rectus femoris, the patella being regarded as a sesamoid bone. **P. fix′a,** olecranon.

**Patel′lar.** Relating to the patella. **P. clo′nus,** clonic contraction of the quadriceps femoris muscle when the patellar tendon is forcibly tapped. **P. fos′sa,** depression on the trochlea of the femur for reception of the patella. **P. plex′us,** formed in front of the knee by branches of the internal saphenous and internal and middle cutaneous nerves. **P. re′flex,** knee-jerk. **P. ten′don,** ligamentum patellæ, connecting the patella with the anterior tubercle of the tibia.

**Patella′ria.** Genus of fungi. **P. geograph′ica,** species of Europe having febrifuge properties.

**Patel′late.** Term applied to a polypus which forms an almost orbicular expansion.

**Patel′liform.** Shaped like a patella or small dish.

**Pa′tency** (*pateo,* to open). State of being open, as the orifice or outlet of a tube, canal, duct, etc.

**Pat′ent med′icine.** Medicinal compound for the sale of which the proposer obtains from the government an exclusive privilege. A specification of his invention must be registered in the Patent Office, and hence it differs from a secret or proprietary medicine.

**Pate′ra Diog′enis** (Diogenes' dish). Palm of the hand.

**Pathe′ma.** Affection; disease.

**Pathematol′ogy** (*pathema,* disease, *logos,* discourse). Pathology.

**Pathengenet′ic** (*pathos,* disease, *engignomai,* to produce). Produced by disease.

**Pathet′ic** (*pathos,* passion). That which moves the passions. Name given to the superior oblique muscle of the eye, and also to the fourth pair of nerves. **P. mus′cle,** superior oblique of the eye. **P. nerve,** trochlear nerve, the smallest encephalic nerve; it arises behind the inferior part of the tubercula quadrigemina (testes) at the lateral parts of the valvula Vieussenii; its roots unite into one thin, round cord, which makes a turn upon the peduncles of the brain, and passes into a canal of the dura mater near the posterior clinoid process; it enters the orbit by the broadest part of the sphenoidal fissure, and terminates in the superior oblique muscle of the eye by dividing into several filaments.

**Pathet′icus.** Superior oblique muscle of the eye.

**Path′etism.** Animal magnetism. Doctrine of mental influences, including hypnotism, telepathy, etc.

**Path′finder.** An instrument so called because it finds its way (with assistance) in or through a stricture of the urethra.

**Path′ic.** Morbid. The passive agent in unnatural sexual acts. **P. re′flexes,** movements due to stimulation of sensory fibres.

**Patho-anatom′ical.** Relating to pathological anatomy.

**Patho-anat′omy.** Pathological anatomy.

**Path′ogen.** A pathogenic microorganism.

**Pathogene′ity.** Pathogenicity.

**Pathogen′esis** (*pathos,* disease, *genesis,* generation). Pathogeny.

**Pathogenet′ic** or **Pathogen′ic.** Relating to pathogeny. Having the power to produce disease; a term applied to microorganisms capable of exciting disease. **P. physiol′ogy,** that part of physiology relating to the origin of disease.

**Pathogenicity,** path-o-jen-is′it-e. State of being pathogenetic.

**Pathogeny,** path-oj′en-e. Branch of pathology relating to the generation, production, and development of disease.

**Pathognomon′ic** (*pathos,* disease, *gignosko,* to know). Characteristic of a disease, by which it may be readily differentiated from other diseases.

**Pathog′nomy** (*pathos,* disease, *gignosko,* to know). Recognition of the characteristics of a disease which differentiate it from other diseases.

**Pathog′raphy** (*pathos,* disease, *grapho,* to describe). Description of disease.

**Patholo′gia.** Pathology. **P. humora′lis,** humorism. **P. solida′ris,** solidism.

**Patholog′ical.** Relating to pathology. Morbid. **P. anat′omy,** see *Anatomy.*

**Patholog′ically.** Considered from a pathological standpoint.

**Pathol′ogist.** One versed in pathology.

**Pathol′ogy** (*pathos,* disease, *logos,* discourse). Doctrine of disease, its nature and results. **Cel′lular p.,** view advanced by Virchow that every vital process originates from the cells, and that all cells take their origin from a previous cell. **Compar′ative p.,** pathology in relation to the animal or the vegetable. **Experiment′al p.,** pathology in relation to diseases produced in animals for purposes of pathological research. **Exter′nal p.,** pathology relating to surgical diseases. **Gen′eral p.,** p. of disease in general and of general changes in the various organs. **Hu′moral p.,** humorism. **Inter′nal** or **med′ical p.,** pathology in relation to internal diseases which cannot be influenced by surgical measures. **Solidis′tic p.,** see *Solidism.* **Spec′ial p.,** study of the changes incidental to individual diseases. **Sur′gical p.,** p. of diseases of the external parts or of those amenable to surgical treatment.

**Pathol′ysis** (*pathos,* disease, *lyo,* to dissolve). Decomposition of substances in the living body under the influence of disease.

**Pathoma′nia.** Moral insanity.

**Pathono′mia** or **Pathon′omy** (*pathos,* disease, *nomos,* law). Study of laws of disease.

**Pathopho′bia** (*pathos,* disease, *phobos,* dread). Morbid dread or fear of being ill; hypochondriasis.

**Pathopoie′sis.** Causation of disease; pathogeny.

**Pathopoiet′ic** (*pathos*, disease, *poieo*, to make). Pathogenic.

**Path′os** (suffering). Affection; disease.

**Pa′tience dock.** Rumex patientia; root used as an alterative.

**Pa′tient** (*patior*, to suffer). One who is affected with disease, especially if under medical treatment.

**Patien′tia.** Rumex patientia.

**Patien′tiæ mus′culus.** Levator scapulæ.

**Patrin′ia jataman′si** (after E. L. M. Patrin, of Lyons). Nardus indica. **P. scabiosæfo′lia,** root of this species yields Japanese valerian.

**Pat′terson's cor′puscles.** Molluscum bodies.

**Pat′ulous.** Open.

**Patur′sa.** Syphilis.

**Paullin′ia** (after S. Pauli, of Copenhagen). Extract of Paullinia sorbilis, known as guarana. **P. pinna′ta,** of Brazil, acronarcotic and poisonous; root-bark used as an anodyne externally and internally. **P. sor′bilis,** of Brazil, climbing shrub, source of guarana.

**Paullinitan′nic acid.** Tannic acid from Paullinia sorbilis.

**Paulocar′dia** (*paulus*, a few, *kardia*, heart). Intermittence or dropping of heart-beats.

**Paul's bet′ony.** Veronica officinalis. Speedwell. **P.'s sign,** weak beat at the apex of the heart, with strong impulse in adherent pericardium.

**Paunch.** Cavity of the abdomen. Ingluvies.

**Pauseme′nia** (*pausis*, cessation, *menes*, menses). Cessation of the menses.

**Pau′sis.** Sedation.

**Pava′na wood.** Croton tiglium.

**Pave′ment epithe′lium.** Flattened, scaly, irregularly shaped nucleated cells, arranged in several superposed layers, lining mucous (in part) and dermal tissues.

**Pavet′ta in′dica.** The root of this shrub is stomachic and diuretic. The leaves are employed in cutaneous affections and applied to hemorrhoids.

**Pavietin′.** Prasetin.

**Paviin′.** Prasin.

**Pavil′ion.** The expanded extremity of a canal or cavity. **P. of the ear** is seated behind the cheeks, beneath the temple, and anterior to the mastoid process; its size varies in individuals; it is free above, behind, and below; anteriorly and within it is continuous with the neighboring parts. Its outer surface has several prominences—the *helix, anthelix, tragus, antitragus,* and *lobe*—and several cavities—the *groove of the helix,* the *fossa navicularis,* and the *concha.* The skin covering the pavilion is very fine, and studded with a number of sebaceous follicles. The auricle is fixed to the head by three fibroareolar ligaments—a superior, anterior, and posterior. **P. of the o′viduct,** its free, expanded extremity. **P. of the pel′vis,** the flare of the pelvic bones.

**Pavimen′tum** (floor) **cer′ebri.** Base of the brain. **P. or′bitæ,** floor of the orbit. **P. tym′pani,** floor of the tympanic cavity. **P. ventric′uli,** floor of the ventricle.

**Pavi′na.** Æsculus hippocastanum.

**Pavita′tio** (*pavito*, to tremble from fear). Tremor.

**Pavo′nia coccin′ea.** Scarlet mallow; plant growing in the Antilles. The flowers are applied externally in inflammations of the eye, and given internally as a demulcent.

**Pa′vor** (Lat.). Dread; great fright. Panophobia. Old term for scabies. **P. noctur′nus,** night-terrors.

**Pa′vy's disease′.** Intermittent cyclic albuminuria. **P.'s solu′tion** or **test,** copper sulphate 16 gr., neutral potassic tartrate 32 gr., caustic potash 64 gr., water 1 oz.; 100♏ represent half a grain of grape-sugar; test for sugar in the urine.

**Paw** (W., *pawen*, a foot). Manus.

**Pawlik's** (pav′liks) **folds.** Anterior columns of the vagina forming the lateral boundaries of *Pawlik's triangle.* **P.'s tri′angle,** extravesical or vaginal trigonum.

**Pawolin,** pav-o-lin′. $C_9H_{13}N$. Ptomain separated from putrefying mackerel by Gautier and Etard.

**Paw′paw.** See *Carica papaya.*

**Pax′ton's disease′.** Tinea nodosa.

**Pax′wax** or **Paxywax′y.** See *Nucha.*

**Pay′ta bark.** Variety of pale cinchona bark from Payta, Peru.

**Paytamine′.** Amorphous alkaloid in white Payta bark.

**Paytine′.** $C_{21}H_{24}N_2O,H_2O$. Natural, crystallizable alkaloid in white Payta bark.

**Pb.** Chemical symbol for plumbum, lead.

**Pea.** Pisum. **Gar′den p.,** pisum. **Ground squir′rel p.,** Jeffersoniana bartoni. **Hoar′y p.,** Galega virginiana. **Is′sue p.,** a round body, usually of wood, the size of a pea, which is kept in an issue to prevent healing. **Love p.,** Abrus precatorius. **Part′ridge p.,** Cassia chamæcristi. **Tur′key p.,** Galega virginiana.

**Peach.** Amygdalus persica. **P. fe′ver,** an affection resembling rose cold or hay fever, induced in those possessing an idiosyncrasy by handling or smelling unpeeled peaches. **P. wood,** see *Cæsalpinia.*

**Peach′wort.** Polygonum persicaria.

**Pea′gle.** Primula veris.

**Péan's′ opera′tion.** Laparotomy for the removal of uterine fibroids. **P.'s posi′tion,** position of a patient lying on the back on a low table with the legs hanging over the edge, while the operator sits on a high chair between the legs.

**Péan-Segond′ opera′tion.** Vaginal total extirpation of the uterus and adnexa.

**Pea′nut.** Groundnut, Arachis hypogea.

**Pear.** See *Pyrus malus.* **Al′ligator p.,** Persea gratissima. **An′chovy p.,** Grias cauliflora. **Avoca′do p.,** Persea gratissima.

**Pearl.** Roundish, nacreous concretion, of a silvery white color and brilliant polish, found in several shells, and especially in the *Avicula margaritifera.* The same secretion is deposited on the inner surface of the shell; it is called *mother of pearl,* and has been used in the fabrication of handles for surgical instruments, etc. Pearls were formerly given in powder as astringents and antacids. They consist of lime and an animal matter. **P. ash,** potash of commerce. **P. bar′ley,** barley deprived of all its investments and afterward rounded and polished in a mill. **P. disease′,** tuberculosis in cattle. **Epithe′lial p.,** see *Pearly bodies.* **Medic′inal p.,** capsule containing medicine for internal use; also capsules of thin glass containing liquid, the glass being crushed in a handkerchief and the vapor inhaled. **Moth′er of p.,** see *Pearl.* **P. plant,** Lithospermum officinale; seed is diuretic and lithontryptic. **P. sa′go,** sago in small grains, prepared by passing moistened sago through a sieve and drying the small fragments by constant stirring over a fire. **P. tu′mor,** cholesteatoma. **P. white,** bismuth subnitrate.

**Pearl-like tu′mor.** Cholesteatoma; tuberculosis in cattle.

**Pearl′y bod′ies.** Collections of concentrically laminated, flattened, fibre-like cells seen in epitheliomata; known also as bird's-nest bodies or epidermic spheres. **P. everlast′ing,** Antennaria margaritacea. **P. tu′mor,** cholesteatoma; tuberculosis in cattle.

**Pear′son's arsen′ical solu′tion.** Aqueous solution of sodium arsenate, of about 0.1 per cent. strength.

**Peas′lee's opera′tion.** Superficial tracheotomy.

**Peat.** Brown or black unctuous substance, composed of decomposing vegetable matter found in bogs beneath the surface of turf. Contains humic, phosphoric, and sulphuric acids; used for baths and poultices and for antiseptic surgical dressing.

**Peb′ble.** Rock crystal sometimes used in the manufacture of lenses, the term sometimes being applied to any lens used for eyeglasses.

**Peb′rine.** Silkworm disease.

**Pecan′** or **Peccan′ nut.** See *Hickory.*

**Pec′cant** (*pecco*, to sin). Morbid; not healthy; epithet given by the old humoralists to the humors when erring in quality or quantity. Pathogenic.

**Pechedion,** pek-e′de-on. Perineum.

**Pechu′rim cor′tex.** An aromatic bark from a species of *laurus;* fragrant, like cinnamon, which it resembles in its properties; used in the cure of dysentery, etc. See *Pichurim beans.*

**Pechytyr′be.** Porphyra nautica; scurvy.

**Pe′ciloblast, Pe′cilocyte,** etc. See *Poikiloblast,* etc.

**Peck′lin's glands.** Peyer's glands.

**Pecquet's** (pek-kaze′) **cis′tern** or **res′ervoir.** Receptaculum chyli. **P.'s duct,** thoracic duct.

**Pec′tase.** Albuminoid ferment found in unripe fruit, roots, etc.

**Pec′tate.** Salt of pectic acid.

**Pec′ten** (border, row). Pubes; also a comb. **P. commissu′ræ anterio′ris,** bundles of fibres running transversely, existing in the velum of the anterior commissure of the brain. **P. den′tium,** a row of teeth. **P. ven′eris,** Scandix cerefolium.

**Pec′tic acid.** Substance obtained from pectin.

**Pectin′** (*pektos*, coagulated, curdled). A principle which forms the basis of vegetable jelly. Extensively diffused in the juices of pulpy fruits and roots, especially when mature, and occasions the coagulation of these juices when they are mixed with alcohol or boiled with sugar.

**Pectina′ceous.** Pectinous.

**Pectinæ′us** or **Pectina′lis** (*pecten*, pubes). Muscle situated at the inner and upper part of the thigh; it is long, flat, and triangular; attached, above, to the space which separates the iliopectineal eminence from the spine of the pubis, and below, by a flat tendon, to the oblique line which descends from the lesser trochanter to the linea aspera. It bends the thigh on the pelvis, and carries it outward in adduction and rotation; it may also bend the pelvis on the thigh.

**Pec′tinate** or **pec′tinated** (*pecten*, comb). Toothed like a comb. **P. lig′ament of the i′ris,** peculiar sponge-like connective tissue filling up the angle at the juncture of the cornea and iris. **P. mus′cles,** musculi pectinati; the fascicular texture observed in the right auricle of the heart—musculi auriculæ pectinati; their main use probably is to prevent the overdilatation of the auricles.

**Pectina′tus.** Pectinalis.

**Pectin′eal.** Relating to the pubic bone. **P. bur′sa,** bursa under the tendon of the pectineus muscle. **P. fas′cia,** part of fascia lata covering the pectineus and adductor longus, attached above to the crest of the pubis. **P. line,** part of the line constituting the brim of the true pelvis formed by the pubic bones. **P. mus′cle,** pectinæus. **P. ridge,** ileopectineal line.

**Pectineofem′oral band.** Pubofemoral ligament.

**Pectine′us.** Pectinæus.

**Pectiniduc′tor.** Pectinæus.

**Pectin′iform** (*pecten*, comb, *forma*, shape). Pectinated; fimbriated. **P. sep′tum,** median septum of connective tissue between the corpora cavernosa.

**Pec′tinose.** Arabinose.

**Pec′tinous.** Of or belonging to pectin or vegetable jelly, as a pectinous or pectinaceous vegetable principle.

**Pectiza′tion.** Process of being converted into a gelatinous state.

**Pecto′ic acid.** Product of transformation of pectose occurring in ripe fruit.

**Pec′toral** (*pectus*, breast). Relating to the chest. A remedy for pulmonary diseases. **P. aor′ta,** thoracic aorta; see *Aorta.* **P. arch,** bony apparatus by which the pectoral limb is attached to the axial skeleton; in man it consists of clavicle and scapula. **P. drops** consist chiefly of tincture of castor, with some camphor and opium, flavored by aniseed. **P. frem′itus,** vibration of chest-walls on speaking. **P. fruits,** dates, figs, jujubes, Corinthian raisins, equal parts; cut and mix. **P. glands,** lymphatics accompanying the long thoracic artery. **P. intercos′tal nerves,** upper six, supplying thorax only. **P. limb,** that attached to the trunk by the pectoral arch; in man upper extremity, in quadrupeds anterior extremity. **P. mus′cles,** see *Pectoralis.* **P. nerves,** see *Thoracic nerves.* **P. ridge,** external lip of bicipital groove, to which is attached the pectoralis major. **P. spe′cies,** p. tea. **P. syr′up,** see *Jackson.* **P. tea,** mixture of althea, glycyrrhiza, mullein flowers, orris root, colt's foot, and anise; or of flowers of althea, mallow, mullein, mouse ear, violet, colt's foot, and poppy; used in preparation of a demulcent infusion or tisane. **P. tu′bercle,** impression for pectoralis major on anterior surface of the clavicle near its external end.

**Pectora′le.** Corset; also medicine for relieving or removing affections of the chest.

**Pectoral′gia.** Intercostal neuralgia.

**Pectora′lis** or **P. ma′jor.** A large, flat, triangular muscle, situated at the anterior part of the chest before the axilla. Attached, on the one hand, by means of aponeurotic fibres, to the inner half of the anterior edge of the clavicle, the anterior surface of the sternum, and to the cartilages of the first six true ribs; on the other, by a strong tendon which is inserted at the anterior edge of the bicipital groove of the humerus. It moves the arm in various directions. If it is hanging by the side of the body it carries it inward and a little forward. When the arm is raised it depresses it and carries it inward. It can also move it in rotation inward. If the humerus is raised and fixed the pectoralis major draws the trunk toward the upper extremity. **P. inter′nus,** triangularis sterni. **P. min′imus,** supernumerary muscle sometimes found arising from the first rib and inserted into the coracoid process. **P. mi′nor,** situated beneath the preceding, at the anterior and upper part of the chest; it is flat and triangular; attached by its base, which appears digitated, to the upper edge and outer surface of the third, fourth, and fifth true ribs, and is inserted at the interior part of the coracoid process. It draws the scapula forward and downward, and makes it execute a rotatory motion, by virtue of which its inferior angle is carried backward and the anterior depressed. When the shoulder is fixed it elevates the ribs to which it is attached and aids in the dilatation of the chest. Connected with the upper edge of the pectoralis minor, and inserted into the first rib and the coracoid process and the clavicle between these points, is a thick fascia called the *costocoracoid membrane.*

**Pectoril′oquy.** Pectoriloquism, cavernous voice. Speech or voice coming from the chest. Laennec has designated by this name the phenomenon often presented by consumptive individuals when their chests are examined with the stethoscope. The voice seems to issue *directly* from the chest and to pass through the central canal of the cylinder—a phenomenon owing to the voice resounding in the anfractuous cavities produced in the lungs by the suppuration or breaking down of tubercles, which constitute abscesses of the lungs. By some it is not separated from bronchophony, having been termed, at times, *strong bronchophony* and *pectoriloquous bronchophony. Whispering* or *aphonic pectoriloquy* is that produced by the whispering of the patient. See *Baccelli's sign.*

**Pectoro′sus** (*pectus*, chest). One who has a broad chest.

**Pec′tose.** Neutral amorphous principle, insoluble in all neutral solvents, found in unripe fruits and some fleshy roots; by the action of acids it is convertible into pectin.

**Pec′tous.** Gelatinous.

**Pectun′culus.** Series of fine, longitudinal furrows, seen with slightly magnifying power on the wall of the Sylvian aqueduct.

**Pec′tus.** Sternum; thorax. **P. carina′tum,** pigeon-breast or chicken-breast. **P. excava′tum,**

condition in which the sternum is depressed, giving the chest a sunken appearance.

**Pectus'culum.** Metatarsus.

**Pe'dal** (*pes*, foot). Relating to the foot. **P. aponeuro'sis,** a thin, aponeurotic layer which invests the extensor brevis digitorum pedis and separates the tendons of the foot from each other. **P. bone,** coffin bone of the horse. **P. sys'tem,** the portion of the longitudinal fibres and ganglia connected with the brain which passes through the internal capsule and pes of the crus cerebri into the pons Varolii.

**Peda'lium mu'rex.** Gokhru; large, succulent East Indian herb, ord. *Pedalineæ;* leaves and seeds are very mucilaginous, and in high repute in urinary disorders.

**Ped'erasty.** See *Pæderastia.*

**Pede'sis** (*pedao*, to leap). Pulsation.

**Pediæ'us exter'nus.** Extensor brevis digitorum pedis. **P. inter'nus,** flexor brevis digitorum pedis.

**Pedial'gia** (*pedion*, sole, *algos*, pain). Pedionalgia, pedioneuralgia. Pain in the sole of the foot. Neuralgia of the foot.

**Pediat'rics** or **Pediat'ry.** Treatment of the diseases and preservation of the health of children.

**Ped'icel.** Pedicle.

**Ped'icellated.** Pediculated.

**Ped'icle** (dim. of *pes*, foot). A slender stalk. Narrow portion of a tumor, from which it has been developed and by which it is supported. Peduncle. **Neu'ral p.,** see *Neural arch.* **P. of op'tic thal'amus,** peduncle of optic thalamus. **P. of ver'tebra,** narrowed portion connecting the lamina with the body. **Vitel'line p.,** see *Vesicula umbilicalis.*

**Pedic'ular.** Infested with lice.

**Pedicula'ria** (*pediculus*). Delphinium staphisagria; pediculosis.

**Pedicula'ris** (*pediculus*, louse). Lousy; relating to lice. **P. palus'tris,** marsh louse-wort; herb is used externally to kill vermin on horses and cattle.

**Pedic'ulate** or **Pedic'ulated.** Provided with a pedicle.

**Pedicula'tion.** Formation of a pedicle. Lousiness.

**Pediculoder'mata.** Cutaneous affections due to presence of pediculi.

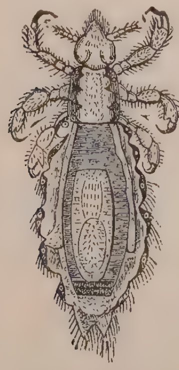
**Pediculofron'tal sec'tion.** Vertical section through the pedicles of the frontal convolutions two centimetres anterior to the fissure of Rolando.

**Pediculopari'etal sec'tion.** Section through the cerebral hemispheres parallel to the fissure of Rolando and three centimetres posterior to it.

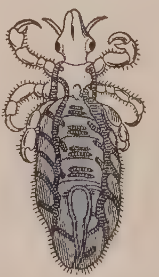
**Pediculopho'bia** (*phobos*, fear). Morbid dread of phtheiriasis, with erroneous belief that one is affected with it.

**Pediculo'sis** (*pediculus*). Lousy disease; phtheiriasis. **P. capillit'ii,** disease of the scalp produced by action of the head-louse. **P. cor'poris,** p. of the body. **P. pu'bis,** p. produced by the crab-louse or pubic louse.

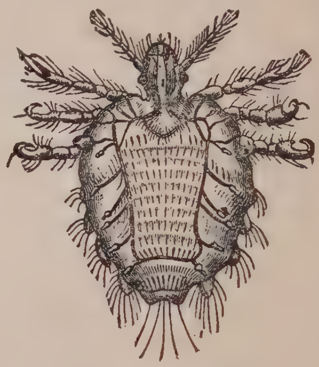
**Pedic'ulus.** Louse. A genus of wingless, non-metamorphosing, parasitic insects. The human body is infested by several kinds: The *body-louse* or *clothes-louse, Pediculus vestimenti* or *vestimentorum* or *corporis;* the *head-louse, Pediculus capitis* or *capillitii,* which lives in the hair; the *brow-louse, Pediculus palpebrarum;* the *crab-louse, Pediculus pubis,* which infests the hair of the pubes. Infusion of tobacco or mercurial ointment, or ointment of white precipitate or of red precipitate of mercury, readily destroys them. Solution of the bichloride, also extractum staphisagriæ fluidum (ʒj) to acidum aceticum dilutum (℥iij), are very useful applications. The louse occurring in phtheiriasis, *Pediculus tabescentium, distemper louse,* was formerly thought to differ from the common louse. The eggs are called *nits.* See *Parasites.* Also a pedicle. **P. cap'itis,** see *Pediculus.* **P. cor'poris** or **vestimen'ti,** see *Pediculus.* **P. inguina'lis** or **pu'bis,** crab-louse. **P. palpebra'rum,** see *Pediculus.* **P. tabescen'tium,** see *Pediculus.*



Pediculus corporis, female. (Küchenmeister.)



Pediculus capitis. (Küchenmeister.)



Pediculus pubis. (Schmarda.)

**Ped'icure** (*pes*, foot, *curo*, to cure). Chiropodist.

**Ped'icus.** Extensor brevis digitorum pedis.

**Pedigam'bra.** Ysambra.

**Pedilan'thus padifo'lius.** Plant of South America and the Antilles, employed in syphilis; root is used like ipecac. **P. pavo'nis,** plant, milk of which is drastic; root possesses emetic qualities, and leaves are said to be emmenagogue and antisyphilitic. **P. tithymaloi'des,** Euphorbia tithymaloides, jewbush, ord. *Euphorbiaceæ,* grows in various parts of the West Indies; the practitioners of Curaçoa give a decoction in venereal cases. It is also used in domestic practice in amenorrhœa. It is, moreover, known and used like ipecacuanha.

**Pedilu'vium** (*pedes*, feet, *lavo*, to wash). Foot-bath.

**Pedim'ana.** Marsupial animals having the feet in shape of hands, as monkeys.

**Pediococ'cus.** Genus of *Schizomycetes.* **P. ac'idi lac'tici** (Lindner), in hay and malt and milk; causes fermentation. **P. al'bus** (Lindner), in water. **P. auranti'acus** (Cohn and Schroeter), Micrococcus aurantiacus. **P. cerevis'iæ** (Francke and Balcke), found in cloudy beer; causes fermentation. **P. koch'ii,** species occurring in discharges from wounds. **P. maggio'ræ,** found in the skin of the foot and the region of the nose and thorax in man; non-pathogenic organism.

**Pedi'olus** (dim. of *pes*, foot). Petiolus.

**Ped'ion.** Sole.

**Pedional'gia** or **Pedioneural'gia.** Pedialgia.

**Pedi'tis.** Laminitis.

**Ped'ium.** Tarsus.

**Pedobaromacrom'eter.** Pædobaromacrometer; an instrument for recording the length and weight of the new-born child.

**Pedobarom'eter.** Pædobarometer; scales for weighing the new-born child.

**Pedol'ogy.** Pædology; the science of the normal development, deformities, and diseases of the child.

**Pedom′eter** (*pes*, foot, *metron*, measure). Instrument for measuring the distance covered in walking.

**Pedun′cle** (dim. of *pes*, foot). Flower-stalk. Term applied to different supporting parts; more specifically, to certain prolongations or appendices of the encephalon. **P. of the brain,** one of two white cords, about three-fourths of an inch in diameter, on the outside of the corpora albicantia. They arise from the medullary substance of the brain, and gradually approach until they join the tuber annulare. They are formed, internally, of a mixture of cineritious and medullary matter, the former of which, being of a darker color at one point than in any other part of the brain, has been called locus niger, substantia nigra, gray substance of Sömmering. It separates the main body of peduncular fibres into two parts. The lower or superficial consists almost wholly of white fibres collected into coarse fasciculi, and is called the crust or basis or fasciculated portion of the peduncle. The upper portion is named tegmentum. **P. of the cerebel′lum,** one of six, three on each side—superior, middle, and inferior; the superior peduncles are generally known as the processus cerebelli ad testes, crura cerebelli ad corpora quadrigemina, brachia copulativa; the inferior, the processus cerebelli ad medullam oblongatam; and the middle are called also cerebellar peduncles —processus or crura cerebelli ad pontem, processus ad pontem, brachia pontis. **P. of the cer′ebrum,** p. of the brain. **P. of the cor′pus callo′sum,** two white bands continuous with the longitudinal striæ above, diverging below to the anterior perforated space of either side. **Infe′rior p. of the cerebel′lum,** corpora restiformia. **P. of the medul′la oblonga′ta,** corpora restiformia. **P. of the op′tic thal′amus,** bundles of white fibre connecting this with other parts of the brain: *anterior*, from the frontal end and external nucleus of the ganglion to the frontal lobes; *inferior* or *internal*, downward and outward from the zonal stratum and internal nucleus to near the Sylvian fissure under the optic tract. A *superior* is constituted by the anterior pillars of the fornix and bundle of Vicq d'Azyr, taken together; *posterior*, by optic radiations. **P. of the pin′eal gland,** two medullary bands or strips which seem to issue from the pineal gland, and proceed on each side upon the upper and inner region of the optic thalami; see *Pineal gland*. **P. of the sep′tum lu′cidum,** white fibres running upon either side in front of the septum lucidum to the corpus callosum.

**Pedun′cular.** Relating to a peduncle. **P. ar′teries,** twigs supplying the crura cerebri: *median*, arising from the posterior communicating; *lateral*, from the posterior cerebral or choroid arteries. **P. lam′inæ,** portion of the pineal gland above the processus pinealis. **P. sul′ci,** on either side of the crus cerebri, separating the crusta from the tegmentum; the inner is also known as oculomotor sulcus; outer as lateral sulcus of the mesencephalon.

**Pedun′culate** or **Pedun′culated.** Having a peduncle or fruit-stalk. **P. fi′broid,** myoma of the uterus attached to the mucous membrane by a pedicle. **P. hydat′id,** see *Morgagni's hydatids*.

**Pedun′culi** (pl. of pedunculus). Peduncles. **P. cerebel′li,** peduncles of the cerebellum. **P. cer′ebri,** peduncles of the brain. **P. cona′rii,** peduncles of pineal gland; see *Pineal gland*. **P. medul′læ oblongat′æ,** corpora restiformia.

**Pedun′culus.** Peduncle. **P. cerebel′li infe′rior,** restiform body. **P. cona′rii,** p. of the pineal gland. **P. cor′poris mammilla′ris,** superficial bundle of fibres in the trigonum interpedunculare, connected with the mammillary tubercles. **P. floc′culi,** commissure of flocculus. **P. gan′glii haben′ulæ,** fasciculus retroflexus. **P. hypophys′eos,** infundibulum of the brain. **P. medul′læ oblonga′tæ,** restiform body. **P. nu′clei globo′si,** stem-like process of the nucleus globosus directed forward. **P. oli′væ,** olivary peduncle. **P. pulmo′nis** or **pulmo′num,** root of lung. **P. sep′ti pellu′cidi,** peduncle of the septum lucidum. **P. substan′tiæ ni′græ,** fibres of the crusta between the pyramidal tract and substantia nigra passing up to the caudate nucleus.

**Pee′nash.** Maggots in the nasal passages (India).

**Pe′ga.** Lesser canthus of the eye.

**Peg′anum.** Ruta. **P. harma′la,** plant of the rue family, growing in S. Europe and N. Africa; seeds are emmenagogue and intoxicant; two alkaloids have been extracted—harmaline and harmine.

**Peg′leg.** Simplest form of artificial leg, consisting of a socket for a stump with straight rod for support.

**Peg′ma** (*pegnymi*, to stick on). Concretion.

**Pegmat′ic.** Producing coagulation or concretion.

**Peg′min** (*pegma*, coagulation). Buffy coat; corium phlogisticum.

**Peg-tooth.** A tooth having a primitive cone form of small size.

**Pe′gu cat′echu.** Official catechu of Ph. U. S.

**Peg′wood.** Euonymus atropurpurea.

**Peinother′apy** (*peina*, hunger, *therapeia*, treatment). Hunger-cure.

**Pela′da.** A word of uncertain origin, applied to alopecia, especially to that occurring in syphilis; it is caused by a parasite, the Microsporon audouini.

**Pelade′.** Pelada.

**Pel′age.** The whole hairy system of the body.

**Pela′gia.** A kind of scaly erysipelas of the hands, sometimes of the legs, at others of the face; pellagra.

**Pelargo′nic acid.** Fatty acid obtained by the action of nitric acid upon the oil of rue.

**Pelargo′nium an′ceps.** A South African plant, ord. *Geraniaceæ*, the decoction of which is used by the Malays in amenorrhœa and to promote parturition and abortion. **P. antidysenter′icum,** South African plant used by the natives in dysentery; it is boiled in milk. **P. cuculla′tum,** common on Table Mountain, Africa; it has been recommended in decoction as an enema in colic, nephritis, and suppression of urine; an excellent emollient, formerly exported to Holland under the name Herba althææ. **P. ro′seum,** rose-geranium, ord. *Aristolochiaceæ;* yields oil of rose-geranium. **P. tris′te,** root which grows at the Cape of Good Hope; is somewhat astringent, and is used there in diarrhœa and dysentery and as an anthelmintic.

**Pel′ican.** Instrument curved at the end like the beak of a pelican; used to extract teeth. **P. flow′er,** Virginia snake-root; Aristolochia serpentaria.

**Pelicol′ogy** (*pelix*, basin, *logos*, discourse). Science in relation to the pelvis.

**Pelicom′eter** (*pelix*, basin, *metron*, measure). Pelvimeter.

**Pelidno′ma** or **Pelio′ma** (*pelidnos*, livid). A livid ecchymosis; see *Ecchymoma*. **P. typho′sum,** rose-colored eruption on the body and extremities in typhoid fever.

**Pelio′sis** (*pelos*, livid). Purpura hæmorrhagica. **P. rheumat′ica,** see *Purpura rheumatica*.

**Pel′la** (*pella*, skin). Cutis; prepuce.

**Pella′cia.** Pica.

**Pella′gra** (*pella*, skin, *agra*, seizure). Italian leprosy, scurvy of the Alps. Endemic disease of Italy, of toxic origin, characterized by chronic, erythematous, desquamative inflammation of the skin, with digestive and neurotic derangement. It has been ascribed to a diseased condition of Indian corn, which is affected by a parasitic fungus, Sporisorium maidis. An affection endemic in the Asturias is said to be a variety of pellagra; it is the rosa or lepra asturica, mal de la rosa.

**Pellagrazeïne′** or **Pellagroceïne′.** Poisonous material obtained from decomposed corn-meal, a mixture of toxical ptomains.

**Pel′lagrous.** Relating to or affected with pellagra.

**Pellar′sis.** Pellagra.

**Pel′let** (*pila*, ball). Small pill; see *Globule*.

**Pelletierine′.** $C_8H_{15}NO$. Oily, aromatic alkaloid, the active principle of pomegranate bark. **P. tan′-**

nate, amorphous salt of pelletierine; efficient tæniafuge in dose of gr. v–xx (0.32–1.3), taken on an empty stomach, and followed in fifteen minutes by an active purgative. The sulphate, hydrobromide, and hydrochloride are also anthelmintic.

**Pel′licle.** Pellicula.

**Pellic′ula** (dim. of *pellis*, skin). Pellicle; a thin skin or membrane; a film. **P. o′vi,** membrana putaminis. **P. sub′tilis,** pia mater. **P. sum′ma,** epidermis. **P. supe′rior,** epidermis.

**Pellic′ulæ cor′dis.** Valves of the heart.

**Pellic′ular.** Resembling or relating to a pellicle.

**Pel′lis.** Skin. **P. æ′gra,** pellagra. **P. sum′ma,** epidermis.

**Pel′litory.** Xanthoxylum fraxineum. **Amer′ican p.,** Parietaria pennsylvanica. **Bas′tard p.,** Achillea ptarmica. **P. of Spain,** Anthemis pyrethrum. **Wall p.,** parietaria.

**Pellotine′.** $C_{13}H_{19}NO_3$. Alkaloid from Anhalonium williamsii; hypnotic; dose, gr. j (0.065), hypodermically, gr. ½ (0.032). The hydrochloride is the preparation usually employed.

**Pel′lous.** Dusky, dark-colored.

**Pellu′cid zone.** Zona pellucida.

**Pel′ma.** Sole of the foot.

**Pelmat′ic.** Relating to the sole of the foot.

**Pelmat′ogram** (*pelma*, sole, *grapho*, to write). Imprint of the foot.

**Pelohæ′mia** (*pelos*, mud, *haima*, blood). Viscidity of blood.

**Pelop′athist** (*pelos*, earth, *pathos*, disease). One who practises or cultivates pelopathy.

**Pelop′athy.** Earth or mud treatment of disease.

**Pelop′ic acid.** Niobic acid.

**Pelo′pium.** Niobium.

**Pe′lor.** Monster with some part of excessive size.

**Pelo′ric.** Monstrous; abnormally large.

**Pelo′sia** or **Pelosine′.** See *Pareira brava*. Cissampeline.

**Pelother′apy** (*therapeia*, cure). Pelopathy.

**Pélouse′-Moore′s test.** Test for sugar in urine; the latter is boiled with solution of potash, and after cooling a drop of concentrated sulphuric acid is added; if sugar be present the odor will be manifest.

**Pelta′lis** or **Pelta′tus cartila′go** (*pelte*, small shield). Thyroid cartilage; xiphoid cartilage.

**Peltan′dra virgin′ica.** Arum virginicum, arrow arum, taraho, wampee; indigenous, ord. *Araceæ;* fresh roots and seeds are active stimulants, diuretic, and diaphoretic.

**Peltid′ea amplis′sima.** Lichen caninus. **P. aphtho′sa,** Lichen aphthosus. **P. cani′na,** Lichen caninus. **P. leucorrhi′za,** Lichen caninus. **P. mala′cea,** Lichen caninus. **P. spu′ria,** Lichen caninus.

**Peltig′era cani′na.** Lichen caninus.

**Pel′todon radi′cans.** Paracary; Brazilian herb, used in asthma and as antidote to snake-poison.

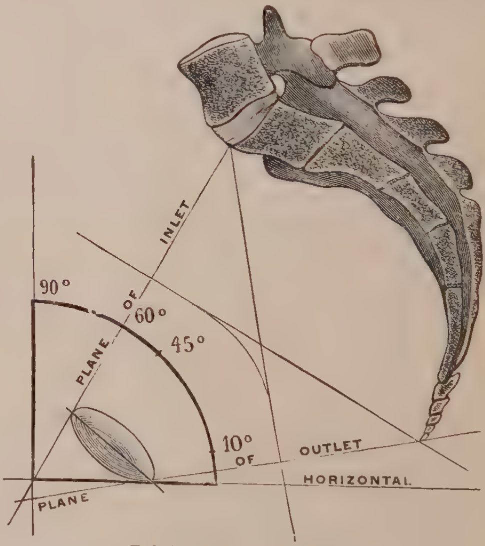
**Pelu′de.** Pelicide.

**Pelvangus′tia.** Contraction of the pelvis.

**Pelveoperitoni′tis.** Pelviperitonitis.

**Pelviar′ium.** Artificial pelvis used for demonstrations.

**Pel′vic.** Belonging or relating to the pelvis. **P. aponeuro′sis,** a tendinous lamina given off from the sides of the pelvis and from the entire circumference of the brim, which passes into and lines the pelvis, and is soon divided into two distinct layers: one, external, the *lateral pelvic* or *obturator fascia*, which is continued to line the sides of the pelvis, and covers the obturator internus muscle; the other, internal or superior, which passes inward upon the side of the prostate, bladder, and rectum in the male, and of the bladder, vagina, and rectum in the female, in order to form the floor of the pelvis. **P. arch,** bony apparatus by which the pelvic limb is attached to the axial skeleton; in man, the hip-bone. **P. ax′is,** line drawn from centre of conjugate diameter of inlet, parallel to face of sacrum and coccyx, to centre of conjugate diameter of outlet. **P. brim,** see *Pelvis*. **P. canal′,** cavity of true pelvis considered as the channel through which the child passes at birth. **P. cav′ity,** cavity of the pelvis. **P. celluli′tis,** inflammation of the cellular tissue surrounding the pelvic viscera; see *Parametritis*. **P. diam′eters,** measurements expressing dimensions of pelvic cavity. At inlet, *anteroposterior* or *conjugate d.* is taken in median line from promontory of sacrum to symphysis pubis; *transverse* or *basiliac d.*, at widest part; *oblique d.*, from sacro-iliac joint to iliopectineal eminence; *obstetrical conjugate d.* (conjugata vera), from promontory to about 1 cm. below upper border of symphysis; *diagonal conjugate*, from same to lower border of symphysis. In the middle of the cavity, conjugate is taken from second and third sacrovertebral junction to middle of symphysis pubis. Meyer's *normal conjugate* is from the most retreating portion of the third sacral vertebra to the upper border of the symphysis. At the outlet, conjugate is from tip of coccyx (lower end of sacrum if coccyx is absent) to lower border of symphysis; transverse or bi-ischiatic, between tuberosities of ischia. **P. di′aphragm,** p. floor. **P. fas′cia,** p. aponeurosis. **P. floor,** a sheet of muscles, fasciæ, and skin occluding the lower opening of the pelvis; see *Rectal diaphragm*. **P. gir′dle,** pelvic arch. **P. hæmat′ocele** or **hæmato′ma,** see *Hæmatocele*. **P. in′dex,** relation of anteroposterior to transverse diameter, the latter being taken as 100. **P. in′let,** see *Pelvis*. **P. limb,** attached to the trunk by the pelvic arch; lower extremity in man, hinder in quadrupeds. **P. mem′bers,** the lower extremities. **P. out′let,** inferior strait. **P. peritoni′tis,** pelviperitonitis. **P. planes,** a series of imaginary planes through each of which the axis of the pelvis passes perpendicularly; the upper plane, the plane of the brim or of the inlet, cuts the iliopectineal lines and the promontory of the sacrum; the lower plane, plane of the outlet, touches the tip of the coccyx and the lower edge of the symphysis pubis. **P. plex′us,** continuation of hypogastric plexus of sympathetic down along internal iliac arteries. **P. re′gion, ante′rior,** that in front of the pelvis, limited laterally on either side by anterior edge of tensor fasciæ latæ. **P. sur′face of il′ium,** that which faces the pelvic cavity. **P. throm′bus,** see *Hæmatocele, pelvic*. **P. tu′mor, sanguin′eous,** see *Hæmatocele, pelvic*.



Pelvic planes. (Gerrish.)

**Pelvicelluli′tis.** Pelvic cellulitis; see *Parametritis*.

**Pelvicliseom′eter** (*klisis*, a bending, *metron*, measure). Instrument for measuring the pelvic inclination and pelvic diameters.

**Pelvicol'ogy** (*logos*, discourse). Treatise on or description of the pelvis.

**Pelvic'ula** (dim. of *pelvis*, basin) **oc'uli.** Orbit.

**Pelvid'ymus** (*pelvis* + *dyo*, to mingle). A monster united at the pelvis and double above; dipygus.

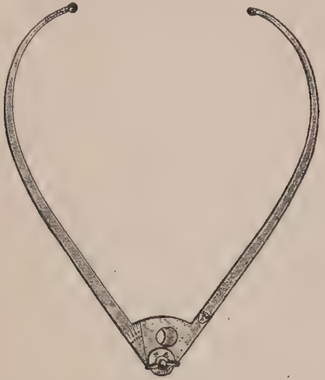
**Pel'viform.** Basin-shaped.

**Pel'vigraph** (*pelvis*+*grapho*, to write). Instrument for recording the dimensions of the pelvis.

**Pelvig'raphy.** Measurement of the contour of the pelvis.

**Pelvimensura'tion.** Pelvimetry.

**Pelvim'eter** (*pelvis*+*metron*, measure). This name has been given to different instruments invented for measuring the diameters of the pelvis, and particularly the anteroposterior or fore-and-aft diameter of the brim—*pelvimetry*. The finger is, decidedly, the best pelvimeter, and by it one can judge whether or not the base of the sacrum is unusually prominent.



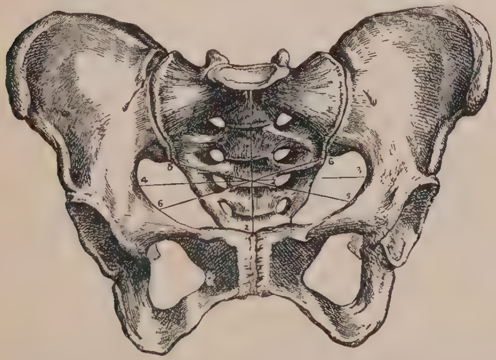
Collyer's pelvimeter.

**Pelvim'etry.** See *Pelvimeter*.

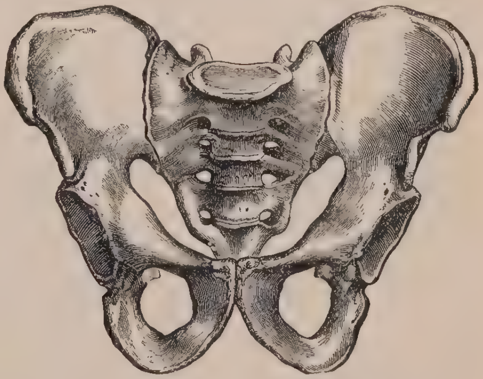
**Pelvioperitoni'tis.** Pelviperitonitis.

**Pelviot'omy** (*pelvis*+*tome*, incision). Division of a pelvic bone, as of the pubes in symphyseotomy.

**Pelviperitoni'tis.** Pelvic peritonitis. Inflammation of the pelvic peritoneum. See *Parametritis*.



Anterior view of the female pelvis, showing the shape and diameters of the superior strait: 1, 2, anteroposterior diameter; 3, 4, transverse diameter; 5, 5, 6, 6, the two oblique diameters.



Anterior view of the male pelvis, showing the peculiar shape of the superior strait, of the foramen ovale, and of the arch of the pubis, wherein it differs from the female pelvis.

**Pel'vis** (Lat., basin). Part of the trunk which bounds the abdomen below. It is a large, bony, irregular, conoidal cavity, open above and below, which supports and contains a part of the intestines and the urinary and genital organs, and serves at the same time as a fixed point for articulation of the lower limbs, the attachment of their muscles, and the execution of their movements. It supports, behind, the vertebral column, and is sustained, before, by the femoral bones. It is situated, in the adult, near the middle part of the body, and is composed of four broad, flat, unequally thick bones, differing much in their shape, size, and arrangement, which touch, are articulated at some part of their surface, and intimately united by means of a number of ligamentous fasciæ. Of these bones, two are behind on the median line—the sacrum and the coccyx; the two others are before and at the sides—the innominate bones. They are fellows, and unite anteriorly with each other. The most important parts of the pelvis, in an obstetrical point of view, are the brim and the outlet. The *brim*, upper opening, inlet or superior strait, is the narrow part which separates the greater pelvis from the less—the false from the true. The *true pelvis* forms a girdle proper, and is below the promontory of the sacrum and iliopectineal line; the *false pelvis* is the expanded portion of the pelvis above that line. In the well-formed woman it is elliptical and slightly inclined forward. Its anteroposterior, sacropubic, or conjugate *diameter* in a standard pelvis measures 4½ inches, but with the soft parts 3⅝ inches; its transverse, or iliac, or lateral, 5¼ inches, but with the soft parts 4 inches; and its oblique, diameter of Deventer, with the soft parts, 4⅝ inches. The outlet, exitus, inferior opening or strait, forms the lower aperture of the pelvis. The anteroposterior diameter is here, on account of the mobility of the coccyx, 5 inches; the lateral, 4 inches. The *axes of the pelvis* are important in obstetrics. The axis of the brim is indicated by a straight line drawn from the umbilicus to the apex of the coccyx; the axis of the outlet by a line drawn from the first bone of the sacrum to the entrance of the vagina. An imaginary curved line which indicates the direction of the canal of the pelvis has occasionally been termed the *curve of Carus*, in consequence of its having been pointedly described by that German obstetrician. **P. æquabil'iter justoma'jor,** one equally enlarged in all directions, with natural proportions maintained. **P. æquabil'iter justomi'nor,** naturally proportioned pelvis with diminution of the several diameters. **Anatom'ical p.,** bony pelvis. **P. au'ris,** tympanum. **P. aur'ium,** cochlea. **Ax'is of the p.,** see *Pelvis*. **Beaked p.,** pelvis triradiata. **Brim of the p.,** see *Pelvis*. **Car'dinal points of p.,** four points of the pelvis: two iliopectineal eminences anteriorly, and two sacro-iliac articulations posteriorly. **P. cer'ebri,** infundibulum of the brain. **Cor'date p.,** p. in which the brim is heart-shaped. **Diam'eters of p.,** see *Pelvis*. **Dynam'ic p.,** p. of the parturient female. **P. fal'sa,** false pelvis; see *Pelvis*. **Fe'tal p.,** funnel p. **Flat p.,** p. with anteroposterior diameters diminished, others about normal. **Floor of p.,** inferior portion of the pelvis, composed of integument, muscles, fasciæ, etc. **Fun'nel** or **Fun'nel-shaped p.,** p. with inlet of normal size or only slightly contracted, but with markedly contracted outlet; masculine or infantile or fetal p. **Halesteret'ic p.**, see *Kilian's pelvis.* **Hau'der's p.**, a p. whose brim is narrowed by exostoses. **Inclina'tion of the p.**, angle between the axis of the pelvis and that of the body. **In'fantile p.**, funnel p. **In'let of the p.**, brim of the p. **Infe'rior p.**, true pelvis; see *Pelvis.* **P. of the kid'ney**, small, membranous pouch occupying the posterior part of the fissure of the kidney; placed behind the renal artery and vein; is elongated from above to below; flattened from before to behind; irregularly oval in figure; and below contracts considerably to be continuous with the ureter; it receives the orifices of the infundibula, which pour the urine secreted in the kidney into its cavity. **Kil'ian's p.**, see *Kilian.* **Kyphot'ic p.**, see *Kyphosis.* **Lordot'ic p.**, see *Lordosis.* **P. ma'jor**, false pelvis. **Mas'culine p.**, funnel p. **P. mi'nor**, true pelvis. **Nae'gele's p.**, see *Naegele.* **P. obtec'ta**, kyphotic pelvis. **P. ocula'ris**, glass used for applying lotions to the eye. **Osteomala'cic p.**, see *Osteomalacia.* **Out'let of p.**, lower opening of pelvic canal. **P. ova'lis**, elliptical fossa above promontory on inner wall of tympanum, in bottom of which appears the fenestra ovalis. **Planes of the p.**, see *Pelvic planes.* **Prague p.**, see *Spondylolisthesis.* **Rachit'ic p.**, see *Rachitis.* **P. rena'lis** or **re'num**, pelvis of the kidney. **Ren'iform p.**, p. the shape of a kidney with the long diameter transverse. **Rob'erts's p.**, uncommon deformity of the pelvis, the oblique and transverse diameters being much diminished. **Rok'itansky's p.**, see *Rokitansky.* **Ros'trated p.**, p. triradiata. **P. rotun'da**, a depression in inner wall of tympanum, at the bottom of which is the fenestra rotunda. **Scoliot'ic p.**, see *Scoliosis.* **P. spino'sa**, form of pelvis met with in rickets, in which the crest of the pubis is sharp and there is a distinct spine for insertion of the psoas parvus muscle. **Split p.**, one in which the pubic bones are not united to form the symphysis. **Spondylolisthet'ic p.**, see *Spondylolisthesis.* **Stat'ic p.**, bony pelvis. **Straits of p.**, see *Pelvis.* **Supe'rior p.**, false pelvis; see *Pelvis.* **Thorn'y p.**, acanthopelvis. **P. tril'oba**, pseudo-osteomalacic p., deformity produced by rachitis, resembling osteomalacic p. **P. triradia'ta**, a deformed p. in which the sacrum and last lumbar vertebra project inward toward the centre of the pelvic canal. **True p.** or **P. ve'ra**, part of pelvis below the iliopectineal line; see *Pelvis.*

**Pelvitrochante'rian.** Relating to the pelvis and great trochanter. The pelvitrochanterian region is formed by the pyramidalis, two obturators, gemini, and the quadratus femoris muscles, which pass from the pelvis to the digital cavity of the great trochanter.

**Pelycochirom'etry** (*pelyx*, pelvis, *cheir*, hand, *metron*, measure). Pelvimetry with the hand.

**Pelycol'ogy.** Science of the pelvis in its various relations.

**Pelycom'eter** (*pelyx*, pelvis, *metron*, measure). Pelvimeter.

**Pelycom'etry.** Pelvimetry.

**Pelycoto'mia.** Pubiotomy.

**Pelyom'eter.** Pelvimeter.

**Pem'mican** or **Pem'ican.** Meat cured, pounded, and mixed with fat. It has been much used as nutriment on long overland journeys.

**Pem'phigoid.** Resembling pemphigus.

**Pem'phigus** (*pemphix*, blister). Vesicular fever, bladdery fever, waterblebs. Skin disease characterized by successive formation of variously sized bullæ, usually seated on slightly inflamed base, with fever. **P. acu'tus contagio'sus adulto'rum**, impetigo contagiosa. **P. apyret'icus**, form of pemphigus without fever. **P. arthrit'icus**, dermatitis herpetiformis. **P. benig'nus**, mild form of pemphigus with few prominent symptoms. **P. chron'icus mor'ta**, pompholyx. **P. circina'tus**, form in which new bullæ rise in a circle around the older ones. **P. diphtherit'icus**, form in which the exposed cutis at the base of the bullæ is covered with a whitish-yellow layer. **P. dissemina'tus**, p. in which the bullar eruption is scattered. **P. diu'tinus**, p. vulgaris prolonged by successive crops of bullæ. **P. folia'ceus**, p. with flaccid bullæ only partly filled with fluid. **P. gangræno'sus**, dermatitis gangrænosa. **P. hæmorrhag'icus**, form in which the blebs contain bloody fluid. **P. hungar'icus**, anthrax. **P. hyster'icus**, herpes gestationis. **P. lepro'sus**, prodromic vesicles of lepra nervorum. **P. malig'nus**, form in which the blebs are large, form rapidly, and ulcerate. **P. mor'ta**, pemphigus. **P. neonato'rum**, contagious form in the newborn. **P. prurigino'sus** (Hardy), dermatitis circumscripta herpetiformis (Duhring). **P. solita'rius**, a form of pemphigus in which there is only one bulla. **P. syphilit'icus**, bullar eruption in syphilis. **P. veg'etans** first appears as a few blebs, which break and are followed by warty growths resembling condylomata; fatal. **P. vulga'ris**, pemphigus.

**Pen'cil flow'er.** Stylosanthes elatior.

**Pen'cil-like pro'cesses.** Styloid processes.

**Pen'cil wood.** Juniperus communis.

**Pendin'ski ul'cer.** Penjdeh sore. See *Ulcers, endemic.*

**Pen'dulous.** Hanging down, loose or flabby. **P. abdo'men**, physconia.

**Pen'dulum pala'ti.** Velum pendulum palati.

**Pen'etrating** (*penetro*, to go into). A wound is so called which penetrates below the surface or into one of the great splanchnic cavities. A medicine is also so called which is supposed to pass through the pores. Also used in the sense of pungent.

**Penetra'tion.** Power of an objective to give good definition of several planes of an object at once. The act of piercing or entering.

**Penghawar'.** Drug derived from certain tree-ferns in Java, which has had a reputation in Holland as a styptic.

**Pe'nial.** Relating to the penis.

**Penicil'li lie'nis.** Tufts of fine twigs into which the small arteries of the spleen suddenly break up.

**Penicil'liform.** Arranged in tuft-like or radiate manner.

**Penicil'lium glau'cum.** A common fungus which gives to decaying organic matter its mildewed appearance; generated also in urine after standing a few days, or in acid urine containing mucus, albumin, etc. **P. ro'seum**, species, thought to be a variety of Penicillium glaucum, occurring on bread.

**Penicil'lum** or **Penicil'lus** (a painter's brush, dim. of *penis*, tail). Tent or pledget; pessary. A tuft produced by the radiation of a number of vessels or fibrous structures from a single point. The secreting glandiform extremities of the venæ portæ have been so termed, as well as the villous textures; a group or pencil of arterioles.

**Penic'ulum.** Compress.

**Penic'ulus.** Penicillus; tent.

**Peni'des.** Saccharum hordeatum.

**Penid'ium.** Clarified sugar made up into rolls.

**Pe'nile.** Relating to the penis. **P. re'flex**, reflex retraction of the penis caused by percussing it near the root when the organ is in a state of erection.

**Pe'nis** (a tail, *pendo*, to hang down). This organ, the main use of which is to carry the seminal fluid into the female organs of generation, is cylindroid, long, and erectile, and situated before and beneath the symphysis pubis. In the ordinary state it is soft and pendent in front of the scrotum. During erection it becomes elongated, upright, and assumes a triangular shape. Its upper surface is called the *dorsum penis*, and at its anterior surface there is a longitudinal projecton formed by the canal of the urethra. Two sides of the penis are round, and its posterior extremity or root is attached to the pelvis. Its anterior extremity is free, and presents the glans, prepuce, and orifice of the urethra. The organ is formed of the corpora cavernosa, the principal seat of erection, the corpus spongiosum, the urethra for the conveyance of the urine and sperm, and the glans which terminates the canal. The arteries of the penis are branches of the internal pudic. The veins correspond with the arteries. The nerves are from the internal pudic. **P. bone,** ossification found in the corpora cavernosa in many animals, traces of it being occasionally seen in man. **P. capti′vus,** said of the penis when held fast during coition by contraction of the muscles of the perineum in the female. **P. cer′ebri,** pineal gland. **Club** or **clubbed p.,** a permanent incurvation or bending of the penis backward toward the scrotum, which is remedied by the removal of a V-shaped piece from the corpora cavernosa. **Factit′ious p.,** dildoe. **P. femine′us,** clitoris. **P. lipoder′mus,** paraphimosis. **P. luna′tus,** curved shape of the penis caused by the formation of bands. **P. mulie′bris,** clitoris. **P. palma′tus,** said of the penis when enclosed by the skin of the scrotum. **Suspen′sory lig′ament of the p.,** see *Suspensory.* **Webbed p.,** p. palmatus.

**Penischisis,** pe-nis′kis-is (*schizo,* to cleave). Fissure of the penis producing epispadias or hypospadias.

**Peni′tis.** Phallitis; inflammation of the penis.

**Penj′deh sore.** Delhi boil.

**Penna′tus.** Penniform.

**Pen′niform** (*penna,* pen, *forma,* form). Epithet for muscles whose fleshy fibres are inserted at the side of a middle tendon, like the feathers of a pen on their common stalk. When on one side of the tendon they are called *simple* or *single penniform;* when on both sides, *double penniform.*

**Pennise′tum.** Plant growing in the East Indies, Cochin China, and the Molucca Islands; root possesses diuretic and slightly astringent properties. **P. spica′tum,** gero corn; grass growing in certain parts of Asia and North Africa; grain is edible.

**Pen′nycress.** Thlaspi; used like mustard.

**Pennyroy′al.** Mentha pulegium, Hedeoma pulegioides. **Hart's p.,** Mentha cervina.

**Pen′nyweight.** Weight consisting of 24 grains troy.

**Pen′nywort.** Cotyledon umbilicus. **Asiat′ic p.,** Hydrocotyle asiatica.

**Penol′ogy** (*poine,* penalty, *logos,* treatise). Science relating to the punishment and prevention of crime.

**Pen′-palsy.** Writers' palsy or cramp.

**Pen′sile** (*pendo,* to hang). Applied to tumors which hang by small roots.

**Penta-** (*pente,* five). In composition, five.

**Pentabro′mide.** A compound of five atoms of bromine with one of another element or radical.

**Pentachlo′ride.** A quinquivalent compound of five atoms of chlorine with one of another element or radical.

**Pen′tad.** An element which will combine with another element in the proportion of one atom to five; a quinquivalent or pentavalent element.

**Pentadac′tyl** (*pente,* five, *daktylos,* finger). Having five fingers.

**Pentaglu′cose.** Sugar, the atomic formula of which contains five atoms of carbon.

**Pentaglycosu′ria.** A form of diabetes in which osazone is developed when treated with phenylhydrazin.

**Pen′tal.** Colorless, inflammable liquid obtained from amylene hydrate by the action of acids; recently introduced as an anæsthetic, two or three drachms being usually sufficient.

**Pentamethylenediam′ine.** Pentamethylendiamin. Cadaverin.

**Pen′tane.** See *Amyl hydride.*

**Pentaphar′macon** (*pente,* five, *pharmakon,* remedy). Any medicine consisting of five ingredients.

**Pentaphyl′lum.** Potentilla reptans.

**Pentas′toma** (*pente,* five, *stoma,* mouth). A genus of entozoa, parasitic in man and other animals. They are long, unevenly cylindrical, and annulated. There are numerous species, the best known of which is P. tænioides. They sometimes become encysted in the organs.

**Pentas′tomum.** Pentastoma.

**Pentasul′phide.** Compound made up of five atoms of sulphur with another element or radical.

**Pentato′mic.** Containing five atoms, as *p. molecule,* or five replaceable atoms of hydrogen, as *p. alcohol.*

**Pentav′alent.** Combining with other elements or radicals in the proportion of one atom to five; quinquivalent.

**Pen′tene.** Amylene.

**Pentho′rum sedoi′des.** Virginia or ditch stonecrop, ord. *Crassulaceæ;* common North American plant; used as astringent in catarrhal affections.

**Penti′odide.** Compound of five atoms of iodine with one of another element or radical.

**Pen′tose.** A group of sugars having the formula $C_5H_{10}O_5$. Pentaglucose.

**Pentosu′ria.** Excretion of a pentose (arabinose, rhamnose, or xylose) in the urine.

**Pentox′ide.** Compound of five atoms of oxygen with another element or radical.

**Pen′tyl ac′etate.** Amyl acetate. **P. al′cohol,** amylic alcohol.

**Pen′tylene.** Hydramyl.

**Pentyl′ic.** Relating to or containing pentyl or amyl.

**Pen′ula** (a cover). Ingluvies.

**Pe′ony.** Pæonia.

**Peot′omy** (*peos,* penis, *tome,* incision). Amputation of the penis.

**Pepan′tic.** Maturative.

**Pepero′mia rotundifo′lia.** The leaves of this plant, which is a native of the West Indies and South America, are diaphoretic, antispasmodic, and applied externally to wounds. **P. umbella′ta,** plant of South America; the Brazilians use an infusion of the root as a diuretic; oil derived from the seeds is used as a stomachic and in scurvy; leaves are applied externally in glandular affections.

**Pep′lus.** Peritoneum.

**Pe′po.** The official (Ph. U. S.) name of the seed of Cucurbita pepo or pumpkin seed; anthelmintic; dose, ʒij (62.0) in emulsion. **P. lagena′rius,** Cucurbita lagenaria. **P. vulga′ris,** Cucurbita pepo.

**Pepores′in.** Substance derived from Cucurbita pepo; anthelmintic.

**Pep′per.** Piper; unripe fruit of *Piper nigrum* (Ph. U. S. and Br.); a warm carminative stimulant. **Af′rican p.,** Capsicum annuum. **Black p.,** Piper nigrum. **P. bush, sweet,** Clethra alnifolia. **Cayenne′ p.,** Capsicum annuum. **Chil′li** or **Chil′ly p.,** Capsicum annuum. **Cu′beb p.,** Piper cubeba. **Decor′ticated p.,** see *Piper nigrum.* **Guin′ea p.,** Capsicum annuum. **Jamai′ca p.,** Myrtus pimento. **Japanese′ p.,** Fagara piperita. **Long p.,** Piper longum. **Malaguet′ta p.,** applied to the fruit or seeds of several zingiberaceous plants, as well as to the pimento; usually considered to be synonymous with grains of paradise and Guinea grains.

**Pep′permint.** Mentha piperita; carminative and stimulant. **P. cam′phor,** menthol. **P. drops,** sugar drops flavored with oil of peppermint. **P. test,** use of oil of peppermint, poured down a soil-pipe and followed by a dash of hot water, to detect leaks in the pipe or fixtures by peculiar odor of the drug. **P. tree,** Eucalyptus amygdalina; Schinus molle. **P.-wa′ter,** aqua menthæ piperitæ; solution of oil of peppermint in water.

**Pep′perpod.** Capsicum annuum. **Poor′man's p.,** Polygonum hydropiper. **Tailed p.,** Piper cubeba. **Tur′nip p.,** Arum triphyllum. **Wall p.,** sedum. **Wa′ter p.,** Polygonum hydropiper. **Wa′ter p. of Amer′ica,** Polygonum punctatum. **White p.,** Piper album.

**Pep′per-root.** Dentaria.

**Pep′perwort.** Lepidium.

**Pep′sic.** Peptic.

**Pep′sin** (*pepsis,* coction, digestion). Characteristic nitrogenous enzyme or ferment found in the gastric juice, which converts the proteids of the food into peptones when acting in an acid medium; it is believed to be secreted by the adelomorphous or central cells of the gastric glands. Also a preparation from the stomach of the pig, sheep, or calf, used to aid digestion; see *Pepsinum.*

**Pepsin′ogen.** Substance in gastric glands which develops into pepsin.

**Pepsi′num.** (Ph. U. S. and Br.) Pepsin; an enzyme prepared from the mucous lining of the fresh stomach of the pig (U. S.), or of the pig, sheep, and calf (Br.). It should dissolve 3000 (U. S.) or 2500 (Br.) times its own weight of freshly prepared hard-boiled white of egg broken into small pieces. Dose, gr. x–xx (0.65–1.3). The official preparations are: *Glyceri′num pepsi′ni* (Br.), containing pepsin in the strength of 1:12; dose, ʒss–ij (2.0–8.0). *Pepsi′num sacchara′tum* (U. S.), containing pepsin, 1 part, and sugar of milk, 10 parts; dose, gr. x–ʒj (0.65–4.0).

**Pep′sis.** Coction, digestion.

**Pep′tase.** A ferment in yeast-cells which acts as a peptonizer.

**Pep′tenzyme.** A preparation said to be made up of all the ferments or enzymes connected with the alimentary canal and organs concerned in the processes of digestion; used in dyspepsia, both gastric and intestinal.

**Pep′tic** (*pepto,* to digest). An agent that promotes digestion or is digestive. **P. cells,** adelomorphous cells of the stomach. **P. glands,** tubular glands in cardiac end of the stomach, which secrete gastric juice. **P. ul′cer,** see *Ulcus ventriculi.*

**Pep′togen** (*pepto,* to digest, *gennao,* to beget). Substance favoring production of pepsin.

**Peptogenous** (pep-toj′en-us) or **Peptogen′ic.** Producing or forming pepsin.

**Peptoman′gan.** A compound employed in chlorosis, rhachitis, and tuberculosis; composed of iron, manganese, and peptone.

**Peptonæ′mia** (*pepto,* to digest, *haima,* blood). Presence of artificially produced peptone in the blood.

**Pep′tonate.** Product of action of peptone upon metallic salts, as upon iron—peptonate of iron.

**Pep′tone.** Product of digestion of proteids with gastric or pancreatic juice or its equivalent, soluble in water, diffusible, not precipitated by acids, alkalies, heat, or saturation with ammonium sulphate, but precipitated by alcohol and phosphotungstic acid. See also *Antipeptone, Hemipeptone,* and *Amphopeptone.* Whitish, pale, brown powder, free from saline matter, soluble in water; prepared by artificial digestion of beef and subsequent desiccation.

**Peptoniza′tion.** Conversion into peptones.

**Pep′tonized food.** Food already partially converted into peptones by artificial digestion.

**Peptonu′ria.** Condition of the urine in which albuminous bodies resembling peptones are noticed in the urine. **Enterogen′ic p.,** form of p. noted in various diseases of the intestinal tract, as typhoid fever, tuberculous ulcerations, etc. **Hæmatogen′ic p.,** met with in scurvy, poisoning, pregnancy, etc. **Hepatogen′ic p.,** form of p. seen in diseases of the liver, notably acute yellow atrophy. **Histogen′ic p.,** hæmatogenic p. **Pyogen′ic p.,** noted in conditions associated with large accumulations of pus within the body.

**Peptotoxin′** (*pepto,* to digest, *toxikon,* poison). Poisonous ptomain extracted from peptonized albumin, disappearing as putrefaction progresses.

**Per.** By or through. In composition often gives intensity to the signification. In chemical terms it implies the highest known or possible combining proportion, as perchloric acid, perbromide, etc.

**Per sal′tum.** By jump or jerk, applied to flow of arterial blood.

**Peraceph′alus** (*per,* through, *akephalos,* without a head). A genus of monsters, comprising one of the most extensive groups of the teratological series, characterized by a sufficiently regular form of the body, by the absence of upper extremities, and by the thorax being more imperfect than in acephali or even completely null. The essential conditions, consequently, in their degree of anomaly pass beyond the true type of the acephalous monster.

**Peracid′ity.** Excess of acidity.

**Peracute′.** Hyperacute; extremely acute.

**Perag′ua.** Ilex vomitoria.

**Perarticula′tion.** Diarthrosis.

**Peratodyn′ia.** Cardialgia.

**Perceptibil′ity.** See *Sensibility.*

**Percep′tion.** Appreciation which the brain has of an impression made upon an organ of sense.

**Perceptiv′ity.** Power of perception.

**Percerine′.** A white, amorphous alkaloid obtained from the bark of Geissospermum læve; generally administered internally, as a tonic and antipyretic, in the form of *hydrochloride* or *valerianate.*

**Per′cha lamella′ta.** Gutta-percha in thin, translucent sheets.

**Perchloreth′ane.** Carbon trichloride.

**Perchlo′ric acid.** Colorless, oily, very acid liquid; distillate of potassium perchlorate with sulphuric acid.

**Perchlo′ride.** Compound of perchloric acid and a base. **P. of mer′cury,** corrosive sublimate.

**Perchlormeth′ane.** Carbon tetrachloride.

**Perclu′sion** (*per,* through, *claudo,* to shut). State dependent upon peripheral lesion of a part, in contradistinction to that associated with lesion of the central nervous system or some remote organ.

**Per′colate.** See *Percolation.*

**Perco′a′tion.** The terms *percolation* and *displacement* are applied, in pharmacy, to an operation of filtration which consists in placing any substance, the virtues of which are to be extracted by a menstruum, in a funnel-shaped instrument having a septum perforated with holes, or its tube stuffed with cotton or tow, and pouring fresh portions of the menstruum upon it until all its virtues have been extracted. The first portion of the filtered liquid is called *percolate.* Used in the formation of certain infusions, extracts, tinctures, etc. An instrument used for this purpose is called a *displacer* or *percolator.*

**Per′colator.** See *Percolation.*

**Percuss′** (*per,* through, *quatio,* to strike). To strike upon with the view of appreciating the resulting sound. To practise percussion.

**Percus′sion.** A repeated sharp tapping of the surface, with a view to determine, by the character of the sound elicited, the condition of solidity or the reverse of the parts beneath. When *immediate* or direct percussion is made on the chest or abdomen, the more or less perfect resonance is an index of the state of the contained organs, and the physician is thus aided in his diagnosis. For this purpose the part may be struck with the fingers gathered into a bundle and their tips placed upon a level. Frequently, however, resort is had to *mediate* percussion, which consists in interposing between the point of the fingers and the part the finger of the other hand, or a pleximeter, and striking this instead of the naked chest. **Auscult′atory p.,** see *Acouophonia.* **P. note,** the sound elicited on percussion of a part or organ. **P. wave,** principal ascending wave of the sphygmographic tracing.

**Percussopuncta′tor.** Instrument provided with needles for puncturing the skin in rheumatic affections.

**Percus′sor.** Hammer employed in percussing. One who percusses.

Percussor.

**Percuta′neous** (*per,* through, *cutis,* skin). Acting or passing through the skin, as *p. faradization.*

**Perei′ra.** Geissospermum vollosii.

**Perei′ria** or **Perei′ra med′ica** (after Dr. Jonathan Pereira, an eminent English pharmacologist). Wom-ival, venivel, bangwellgetta, ord. *Menispermaceæ;* Ceylonese plant. An infusion of the root is considered by the Cingalese to be an excellent stomachic.

**Pereirine′.** Amorphous alkaloid found in bark of Geissospermum læve; tonic, antipyretic, and antiperiodic; the valerianate and hydrochloride are also employed.

**Perencephal′ia** or **Perenceph′aly.** A condition of multiple cysts of the brain.

**Peres′kia aculea′ta.** Gooseberry of the West Indies; the fruit has expectorant and antisyphilitic virtues.

**Perete′rium** (*perao,* to bore). Trepan.

**Pereto′rium.** Trepan.

**Pe′rez's sign.** Very distinct friction sound heard over the sternum in aneurysm of the arch of the aorta when the individual raises and drops his arms.

**Pere′zia adna′ta.** Mexican herb, genus of *Compositæ;* root is an active purgative; see *Pipitzahoa.* **P. mictico′sa,** P. adnata. **P. na′na** and **P. wright′ii** also contain pipitzahoic acid and are purgative.

**Perfla′tion** (*perflo,* to blow through). Act of blowing through a tube or canal to effect expulsion of its contents.

**Perfolia′ta.** Bupleurum rotundifolium.

**Per′forans** (*perforo,* to bore through). Name given to different muscles whose tendons pass through intervals between the fibres or tendons of other muscles, thence called *perforated.* See *Flexor longus digitorum,* etc. Under the name *perforating arteries* are included: 1. In the hand—arterial branches, given off by the profound palmar arch, which traverse the muscles and interosseous spaces. 2. In the thigh—three or four arteries, furnished by the profunda, which pass through the openings of the abductor mangus. 3. In the foot—the anterior and superior branches of the plantar arch. **P. Casse′rii,** musculocutaneous nerve. **P. ma′nûs,** flexor profundus perforans. **P. profun′dus,** flexor longus digitorum pedis, profundus perforans.

**Perfora′ta.** Perforated space.

**Per′forated.** Pierced with one or more holes; see *Perforatus.* **P. mem′brane,** fenestrated membrane, the intima or endothelial coat of an artery. **P. space or spot,** locus perforatus; one of three grayish depressions at the base of the brain presenting numerous orifices for blood-vessels: two anterior, situated laterally at the beginning of the Sylvian fissure; one posterior, in the trigonum interpeduncNular on the median line.

**Per′forating ar′teries.** See *Perforans.* **P. cuta′neous nerve,** branch from the fourth sacral or pubic nerve, perforates the great sciatic ligament; is distributed to the skin over the inner and lower border of the gluteus maximus. **P. disease′ of foot,** trophoneurotic affection beginning as a cutaneous disorder of the sole of the foot, followed by ulceration and destruction of the soft parts and bones. **P. fi′bres,** Sharpey's fibres. **P. mus′cles,** see *Perforans.* **P. ul′cers of foot,** ulcers with sharp edges which occur on the soles of the feet or between the toes in tabes dorsalis; probably analogous to bed-sores. **P. ves′sels of bone,** found in Volkmann's canals in the cortical substance.

**Perfora′tion** (*perforo,* to bore through). An opening in the continuity of parts or organs. The act of perforating. **P. of root,** accidental formation of an opening from the root-canal of a tooth into the pericementum.

**Per′forator.** Instrument for perforating the osseous structures, or for opening the head of the fœtus in utero when it is necessary to diminish its size. The operation is called *cephalotomy; perforatio cranii.*

**Perforato′rium.** Perforator.

**Perfora′tus.** That which is pierced. Anatomists have given this name to muscles whose fibres or tendons separate to suffer other parts to pass through them; such are the flexor brevis digitorum pedis, flexor sublimis perforatus, and coracobrachialis. Also to parts that are perforated for any purpose—as the substantia perforata of the brain. **P. Casse′rii,** coracobrachialis.

**Perfrica′tion** (*frico,* to rub). Inunction.

**Perfrigera′tion.** Shivering; chill; rigor.

**Perfu′sion** (*fundo,* to pour). Fomentation. **Frig′id p.,** see *Affusion.* **P.-cann′ula,** two-way cannula.

**Peri-.** Prefix signifying about, on all sides, around.

**Periacinal,** per-e-as′in-al, or **Periacinous,** per-e-as′in-us. Around an acinus.

**Periadeni′tis** (*aden,* gland). Inflammation of the surroundings of a gland, as the cellular tissue, etc.

**Periadventi′tial.** Around the outer tunic of a blood-vessel.

**Periære′sis** (*aireo,* to take away). A sort of circular incision formerly made about large abscesses; now practised only in some forms of tumor.

**Perial′gia** (*algos,* pain). A very violent pain.

**Peria′nal** (*anus*). Periproctic; circumanal.

**Periangeiocholi′tis** or **Periangiocholi′tis** (*peri,* around, *angeion,* vessel, *chole,* bile). Inflammation of tissue around the biliary canals.

**Periangeio′ma** or **Periangio′ma.** A new-growth around a vessel, occupying its outermost structures.

**Perianthop′odus diffu′sus.** Plant of Brazil used internally in diseases of the skin and as an emmenagogue.

**Perian′tral.** Surrounding an antrum.

**Periappendici′tis.** Inflammation of the tissues around the appendix.

**Periarte′rial.** Around or surrounding an artery.

**Periarteri′tis.** Inflammation of the sheath of an artery.

**Periarthri′tis.** Inflammation of parts about a joint.

**Periartic′ular** (*articulus,* joint). Around a joint. **P. car′tilage,** circumferential cartilage; a cartilage surrounding and deepening the cavity of a joint, as the acetabulum.

**Periax′ial.** Surrounding the axis. **P. neuri′tis,** inflammation affecting the myelin of a nerve.

**Periax′illary.** Surrounding the axilla; circumaxillary.

**Periax′onal.** Around an axon.

**Per′iblast** (*peri,* around, *blastos,* germ). Protoplasm which surrounds the endoblast or cell-nucleus, and undergoes segmentation.

**Periblas′tic.** Relating to the periblast. Developing from the exterior of the ovum.

**Periblas′tula.** Ovum in a more developed condition than when in the morula.

**Perible′ma** (*ballo,* to throw). Outer coating.

**Periblep′sia** or **Periblep′sis** (*peri,* around, *blepo,* to look). Wild look accompanying delirium.

**Perib′ole** (*peri,* around, *ballo,* to throw). Pericardium. Passage of morbific matter toward the surface.

**Peribol′ic** (*peribole*). Surrounding, encasing.

**Peribronch′ial.** Situated around a bronchus.

**Peribronchi′tis** (*peri,* around, *bronchos,* bronchus). Inflammation of the cellular tissue around the bronchi. **P. fibro′sa,** inflammation with fibrous hyperplasia around the bronchi. **P. nodo′sa,** inflammation accompanying a deposit of miliary tubercles in the tissues around the bronchi.

**Peribro′sis** (*peri,* around, *brosko,* to eat). Ulceration or erosion at the corners of the eyelids.

**Peribul′bar.** Around the eye; circumocular.

**Pericæ′cal.** Surrounding the cæcum.

**Per′ical.** Elephantiasis; also Madura foot.

**Pericar′diac.** Pericardial; relating to the pericardium. **P. ar′teries,** small branches from the internal mammary and the aorta. **P. pleu′ra,** mediastinal pleura. **P. veins,** small branches collecting blood from the pericardium, emptying into the superior cava.

**Pericardi′acophren′ic ar′teries.** Branches of the internal, mammary supplying the diaphragm and pericardium.

**Pericar′dial.** Pericardiac.

**Pericardicente′sis** or **Pericardiocente′sis** (*kentesis,* puncture). Puncture of the pericardium for the discharge of fluid.

**Pericardiopleu′ral cav′ity.** Part of the embryonic body-cavity extending into the neck.

**Pericardiopneumato′sis.** Effusion of air into the pericardium.

**Pericardiothy′roid.** Muscular bundle extending from the outer surface of the pericardium to the body of the thyroid; regarded as an independent fascicle of the sternothyroid.

**Pericardiot′omy.** Pericardotomy.

**Pericardit′ic.** Relating to pericarditis.

**Pericardi′tis.** Inflammation of the pericardium. This is probably the proper appellation for most of those cases which have received the names carditis and cardiopericarditis. Along with signs of pyrexia, the local symptoms resemble those of pneumonia. Those which point out that the pericardium is the seat of disease are the following: pain referred to the region of the heart or the scrobiculus cordis, sometimes sharp, at others dull and heavy; palpitation, accompanied with spasmodic twitchings in the neighborhood of the heart, shooting up to the left shoulder; pulsation and sometimes soreness of the carotids, with tinnitus aurium and vertigo. The breathing is by catches; dyspnœa considerable; pulse jarring, jerking, peculiar; the tongue white, covered with a mucous coat; and the skin is often bathed in sweat, as in acute rheumatism. The physical signs during the first period are as follows: The action of the heart is generally evident to the eye, and may be felt by the hand. There is soreness to the touch over the intercostal spaces and over a small surface in the epigastric region when the pressure is directed toward the pericardium. Percussion is usually natural, but at times there is dulness. On auscultation the cardiac movements are found to be frequent, abrupt, jerking, and tumultuous; often irregular and intermittent. The pulse presents corresponding characters. When effusion of lymph has occurred percussion may be negative or be but slightly affected. On auscultation, in addition to the preceding signs, there may be one or more of the rubbing or friction sounds resembling the rustling of parchment, or of a sawing or rasping character. In some cases the sound is like the creaking of new leather. This has been supposed to be pathognomonic of effused lymph. The most important point in the pathology of pericarditis is its connection with acute rheumatism, and it forms one of the most dangerous complications of the latter disease. It may be acute or chronic; in either case it is, of course, formidable. **Adhe′sive p.,** p. in which the layers of pericardium become adherent or have such a tendency. **Can′cerous p.,** carcinoma of the pericardium accompanied with inflammatory symptoms. **Dry p.,** p. in which there is no effusion. **P. exsudato′ria sanguinolen′ta,** effusion of blood in the pericardium. **P. exter′na,** p. involving the external layer of the pericardium. **Fi′brinous p.,** p. in which an exudation of fibrin occurs on the membrane. **P. gummato′sa,** syphilitic pericarditis accompanied by formation of gummata. **Hemorrhag′ic p.,** p. with sanguineous or bloody effusion. **P. inter′na,** inflammation involving the inner pericardial layer. **Lo′calized p.,** circumscribed form of pericarditis, with very light colored spots, "milk spots." **Moist p.,** p. with effusion. **P. oblit′erans,** in this form of pericarditis the cardiac muscle atrophies. **Pu′rulent p.,** p. in which there is purulent effusion. **Rheumat′ic p.,** p. due to rheumatism. **Serofi′brinous p.,** p. with a serous exudation, in which there is a little fibrin. **Tuber′culous p.,** form of pericarditis caused by tuberculous infection.

**Pericar′dium** (*peri,* around, *kardia,* heart). Sac or capsule of the heart. The pericardium is a membranous sac which envelops the heart and the arterial and venous trunks passing from or into it. It is situated in the anterior mediastinum, above the central aponeurosis of the diaphragm, to which it strongly adheres. Its shape is triangular like that of the heart, to which it is fitted; it is composed of two membranes: external, fibrous; internal, serous. The latter, having lined the inner surface of the external layer, is reflected over the heart and covers it entirely—*epicardium*—without, however, having the heart within it; in which arrangement it resembles other serous membranes. It retains the heart in position and facilitates its movement by means of the serous fluid contained in its cavity and secreted by the membrane. The arteries of the pericardium are small and derived from the superior phrenic, anterior mediastinal, and bronchial. The veins accompany them and open into the brachiocephalic. The lymphatics enter the lymphatic glands that surround the vena cava superior. **Bread and butter p.,** appearance of the surface in fibrinous pericarditis produced by friction; it is like that of the buttered surface when two slices of bread have been pressed together and then separated. **P. exter′num,** parietal p. **P. inter′num,** p. viscerale. **Pari′etal p.,** part of the pericardium contiguous to the pleura and diaphragm. **Shag′gy p.,** p. having fibrin deposited on it. **P. viscera′le,** portion of the pericardium covering the heart, or epicardium.

**Pericardot′omy** (*tome,* incision). Operation of incision of the pericardium, as in purulent infusion into its cavity.

**Pericar′pium** (*peri,* around, *karpos,* fruit). Epicarpium.

**Pericel′lular.** Situated around a cell.

**Pericement′al.** Relating to the pericementum.

**Pericementi′tis.** Inflammation of the pericementum. Periodontitis. **Ap′ical p.,** inflammation of the pericementum about the apex of a root. **Phageden′ic p.,** a form of pyorrhœa alveolaris, a molecular necrosis of the pericementum attended by alveolar atrophy. **Sep′tic p.,** p. of bacterial origin.

**Pericemen′tum.** Osseous layer over the fangs of the teeth and under the periodontal membrane.

**Paricen′tral.** About any central part.

**Pericephal′ic ar′tery.** External carotid.

**Pericholangi′tis.** Periangeiocholitis.

**Pericholecysti′tis** (*peri,* around, *chole,* bile, *kystis,* bladder). Inflammation of tissue around the gall-bladder.

**Perichol′ia** (*peri,* around, *chole,* pile). Superabundance of bile.

**Perichon′dral.** Relating to the perichondrium.

**Perichondriodyn′ia** (*peri,* around, *chondros,* cartilage, *odyne,* pain). Pain in the perichondrium.

**Perichondri′tis.** Inflammation of the perichondrium. **P. auric′ulæ,** hæmatoma auris. **P. laryn′gis,** inflammation of the perichondrium covering the larynx.

**Perichon′drium.** Fibrovascular membrane surrounding the cartilage and providing for its nutrition.

**Perichondro′ma.** Tumor of the perichondrium.

**Perichor′dal.** Surrounding the chorda dorsalis or notochord.

**Perichorioid′al.** Perichoroidal.

**Perichoroid′al** or **Pericho′roid.** Surrounding the choroid, as the perichoroidal space, lymph-space between the choroid and sclerotic.

**Pericla′sis** (*peri,* around, *klao,* to break). A comminuted fracture, with denudation of the bone.

**Pericly′menum.** Lonicera periclymenum.

**Pericne′mia** (*peri,* around, *kneme,* the leg). Parts surrounding the tibia; also the tibia itself.

**Pericne′mious** (*peri,* around, *kneme,* leg). Relating to the tibia and to parts surrounding it.

**Pericoli′tis** or **Pericoloni′tis.** Inflammation of the areolar tissue surrounding the colon.

**Pericolpi′tis** (*kolpos,* vagina). Inflammation of the areolar tissue surrounding the vagina.

**Periconchal,** per-e-kong′kal. Surrounding the concha of the ear. **P. sul′cus,** groove between the helix and convex posterior surface of the concha.

**Pericor′neal.** Surrounding the cornea.

**Pericowperi'tis.** Inflammation around Cowper's gland.

**Pericoxi'tis** (*coxa*, hip-joint). Inflammation of parts in the neighborhood of the hip.

**Pericra'nial.** Relating to the pericranium.

**Pericraniœde'ma.** Œdema of the head, owing to fluid effused under the pericranium.

**Pericrani'tis.** Inflammation of the pericranium.

**Pericra'nium** (*peri*, around, *kranion*, cranium). Periosteum covering the cranium externally. **P. inter'nus,** endocranium.

**Pericysti'tis.** Inflammation of the areolar tissue separating the bladder from the neighboring parts.

**Pericys'tium.** The vascular wall of a cyst.

**Pericystomati'tis.** Inflammation of the surrounding coat or membrane of an ovarian cystoma.

**Pericy'tial** (*kytos*, cell). Around a cell.

**Pericyt'ula** (*peri*, around, *kytos*, cavity). Ovum in an impregnated state prior to superficial segmentation.

**Peridec'tomy** (*peri*, around, *ektome*, excision). Removal of band of the conjunctiva from around the base of the cornea, in the treatment of pannus. Peritomy.

**Periden'tal.** Periodontal. Around or surrounding a tooth.

**Peridenti'tis.** Periodontitis.

**Periden'tium** (*dens*, tooth). Periodontium.

**Per'iderm.** Rete Malpighii.

**Perides'mic** (*peri*, around, *desmos*, ligament). Relating to the peridesmium.

**Peridesmi'tis.** Inflammation of the peridesmium.

**Perides'mium** (*peri*, around, *desmos*, ligament). Delicate areolar tissue surrounding a ligament.

**Peridias'tole.** See *Diastole.*

**Peridid'ymis** (*didymos*, testicle). Tunica albuginea.

**Perididymi'tis.** Inflammation of the tunica albuginea testis or areolar tissue surrounding the testis.

**Peridiodyn'ia.** Perodynia; cardialgia.

**Periencephali'tis** (*peri*, around, *enkephalos*, brain). Inflammation of the pia mater and the superficial layers of the brain.

**Perienteri'tis.** Inflammation of the peritoneal tunic of the intestines.

**Perien'teron** (*peri*, around, *enteron*, intestine). Primitive perivisceral cavity.

**Periepen'dymal.** Around or about the ependyma. **P. myeli'tis,** syringomyelia.

**Perier's' opera'tion.** Removal of the inverted uterus by elastic ligature.

**Perifis'tular.** About or around a fistula.

**Perifolliculi'tis.** Inflammation around a follicle. **Conglom'erative pus'tular p.,** eruption on the backs of the hands and buttocks chiefly, in those who work among horses and other animals. It is an inflammation of the follicles, perifollicular tissues, and sebaceous glands.

**Perifolliculo'sis.** Follicular affection of the skin.

**Periganglii'tis.** Inflammation of the cyst wall of a ganglion.

**Perigas'tric.** In the immediate vicinity of the stomach.

**Perigastri'tis** (*peri*, around, *gaster*, stomach). Inflammation of the peritoneal coat of the stomach.

**Perigas'trula.** Bladder gastrula.

**Periglot'tis** (*glotta*, tongue). Mucous membrane of the tongue. Epiglottic gland.

**Perigna'thic** (*peri*, around, *gnathos*, jaw). In the immediate vicinity of the jaws.

**Perig'raphe** (*peri*, around, *grapho*, to write). Circumscription. An aponeurotic intersection of the rectus abdominis.

**Perihepati'tis.** Inflammation of the peritoneum covering the liver.

**Perihyster'ic** (*peri*, around, *hystera*, uterus). Around the uterus; periuterine.

**Perikar'yon** (*karyon*, nucleus). Protoplasm of a neuron.

**Perikerat'ic** (*keras*, horn). Circumcorneal.

**Perilaryn'geal.** Situated round the larynx.

**Perilaryngi'tis.** Inflammation of the areolar tissue about the larynx, not infrequently ending in perilaryngeal abscess.

**Per'ilymph.** Liquor of Cotunnius; fluid surrounding the membranous labyrinth. Aqua labyrinthi.

**Perilymphan'geal.** Situated around lymphatic vessel. **P. nod'ules,** lymphoid cells developed around lymphatic vessels.

**Perilymphangeï'tis** or **Perilymphangi'tis.** Inflammation of the connective tissue around a lymphatic vessel.

**Perilymphat'ic.** Relating to perilymph.

**Perimasti'tis.** Inflammation of connective tissue around the mammary gland.

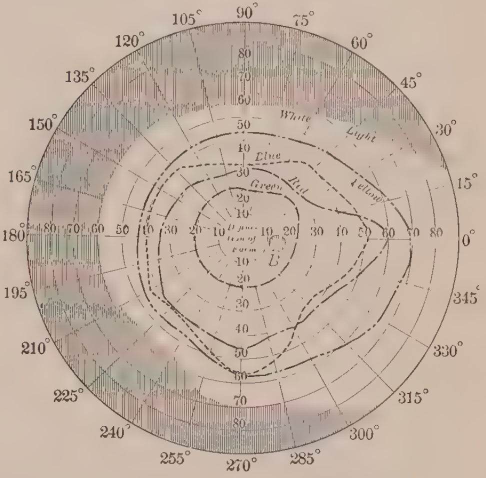
**Perime'nia.** Hemorrhage about the uterus and its appendages, usually about the time of the catamenia.

**Perimeningi'tis.** Pachymeningitis or inflammation of the dura mater.

**Perimenin'goencephali'tis.** Periencephalitis.

**Perimen'inx** (*meninx*, a membrane). Dura mater.

**Perim'eter** (*peri*, around, *metron*, measure). Instrument for determining the limits of the field of vision; also the record or chart showing the results of perimetric examination.



Perimeter chart, with tracings.

**Perimet'ric.** Pertaining to perimetry.

**Perimetrit'ic.** Relating to perimetritis.

**Perimetri'tis.** Inflammation of the peritoneal covering of the uterus. See *Parametritis.*

**Perime'trium.** Peritoneal covering of the womb.

**Perim'etry.** Determination of the exact limits of the visual field.

**Perimy'elis** (*myelos*, marrow). Medullary membrane.

**Perimyeli'tis** (*myelitis*). Spinal meningitis.

**Perimysii'tis.** Inflammation of the perimysium.

**Perimys'ium** (*peri*, around, *mys*, muscle). Areolar membrane or sheath surrounding a muscle or its fasciculi. The sheath of the whole muscle is termed p. externum; of the fasciculi, p. internum.

**Perinæ'um** (Gr. *perinaion*). Perineum.

**Perine'al.** Relating or belonging to the perineum. **P. aponeuro'sis,** p. fascia. **P. ar'tery,** branches of the internal pudic distributed to the perineum, superficial and transverse perineal arteries. **P. bod'y,** term applied to designate a sort of fusing together of perineal structures by a great accession of elastic tissue, at a point midway between the posterior vulvar commissure and the anus, thus forming a highly elastic and resistant structure or body. **P. cuta'neous nerve,** see *Sciatic nerve, lesser.* **P. cystot'omy,** cystotomy by incision through the perineum. **P. disloca'tion,** dislocation of the hip with the head of the femur in the perineum. **P.**

**fas'ciæ**, fasciæ, superficial and deep-seated—perineal ligament, Camper's ligament, triangular ligament—which belong to the perineum. In the anterior half of the perineum, beneath the subcutaneous fat, is a special layer of fascia continuous with the dartos. It is the proper superficial perineal fascia, sometimes called fascia of Colles. It closes in the urogenital outlet of the pelvis. The inferior (superficial, deep layer of superficial) perineal fascia lies below the inferior muscular sheet, composed of transversus perinei, bulbocavernosus and ischiocavernosus. The middle perineal fascia lies between the inferior and the superior muscular sheets, the latter being the ischio-urethralis. The inferior perineal fasciæ are between the superior muscular layer and urogenital viscera; middle and superior layers are often classed together as the deep perineal fascia, also known as the triangular ligament of the urethra. **P. fis'tula,** fistula taking place in or through the perineum. **P. flex'ure,** short turn which the rectum makes just above the anus. **P. fos'sa,** ischiorectal fossa; conical fossa, the base of which corresponds with the skin; formed anteriorly by the transversus perinæi muscle, behind by the inferior border of the gluteus maximus, internally by the levator ani, and externally by the tuber ischii. It is filled up with fat and fibrous striæ, and usually described as the superficial portion of the ischiorectal fossa. **P. her'nia,** hernia taking place in or through the perineum. **P. ischu'ria,** retention of urine caused by a tumor seated in the perineum. **P. lig'ament,** triangular ligament; see *P. fasciæ*. **P. luxa'tion,** p. dislocation. **P. nerve,** branch of the internal pudic, mainly distributed to the perineum and scrotum of the male, and to the vulva and perineum of the female. **P. nerves, deep,** branches of the perineal supplying muscles of the perineum. **P. nerves, superfic'ial,** branches of perineal supplying the perineum, scrotum (labia, female), and inner part of the thigh; two in number, internal or posterior and external or anterior. **P. re'gion,** perineum. **P. sec'tion,** incision through the perineum for the cure of stricture of the urethra.

**Perineauxe'sis** (*perineaion* + *auxesis*, growth). Reparatory operation for fissured or lacerated perineum; colpoperineorrhaphy.

**Perine'ocele.** Perineal hernia.

**Perine'ocheilor'rhaphy.** Operation of uniting by suture the freshly cut surfaces of the labia majora and a small section of perineum for relief of prolapsed uterus.

**Perine'oplasty** (*plasso*, to repair). Operation for repair of ruptured perineum when performed after involution has taken place and when the surfaces must be freshened or denuded before sewing.

**Perineor'rhaphy** (*rhaphe*, suture). Suture of the perineum, in cases of laceration of the same. **Em'met's p.,** see *Emmet's operation*. **Flap p.,** p. in which flaps are obtained from the region around the cicatrices.

**Perineoscro'tal.** Relating to perineum and scrotum.

**Perineosyn'thesis** (*perineaion* + *synthesis*, placing together). Operation devised by Langenbeck for relief of ruptured perineum by making a graft from the mucous membrane of the vagina.

**Perineot'omy.** Incision into the perineum.

**Perineovaginal,** per-in-e'o-vaj'in-al. Relating to the perineum and vagina, as perineovaginal fistula.

**Perineph'ral** or **Perineph'rial.** Perinephric. Also relating to the perinephrium.

**Perineph'ric** (*nephros*, kidney). Relating to the surroundings of the kidney, as perinephric abscess, which is not necessarily dependent on perinephritis.

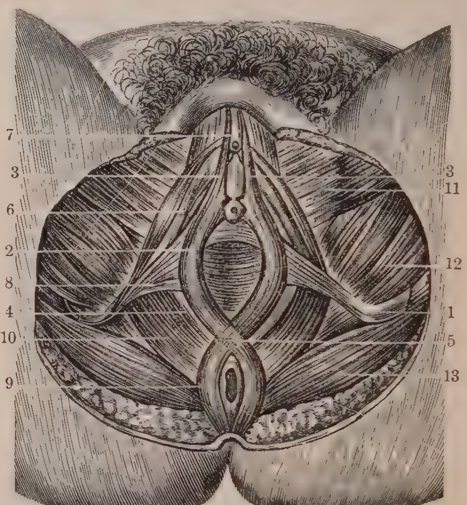
**Perinephrit'ic.** Relating or appertaining to perinephritis, as perinephritic abscess, an abscess dependent especially on inflammation of the tissues surrounding the kidney.

**Perinephri'tis.** Inflammation of the areolar and fibrous tissue around the kidney.

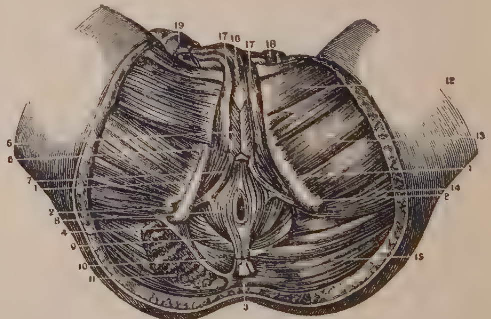
**Perineph'rium.** Connective-tissue covering of the kidney.

**Perineph'ros** or **Perineph'rus.** Tunica propria of the kidney.

**Perine'um.** The space at the inferior region of the trunk, between the ischiatic tuberosities, anus, and genital organs. It is smaller in the female than in the male, has a triangular shape, and is divided into two equal parts by a median line called the *raphe*. It is occasionally ruptured during labor. Some regard it as extending posteriorly as far as the os coccygis. The part between the pudendum and anus is sometimes called *anterior perineum*, to distinguish it from that which extends from the anus to the coccyx, called *posterior perineum*.



Muscles of the perineum in the female: 1, tuber ischii; 2, sphincter vaginæ muscle; 3, its origin from the base of the clitoris; 4, vaginal ring of the same muscle, which receives a part of the fibres of the levator ani; 5, intercrossing of the sphincter ani and sphincter vaginæ muscles at the perineal centre; 6, erector clitoridis; 7, clitoris covered by its prepuce; 8, transversus perinei; 9, sphincter ani; 10, levator ani; 11, gracilis; 12, adductor magnus; 13, posterior part of gluteus magnus.



Muscles of the perineum of the male: 1, 1, ascending ramus of ischium; 2, 2, tuber ischii; 3, posterior face of coccyx; 4, portion of great sacrosciatic ligament; 5, accelerator urinæ; 6, erector penis; 7, transversus perinei; 8, sphincter ani; 9, levator ani; 10, coccygeus; 11, section of gluteus magnus; 12, adductor longus; 13, adductor brevis; 14, adductor magnus; 15, extremity of gluteus magnus; 16, urethra; 17, 17, corpora cavernosa, turned up; 18, spermatic cord, turned up; 19, free extremity of penis, with its integuments.

**Perineu'rion** (*peri*, around, *neuron*, nerve). Perineurium.

**Perineuri′tis.** Inflammation of the perineurium. **No′dose p.,** a form of herpes zoster in which small nodules are visible along the cutaneous nerve branches.

**Perineu′rium.** Investing sheath of the funiculus of a nerve. Neurilemma. **P. of the brain,** neuroglia. **P. inter′num,** neuroglia.

**Perinu′clear.** Situated around a nucleus.

**Perioc′ular.** Situated around the eye or region of the eye. **P. space,** space between the eyeball and orbit.

**Pe′riod** (*peri,* around, *hodos,* way). Circuit. A portion of time. One of the different phases or revolutions of a disease or the epochs which are distinguishable in the course of it. Three periods are commonly enumerated: augmentation, increase, or progress; acme, or height; decline. Some authors reckon only the invasion and termination. Period is used, in describing an intermittent, for the time between the commencement of one paroxysm and that of the next, including the fit as well as the interval. **Child′bearing p.,** p. of life in woman when she may give birth to children, commencing at puberty and ceasing usually with the menopause. **Intermen′strual p.,** time elapsing between occurrences of menstruation. **Month′ly p.,** menses. **Puer′peral p.,** p. following and extending from delivery to the reappearance of menstruation.

**Period′ic** or **Period′ical.** Rhythmic, recurrent, marked by periodicity. **P. breath′ing,** Cheyne-Stokes respiration. **P. fe′ver,** malarial fever. **P. swel′ling,** angioneurotic œdema.

**Periodic′ity.** Rhythm. Aptitude of certain physiological or pathological phenomena in health or disease to recur at particular periods after longer or shorter intervals, during which they cease completely. Diseases thus recurring are called periodical or rhythmical.

**Periodol′ogy.** Doctrine of periodicity in health and disease.

**Periodon′tal** (*peri,* around, *odous,* tooth). Surrounding a tooth. **P. mem′brane,** dental periosteum; fibrovascular membrane, analogous to the periosteum, and itself united to the periosteal membrane lining the sockets.

**Periodonti′tis.** Inflammation of the membrane lining the socket of a tooth. **Ap′ical p.,** inflammation of the periodontal membrane at the apex of the root of a tooth. **P. gingiva′rum,** inflammation of the gums and their surroundings.

**Periodon′tium.** Periodontal membrane. Pericementum.

**Period′oscope** (*periodos,* period, *skopeo,* to view). A dial for ready calculation of the monthly periods or of the probable termination of a pregnancy.

**Pe′riods.** Menses.

**Periodyn′ia.** A violent and extensive pain. Cardialgia.

**Periœsophage′al.** About the œsophagus.

**Periœsophagi′tis.** Inflammation of the cellular tissue around the œsophagus.

**Per′ion** (*peri,* around, *oon,* ovum). Decidua.

**Perionych′ia** or **Perionyx′is** (*peri,* around, *onyx,* nail). Inflammation involving the fold of skin adjoining the nail.

**Perionychium,** per-e-o-nik′e-um. Epidermic border at the root of the nail.

**Perion′yx.** Perionychium, especially the wide band seen in later fetal life.

**Perionyx′is.** Perionychia.

**Perioöph′oric.** Surrounding the ovary.

**Perioöphori′tis.** Inflammation of the peritoneal investment of the ovary.

**Periophthalmi′tis** (*peri,* around, *ophthalmos,* eye). Inflammation of the orbital tissues.

**Perioptom′etry** (*peri,* around, *optos,* visible, *metron,* measure). Measurement or estimation of the visual power in parts situated at the periphery of the retina.

**Perio′ral.** About the mouth.

**Perior′bita** (*peri,* around, *orbita,* the orbit). Periosteum lining the orbit, a continuation of the dura mater.

**Perior′bital.** Surrounding the orbit. **P. mem′brane,** periorbita.

**Periorbi′tis** or **Periorbiti′tis.** Inflammation of the periosteum lining the orbit.

**Periorchi′tis** (*peri,* around, *orchis,* testicle). Inflammation of the tunica vaginalis testis or cellular tissue around the testicle. **P. adhæsi′va,** in this form the tunica vaginalis and testis adhere.

**Perios′teal.** Relating to the periosteum.

**Periosteï′tis.** Periostitis.

**Periosteo′ma** (*peri,* around, *osteon,* bone). Osteoid chondroma, periostosis. Periosteal tumor, or a tissue resembling its deep layer, which becomes transformed into bone by the cells taking the shape of bone cells, and the matrix calcifying. These tumors are more rapidly developed, have a less degree of consistence, and sooner disperse than exostoses, which they resemble greatly.

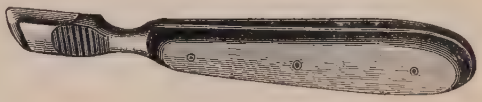
**Periosteomyeli′tis** (*peri,* around, *osteon,* bone, *myelos,* marrow). Periostitis with myelitis.

**Periosteophy′ma** (*phyma,* swelling). Periosteal swelling; periosteophyte.

**Perios′teophyte.** Osseous outgrowth from the periosteum.

**Periosteo′sis.** Periostitis; also periosteoma.

**Perios′teotome** (*tome,* incision). Instrument for cutting and lifting the periosteum from a bone.



Periosteotome.

**Periosteot′omy.** Incision of the periosteum.

**Perios′teous.** Periosteal.

**Perios′teum** (*peri,* around, *osteon,* a bone). Fibrovascular membrane surrounding the bones everywhere, except the teeth at their coronæ and the parts of the bones covered with cartilage. The external surface is united in a more or less intimate manner to the neighboring parts by areolar tissue. The inner surface covers the bone, whose depressions it accurately follows. It is united to the bone by small, fibrous prolongations, and especially by a prodigious quantity of vessels which penetrate the bone substance. It unites the bones to the neighboring parts and assists in their growth, either by furnishing at its inner surface an albuminous exudation, which becomes cartilaginous and at length ossifies, or by supporting the vessels which penetrate the bone to carry the materials of its nutrition. See *Medullary membrane.* **Alveoloden′tal p.,** see *Alveolar.* **Den′tal p.,** see *Alveolar membrane* and *Periodontal.* **P. inter′num,** medullary membrane. **P. or′bitæ,** periorbita.

**Perios′tic.** Relating or appertaining to the periosteum, or to parts surrounding a bone.

**Periosti′tis.** Periosteitis. Inflammation of the periosteum. When accompanied by suppuration it is called acute subperiosteal abscess. **P. albumino′sa,** p. accompanied with an albuminous, synovia-like exudation. **P. au′ris me′diæ,** inflammation of the middle ear, acute and purulent in character. **P. caseo′sa,** tuberculous periostitis. **Den′tal p.,** p. involving the roots of the teeth. **P. gummato′sa,** periostitis of syphilitic origin in which gummata exist under the periosteum. **P. inter′na cra′nii,** pachymeningitis of the exterior part of the dura mater. **P. malig′na,** acute suppurative periostitis. **P. mastoide′a,** inflammation of the periosteum of the mastoid process. **P. plegmono′sa,** malignant periostitis.

**Periosto′ma.** Bony growth around a bone.

**Periostomedulli′tis.** Periosteomyelitis. Simultaneous inflammation of the periosteum and medulla.

**Periosto'sis.** Tumor of the periosteum. Enlargement of a bone from inflammation. See *Periosteoma.*

**Periostosteï'tis** (*periosteon+osteon*, bone). Simultaneous inflammation of the periosteum and bone.

**Periostot'omy.** Periosteotomy.

**Perio'tic** (*peri*, around, *ous*, ear). Surrounding the ear. **P. car'tilage,** a small collection of cartilaginous tissue on each side of the fetal skull. **P. por'tion,** petromastoid portion of the temporal bone.

**Periovari'tis.** Inflammation of the peritoneal investment of the ovary.

**Periov'ular.** Surrounding the ovum.

**Peripachymeningi'tis** (*peri*, around, *pachys*, thick, + *meningitis*). Purulent inflammation of connective tissue between the dura mater and vertebræ.

**Peripancreati'tis.** Inflammation involving the peritoneum around the pancreas.

**Peripap'illary.** Around a papilla, especially the optic papilla.

**Peripe'nial mus'cle.** Dartos-like envelope of smooth muscular fibres around the penis.

**Periphaci'tis** (*phakos*, lens). Inflammation of the capsule of the lens.

**Periph'erad.** Toward the periphery.

**Periph'eral** (*peri*, around, *phero*, to bear). Peripheric, peripherical. Relating to the periphery or circumference. **P. anæsthe'sia,** anæsthesia of the cutaneous nerves. **P. as'pect,** aspect toward the circumference of an organ. **P. lay'er,** outer portion of molecular cortex of brain, composed entirely of medullated nerve-fibres. **P. neuri'tis,** a condition having the symptoms of neuritis, with paralysis, dependent usually on chronic alcoholism. **P. vas'cular sys'tem,** capillary system. **P. veins,** interlobular veins.

**Periph'eraphose.** Subjective impression of a shadow originating in the eye itself.

**Peripher'ic.** Peripheral. **P. im'pulses,** influence transmitted by nerves from periphery to nerve-centres. **P. lin'ear extrac'tion,** modified linear extraction.

**Peripheri'tis.** Periophthalmitis.

**Periph'erophose.** Subjective impression of light originating in the eye itself.

**Periph'ery.** External surface or its boundary-line.

**Periphimo'sis.** Paraphimosis.

**Periphlebi'tis.** Inflammation of the sheath of a vein.

**Periphracterythe'ma.** Circumscribed erythema.

**Periphractoli'chen.** Circumscribed herpes.

**Per'iplasm.** Ectoplasm.

**Per'iplast** (*peri*, around, *plasso*, to form). Periblast.

**Peripleumo'nia.** Peripneumonia.

**Peripleuri'tis** (*peri*, around, *pleuritis*). Inflammation of the subserous areolar tissue of the costal pleura; in many cases due to actinomycosis.

**Perip'loca.** A genus of plants, ord. *Asclepiadeæ.* **P. græ'ca,** silk-vine, milk-vine, climbing dogsbane; the acrid juice is a cardiac poison. **P. in'dica,** Hemidesmus indicus. **P. mauritia'na,** Bourbon scammony.

**Periplocin'.** Glucoside from Periploca græca, similar in its action to digitalin.

**Perip'lysis** (*peri*, around, *plysis*, the act of washing). A copious discharge from any part, especially from the bowels.

**Peripneumo'nia** (per-e-nu-mo'ne-ah), **Peripneumoni'tis** (*pneumon*, lung). Pleuropneumonia. Pneumonia. **P. bilio'sa,** inflammation of the lungs accompanied with bilious fever. **P. catarrha'lis,** bronchitis or pulmonary catarrh with pain in some part of the chest; peripneumonia notha. **P. no'tha,** name formerly given to certain affections that resemble pneumonia, and especially chronic bronchitis with pleurodynia. **P. pituito'sa,** p. notha.

**Peripneumoni'tis.** Peripneumonia.

**Peripneu'mony.** Pneumonia.

**Peripo'lar.** Surrounding a pole.

**Peripor'tal.** Surrounding the portal vein.

**Periproc'tic** (*peri*, around, *proktos*, anus). Around the anus.

**Periprocti'tis** (*peri*, around, *proktos*, anus). Inflammation of the areolar tissue surrounding the rectum or anus.

**Periprostat'ic.** About the prostate, a term especially applied to abscesses situated around the prostate gland—periprostatic abscesses.

**Periprostati'tis.** Inflammation of periprostatic tissue.

**Peripsoï'tis** (*peri*, around + *psoas*). Inflammation of connective tissue surrounding the psoas muscle.

**Peripye'ma** (*peri*, around, *pyon*, pus). Suppuration around an organ—a tooth, for example.

**Peripylephlebi'tis** (*peri*, around, *pyle*, porta, *phleps*, vein). Inflammation of the connective tissue in immediate relation with the portal vein.

**Perirec'tal.** About or surrounding the rectum.

**Perire'nal.** Perinephric.

**Perirrhi'nal.** About the nose.

**Perisalpingi'tis** (*salpinx*, tube). Inflammation of the connective tissue around the Fallopian tube.

**Perisal'pinx** (*peri*, around, *salpinx*, tube). Peritoneal investment of the Fallopian tube.

**Peris'celis** (*peri*, around, *skelos*, leg). Herpetic eruption at the place at which the garter is worn.

**Periscop'ic.** Giving a wide range of vision. **P. glass'es,** concavo-convex lenses, arranged with the view of obviating spherical aberration and allowing a greater degree of oblique vision.

**Perisialdochi'tis** (*peri*, around, *sialon*, saliva, *docheion*, holder). Inflammation involving connective tissue around duct of Steno.

**Perisinui'tis.** See *Perisinuous.*

**Perisin'uous.** Around or about the tissues in or contiguous to a cerebral sinus. Inflammation at this location is called *perisinuitis* or *perisinusitis.*

**Perisinusi'tis.** See *Perisinuous.*

**Perispermati'tis.** Inflammation of the parts about the spermatic cord.

**Perisphal'sis** (*sphallo*, to move). Circular motion impressed on a luxated bone for the purpose of reducing it.

**Perisphinx'is** (*sphingo*, to compress). Ligation.

**Perisplen'ic.** At, around, or relating to the location of the spleen.

**Perispleni'tis.** Inflammation of the peritoneal investment of the spleen.

**Perispo'rium.** Genus of fungi which are destructive to paper and tissue of vegetables.

**Perissarte'ria** (*perissos*, superabundant + *arteria*). Excessive development of arteries or of arterial tissue.

**Perissodac'tylus** (*perissos*, superabundant, *daktylos*, finger). Having supernumerary fingers or toes.

**Peristal'sis** (*peri*, around, *stalsis*, constriction). A kind of undulation or vermicular movement, induced by contraction of the circular muscular fibres of the intestine from above downward. The purpose of this successive contraction of the circular fibres is to propel the intestinal contents. When the fibres contract inversely they occasion an antiperistaltic action. Peristaltic action is involuntary, and is not under the immediate influence of either brain or spinal marrow. It continues for some time after death.

**Peristal'tic.** Relating to peristalsis. An agent that promotes peristalsis.

**Peristaph'yline** (*peri*, around, *staphyle*, uvula). Relating to the parts immediately around the uvula.

**Peristaphyli'nus exter'nus.** Circumflexus muscle. **P. infe'rior,** circumflexus muscle. **P. inter'nus,** levator palati.

**Peristaphylopharynge'us.** First or upper portion of the palatopharyngeus muscle; second or middle is the pharyngostaphylinus; third or lower, the thyrostaphylinus.

**Peris'tera an'ceps.** Pelargonium anceps.

**Perister'ium.** Verbena officinalis.

**Perister′na** (*peri*, around, *sternon*; the sternum). Lateral parts of the chest.

**Peris′tole** (*peri*, around, *stello*, to contract). Peristalsis.

**Peris′toma** (*peri*, around, *stoma*, mouth). Part immediately around the mouth or a similar opening.

**Perisys′tole** (*peri*, around, *systole*, contraction). Interval between the systole and diastole of the heart.

**Perit′asis** (*periteino*, to stretch all around). Extension or swelling in all directions.

**Peritendin′eum.** Loose connective-tissue sheath surrounding the tendons and containing blood-vessels.

**Perites′tis** (*peri*, around + *testis*). Tunica albuginea.

**Perithelio′ma.** Tumor developed from the external coat of a blood-vessel, especially in the brain.

**Perithe′lium.** Sheath of a small blood-vessel. **Vas′cular p.,** nucleated membrane forming the outer covering of the larger-sized capillaries.

**Perithoracic,** per-e-tho-ras′ik. Around the thorax.

**Perithyroidi′tis.** Inflammation of the capsule of the thyroid gland.

**Perit′omist.** One who performs peritomy.

**Perit′omy** (*peri*, around, *tome*, incision). Circumcision. Excision of the conjunctiva and subconjunctival tissue for pannus.

**Peritonæ′um.** Peritoneum.

**Peritone′al.** Relating to the peritoneum. **P. cav′ity,** space included by layers of the peritoneum; abdominal cavity. **P. fe′ver,** peritonitis. **P. fos′sæ,** various depressions made by the peritoneum dipping down between the viscera; the chief of these are the abdominovesical pouch, cæcal fossa, duodenojejunal recess, ileocæcal fossa, inguinal fossa, intersigmoid fossa, pararectal pouch, paravesical pouch, rectovaginal pouch, rectovesical pouch, subcæcal fossa, and vesico-uterine pouch.

**Peritoneal′gia** (*algos*, pain). Peritoneal pain.

**Peritoneoc′lysis** (*klyzo*, to wash). Injection of fluids into the peritoneal cavity.

**Peritoneorrhex′is** (*rhexis*, rupture). Tear of the peritoneum.

**Peritoneot′omy.** Incision of the peritoneum.

**Peritoneovaginal,** per-it-o-ne-o-vaj′in-al. Relating to the peritoneum and vagina.

**Peritone′um** (*peri*, around, *teino*, to stretch). Serous membrane lining the abdominal cavity. The *parietal p.* lines the walls of the abdomen and pelvis, and is reflected over the viscera, becoming thus the *visceral p.* This envelops the viscera wholly or in part, and maintains their respective relations by means of different prolongations and ligamentous folds — the mesentery, epiploon, mesocolon, etc. Like all the serous membranes, the peritoneum, in the male, is a sort of sac without aperture, which covers the abdominal organs, without containing them within it, and the internal surface of which is smooth and lubricated by a serous fluid. In the female the peritoneum is not a closed sac, but communicates with the external world through the open end of the oviducts. In the male fœtus the peritoneum furnishes a prolongation which accompanies the testicle at the time of its descent; in the female fœtus this forms the canal of Nuck. Below the neck of the gall-bladder the peritoneal sac is narrowed to a triangular opening, called the foramen or hiatus of Winslow, through which it proceeds behind the stomach to form a sort of secondary cavity, called the *posterior cavity of the peritoneum.* **P. duplica′tum,** gastrocolic epiploon.

**Per′itonism.** Spurious peritonitis; this term also denotes a condition of shock occurring in peritonitis, or in disease of certain viscera which are covered by the peritoneum.

**Peritoni′tis.** Inflammation of the peritoneum. The characteristic signs of acute inflammation of the peritoneum are violent pain in the abdomen, increased by the slightest pressure, often by the simple weight of the bed-clothes. It may involve only a part or the entire membrane. It frequently occurs in the parturient state, beginning on the second or third day after delivery. Another common form of peritonitis is that accompanying an inflamed appendix, either with or without rupture and extrusion of the purulent contents. The appearances post mortem are such as occur whenever a serous membrane has been inflamed and such inflammation has produced death: effusion of fluid with flakes of coagulable lymph in it; appearances of vascularity, etc., in the membrane. Subdivisions of the subject have been made, as general or partial peritonitis, hypochondriac, epiploic, iliac, pelvic, periuterine, etc., according to the nature of the region involved. **Adhe′sive p.,** in this form adhesions between the two peritoneal layers are formed. **Appendic′ular p.,** perityphlitis; appendicitis. **Diaphragmat′ic p.,** inflammation involving the peritoneum of the diaphragm. **Diffuse′ p.,** inflammation involving the entire peritoneum. **Dry p.,** p. before the occurrence of effusion. **Erythemat′ic p.,** see *Peritonitis.* **Gen′eral p.,** diffuse peritonitis. **P. hepat′ica,** inflammation of the peritoneal covering of the liver; see *Hepatitis.* **Non-plas′tic p.,** see *Peritonitis.* **Omen′tal p.,** epiploitis. **Pel′vic p.,** pelviperitonitis. **Permea′tion p.,** inflammation of the peritoneum believed to be due to the action of pathogenic agents which have passed through the intact intestinal walls. **Puer′peral p.,** see *Peritonitis.* **Pyæ′mic** or **sep′tic p.,** p. from septic poison in the cavity of the peritoneum. **Se′rous p.,** p. attended with exudation of serum. **Tuber′culous p.,** form of peritonitis often met with in children or in early adult life, due, as its name implies, to tuberculous invasion of the peritoneum. **Typhohæ′mic p.,** see *Peritonitis.* **U′terine p.,** perimetritis.

**Periton′sillar.** About a tonsil, as *p. abscess.*

**Peritonsilli′tis.** Inflammation of the tissues surrounding the tonsils. **P. absce′dens,** peritonsillitis in which an abscess forms.

**Peritracheï′tis.** Inflammation of the connective tissue around the trachea.

**Perit′richa** (*peri*, around, *thrix*, hair). Infusoria having a line of ciliæ around the body.

**Peritrichous,** per-it′rik-us. Provided with ciliæ encircling the body.

**Perityphlit′ic** (*peri*, around, *typhlos*, cæcum). Relating to inflammation around the cæcum, as perityphlitic abscess.

**Perityphli′tis.** Inflammation of the areolar substance surrounding the cæcum and vermiform appendix; usually a sequel of appendicitis.

**Periure′teral** or **Periureter′ic.** About the ureter.

**Periureteri′tis.** Inflammation of the tissues about the ureters.

**Periure′thral.** About the urethra.

**Periurethri′tis.** Inflammation of connective tissue around the urethra.

**Periu′terine.** Perihysteric. Around the uterus; hence periuterine inflammation or phlegmon, inflammation of areolar tissue around the uterus.

**Perivagini′tis.** Paracolpitis. **P. phlegmono′sa dis′secans,** paracolpitis with suppuration.

**Perivas′cular** (*vasculum*, vessel). Situated around a vessel, as the perivascular canals or grooves, which have been said to surround the minute cerebral vessels, having an epithelial lining and communicating with the lymphatic system. **P. lymphat′ics,** lymphatic vessels or plexuses ensheathing blood-vessels. **P. sheath,** sheath of pia mater forming a perivascular canal.

**Perivasculi′tis.** Inflammation of perivascular sheaths, especially of retinal vessels. **P. nodo′sa,** in this form indurated tubercles exist around the vessels. **P. specif′ica,** form due to specific bacteria or their products, as in tuberculosis, glanders, or leprosy.

**Perives′ical** (*vesica*, bladder). Around the bladder.

**Perivis′ceral.** Surrounding the viscera.

**Perivitel′line.** Around the yolk. **P. space,** space between zona pellucida and vitellus when the latter shrinks.

**Per′iwinkle.** A plant of the genus *Vinca*. A sea-snail of the genus *Littorina*.

**Per′kinism.** A form of metallotheraphy first employed by Dr. Elisha Perkins, of Norwich, Connecticut, toward the termination of the last century, and named after him. It consisted in drawing over the affected or other parts the pointed extremities of two metallic rods, called tractors, each made of a different metal. The operation was also called *tractoration*.

**Per′la.** Pearl. Cicatrix on the transparent part of the eye.

**Perle′s bod′ies.** Certain motile bodies, of undetermined character, found in the blood in some cases of pernicious anæmia.

**Perlèche,** pare-lesh′ (Fr.). A buccal disease of children, contagious in character, having a bacterial origin, as established by microscopic examination. The principal symptoms are induration of the epithelium at the corner of the mouth, which becomes torn and fissured.

**Per′lia′s fi′bres.** Fibres in the cerebrum and medulla having a relation to the sense of sight. **P.′s nu′cleus,** a nucleus of the oculomotor group in the central gray matter of the cerebrum.

**Per′manent car′tilage.** That which remains, without ossifying, throughout life. **P. teeth,** those not replaced by others, but replacing the milk teeth.

**Perman′ganate.** Salt formed by combination of permanganic acid with a base. **P. of potas′sium** occurs in very dark crystals, making a purple solution in water; an oxidizing agent, antiseptic, and antidotal to many poisons.

**Permangan′ic acid.** $MnHO_4$. An acid derived from manganese.

**Per′meable.** Capable of affording passage to fluids. Term also applied to strictures through which an instrument can be passed.

**Perni′cious** (*perneco*, to destroy). Deleterious, malignant. **P. anæ′mia,** progressive, fatal form of anæmia. **P. fe′ver,** fatal form of malarial fever with great prostration.

**Per′nio.** Chilblain. **P. sim′plex,** pernio with unbroken skin.

**Pernocta′tion** (*per*, through, *nox*, night). Insomnia.

**Pero-** (*peros*, deficient). In composition, deficient. Also external layer of olfactory lobe giving rise to olfactory nerve.

**Perobra′chius** (*brachion*, arm). Wanting arms or with greatly malformed arms. Condition of monstrosity in which part of one of the upper limbs is undeveloped or absent.

**Peroceph′alus** (*kephale*, head). Monster with a defective head.

**Perochei′rus** or **Perochirus,** per-o-ki′rus (*cheir*, hand). Having a congenitally malformed hand.

**Perocor′mus** (*kormos*, trunk). Malformation in which the trunk is defective, and too short, from the absence of one or more vertebræ—the head and limbs being normal.

**Perodactyl′ius.** Peronedactylius.

**Perodac′tylus.** A monster with arrested development of the fingers.

**Perodac′tyly.** Deficiency or defect in the fingers.

**Perodyn′ia** (*odyne*, pain). Cardialgia.

**Pero′ma** (*peroo*, to disable). Paralysis.

**Perome′lia.** Congenital mutilation of the limbs.

**Perom′elus** (*melos*, a limb). Monster having deformed limbs, or in which part of one limb is absent.

**Peronæ′us** (*perone*, fibula). See *Peroneus* and *Peroneal muscles*.

**Peronarthro′sis** (*perone*, pin, *arthron*, joint). Saddle-joint.

**Peroncito′a scarlatinosa.** Micrococcus scarlatinæ.

**Perone,** per′o-ne (*perone*, pin of a brooch). Fibula.

**Perone′al** (*perone*, pin). Peronæus, fibular. Belonging or relating to the fibula. **P. ar′tery,** fibular artery; arises from the popliteal, situated deeply in the posterior and outer part of the leg. It gives off branches of little importance; near the outer ankle it divides into two branches: posterior peroneal, which descends behind the lower joint of the fibula, on the outer surface of the calcaneum; anterior peroneal, which crosses the inferior extremity of the interosseous ligament, to be distributed on the dorsal surface of the foot. **P. bone,** fibula. **P. commu′nicating nerves,** branches from external popliteal joining short saphenous. **P. groove,** on outer and under surface of cuboid bone, for tendon of peroneus longus. **P. mus′cles,** three in number: 1. *Peronæus brevis*, situated beneath the peronæus longus; attached above to the outer surface of the fibula, and terminating below at the posterior extremity of the fifth metatarsal bone, after having been reflected beneath the malleolus externus; it extends the foot upon the leg, at the same time raising a little the outer edge; may also act upon the leg and extend it upon the foot. 2. *Peronæus longus*, situated at the outer part of the leg; it is long, thick, and triangular above; thin, narrow, and flat below; attached above to the outer edge of the upper extremity of the fibula and to the upper third of the outer surface of that bone; below, it terminates at the outer part of the posterior extremity of the first metatarsal bone; extends the foot on the leg, turning its point outward and raising its outer edge; it acts also upon the leg, which it extends on the foot. 3. *Peronæus tertius*, situated at the anterior, outer, and inferior part of the leg; it is long and flat, attached above to the inferior third of the anterior margin and inner surface of the fibula, terminating below at the posterior extremity of the fifth metatarsal bone; it bends the foot on the leg by raising its outer edge; it can also bend the leg on the foot. See also *Peroneus*. **P. nerve,** external popliteal nerve. **P. ridge** or **spine,** ridge separating grooves for tendons of peroneal muscles on outer surface of calcaneum. **P. veins** follow the same course as the artery; they discharge into the posterior tibial.

**Peronedactyl′ius** (*perone*, fibula, *daktylos*, toe). Flexor longus digitorum pedis, profundus perforans.

**Peroneo-.** As a prefix, relating to the fibula.

**Peroneocalca′neus inter′nus.** Accessorius ad accessorium.

**Peroneosupraphalanget′tian.** Extensor digitorum pedis longus.

**Peroneotibia′lis.** Pronator tibiæ.

**Perone′us.** Peronæus. **P. accesso′rius,** apparently a form of peroneus quinti digiti. **P. ante′rior** or **anti′cus,** or **P. bre′vis,** see *Peroneal muscles*. **P. lon′gus, posti′cus,** or **pri′mus,** or **posti′cus lon′gus,** see *Peroneal muscles*. **P. me′dius** or **P. posti′cus bre′vis,** see *Peroneal muscles*. **P. quar′tus,** form of p. quinti digiti. **P. quin′tus** or **P. dig′iti,** muscle found in many mammals, arising from the fibula between the peroneus longus and brevis, inserted upon proximal phalanx of little toe. In man it appears to be represented by a tendinous slip passing from p. brevis to extensor tendon of little toe. In about one-third of human subjects there appears a more or less complete restoration of the muscle. **P. secun′dus,** p. brevis; see *Peroneal muscles*. **P. sex′tus,** apparently a form of p. quinti digiti. **P. ter′tius,** see *Peroneal muscles*.

**Peronine′.** Benzyl-morphine. The hydrochloride is used as a hypnotic and sedative, also to alleviate cough. Said to resemble morphine and codeine in therapeutic action. Dose, gr. ss–iss (0.32–0.1).

**Peronos′pora.** Genus of fungi; mildew is an example. **P. parcino′næ** or **ferra′ni,** fungus supposed by Ferran to be a cholera microorganism.

**Pero-olfacto′rius** (Wilder). Soft outer part of olfactory bulb, from which olfactory filaments arise.

**Peropla′sia** (*plasso*, to form). Malformation by defect.

**Per′opus** (*pous*, foot). Having deformed feet; monster with absence of part of the lower limbs.

**Pero′sis** (*peroo*, to maim). Defective formation; condition of being malformed or maimed.

**Peros'mic acid.** Osmic acid.

**Peroso'mus** (*peros*, maimed, *soma*, body). Monster whose whole body is imperfectly developed.

**Perosplanchnica,** per-o-splank'nik-ah (*splanchnon*, viscus). Congenital malformation of the viscera.

**Pero'tis latifo'lia.** The root of this grass is diuretic and slightly astringent.

**Perox'ide.** One of a series of oxides containing highest quantivalence of oxygen.

**Perox'ol.** A substance formed by combination of hydrogen peroxide with menthol, camphor, naphthol, etc.

**Peroxyhy'drate.** Hydrate of a peroxide.

**Perpendic'ular line.** Ridge on the posterior surface of the ulna, separating the attachment of the extensor carpi ulnaris from that of the supinator brevis and extensors of the thumb and index finger. **P. plate,** central, vertical portion of ethmoid, thin lamina of bone in the median line separating the nasal fossæ, ossified separately.

**Perpendicula'ris.** Perpendicular. **P. extre'mus lin'guæ,** intrinsic muscle of tongue; the vertical fibres passing downward form curves with concavity outward.

**Perpendic'ulum hep'atis** (*perpendiculum*, plumb-line, *hepar*, liver). Suspensory ligament of the liver.

**Perplica'tion** (*plico*, to fold). Method of tying arteries, which consists in making a small incision in the side of the artery near its bleeding orifice, introducing a small pair of forceps, seizing the open extremity, and drawing it backward through the aperture made in the side of the vessel, so as to form a kind of knot.

**Per'rin's amputa'tion.** Subastragaloid amputation by an oval flap.

**Perrosin'.** See *Pinus abies*.

**Per'ry.** Juice of the pear, resembling cider.

**Per'sea cam'fora.** See *Camphor*. **P. cas'sia,** Laurus cassia. **P. cinnamo'mum,** Laurus cinnamomum. **P. cube'ba,** Piper cubeba. **P. gratis'sima,** Laurus persea, palta tree, avocado or alligator pear. Slender, very high tree of Peru, with a small dome-like top, which grows on the eastern declivity of the Andes, and rises at times to the height of more than 60 feet. Its fruit, which is pear-shaped, is generally much liked. It dissolves like butter on the tongue. The leaves are reckoned balsamic, pectoral, and vulnerary; seeds are very astringent. **P. in'dica,** bay tree of the East Indies; the bark has stomachic and leaves antidysenteric properties. **P. pichu'rim,** see *Pichurim beans*. **P. sas'safras,** Laurus sassafras.

**Persecu'tion, ma'nia of.** Form of chronic mental disorder in which the patient ascribes all his morbid sensations to persecution of which he is the supposed victim.

**Per'seite.** $C_6H_{14}O_6$. Derived from Persea gratissima.

**Per'sian.** Pertaining to or coming from Persia. **P. bal'sam,** compound tincture of benzoin. **P. ber'ries,** fruit of *Rhamnus amygdalina* and other species of rhamnus; furnishes a yellow dye. **P. fire,** anthrax. **P. in'sect pow'der,** powdered flowers of *Pyrethrum roseum* and *P. carneum;* used for killing insects. **P. man'na,** saccharine exudate from *Hedysarum alhagi*, resembling manna; used in India and Persia. **P. o'pium,** obtained from poppy grown in Persia; variable in quality, and used only by manufacturing chemists in preparation of opium alkaloids. **P. pel'litory,** *Pyrethrum roseum;* see *Persian insect powder*. **P. ul'cer,** an affection of the same nature as Delhi boil and Aleppo evil.

**Per'sica vulga'ris.** Amygdalus persica; peach tree, native of China, cultivated in temperate climates. Leaves and flowers were formerly official; young branches, leaves, flowers, and seed yield, after maceration in water, a volatile oil identical with oil of bitter almonds.

**Persica'ria.** Polygonum persicaria. **P. mi'nor,** Polygonum persicaria. **P. mi'tis,** Polygonum persicaria. **P. u'rens,** Polygonum hydropiper. **Wand'-spiked p.,** Polygonum virginianum. **Wa'ter p.,** Polygonum amphibium.

**Per'sicus ig'nis.** Anthrax.

**Persim'mon.** Dyospyros virginiana. See also *Chinese* and *Japanese persimmon*.

**Persist'ent.** Continued, permanent; not undergoing the usual development or change.

**Persola'ta.** Arctium lappa.

**Per'sonal.** Relating to the person or individual. **P. equa'tion,** special reaction time or capability of each individual. The difference in the results of observation or experiment due to the personal characteristics of the individual observer. **P. er'ror,** time lost—the fraction of a second—in personal observation of execution of a voluntary movement.

**Personal'ity.** Individuality. Conscious existence. **Doub'le** or **mul'tiple p.,** see *Vigilambulism*.

**Perspira'tion** (*per*, through, *spiro*, to breathe). Exhalation of fluid which is continually going on at the surface of the body. When this evaporates as quickly as exuded so as to cause no perceptible moisture it is called *insensible perspiration*. Sensible perspiration is also called *sweat*. The perspiratory fluid is secreted by an appropriate glandular apparatus termed sudoriparous glands or sweat glands, consisting of a convoluted tube situated beneath the true skin, and of spiral ducts which open obliquely under the scales of the epidermis. The following estimates have been made of the number, size, etc., of sweat glands in the human body: The body of a gland averages 0.17–0.35 mm. in diameter; in the axilla, 0.75–1.25, up to 3.9. The total number of glands is about two millions (Krause); their volume about 80 cm. On 1 square cm. of surface (Moleschott) there are: In the hand (volar surface), 373 of these glands; in the foot (plantar surface), 366; hand (back part), 103; neck, 178; forehead, 172; forearm (flexor side), 157; breast and abdomen, 155; forearm (extensor side), 149; foot (back part), 126; thigh and leg (median side), 79; cheeks, 75; nucha and back, 54.

**Perspi'ratory.** Transpiratory. Relating or belonging to or the product of perspiration.

**Perstric'tion** (*per*, through, *stringo*, to bind). Operation to arrest the flow of blood, as by compression or ligation.

**Persuda'tion** (*per*, through, *sudo*, to sweat). Diapedesis. Bloody sweating.

**Persul'phate.** That salt of a series which contains the greatest proportion of sulphuric acid.

**Persulphu'ric acid.** Acid prepared by adding hydrogen peroxide to diluted sulphuric acid.

**Per'tik's divertic'ulum.** A diverticulum of the nasopharynx, so near the fossa of Rosenmüller as sometimes to involve it.

**Pertroph'ic** (*trophe*, nourishment). Relating to excess of nourishment or nutrition.

**Perturba'tion** (*perturbo*, to disturb). Mental disturbance. Malaise. Functional loss of equilibrium.

**Pertus'sal.** Relating or appertaining to pertussis.

**Pertus'sis** (*tussis*, cough). A violent cough. Hooping-cough, whooping-cough, chin-cough, kin-cough, kind-cough (Ger., *kind*, a child). A violent, convulsive cough, returning by fits at longer or shorter intervals, and consisting of several expirations, followed by a sonorous inspiration or whoop. Fits of coughing generally recur more frequently during the night, morning, and evening than in the day. It is contagious, and attacks the young more particularly. It is rare for it to affect an individual the second time. The duration is various—six or eight weeks or more. Although the paroxysms are very violent, it is not a dangerous disease. It may, however, give rise to other affections, as convulsions, pneumonia, etc., when the complication is very dangerous, as the cause cannot be removed. Those children suffer the least who evacuate the contents of the stomach during the fit. In the treatment all that can be done is to palliate. It must be borne in mind that the disease will in time wear itself out.

After it has continued for some weeks, and persists in part from habit, change of air is essential.

**Peru′.** See *Lima*. **Bal′sam of p.**, see *Balsam*.

**Peru′vian bal′sam.** See *Balsam*. **P. bark,** cinchona. **P. ipecacuan′ha,** striated or black ipecacuanha; root of Psychotria emetica; contains emetine; occasionally appears in commerce as substitute for official ipecac. **P. wart,** verruga peruana.

**Peruvin′.** Cinnamic alcohol, obtained from Peruvian balsam.

**Perver′sion** (*perverto*, to turn about). Alteration for the worse; one of the four modifications of function in disease, the three others being augmentation, diminution, and abolition. Also morbid change in fluids. **Sex′ual p.,** abnormality of a sexual instinct.

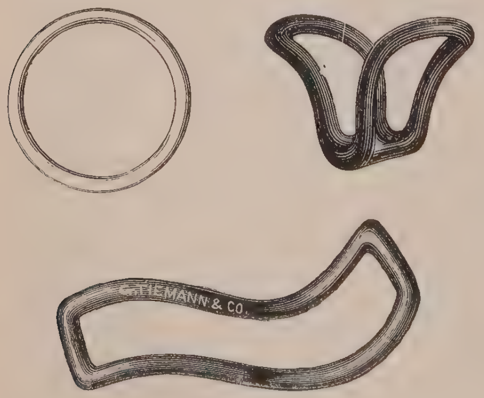
**Per′vert.** One who encourages or cultivates an abnormal moral existence. **Sex′ual p.,** one who cultivates in himself sexual perversion.

**Pervigil′ium** (*per*, through, *vigilo*, to watch). Insomnia. Coma vigil.

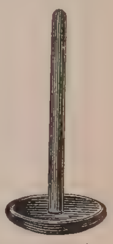
**Per′vious.** Open; penetrable.

**Pes.** Foot. Inferior extremity of the abdominal member, representing a bony arch, an elastic vault, which transmits the weight of the body to the ground. It is divided into three parts—the tarsus, metatarsus, and phalanges or toes. **P. accesso′rius,** eminence of white matter situated between the hippocampus major and minor, at the junction of the posterior with the descending cornu ammonis. **P. alexandri′nus,** Anthemis pyrethrum. **P. anseri′nus,** chenopodium bonus Henricus. **P. a. fasc′iæ lat′æ,** radiating bands formed by the insertion of sartorius, gracilis, and semitendinosus on the inner side of the knee. **P. a. ma′jor,** plexus formed by interlacing of the branches of the facial nerve in the substance of the parotid gland and on the side of the face. **P. a. mi′nor,** infraorbital plexus. **P. a. ner′vi media′ni,** a radiating plexus of fibres of the median nerve. **P. calca′neus,** talipes calcaneus. **P. ca′ti,** Antennaria dioica. **P. ca′vus,** talipes cavus. **P. coro′næ radia′tæ,** foot of corona radiata. **P. corvi′nus,** crow's foot, radiate wrinkles at the outer angle of the eye. **P. equi′nus,** talipes equinus. **P. fabric′itans,** elephantiasis cruris. **P. hippocam′pi ma′jor,** cornu ammonis. **P. h. mi′nor,** hippocampus minor. **P. hippopot′ami ma′jor,** cornu ammonis. **P. h. mi′nor,** cornu ammonis. **P. leo′nis,** alchemilla. **P. olfacto′rius,** inner fibrous layer of the olfactory lobe. **P. pedun′culi,** crusta. **P. pla′nus,** flat foot. **P. val′gus,** talipes valgus. **P. va′rus,** talipes varus.

**Pes′sary** (*pessos*, small stone or other substance for playing at draughts). Instrument made of various materials, gutta percha, ivory, glass, etc., which is introduced into the vagina to support the uterus in cases of prolapsus or malposition of that organ or relaxation of the vagina, to keep vaginal hernia reduced, etc. The ancients made use of *medicated pessaries*, which they distinguished into emollient, astringent, aperient, etc., and these are still used, although generally called vaginal suppositories. An anal pessary is sometimes employed for the compression of hemorrhoids. The form of pessaries is very variable—round, oval, etc., according to fancy and circumstances. Some of them have an external support from a stem, the intra-uterine pessary, for example. Some forms of pessary are referred to according to their shape, as the ring pessary, the horseshoe pessary, etc., and the various modifications of shapes are also named after their proposers, as Hodge's pessary, etc. **In′tra-u′terine p.,** stem pessary, an instrument for rectifying uterine displacements, as anteversion and retroversion, consisting of a stem which is introduced into the uterus; this stem is attached to a flattened, ovoid bulb or ball, on which the cervix uteri rests. Connected with this is sometimes an external part or wire frame, which is attached at one extremity to a flat, tubular portion passing into the vagina, to be fixed to the intra-uterine portion. The wire frame is made to press upon the pubis, so that the pessary can be kept in position in utero. This is essentially the intra-uterine pessary of Professor Simpson, of Edinburgh. **Med′icated p.,** see *Pessary*. **Stem p.,** intra-uterine pessary.



Pessaries.



Intra-uterine pessary.

**Pesse′ma** or **Pessi′ma.** Mycosis fungoides. Skin disease characterized by hard, brownish-yellow pustules, surrounded by inflammatory areolæ, covering the entire body and producing a checker-board appearance; a variety of papilloma.

**Pes′simism** (*pessimus*, worst). Habit of viewing everything in the worst light, a common symptom of melancholy and hypochondriasis.

**Pest.** Plague, or generally any endemic contagious disease. **P.-house,** an isolation hospital for the reception of persons suffering from an infectious disease, such as smallpox.

**Pestif′erous** (*pestis*, pest, *fero*, to bear). Tending to produce pestilence.

**Pest′ilence** (*pestis*, pestilence). Malignant spreading disease; formerly applied especially to plague. A severe epidemic. **P. weed,** Petasites vulgaris; leaves are detergent, flowers diaphoretic; root is vermifuge.

**Pestilen′tial.** Relating or appertaining to a pestilence or the plague. **P. fe′ver,** malignant fever, generally typhus.

**Pes′tilentwort.** Tussilago petasites.

**Pes′tis.** Pest. Plague. **P. acutis′sima,** plague. **P. adenosep′tica,** plague. **P. america′na,** yellow fever. **P. antoninia′na,** plague of Antoninus. **P. bel′lica,** typhus. **P. bovil′la,** rinderpest. **P. britan′nica,** sudor anglicus. **P. bubona′ria orienta′lis** or **bubon′ica,** plague. **P. contagio′sa,** plague. **P. glandulo′sa,** plague. **P. glossan′thrax,** glossanthrax. **P. inguina′ria,** plague. **P. intertrop′ica,** yellow fever. **P. marrano′rum,** syphilis. **P. mi′nor,** a disease occurring in the East, resembling the plague in some particulars, but not fatal in its termination; believed to be a mild or modified form of bubonic plague, bearing to it a relation like that of varioloid to smallpox. **P. ni′gra,** black death. **P. occidenta′lis,** yellow fever. **P. orienta′lis,** plague. **P. pneumon′ica,** pneumonic plague. **P. sep′tica,** plague. **P. variolo′sa,** variola.

**Pes′tle** (*pistillum*). An instrument for crushing substances in a mortar.

**Pe′ta.** Tinea imbricata.

**Pet′al.** Leaf of the corolla of a flower.

**Petalobacte′ria** or **Petalococ′ci.** Microorganisms which combine to form mycodermic pellicles.

**Petasi′tes, P. hy′brida, P. ma′jor, P. officina′lis, P. ru′bens, P. vulga′ris.** Tussilago petasites.

**Petechiæ,** pe-tek′e-e (pl. of petechia). Small spots, similar in shape and color to flea-bites, which occur spontaneously upon the skin in the course of severe fevers, etc. They are, under such circumstances, signs of great prostration. The smallest spots—mere specks or dots—are often termed *stigmata*.

**Petech′ial.** Resembling or accompanied by petechiæ. **P. fe′ver,** cerebrospinal meningitis; typhus fever. **P. scur′vy,** purpura simplex. **P. ty′phus,** typhus fever.

**Petechian′osus** (*nosos*, disease). Purpura hæmorrhagica. Typhus. Formation of petechiæ.

**Pe′ter′s law.** That atheroma of the blood-vessels shows itself first at angles and protruding points.

**Pe′tersen′s bag.** Rubber bag to be introduced into the rectum and distended during suprapubic lithotomy.

**Peti′go.** Impetigo.

**Peti′na** (*peto*, to go). Sole of the foot.

**Peti′olus** (dim. of *pes*, foot). Pediolus. A footstalk or leaf-stalk of a plant. A petiole. **P. epiglot′tidis,** the root of the epiglottis. **P. glan′dulæ pinea′lis,** peduncle of the pineal gland. **P. mal′lei,** manubrium mallei. **P. tetran′dra,** root of this plant is employed by the Brazilians as a sudorific.

**Petit mal,** pet-ee-mal′ (Fr.). Mild form of epilepsy.

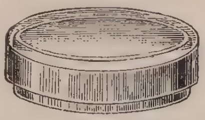
**Petit′s** (pet-eze′) **canal′.** Godronné canal, sacculated passage encircling the lens of the eye, lying within two layers of the suspensory ligament. **P.′s her′nia,** lumbar hernia. **P.′s lig′ament,** a ligamentous structure of Douglas's sac. **P.′s opera′tion,** herniotomy without opening the sac. **P.′s si′nus,** sinus aorticus. **P.′s tri′angle,** a triangular space bounded by the iliac crest, the external oblique muscle, and the latissimus dorsi muscle.

**Petive′ria allia′cea.** Guinea-hen weed; the plant is febrifuge, diaphoretic, and anthelmintic.

**Petræ′um.** Solidago virgaurea.

**Petrap′ium.** Bubon macedonicum.

**Pe′tri′s dish.** A shallow glass vessel with cover, used to contain culture media in bacteriological work. **P.′s plate,** P.′s dish, containing culture media ready for inoculation. **P.′s sand fil′ter,** a glass cylinder with one or two segments filled with sand through which air is aspirated, used in the bacteriological examination of air.



Petri's dish.

**Petrifac′tion** (*petra*, rock, *facio*, to make). Process of changing into stone. The conversion of a fœtus into a lithopædion. Hardening of a tissue by a deposit of saline material from the blood.

**Petrissage′** (Fr.). A form of massage in which the part is gathered up in the hand and firmly pressed and rolled.

**Petro-** (*petra*, rock). In composition, rock, or the petrous portion of the temporal bone.

**Petrobas′ilar fis′sure.** Narrow, irregular space at the base of the skull between the petrous portion of the temporal bone, the basilar process of the occipital, and the body of the sphenoid, filled during life by the basilar fibrocartilage.

**Petrohy′oid mus′cle.** Aberrant form of stylohyoid, arising from the petrous portion of the temporal bone.

**Petrola′tum.** Petroleum. Petroleum ointment or petrolatum molle is dispensed when a prescription calls simply for petrolatum. Official in the Ph. U. S. under three forms (called *paraffinum* in Ph. Br.): *P. liquidum,* liquid petroleum, a mixture of hydrocarbon from crude petroleum. *P. molle,* soft petroleum, vaselin, cosmolin; purified residue after distilling off lighter and more volatile portions from American petroleum; yellowish, fluorescent, amorphous, tasteless, odorless, neutral, fat-like mass, melting at 40° to 51° C., insoluble in water, soluble in ether, chloroform, carbon bisulphide, oil of turpentine, benzin, benzol, and in fixed and volatile oils; protective; used in pharmacy as a substitute for lard. *P. spissum,* hard petroleum, a mixture of hydrocarbons from crude petroleum, not so soft as vaselin, melting between 45° and 51° C.

**Pe′trolene.** Fluid hydrocarbon derived from petroleum.

**Petro′leum** (*petra*, rock, *elaion*, oil). Rock oil, earth oil, Barbadoes tar. Bituminous substance flowing spontaneously from the earth in various parts of the world, and abounding on this continent over a large area. It has a fetid odor and bitter, acrid taste; is semiliquid, tenacious, semitransparent, of a reddish-brown color; insoluble in water and alcohol; combines with fixed and essential oils and sulphur, and is partially soluble in ether. Petroleum has been given as an excitant expectorant and anthelmintic, and mixed with tincture of asafœtida in tapeworm; also used externally in chilblains, chronic rheumatism, affections of the joints and skin, and paralysis, and is a disinfectant and parasiticide. **P. barbaden′se,** petroleum. **P. benzin′,** benzin. **Crude p.,** limpid, iridescent, yellowish or reddish liquid, of peculiar bituminous odor, sp. gr. 0.75 to 0.85; soluble in fixed and volatile oils, ether, and absolute alcohol. Native petroleum partially purified by fractional distillation. **P. e′ther,** benzin. **P. jel′ly,** petrolatum molle. **New York p.,** Seneca oil, petroleum obtained in the western part of New York State. **P. oint′ment,** petroleum. **P. ru′brum,** oleum gabianum, petroleum found at Gabian, near Béziers, in France. **P. spir′it** (Ph. Br.), benzinum (Ph. U. S.); petroleum ether, benzin, rhizolene, ligroin; a purified distillate from American petroleum; used as a solvent and for heating cauteries. **P. sulphura′tum** (composed of petroleum, ℥xvj; sublimed sulphur, ℥iv) has been used as a pectoral and as a detergent to ulcers; it has been accounted antispasmodic and sudorific; dose, gtt. x to xxx (0.65–2.0); externally it is used as a stimulant and discutient.

**Petrolin′.** Commercial name of a combination of hydrocarbons obtained from petroleum; paraffin.

**Petromas′toid canal′.** Short passage from the back part of the tympanum to the mastoid antrum. **P. fora′men,** tympanic orifice of the petromastoid canal. **P. por′tion,** united petrous and mastoid portions of the temporal bone considered as an ossific integer.

**Petro-occip′ital.** Belonging to the petrous portion of the temporal bone and to the occipital bone. **P.-o. si′nus, infe′rior,** vein running on the external surface of the base of the skull between the middle lacerate and jugular foramina. **P.-o. s., supe′rior,** inferior petrosal sinus. **P.-o. su′ture,** formed by the junction of the petrous portion of the temporal with the occipital bone; a deep groove separating the bones, which have between them a thin layer of cartilage.

**Petropharynge′us.** Small muscle occasionally found arising from the under surface of the petrous bone and inserted into the pharynx with the stylopharyngeus.

**Petro′sa** (*pars*, part, understood). Petrous portion of the temporal bone.

**Petro′sal.** Petrous; relating to petrous portion of the temporal bone. **P. bone,** petrosa. **P. crest,** lower edge of vaginal process of temporal bone. **P. gan′glion,** petrous ganglion. **P. nerves,** small nerves passing through foramina in the petrous portion. The *great superficial p. n.* arises from geniculate ganglion, passes out through hiatus Fallopii, joins *great deep p. n.*, which arises from filaments of the carotid plexus; the two united constitute the Vidian. *Small superficial p. n.* and *small deep p. n.*, branches from tympanic plexus, first to the otic ganglion through the canaliculus tympanicus, later along tensor tympani to carotid plexus; *external superficial p. n.*, inconstant filament uniting the geniculate ganglion with the sympathetic plexus on the middle meningeal artery. **P. si′nuses,** two venous sinuses of the dura mater connected with the petrous portion of the temporal bone. The *superior* petrosal sinus arises from the cavernous sinus; follows the upper edge of the petrous portion, which affords it a gutter; passes into the great circumference of the tentorium cerebelli, and opens into the lateral sinus, where the latter experiences a bend near the base of the pars petrosa; it is triangular. The *inferior* petrosal sinus arises from the cavernous sinus at the same point as the last, with which it communicates at the moment of its origin; descends between the inferior edge of the pars petrosa and the basilary process; and terminates in the lateral sinus at the sinus or gulf of the internal jugular vein. It is triangular, and broader at its extremities than at the middle. The external petrosal sinus is an emissary of the carotid canal.

**Petrosal′pingopharynge′us.** Fleshy fasciculus which extends from the sphenoid bone, from the petrous portion of the temporal bone, and from the Eustachian tube to the upper part of the pharynx. See *Constrictor.*

**Petrosalpingostaphyli′nus.** Circumflexus; levator palati.

**Petroseli′num.** Apium petroselinum. **P. macedon′icum,** Bubon macedonicum. **P. sati′vum,** fruit and root are official; see *Parsley.*

**Petrosomastoid′ean.** Petromastoid.

**Petrosphe′noid.** Belonging to the petrous portion of the temporal bone and to the sphenoid bone. **P. lig′ament, ante′rior,** connective tissue and fibrocartilage filling up the middle lacerate foramen at the base of the skull. **P. l., poste′rior,** band stretching from apex of petrous portion of temporal bone to posterior clinoid process over the sixth nerve. **P. su′ture,** small suture formed by the anterior edge of the petrous portion of the temporal bone and the posterior edge of the sphenoid.

**Petrosphenoi′dal.** Petrosphenoid.

**Petrosquamo′sal fis′sure** or **su′ture.** Seam which at birth separates the squamous and petrous portions of the temporal bone; traces of it are usually visible in the adult skull, limiting the anterior surface of the petrous portion within the cranium.

**Petrosqua′mous si′nus.** Venous passage in the dura mater sometimes found at the junction of the petrous and squamous portions of the temporal bone, discharging into the lateral sinus.

**Petrostaphyli′nus.** Levator palati.

**Petro′sum** (*os*, bone, understood). Petrous portion of the temporal bone.

**Pe′trous.** Petrosal. Resembling stone; having the hardness of stone; relating or belonging to the petrous portion of the temporal bone. **P. bone,** petrous portion of the temporal bone. **P. gan′glion,** petrosal ganglion, ganglion of Andersch, formed by the glossopharyngeal nerve shortly after it emerges from the jugular fossa. From this ganglion M. Jacobson, of Copenhagen, traced an anastomosing loop through the cavity of the tympanum, which left branches there, and was thence reflected downward to join the Vidian nerve. This been called the nerve of Jacobson, tympanic branch of the glossopharyngeal; and the inosculation, Jacobson's anastomosis. **P. por′tion of tem′poral bone,** see *Temporal bone.* **P. pro′cess,** see *Temporal bone.* **P. si′nuses,** petrosal sinuses.

**Pet′tenkoffer's test.** Test for the presence of bile-acids, as in the urine, by dropping any solution containing bile into a mixture of sulphuric acid and sugar, a purplish-crimson color being produced.

**Pet′tymorrel.** Aralia racemosa.

**Pe′tum** or **Pe′tun.** Nicotiana tabacum.

**Peu′ce.** Pinus sylvestris.

**Peu′cea balsame′a.** See *Pinus abies.*

**Peucedanine′.** $C_{12}H_{12}O_3$. Crystallizable substance obtained from root of Peucedanum ostruthium and Peucedanum officinale.

**Peuced′anum.** Hog's fennel, sulphurwort, ord. *Umbelliferæ.* The root has a strong, fetid smell, somewhat resembling that of sulphureous solutions, and an acrid, unctuous, bitterish taste. It has been recommended as antihysteric and nervine. **P. alsat′icum,** peucedanum. **P. altis′simum,** peucedanum. **P. austri′acum,** see *P. palustre.* **P. grave′olens,** dill-seed; see *Anethum graveolens.* **P. officina′le,** peucedanum. **P. oreoseli′num,** Athamanta aureoselinum. **P. ostruth′ium,** Imperatoria ostruthium. **P. palus′tre,** marsh selinum, a European plant, has been recommended as an antiepileptic. Peucedanum austriacum is possessed of the same virtues. **P. panicula′tum,** peucedanum. **P. praten′se,** P. silaüs. **P. sati′vum,** Pastinaca sativa. **P. sil′aüs,** English or meadow saxifrage; roots, leaves, and seeds were once recommended as aperients, diuretics, and carminatives. **P. terra′tum,** peucedanum.

**Peu′mus.** Plant of the order *Monimiaceæ.* **P. bol′dus,** Chilean evergreen shrub; leaves are called boldo; reputed to be of value in genito-urinary inflammations, and employed in France in inflammation of the liver. The bark is used for tanning, and the wood for charcoal-making. **P. fra′grans,** P. boldus.

**Pex′is.** Concretion.

**Pey′er's glands** or **patches.** Agminated or aggregate glands. Small glands situated beneath the villous coat of the intestines (called after Peyer, who well described them). They are clustered together, having a honeycomb appearance, and are extremely numerous. They occur mostly in the lower portion of the ileum, and resemble, in their morphology and functions, the lymphatic ganglions. When scattered singly they are called *glandulæ solitariæ.*

**Peye′rian fe′ver.** Typhoid fever.

**Pe′za.** Foot. According to some, the sole of the foot; and to others, the astragalus, the ankle.

**Pezi′za** (or **Peze′za**) **acetab′ulum.** Plant growing in France, which is edible, and reputed to be purgative. **P. auric′ula,** Jew's ear; this fungus is said to be astringent; it has chiefly been used in decoction or infusion as a gargle in relaxed sore throat.

**Pfeif′fer's bacil′lus.** Influenza bacillus. **P.'s gland′ular fe′ver,** acute infectious fever, in which the glands of the lymphatic system are involved, with accompanying anæmia and debility. **P.'s law,** that the blood serum from an animal immune against any particular disease will, when injected into another animal, cause destruction and agglutination of the bacteria of that disease only. **P.'s phenom′enon,** agglutination of bacilli in the presence of specific serum.

**Pflüger's gas-pump.** Mercurial pump used to extract gases from the blood and to collect them for chemical analysis. **P.'s law,** that stimulation of a nerve-tract occurs when catelectrotonus is developed or anelectrotonus disappears. **P.'s sacs,** tubular passages observed in the ovary in very early fetal development. **P.'s sal′ivary tubes,** intralobular ducts of the salivary glands. **P.'s tubes** or **tu′bules,** ovarian tubes or ducts.

**Pfuhl's sign.** In subphrenic abscess the fluid is expelled through the incision made in the affected part with force during inspiration; in pyothorax this does not occur.

**Pfuhl-Jaffe sign.** Pfuhl's sign.

**Pha′ce** (*phake*, a grain of the lentil; a lens). Chloasma. Lens; crystalline lens. Flask for the application of heat, so called owing to its flattened, lens-like shape.

**Phacecphlogis′con.** Varicella lentiformis.

**Phacel′lus** or **Phace′lus.** Fasciculus.

**Phacen′tocele** (*phake*, lens, *entos*, within, *kele*, swelling). Dislocation of the crystalline lens into the anterior chamber.

**Phachymenitis,** fak-hi-men-e′tis. Inflammation of the capsule of the crystalline.

**Pha′ci** or **Pha′cia.** Ephelides.

**Pha′cic.** Lens-shaped, lenticular.

**Phaci′tis** (*phakos*, lens). Phakitis; inflammation of the crystalline lens.

**Phacocatapie′sis** (*phakos*, lens, *katapiesis*, downward pressure). Depression of the lens.

**Phac′ocele** (*phakos,* lens, *kele,* rupture). Escape of the crystalline lens from its normal location, as into the anterior chamber.

**Phac′ocyst** (*phakos,* lens, *kystis,* cyst). Capsule of the lens. See *Crystalline.*

**Phacocystec′tomy.** Operation for cataract, which consists in cutting out a part of the capsule of the lens.

**Phacocysti′tis.** Inflammation of the capsule of the lens.

**Phacoglauco′ma.** Glaucomatous change in the crystalline.

**Phacohy′dropsy.** Dropsy of the lens.

**Phacohymeni′tis** (*phakos,* lens, *hymen,* membrane). Inflammation of the capsule of the crystalline.

**Pha′coid** (*phakos,* lens, *eidos,* resemblance). Resembling a lens. See *Crystalline.*

**Phacoideï′tis.** Inflammation of the crystalline lens.

**Phacoid′oscope** (*phakos,* lens, *eidos,* resemblance, *skopeo,* to view). Instrument for noting changes in the crystalline lens during accommodation.

**Phacomala′cia** (*phakos,* lens, *malakia,* softness). Soft cataract.

**Phacometachore′sis** (*phakos,* lens, *metachoreo,* to change place). Dislocation of the crystalline lens.

**Phacom′eter** (*phakos,* lens, *metron,* measure). Instrument for determining the refractive power of lenses.

**Phacometœce′sis** (*metoikesis,* change of place). Phacometachoresis.

**Phacopalingen′esis** (*phakos,* lens, *palin,* again, *genesis,* generation). Regeneration of the crystalline lens.

**Phacoplane′sis** (*phakos,* lens, *planesis,* wandering). Mobility of the crystalline lens.

**Phacopyo′sis** (*phakos,* lens, *pyosis,* suppuration). Name given formerly to suppuration imagined to occur in the crystalline lens.

**Pha′cos.** Ervum lens or lentil.

**Phacosclero′ma** or **Phacosclero′sis** (*phakos,* lens, *skleros,* hard). Induration of the crystalline lens.

**Phac′oscope.** Phacoidoscope.

**Phacoscotas′mus** (*phakos,* lens, *skotasmos,* clouding). Condition in which the crystalline lens is obscured.

**Phacoscoto′ma** (*phakos,* lens, *skotoma,* darkness). Opacity of the crystalline lens.

**Phaco′sis** (*phakos,* lens). Production of freckles.

**Pha′cus.** Ervum lens or lentil.

**Phænom′enon** (*phaino,* to manifest). Phenomenon.

**Phænophthal′motrope** (*phaino,* to manifest, *ophthalmos,* eye, *trepo,* to turn). Apparatus designed by Donders to illustrate the movements of the eye by movable globe, rings, and axes.

**Phænoz′ygous.** Term applied to skulls having zygomatic arches visible when viewed directly from above.

**Phæochlo′rophyll.** Coloring-matter obtained from chlorophyll.

**Phæomyeli′tis** (*phaios,* gray, *myelos,* marrow). Inflammation of the gray matter of the spinal cord.

**Phæoretin′.** Brown, resinous matter contained in rhubarb, but not of therapeutic value.

**Phagedæ′na** or **Phagede′na** (*phagedaina,* ravenous hunger). Phagedenic ulcer. **P. gangræno′sa,** hospital gangrene. **P. nosocomia′lis,** hospital gangrene. **P. trop′ica,** see *Tropical.*

**Phageden′ic.** Phagedenous, rodent; that which rapidly eats away; gangrenous. A *phagedenic* in the materia medica is a substance used for destroying fungous granulations in ulcers, etc. **P. chan′cre,** destructive form of primary syphilitic sore; a virulent variety was long known in London hospitals under the name "Swan-alley" sore, from the miserable locality inhabited by prostitutes in which it formerly prevailed. **P. slough′ing of the mouth,** cancer aquaticus. **P. ul′cer,** phagedenic sore, nome; one which rapidly spreads, eating away the neighboring parts; when the slough extends deeper than the surface the term *sloughing phagedena* is applied to it. The morbid condition which gives occasion to this destruction of parts is called *phagedenism.*

**Phagedenism,** faj′e-den-izm. See *Phagedenic ulcer.*

**Phagede′nous.** Phagendenic.

**Phag′ocytes** (*phago,* to eat, *kytos,* cell). Cells, either connective-tissue cells (*macrophages*) or leucocytes (*microphages*), which destroy bacteria by enclosing and absorbing them. *Globuliferous ps.* destroy blood globules, and *melaniferous ps.* take up pigment granules.

**Phagocyt′ic.** Relating to phagocytes.

**Phagocy′toblast.** Mesoderm.

**Phagocyto′sis.** Condition in which phagocytes have an existence; destruction of bacteria by phagocytes; development of phagocytes.

**Phagodynamom′eter** (*phago,* to eat, *dynamis,* power, *metron,* measure). Instrument for measuring the muscular force used in the mastication of food.

**Phagol′ysis** (*lysis,* solution). Disintegration or destruction of phagocytes.

**Phagoma′nia** (*phago,* to eat, *mania,* insanity). Paroxysmal and irresistible craving for food.

**Phaki′tis.** Phacitis.

**Phakom′eter, Phak′oscope,** etc. See *Phacometer,* etc.

**Pha′lacra, Phalacro′ma,** or **Phalacro′sis.** Calvities; baldness.

**Phalæ′na** (*phalaina,* moth). Moth.

**Phalangag′ra** (*phalanx,* segment of a digit, *agra,* seizure). Gout in the fingers or toes.

**Phalan′gal.** Phalangeal.

**Phalangarthri′tis** (*arthron,* joint). Inflammation of the joints of the fingers or toes.

**Phalan′geal.** Like or relating to a phalanx. **P. pro′cess,** process of head-plate of outer rod of Corti, which joins with outer hair cells; slender prolongation of cells of Deiters of organ of Corti, attached above to phalanges of reticular lamina.

**Phalan′ges** (pl. of phalanx). Bones of the fingers and toes. **Bas′ilar p.,** proximal phalanges or those of the first row. **P. of Dei′ters,** see *Deiters.* **Dis′tal p.,** ungual phalanges. **P. of the ear,** minute fibres in the organ of Corti. **Me′dial p.,** those of the second row of phalanges. **Metacar′pal** or **Metatar′sal p.,** basilar phalanges. **Prox′imal p.,** basilar phalanges. **Un′gual p.,** those of the third or terminal row.

**Phalan′gial** or **Phalan′gian.** Phalangeal.

**Phalangi′tis.** Inflammation of a phalanx.

**Phalan′gium esculen′tum.** Scilla esculenta.

**Phalango′sis** (*phalanx,* row of soldiers). An affection of the eyelids in which the lashes are arranged in two or three rows. Also ptosis.

**Pha′lanx** (*phalanx,* row of soldiers). A name which has been given to the small bones which form the fingers and toes, because placed alongside each other like a phalanx. There are phalanges of the fingers and phalanges of the toes. I. *Phalanges of the fingers,* in each hand fourteen—three to each finger, and two to the thumb; situated one above the other. They are distinguished numerically, reckoning from the base toward the tip of the finger. 1. The first or metacarpal. 2. The second or middle phalanges. 3. The third or ungual, which terminate each finger and support the nail. II. *Phalanges of the toes,* the same in number as those of the fingers, but much smaller and of a very different shape. Those of the first row in the foot are called metatarsal phalanges. The phalanges of a finger or toe are united with each other, and the first with the metacarpal or metatarsal bone. They are developed from two points of ossification, one for the superior extremity and the other for the body and inferior extremity.

**Phal′aris canarien′sis.** Cultivated canary grass, ord. *Gramineæ.* Seed of this grass, *canary seed,* was formerly recommended for allaying pains in the kidney and bladder. **P. ova′ta,** P. canariensis. **P. zizanoi′des,** Andropogon muricatus.

**Phallal′gia** (*phallos*, penis, *algos*, pain). Pain in the penis.

**Phallanas′trophe** (*phallos*, penis, *anastrophe*, turning back). Distortion of the penis backward.

**Phallan′eurysm.** Aneurysm of the penis.

**Phallankylo′sis** (*phallos*, penis, *ankylosis*, bending). Chordee.

**Phal′lic** (*phallos*, penis). Pertaining to the penis.

**Phalli′tis.** Inflammation of the penis.

**Phallo-** (*phallos*, penis). In composition, penis.

**Phalloblennorrhœ′a.** Gleet.

**Phallocamp′sis** (*phallos*, penis, *kampsis*, bending). Chordee.

**Phallocarcino′ma.** Carcinoma of the penis.

**Phallocryp′sis** (*krypto*, to cover). Retraction of the penis; abnormal smallness of the penis.

**Phallodyn′ia** (*odyne*, pain). Phallalgia.

**Phal′loid** (*phallos*, penis, *eidos*, resemblance). Resembling the penis.

**Phalloi′deæ.** Division of fungi, the most important of which, medically, is phallus; see *Phallus*.

**Phallon′cus** (*onkos*, swelling). Tumefaction or tumor of the penis.

**Phal′loplasty.** Plastic surgery of the penis.

**Phallopsoph′ia** (*phallos*, penis, *psophos*, noise). Discharge of wind from the male urethra.

**Phallorrhag′ia** (*phallos*, penis, *rhegnymi*, to break forth). Hemorrhage from the male urethra.

**Phallorrhœ′a** (*phallos*, penis, *rheo*, to flow). Gonorrhœa in the male.

**Phal′lus** (*phallos*, penis). Penis. A genus of fungi. **P. esculen′tus,** Morchella esculenta. **P. impudi′cus,** the thick, glutinous liquid in the sporules of this fungus, which grows largely in the Ukraine, is applied popularly to painful limbs. Infusion of the powdered plant is given in arthritic affections.

**Phanakis′toscope.** Zoetrope.

**Phanerobiot′ic** (*phaneros*, visible, *bios*, life). Having some clear evidence of life or existence.

**Phanerog′amous** (*phaneros*, evident, *gamos*, marriage), **Phanerogam′ic.** Epithet used by botanists for plants whose sexual organs are apparent. It is, consequently, the opposite to *cryptogamous*.

**Phanerogenous** (fan-er-oj′en-us) **tis′sue** (*phaneros*, visible, *gennao*, to beget). Special substance forming the pulp of the tooth (Robin).

**Phaneroma′nia** (*phaneros*, visible). A habit, almost a mania, to get rid of prominences or growths upon the skin by picking or biting them, tearing out hangnails, etc.

**Phaneroph′orous tis′sue** (*phaneros*, visible, *phoreo*, to bear). Phanerogenous tissue.

**Phan′eroscope.** See *Phaneroscopy*.

**Phaneros′copy** (*phaneros*, visible, *skopeo*, to see). Observation of the skin by concentration on it of light from a lamp of medium intensity, by means of a plano-convex lens of large aperture. The instrument is called a *phaneroscope*.

**Phanta′sia.** Delirium. Imagination.

**Phan′tasm.** A phantom, false appearance, apparition, hallucination. Derangement of the sense of sight or of the intellectual faculties, causing objects to be perceived which are not before the eyes.

**Phantas′ma.** Phantasm. Pseudoblepsia.

**Phantasmamo′ria** (*moria*, foolishness). Dementia with hallucinations.

**Phantasmat′ic** (*phantasma*). Phantastic.

**Phantasmatol′ogy** (*logos*, description). The science of hallucinations.

**Phantasmatoscop′ia** (*phantasma*, phantasm, *skopeo*, to view). Aberration of the sense of sight, which transmits the image of imaginary objects.

**Phantasmol′ogy.** Phantasmatology.

**Phantasmophreno′sis** (*phantasma*, phantasm, *phren*, mind). Dreaming in a waking state.

**Phantasmos′copy.** Phantasmatoscopia.

**Phantas′tic.** Inebriant. Creating phantoms.

**Phan′tom** (*phaino*, to cause to appear). Fantom; apparition. Manikin. **P. cor′puscle,** decolorized blood corpuscle. **P. odontal′gia,** toothache referred to a space from which a tooth has been extracted. **P. stric′ture,** imaginary stricture of the urethra or rectum, based on supposed symptoms. **P. tooth′ache,** p. odontalgia. **P. tu′mor,** swelling appearing in the abdomen, simulating organic disease or pregnancy, and sometimes very deceptive.

**Phanto′ma.** Phantasm. **P. obstetric′ium,** manikin.

**Pharbetisin′.** Resin of kaladana.

**Pharbitin′.** Pharbetisin.

**Pharbit′is nil.** See *Kaladana*. **P. sem′ina,** kaladana.

**Pharcid′ous.** Wrinkled.

**Pharm′acal.** Relating to pharmacy.

**Pharmaceu′tic** or **Pharmaceu′tical.** Epithet for everything belonging to pharmacy. **P. chem′istry,** chemistry relating to medicinal substances.

**Pharmaceu′tics.** Pharmacy.

**Pharmaceu′tist.** Apothecary.

**Phar′macic.** Pharmaceutic; poisonous.

**Pharma′cion.** Purgative. A mild remedy.

**Phar′macist.** Apothecary; one skilled in pharmacy.

**Pharmaco-** (*pharmakon*, a medicine, a poison). In composition, generally medicine, at times poison.

**Pharmacochym′ia.** Phamaceutical chemistry.

**Pharmacodynam′ic.** Relating to pharmacodynamics.

**Pharmacodynam′ics** (*pharmakon*, medicine, *dynamis*, power). Dynamical materia medica. Division of pharmacology treating of the effects and uses of medicines.

**Pharmacogno′sia, Pharmacogno′sis,** or **Pharmacog′nosy** (*gnosis*, knowledge). Division of pharmacology treating of simples or unprepared medicines.

**Pharmacog′raphy** (*grapho*, to write). Description of drugs.

**Pharmacol′ogy** (*parmakon*, a medicine, *logos*, discourse). Materia medica and therapeutics; the science of drugs.

**Pharmacoma′nia.** Mania for prescribing or for taking or giving medicine, or for drugging.

**Pharmacom′etry.** Measuring and weighing of drugs.

**Pharmacomor′phic.** Pertaining to form or appearance of drugs.

**Phar′macon.** Medicament; poison.

**Pharmacopœ′ia** (*pharmacon*, a medicine, *poieo*, to make). A work containing directions for the preparation, etc., of medicines, generally published by official authority in each country.

**Pharmacopœ′ial.** Official; relating to or authorized by a pharmacopœia.

**Pharmacothe′ca** (*theke*, sheath). A medicine-chest.

**Pharmacotherapeu′tic.** Relating to medicinal therapeutics.

**Pharmacother′apy.** Treatment by drugs.

**Phar′macy** (*pharmacon*, a medicine). Art which teaches the knowledge, choice, preservation, preparation, and combination of medicines. It was formerly divided into *galenical* and *chymical*. The former, called after Galen, embraced the operations to which medicines were subjected without chemistry; the latter, *chymical pharmacy* or *pharmaceutic chymistry*, *pharmacochymia*, comprise the preparation of medicines founded on chemical action of their principles. Pharmacy is also used in the sense of apothecary shop or drug-store.

**Pharna′ceum linea′re.** A South African plant, ord. *Paronychiaceæ*, employed at the Cape in pulmonary affections, generally in infusion. **P. malabar′icum,** plant of Malabar, employed as an antiemetic and to prevent purging; juice is slightly diuretic. **P. spathula′tum,** South American and West Indian plant; externally applied, it possesses emollient and discutient properties; given internally in phthisis and menorrhagia.

**Pha′rus, Phary′athron,** or **Pharyg′ethrum.** Pharynx. **P. sappula′ceus,** plant of Guiana, used by the natives for making a pectoral; seeds are eaten as gruel.

**Pharyngæ′a ascen′dens.** Inferior ascending pharyngeal artery.

**Pharyngæ′um** (*sal,* salt, understood). Compound of cream of tartar, potassium nitrate, burnt alum, and distilled vinegar; formerly employed, united with honey and plantain-water, to make gargles, which were advised in quinsy.

**Pharyngal′gia** (*algos,* pain). Pain in the pharynx.

**Pharynge′a.** Pharyngeal artery.

**Pharyn′geal** (*pharynx*). Faucial. Relating to the pharynx or fauces. Name given to the muscles, vessels, and nerves connected with the pharynx. **P. aponeuro′sis,** fibrous tissue forming walls of the pharynx; strong above, where attached to base of skull; weak below, where covered with muscles. **P. arch′es,** fifth pair of branchial arches. **P. ar′teries** are two in number: The *superior* or *pterygopalatine* arises from the internal maxillary at the base of the zygomatic fossa, passes through the pterygopalatine canal, and proceeds to be distributed to the pharynx and the corresponding part of the Eustachian tube. The *inferior* or *ascending pharyngeal artery* arises from the external carotid on a level with the facial, ascends along the lateral and posterior part of the pharynx, and divides into two branches: the one—the pharyngeal, properly so called—distributed to the pharynx; the other—the meningeal—gives its branches particularly to the dura mater. **P. asth′ma,** asthma due to conditions present in the pharynx. **P. bur′sa,** pouch in mucous membrane of back part of pharynx. **P. cav′ity,** that part of the alimentary canal and respiratory passages extending from the mouth and nasal cavities above to the œsophagus and larynx below. **P. gan′glion,** minute sympathetic ganglion on the ascending pharyngeal artery near its origin; see *Pharyngeal plexus.* **P. glands,** numerous mucous glands which are found especially in the posterior wall of the pharynx. **P. nerves,** branches from the trifacial, glossopharyngeal, and pneumogastric; name especially applied to the branch passing through Meckel's ganglion backward through the pterygopalatine canal to the mucous membrane of the pharynx. **P. plex′us,** formed by pharyngeal branches of the pneumogastrics, with contributions from the glossopharyngeal and sympathetic; it contains small ganglia; also a rich network of veins covering the outer surface of the pharynx. **P. spine,** pharyngeal tubercle. **P. ton′sil,** Luschka's tonsil, a considerable collection of adenoid tissue and lymph-follicles found in the pharynx at the upper end of the posterior wall on the median line. **P. tu′bercle,** that to which the pharyngeal raphe is attached on the under surface of the basilar process of the occipital bone. **P. veins** collect from the pharyngeal plexus and discharge into the internal jugular. **P. voice,** see *Voice.*

**Pharyngec′tomy** (*ektome,* excision). Partial excision of the pharynx.

**Pharyngemphrax′is** (*emphraxis,* obstruction). Obstruction of the pharynx.

**Pharyngeurys′ma** (*eurysma,* dilatation). Pharyngocele.

**Pharyngis′mus.** Spasm or cramp of the pharynx.

**Pharyngit′ic.** Relating to pharyngitis.

**Pharyngi′tis.** Inflammation of the pharynx; cynanche pharyngea. **P. apostemato′sa,** abscess of the pharynx. **P. atroph′ica,** pharyngitis characterized by atrophy of the mucous membrane and of the glandular structures of the pharynx. **Catar′rhal p.,** catarrhal angina. **Chron′ic p.,** p. following repeated acute attacks, the mucous membrane becoming altered. **Crou′pous p.,** diphtheritic pharyngitis. **Diphtherit′ic p.,** pseudomembranous pharyngitis, pharyngeal diphtheritis or diphtheria, hog-skin angina, diphtheritic inflammation of the pharynx; when *diphtheria* is spoken of it is usually this affection that is meant. **Erythem′atous p.,** simple pharyngitis without complications. **Follic′ular p.,** follicular inflammation of the pharynx, acne of the throat; inflammation and enlargement of the follicles of the pharynx, occasionally extending to the larynx; termed clergymen's sore throat, tubercles of the larynx and fauces, and tubercular or tuberculated sore throat. **Glan′dular p.,** follicular pharyngitis. **P. gangræno′sa,** cynanche maligna. **Gran′ular p.,** follicular pharyngitis. **Herpet′ic p.,** aphthous or membranous sore throat; herpes of the pharynx; vesicular eruption, followed by excoriations and fibrinous membranes. **P. hypertroph′ica,** in this form the mucous membrane of the pharynx becomes hypertrophied. **P. latera′lis hypertroph′ica,** inflammatory thickening of the lateral pharyngeal bands. **P. leukæ′mica,** inflammation of the pharynx, involving also the lymphatic glands, and attended with an increase of the white corpuscles of the blood. **P. malig′na,** cynanche maligna. **Mem′branous p.,** diphtheritic p. **Phleg′monous p.,** phlegmonous angina, acute pharyngitis with the formation of an abscess. **Pseudomem′branous p.,** diphtheritic p. **P. sic′ca,** chronic pharyngitis with atrophied mucous membrane and consequent dryness. **P. ulcero′sa,** ulcerative pharyngitis; inflammation of the pharynx attended with ulceration; ulcerated or hospital sore throat, a disease of debility and atmospheric vitiation, with high fever, pain, prostration, and ulcers on the tonsils. **P. villo′sa,** in this variety papillomata are present on the posterior wall of the pharynx.

**Pharyngo-.** In composition, the pharynx.

**Pharyngocace,** far-in-gok′a-se (*kakos,* evil). Cynanche maligna.

**Pharyn′gocele** (*kele,* tumor). A sacculated enlargement at the upper part of the gullet, in which the food sometimes rests in considerable quantity.

**Pharyngoceph′ale.** Vault of the pharynx.

**Pharyngocynanche,** -si-nang′-ke. Pharyngitis.

**Pharyngodyn′ia** (*odyne,* pain). Pain in the pharynx.

**Pharyngoepiglot′tic fold.** Concave plication of mucous membrane on either side of the epiglottis, passing to the pharynx.

**Pharyngoepiglot′ticus.** Fibres of the stylopharyngeus inserted into the side of the epiglottis and pharyngoepiglottic ligament.

**Pharyngoglos′sal.** Glossopharyngeal. Belonging to the pharynx and tongue. **P. nerve,** glossopharyngeal nerve; a portion of the eighth pair, arising from the superior and lateral parts of the spinal marrow, between the facial and pneumogastric nerves, by several filaments, which soon unite into a single cord that passes out of the cranium by the foramen lacerum posterius, goes downward and forward, and gains the posterior and inferior part of the tongue. Immediately after its exit from the cranium it gives a branch to the meatus auditorius externus, and receives a filament from the facial and another from the pneumogastric nerve. It then furnishes two other filaments, which descend upon the carotid artery and unite at the bottom of the neck, with branches from the cervical ganglions and cardiac nerves, and give two filaments to the stylopharyngeus muscle. After sending a twig or two to the tonsil, to the upper part of the pharynx and membrane of the epiglottis, it divides into many branches, which run partly to the margin and partly to the middle of the root of the tongue, supplying especially the papillæ majores and the parts in their neighborhood.

**Pharyngoglos′sus.** Pharyngoglossal nerve.

**Pharyngog′raphy** (*graphe,* description). An anatomical description of the pharynx.

**Pharyngolaryn′geal.** Relating to the pharynx and larynx. **P. cav′ity,** pharyngeal cavity below the soft palate during deglutition. **P. si′nus,** pyramidal or pyriform sinus.

**Pharyngolaryngi′tis.** Inflammation of the pharynx and larynx.

**Pharyn′golith** (*lithos*, stone). Calcareous deposit in the mucous membrane of the pharynx near the tonsil.

**Pharyngol′ogy.** The branch of medicine which treats of the pharynx and its diseases.

**Pharyngol′ysis** (*lysis*, solution). Paralysis of the pharynx.

**Pharyngomas′toid.** Supernumerary muscle arising from the mastoid process, inserted into the pharyngeal wall.

**Pharyngomax′illary space.** Space bounded by the lateral wall of the pharynx, internal pterygoid muscle, and the cervical vertebræ.

**Pharyngomyco′sis** (*mykes*, fungus). Growth of fungi, usually leptothrix, in the pharynx.

**Pharyngona′sal cav′ity.** Nasopharynx.

**Pharyngo-o′ral.** Buccopharyngeal.

**Pharyngopal′atine.** Relating to the pharynx and palate.

**Pharyngopalati′nus.** Palatopharyngeus muscle; also that part thereof inserted into the pharynx only.

**Pharyngoparal′ysis.** Paralysis of the pharynx.

**Pharyngop′athy** (*pathos*, disease). Disease of the pharynx.

**Pharyngoperis′tole.** Stricture of the pharynx.

**Pharyngople′gia** (*plesso*, to strike). Paralysis of the pharynx or œsophagus; commonly a symptom of general paralysis or of approaching dissolution.

**Pharyngopleth′ora.** Congestion of the pharynx.

**Pharyngorrha′gia.** Hemorrhage from the pharynx.

**Pharyngorrhini′tis.** Inflammation of the nasopharynx.

**Pharyngorrhinos′copy** (*skopeo*, to observe). Examination of the nasopharynx by the rhinoscope.

**Pharyngorrhœ′a.** Discharge of mucus from the pharynx.

**Pharyngosclero′ma.** Scleroma of the pharynx.

**Pharyn′goscope** (*skopeo*, to observe). Modified laryngoscope for examination of the pharynx.

**Pharyngos′copy.** Examination of the pharynx.

**Pharyn′gospasm.** Spasm or cramp of the pharynx.

**Pharyngostaphyli′nus** or **Pharyngostaphyle′us** (*staphyle*, uvula). Palatopharyngeus.

**Pharyngosteno′sis** (*stenos*, narrow). Stricture or contraction of the pharynx.

**Pharyngother′apy.** Local treatment by direct application to or irrigation of the pharynx.

**Pharyn′gotome** (*tome*, incision). An instrument used to open abscesses in the parietes of the pharynx.

**Pharyngot′omy.** Incision into or operation on the pharynx. **Exter′nal p.,** the incision is made from the outside of the pharynx. **Inter′nal p.,** the incision is made from the inside of the pharynx. **Lat′eral p.,** the incision is made outside the pharynx, but on one side. **Subhy′oid p.,** the incision is here made through the thyrohyoid membrane.

**Pharyngotonsilli′tis.** Inflammation involving the pharynx and tonsil. **P. lacuna′ris,** infectious tonsillitis due to microorganisms.

**Phar′ynx** (Gr.). A musculomembranous, symmetrical canal on the median line, irregularly funnel-shaped and extending between the base of the cranium and œsophagus, in front of the vertebral column, to the cricoid cartilage. It is very narrow above, dilates in the middle, and again contracts below, at its junction with the œsophagus. Into the pharynx open, successively, from above downward, the posterior orifices of the nasal fossæ, the Eustachian tubes, the posterior aperture of the mouth, and the top of the larynx. The pharynx is formed externally of a muscular coat, and internally of a mucous membrane which is continuous above with the Schneiderian membrane, and in the middle with that of the mouth; below with that of the œsophagus; and at the sides with that of the Eustachian tubes. This membrane has no villi, and presents only a few inequalities, which are owing to the presence of muciparous follicles. The muscular coat is composed of the constrictor muscles, stylopharyngei, and pharyngostaphylini. The vessels and nerves are called pharyngeal. It serves as a common origin for the digestive and respiratory organs. It gives passage to the air during respiration, and to the food at the time of deglutition.

The following are some of the measurements of the pharynx (Luschka):

| | |
|---|---|
| Length (from the pars basilaris of the occiput to the fifth cervical vertebra) . . | 140 mm. |
| Breadth of posterior wall at upper end . . | 44 |
| Depth of pharynx at upper end (from the tuberculum pharyngeum to posterior margin of the vomer) in man . . . . . . . . | 20 |
| Thickness of wall of pharynx . . . . . . . . . . | 2½ |
| Constrictor inferior muscle in the median line, high . . . . . . . . . . . . . . . . . . . | 70–80 |
| Acinous mucous papillæ, large . . . . . . . . | 1–2 |

**Phase.** Condition or stage of disease or physiological function at a given time.

**Phaselin′.** A digestant derived from phaseolus.

**Phase′olus.** A genus of plants, including the kidney bean, French bean, bush bean, string bean, snap bean; ord. *Leguminosæ.* When young and well boiled the unripe pods of the string bean are easy of digestion; their sweet taste is owing to the presence of mannite—phaseomannite. **P. albiflo′rus,** white runner, plant of Mexico; root is poisonous. **P. cre′ticus,** cajan, cayan; a decoction of the leaves has been used to restrain the hemorrhoidal flux when excessive. **P. multiflo′rus,** scarlet runner. **P. vulga′ris,** string bean.

**Phaseoman′nite.** A sweetish, crystalline substance found in the kidney bean.

**Phasia′nus gal′lus** (from the river *Phasis*, in Colchis, near the Black Sea). The cock. Various parts of this bird, when dried and pulverized, were formerly employed in medicine.

**Phat′ne** or **Phat′nion** (*phatne*, manger). Alveolus.

**Phatno′ma.** Alveolus, tooth-socket.

**Phatnorrha′gia.** Hemorrhage from the alveoli.

**Phausin′ges** (*phauzo*, to roast). Spots or blisters on the legs, produced by heat, and, in a more extensive signification, by any other cause.

**Phaylop′sis longifo′lia.** Plant of Malabar and East Indies; root has aperient and hydragogue virtues.

**Pheas′ant's eye.** Adonis autumnalis. Indigenous; plant is astringent and bitter.

**Pheduretin′.** A derivative of phenol. White, crystallized substance, diuretic in doses of gr. viij–xv (0.5–1.0).

**Phellan′drium aquat′icum.** Water fennel, fine-leaved water hemlock; ord. *Umbelliferæ.* This plant is stimulant and narcotic. Has been used in intermittents and dyspepsia; also in phthisis pulmonalis and in cases of scrofulous atonic ulcers.

**Phelps's opera′tion.** Open division of resisting tissues down to the bone, for relief of talipes.

**Phenacethydrazin′.** Hydracetin.

**Phenacetin′.** $C_{10}H_{13}NO_2$. It has been variously called acetphenetidin, acetylphenetidin, phenedin, oxyethanilid, paraoxyethylacetanilid, oxyethylphenylacetamide, paraäcetphenetidin, acetparaphenetidin, paraämidophenol. A derivative of phenol by a number of chemical processes. The antipyretic dose is from gr. v-x (0.32–0.65), repeated every three or four hours; and as an analgesic it is given in still larger doses.

**Phenacetu′ric acid.** Acid found in urine of dogs after taking phenylacetic acid and phenylacetonitril.

**Phenacylidin′.** Obtained by condensation of bromo-acetophone and paraphenetidin. Antipyretic.

**Phenal′gin.** Ammoniated combination of phenyl and acetamide. Similar in therapeutic action to phenacetin, and given in about the same doses.

**Phenam′id.** Suilin.

**Phe′nate.** Carbolate.

**Phen′azone.** Antipyrin.

**Phenedin′.** Phenacetin.

**Pheneth′ol.** Ethyl phenate.

**Phenet′idene.** Substance from which phenacetin is obtained by process of substitution.

**Phenet′idyl croto′nic-eth′yl-es′ter.** Made by mixing paraphenetidin and acetoacetic ester.

**Phen′etol.** $C_8H_{10}O$. Ethylic ether of phenol. **P. car′bamide,** dulcine.

**Phengopho′bia** (*phengos,* light, *phobos,* dread). Photophobia.

**Phe′nic.** Obtained from or containing phenyl. **P. acid,** carbolic acid.

**Phen′icated.** Containing phenic acid.

**Phenicin′.** Indigo-carmine.

**Phe′nicism.** Rubeola. Phenigmus.

**Phenidin′.** Phenacetin.

**Phenig′mus.** Red jaundice. Cutaneous affection consisting of redness diffused over the skin without fever. Also the act of irritating a part by a stimulating application.

**Phenin′.** Phenacetin.

**Phe′nion.** Anemone pulsatilla.

**Phe′nocoll.** $C_{10}H_{14}O_2N_2$. Derivative of phenacetin. **P. ac′etate,** employed hypodermically. **P. car′bonate,** employed like p. hydrochlorate; antiseptic dusting-powder. **P. hydrochlo′rate** or **hydrochlo′ride,** white powder, closely allied to phenacetin; antipyretic in affections of the lungs, acute rheumatism, or neuralgia, in powder, capsules, or solution. **P. sal′icylate,** salocoll; antipyretic and antiarthritic; dose, gr. xv–xxx (1.0–2.0).

**Phenodin′.** Hæmatin.

**Phe′nol.** $C_6H_5OH$. Carbolic acid. **P. bis′muth,** see *Bismuth.* **P. cam′phor,** see *Camphor phenol.* **P. dii′odide,** diiodophenol iodide; a red powder employed as a substitute for aristol. **Orthomonochlorophe′nol,** from the action of chlorine on amidophenol, antiseptic in skin diseases; name also given to paramonochlorophenol; antiseptic in syphilis of the eyes and throat, tuberculosis of the latter, lupus, etc., in solution and ointment. **P. so′dio-sulphoric′inate,** a yellow fluid obtained by mixing carbolic acid and sodium sulphoricinate; applied to false membrane in diphtheritic sore throat. **P. sulphon′ic acid,** unimportant constituent of normal urine, much increased by vegetable diet or ingestion of phenol or benzol, and in peritonitis resulting from ileus or lymphosarcomatous growths. **P. sulphoric′inate,** solution of chemically pure carbolic acid in sulphoricinic acid; yellow liquid, used in solution in tuberculous diseases of the lungs and throat. **P. trichlo′ride,** trichlorophenol.

**Phenolin′.** A solution of crude cresol in potassium soap; antiseptic.

**Phenoloxyhy′drate.** Carbolic acid.

**Phenolphthaleïn′.** $C_{26}H_{14}O_4$. Nearly colorless crystalline substance, readily soluble in alcohol, insoluble in water; produced by action of phenol upon phthalic anhydride; a delicate test in alkalimetry.

**Phenom′enon** (*phainomai,* to appear). An extraordinary and unexpected event. In medicine it means any change, appreciable by our senses, which supervenes in an organ or function, as the phenomena of the circulation, respiration, etc. It is used in pathology synonymously with symptom. **Aubert p., Bell p., Cheyne-Stokes p.,** etc., see these names and also under *Reflex, Sign,* and *Symptom.*

**Phenopyrin′.** Oily, colorless liquid, composed of equal parts of carbolic acid and antipyrin.

**Phenoqui′none.** Substance produced by oxidation of phenol, or by combining quinone and phenol.

**Phenoresor′cin.** Mixture containing carbolic acid 67 per cent., resorcin 33 per cent.

**Phe′nosal.** Acetosalicylate of phenetidin; phenetidin salicylacetate; antipyretic and used also in acute articular rheumatism; decomposed in the digestive canal into salicylic acid and phenetidin.

**Phenosal′yl.** A mixture of benzoic, salicylic, and carbolic acids, menthol, and oil of eucalyptus, in lactic acid; employed as a disinfectant and surgical antiseptic in watery solution of 1 to 2 per cent.

**Phenosuccin′.** Pyrantin. Para-ethoxyphenylsuccinimide. Antipyretic and antineuralgic; dose, gr. xv–xxx (1.0–2.0).

**Phenosuc′cinate.** Compound of amide derivative of succinic acid and phenol with a base. **So′dium p.,** analgesic and antipyretic.

**Phenoxycaffeine′.** White powder, derivative of caffeine; mild narcotic in neuralgia, migraine, etc. Also locally anæsthetic.

**Phe′nyl.** $C_6H_5$. Organic radical of phenol. **P. acetam′ide,** acetanilid. **P. al′cohol** or **P. hy′drate,** carbolic acid. **P. glucosaz′on,** yellow, crystalline material obtained in the phenylhydrazin test for sugar in urine. **Hy′drated ox′ide of p.,** carbolic acid. **P. hydrazin′,** colorless oil, soluble in water; the hydrochloride is used in the phenylhydrazin test for sugar in the urine. **P. hy′dride,** benzol. **Hy′druret of p.,** benzol. **P. red,** pæonin. **P. sal′icylate,** salol.

**Phenylace′tic acid.** Alphatoluic acid. Obtained by the action of benzyl-cyanide on potassium hydride in solution. Employed in tuberculosis of the lungs and typhus fever, in doses of gr. j–iij (0.065–0.2).

**Phenylacryl′ic acid.** See *Cinnamic acid.*

**Phenylalanin′.** Phenylamidopropionic acid.

**Phenylamidopropion′ic acid.** $C_8H_{11}NO_2$. Substance of putrefactive origin; represents a constituent of the albumin molecule.

**Phenylamin′.** Anilin.

**Phenylanilin′.** Diphenylamin.

**Phen′ylate.** Carbolate.

**Phenylben′zamide.** Benzanilide.

**Phenylben′zene.** Diphenyl.

**Phenylbo′ric acid.** A white powder, having antiseptic properties when applied to wounds and ulcers. It is produced by acting on a mixture of boric and carbolic acids with phosphorus oxychloride.

**Phenylchinaldin′.** Phenylquinaldin.

**Phenylchinolin′.** A derivative of chinolin.

**Phenyldihydrochinazolin′.** Orexin.

**Phenyldimeth′yl-pyraz′olone.** Antipyrin.

**Phenylethylamin′.** $C_8H_{11}N$. Formed by the decomposition of phenylamidopropionic acid, identical with collidin.

**Phenyleth′ylene.** Styrol.

**Phenylgalac′tosazone.** Osazone of galactose.

**Phenylgly′colyl-phenetidin′.** Amygdophenin.

**Phenylglycuron′ic acid.** Found in urine after administration of carbolic acid; a compound of phenyl and glycuronic acid.

**Phenylhydrazin′.** $C_6H_8N_2$. Oily liquid. The hydrochloride of phenylhydrazin is used as a test; in combination with sodium acetate it precipitates osazones from sugars. **P. acetyleth′yl,** antipyretic; obtained by the action of acetic anhydride on a solution of ethylenephenylhydrazin. **P. lævulin′ic acid,** antithermin. **P. test,** test for sugar dependent upon formation of crystals of phenylglucosazon in the presence of phenylhydrazin hydrochloride and sodium acetate.

**Phenylhydroxylamin′.** A toxic substance obtained from the reduction of nitrobenzol.

**Phenyl′ic.** Relating to phenyl. **P. acid,** carbolic acid. **P. al′cohol,** carbolic acid.

**Phenyllac′tosazone.** $C_{24}H_{32}N_4O_9$. Osazone of lactose.

**Phenylmalto′sazone.** $C_{24}H_{32}N_4O_9$. Osazone of maltose.

**Phenylmeth′ane.** Diphenylmethane. Antipyretic and analgesic; dose, gr. viij (0.5).

**Phenylmethyla′cetone.** Hypnone.

**Phe′nylon.** Antipyrin.

**Phenylpropion′ic acid.** Hydrocinnamic acid. In colorless crystals; used in phthisis. It is made by reducing cinnamic acid with mercury amalgam.

**Phenylquinaldin′.** Internally, antiperiodic; externally, a local irritant.

**Phenylsal′icylate.** Salol.

**Phenylsalicyl′ic acid.** Orthoöxydiphenylcarboxylic acid. White, antiseptic dusting-powder.

**Phenylsulphu′ric acid.** Sulphocarbolic acid.

**Phenylureth′ane.** Euphorin. White, crystalline powder resembling in composition carabaminic acid and acetanilid; antipyretic, antiarthritic, and analgesic. Applied also externally in venereal ulcers, wounds, skin diseases, etc.

**Pheomyeli′tis** (*phaios*, gray, *myelos*, marrow). Disseminated inflammation of the gray matter of the spinal cord; poliomyelitis.

**Phere′a.** Swollen condition of the parotid glands.

**Phesin′.** Sulpho-derivative of phenacetin, with similar therapeutic action.

**Phi′al.** Vial; small bottle.

**Philadel′phia flea′bane.** Erigeron philadelphicum.

**Philanthro′pus.** Galium aparine.

**Philer′mum.** Mercaptan.

**Philet′ron.** Groove of the upper lip.

**Phil′lip's mus′cle.** Muscle passing from the styloid process of the radius and external lateral ligament to the phalanges.

**Philo-** (*phileo*, to love). In composition, love.

**Philobio′sis** (*bios*, life). Love of life.

**Philocy′tase.** Metchnikoff's term for immune-body.

**Philogyn′ia** (*phileo*, to love, *gyne*, a woman). Fondness for women.

**Philomime′sia** (*mimeomai*, to imitate). Morbid tendency to mimic.

**Philone′ism** (*neos*, new). Morbid desire for new things.

**Philopatridal′gia** (*phileo*, to love, *patris*, one's country, *algos*, pain). Nostalgia.

**Philopatridoma′nia.** Nostalgia.

**Phil′trum.** Groove of the upper lip.

**Phily′ra.** The lime or linden tree. See *Tilia.*

**Phily′rea latifo′lia.** Shrub of the South of France and Spain, ord. *Oleaceæ*, whose leaves have been used as an astringent in ulcers of the mouth and throat. The flowers, steeped in vinegar, have been applied to the head in headache. Decoction of the leaves is said to be diuretic.

**Philyrine′.** Alkaloid obtained from Philyrea latifolia.

**Phimosien′tomy** (*phimosis*+*entome*, incision). Incision for relieving contraction of the prepuce.

**Phimo′sis** (*phimoo*, to bind tight). Preternatural narrowness of the opening of the prepuce, so that it cannot be carried behind the corona glandis; most commonly congenital. Sometimes it is accidental, and dependent upon tumefaction of the glans or of the prepuce, as occurs in syphilis. To remedy this state the prepuce may be divided by means of a bistoury and director, or circumcision may be practised. **P. adna′ta**, congenital phimosis. **P. circumliga′ta**, paraphimosis. **P. congen′ita**, p. adnata. **P. œdemato′des**, hydrophimosis; phimosis with œdematous swelling of the prepuce. **P. o′ris**, congenital condition of smallness of the mouth. **P. palpebra′rum**, congenital diminution of space between the eyelids. **P. pueri′lis**, p. adnata. **P. vagina′lis**, atresia vaginæ.

**Phimot′ic.** Pertaining to phimosis.

**Phlas′ma** (*phlao*, to bruise). Contusion.

**Phleb-** (*phleps*, vein). Prefix signifying a vein or relation to a vein.

**Phlebangio′ma.** A tumor consisting largely of dilated and tortuous veins.

**Phlebarteriecta′sia.** Varicose aneurysm.

**Phlebarteriodial′ysis.** Arteriovenous aneurysm.

**Phlebecta′sia, Phlebec′tasis,** or **Phlebec′tasy** (*ektasis*, dilatation). Dilatation of a vein or portion of a vein.

**Phlebec′tomy.** Excision of a vein.

**Phlebecto′pia** (*ektopos*, misplaced). Abnormal position of a vein.

**Phlebemphrax′is** (*emphraxis*, obstruction). Obstruction or plugging of a vein.

**Phleb′es** (pl. of phleps). Veins.

**Phleb′ic.** Relating to a vein.

**Phleb′in.** A pigment in venous blood, but not known to be distinct from hæmoglobin.

**Phleb′ion** (dim. of phleps). Small vein, venula.

**Phlebis′mus** (*phleps*, a vein). Turgescence of veins produced by impeded return of the blood.

**Phlebit′ic.** Relating to phlebitis.

**Phlebi′tis** (*phleps*, a vein). Inflammation of the inner membrane of a vein, *endophlebitis*, which formerly sometimes followed bloodletting, extending from the small wound made in that operation to the neighboring parts of the venous system. The symptoms are, first, inflammation in the punctured part, and afterward a knotty, tense, painful cord, following the direction of the vessel, and accompanied with more or less fever, according to the extent of the inflammation, the nervous symptoms, etc. Phlebitis also sometimes supervenes on the ligation or excision of varices, after amputation, gunshot wounds, delivery (*uterine phlebitis*), the ligation of the umbilical cord, etc. It may terminate by resolution, suppuration, ulceration, or gangrene. Sometimes, when a clot forms in a vein and the vessel becomes permanently obliterated, the clot and vein ultimately contracting so as to form a firm cord, it constitutes *adhesive phlebitis*. **Adhe′sive p.**, see *Phlebitis*. **Cru′ral p.**, phlegmasia dolens. **Gout′y p.**, p. due to gout. **Hyperplas′tic p.**, plastic phlebitis. **P. oblit′erans**, p. resulting in the obliteration of the vein. **Plas′tic p.**, local aseptic inflammation of a vein. **Por′tal p.**, inflammation of the portal vein. **P. prolif′era**, plastic phlebitis. **Puer′peral p.**, p. uterina. **Sep′tic p.**, p. attended with suppuration. **Si′nus p.**, inflammation of the cranial sinus. **Sup′purative p.**, p. in which suppuration occurs. **P. umbilica′lis**, inflammation of the umbilical vein. **P. uteri′na**, see *Phlebitis*. **Var′icose p.**, inflammation involving a varicose vein.

**Phlebo-** (*phleps*, a vein). In composition, a vein.

**Phlebocarcino′ma.** Cancer of a vein.

**Phlebodias′tasis.** Separation of the ends of a vein after division.

**Phlebog′enous** (*phleps*, vein, *gennao*, to generate). Term applied to angiomatous tumors—*phlebogenous angiomata*—which are in communication with large venous trunks.

**Phleb′ogram.** Sphygmographic tracing of the movements of a vein.

**Phleb′ograph.** Instrument used in making a phlebogram.

**Phlebog′raphy** (*phleps*, vein, *graphe*, description). Description or anatomy of the veins.

**Phleb′oid.** Relating to a vein.

**Phleb′olite** or **Phleb′olith** (*phleps*, vein, *lithos*, stone). Veinstone. Loose concretion, varying in size from that of a currant to that of a pea, occasionally found in the veins; it would seem to be formed in the blood.

**Phlebolithi′asis.** Formation of phleboliths.

**Phlebol′ogy** (*phleps*, vein, *logos*, discourse). The part of anatomy treating of the veins.

**Phlebometri′tis.** Metrophlebitis.

**Phlebophlogo′sis** (*phlogosis*, heat). Phlebitis.

**Phlebophthalmot′omy** (*ophthalmos*, eye, *tome*, incision). Bloodletting from the conjunctival vessels.

**Phleboplero′sis** (*plerosis*, fulness). Distention or fulness of the veins. **P. ecphrac′tica**, inflammation.

**Phleborrha′gia.** Venous hemorrhage.

**Phleborrhex′is** (*phleps*, vein, *rhexis*, rupture). Rupture of a vein.

**Phlebosclero′sis** (*skleros*, hard). Thickening and calcification of a vein.

**Phlebosteno′sis** (*stenosis*, contraction). Constriction or contraction of a vein.

**Phlebostrep′sis** (*strepsis*, twist). Torsion of a vein.

**Phlebothrombo′sis.** Coagulation of blood in a vein. **P. puerpera′lis**, phlegmasia dolens.

**Phleb′otome.** Instrument employed for bloodletting.

**Phlebot′omist** (*phleps*, vein, *tome*, incision). A bleeder. One who practises the art of phlebotomy.

**Phlebot′omize.** To practise phlebotomy.

**Phlebot′omum.** Fleam; lancet.

**Phlebot′omy.** Venesection. See *Bloodletting.*

**Phledo′nia** (*phleo*, to talk idly). Delirium.

**Phlegm,** flem. One of the four natural humors of the ancients, which, according to them, was cold and moist, as atrabilis was cold and dry. It predominated especially in winter. The term *pituita* or *phlegm* was afterward applied to every aqueous or excrementitious humor, such as the saliva, nasal and intestinal mucus, serum, etc. These terms are no longer employed in physiology, but the laity still use the term phlegm to designate a stringy mucus expectorated or rejected by vomiting.

**Phleg′ma.** Phlegm.

**Phleg′magogue** (*ago*, to expel). Medicine formerly believed capable of liquefying or removing phlegm.

**Phlegmap′yra** (*pyr*, fire). Adenomeningeal fever.

**Phlegma′sia.** Inflammation; phlegmon. **P. adeno′sa,** adenitis; phlegmasia alba. **P. æthi′opum,** phlegmasia or chlorosis of negroes. **P. al′ba do′lens,** phlegmasia dolens. **P. cellula′ris,** induration of the cellular tissue. **P. do′lens,** crural phlebitis, white leg, swelled leg, milk leg, white swelling of lying-in women; acute painful œdema, due to venous obstruction from thrombosis, most frequent in the lower extremity in women after labor. It occurs, for the most part, in the second or third week after delivery, is limited to the lower extremity, and chiefly to one side, exhibiting to the touch a feeling of numerous, irregular prominences under the skin. It is accompanied, sooner or later, with febrile excitement. After a few days the heat, hardness, and sensibility diminish, and the limb remains œdematous for a longer or shorter period. **P. glandulo′sa,** adenitis. **P. lac′tea,** phlegmasia dolens. **P. malabar′ica,** elephantiasis. **P. myoi′ca,** myositis. **P. of the peritone′um,** peritonitis.

**Phlegmat′ic.** Abounding in phlegm, hence apathetic, sluggish; as the phlegmatic temperament.

**Phleg′matoid.** Inflammatory.

**Phlegmatorrha′gia.** Copious secretion, by the nostrils, of a limpid mucus, without inflammation.

**Phlegmatorrhœ′a** (*rheo*, to flow). Catarrh.

**Phleg′matous.** Relating to or resembling phlegm.

**Phleg′mon** (*phlego*, to burn). Inflammation of the areolar texture accompanied with redness, circumscribed swelling, increased heat, and pain, which is at first tensive and lancinating, afterward pulsatory and heavy. It is apt to terminate in suppuration. **Diffuse′ p.,** grave form of dermatitis in which the skin is hot, livid, and painful, sometimes becoming gangrenous. **Dupuytren's′ p.,** see *Dupuytren.* **Gas p.,** p. attended with local emphysema. **Sim′ple p.,** in this form of phlegmon the inflammation is not extensive and is non-malignant.

**Phleg′monoid.** Resembling phlegmon.

**Phleg′monous.** Phlegmonoid. Relating or belonging to phlegmon. Inflammatory. **P. inflamma′tion** is the active inflammation of the areolar membrane, in contradistinction to erysipelatous inflammation, or that of the skin.

**Phlobaph′ene.** Amorphous coloring-matter in the bark-cells of various plants.

**Phlœ′um.** Bast; portion of bark just beneath the epidermis.

**Phlo′gia.** Inflammation.

**Phlogis′tic.** Inflammatory; heat-producing.

**Phlogis′ticated.** Containing phlogiston. **P. air** or **gas,** nitrogen. **P. al′kali,** potassium cyanide.

**Phlogis′ton** (*phlogizo*, to burn). An old term for the supposed principle of flame.

**Phlog′mus.** Verbascum thapsus.

**Phlogochro′ma** (*phlox*, a flame, *chroma*, color). Inflammatory color or tint.

**Phlogo′des.** Inflamed. Inflammatory. Epithet employed particularly to express the red color of the face.

**Phlogogen′ic** or **Phlogogenous,** flo-goj′en-us (*phlogia*, inflammation, *gennao*, to produce). Exciting inflammation, as the action of pus after wounds.

**Phlogosed′.** Inflamed.

**Phlogosin′.** Product of cultures of *Staphylococcus aureus*, which produces intense inflammation and suppuration.

**Phlogo′sis.** Inflammation. Some writers use this word exclusively for external inflammation—phlegmon; others, for that which is superficial or erysipelatous.

**Phlo′mis.** Lychnitis. Lamp-wick, European plant; flowers and leaves have stimulant and emmenagogue virtues, and are used externally in hemorrhoids. **P. tubero′sa,** Jerusalem sage; leaves are employed in diarrhœa and dysentery.

**Phloret′ic acid.** Crystalline product of action of potassa upon phlorizin.

**Phloretin′.** Decomposition product of the action of dilute acids upon the glucoside phlorizin.

**Phloridzin′.** Phlorizin.

**Phlorizeïn′.** Product of the action of ammonia upon phlorizin.

**Phlorizin′** (*phloios*, bark, *rhiza*, root). $C_{21}H_{24}O_{20}$. Bitter or active principle of the bark of the root of the apple, pear, cherry, and plum tree, deposited from the decoction on cooling; crystallizes in silky spicula or in long, slender prisms or tables. It has been administered successfully in intermittents. It produces artificial diabetes, and is employed in physiological investigations. **P. glycosu′ria,** glycosuria caused by phlorizin.

**Phloroglucin′.** Derivative of resorcin or phlorizin; used in solution with vanilla as test for free hydrochloric acid in the contents of the stomach, producing a deep-red color.

**Phlo′rol.** One of the constituents of creosote; existing also in crude carbolic acid.

**Phlo′rose.** Dextrose.

**Phlox.** Verbascum thapsus. Flame. **Caroli′na p.,** indigenous Southern herb, ord. *Polemoniaceæ;* the roots are said to furnish a portion of commercial spigelia and to be equally efficacious therapeutically.

**Phlyctæ′na** (*phlyktaina*, blister). A small vesicle or blister.

**Phlyctænophthal′mia.** See *Phlyctenular.*

**Phlyctæno′sis.** Formation of phlyctænæ. Under phlyctænosis, Hebra includes herpes, miliaria, and pemphigus acutus. **P. aggrega′ta,** skin disease characterized by eruption of pin-head vesicles, thickly set on an intensely red base, appearing in succession on different parts of the body, with intense itching. **P. labia′lis,** herpes labialis. **P. spar′sa,** herpes.

**Phlyctæ′nula** (dim. of phlyctæna). Small vesicle or blister. Presence of serous fluids under the epidermis, conjunctiva, or cornea.

**Phlycte′na.** Phlyctæna.

**Phlyc′tenoid** (*phlyctæna*+*eidos*, resemblance). Resembling phlyctæna. A variety of herpes is so called.

**Phlycten′ular** (*phlyctænula*). Of or belonging to phlyctænula. **P. ophthal′mia,** inflammation of the eye accompanied with phlyctænulæ on the cornea, phlyctænophthalmia, phlyctenular corneitis, scrofulous ophthalmia.

**Phlyc′tenule.** Phlyctænula.

**Phlyctid′ium** (dim. of phlyctis). A circular or annular spot of inflammation of the corium, encircled by a red ring or zone, within which suppuration takes place. Genuine smallpox pustule and that produced by the application of tartar-emetic ointment are examples of it.

**Phlyc′tis.** Phlyctæna.

**Phly′sis** (*phlyo*, to bubble up). Cutaneous eruption. Whitlow. An old term for an ulcerative, subcutaneous tumor; flat, tensive, glabrous; diffused, hot, throbbing; at length fluctuating, with an acrid ichor. Phlyctæna. **P. ecthy′ma**, ecthyma. **P. impeti′go**, impetigo. **P. porri′go**, porrigo. **P. scab′ies**, psora.

**Phlyza′cia.** Ecthyma.

**Phlyza′cion** or **Phlyza′cium.** Phlyctæna. **P. acu′tum**, acute ecthyma. **P. chron′icum**, chronic ecthyma.

**Pho′bia** (*phobos*, fear). Any morbid fear or dread.

**Pho′cas's disease′.** Chronic fibrous inflammation of the breast.

**Phoce′nia.** Trivalerin.

**Phocen′ic acid.** Delphinic acid.

**Phocom′elus** (*phoke*, seal, *melos*, limb). Monster in which the hands and feet appear to be inserted immediately on the trunk, as in the seal and the herbivorous cetacea. Condition is called *phocomelia*.

**Phœnicin′** (*phoinix*, red). Hæmatin. Indigo-carmine.

**Phœnig′mus.** Phenigmus. **P. petechia′lis**, purpura simplex.

**Phœ′nix dactylif′era.** Date tree. **P. excel′sa**, date tree.

**Phœnodin′.** Hæmatin.

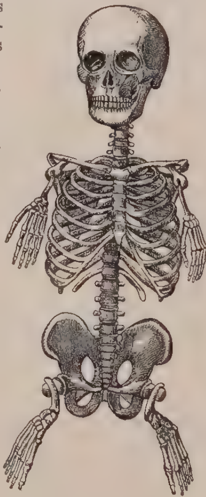
**Pholida′ta imbrica′ta.** Plant of Malabar; natives apply the bulb externally to ulcers, etc.

**Pho′lis.** Scale, horny in character.

**Pho′nal.** Relating to the voice.

**Phona′tion** (*phone*, voice). Voice-production.

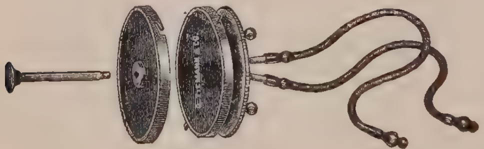
**Pho′natory.** Relating to or assisting in phonation or the production of voice; as *phonatory bands*, the vocal cords.



Skeleton of a phocomelus.

**Phonau′tograph** (*phone*, voice, *autos*, self, *grapho*, to write). Apparatus for recording vibrations of air set in motion by the voice.

**Phonen′doscope** (*phone*, sound, *endo*, within, *skopeo*, to see). Instrument like a stethoscope, the sound through which is made more distinct by use of two parallel vulcanite disks.



Phonendoscope.

**Phone′sis.** Phonation.

**Phonet′ic.** Relating to sound or to the voice.

**Phonet′ics.** Science which treats of sound or of the voice.

**Pho′nic.** Relating to the voice. **P. cen′tre**, reflex centre at base of brain for production of sounds. **P. spasm**, spasmodic stoppage of the voice by closure of the glottis when an attempt is made to speak.

**Pho′nics.** See *Acoustics*.

**Phonochor′dæ** (*phone*, voice, *chorda*, cord). Vocal cords.

**Pho′nograph** (*phone*, voice, *grapho*, to write). Instrument for making graphic record of sounds, which may be reproduced by reversing the action of the apparatus.

**Phonol′ogy** (*phone*, voice, *logos*, discourse). Phonetics.

**Phonomassage′.** Action upon the tympanum, especially the ossicles, by sound waves conducted into the auditory meatus.

**Phonom′eter** (*phone*, sound, *metron*, measure). Instrument for estimating the intensity of sounds.

**Phonom′etry** (*phone*, sound, *metron*, measure). Measurement of intensity of sound emitted by a vibrating tuning-fork, to determine presence or absence of a cavity beneath the surface.

**Phonop′athy** (*phone*, sound, *pathos*, disease). Disease of the vocal organs.

**Phonopho′bia** (*phone*, sound, *phobos*, dread). Morbid dread of sound.

**Pho′nophore** (*phone*, sound, *phoreo*, to carry). Ossicle of the middle ear. A form of stethoscope.

**Phonopneumomassage′.** Phonomassage.

**Phonop′sia.** A color impression excited by a musical note.

**Phono′sis.** Phonation.

**Pho′nospasm.** Spasm of the vocal organs.

**Pho′ra.** Gestation.

**Phoraden′dron flaves′cens.** American mistletoe, growing on oaks, etc. Berries of this parasitic shrub have produced catharsis and vomiting, and have even proved fatal in young subjects. It is reputed to resemble digitalis in its action; has been employed in affections of the heart, dropsies, etc.; also to produce abortion.

**Phor′mium te′nax.** New Zealand flax; decoction of root and leaf bases used as a lotion for wounds. Ord. *Liliaceæ*.

**Phorom′eter** (*phoreo*, to carry, *metron*, measure). Instrument for determining insufficiencies of the external ocular muscles, as shown by a tendency to deviation of the visual axes from their normal relations.

**Pho′rone.** $C_9H_{14}O$. Derivative of acetone.

**Phoron′omy** (*phoreo*, to carry, *nomos*, law). Doctrine of muscular motion.

**Pho′rotone.** An instrument arranged with prisms or disks, for developing the muscles of the eye.

**Phose** (*phos*, light). A subjective sensation of light or color.

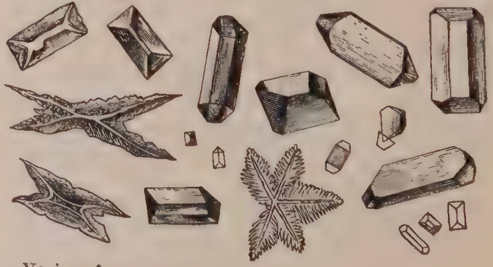
**Phos′gene** (*phos*, light, *gennao*, to produce). Producing light. **P. gas**, carbonyl chloride.

**Phosgen′ic.** Producing light. Photogenic.

**Pho′sote.** Combination of creosote and phosphoric anhydride, readily absorbed by the intestines. Prescribed in tuberculosis.

**Phos′phas.** Phosphate.

**Phos′phate.** A salt of phosphoric acid. **Ammoniomagne′sium p.**, a phosphate of ammonium and of magnesium, sometimes found in the urine. **Earth′y p.**, a chemical compound of phosphoric acid with one of the alkaline earths. **Trip′le p.**, phosphate of ammonium, calcium, and magnesium; normal urinary deposit during alkaline fermentation, sometimes pathologically deposited in fresh urine.



Various forms of triple phosphates. (Finlayson.)

**Phosphat′ic.** Relating to the phosphates. **P. acid**, name given to union of phosphoric and phosphorous acids produced by gradual combustion of phosphorus. **P. diabe′tes**, excessive chronic phosphaturia. **P. diath′esis**, the habit of body which favors or occasions the deposition of the phosphates from the urine.

**Phos′phatol.** Substance resulting from the action of creosote on phosphorus trichloride.

**Phosphatu′ria.** Condition in which urine contains a large quantity of phosphates.

**Phos′phene** (*phos*, light, *phaino*, to become manifest). Photopsia. Subjective sensations of light produced by pressure upon the eyeball. **P. of accommoda′tion,** similar affection caused by contraction of the ciliary muscle during the act of accommodation.

**Phosphen′yl.** Compound of phosphorus and phenyl.

**Phos′phide.** Compound of phosphorus with another element.

**Phosphin′.** Hydrogen phosphide, $PH_3$, produced by boiling phosphorus with solution of caustic alkali.

**Phos′phite.** A salt of phosphorous acid.

**Phosphocar′nic acid.** Combination of carnic acid and phosphorus, found in blood, milk, and muscular tissue.

**Phosphomolyb′dic acid.** Combination of phosphorus and oxide of molybdenum, used as a test for alkaloids.

**Phospho′nium.** $PH_4$. Univalent radical; its compounds are like those of ammonium, $NH_4$.

**Phos′phorated.** Phosphureted. Combined or impregnated with phosphorus. **P. oil,** 1 per cent. solution of phosphorus in expressed oil of almonds; Ph. U. S. directs subsequent addition of a small quantity of ether; convenient form for administration of phosphorus. Official as oleum phosphoratum.

**Phosphores′cence.** Luminosity. Property of being luminous without combustion. It is noticed in certain insects, marine animals, fungi, some forms of putrefying organic matter, in some minerals, and is produced by certain bacteria.

**Phosphores′cent.** Producing phosphorescence; luminous without combustion.

**Phos′phoreted.** Containing or united with phosphorus.

**Phosphorhidro′sis.** Phosphoridrosis.

**Phosphor′ic.** Relating to phosphorus. **P. acid,** colorless, odorless, strongly acid liquid, official in the Ph. U. S. and Br. See *Acidum phosphoricum.*

**Phosphoridro′sis.** Phosphorescent sweat, making the body luminous in the dark; reported in malaria, phthisis, and after the ingestion of certain fish.

**Phos′phorism.** Condition produced by long-continued or excessive doses of phosphorus.

**Phos′phorized.** Containing phosphorus.

**Phosphornecro′sis.** Necrosis, especially of the maxillary bones, from chronic phosphorus poisoning, as in those engaged in the manufacture of matches.

**Phos′phorous acid.** Crystalline, deliquescent substance formed by slow oxidation of phosphorus in moist air or by the action of water on phosphorus trioxide. It forms with bases salts called phosphites.

**Phosphoru′ria.** Phosphorescent urine. Also phosphaturia.

**Phos′phorus** (*phos*, light, *phero*, to carry). Translucent, nearly colorless, wax-like, non-metallic element. Sp. gr. 1.83. Soft and flexible at ordinary temperatures; melts at 440° C.; emits white fumes when exposed to the air; ignites at a temperature slightly above the melting-point; insoluble in water, soluble in absolute ether, fatty oils, and abundantly in carbon bisulphide. It is official in the Ph. U. S. and Br. It is a nerve tonic and stimulant, and is employed in the treatment of neuralgia, nervous prostration, impotence, osteomalacia, and rickets. It is an active, irritant poison. See *Poisons.* In acute phosphorus poisoning the vomited matters and tissues are luminous in the dark. Lipowitz's test is to acidulate the suspected liquid with sulphuric acid and boil with sulphur, which abstracts and combines with the phosphorus, which may be recognized by its luminosity or as phosphoric acid. Dose, gr. $\frac{1}{100}-\frac{1}{50}$ (0.0006–0.0013). The following are the official preparations: *Elix′ir phos′phori* (U. S.); dose, ʒss–j (2.0–4.0). *Ol′eum p.* (U. S. and Br.); dose, ♏j–ij (0.065–0.13). *Pil′ula p.* (Br.); dose, gr. j–ij (0.065–0.13). *Pil′ulæ p.* (U. S.), each pill contains about $\frac{1}{100}$ grain (0.0006); dose, 1 or 2 pills. *Spir′itus p.* (U. S.); dose, ♏vij–xv (0.5–1.0). **Amor′phous p.,** red p. **P. necro′sis,** phosphornecrosis. **Red p.,** an allotropic form of p., obtained by heating to 260° C. (500° F.) in carbon dioxide; it is a red powder, not luminous, not poisonous, and therapeutically inert; it is reconverted into ordinary p. on heating in air. **Vit′reous** or **white p.,** ordinary phosphorus.

**Phosphotung′stic acid.** A combination of phosphorus and tungstic acid, used in testing for alkaloids and ptomains.

**Phos′phuret.** Phosphide.

**Phos′phureted.** Phosphorated.

**Phosphu′ria.** Phosphoruria.

**Photæsthe′sia** (*phos*, light, *aisthesis*, sensation). Sensitiveness of the eye to light.

**Photal′gia** (*algos*, pain). Pain in the eyes caused by light.

**Pho′tic** (*phos*, light). Relating or appertaining to light and to the acts concerned in its production in the lower animals.

**Photobacte′rium.** A luminous phosphorescent microorganism; several varieties are described.

**Photobiot′ic** (*phos*, light, *bios*, life). Existing only in light.

**Photocamp′sis** (*kampsis*, bending). Refraction.

**Photochem′istry.** Science of the chemical action of light.

**Photochronog′raphy.** Process of successively photographing objects while moving.

**Photodyspho′ria** (*phos*, light, *dysphoreo*, to bear ill). Intolerance of light.

**Photoëlectric′ity.** Electricity developed by chemical decomposition of the element of the galvanic battery under the effect of light; the element being called the *photo-element.*

**Pho′togene** (*phos*, light, *gennao*, to produce). After-image.

**Photogen′ic** (*gennao*, to produce). Light-producing.

**Photog′raphy.** Producing pictures of objects by the action of light on chemically prepared substances.

**Photohæmotachom′eter** (*phos*, light, *haima*, blood, *tachys*, swift, *metron*, measure). Instrument for measuring photographically the velocity of the blood current.

**Photokinet′ic.** Producing movement with bright rays of light.

**Photol′ogy** (*phos*, light, *logos*, discourse). Science of light and its laws and influences.

**Pho′tolyte** (*lysis*, solution). A substance decomposable under the influence of light.

**Photomagnet′ic.** Relating to or causing photomagnetism.

**Photomag′netism.** Magnetism developed under the influence of light.

**Photoma′nia.** Delirium induced by light.

**Photomechan′ical.** Relating to anything performed under the influence of light.

**Photom′eter.** Apparatus for comparing the intensity of the sources of light.

**Photomet′ric.** Pertaining to photometry. **P. u′nit,** one candle; one-twentieth of the amount of light given off from a surface of melted platinum, 1 cm. square, at the moment of its solidification.

**Photom′etry.** Measurement of the intensity of light.

**Photomi′crograph** (*mikros*, small). Enlarged photograph of a microscopic object.

**Photomicrog′raphy.** The art of reproducing by photography the image of a minute object as seen through a microscope. (See cut on page 872.)

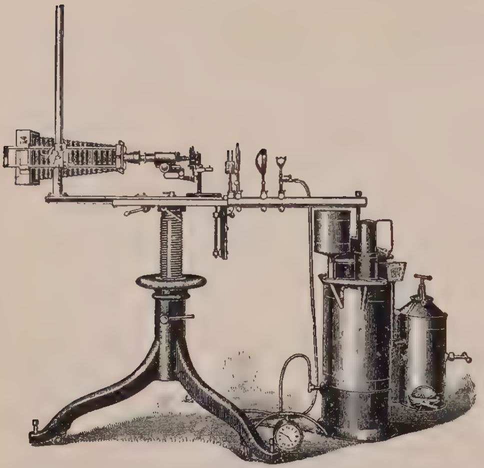
**Photon′osus** (*phos*, light, *nosos*, disease). Disease due to excess of light.

**Photopho′bia** (*phos*, light, *phobos*, fear). Intolerance of the eyes to light.

**Photopho′bic.** Having a dread of the light.

**Pho′tophone** (*phos*, light, *phone*, sound). Apparatus in which sound is transmitted by a beam of light.

**Pho′tophore** (*phos*, light, *phero*, to carry). Electric lamp for illuminating the interior of the body.



Photomicrographic apparatus in horizontal position; arranged with acetylene gas as the illuminant and clock for cutting off the gas at the completion of the exposure.

**Photop'sia** (*phos*, light, *ops*, eye). False perception of light, as of sparks, flashes of fire, etc., occasioned by certain conditions of the retina and brain and by pressure on the eyeball. When pressure does not induce the luminous appearance the existence of amaurosis may be inferred. See *Metamorphopsia*.

**Photoptom'eter** (*phos*, light, *ops*, eye, *metron*, measure). Instrument for measuring the acuteness of vision by reducing light.

**Photoptom'etry.** Measurement of acuteness of vision in diminished light.

**Photorrhex'is** (*phos*, light, *rhexis*, breaking). Refraction of rays of light.

**Pho'toscope.** Fluoroscope.

**Phototax'is** (*taxis*, arrangement). Disposition to be affected by light exhibited by some bacterial or other cellular formations. **Neg'ative p.**, repulsion under influence of light thus shown. **Pos'itive p.**, attraction under the influence of light thus shown.

**Photother'apy** (*phos*, light, *therapeuo*, to cure). The use of light rays as a therapeutic agent, especially in skin diseases. The violet rays affect bacterial growth unfavorably.

**Photoxylin'.** Kind of pyroxylin made by nitrating wood-pulp; recommended for use in the preparation of collodion. When itself applied to a surface, as in plastic surgery, it leaves on evaporation a firmer film than collodion does. Used also in mounting specimens for the microscope.

**Photu'ria.** Luminous condition of the urine.

**Phox'os.** One with a peaked head.

**Phragmid'iothrix.** Genus of *Schizomycetes*, similar to the *Beggiatoa*.

**Phragmi'tes.** A genus of grasses. **P. commu'nis**, common reed, marsh-reed, or cane.

**Phrag'mus** (*phragmos*, fence). A row of teeth.

**Phra'sis.** Articulated voice.

**Phra'sum.** Marrubium.

**Phren** (*phren*, mind). The mind or organ of the mind. Also the diaphragm and scrobiculus cordis.

**Phrenal'gia** (*phren*, mind, *algos*, pain). Melancholia; psychalgia. **P. si'ne delir'io**, melancholy.

**Phrenasthe'nia** (*astheneia*, weakness). Diaphragmatic paresis. Mental weakness.

**Phrenasthen'ic.** Idiotic, imbecile.

**Phrenat'rophy** (*phren*, mind, *a*, priv., *trophe*, nourishment). Wasting or atrophy of the brain.

**Phrenaux'e** (*auxe*, increase). Hypertrophy of the brain.

**Phrene'sia, Phrene'sis.** Phrenitis.

**Phrenet'ic.** Frantic; mad.

**Phrenetis'mus.** Phrenitis.

**Phreniat'rics.** Therapeutics of mental disorders.

**Phren'ic** (*phren*, mind, diaphragm). Relating to the mind. Diaphragmatic. **P. ar'teries**, those supplying the diaphragm: *superior*, from internal mammary; *inferior*, from abdominal aorta. **P. cen'tre**, central tendon of the diaphragm. **P. gan'glion**, small ganglion in the diaphragm connected with the right phrenic nerve and with the solar plexus. **P. nerve**, principal motor nerve of the diaphragm, derived from the cervical plexus, mainly from the fourth cervical; passes across the scalenus anticus, in front of the subclavian artery and root of the lung, between the pericardium and pleura (to which it gives filaments) to the diaphragm. **P. plex'us**, division of the solar plexus accompanying the inferior phrenic artery. **P. veins** correspond to the arteries of the same name; they empty into the inferior cava.

**Phrenic'ula** (or **Phrenetic'ula**) **hydrocephal'ica.** Hydrocephalus internus.

**Phrenis'mus.** Phrenitis.

**Phrenit'ic.** Phrenetic; relating to phrenitis.

**Phreni'tis.** Frenzy, delirium, brain fever, encephalitis; disease characterized by violent pyrexia, pain in the head, redness of the face and eyes, intolerance of light and sound, watchfulness, and delirium, either furious or muttering. Its causes are the same as those of other inflammations; sometimes, however, it is induced by sunstroke, inebriation, violent mental emotions, etc. Some authors have given the name phrenitis and meningitis to inflammation of the membranes of the brain, and that of cephalitis, encephalitis, or cerebritis to inflammation of the substance of the brain; but there are no pathognomonic symptoms which can lead us to refer the seat of the disease to any of those parts exclusively. When the brain and meninges were thought to be affected only symptomatically the disease was formerly called *paraphrenitis*. Hydrocephalus acutus is a variety of phrenitis. **P. aphrodisi'aca**, erotomania. **P. calentu'ra**, insolation; sunstroke. **P. la'trans**, hydrophobia. **P. potato'rum**, delirium tremens. **P. vermino'sa**, phrenitis anciently supposed to be dependent on the presence of a worm in the brain.

**Phrenob'labes** or **Phrenobla'bia** (*phren*, mind, *blapto*, to hinder). Mental impairment; dementia.

**Phrenocol'ic.** Relating to the diaphragm and colon. **P. lig'ament**, fold of the peritoneum passing from the diaphragm opposite the tenth or eleventh rib to the splenic flexure of the colon. It assists in supporting the spleen, forming the splenic recess.

**Phrenocos'tal.** Relating to the diaphragm and ribs.

**Phrenogas'tric.** Relating to the diaphragm and stomach; gastrophrenic.

**Phrenoglot'tic.** Relating to the glottis and diaphragm. **P. spasm**, phrenoglottism.

**Phrenoglot'tism.** Asthma thymicum. Spasm of the glottis considered to originate from the diaphragm.

**Phren'ograph** (*phren*, diaphragm, *grapho*, to write). Apparatus for recording diaphragmatic movements.

**Phrenog'raphy.** Science of the mind; psychology.

**Phrenohepat'ic.** Relating to both diaphragm and liver.

**Phrenolep'sia** (*lepsis*, seizure). Loss of mind.

**Phrenolin'.** Phrenosin.

**Phrenolog'ical.** Relating to phrenology.

**Phrenol'ogy** (*phren*, mind, *logos*, discourse). The pseudoscience of judging of the mental powers of an individual by the external configuration of the skull. It is based upon the assumption that the various faculties of the mind reside in definite regions of the brain surface, and are developed in proportion to the size of the corresponding regions, and further that the cranial bones follow accurately the contours of the brain surface, enabling the examiner, by inspection and palpation of the skull, to locate the corresponding elevations and depressions of the brain.

**Phrenomag′netism** or **Phrenomes′merism.** Animal magnetism.

**Phrenonarco′sis.** Stupefaction; dulling of the senses.

**Phrenoparal′ysis.** Paralysis of the brain or of the diaphragm.

**Phren′opath.** Psychiater.

**Phrenopath′ic.** One who is insane.

**Phrenop′athy** (*pathos*, affection). Mental disease.

**Phrenople′gia** (*plesso*, to stun). Sudden mental failure. Paralysis of the brain or of the diaphragm.

**Phrenosin′.** Nitrogenized substance obtained from white cerebral matter.

**Phreno′sis.** Phrenopathy.

**Phrenosplen′ic.** Relating to the diaphragm and spleen; splenophrenic.

**Phrenother′apy.** Treatment of mental diseases.

**Phren′sy.** Phrenitis or delirium associated with it.

**Phricas′mus.** Emotional shiver; horripilation.

**Phrico′des** (*phrike*, shivering). Fever in which the chill is very intense and prolonged.

**Phric′ogen.** Material producing cold.

**Phronemopho′bia** (*phroneo*, to think, *phobos*, fear). Morbid dread of thought.

**Phrone′sis** (*phroneo*, to think). Reason.

**Phrynin′** (*phryne*, toad). Poison contained in the skin glands of the toad, resembling digitalis in therapeutic action.

**Phthal′ic acid.** A dibasic acid obtained from naphthalene.

**Phthar′sis.** Decomposition; corruption.

**Phtheiræ′mia** (*phtheiro*, to corrupt, *haima*, blood). State in which the plastic powers of the blood are deteriorated.

**Phtheiri′asis,** thir-i′a-sis. Lousiness, lousy disease. The state of being infested with lice. Pediculosis. **P. capillit′ii,** p. of the scalp. **P. cilio′rum,** p. of the eyelashes. **P. cor′poris,** p. of the body. **P. inguina′lis,** infestation with crab-lice. **P. palpebra′rum,** p. ciliorum. **P. pu′bis,** p. inguinalis. **P. supercilio′rum,** p. of the eyebrows.

**Phtheir′ium.** Delphinium staphisagria.

**Phtheir′ius.** Louse. **P. inguina′lis** or **P. pu′bis,** crab-louse.

**Phtheiroc′tonum** (*phtheir*, a louse, *kteino*, to kill). Delphinium staphisagria.

**Phthin′oid.** Having the characters of phthisis.

**Phthiri′asis.** Malis; phtheiriasis; pediculosis.

**Phthir′ium scab′iei.** See *Psora*.

**Phthir′ius.** A louse, pediculus.

**Phthisic,** tiz′ik. Phthisis; tickling cough.

**Phthis′ical,** tiz′ik-al. Relating to phthisis.

**Phthisinoid,** tiz′in-oid. Form of long and flat chest, associated with pulmonary tuberculosis, having a short anteroposterior diameter, prominent scapulæ, depression of spaces above and below the clavicles, etc.

**Phthisiol′ogy** (*logos*, discourse). Treatise on phthisis.

**Phthisiopho′bia.** Morbid fear of phthisis.

**Phthisiother′apy.** Therapeutic treatment of phthisis pulmonalis.

**Phthisipneumo′nia.** Phthisis pulmonalis.

**Phthisis,** te′sis, ti′sis, or thi′sis (*phthio*, to waste away). Consumption. In a general sense, progressive emaciation; it is usually, however, restricted to phthisis pulmonalis, pulmonary tuberculosis. Pulmonary tuberculosis is an infective disease of the lungs caused by the Bacillus tuberculosis. The lesions are characterized by nodular bodies called tubercles, or diffuse infiltration of tuberculous tissue, which undergo caseation or sclerosis, and may finally ulcerate or in some situations calcify. Three chief clinical groups may be recognized: (1) *Tuberculo-pneumonic p.*, acute phthisis; (2) *chronic ulcerative p.;* (3) *fibroid p.* According to the mode of infection there are two distinct types of lesions: (*a*) when the bacilli reach the lungs through the blood-vessels the primary lesion is usually in the tissues of the alveolar walls, in the capillaries, epithelium of air-cells, and the connective-tissue framework of septa; (*b*) when through the bronchi—inhalation tuberculosis—the smaller bronchi and bronchioles are more extensively affected; the process is not confined to single groups of alveoli, but has a more lobular arrangement, and tuberculous masses from the outset are large, more diffuse, and may in some cases involve an entire lobe or greater part of a lung. Until recently the view has been universal that pulmonary phthisis consists in the formation of tubercles in the lungs, which sooner or later soften and break down. According to the nomenclature of the Royal College of Physicians of London, phthisis now includes two general varieties: 1. As allied to scrofula: general constitutional disease with or without scrofula, *tuberculo-pneumonia* and *tuberculous phthisis*. 2. Destructive disintegration of pulmonary tissue, having its source in chronic or acute pneumonia, *acute* and *chronic pneumonic phthisis*. According to recent theories of the nature of phthisis pulmonalis, the affection may occur in non-tuberculous persons, who may never become tuberculous; it may be caused by chronic inflammatory processes in the lungs, such as bronchial catarrh, and especially chronic catarrhal pneumonia, etc., which is preceded by bronchitis, the air-cells and smaller air-cells being next involved and filled with the products of the inflammatory processes. The solid structures may gradually undergo a cheesy or caseous degeneration (see *Tyrosis*) and become softened. Phthisis may be also excited by hæmoptysis, *phthisis ab hæmoptöe*, inducing lobular pneumonia.

The following table (Aitken) affords an exposition of some of the views on this subject, and of the variety of diverse affections productive of ulceration and destruction of the tissue of the lungs included under the generic name of phthisis:

| | |
|---|---|
| 1. Tuberculous, specific, or granular phthisis. | The true gray granulation. Pigmentary tubercle. Fibrous tubercle. Cellular tubercle. |
| 2. Scrofulous or epithelial phthisis. | Primitive yellow tubercle; accumulation, cheesy degeneration, and disintegration of epithelium-like cells. |
| 3. Catarrhal or bronchial phthisis. | Ulceration of bronchi, with adjacent fibroid and cellular deposits, and cheesy degeneration of the same. |
| 4. Pneumonic phthisis. | Disintegration of recent or old deposits, occurring in vesicular, lobular, or lobar pneumonia, primary or secondary, common or scrofulous. |
| 5. Fibrous phthisis (cirrhosis, chronic or interstitial pneumonia). | Fibroid deposits, with cheesy degeneration of imprisoned portion of lung, due to: 1. Mechanical irritation (as in grinders, miners, masons, etc.); 2. Rheumatic inflammation of interlobular tissue; 3. Chronic pleurisy; 4. Constitutional states, as in granular kidney and liver. |
| 6. Lardaceous phthisis. | Circumscribed or diffuse cellular formations composed of lardaceous material. |
| 7. Syphilitic phthisis. | Cheesy disintegration of nodules of nucleo-fibrous tissue, and diffuse infiltration of the same. |
| 8. Hemorrhagic phthisis. | Cheesy degeneration and disintegration of nodules of extravasated blood. |
| 9. Embolic phthisis (including pyæmic deposits and suppurations). | Cheesy degeneration and disintegration of gray or yellow deposits, arising directly or indirectly from pulmonary emboli coming from the liver, lymphatics, or veins. |

The chief symptoms of *tuberculous phthisis* or pulmonary tuberculosis are the following: A sense of uneasiness in the chest, severe fits of coughing, or short and dry cough with dyspnœa, becoming troublesome, especially in the morning, and dyspnœa increased on exertion. The expectoration is evidently purulent, and a bacterioscopic examination will usually reveal the presence of the specific bacillus. The patient has fever in the evening, circumscribed redness of the cheeks, wasting and colliquative sweats early in the morning—*phthisis consummata, pneumophthisis*. In the third stage the hectic is constant, with small pulse, pungent heat, colliquative sweats, diarrhœa, and exhaustion. In some cases the symptoms run their course so rapidly as to constitute what is popularly known as *galloping consumption, phthisis florida. Physical signs:* 1. In the first stage, while there are yet scattered miliary tubercles, there is sometimes a want of freedom in the movements under one or both clavicles. Percussion will generally discover a slight diminution of sound corresponding to the summit of one lung; auscultation shows that the inspiratory murmur is weaker, rougher, or confused. The sound of expiration is more distinct. The voice and cough are rather more resonant, and wheezing or mucous *râles* are occasionally heard in the same region. 2. When the tuberculous deposition has become more abundant the motion of the chest is more markedly diminished. Loss of sound on percussion is more distinct, inspiration on auscultation is bronchial, expiration is louder and more superficial, and the resonance of the voice and cough is increased. The rest of the lung is perhaps healthy, or the respiration may be puerile. 3. When the tubercles are undergoing softening, in addition to the preceding signs, auscultation exhibits a subcrepitant *râle* around the apex of the lung, decreasing from above downward. It is most distinct during or after the cough and at the close of a deep inspiration. Soon the bubbling becomes successively larger, and ultimately gurgling is heard. The inspiration and expiration are cavernous or tracheal. The voice and cough indicate unusual resonance and pectoriloquy. The intercostal spaces are often depressed locally, and percussion may become gradually clearer and even tympanitic as the cavern increases. The treatment of tuberculosis consists essentially in an open-air life. If removal to a place with a sunny, mild, and equable climate, or to one in an elevated region, is impossible, the patient should sleep in an apartment with the windows constantly open, and should sit in the open air all day, and exercise out of doors every day, if no fever is present. The other indications will be to moderate inflammatory action, support the strength, and palliate urgent symptoms.

**Abdom'inal p.**, intestinal or peritoneal tuberculosis. **P. acu'ta**, galloping consumption. **Black p.**, miners' asthma; see *Anthracosis.* **Bron'chial p.**, phthisis occasioned by the pressure of enlarged tuberculous bronchial glands, which not infrequently communicate with caverns in the lungs or with the bronchia. **P. bul'bi**, wasting of the eyeball, the result of inflammation of the internal membranes of the eye, usually a purulent iridochoroiditis. Von Graefe described a form or essential wasting of the ball under the name *essential phthisis bulbi*, in which there is sudden and marked reduction in tension without any pathological change in the interior of the eye, the ball gradually returning to the normal pressure. **P. calculo'sa**, lithiasis pulmonum; formation of calculous concretions in the lungs. **Can'cerous p.**, cancer of the lung, which gives rise to carcinomatous phthisis. **Carbona'ceous p.**, miners' asthma; anthracosis. **Catar'rhal p.**, bronchial p. **Coal'-miners'** or **Col'liers' p.**, anthracosis. **P. cor'neæ**, wasting away of the cornea, which becomes occupied by the cicatrix of a prolapsed iris. **Cot'ton p.**, see *Pneumonia, cotton.* **P. dorsa'lis**, tabes dorsalis. **Essen'tial p. of the eye-ball**, p. bulbi. **P. exulcera'ta**, p. pulmonalis. **Fi'broid p.**, see *Phthisis* and *Cirrhosis of the lung.* **Flax'dressers' p.**, see *Flaxdressers.* **P. flor'ida**, acute phthisis. **Glan'dular p.**, tuberculosis of the lymphatic glands. **Grind'ers' p.**, see *Grinders.* **Hemorrhag'ic p.**, p. with hæmoptysis. **P. hepat'ica**, hepatophthisis. **P. ischiad'ica**, wasting from suppuration of the hip-joint. **Laryn'geal p.**, tuberculosis of the larynx. **Mam'mary p.**, atrophy of the mammary gland, usually the result of suppuration after inflammation. **P. mesera'ica**, tabes mesenterica. **Mill'stone-mak'ers' p.**, see *Millstone-makers.* **P. muco'sa**, see *Bronchorrhœa.* **P. nodo'sa**, p. pulmonalis. **P. no'tias**, tabes dorsalis. **P. pancreat'ica**, cachectic condition with emaciation produced by tuberculous condition of the pancreas. **P. phlegmat'ica**, phthisis in which there is no general falling off in flesh. **P. pituito'sa**, see *Bronchorrhœa.* **Placen'tal p.**, see *Placental.* **Pneumon'ic p.**, see *Phthisis.* **P. pulmona'lis** or **P. pulmo'num**, see *Phthisis.* **P. pupil'læ**, synizesis. **P. pupilla'ris**, smallness of the pupil, often permanent, and the result of iritis. **Re'nal p.**, wasting of the kidney from inflammation, etc. **P. scrophulo'sa**, phthisis pulmonalis. **P. sic'ca**, tabes dorsalis. **Stone'-cutters' p.**, see *Stonecutters.* **P. tuberculo'sa**, tuberculosis pulmonalis, wasting. **P. uteri'na**, wasting from ulceration of the uterus. **P. ventric'uli**, atrophy of the coats of the stomach. **P. vesica'lis**, wasting from ulceration of the bladder.

**Phthi'sis-weed.** Ludwigia palustris.

**Phthisu'ria** (*phthisis*+*ouron*, urine). Diabetes.

**Phtho'ra** (*phthora*, destruction). Corruption; plague.

**Phtho'ric.** Causing corruption. Abortive. **P. acid**, hydrofluoric acid.

**Phu.** Valeriana phu.

**Phucagos'tris mi'nor.** Pila marina.

**Phus'ca.** Mixture of vinegar and water.

**Phy'cit.** Kind of sugar obtained from an alga, Protococcus vulgaris.

**Phy'cochrome** (*phykos*, seaweed, *chroma*, color). A bluish-green pigment of algæ.

**Phycocysti'tis.** Capsulitis.

**Phycoërythrin'.** Red coloring-matter contained in certain algæ.

**Phycol'ogy.** Botany relating to algæ.

**Phycom'yces.** Genus of *Mucorini.*

**Phygan'trus** (*phyge*, flight, *antrum*, antrum of Highmore). Applied to skulls in which a line let fall upon the radius fixus from the most projecting point of the torus frontalis is behind that let fall from nasion by from 6 to 10 mm. (Lissauer).

**Phygeth'ion.** Inflammation of the superficial lymphatic glands, especially of the axilla, not ending in suppuration. A boil.

**Phygœde'ma** (*phyge*, flight). Hysterical or wandering œdema.

**Phygogalac'tics** (*phyge*, flight, *gala*, milk). Agents that arrest the secretion of milk.

**Phygometo'pus** (*phyge*, flight, *metopon*, forehead). Applied to skulls in whih a line drawn from bregma to nasal point makes with the radius fixus an angle of 8° to 33.5° (Lissauer).

**Phygopis'thius** (*phyge*, flight, *opisthe*, behind). Applied to skulls in which a line drawn through the lambda and inion makes with the radius fixus an angle of 106° to 127° (Lissauer).

**Phygoproso'pus** (*phyge*, flight, *prosopon*, face). Applied to skulls in which a line drawn from the nasion to the alveolar point makes with the radius fixus an angle of 38° to 66.5° (Lissauer).

**Phygorrhi'nus** (*phyge*, flight, *rhis*, nose). Applied to skulls in which a line drawn between the nasion and subnasal point makes with the radius fixus an angle of 36° to 66.5° (Lissauer).

**Phylaxin'** (*phylax*, a guardian). A defensive proteid detected in artificially immunized animals. See *Alexin, Sozin, Toxophylaxin, and Mycophylaxin.*

**Phyllac'tis coarcta'ta.** Plant of Peru possessing antispasmodic and vulnerary properties.

**Phyllan'thus dis'ticha.** Ord. *Euphorbiaceæ.* Country gooseberry; East Indian tree; leaves are sudorific; root has active cathartic virtues, and seeds are purgative. **P. multiflo'rus**, plant of East India, having root with alterative properties. **P. urina'ria**, binkohumba, plant employed in Ceylon as a diuretic.

**Phyllos'teophyte** (*phyllon*, leaf, *osteon*, bone, *phyo*, to grow). Laminated osteophyte.

**Phylloxanthin'.** Yellow coloring principle united with phyllocyanin to make up chlorophyll.

**Phyllox'era.** Species of aphidæ which produce excrescences known as galls by puncturing the under side of leaves to deposit their ova. **P. vasta'trix**, grapevine louse, which inflicts much damage on vineyards.

**Phylogen′esis.** Phylogeny.

**Phylogenet′ic.** Pertaining to phylogeny.

**Phylogeny,** fi-loj′en-e (*phylon*, a race, *gennao*, to produce). Evolutionary history, genesis of race, as opposed to ontogeny, development of the individual.

**Phy′ma** (*phyo*, to grow). This word has been used with great latitude; sometimes in the sense of phlegmon, for suppurative tumors larger than a boil, also to include erysipelas, œdema, phlegmon, emphysema, scirrhus, etc., and even hordeolum, furunculus, sycosis, and anthrax. Now used to denote a cutaneous tubercle.

**Phy′matoid** (*phyma*, tubercle, *eidos*, resemblance). State of cancerous tissue in which the dull yellow hue and the consistence are like those of tubercle.

**Phymatorrhisin′** or **Phymatorrhusin′.** Black, granular pigment obtained from melanotic sarcoma.

**Phymato′sis.** Excrescence. Elephantiasis. The presence of cutaneous tubercles. Scrofulous or tuberculous disease.

**Phymolep′ra.** Tubercular leprosy.

**Phy′sa** (*physa*, wind). Crepitation; flatulence; bulla.

**Phy′sagogue** (*physa*, wind, *ago*, to carry off). Carminative.

**Physal′ides.** Plural of physalis, which see.

**Physalin′.** Amorphous bitter principle of Physalis alkekengi.

**Physal′iphore** (*physalis*, bladder, *phoreo*, to carry). A brood-cell or cell containing a vesicle (called physalis or brood-cavity) found in malignant new-growths.

**Phy′salis** (*physalis*, bladder). A brood-cavity, or vesicle found in certain giant cells (physaliphores) in malignant neoplasms. Also a genus of plants, ord. *Solanaceæ*. **P. alkeken′gi,** strawberry tomato; winter-cherry; European; naturalized in U. S. **P. halicac′abum,** physalis. **P. obscu′ra,** P. viscosa. **P. pennsylvan′ica,** P. viscosa. **P. pubes′cens,** P. viscosa. **P. stramo′nium,** Anisodus luridus. **P. visco′sa,** ground cherry; indigenous; berries are diuretic.

**Phys′cia islan′dica.** Lichen islandicus. **P. niva′lis,** Lichen caninus.

**Physco′nia** (*physkon*, the paunch). A generic term comprising every large solid tumor developed in the abdomen. Hyposarca; excessive corpulency. **P. adipo′sa,** accumulation of fat in the intestines. **P. bilio′sa,** distention of the gall-bladder with bile. **P. emphysemat′ica,** accumulation of air in the areolar tissue or between the coats of particular viscera. **P. lie′nis,** tumor of the spleen. **P. mesenter′ica,** tabes mesenterica. **P. splen′ica,** ague-cake. **P. strumo′sa,** tumid abdomen from scrofulous enlargement of the glands.

**Physe′ma.** Tympanites. Emphysematous tumor.

**Physe′ter macroceph′alus** (*physeter*, one that blows, *makros*, large, *kephale*, head). Spermaceti whale. See *Cetaceum*.

**Physiat′rics.** Part of medicine relating to therapeutical application of physical forces, such as heat, light, electricity, etc.

**Phys′ic** (*physis*). Science and art of medicine. Medicament. To *physic* is to administer medicine, or to purge. **In′dian p.,** Euphorbia corollata, Gillenia trifoliata. **P. nut,** Jatropha curcas. **P. root,** Leptandra purpurea.

**Phys′ical.** Pertaining to physics, to matter in mass, and forces acting on it. **P. diagno′sis,** a diagnosis, especially of thoracic diseases, based upon auscultation, inspection, palpation, and percussion. **P. educa′tion,** training of the body by means of gymnastic exercises, etc. **P. examina′tion,** examination of appearances, dimensions, sounds, etc., presented by a patient. **P. signs,** those derived from physical examination.

**Physician,** fiz-ish′an (*physikos*, an investigator of nature). Properly, one who has received his degree from an incorporated institution as doctor of medicine or has been licensed to practise medicine. The French formerly used the word *physicien* in the same sense. It is now appropriated by them to the natural philosopher. *Physicist* is the English equivalent of this. **Botan′ical p.,** herb doctor. **Fam′ily p.,** one regarded as the regular attendant on a family; a general practitioner.

**Phys′icist.** A natural philosopher. See *Physics*.

**Phys′ick's encys′ted rec′tum.** Hypertrophy and dilatation of the pouches of the rectum.

**Physicochem′ical.** Relating to both physics and chemistry.

**Phys′ics** (*physis*, nature). Natural philosophy. The science of the nature and forces of inorganic matter. **Med′ical p.,** iatrophysics; physics directly applied to medicine—to the explanation of the vital phenomena, the preservation of the individual, or the treatment of disease.

**Physiogeny,** fiz-e-oj′en-e (*physis*, nature, *gennao*, to produce). Development of function.

**Physiog′nomist.** One versed in physiognomy.

**Physiognomon′ic.** Relating to physiognomy.

**Physiog′nomy** (*physis*, nature, *gnome*, knowledge). The art of determining the disposition from the external appearance, especially the features. The face as indicative of character. The external appearance of anything.

**Physiolog′ical.** Relating to physiology, especially to normal, as distinguished from pathological physiology. **P. albuminu′ria,** alimentary albuminuria, caused by the ingestion of more albumin than can be oxidized in the system. **P. anat′omy,** see *Anatomy*. **P. an′tidote,** one which when administered to a healthy person produces effects opposite to those produced by the poison of which it is the antidote. **P. doc′trine,** Broussaism. **P. salt solu′tion,** see *Salt solution*. **P. test,** trial by its physiological action upon animals of a substance suspected of being poisonous.

**Physiologico-anatom′ical.** Relating to physiology and anatomy.

**Physiologico-histological,** fiz-e-o-loj′ik-o-his-to-loj′ik-al. Relating to physiology and histology.

**Physiol′ogism.** Abuse of physiology. The improper application of physiological data to the theory of disease.

**Physiol′ogist.** One versed in physiology.

**Physiol′ogy** (*physis*, nature, *logos*, description). Science of vital phenomena of organisms and their relations to chemical and physical laws. *General p.* treats of the general laws of life; *special*, of the nature and functions of particular organs, as heart, lungs, etc. It is called zoöphysiology or zoöbiology, *animal physiology*, and phytophysiology or phytobiology, *vegetable physiology*, according as it considers the life of animals or of vegetables singly. To the former belongs the physiology of man, *human physiology*. Physiology is also qualified as *normal* or *hygienic physiology*, to distinguish it from *pathological* or *morbid physiology* or pathology.

**Physiol′ysis** (*physis*, nature, *lyo*, to dissolve). Natural decomposition of organic matter by oxidation, putrefaction, etc.

**Physiomed′icalism.** Eclectic and Thomsonian doctrines combined.

**Physion′omy** (*physis*, nature, *nomos*, law). Natural philosophy.

**Physiopathol′ogy.** Study of function as modified by disease.

**Physiother′apy.** Expectant treatment.

**Physique′.** Physical structure; constitution.

**Physo-** (*physa*, air). In composition, air.

**Phy′socele.** Pneumatocele. Emphysematous tumor of the scrotum; intestinal hernia containing much flatus.

**Physoceph′alus.** Emphysema of the head.

**Physocœl′ia** (*koilia*, intestines). Tympanites.

**Physocol′ica.** Flatulent colic.

**Physo′des** (*physa*, air). Full of air; apparently full of air—applied to tumors, etc.

**Physodyspnœ′a.** Dyspnœa from emphysema.

**Physohæmatome′tra** (*physa*, air, *haima*, blood, *metra*, womb). Accumulation of sanguineous fluid and gas in the womb.

**Physohydrome′tra** (*physa*, air, *hydor*, water, *metra*, uterus). Watery fluid, mixed with air, in the cavity of the uterus.

**Physom′eter** (*physao*, to inflate, *metron*, measure). Instrument for determining variations in volume of the confined body of air.

**Physome′tra** (*physa*, air, *metra*, womb). Tympany of the womb; uterine tympanites. Accumulation of gas in the uterus, causing a light, tense, circumscribed protuberance in the hypogastrium, obscurely sonorous, with wind occasionally discharged through the os uteri with noise.

**Physon′cus** (*onkos*, swelling). Emphysema.

**Physos′cheocele** (*physa*, air, *osche*, scrotum, *kele*, tumor). Scrotal emphysema.

**Physospas′mus.** Flatulent colic.

**Physosterin′.** Substance allied to cholesterin, found in physostigma.

**Physostig′ma** (Ph. U. S.), **Physostig′matis sem′ina** (Ph. Br.). Calabar bean, the seed of **P. veneno′sum**, leguminous, woody, climbing plant of West Africa. The seed, physostigma (Ph. U. S.), is the Calabar bean, ordeal bean or nut. It contains alkaloids physostigmine or eserine and calabarine; used by the Africans in trial by ordeal. It is a motor depressant and antispasmodic, employed in tetanus, chorea, and other spasmodic affections, and in paralysis to prevent muscular wasting; dose of the powdered bean, gr. j–ij (0.065–0.13). The following preparations are official: *Extrac′tum physostig′matis* (U. S. and Br.); dose, gr. $\frac{1}{16}$–$\frac{1}{8}$ (0.004–0.008). *Tinctu′ra p.* (U. S.); dose, ♏v–xx (0.32–1.3).

**Physostigmatine′.** Eserine.

**Physostigmi′na** or **Physostigmine′.** $C_{15}H_{21}N_3O_2$. Eserine. Amorphous alkaloid principle of Calabar bean, used to produce contraction of the pupil, internally in paralysis, and as an antidote to strychnine and atropine. Powerful depressant, nerve-poison; slightly soluble in water, soluble in alcohol, ether, chloroform, benzol. Bromine in potassium bromide gives with it a red color (very delicate); most satisfactory test is that of application to the pupil. **P. sal′icylate**, eserine salicylate, official in Ph. U. S., is said to be less liable to decomposition than other salts of physostigmine; chiefly used externally in ophthalmic practice as a mydriatic; internally, in doses gr. $\frac{1}{150}$–$\frac{1}{100}$ (0.00043–0.00064), in spasmodic nervous affections, atonic dyspepsia, and as an antidote to strychnine. **P. sul′phate**, eserine sulphate, official in the Ph. U. S. and Br.; occurs in yellowish-white, granular crystals; dose, gr. $\frac{1}{150}$–$\frac{1}{100}$ (0.00043–0.00064). It is used also by veterinary surgeons in colic.

**Physotho′rax.** Pneumothorax.

**Phytal′bumoses.** Vegetable albumoses.

**Phytanat′omy.** Vegetable anatomy.

**Phytel′ephas macrocar′pa.** Tree of South America, elephantasia, the dense albumin of whose nut is the vegetable ivory, which is as durable and nearly as hard as the ivory of the elephant.

**Phyterythrin′.** Coloring-matter which gives to plants and leaves their red color in the fall of the year.

**Phyteu′ma spica′tum.** European herb, the juice of which is narcotic.

**Phy′tiform.** Phytoid.

**Phytiv′orous** (*phyton*, plant, *voro*, to devour). Feeding or subsisting on vegetables.

**Phyto-** (*phyton*, plant). Greek prefix signifying connection with or relation to vegetable organisms.

**Phytoalope′cia.** Porrigo decalvans.

**Phytobiol′ogy.** Vegetable biology.

**Phy′toblast** (*phyton*, plant, *blastos*, sprout). Living body containing protoplasm, of which the cell-unit is composed.

**Phytochem′istry.** Chemistry of plants.

**Phytocol′la.** Extractive from belladonna.

**Phy′tocyst** (*phyton*, plant, *kystis*, cyst). Cyst in which the phytoblast is contained.

**Phytoder′mata** (*phyton*, plant, *derma*, skin). Cutaneous diseases dependent on parasitic vegetable organisms.

**Phytogen′esis.** Germination.

**Phytogenet′ic** or **Phytogen′ic.** Of vegetable origin.

**Phytogenous**, fi-toj′en-us (*phyton*, plant, *gennao*, to bring forth). Due to a vegetable growth.

**Phytogeog′raphy.** Geographical botany.

**Phytog′raphy.** Description of plants.

**Phy′toid** (*phyton*, plant, *eidos*, appearance). Phytiform. Having the form or appearance of a vegetable growth.

**Phytolac′ca decan′dra.** Pokeweed, American nightshade, cancer root, pokeberry, pigeon berry, jalap cancer root, red weed, red nightshade, ord. *Chenopodeaceæ*. The berries, Phytolaccæ fructus, pokeberry, and root, Phytolaccæ radix, pokeroot, are official in the Ph. U. S. The young stems, when boiled, are sometimes eaten; but, when old, they must be cautiously used, as the plant is emetic and cathartic. Pokeweed is employed in chronic rheumatism, and as an alterative. Dose of the berry, gr. j–x (0.065–0.65) or more in infusion; of the root, gr. j–v (0.065–0.32). *Extrac′tum phytolac′cæ rad′icis flu′idum* is official; dose, ♏j–x (0.065–0.65) or more. It is also used in cutaneous eruptions, tinea capitis, itch, cancerous ulcers, etc. **P. dras′tica**, species possessing a root with active purgative properties.

**Phytolac′cic acid.** Amorphous principle separated from phytolacca berries.

**Phytolaccin′.** Name improperly given to powdered alcoholic extract of phytolacca; more correctly, a neutral principle found in it.

**Phytolaccotoxin′.** Poisonous alkaloid prepared from a Japanese species of phytolacca.

**Phytol′ogy** (*phyton*, plant, *logos*, a discourse). Botany.

**Phytomelin′.** Rutin.

**Phytomen′tagra** (*phyton*, plant+*mentagra*). Sycosis.

**Phytomyce′tes** (*mykes*, fungus). Moulds, as in putrid urine.

**Phyton′omy.** Vegetable physiology.

**Phytopar′asite.** A parasite from the vegetable kingdom. Epiphyte.

**Phytoparasit′ic.** Relating to or caused by a vegetable parasite.

**Phytopathol′ogy.** Properly, the pathology of vegetables; but occasionally applied to the pathology of morbid states induced by vegetable growths.

**Phytoph′agous** (*phyton*, plant, *phago*, to eat). Phytivorous, herbivorous. Feeding or subsisting upon vegetables.

**Phytoph′thora** (*phyton*, plant, *phthora*, destruction, corruption). Genus of fungi. **P. infes′tans**, fungus causing potato disease.

**Phytophysiol′ogy.** Vegetable physiology.

**Phy′toplasm** (*phyton*, plant, *plasso*, to form). Substance in vegetable cells analogous to protoplasm.

**Phyto′sis.** A disease, especially cutaneous disease, of phytoparasitic causation. **P. annula′ta**, tinea circinata. **P. circina′ta**, a term employed by E. Wilson for ringworm of the hairless skin. **P. favo′sa**, porrigo favosa. **P. ton′surans**, porrigo decalvans. **P. versic′olor**, tinea versicolor.

**Phytostearin′** (*phyton*, plant, *stear*, fat). Fatty matter like cholesterin derived from plants.

**Phytot′omy** (*phyton*, plant, *tome*, section). Vegetable anatomy.

**Phytovitellin′.** Vegetable vitellin; globulin-like body resembling animal vitellin, found in seeds of many plants, as in the pumpkin.

**Phytozo′on** (*phyton*, plant, *zoon*, animal). Lowest class of animals, seeming to form a transition between the animal and vegetable kingdoms. Zoöphyte.

**Pi′a.** Pia mater. **P.-arach′noid**, the pia mater and arachnoid regarded as a single membrane. **P. ma′ter** (delicate mother), a very delicate membrane which covers the brain immediately, penetrates into its anfractuosities, and envelops also the cerebellum and the spinal cord. The exterior pia mater is the portion of membrane which covers the exterior of the encephalon and faces the arachnoid externally; the interior pia mater is that which lines the cerebral fossa, into which it penetrates by a cleft situated between the posterior part of the corpus callosum and the fornix, and by two other fissures, situated between the corpora fimbriata and the thalami nervorum opticorum. It contains a number of granulations similar to the glandulæ Pacchioni. **P. m. tes′tis,** tunica vasculosa. **P. men′inx,** pia mater. **P. spina′lis,** pia of spinal cord.

**Pi′al.** Relating to the pia mater. **P. sheath,** sheath of optic nerve.

**Pian′.** Frambœsia; yaws.

**Pian′ists′ cramp.** Painful spasm of the muscles of the forearm due to excessive piano practice.

**Pi′ar.** Fatness.

**Piarachni′tis.** Inflammation of the pia mater and arachnoid membrane conjointly.

**Piarach′noid.** Pia mater and arachnoid membrane considered as one.

**Piarhæ′mia** (*piar*, fat, *haima*, blood). Fat in the blood.

**Piarolyt′ic** (*piar*, fat, *lyo*, to dissolve). Fat decomposing or emulsifying.

**Piarrhæ′mia.** Piarhæmia.

**Pi′ca.** Morbid appetite for unusual articles of food. Malacia. **P. africano′rum,** chthonophagia.

**Pic′ac.** Euphorbia corollata.

**Picacis′mus** (*pix*, pitch). Depilation by means of a pitch plaster.

**Pic′amar.** Bitter, oily compound found in heavy oil of tar.

**Pica′tion.** Picacismus.

**Pice′a** (*pix*, pitch). Pinus abies.

**Picea′lis.** Produced by tar.

**Picein′.** Glucoside from picea excelsa.

**Pi′ceol.** A derivative of picein.

**Pi′ceous.** Having the nature of pitch. Thick; viscous.

**Pi′chi.** Terebinthinate wood of Fabiana imbricata of Chile; has been used in lithiasis, cystitis, and other diseases of the bladder, in decoction or in fluid extract; dose of the latter, ♏xv–xxx (1.0–2.0).

**Pichu′rim beans.** The seed—Para nut, sassafras nut, puxiri, Brazilian nutmeg—of a tree supposed to be Nectandra puchury, puchyury, or puchyry of the Brazilians, ord. *Lauraceæ*, which grows in Brazil, Guiana, Venezuela, and other parts of South America. They are of an elliptical shape, flat on one side, convex on the other; of an aromatic odor between that of nutmeg and sassafras; and of a spicy, pungent taste. The medical properties are the same as those of other aromatics. **P. bark,** a fragrant bark resembling cinnamon; see *Pechurim cortex*. **P. cam′phor,** body contained in fat of pichurim analogous to laurel camphor. **P. fat,** matter resembling butter occurring in pichurim beans, consisting of laurin and pichurim camphor.

**Pick's bun′dle.** Occasional collection of nerve-fibres in the medulla oblongata, in association with the pyramidal tract. **P.'s disease′,** pseudocirrhosis of the liver, sometimes accompanying adhesive pericarditis.

**Pick′erelweed.** Unisema deltifolia.

**Picoline′.** $C_6H_7N$. Methyl-pyridine. A liquid base in coal-tar oil and in Dippel's animal oil.

**Pi′cra** (*pikros*, bitter). Pulvis aloës et canellæ.

**Picraconine′.** Derivative of picraconitine by saponification with an alkali.

**Picraconitine′.** $C_{25}H_{29}NO_{10}$. Alkaloid from Aconitum napellus, either pre-existing in the plant or an accidental product due to the method of preparation.

**Picræ′na excel′sa** (*pikraino*, to be bitter). Quassia.

**Picram′nia antides′ma.** Shrub of Mexico and West Indies; genus of *Simarubæ;* bark—cascara amagra, Honduras bark—recommended as an alterative in syphilis. **P. cilia′ta,** native of Brazil; bark used as a substitute for cascarilla.

**Picranis′ic acid.** Picric acid.

**Pic′ras.** Picrate. **P. japon′ica,** a plant of Japan with tonic, antidysenteric, and febrifuge properties.

**Picras′ma excel′sa.** Picræna excelsa.

**Pic′rate.** Salt of picric acid.

**Pic′ratol.** Trinitrophenolate of silver.

**Pic′ria.** Bitterness.

**Pic′ric acid.** $C_6H_3N_3O_7$. Carbazotic acid; trinitrophenic, nitrophenisic acid; bright yellow, inodorous, crystalline substance, having an acid and extremely bitter taste, staining organic matter permanently yellow. It is obtained by heating a mixture of carbolic and strong nitric acids, evaporating, and crystallizing. It is used for hardening tissues for microscopic examination, as a test for albumin and mucin, as an application to burns, and internally as an antiperiodic; dose, gr. $\frac{1}{4}$–ij (0.016–0.13). In large doses it destroys the red blood corpuscles and causes jaundice. **P.-a. test**, for glycosuria, deep red coloration of picric-acid solution in glycosuric urine when liquor potassæ is added.

**Picrin′.** Bitter substance from Digitalis purpurea, said to be identical with digitalin.

**Pic′ris** (*pikros*, bitter). Cichorium intybus.

**Pic′rium spica′tum.** Coutoubea alba.

**Picroaconitine′.** Picraconitine.

**Picrocar′mine.** Staining fluid employed in microscopic examinations, made by adding picric acid to an ammoniacal solution of carmine.

**Picroch′olos** (*pikros*, bitter, *chole*, bile). Bilious.

**Picrogly′cion.** Peculiar principle isolated from dulcamara, having bitter-sweet taste.

**Pi′crol.** $KC_6HI_2(OH)_2SO_3$. Diiodoresorcin-monosulphonate of potassium; a colorless, soluble, bitter, crystalline substance, employed externally as a substitute for iodoform; made by acting on resorcin-monosulphonate of potassium with solution of iodic and hydriodic acids.

**Pic′romel** (*pikros*, bitter, *meli*, honey). Bilin. Colorless, soft substance, of acrid, bitter, saccharine taste, nauseous smell, and very soluble in water, considered to be a bilate of soda. It is not an immediate principle, but a mixture of different substances. It forms part of the bile, and is generally classed among the animal immediate principles.

**Picropodophyllin′.** A principle found in Podophyllum peltatum.

**Picropodophyl′lon.** Intensely bitter, crystallizable compound produced by action of ammonia on podophyllotoxin; cholagogue, cathartic.

**Pic′ros** (*pikros*, bitter). Bitter. See *Amarus*.

**Picrotin′.** One of the constituent principles of picrotoxin.

**Picrotoxin′** (*pikros*, bitter, *toxikon*, poison). (Ph. U. S. and Br.) A bitter, neutral principle obtained from Anamirta paniculata, cocculus indicus; occurring in colorless, prismatic crystals. A motor stimulant, bitter tonic, remedy for night-sweats, and parasiticide. Dose, gr. $\frac{1}{100}$–$\frac{1}{50}$ (0.00064–0.0013). Sparingly soluble in water, very soluble in alcohol and chloroform. Reacts like grape-sugar to Trommer's test. Cocculus indicus owes its poisonous properties to this principle. It is a physiological antidote to opium.

**Picrotoxi′num.** Official (Ph. U. S. and Br.) name of picrotoxin.

**Pie′baldskin.** Achroma vitiligo; acquired achroma.

**Pied ne′gro.** Dappling of a negro's skin from partial decoloration after enervating diseases. **P. skin,** piebald skin.

**Piedosa,** pe-a-do′sah. Disease similar to dengue existing in Spain in the eighteenth century.

**Piedra,** pe-a′drah. Form of trichorrhexis nodosa.

**Pie′plant.** Rheum rhaponticum.

**Piezometer,** pi-e-zom′e-ter (*piezo*, to press, *metron*, measure). Apparatus for testing pressure, and in medicine for testing the sensitiveness of the skin to pressure; also for estimating compression of gases.

**Pig′-backed kid′ney.** Form of alcoholic venous congestion of the kidney.

**Pig′eon ber′ry.** Phytolacca decandra. **P. breast,** malformation of the thorax consisting in a sinking in of the costal cartilages at each side of the sternum and a projection forward of that bone. **P. louse,** Dermanyssus avium. **P. tree,** Aralia spinosa.

**Pig′ment.** An organic coloring-matter. A stain for histological or bacteriological work. A preparation used in dermatology. **Bil′iary p.,** see *Bile*. **Blood p.,** hæmoglobin. **P. cells,** cells normally containing pigment granules. **P. embo′lia,** pigmentary embolism. **P. gran′ule,** a minute, amorphous collection of pigment matter. **P. liv′er,** blackish appearance of the liver after malarial fevers, from the accumulation of pigment matter in its vascular apparatus. **Respi′ratory p.,** histohæmatin. **P. sarco′ma,** see *Sarcoma*. **P. spot,** nævus. **U′veal p.,** pigment on posterior part of iris, on ciliary processes, and choroid.

**Pigmen′tal.** Pigmentary. Having relation to pigment or coloring-matter. **P. appara′tus,** apparatus concerned in the coloration of the skin of the dark races of man. **P. em′bolism,** see *Pigmentary*.

**Pig′mentary.** Pigmental. **P. degenera′tion,** pigmentation. **P. em′bolism,** condition met with in bad cases of malarial fever. Pigment is formed in the spleen, whence it is carried to the liver, the smaller flakes thence passing into the general circulation, and when deposited in the cutaneous capillaries giving a peculiar malarious tint to the skin. **P. lay′er,** outer stratum of the retina, composed of pavement epithelium, thickly filled on the inner surface with pigment. **P. mole,** nævus pigmentosum. **P. næ′vi,** see *Nævus*. **P. syph′ilide,** syphiloderma maculosum. **P. tuber′culide,** melanoderma of the scrofulous.

**Pigmenta′tion.** Degeneration of tissues in which pigment takes the place of their minute elements.

**Pig′mented.** Containing pigment; dark.

**Pigmen′tum** (*pingo*, to paint). Pigment. **P. in′dicum,** indigo. **P. i′odi et o′lei pi′cis,** Coster's paste. **P. ni′grum,** uveal pigment. **P. ura′cu,** terra orleana.

**Pig′my.** Pygmy.

**Pig′nut.** The bulbous root of Bunium bulbocastanum, ord. *Umbelliferæ*. It has been considered styptic, and serviceable in atonic affections of the kidney.

**Pigodid′ymus** (*pyge*, buttock, *didymos*, double). Monster consisting of two bodies connected about the buttocks.

**Pig's flare.** Adeps.

**Pig-ty′phoid.** Swine-plague.

**Pig′weed.** Chenopodium album; said to be sedative and antihemorrhoidal.

**Pii′tis.** Inflammation of the pia mater.

**Pikrotoxin′.** Picrotoxin.

**Pi′kry** (*pikros*, bitter). Pulvis aloës et canellæ.

**Pi′la.** A ball. Mortar and pestle. **P. dama′rum,** ægagropila. **P. mari′na,** certain light, round, depressed, or oblong masses, inodorous and insipid, in which rushes, hairs, and the *débris* of shells are met with. These are found on the seashore, and consist chiefly of the roots of big tangles, ware, wair, seaware, seawrack, eel grass. Iodine is detected in the ashes, which accounts for their success in goitre. They have also been given as a vermifuge. **P. rupicapra′rum,** ægagropila.

**Pi′lar.** Pileous; pertaining to or covered with hair. **P. mus′cles,** arrectores pilorum.

**Pil′ary.** Relating to or situated at the point of exit of a hair.

**Pilas′tered.** In anatomy, having a fluted appearance. **P. fe′mur,** condition found in some races, in which the backward concavity of the shaft of the femur is intensified and the linea aspera prominent.

**Pila′tion** (*pilus*, a hair). Fracture of the cranium in which the fissure is narrow and has the appearance of a hair—a *capillary fissure*.

**Pile** (*pilus*). Hair. Hemorrhoid. Battery. **Prostat′ic p.,** state in which the prostate is enlarged and hemorrhages take place. **Thermoelec′tric p.,** collection of delicate metallic bars soldered together; when heated, an electrical current is developed, which moves a registering index, showing amount of heat.

**Pi′lea pu′mila.** Richweed, clearweed, coolweed; indigenous; ord. *Urticaceæ;* has been used as a wash in poisoning by rhus; it has a strong, grateful smell.

**Pile′olum** (dim. of pileus). Aponeurosis of occipitofrontalis muscle.

**Pi′leous.** That which relates to hair; hairy. **P. sys′tem** of Bichat is that formed by the hair; it comprises the different species of hair of the human body.

**Piles.** Hæmorrhoids.

**Pi′leum.** A hemisphere of the cerebellum.

**Pile′wort.** Ranunculus acris and R. ficaria.

**Pi′li** (pl. of pilus) **annula′ti.** Monilethrix, leucotrichia. **P. cap′itis,** see *Capillus*. **P. cibo′tii,** hairs of fern, Cibotium barometz; used as a styptic in hemorrhage from wounds. **P. cu′tis,** lanugo. **P. gossyp′ii,** cotton. **P. palpebra′rum,** cilia. **P. pudendo′rum,** hair of the pubes. **P. subaxilla′res,** hair under the axillæ.

**Pilif′erous** (*pili*, hairs, *fero*, to bear). Pile- or hair-bearing, as a piliferous cyst—one containing hair.

**Pi′liform** (*pilus*, hair, *forma*, form). Having the form of a hair.

**Piliganine′.** $C_{15}H_{24}N_2O$. Alkaloid from Lycopodium saussurus. Tetanic, emetocathartic.

**Pilimic′tion** (*pili*, hairs, *mingo*, *mictum*, to urinate). Passing of filamentous bodies in the urine.

**Pill.** Pilula; medicine in small, globular mass that may be swallowed without mastication. **Ab′ernethy's p.,** see *Pilulæ hydrargyri*. **An′derson's p.,** aloes, black hellebore, jalap, carbonate of potassium, and oil of anise. **Asiat′ic p.,** arsenic pills, each containing about $\frac{1}{15}$ grain. **Bach′er's p.,** extract of black hellebore, myrrh, and caraway; tonic and emmenagogue. **Bar′clay's antibil′ious p.** contains colocynth, jalap, guaiac, tartar emetic, and various aromatic oils, with syrup of buckthorn. **Bar′thez's p.,** pilula aloës et myrrha. **Bec′querel's p.,** formed of quinine, extract of digitalis, and colchicum seed. *Debout's pills* are said to have a like composition. **Bellos′te's p.,** made of metallic mercury, white honey, Cape aloes, black pepper, rhubarb, and scammony. **Blair's p.,** an empirical preparation of colchicum, used in cases of gout. **Blan′card's p.** contains iodide of iron. **Blaud's p.,** pilula ferri carbonatis (Ph. U. S.), made of gum tragacanth, sulphate of iron, and subcarbonate of potassium. **Blue p.,** pilula hydrargyri. **Boer′haave's p.** contains red sulphide of mercury. **P. of Bon′tius,** made of Barbadoes aloes, gamboge, gum ammoniac, and white vinegar. **Co′chy p.,** made of aloes and colocynth. **Debout's′ p.,** Becquerel's p. **Din′ner p.,** various so-called dinner pills contain aloes and mastich, aloes and quinine, rhubarb, etc. **Dupuytren's′ p.,** made of bichloride of mercury, extract of opium, and extract of guaiac. **Everlast′ing p.,** a pill once in vogue, and said to be composed of metallic antimony. It was believed to have the property of purging as often as it was swallowed, being recoverable after passing through the bowels unchanged. **Foth′ergill's p.,** made of aloes and colocynth. **Frank's p.,** pill of aloes and quinine. **Ful′ler's p.,** made of aloes and asafœtida. **Grif′fith's p.,** pilula ferri composita, made of iron sulphate, sodium carbonate, and myrrh. **Grif′fitt's p.,** pilula rhei composita. **Gum p.,** pilula galbani composita. **Har′vey's p.** contains aloes and colocynth. **P. of Helve′tius,** made of alum, sandragon, and honey of roses. **Hol′loway's p.** contains aloes and jalap. **Hoop′er's p.,** pill of aloes and myrrh. **Key′ser's p.** contains acetate of mercury. **Lady Cres′pigny's p.,** pill of aloes and quinine. **Lady Hes′keth's p.,** pill of aloes and quinine. **Lady Web′ster's p.,** pill of aloes and mastich. **Lartigue's′ p.,** composed of compound extract of colocynth, extract of colchicum seeds, and extract of digitalis; used in gout. **Laville's′ p.,** said to consist of physalin, silicate of sodium, and powdered chamædrys; one is taken before a meal, for several weeks, in a case of gout. **Lee's New Lon′don p.,** composed of scammony, gamboge, calomel, jalap, aloes, soap, and syrup of buckthorn. **Lee's Wind′ham p.** consists of gamboge, aloes, soap, and nitrate of potassium. **Mat′thew's p.**, pill of hellebore and myrrh. **Meg′lin's p.**, made of alcoholic extract of hyoscyamus, alcoholic extract of valerian, and sublimed oxide of zinc. **Mof′fat's p.** contains aloes and camboge. **Mor′rison's p.**, camboge, aloes, and cinnamon. **Mose′ley's p.**, pilula rhei composita. **Nie′meyer's p.**, composed of digitalis, opium and quinine. **Pe′ter's p.**, pill of aloes and camboge. **Plum′mer's p.**, pilula antimonii composita. **Red p.**, Plummer's p. **Ricord's′ p.**, see *Ricord*. **Ru′dius's p.**, pill of aloes and colocynth. **Ru′fus's p.**, pill of aloes and myrrh. **Rush's p.**, pill of aloes and camboge. **Scotch p.**, composed of aloes and asafœtida. **P. of Sédillot′**, made of mercurial ointment, medicinal soap, and licorice powder. **Speed′iman's p.**, pill of aloes and myrrh. **Squat′ting p.**, opium pill, containing one grain. **Stahl's p.**, pill of aloes and asafœtida. **Stark′ey's p.** contains black hellebore, myrrh, and caraway. **Stomach′ic p.**, variously made of aloes, quinine, and rhubarb. **Tanjore′ p.**, Asiatic pill. **Vallet's′ p.**, massa ferri carbonatis. **Web′ster's p.** contains aloes and quinine. **Whytt's p.**, made of aloes and asafœtida.

**Pil′lars.** In anatomy, structures of columnar form serving as appendages to a vaulted organ. **P. of Cor′ti**, rods of Corti. **P. of di′aphragm**, see *Diaphragm*. **P. of exter′nal abdom′inal ring**, two diverging bundles of fibres implanted on either side, the inner to the anterior surface of the symphysis pubis, the outer with Poupart's ligament upon the spine of the pubis. **P. of fau′ces**, curved arches at the sides of the passage from the mouth to the pharynx, formed by the prominence of the muscles; anterior occupied by the palatoglossus, posterior by the palatopharyngeus. **P. of for′nix**, continuation of the fornix downward toward the base of the brain; anterior pass down in front of foramina of Monro, and can be traced as *radices descendentes fornicis* to the maxillary tubercles, thence reflected upward as *radices ascendentes fornicis*, or bundles of Vicq d'Azyr, to the basis of the anterior nucleus of the optic thalamus; posterior usually called crura of fornix. **P. of ve′lum pala′ti**, pillars of the fauces.

**Pill′-bearing spurge.** Euphorbia pilulifera.

**Pill′box hydat′id.** See *Acephalocyst*.

**Pillicosh′y** or **Pilliocau′sia.** Hiera picra.

**Pilocarpidine′.** Alkaloid from pilocarpus.

**Pilocarpi′na.** Pilocarpine.

**Pilocarpi′næ hydrochlo′ras.** (Ph. U. S.) White crystals, soluble. Usually given hypodermically in dose of gr. ⅛ (0.008) as a diaphoretic in dropsy, diseases of the chest, diphtheria, rheumatism, skin diseases, etc. Externally applied as a hair invigorator in washes, pomades, etc., and in solution as a mydriatic. **P. ni′tras** (Ph. Br.), white, granular crystals; employed for the same purposes as the hydrochlorate in doses of gr. $\frac{1}{20}$–$\frac{1}{2}$ (0.0032–0.032).

**Pilocarpine′.** $C_{11}H_{16}N_2O_2$. Alkaloid from pilocarpus. Soft mass, used principally as the hydrochloride or hydrochlorate.

**Pilocar′pus.** (Ph. U. S.) Jaborandi folia (Ph. Br.). Leaflets of Pilocarpus selloanus and P. jaborandi. Active diaphoretic; dose, ʒss–j (2.0–4.0) in infusion. *Extrac′tum pilocar′pi flui′dum* is official in the Ph. U. S.; dose, ʒss–j (2.0–4.0). Its active principle is pilocarpine; jaborine is another alkaloid separated from it, but resembling atropine in action.

**Pilocys′tic tu′mors** (*pilus*, hair). Encysted tumors containing hair and fatty matters—dermoid cysts.

**Pilomo′tor.** Causing motion of the hair, as pilomotor nerves, which supply the arrectores pilorum muscles.

**Piloni′dal** (*pilus*, hair, *nidus*, nest). Containing a collection of hair in a cyst, as in a nest. **P. fis′tula** or **si′nus**, sinus in the vicinity of the anus, suppuration from which is generally due to the presence of a collection of hair in the tissues.

**Pi′lose.** Hairy.

**Piloseba′ceous.** Sebaceous glands or matter connected with the hair.

**Pilosel′la** (*pilosus*). Hieracium pilosella. **P. alpi′na**, Hieracium pilosella.

**Pi′lous.** Pileous.

**Pil′ula** (dim. of *pila*, a ball). A pill. A mass, weighing from one to five grains, of a firm consistence and spherical form, intended to be swallowed at once without chewing. The pill differs from the bolus, the latter being softer and larger. Medicines are often given in the form of pill on account of their disagreeable taste and odor, and for the like reason pills are now sugar-coated or gelatin-coated. Pilula in the Ph. Br. also means a pilular mass (massa, Ph. U. S.), formed by the amalgamation of the different articles that enter into the composition of the pill. To form the mass into pills it is rolled out and divided by the spatula on a smooth square of porcelain, glass, marble, or hard wood, called a pill-tile, or by a pill machine. The British Pharmacopœia has directions for various forms of pilula, or pill in mass, but, unlike the Ph. U. S., has no pilulæ or separate pills.

**Pil′ulæ** (pl. of pilula). See *Pilula* and *Pill*. The following are the official pilulæ (Ph. U. S.) or pilula (Ph. Br.): **P. al′oës** (U. S.), **P. a. barbaden′sis** (Br.), containing each gr. ij (0.13). **P. a. et asafœ′tidæ** (U. S. and Br.), each pill contains aloes, asafœtida, and soap, gr. 1⅓ (0.086) each; purgative and stomachic. **P. a. et fer′ri** (U. S. and Br.), pill of aloes and iron, containing each about gr. j (0.065) of purified aloes, dried ferrous sulphate, and aromatic powder. **P. a. et mas′tiches** (U. S.), pills of aloes and mastich, containing each aloes gr. ij (0.13) with mastich and red rose; mastich is added to prevent the too ready solution of the aloes in the gastric and intestinal fluids, so that it is long in operating as a laxative. It was introduced into the Ph. U. S. as a form for Lady Webster's pills. **P. a. et myr′rhæ** (U. S. and Br.), Rufus's or Ruffus's pills, containing each aloes gr. ij (0.13) with myrrh, about gr. j (0.065), and aromatic powder. **P. a. socotri′næ** (Br.), containing about the same proportion as the p. a. barbadensis. **P. antimo′nii compos′itæ** (U. S.), Plummer's pills, containing gr. ⅔ (0.04) each of sulphurated antimony and calomel and gr. 1⅓ (0.086) of guaiac. **P. asafœ′tidæ** (U. S.), containing each gr. iij (0.2) of asafœtida. **P. a. compos′itæ**, containing equal parts of galbanum, asafœtida, and myrrh. **P. asiat′icæ**, Asiatic or Tanjore pills (acidi arsenosi, gr. lv; piperis nigr. pulv., ʒix; acaciæ, q. s. ut fiant pil. 800). Each pill contains about one-fifteenth of a grain of arsenic acid. Employed in India for the cure of syphilis and elephantiasis. **P. balsam′icæ** (milleped., ʒxviij; gum ammon., ʒxj; acid. benzoici, ʒvj; croci, balsami Peruv., āā ʒj; balsam. sulph. anisat., ʒvj); tonic, expectorant, and balsamic. **P. Barbaros′sæ**, see *Barbarossæ pilulæ*. **P. benedic′tæ Ful′leri**, p. de aloë et fœtidis. **P. calomel′anos compos′itæ**, p. hydrargyri submuriatis compositæ. **P. c. et o′pii**, pills of calomel and opium (hydrarg. chlorid. mit., p. iij; opii, p. j; confect. rosæ, q.s.; to be divided into pills each containing two grains of calomel). **P. cambo′giæ compos′itæ** (Br.), gamboge pills, containing gamboge, aloes, and compound cinnamon powder, each 1 part, and soap 2 parts; cathartic; dose, gr. v–x. **P. cathar′ticæ compos′itæ** (U. S.), compound cathartic pills, contain compound extract of colocynth, gr. 1⅓ (0.086), calomel, gr. j (0.065), extract of jalap, gr. ss (0.032), and gamboge, gr. ¼ (0.016); two or three for a dose. **P. c. vegetab′iles** (U. S.), vegetable cathartic pills, contain compound extract of colocynth, gr. j (0.065); extract of hyoscyamus, gr. ss (0.032); extract of jalap, gr. ss (0.032); extract of leptandra, gr. ¼ (0.016); resin of podophyllum, gr. ¼ (0.016); oil of peppermint, ♏⅛ (0.008). **P. coc′ciæ mino′res**, p. aloës et colocynthidis. **P. cocci′næ**, p. aloës et colocynthidis. **P. col′chici et digita′lis**, Lartigue's pills. **P. ex colocyn′thide cum al′oë**, p. aloës et colocynthidis. **P. colocyn′thidis**

**compos′itæ** (Br.), containing scammony, aloes, colocynth, and oil of cloves. **P. c. et hyoscy′ami** (Br.), pill of colocynth and henbane, containing compound colocynth pill, 2 parts, and extract of hyoscyamus, 1 part; dose, gr. v–xx (0.32–1.3). **P. fer′ri** (Br.), **P. f. carbona′tis** (U. S.), Blaud's pill, containing each gr. j (0.065) of ferrous carbonate, made by the reaction of ferrous sulphate and potassium carbonate; dose, 1 to 3 pills, of the pilula ferri (Br.), gr. v–xv (0.32–1.0). **P. f. io′didi** (U. S.), pills of iodide of iron, Blancard's pills, containing each gr. ¾ (0.05) of ferrous iodide, coated with balsam of Tolu. **P. f. cum myr′rhâ,** p. ferri compositæ. **P. f. sulpha′tis,** pills of sulphate of iron (ferri sulph. exsicc., p. ij; ext. taraxac., p. v.; conserv. rosæ, p. ij; glycyrrhiz., p. iij); dose, gr. v–xx (0.32–1.0). **P. fœ′tidæ,** p. galbani compositæ. **P. gal′bani compos′itæ,** compound galbanum pill, gum pill, containing galbanum, myrrh, and asafœtida; same as p. asafœtidæ composita. **P. hydrar′gyri** (Br.), massa hydrargyri (U. S.), mercurial or blue-pill, blue mass, mercury; for formula, see *Massa hydrargyri*. Antisyphilitic; mercurial; in large doses, purgative. A purgative pill, much prescribed by Mr. Abernethy, and called *Abernethy's pill,* consisted of pil. hydrarg., gr. x; jalap., gr. xx; syrup. rhamni., q. s. ut fiant pil. vj. Two were given at night, and the next morning a wineglassful of infusum sennæ. **P. h. chlo′ridi mi′tis,** pills of mild chloride of mercury, calomel pills (hydrarg. chlorid. mit., ℥ss; acaciæ, ʒj; syrup., q. s. ut fiant pil. 240); each pill contains one grain. **P. h. c. m. et o′pii,** p. calomelanos et opii. **P. h. subchlo′ridi compos′itæ** (Br.), p. antimonii compositæ (Ph. U. S.), Plummer's pill; see *P. antimonii compositæ*. **P. ipecacuan′hæ cum scil′lâ** (Br.), pill of ipecacuanha with squill, contains compound ipecac powder, 3 parts, squill, and ammoniac, each 1 part; there is 5 per cent. opium in the pill; dose, gr. v–x (0.32–0.65). **P. i. cum urgin′ea** (Br.), same as the preceding, with the substitution of urginea or Indian squill for the squill; dose, gr. iv–viij (0.25–0.5). **P. o′pii** (U. S.), each containing gr. j (0.065) of opium. **P. phos′phori** (U. S. and Br.), containing each gr. $\frac{1}{100}$ (0.00065), coated with balsam of Tolu. **P. plum′bi cum o′pio** (Br.), pill of lead and opium, contains lead acetate 6 parts, opium 1 part; dose, gr. ij–iv (0.13–0.26). **P. quini′næ sulpha′tis** (Br.), pill of sulphate of quinine, contains quinine sulphate 30 parts, tartaric acid 1 part, made into a pill mass with glycerin and tragacanth; dose, gr. ij–viij (0.13–0.5). **P. rhe′i** (U. S.), contain each gr. iij (0.2) of rhubarb. **P. r. compos′itæ** (U. S. and Br.), compound rhubarb pills, contain rhubarb, aloes, myrrh, and oil of peppermint. **P. sapo′nis compos′ita** (Br.), compound soap pill, contains opium (20 per cent.) with soap and syrup of glucose. **P. scammo′nii compos′ita** (Br.), contains scammony and jalap; dose, gr. v–xv (0.32–1.0). **P. scil′læ compos′ita** (Br.), contains squill, ginger, and ammoniac; dose, gr. iv–viij (0.25–0.5). **P. urgin′ea compos′ita** (Br.), similar to the preceding, Indian squill or urginea being substituted for the squill; dose, gr. iv–viij (0.25–0.5). **P. theba′icæ,** p. opii.

**Pil′ular.** Relating to pills, as a pilular mass, a pilular form, etc.

**Pi′lum.** Pestle. Wooden, iron, bell-metal, marble, agate, porcelain, or glass instrument for beating or dividing substances in a mortar.

**Pi′lus.** Capillus; caul; hair.

**Pimela′den** (*pimele,* fat, *aden,* gland). Sebaceous gland.

**Pimel′ic** (*pimele,* fat). Fatty.

**Pimeli′tis.** Inflammation of the adipose tissue.

**Pimelo′ma.** Fatty tumor.

**Pimelopterygium,** pim-el-o-ter-ij′e-um (*pimele,* fat, *pterygion,* wing). Fatty outgrowth on conjunctiva.

**Pimelorthopnœ′a** (*pimele,* fat, *orthos,* upright, *pneo,* to breathe). Dyspnœa, except in the erect attitude, owing to obesity.

**Pimelo′sis.** Conversion into or formation of fat. **P. hepat′ica,** fatty degeneration of the liver. **P. nim′ia,** see *Polysarcia.*

**Pimelu′ria** (*pimele,* fat, *ouron,* urine). Fatty urine.

**Pimen′ta.** The official name (Ph. U. S.) for the nearly ripe fruit of Pimenta officinalis, allspice; dose, gr. j–x (0.065–0.65). *O′leum pimen′tæ,* dose, ♏j–v (0.065–0.32). See *Myrtus pimenta.*

**Pimente′lia.** Tree, species of *Cinchoneæ,* bark of which is astringent.

**Pim′pernel.** See *Pimpinella.* **Blue p.,** Scutellaria laterifolia. **Red p.,** Anagallis arvensis. **Scar′let p.,** Anagallis arvensis. **Wa′ter p.,** Veronica beccabunga.

**Pim′pilim.** Piper longum.

**Pimpinel′la.** A genus of umbelliferous plants. **P. al′ba,** P. saxifraga. **P. angelicæfo′lia,** Ligusticum podagraria. **P. ani′sum,** anise plant, water anise, native of Egypt; the fruit, anisum (Ph. U. S.), aniseed, has an aromatic odor and a sweetish, warm, grateful taste; carminative; used in dyspepsia and in tormina of infants. **Great′er p.,** P. magna. **P. hirci′na,** P. saxifraga. **P. laterifo′lia,** Sion ammi. **P. mag′na,** greater pimpinella; root has been extolled as diuretic and resolvent, as well as a remedy for erysipelatous ulceration, tinea capitis, rheumatism, etc. **P. ma′jor,** P. magna. **P. ni′gra,** P. magna. **P. nos′tras,** P. saxifraga. **P. officina′lis,** Sanguisorba officinalis. **P. ru′bra,** P. magna. **P. saxif′raga,** saxifrage, burnet saxifrage; root has an unpleasant smell, and hot, pungent, bitterish taste; is used in medicine.

**Pimpinellin′.** Crystalline acid principle contained in Pimpinella saxifraga.

**Pim′ple.** Papula. Pustula. **Amboy′na p.,** disease resembling syphilis, epidemic in the island of Amboyna in the early part of the eighteenth century. **Goose p.,** see *Horrida cutis.* **Mag′got p.,** term given by the laity to comedones and acne punctata. **P. mite,** Steatozoon folliculorum.

**Pim′pled.** Papulose.

**Pin.** Steel or brass instrument, pointed at one extremity and having a head at the other; used in surgery to fix rollers and dressings, and occasionally in sutures. **P. bone,** ischion. **P. and web,** caligo; pterygium. **P. worm,** Oxyuris vermicularis.

**Pinacolin′.** Liquid derived from acetone.

**Pin′acone.** Alcohol or glycol with two atoms.

**Pinal′ic acid.** Valeric acid.

**Pinard's′ sign.** Pain on pressure over the fundus of the uterus after the sixth month generally implies a breech presentation.

**Pinastel′lum** (*pinus*). Peucedanum.

**Pinas′ter.** Pinus sylvestris.

**Pin′cers.** Forceps.

**Pincette′.** Forceps.

**Pinched.** Epithet applied to the face when the features are contracted or shrunken, as in violent abdominal affections or during intense pain.

**Pinckne′ya pu′bens** or **pubes′cens.** Georgia bark, bitter bark, Florida bark, fever tree. Used in intermittents; a powerful bitter.

**Pin′dars.** Arachis hypogea.

**Pine.** Pinus. **Aphernous′li p.,** Pinus cembra. **P.-ap′ple,** Bromelia ananas. **Ground p.,** Lycopodium complanatum; Camphorosma monspeliaca. **Loblol′ly p.,** Pinus tæda. **Moun′tain p.,** see *Pinus mughos.* **Mu′gho p.,** see *Pinus mughos.* **Prince's p.,** Pyrola umbellata. **Sap p.,** Hypopitys lanuginosa. **Stone p.,** Pinus pinea. **P. su′gar,** see *Arrowroot.* **Yel′low p.,** Pinus palustris.

**Pin′ea.** Pinus pinea.

**Pin′eal** (*pinea,* a pine cone). Resembling a pine cone. **P. bod′y** or **P. gland,** conarium, cerebral epiphysis; small body of conical shape, pale red or grayish color, and soft consistency, situated between the fornix and the tubercula quadrigemina. It almost always contains sabulous particles, sabulum conarii, brain-sand, pineal sand. When these are grouped together over the base of the gland they form the acervulus cerebri of Sömmering, acervuli or lapilli glandulæ pinealis. From its anterior parts arise two medullary striæ, which proceed over the posterior commissure, coast along the optic thalami, and unite at the anterior pillar of the fornix, habenæ, habenulæ, or reins of the pineal gland—pedunculi conarii; see *Peduncles of the pineal gland.* The uses of the pineal gland are unknown; some comparative anatomists have regarded it as a rudimentary eye. Descartes supposed it to be the seat of the soul. **P. sand,** see *Pineal gland.* **P. ven′tricle,** cavity in the interior of the p. gland.

**Pine′apple.** Ananas sativa.

**Pinel′lia waw′ræ.** Herb used by the Chinese in obstruction of the bowels.

**Pinen′chyma** (*pinax,* tablet, *enchyma,* infusion). Tissue consisting of cells of tabular shape.

**Pine′-needle oil.** Oil distilled from the needles of Pinus sylvestris, resembling turpentine in medicinal effects, and used by inhalation in bronchial affections. A pine-needle bath is made from the branches and leaves of the pine or spruce tree. See *Pinus pinea.*

**Pin′eus pur′gans.** Jatropha curcas.

**Pine′weed.** Hypericum sarothra.

**Pingue′cula** or **Pinguic′ula** (*pinguis,* fat). Small, whitish-yellow tumor in the sclerotic conjunctiva and subjacent areolar tissue, close to the margin of the cornea on its nasal or temporal side; supposed, erroneously, to be of a fatty nature.

**Pingued′inous.** Fatty.

**Pingue′do.** Fat; adeps. **P. rena′lis,** nephridion.

**Pinguefac′tion.** Process of being converted into fat.

**Pinguic′ula.** See *Pinguecula.* **P. vulga′ris,** Yorkshire sanicle, ord. *Lentibulaceæ.* The unctuosity of this plant has caused it to be applied to chaps and as pomatum to the hair; a decoction of the leaves is cathartic.

**Pin′guid.** Fatty.

**Pin′guin.** Bromelia pinguin.

**Pinguitu′do.** Polysarcia adiposa. **P. cor′dis,** steatosis cordis.

**Pinguo′leum theobroma′tum.** Oil of theobroma.

**Pin′hole os.** Very small os uteri. **P. pu′pil,** condition of the pupil in typhus, in which it is so contracted as to resemble a pinhole; it indicates a dangerous brain complication.

**Pinho′nes in′dici.** Jatropha curcas.

**Pi′nic acid.** $C_{20}H_{30}O_2$. Contained in pine resin.

**Pin′iform.** Cone-shaped. **P. decussa′tion,** decussation of the pyramids.

**Pinipic′ria** or **Pinipicrin′.** Amorphous powder with bitter taste; glucoside contained in Pinus sylvestris and Thuja occidentalis.

**Pinitan′nic acid.** Powder of a yellowish-red color derived from Pinus sylvestris and Thuja occidentalis.

**Pi′nite.** Substance, crystalline and having very sweet taste and laxative properties, existing in exudation of Pinus lambertiana.

**Pink.** A light red color inclining to purple. **P. bacil′lus,** B. œdematis maligni. **Caroli′na p.,** Spigelia marilandica. **Clove p.,** Dianthus caryophyllus and Pinguis oleum. **P.-eye,** contagious mucopurulent conjunctivitis, due to the presence of B. conjunctivitidis. **Ground p.,** Silene virginica. **In′dian p.,** Spigelia marilandica. **P. root,** Spigelia marilandica. **P. r., Demera′ra,** Spigelia anthelmia. **Wild p.,** Silene virginica.

**Pin′kus's hair discs or disks.** Minute discoid prominences situated near the hair follicles in various parts of the body.

**Pin′na** (wing). Ala nasi; pavilion of the ear. **P. mari′na,** see *Byssus.*

**Pin′nula.** Extremity of the wing of a bird. **P. hep′atis,** lobe of the liver.

**Pinocyto′sis** (*pino,* to drink, *kytos,* cell). The property, supposed to be possessed by phagocytes, of absorbing harmful liquid substances as well as of destroying microorganisms.

**Pi′nol.** Volatile oil from needles of Pinus pumilio.

**Pins and Nee′dles.** Obtunding of local sensation from pressure on an important nerve, as of the leg. As the nerve-fibres gradually recover from the effect of the pressure, a pricking sensation is experienced, familiarly known as "pins and needles."

**Pins's sign.** In infantile pericarditis, disappearance of symptoms pointing to pleurisy when the patient is placed in the knee-chest position.

**Pint.** Octarius, symbol of which is O; a measure containing 16 fluidounces (28.875 cu. in.), approximately half a litre; see *Weights and Measures.* **Impe′rial p.** contains 20 fluidounces.

**Pin′ta** ([Sp.] *pintar,* to paint). Blue stain, mal de los pintos. Disease prevailing in Mexico, a variety of pityriasis versicolor or chloasma.

**Pi′nus ab′ies.** Norway spruce fir, yew-leaved fir; ord. *Coniferæ.* Tops are used in making spruce beer. *Essence of spruce,* a fluid extract prepared by a decoction from the twigs of this species of fir, is used for this purpose. This fir affords the Burgundy pitch and common frankincense. 1. *Burgundy* or *white pitch, pix burgundica* (Ph. U. S. and Br.). Prepared concrete juice of close consistency, rather soft, of reddish-brown color, and not unpleasant smell. It is very adhesive to the skin, and consequently forms excellent plasters. 2. *Abietis resina,* common frankincense, resin of the spruce fir. It is solid, dry, brittle; externally, brownish-yellow; internally, whitish. Used in plasters like the last. See *P. picea.* **P. al′ba,** P. picea. **P. austra′lis,** yellow pine, native of the Southern United States; used for ship timber, and furnishes rosin and turpentine. **P. balsam′ea,** balsam fir, the tree which affords the Canada turpentine or balsam, balsam of fir. It is one of the purest turpentines, and has the common properties of those substances; it is employed by microscopists. **P. canaden′sis,** Abies canadensis, hemlock, hemlock spruce; abundant in Canada, Nova Scotia, and the more northern parts of New England, and found in the elevated and mountainous regions of the middle States. The pitch obtained from it—*pix canadensis* (Ph. U. S.), Canada pitch, hemlock pitch—is commonly known under the name hemlock gum. **P. can′dicans,** P. picea. **P. cem′bra,** P. montana, aphernousli pine, yields an agreeably scented turpentine—the Carpathian balsam, balsamum carpathicum, Briancon turpentine; the nuts, cembro nuts, nuclei cembræ, have an eatable kernel and yield oil; the shoots yield Riga balsam by distillation. **P. damar′ra,** Agathis damarra, grows in the East India Islands; the juice speedily concentrates into very hard resin, the Damarra turpentine, which is used for fine microscopic preparations; Cowrie or cowdie resin is procured by incision from Damarra australis in New Zealand. **P. excel′sa,** P. abies. **P. gal′lica,** P. picea. **P. lambertia′na,** of Oregon and California. The exudation from this tree, pinit, a crystallizable sugar resembling manna, is eaten. **P. la′rix,** Larix europæa, Abies larix, larix, larch; from this tree exudes Oremberg gum, Briancon manna; it also yields, by boring, *Venice turpentine;* it is usually thinner than the other sorts of turpentine. **P. longifo′lia,** the commonest of the Himalayan coniferæ, the oleoresin of which is used as a stimulating application to ulcers, and internally in gleet; the tar is employed externally in the treatment of various skin diseases, and internally in bronchitis and phthisis. **P. monta′na,** P. cembra. **P. mu′ghos,** mountain or mugho pine, Pinus pumilio; from the extremities of the branches exudes the *resina strobilina* of the Germans, or *Hungarian balsam.* It is also obtained by expression from the cones. By distillation the Hungarian balsam affords the Krumholz oil. **P. palus′tris,** P. australis; see *Pinus sylvestris.* **P. pi′cea,** European silver fir tree. Strasburg turpentine is obtained from this tree. **P. pinas′ter,** see *Pinus sylvestris.* **P. pi′nea,** stone pine. The nuts, *Zirbel nuts, pine nuts,* are eaten raw or preserved like almonds, and are also used in emulsions. **P.**

**pumil'io,** see *Pinus mughos*. **P. religio'sa,** of Mexico, yields turpentine. **P. sabinia'na,** native of California and Oregon; the seeds are eaten by the Indians. **P. sati'va,** P. pinea. **P. stro'bus,** white pine of the Northwestern United States. **P. sylves'tris,** Scotch fir. This pine, as well as *P. maritima* (P. pinaster) and other species of pinus, affords common turpentine and its oil, resin, tar, and pitch. 1. Common turpentine of Europe, terebinthina, horse turpentine, Bordeaux turpentine, is obtained by wounding the tree in hot weather. Is used chiefly as a dressing for wounds, etc., in horses, and for the distillation of oil (see *Oleum terebinthinæ*). White turpentine or common turpentine of America, *terebinthina* (Ph. U. S.), is produced chiefly from Pinus palustris, yellow pine, and P. tæda, loblolly pine, and perhaps from other species inhabiting the Southern States. When the oil is distilled with water, yellow resin, rosin, *resina* (Ph. U. S.), resina flava, is left, which is used only in the formation of ointments and plasters. If water is not added, the residuum is common resin or colophony. 2. When the cold begins to check the exudation of the common turpentine, part of it concretes in the wounds, called white rosin, resina alba, when hardened after long exposure to the air. 3. When the old trees are subjected to distillation in a coarse manner, tar is obtained—hygropissos, pissa, pix cedria, *pix liquida*, used in skin diseases. Tar-water, infusion of tar, *infusum picis* (Ph. U. S.), is made by mixing a pint of tar with four pints of water, shaking the mixture frequently during twenty-four hours; then pouring off the infusion and filtering through paper. It is employed chiefly in pulmonary and bronchial affections, and the vapor has been used in phthisis and other diseases of the lungs; externally detergent. 4. Common pitch, black pitch, stone pitch, is obtained by inspissating tar, and is used only as a resolvent in plasters. **P. tæ'da,** see *P. sylvestris*. **P. uber'rima,** Pinus picea. **P. vulga'ris,** P. picea.

**Pin-worm.** Ascaris vermicularis.

**Pioepithe'lium** (*pion*, fat). Fat-containing epithelium.

**Pionæ'mia** (*pion*, fat, *haima*, blood). Lipæmia; fat in the blood.

**Piorthopnœ'a** (*pion*, fat, *orthos*, straight, *pneo*, to breathe). Dyspnœa from impracticability of breathing except in the erect attitude, owing to obesity.

**Pi'oscope** (*pion*, fat, *skopeo*, to see). Shallow disk on which are strips of differently colored oil-paint from white to dark gray, to determine the quality of cream and milk.

**Pip.** Contagious disease of poultry, affecting the eyes and nostrils and causing a thin skin or membrane on the tongue

**Pipe'plant.** Monotropa uniflora.

**Pi'per.** The official (Ph. U. S.) name for the nearly ripe fruit of Piper nigrum, black pepper; carminative, antiperiodic, formerly believed to act especially on the rectum; dose, gr. v–xx (0.32–1.3). See *Piper nigrum*. **P. adun'cum,** species of tropical America. **P. al'bum,** white pepper; black pepper freed from its cuticle. **P. angustifo'lium,** matico. **P. aromat'icum,** P. nigrum. **P. be'tel,** betel. **P. brazilia'num,** Capsicum annuum. **P. calecu'ticum,** Capsicum annuum; P. siriboa. **P. capen'se,** a South African species, has properties of the peppers, and in appearance and taste resembles cubebs, possessing similar virtues. **P. carpun'ya,** small tree of Chile and Peru; leaves are used in disorders of digestion. **P. caryophylla'tum,** see *Myrtus pimenta*. **P. cauda'tum,** P. cubeba. **P. chi'apæ,** see *Myrtus pimenta*. **P. clu'sii,** species of tropical Africa yielding Ashantee pepper. **P. cube'bæ,** cubeb (Ph. U. S.), is the unripe fruit of Cubeba officinalis, called Piper cubebæ (Ph. Br.); native of Java and Guinea. The odor of these berries, cubeb or tailed pepper, is aromatic; taste at first cooling, afterward pungent. The active principle is an essential oil—oleum cubebæ, oil of cubebs—official in the Ph. U. S. and Br. The properties of the cubeb are stimulant and purgative. Used chiefly in gonorrhœa and in bronchitis. Turkey-yellow berries—the dried fruit of Rhamnus catharticus—are often substituted for cubebs. **P. elonga'tum,** matico. **P. guineen'se,** Capsicum annuum. **P. hispan'icum,** capsicum. **P. in'dicum,** Capsicum annuum. **P. jamaicen'se,** see *Myrtus pimenta*. **P. lon'gum,** long pepper; berries consist of the unripe fruit dried in the sun; small round grains; stimulant, carminative, and tonic, like the other peppers; dose, gr. v–xx (0.32–1.3). **P. lusitan'icum,** Capsicum annuum. **P. methys'ticum,** see *Ava*. **P. mura'le,** sedum. **P. ni'grum,** black pepper, piper (Ph. U. S.), is the unripe fruit dried in the sun; its virtues are the same as those of the other peppers. The active principle is piperin; see *Piperinum*. **P. odora'tum jamaicen'se,** see *Myrtus pimenta*. **P. officina'rum,** native of the Indian Archipelago. **P. tabas'cum,** see *Myrtus pimenta*. **P. tur'cicum,** Capsicum annuum.

**Piperazidin'.** Piperazin.

**Piperazin'.** $C_4H_{10}N_2$. Dispermin. Substance formed by the action of ammonia on ethylene bromide or chloride; very soluble. It is said to dissolve uric acid with great facility; hence has been employed in gouty diseases, gouty concretions, etc. It has been proposed to inject a solution into the bladder for dissolution of calculi. Piperazin is a diethylendiamine. Dose, gr. v–viij (0.32–0.5). The citrate and hydrochlorate are also used.

**Pi'percoorn.** Form of epidemic typhus fever which prevailed in Holland during a portion of the sixteenth century.

**Piper'ic acid.** $C_{12}H_{10}O_4$. A crystalline acid resulting from the decomposition of piperin.

**Piperidin'.** Volatile alkaloid produced by action of alkali on piperin. **P. guaiac'olate,** guaiaperol, made by the action of piperidine guaiacol; used in pulmonary tuberculosis in doses of gr. v–xx (0.32–1.3).

**Piperin'.** Piperinum.

**Piperi'num.** (Ph. U. S.) $C_{17}H_{19}NO_3$. Resinous substance obtained from the Piper nigrum, in which a part of the virtues of the pepper resides. Employed, like quinine, in intermittents; also laxative.

**Pi'peroid** (*piper*, pepper, *eidos*, resemblance). A yellow, syrupy mass obtained by exhausting ginger root by ether. It is soluble in ether, alcohol, and oils, and given in tincture, sugar, lozenge, or syrup where ginger is indicated. **P. of gin'ger,** oleoresina zingiberis.

**Pi'peronal.** $C_8H_6O_3$. Derivative of piperin, piperic acid being first obtained and oxidized. Antiseptic and antipyretic. Dose, gr. xv (1.0).

**Piperovatine'.** $C_{16}H_{21}NO_2$. Crystalline alkaloid from Piper ovatum, West Indian plant. A motor and sensory depressant, and spinal tetanic.

**Pipe-stem ar'tery.** A calcified artery transformed into a hard, rigid, brittle tube; occurring in advanced arteriosclerosis.

**Pipette'** (a small pipe). In pharmacy, a small tube terminating in a perforated point, which is passed into a liquid to be removed. The liquid is drawn into the tube by applying the mouth to the free extremity.

**Pipitzaho'ic acid.** Hydroxyquinone derived from root of Trixis fruticosa.

**Pip'menthol.** Menthol derived from oil of peppermint.

**Pip'peridge bush.** See *Oxyacantha galeni*.

**Pipsis'sewa.** Pyrola umbellata. **Spot'ted p.,** Pyrola maculata. **White p.,** Pyrola maculata.

**Piptade'nia peregri'na.** South American niopo tree, of which the natives utilize the seeds for making a highly intoxicating snuff. **P. rig'ida,** tree of South America from which gum is obtained.

**Piptonychia,** pip-to-nik'e-ah (*pipto*, to fall, *onyx*, nail). Falling off of the nails.

**Pique′ria triner′va.** Eupatorium febrifugum, shrub of Mexico possessing stimulant and febrifuge virtues.

**Piren′nia abyssin′ica.** Plant of Abyssinia, ord. *Phytolaccaceæ;* root is purgative and emetic; fruits are used as tæniafuge.

**Pir′iform.** Pear-shaped; pyramidal.

**Pir′ogoff's opera′tion.** Mode of amputating at the ankle, proposed by Pirogoff, of Russia, which retains a portion of the calcaneum to impart greater length and rotundity to the stump.

**Piscic′ulus.** Biceps flexor brachii.

**Piscid′ia erythri′na.** Jamaica dogwood; ord. *Leguminosæ.* Small branching tree, common in most of the West India Islands; Diadelphia decandria of Linnæus; used in the West Indies to poison fish. It appears to be an acronarcotic. The fluid extract has been used as an application in hemorrhoids, burns, and scalds, in painful conditions of tooth-structures, etc.; and internally in neuralgias of various kinds, as a substitute for opium.

**Piscidin′.** Resinoid derived from Piscidia erythrina, but not fully recognized as its active principle.

**Pisciv′orous** (*piscis*, fish, *voro*, to eat). Ichthyophagous. Feeding or subsisting on fish.

**Pis′iform** (*pisum*, pea, *forma*, shape). Pea-like; pea-shaped. **P. bone,** os lenticulare; the fourth bone of the first row of the carpus; is round, and gives attachment to the tendon of the cubitalis anterior and to the anterior transverse ligament of the carpus; is articulated, behind, with the os cuneiforme.

**Pi′so.** Mortar.

**Piso-hama′tus.** Piso-uncinatus.

**Piso′nia fra′grans.** Plant of the West Indies possessing emetic properties. **P. morindifo′lia,** Indian lettuce tree; leaves are employed in elephantiasis.

**Piso-uncina′tus** (*pisum*, pea, *uncinatus*, barbed). Muscle (very rare) replacing the ligamentum pisohamatum.

**Pis′sa.** Pitch. See *Pinus sylvestris.*

**Pissasphal′tus.** Mineral pitch, glutinous bitumen, Malta bitumen, mineral tar.

**Pisselæ′um** (*pissa*, pitch, *elaion*, oil). Oleum picinum. Oily matter obtained from boiling pitch, and used for the same purposes as tar. **P. in′dicum,** petroleum.

**Pissoc′opy** (*pissa*, pitch, *kopto*, to strike). Depilation with plaster made of pitch.

**Pisso′sis** (*pissa*, pitch). See *Depilatory.*

**Piss′weed.** Anthemis cotula.

**Pistachio** (pis-tah′she-o) **nuts.** Pistacia vera. See *Arachis hypogea.*

**Pista′cia chi′a.** P. lentiscus. **P. lentis′cus,** mastich tree; ord. *Terebinthaceæ.* The wood of this tree abounds with the resinous principles of mastich. It yields by incision the resin mastic, *mastiche* (Ph. U. S. and Br.), which has an agreeable smell when heated; soluble in ether, partly so in alcohol; is stimulant. It is sometimes also employed to stop holes in carious teeth. **P. narbone′sis,** P. lentiscus. **P. reticula′ta,** P. lentiscus. **P. terebin′thus,** P. narbonensis, turpentine tree, tree which affords the Cyprus or Chian turpentine. This substance is classed among the resins; it is procured by wounding the bark of the trunk. The best Chian turpentine is of about the consistence of honey, very tenacious, clear, and almost transparent; of a white color, inclining to yellow, and of a fragrant smell; moderately warm to the taste, but free from acrimony and bitterness, resembling in virtues the other turpentines. **P. ve′ra,** name of the tree which yields pistachio nuts. These have a sweetish, unctuous taste, resembling that of sweet almonds. Like these, they afford an oil and are used in emulsions.

**Pista′tion** (*pisto*, to pound). Act of bruising soft and parenchymatous substances in a mortar.

**Pis′tia.** Water-lettuce; tropical herb, leaves possessing demulcent and refrigerant, and the root emollient and laxative, properties.

**Pis′ton pulse.** Corrigan's pulse.

**Pi′sum.** Pea, garden pea, ord. *Leguminosæ.*

**Pit.** Depression remaining in œdematous tissue after pressure by the finger has ceased. Pock-mark. A dental fault marking the imperfect junction of three or more tooth segments. **Au′ditory p.,** a depression on each side of the brain in the embryo where the labyrinth appears later. **Bas′ilar p.,** a depression upon the palatal face of an upper incisor, above the cingulum. **Na′sal p.,** two indentations on anterior vesicle of cerebrum, giving rise to the nasal fossæ. **P. of the stom′ach,** depression at the anterior part of the abdomen, below the xiphoid cartilage. **Tear p.,** see *Sinus, lacrymal.*

**Pita′ya bark.** Bark of Cinchona pitaya, ord. *Cinchonaceæ.* Preferred in Colombia to any other. It contains an alkaloid to which the name *pitayine′* has been given.

**Pitayine′.** See *Pitaya bark.*

**Pitch** (Lat., *pix*). Colophonia pissa. **Birch p.,** see *Betula alba.* **Black p.,** see *Pinus sylvestris.* **Bur′gundy p.,** see *Pinus abies.* **Can′ada p.,** see *Pinus canadensis.* **P. cap,** see *Depilatory.* **Com′mon p.,** see *Pinus sylvestris.* **Hem′lock p.,** see *Pinus canadensis.* **Jew's p.,** asphaltum. **Min′eral p.,** pissasphaltum. **P.-plas′ter,** emplastrum picis. **Stone p.,** see *Pinus sylvestris.* **White p.,** see *Pinus abies.*

**Pitch′er plant.** Sarracenia purpurea.

**Pith.** Spinal cord or marrow; the marrow of bones; the loose cellular central portion of the stem of a plant. As a verb, to introduce an instrument into the cranial or spinal cavity of an animal and destroy the cerebrospinal axis.

**Pithecolo′bium.** Soap-bark tree of Malabar. Bark is employed in leprosy and cutaneous affections.

**Pitres's sec′tions.** Sections made through the brain for post-mortem investigations. **P.'s sign,** impairment of sensation in the testes and scrotum in tabes dorsalis; also deviation of the sternum in pleuritic effusion.

**Pitta′cium** (*pitta*, pitch). Pitch plaster.

**Pit′ted teeth.** Teeth exhibiting numerous pits, due to faulty formation of enamel.

**Pit′ting.** Indentation or marking from disease, as smallpox; pock-mark.

**Pitto′sis** (*pitta*, pitch). Depilation.

**Pituita,** pit-u-e′ta. Mucus; phlegm. **P. na′rium,** nasal mucus. **P. un′guis ca′ti,** cat's-claw tree of tropical America, having an edible fruit; bark is applied externally in powders to ulcers, and given internally in fevers.

**Pitu′itary** (*pituita*, phlegm). Concerned in the secretion of mucus or phlegm. A name given to several parts. **P. bod′y,** p. gland. **P. divertic′ulum,** an outgrowth from the posterior part of the buccal cavity in the embryo, which participates in the formation of the p. gland. **P. ex′tract,** extract made from the pituitary body, which when given internally retards the action of the heart and increases its force. **P. fos′sa,** sella turcica. **P. gland,** hypophysis cerebri, a small, round body attached by a pedicle to the brain; the anterior portion is of a cineritious, yellow hue, and the posterior, which is smaller, is whitish and pulpy. It occupies the sella turcica of the sphenoid bone. **P. mem′brane,** mucous membrane lining the nasal fossæ, and extending to the different cavities communicating with the nose. In the nasal fossæ the membrane appears formed of two layers, intimately united; the one in contact with the bone is fibrous, the other is free at one surface. The latter is a mucous membrane in which papillæ are not easily distinguishable, but which contains them, as well as a number of very small mucous follicles that open into the cavity of the nares. On penetrating the maxillary, frontal, sphenoidal, and ethmoidal sinuses the membrane becomes very thin, transparent, less vascular, and seems reduced to its mucous layer. The pituitary membrane receives the impression of odors by means of the expansion of the olfactory nerves upon it. This portion of it is at times alone called the olfactory membrane. It is the seat of smell.

**Pitu′itous.** Consisting of, or resembling, or full of, mucus or phlegm. **P. catarrh′,** catarrh accompanied with a thin secretion of serum and mucus. **P. fe′ver,** enteric fever.

**Pitu′ri.** Popular name for the leaves and small stems of the Duboisia hopwoodii; used as a narcotic stimulant.

**Piturine′.** $C_{12}H_{16}O_2$. Alkaloid contained in Duboisia hopwoodii, similar to if not identical with nicotine.

**Pityri′asic.** Relating to, affected with, or resembling pityriasis.

**Pityri′asis** (*pityron*, bran). Tetter, dandruff. Very superficial affection, characterized by irregular patches of thin scales, which repeatedly exfoliate and recur, but never form crusts or are accompanied with excoriations. It occurs under three or four varieties. See *Porrigo*. **P. al′ba,** same as pityriasis simplex. **P. a. atroph′icans,** a form of p. in which there is chronic branny desquamation with atrophy. **P. cap′itis,** an erythematous desquamation of the head in infants and old persons. When accompanied by an accumulation of sebaceous matter, as in infants, it is called *seborrhœa furfuracea*. **P. circina′ta,** p. rosea. **P. gravida′rum,** the brown discoloration of pregnancy; chloasma uterinum. **P. lin′guæ,** partial coating of the tongue with white circular or semicircular spots, due to accumulation of epithelial cells. **P. macula′ta et circina′ta,** identical with pityriasis rosea. **P. ni′gra,** melasma. **P. ni′gricans,** dark discoloration of the skin, a form of chromidrosis. **P. pila′ris,** hypertrophied condition of epidermis about the orifice of the hair follicles. Synonym of keratosis pilaris and lichen pilaris. **P. ro′sea,** herpes tonsurans (Hebra), form of dermatitis with pale reddish, scaly, irregular or circular patches. **P. ru′bra,** synonym of dermatitis exfoliativa and pityriasis rubra essentialis; rare affection, usually chronic. **P. r. pila′ris,** lichen rubra acuminatus. **P. sim′plex,** scurfy condition of epidermis. **P. tabescen′tium,** seborrhœa. **P. versic′olor,** tinea versicolor.

**Pityris′ma.** Pityriasis.

**Pit′yroid.** Branny or furfuraceous.

**Pity′ron** (*pityron*, bran). Furfur.

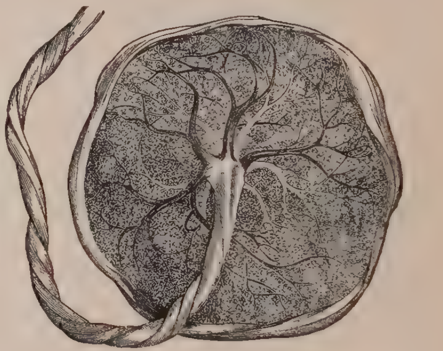
**Piv′oting.** Operation of fastening a new crown upon the root of a tooth with a piece of gold wire called a pivot.

**Pix.** Pitch. See *Pinus sylvestris*. **P. abieti′na,** see *Pinus abies*. **P. abi′etis,** see *Pinus abies*. **P. al′ba,** see *Pinus abies*. **P. ar′ida,** see *Pinus abies* and *Pinus sylvestris*. **P. at′ra,** see *Pinus sylvestris*. **P. bru′tia,** brutia. **P. burgun′dica** (Ph. U. S.), Burgundy pitch, the resinous exudate from Abies excelsa; see *Pinus abies*. **P. canaden′sis,** see *Pinus canadensis*. **P. carbo′nis præpara′ta** (Ph. Br.), prepared coal-tar; heated in a shallow vessel at 120° F., with frequent stirring, for one hour; used in making liquor picis carbonis (one part of tar to five parts of tincture of quillaia). **P. ce′dria,** see *Pinus sylvestris*. **P. græ′ca,** colophonia. **P. liq′uida** (Ph. U. S. and Br.), tar, an oleoresin obtained by distillation of the wood of several species of pine; see *Pinus sylvestris*; diuretic and expectorant; dose, gr. v–x (0.32–0.65). The official preparations are: *Oleum pi′cis liq′uidæ* (U. S.); dose, ♏j–v (0.065–0.32); *syr′upus p. l.* (U. S.); dose, ʒj–ij (4.0–8.0); *ungen′tum p. l.* (U. S. and Br.), used locally in diseases of the skin. **P. nava′lis,** see *Pinus sylvestris*. **P. ni′gra,** see *Pinus sylvestris*. **P. sic′ca,** see *Pinus sylvestris*.

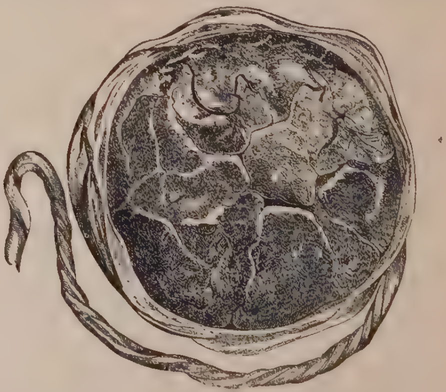
**Pix′ol.** A solution of wood-tar in soap and caustic potash; used as a surgical antiseptic and also as a demulcent in skin diseases.

**Place′bo** (*placebo*, I will please). A medicine prescribed rather to satisfy the patient than with any expectation of its effecting a cure.

**Placen′ta** (a cake). Soft, spongy, vascular body, adherent to the uterus, and connected with the fœtus by the umbilical cord. It is generally considered to have two portions, one fetal and the other maternal. The fetal portion consists of highly vascular villi and tufts, containing the inosculating loops of the umbilical arteries and umbilical vein of the fœtus. The maternal portion consists essentially of a large sac formed by the inner coat of the vascular system of the mother, into which the maternal blood is poured by the curling arteries of the uterus, and from which it is returned by the uteroplacental veins. The tufts and villi of the fetal placenta are ensheathed by this inner coat of the maternal vascular system. The placenta is formed of several lobes or cotyledons, which can be readily distinguished from each other on the uterine surface, but toward the fetal surface are confounded into one mass. When a lobe is so distinct from the rest as to form, as it were, a supplementary placenta, it is termed *placenta succenturiata*. The placenta is composed of the umbilical vessels, areolar tissue, and whitish, resisting filaments, which are vascular ramifications obliterated. Lymphatic vessels have also been presumed to exist in it; and nerves have been traced, proceeding from the great sympathetic of the fœtus. The veins of the placenta anastomose freely with one another, and give rise at its edge to a venous channel which runs around the whole circumference—the *placental sinus*. The umbilical cord usually arises from the centre of the placenta, but occasionally from its edge, when it is called *battledore placenta*. The placenta serves as the organ of circulation, respiration, and nutrition of the fœtus. The placenta is liable to inflammation, and also to fatty and calcareous degeneration. Animals which have no placenta—as the marsupialia—are called *implacental* and *non-placental*. The word placenta is also applied occasionally to any rounded, flattened body having a shape resembling that of the uterine placenta. **Adhe′rent p.,** one which adheres abnormally



The internal or fetal surface of the placenta.



The external or uterine surface of the placenta.

to the wall of the uterus. **An′nular p.**, a p. covering a portion of the interior of the uterus, like a belt or ring. **Bat′tledore p.**, a p. with the umbilical cord attached near the edge instead of in the centre. **Cir′soid p.**, one in which the umbilical vessels are in a varicose condition. **P. cruo′ris**, the solid portion of a blood clot which separates from the serum after standing. **Decid′uate p.**, p. in which the maternal part comes away entire at birth. **Dis′coid** or **discoi′dal p.**, p. of a defined circular shape. **Du′plex p.**, one consisting of two separated parts. **P. febri′lis**, ague-cake. **Fe′tal p.**, portion of the placenta in which the umbilical vessels ramify. **Fun′dal p.**, one attached at the fundus of the uterus. **Horse′shoe p.**, two p. united in this shape. **Incar′cerated p.**, see *Incarceration*. **P. margina′ta**, p. in which the chorion is so connected with its fetal aspect that the edges of the placenta are left free. **Mater′nal p.**, outer layer of p. formed from decidua serotina. **P. membrana′cea**, p. which is like a membrane in thinness. **Non-decid′uate p.**, p. in which the maternal portion does not come away at delivery. **P. obla′ta**, p. prævia. **P. ob′via**, p. prævia. **Polycotyl′edonary p.**, p. in which fetal villi are arranged in distinct tufts. **P. præ′via** (*præ*, before, *via*, way), attachment of the placenta to the lower segment of the uterus; at the beginning of labor this attachment is necessarily loosened, and hemorrhage, called *unavoidable hemorrhage*, ensues; the safety of the mother depends upon speedy delivery. **Retained′ p.**, one which is not expelled after birth of the child, but must be removed by the hand of the accoucheur. **P. san′guinis**, blood clot. **P. splen′ica**, see *Ague-cake*. **Stu′dent's p.**, a placenta that has been retained on account of ill-judged interference, or non-interference, on the part of the inexperienced accoucheur. **P. succenturia′ta**, a supplementary or supernumerary p. **U′terine p.**, maternal portion of the placenta.

**Placen′tal.** Relating or appertaining to the placenta; possessed of a placenta, as a placental mammal. **P. bruit** (brue-ee′), souffle. **P. dysto′cia**, difficult expulsion of the placenta. **P. mur′mur**, a sound heard on auscultation of the uterus in pregnancy, supposed to be due to placental circulation. **P. phthi′sis**, wasting of the placenta from inflammation, gangrene, degeneration, etc. **P. si′nus**, a venous channel which runs around the edge of the placenta communicating with the general vascular system of this organ; see *Placenta*. **P. souffle**, sound heard on auscultation over the placenta. **P. transmis′sion**, the transmission of drugs, disease-germs, etc., through the circulation of the mother to the fœtus.

**Placenta′lia.** Mammals having a placenta.

**Plac′entary.** Placental.

**Placenta′tion.** Formation of a placenta.

**Placenti′tis.** Inflammation of the placenta.

**Placen′tula** (dim. of *placenta*, a cake). Rudimental placenta; placenta of an abortion.

**Placi′do's disk.** Disk having concentric circles on it, used for examining and testing the meridians of curvature of the cornea.

**Plac′oid.** Resembling a plate.

**Placoï′tis** or **Placunti′tis** (*plakous*, placenta). Placentitis.

**Plac′us chinen′sis.** Plant employed by the Chinese in applications to ulcers and in diseases involving hairy parts; the root is given in coughs.

**Pladaro′ma.** Pladarosis.

**Pladaro′sis** (*pladaros*, humid). Soft tumor on the eyelid, unaccompanied with redness or pain; thickening of the palpebral conjunctiva; trachoma.

**Pla′ga.** Wound. **P. ig′nis**, anthrax.

**Plagiocephal′ic** or **Plagioceph′alous** (*plagios*, to one side, *kephale*, head). Having the skull twisted to one side; this oblique asymmetrical condition being called *plagiocepha′lia*, *plagioceph′alism*, or *plagioceph′aly*.

**Plague** (Lat., *plaga*). Pestis, pestis orientalis, pest, adenonervous fever, septic or glandular pestilence. Eminently malignant disease endemic in Central Asia; frequently epidemic, and destroying at least two-thirds of those it attacks. The disease occurs under three forms, the bubonic, the septicæmic, and the pneumonic. The first form, *bubonic plague*, begins with chills followed by fever; prostration is marked from the outset; the characteristic glandular symptoms, which appear about the second to the fourth day, consist in swelling, pain, and tenderness, usually followed by suppuration in the glands of the groin or the axilla. The septicæmic form, *pestis siderans* or *plague septicæmia*, is exceedingly violent and fatal, the patient dying before the bubonic signs have time to appear. The pneumonic form, *plague pneumonia*, presents the symptoms of a severe pneumonia, with but slight glandular affection. In addition to these varieties there is a very mild form, *pestis minor*, with bubonic symptoms, but only slight constitutional disturbances. The specific microorganism of plague is believed to be Bacillus pestis bubonica or Kitasato's bacillus. Rats, mice, and monkeys suffer equally with man, and it is believed that the former are chiefly instrumental in the propagation of the disease. Plague is supposed to have been the "black death" of the middle ages, but whether or not it was this disease that caused the pestilences of antiquity cannot now be determined. Sera have been employed both in the prophylaxis and in the treatment of plague, with apparently considerable success **Am′bulatory p.**, pestis minor; see *Plague*. **P. of Antoni′nus**, severe febrile disease which prevailed in the Roman empire during the reign of Antoninus. **P. of Ath′ens**, febrile disease which raged at Athens during the Peloponnesian war, in the fifth century before the Christian era, a description of which is given in Thucydides; it was characterized by a cutaneous eruption, accompanied by small ulcerations, vomiting, affection of the respiratory organs, and diarrhœa. **Cold p.**, severe form of congestive fever, seen in the Southern States. Bilious pneumonia, in which there is no reaction, has been also so called. **P.-cross**, cross formerly affixed by the authorities to the door of a house in which there was plague. **Great p. of Lon′don**, last visitation in London of the plague in 1665, the year before the great fire, which gave occasion to the rebuilding of a large portion of the city and to improved sanitary arrangements. On the 15th of September Evelyn records the deaths of the preceding week at 5000, and in another week of September they reached nearly 10,000. **Hun′ger p.**, relapsing fever. **Lung p.**, contagious pleuropneumonia of cattle. **Pa′li p.**, malignant fever, greatly resembling plague, which prevailed in Rajpootana in 1836. **Pneumon′ic p.**, see *Plague*. **Septicæm′ic p.**, see *Plague*. **Sibe′rian p.**, a cattle disease of Siberia. **Sid′erant p.**, pestis siderans; see *Plague*. **P. spot**, plague token. **Swine p.**, hog cholera. **P.-to′ken**, p. mark, p. spot; mark by which one struck with the plague was known, probably an ecchymosis or a carbuncle.

**Plain′tive.** Lamenting; complaining.

**Plais′ter.** Plaster.

**Planæ′a** (*planus*, flat). Fourth stage of development in embryo.

**Planan′thus fastiga′tus.** Lycopodium selago. **P. sela′go**, Lycopodium selago.

**Plana′ria latius′cula.** Distoma hepaticum.

**Planarthrag′ra** (*plane*, wandering, *arthron*, joint, *agra*, seizure). Wandering gout.

**Plan′cus** (*planea*, plane, table). One the soles of whose feet are flat and devoid of the usual concavity.

**Plan′e** (*plane*, wandering). Plexus.

**Plane.** A flat surface; a term used in craniometry. **Ae′by's, Ha′my's, Mor′ton's p.**, etc., see these words. **Da′tum p.**, any plane selected as the starting point for craniometrical calculations. **P. of mastica′tion**, p. tangent to the masticating surface of the teeth of the upper jaw. **Me′sial p.**, see *Mesial*. **P. of mo′tion**, any one of the planes in which the visual line is moved in motions of the eye. **P. of regard′**, p. which contains lines of regard, and also point of fixation. **Sag′ittal p.**, the vertical plane cutting the body anteroposteriorly in the median line or line of the sagittal suture.

**Plane′sis.** Wandering, as of the mind. Anxiety.

**Plane′tes** (*plane*, wandering). Erratic. Epithet given to diseases whose returns are irregular; especially intermittent fever.

**Planet′ic arthri′tis.** Wandering gout.

**Planim′eter.** An instrument used to measure a plane by tracing the periphery. Perimeter.

**Plani′ties pe′dis.** Sole.

**Planocel′lular.** Flat-celled.

**Planococ′cus.** A motile micrococcus, the cells of which divide in two dimensions only.

**Planocon′cave** (*planus*, plane, *concavus*, concave). Plane on one side and concave on the other.

**Planocon′ical** (*planus*, plane, *conicus*, conical). Plane on one side and conical on the other.

**Planocon′vex.** Plane on one side and convex on the other.

**Plan′ocyte** (*plane*, wandering, *kytos*, cell). A wandering cell.

**Plano′dia** (*plane*, wandering, *hodos*, way). False passage.

**Planoma′nia.** Insane desire to leave home and wander about.

**Planosar′cina.** A motile micrococcus in which division occurs in three dimensions.

**Plant.** A vegetable growth smaller than a tree. **Aë′rial p.**, p. which is nourished solely by air. **Dys′entery p.**, Oldenlandia globosa. **For′cible p.** Bupleurum rotundifolium. **Hu′mus p.**, saprophyte. **Lit′mus p.**, Chrozophora tinctoria. **P. pep′sin**, papain.

**Plan′ta.** Sole. **P. noc′tis**, hydroa; sudamina. **P. pe′dis**, sole. **P. pri′ma pe′dis**, tarsus.

**Planta′go.** Great plantain, way-bread, ord. *Plantaginaceæ.* The leaves have been said to be refrigerant, attenuant, substyptic, and diuretic. **P. aquat′ica**, Alisma plantago. **P. arena′ria**, European species. **P. corda′ta**, heartleaved plantain. **P. coron′opus**, coronopodium, plantago, buckshorn plantain, has similar properties. **P. isphaghu′la**, of India; seeds are demulcent and astringent. **P. lanceola′ta**, ribgrass. **P. ma′jor**, plantago. **P. nit′ida**, P. psyllium. **P. psyl′lium**, branching plantain, fleawort; seeds have a nauseous, mucilaginous taste; a decoction of the seeds is recommended in hoarseness and roughness of the fauces. **P. virgin′ica**, white plantain or ribwort, indigenous; has properties like those of P. major. **P. vulga′ris**, plantago.

**Plan′tain.** Plantago. **Bucks′horn p.**, Plantago coronopus. **Com′mon p.**, plantago. **Great p.**, Plantago major. **Heart′leaved p.**, Plantago cordata. **P. meal**, see *Musa paradisiaca.* **Rat′tlesnake p.**, Goodyera pubescens. **Rob′in′s p.**, Erigeron bellifolium. **True p.**, Musa paradisiaca. **Wa′ter p.**, Alisma plantago; Unisema deltifolia. **White p.**, Plantago virginica.

**Plan′tar** (*planta*, sole). Plantaris. Relating or belonging to the sole of the foot. **P. aponeuro′sis**, p. fascia, a thick, dense, resisting aponeurosis, of a triangular shape and superficially situated, occupying the middle and sides of the sole of the foot, and furnishing insertions to several of the muscles of the region, either directly or through the medium of septa which it sends between them. **P. arch**, see *Plantar arteries.* **P. ar′teries**, two in number, arising from the extremity of the posterior tibial artery. They are distinguished into: The internal plantar artery, situated above the abductor pollicis pedis; it extends from the termination of the posterior tibial to the trunk of one of the collaterals of that toe. The external plantar artery is larger than the preceding, and ought to be considered as the termination of the posterior tibial; situated above the flexor communis digitorum pedis, it extends from beneath the calcaneum to the posterior extremity of the last metatarsal space; when it has reached this part it turns from without inward, advances toward the posterior extremity of the first metatarsal bone, and anastomoses with the perforating branch of the dorsalis tarsi. In the first part of its course it furnishes calcaneal, articular, muscular, and adipose branches. The second portion of the artery is called the plantar arch or cross. It gives branches in all directions. The inferior and posterior have received no name. The superior—three in number—are the posterior perforating arteries. The anterior branches are larger, and there are commonly four. They furnish the anterior perforating and the collaterals of the last four toes. **P. cross**, see *Plantar arteries.* **P. fas′cia**, p. aponeurosis. **P. interos′seous mus′cles**, interosseous muscles. **P. lig′aments**, name given to the inferior ligaments which unite the bones of the tarsus and metatarsus, to distinguish them from the superior, called *dorsal.* **P. metatar′sal ar′teries**, p. interosseous arteries. **P. mus′cle**, muscle situated at the posterior part of the leg; is long, thin, and narrow. Above, it is attached to the posterior part of the external condyle of the os femoris; below, it terminates by a long tendon which is attached to the posterior and inner part of the calcaneum. This muscle extends the leg on the foot, and conversely; it can also assist in the flexion of the leg on the thigh. **P. nerves** are two in number, and are furnished by the termination of the posterior tibial nerve; they are distinguished into: 1. The *internal plantar nerve*, which extends from the inferior part of the tibial nerve to both sides of the first three toes and the inner side of the fourth. It furnishes branches to the abductor of the great toe, to the short flexor of the toes, to the accessory, to the short flexor of the great toe, the lumbricales, etc. 2. The *external plantar nerve* proceeds from the termination of the posterior tibial to the posterior extremity of the fifth metatarsal bone, and gives branches to the flexor brevis digitorum pedis, the accessory, and the abductor of the little toe. This trunk subsequently divides into two branches: the one—*profunda*—is distributed to the short flexor of the great toe, the interosseous and abductor pollicis pedis; the other—*superficialis*—sends filaments to the short flexor of the little toe, the two sides of that toe, the outer side of the fourth, and the last lumbricalis. **P. re′flex**, muscular contraction induced by a stimulus applied to the sole of the foot. **P. re′gions** or **sur′faces** are different regions or surfaces of the sole of the foot. Three are generally reckoned—the internal, middle, and external. **P. tu′bercle**, tubercle on the plantar surface of the first metatarsal bone, to which the tendon of the peroneus longus muscle attaches. **P. veins** follow an arrangement similar to that of the arteries.

**Planta′ria.** Dengue.

**Planta′ris.** Plantar; p. muscle. **P. superfic′ies pe′dis**, sole. **P. ve′rus**, see *Flexor longus digitorum pedis profundus perforans* (*accessorius*).

**Plan′tigrade** (*planta*, sole, *gradior*, to walk). Walking on the entire foot, as man or the bear; opposed to *digitigrade.*

**Plan′ula.** Embryo of Cœlenterata provided with cilia.

**Pla′num.** A plane or smooth surface. **P. aponeurot′icum diaphrag′matis**, tendinous expansion of the diaphragm. **P. auricula′re**, auricular surface of the ilium. **P. circula′re elas′ticum**, sphincter of bladder. **P. fibro′sum dorsa′le transver′sum**, transverse ligament on the dorsum of the wrist. **P. infraorbita′le**, portion of the orbital surface of the superior maxillary bone on the external side of the sutura infraorbitalis. **P. is′chii**, inner surface of the ischium. **P. nucha′le**, surface between the superior curved line of the os occipitis and the foramen magnum. **P. occipita′le**, surface above the upper curved line of the occipital bone. **P. orbita′le**, see *Maxillary bone* (*superior*). **P. os**, papyraceous or orbital plate of the ethmoid—lamina papyracea, lamella plana. **P. os′sis is′chii**, inner surface of the ischium. **P. pe′dis**, sole. **P. poplite′um**, popliteal surface. **P. semiluna′tum,** half-moon shaped surface by which the ends of the crista acustica are connected to the ampulla of the semicircular canal. **P. sphenoida′le,** flat surface anterior to the optic groove on the superior region of the sphenoid bone. **P. sterna′le,** anterior portion of the thorax. **P. supe′rius lin′guæ,** upper surface of the tongue. **P. tempora′le,** a somewhat flattened portion of the temporal fossa.

**Planu′ria** (*plane,* a wandering, *ouron,* urine). Discharge of urine through unwonted ways.

**Plaque,** plak. A patch, differing in appearance from the surrounding surface, on the skin or mucous membrane. A blood platelet.

**Plasm** (*plasma,* thing formed). Plasma; liquor sanguinis. A pharmaceutical preparation from glycerin and starch heated together, called also *glycamil.* **Blood p.,** liquor sanguinis. **P. cor′puscles,** granular cells in the connective tissue. **Histogenet′ic p.,** body protoplasm from which tissue is regenerated. **Lymph p.,** see *Lymph.* **Mus′cle p.,** see *Muscle.* **Somat′ic p.,** histogenetic plasma.

**Plas′ma.** Plasm. **P. rhex′is,** rupture of a cell from internal pressure.

**Plas′masome** (*soma,* body). Separate particle of plasma.

**Plasmat′ic.** Having the power to form; plastic. Relating to plasma. **P. cur′rent,** or **lay′er,** colorless space, devoid of red corpuscles, along the walls of the capillary vessels; in contradistinction to the axial current.

**Plasmatorrhex′is** (*rhexis,* rupture). Plasma rhexis.

**Plasmexhidro′sis** (*ek,* out of, *hidrosis,* perspiration). Exudation of the plasma of the blood from the vessels.

**Plas′mic.** Plasmatic.

**Plas′min.** Proteid of blood plasma.

**Plas′mocyte** (*kytos,* cell). Any cell, not a blood corpuscle, free in the blood plasm.

**Plasmodië̆r′esis** (*diairesis,* division). Division of a cell-body.

**Plasmo′dium.** Protoplasmic mass made by the fusion of several amœbiform bodies. **P. mala′riæ,** the hæmatozoon of malaria; see *Hæmamœba* and *Malaria.* **P. malig′num,** the parasite of estivo-autumnal or pernicious malarial fever. **P. quarta′næ,** the parasite of quartan fever. **P. tertia′næ,** the parasite of tertian fever. **P. vi′vax,** P. tertianæ.

**Plas′mogen** (*gennao,* to produce). True protoplasm.

**Plasmol′ogy** (*logos,* description). Histology.

**Plasmol′ysis** (*plasma,* thing formed, *lysis,* loosing). Disintegration of the plasma of the erythrocytes.

**Plasmolyt′ic.** Relating to plasmolysis.

**Plas′molyze.** To cause disintegration of protoplasm in active cells.

**Plasmo′ma.** Fibroplastic growth.

**Plasmorrhex′is** (*rhexis,* rupture). Rupture of a cell, allowing egress of the plasma.

**Plasmoschisis,** plaz-mos′kis-is (*schisis,* splitting or fissure). Splitting or fissure of a cell.

**Plas′mosome** (*soma,* body). Nucleolus of a cell-body.

**Plasmotrop′ic** (*trope,* change). Causing granular degeneration of protoplasm, especially of that of the erythrocytes.

**Pla′some.** Plasma molecule; plastidule; the smallest particle of plasma possible without chemical decomposition.

**Plas′son** (*plasso,* to form). Protoplasm.

**Plas′ter** (*plasso,* to smear). Emplastrum. **Adhe′sive p.,** emplastrum resinæ; sparadrapum adhæsivum. **Antisep′tic p.,** plaster made by dipping ordinary adhesive plaster in a hot solution of carbolic acid (1:60). **Antisep′tic lac p.,** p. made, according to Lister, by heating shellac, three parts, with crystallized carbolic acid, one part. **P. ban′dage,** a bandage impregnated with plaster-of-Paris. **Black p.,** see *Emplastrum plumbi.* **Blis′tering p.,** emplastrum lyttæ. **Cephal′ic p.,** emplastrum picis compositum. **Chalyb′eate p.,** emplastrum ferri. **Corn p.,** sparadrapum viride. **Court p.,** see *Ichthyocolla, Sparadrapum adhæsivum.* **Defen′sive p.,** sparadrapum Galteri. **Diach′ylon p.,** emplastrum plumbi. **Fly p.,** emplastrum lyttæ. **Is′sue p.,** sparadrapum profonticulus. **P. jack′et,** a permanent bandage, stiffened with plaster-of-Paris, encircling the trunk; used in the treatment of spinal deformities. **P. mull,** see *Mull.* **Nu′remberg p.,** emplastrum norimbergense. **P.-of-Par′is,** calcii sulphas. **Poor man′s p.,** p. of resin, tar, and yellow wax. **Po′rous p.,** a plaster spread on muslin pierced with holes to prevent wrinkling. **Stick′ing p.,** emplastrum resinæ. **Strength′ening p.,** emplastrum ferri; emplastrum oxidi ferri rubri. **P. of Vi′go,** see *Emplastrum hydrargyri compositum.* **Warm′ing p.,** emplastrum calefaciens.

**Plas′tered wine.** Wine which has been treated with gypsum in order to neutralize the acid or improve the bouquet.

**Plas′tic** (*plastikos,* formative). That which forms or serves to form. A dental filling material, inserted in a soft state and undergoing subsequent hardening. **P. bronchi′tis,** pseudomembranous bronchitis. **P. el′ement,** one which bears within it the germs of a higher form. Plastic, histogenic, or organoleptic elements of nutrition are those elements of food which go to the formation of organized tissue; agents—hygienic or curative—which take part in such formations may be termed histotrophic or constructive. See *Aliment.* **P. force,** plasticity, force of nutrition, force of assimilation, force of formation, force of vegetation, generative or formative power in organized bodies. **P. lymph,** liquor sanguinis. **P. opera′tion,** operation for the restoration of a lost part. **P. sur′gery,** anaplastic or autoplastic surgery, autoplasty; operation for the restoration of lost parts. Operations for this purpose have various names according to the part concerned, as cheiloplasty (plastic operation on the cheek), rhinoplasty (plastic operation on the nose), etc. The following is a table of the methods used in plastic surgery (J. B. Roberts):

### METHODS USED IN PLASTIC SURGERY.

DISPLACEMENT—stretching or sliding of tissues.

I. *Simple approximation after fastening the edges,* as in hare-lip, vesico-vaginal fistule, and notches caused by tearing out ear-rings.

II. *Sliding into position after transferring tension to adjoining localities,* as in v-shaped incision for ectropium and cicatricial contraction of joints after burns, and in linear incisions to allow stretching of skin to cover large wounds and to relax contracted parts.

INTERPOLATION—borrowing material from adjacent regions, from a limb, or from another person.

I. *Transferring flap with a pedicle.*

[When a flap is borrowed from the arm or hand there is less necessity for rotating and twisting than when it is taken from the neighborhood of the organ to be constructed. The latter is generally the preferred method, however, because less irksome to the patient than the former with its constrained posture.]

*A.* Putting it in place at once:

1. By rotating flap on the pedicle in its own plane through one-fourth or one-half a circle, as in making upper eyelid or nose from forehead.
2. By twisting flap on its pedicle, as in making side of nose from lip.
3. By everting flap entirely so that raw surface is uppermost, as in covering exstrophy of bladder by a scrotal flap.
4. Superimposing one flap on another which has been everted. This is done where a thick wall is desirable, as in closing the front of an exstrophy of the bladder.
5. By jumping or carrying flap across a bridge of skin, and fixing only its end to the part to be repaired. When the flap has become attached the pedicle is severed. This manœuvre is rarely employed.

*B.* Putting in place gradually by successive migrations, by same manœuvres as when the flap is placed at once in its permanent position.

This method is not very commonly needed, but may be valuable when there is nothing but cicatricial material in the immediate vicinity of the part to be repaired.

II. *Transplanting without a pedicle.*
  *a.* By carefully suturing or fixing in the gap areas of tissue recently dissected from distant regions or taken from the lower animals; such as replacing the bone button after trephining, inserting portions of nerve-trunks in wounded nerves, etc.
  *b.* By skin-grafting with small pieces of large shavings of skin. This is the manœuvre of this class that has been followed by the greatest success. As it lessens cicatricial contraction it may be advantageously used at times in plastic operations that necessarily leave surfaces to heal by granulation. Skin from the frog's abdomen may answer well.
  *c.* By readjusting finger-tips, ears, and noses recently completely severed by injuries.

RETRENCHMENT—removing superfluous material and causing cicatricial contraction.
I. By cutting out elliptical or semi-elliptical pieces of tissue, as in ptosis, cystocele, and prolapse of the rectum.
II. By cutting out triangular or wedge-shaped portions of tissue, as in closing the vaginal aperture, decreasing the size of a lip, ear, or nose, and separating webbed fingers.

**Plastic′ity** (*plasso*, to form). Plastic force.

**Plas′ticule.** Plastidule.

**Plas′tid.** Any cell of the living organism.

**Plas′tidule.** Smallest possible particle of matter imbued with life; plasome.

**Plastilyt′ic** (*plasso*, to form, *lyo*, to loose). Diminishing the quantity of plastic matter in the blood.

**Plastin′.** One of the proteids in protoplasm.

**Plastodynam′ia** (*plasso*, to form, *dynamis*, force). Manifestation of nutritive activity or power.

**Plastodynam′ic.** Relating to nutritive activity.

**Plas′tron.** Sternum with costal cartilages attached, as removed in post-mortem examinations.

**Pla′ta** (*platys*, broad). Scapula.

**Platan′thera orbicula′ta.** Large, round-leaved orchid; indigenous; ord. *Orchidaceæ*. The leaves are large, soft, and fleshy, and are used for dressing blisters.

**Plat′anus.** Musa paradisiaca. **P. acerifo′lia,** plane tree of North America. Like the eucalyptus, when grown in low, marshy ground it exerts a beneficial influence in checking malaria.

**Plate.** A disk. A flat surface of limited extent. **Approxima′tion p.,** a disk of decalcified bone or other absorbable material employed in intestinal anastomosis. **Au′ditory p.,** a bone p. forming the roof of the external auditory meatus. **Ax′ial p.,** primitive streak of blastoderm. **Blood p.,** see *Blood*. **P. bone,** scapula. **Crib′riform p.,** see *Ethmoid*. **P.-cul′ture,** see *Culture*. **Dor′sal p.,** one of two prominences on dorsal surface of embryo which united constitute the neural canal. **Elec′trical p.,** see *Electricity*. **End-p.,** see *End-plate*. **Equato′rial p.,** collection of chromosomes or chromatin fibres at the equator of the nuclear spindle in the process of karyokinesis or indirect nuclear division. **Foot p.,** flat portion of the stapes bone. **Gray p.,** lamina cinerea. **Med′ullary p.,** dorsal p. **Me′sial p.,** see *Visceral*. **Moto′rial p.,** see *Motorial end-plate*. **Neu′ral p.,** dorsal p. **Or′bital p.,** os planum. **Pal′ate p.,** portion of palate-bone, which when joined to its fellow of the opposite side constitutes the roof of the mouth. **Spi′ral p.,** lamina spiralis. **Tympan′ic p.,** osseous portion of the auditory meatus. **Vis′ceral p.,** see *Visceral*.

**Plat′ea** (*platys*, broad). Bothriocephalus latus.

**Plate′let.** Small disk, plaque. **Blood p.,** see *Blood*.

**Plat′etrope.** Term applied, in symmetrical bodies, to a part which corresponds to one on the other side.

**Platias′mus.** Excessive development of the tongue, causing articulation to be imperfect.

**Plat′iculture.** Plate culture.

**Pla′ting.** Preparing a plate culture.

**Plat′inode.** Cathode.

**Plat′inum.** A metallic element, symbol, Pt. The preparations of platinum resemble in therapeutical properties those of gold; they are not much prescribed. It is used in electrical and chemical work chiefly.

**Platy-** (*platys*, broad). In composition, broad.

**Platybreg′mate.** See *Cranium*.

**Platycephal′ic** or **Platyceph′alous.** Having a broad skull.

**Platycne′mic** (*platys*, broad, *kneme*, a leg). Appearance of a bone of the leg, especially the tibia, when flattened on the sides. Some African tribes have the femur so constituted.

**Platycne′mism.** Lateral flatness of tibiæ.

**Platycœ′lian** or **Platycœ′lous** (*platys*, broad, *koilos*, hollow). Opisthocœlus.

**Platyco′ria** or **Platycori′asis** (*kore*, pupil). Mydriasis.

**Plat′ycyte.** An epithelioid cell, slightly smaller than a giant cell, found in tubercle.

**Platydolichocephal′ic** (*platys*, broad, *dolichos*, long, *kephale*, head). Relating to a flat and narrow skull.

**Platyel′mia** (*platys*, broad, *helmins*, worm). Variety of worms, long and flat; trematodes.

**Platyglos′sus** (*platys*, broad, *glossa*, tongue). Having a broad tongue.

**Platyhel′minth** (*platys*, broad, *helmins*, a worm). A flat worm; trematode.

**Platyhi′eric** (*platys*, broad, *hieros*, sacred or sacrum). Having the sacrum in breadth greater than its length.

**Platyl′obus.** Having broad lobes.

**Platymesaticephal′ic** or **Platymesocephal′ic.** Term applied to a skull both platycephalic and mesaticephalic.

**Platyophthal′mus.** One who has broad eyes.

**Platyo′pic.** Broad across the eyes, broad-faced; having a nasomalar index less than 107.5.

**Platypel′lic** or **Platypel′vic.** Having a broad pelvis.

**Platypo′dia.** Condition of flat-footedness.

**Platyp′ygous** (*platys*, broad, *pyge*, buttock). Having broad buttocks.

**Plat′yrrhine** (*platys*, broad, *rhis*, nose). Having a flat nose, or a nasal index of from 51.1 to 58.

**Platys′ma** (*platys*, broad). Anything broadly extended; a spread plaster. **P. myoi′des** or **myo′des,** muscle situated superficially on the lateral parts of the neck; flat, broad, and quadrilateral. Its fibres, which are all parallel to each other, pass obliquely upward and from without inward. They arise from the areolar tissue, which covers the anterior and superior part of the chest, pass before the clavicle, and proceed to attach themselves at the interior part of the symphysis menti, at the external oblique line of the jaw, and at the commissure of the lips. The fibres of this last insertion form a distinct fasciculus, called by some anatomists *musculus risorius Santorini*. The platysma myoides depresses the commissure of the lips and carries it outward; contributes, also, to the depression of the lower jaw. When it contracts it wrinkles the skin of the neck transversely.

**Platystencephal′ic** (*platystos*, widest). Term applied to a head very wide at the occiput, with prominent jaw.

**Platyster′nus.** Having a broad chest.

**Platys′tomus.** Having a wide mouth.

**Plax.** Genus of *Schizomycetes*. **P. scin′dens,** organism which has been described as present in the blood and urine of individuals suffering with scarlet fever.

**Ple′chas.** Perineum.

**Plec′tane** (*pleko*, to twine). Fold. Plexus. Cornu of the uterus.

**Plec′trum.** Styloid process of the temporal bone. Uvula. Tongue.

**Pled′get.** A small mass of cotton, lint, or wool.

**Plegapho′nia** or **Plegaph′ony** (*plege*, blow, *phone*, sound). Sound elicited in percussion of the larynx when the glottis is open at the same time.

**Plegom′eter** (*plege*, stroke, *metron*, measure). Pleximeter.

**Plehn's solu'tion.** An alkaline solution of eosin and methylene-blue, employed for staining corpuscles (red) and plasmodia of malaria (blue).

**Plenal'via** (*plenus*, full, *alvus*, abdomen). Grain-sick, mawbound; impaction of the paunch or rumen of cattle.

**Plen'itude.** Plethora; fulness.

**Ple'no ri'vo** (in full stream). Term formerly applied to the blood when it flowed freely from the vein in venesection.

**Pleocatan'tes** (*pleon*, more, *katantes*, downward). Said of skulls in which angle is formed by line uniting with radius between 45° and 67°.

**Pleochroic**, ple-o-kro'ik (*pleon*, more, *chroma*, color). Showing different colors under different surroundings.

**Pleochro'ism.** State of being pleochroic.

**Pleochromat'ic** (*pleon*, more, *chroma*, color). Pleochroic.

**Pleoepignath'us** (*pleon*, more, *epi*, upon, *gnathos*, jaw). A double monster in which an incomplete fœtus is rooted, with its vessels, in the palate of one more complete.

**Pleomas'tia** (*pleon*, more, *mastos*, nipple). Condition of having several nipples developed on one breast.

**Pleoma'zia** (*pleon*, more, *mazos*, breast). Condition in which there are more than the normal number of breasts.

**Pleomor'phic** or **Pleomor'phous** (*pleon*, more, *morphe*, form). Occurring in many distinct forms.

**Pleomor'phism** (*pleon*, more, *morphe*, shape). Polymorphism.

**Ple'onasm** (*pleonazo*, to abound). Abnormal or defective formation by excessive abundance or size.

**Pleonec'tica athym'ia** or **melanchol'ia.** Form of insanity characterized by a desire for gain or by covetousness.

**Pleonex'ia** (*pleon*, more, *echo*, to have). Insane greediness or selfishness.

**Plerocer'cus.** Term applied to tapeworm when in larval state.

**Plerot'ic** (*pleroo*, to fill up). Promoting regeneration.

**Plesiomor'phous** (*plesios*, near, *morphe*, form). Having the same shape or crystalline form.

**Ples'sigraph** (*plesso*, to strike, *grapho*, to write). Instrument intended not only for the purposes of percussion, but also to indicate a change in the nature of the sound elicited.

**Plessim'eter.** Pleximeter.

**Ples'sor** (*plesso*, to strike). Any instrument employed in percussion.

**Plethome'ria** (*plethos*, great number, *meros*, part). Superabundance of parts, as in the case of six fingers to one hand.

**Pleth'ora** (*plethos*, fulness). Plethory, repletion, fulness. Superabundance of blood in the general system or in some part of it; hence the division of plethora into general and local, the latter being called, according to its seat, cerebral, pulmonary, uterine, etc. The principal symptoms of plethora exist in the circulatory system: redness of the surface, swelling of the veins, increase in the fulness of the pulse, in the strength of the heart's pulsations, etc., with spontaneous hemorrhages occasionally. With these are usually united general heaviness, torpor, lassitude, vertigo, tinnitus aurium, flushes of heat, etc. The blood of plethoric persons differs from healthy blood in the smaller ratio of water which it contains, and especially in the augmentation of the red corpuscles. **P. apocop'tica,** p. with local increase in the amount of circulating fluid. **P. arterio'sa,** form in which the blood is rich in fibrin and red corpuscles, the *arterial constitution.* **Hydræ'mic p.,** hydræmia; p. from increase of the amount of water in the blood. **P. hyperalbumino'sa,** increased quantity of albumin in the blood. **Lo'cal p.,** hyperæmia. **P. partia'lis,** hyperæmia. **P. polycythæ'mica,** condition of the blood in which there is an increase of red corpuscles. **Se'rous p.,** condition in which an excessive amount of serum is contained in the blood.

**Pleth'oric.** Polyæmic, sanguine. Full of blood. Relating to or affected with plethora.

**Pleth'ory.** Plethora.

**Plethys'mograph** (*plethysmos*, enlargement, *grapho*, to write). Instrument for determining the difference in the size of parts of the body.

**Plethysmograph'ic.** Relating to the plethysmograph.

**Pleumo'nia.** Pneumonia.

**Pleu'ra** (*pleura*, rib, side). The pleuræ are two thin, diaphanous membranes lining each side of the chest, and are reflected thence upon each lung. Like other serous membranes—to which class they belong—each represents a sac without aperture. From the junction of the pleura of each side the mediastina are formed. That portion of the pleura which lines the parietes of the chest is called *pleura costalis* or *parietalis;* the portion that covers the lungs, *pleura pulmonalis.* The arteries of the pleuræ are from the intercostal, internal mammary, phrenic, inferior thyroid, etc. The veins correspond with the arteries. They are also supplied with lymphatics. A fold of the pleura, reaching from the lower edge of the root of the lung to the diaphragm, is called ligamentum latum pulmonis, broad ligament of the lung. Pleura is also used for cavity of the pleura, saccus pleuræ. **Cos'tal p.,** see above. **Diaphragmat'ic p.,** that portion of the pleura which lines the superficial part of the diaphragm. **Pari'etal p.,** see above. **P. pericardi'aca,** pleura of the mediastinum reflected over the pericardium. **P. phren'ica,** p. of the diaphragm. **Pul'monary p.,** that covering the lungs. **Vis'ceral p.,** pulmonary and pericardiac pleura.

**Pleu'ræ** (pl. of pleura). Folds of the pleura. Sides of the chest.

**Pleur'al.** That which concerns the pleura.

**Pleural'gia** (*pleura*, side, *algos*, pain). Pleurodynia.

**Pleurapoph'ysis** (*apophysis*, processes). A rib.

**Pleuraposte'ma** (*apostema*, abscess). Empyema.

**Pleurarthroc'ace** (*pleura*, rib, *arthron*, joint, *kakos*, bad). Caries of the ribs.

**Pleurar'thron** (*pleura*, rib, *arthron*, joint). Articulation of a rib.

**Pleure'sia** or **Pleure'sis.** Pleuritis.

**Pleu'risy.** Pleuritis; inflammation of the pleura. It may be acute, subacute, or chronic. The acute form is marked by sharp, lancinating pain on one side of the chest, increased by inspiration, by coughing, and often by pressure; dyspnœa, the inspirations being short and frequent; cough, dry or with little expectoration, and difficulty of lying on the affected side, with symptoms attending the phlegmasiæ in general strongly marked. There are four varieties of pleurisy: acute, exudation mainly fibrous; subacute, exudation mainly serous; chronic or empyema, exudation mainly cells and pus; hydropneumothorax, air and fluid in the pleuræ. Acute pleurisy may be primary or secondary. It may be divided into four stages: dry stage, or hyperæmia; plastic stage; stage of liquid effusion; and stage of absorption and adhesion. Physical signs: *First stage.* Inspection, diminished movement of affected side; percussion, negative; palpation, negative; auscultation, friction sound, grating or creaking. *Second stage.* Inspection, movements of affected side more diminished; palpation, diminished vocal fremitus; percussion, marked dulness; auscultation, crepitating friction sound at the end of inspiration. *Third stage.* Inspection, no visible motion; vocal fremitus absolutely suppressed; percussion, flatness on percussion; auscultation, respiratory sounds below the level of the fluid are suppressed, above they are exaggerated. *Fourth stage.* All the signs gradually diminish until they become normal. There is seldom any perceptible alteration in the exterior of the chest. When effusion has taken place to a great extent the signs will be similar to those of chronic pleurisy. Motion of the affected side is diminished, and the vibrations of the voice cannot be detected by the hand. There is more or less dulness on percussion, the dulness diminishing or disappearing by change of position. On auscultation the inspiration is feeble, distant, or inaudible, but change of position modifies it. Egophony is usually present when the effusion is in moderate quantity, and is best heard over a portion of the thoracic parietes represented by a band three inches wide running from below the inferior margins of the scapula in the direction of the ribs to the sternum. Simple pleurisy rarely attacks both sides at once. When such is the case the presence of tubercles may be suspected. Formerly, a *true pleurisy* meant one seated in the pleura; a *mediastinal pleurisy*, one situated in the anterior mediastinum; and *false pleurisy* or *rheumatic pleurisy*, that which occupied the intercostal muscles. The last has received the name pleurodynia, that of pleurisy being exclusively appropriated to inflammation of the pleura. Pleurisy has also been distinguished into *dry* or *humid*, according as it is or is not accompanied by expectoration. Humid or moist pleurisy is now properly regarded as a complication of pleurisy with pulmonary catarrh. It is the catarrhal pleurisy of some. In *latent pleurisy* pain, cough, and dyspnœa may all be absent, and yet a serious amount of effusion occur. The term *dry pleurisy, pleuritis sicca*, has been given to a form of the disease with merely fibrinous exudation. *Chronic pleurisy* may form slowly, without evident symptoms, or may succeed acute pleurisy. In the former case vague pains are felt in the chest, with short, dry cough, oppression at intervals, shivering, irregular febrile symptoms, and hardness of pulse. It most frequently terminates by a serous or purulent effusion, which sometimes simulates hydrothorax; at others, phthisis pulmonalis. Physical signs: Affected side is smoother, more rounded, and motionless; the intercostal spaces are dilated and filled up, or may even protrude slightly. In very chronic cases, however, the affected side may be smaller. The triangular space above the clavicle and the depression immediately above the sternum are often drawn downward on the diseased side. No vibration is experienced by the hand when the patient speaks. The parietes of the thorax are sometimes œdematous, and fluctuation may occasionally be felt between the ribs. On percussion the sound is dull, or, if clear, only so in the upper portions of the chest. On auscultation there is absence of the usual sounds over the affected parts, excepting occasionally transmitted sounds. On dissection of those who have died of pleurisy the pleura is found thickened, red, inflamed, and covered with membranous exudations or false membranes. Sometimes it seems cartilaginous and ossified. Its cavity frequently contains serous or seropurulent effusions. **Bil′ious p.**, pleurisy accompanied with bilious symptoms, the effect of duodenitis or duodenohepatitis. **Bron′chial p.**, bronchitis. **Costal p.**, parietal pleurisy. **Dry p.**, pleuritis sicca. **Encys′ted p.**, p. in which the effusion is in sac-like cavities formed by adhesions. **False p.**, pleurodynia. **Fet′id p.**, p. with foul-smelling effusion. **Fi′brinous p.**, p. in which there is an exudation of fibrinous material, with but little serous effusion. **Hemorrhag′ic p.**, hæmatothorax. **Hu′mid p.**, an old term for bronchitis. **I′chorous p.**, fetid pleurisy. **Interlo′bar p.**, inflammation of the pleura between the lobes of the lungs. **La′tent p.**, see above. **Mediasti′nal p.**, p. involving the layers of the mediastinal portion of the pleura. **Metapneumon′ic p.**, p. connected with or following pneumonia. **Pericar′dial p.**, pericarditis. **Plastic p.**, p. characterized by a semisolid exudation. **Pul′sating p.**, p. in which the impact of the heart beat is transmitted through the layer of fluid; pulsating empyema. **Pur′ulent p.**, empyema. **P. root,** Asclepias tuberosa. **Serofi′brinous p.**, p. accompanied by an effusion of serum together with a more or less marked fibrinous exudation on the surface of the pleura. **Se′rous p.**, p. with abundant serous effusion, with little or no fibrinous exudate. **Ty′phoid p.**, p. accompanied with adynamic symptoms.

**Pleurit′ic.** Relating to pleuritis.

**Pleuri′tis.** Pleurisy. **P. defor′mans,** form of pleurisy in which the pleura becomes thickened like fibrocartilage, occurring in cirrhosis of the lungs. **P. diaphragmat′ica,** diaphragmitis. **P. duplica′ta,** bilateral pleurisy. **P. legit′ima,** true pleurisy. **P. muscula′ris,** pleurodynia. **P. no′tha,** pleurodynia. **P. pulmo′nis,** pleuropneumonia. **P. rheumat′ica,** pleurodynia. **P. sic′ca,** dry pleurisy. **P. spu′ria,** pleurodynia. **P. vento′sa,** a pain behind the false ribs, attributed to the presence of air in the intestines. **P. ve′ra,** true pleurisy.

**Pleu′rocele** (*kele*, tumor). Hernia of the pleura. An inaccurate term, as the pleura never protrudes alone. It forms a hernia only when it serves as an envelope to the lung, to tumors, or to purulent collections which have protruded from the thoracic parietes.

**Pleurocente′sis.** Thoracentesis.

**Pleurocent′rum.** The lateral element of a vertebral centrum.

**Pleurocholecysti′tis** (*chole*, bile, *kystis*, bladder). Inflammation involving the pleura and gall-bladder.

**Pleuroc′lysis** (*klysis*, washing). Washing out of the pleural cavity by injection and aspiration of sterilized water.

**Pleurococ′cus beige′lii.** Vegetable fungus developed in human hair, called also *Gregarine*. **P. ro′seopersici′nus** (Rabenhorst), Beggiatoa roseopersicina.

**Pleurocœnadelph′us** (*pleura*, side, *koinos*, common, *adelphos*, brother). Monster possessing two bodies which are connected by the trunks at the side.

**Pleurocol′ic lig′ament.** Costocolic ligament.

**Pleurocolle′sis** (*kollao*, to glue). Adhesion between the two pleural surfaces.

**Pleurocuta′neous.** Extending through the pleura and skin; said of a fistula.

**Pleu′rodont** (*pleura*, side, *odous*, tooth). Possessing teeth attached laterally to the lower jaw.

**Pleurodyn′ia** (*pleura*, side, *odyne*, pain). Pseudopleurisy, pain in the side, stitch in the side, false or rheumatic pleurisy. Spasmodic or rheumatic affection, generally in the muscles of the chest, and, ordinarily, in the intercostals. It is usually augmented by outward pressure, inspiration, coughing, exertion, moving the thorax, and sometimes even the corresponding arm. It is unaccompanied by fever, cough, or dyspnœa, excepting under the form of a *stitch*, which interferes with free inspiration; is generally by no means obstinate, and yields promptly to the proper external applications. If it still resists, a blister will almost always remove it. **P. vento′sa,** pleuritis ventosa.

**Pleurodyn′ic.** Relating to pleurodynia.

**Pleurogen′ic** or **Pleurog′enous.** Of pleural origin.

**Pleurohepati′tis** (*hepar*, liver). Inflammation of the liver and neighboring pleura.

**Pleu′rolith** (*lithos*, stone). Concretion in the pleura.

**Pleuro′ma.** Costa or rib; pleura.

**Pleurom′elus** (*pleura*, side, *melos*, limb). Monster with supernumerary members attached to the thorax.

**Pleu′ron.** Rib.

**Pleuro-œsophage′us.** Band of smooth muscle-fibres connecting the left pleura posteriorly with the œsophagus.

**Pleurop′athy** (*pathos*, disease). Disease of the pleura.

**Pleuropericardi′tis.** Inflammation of the pleura and the pericardium.

**Pleuroperipneu′mony.** Pleurisy and pneumonia existing simultaneously. Pleuropneumonia.

**Pleuroperitone′al.** Belonging to the pleura and peritoneum. **P. cav′ity,** a space in the early development of the embryo, which afterward becomes separated into the pleural and peritoneal cavities.

**Pleuroperitoni′tis.** Combined pleurisy and peritonitis.

**Pleuropneu′ma** (*pneuma,* wind). Pneumothorax.

**Pleuropneumo′nia** (plu-ro-nu-mo′ne-ah) or **Pleuropneumoni′tis.** Pneumonia with involvement of the pleura. Also, called sometimes *contagious p.,* a specific contagious disease among cattle; lung plague.

**Pleuropye′sis** (*pyesis,* suppuration). Empyema.

**Pleurorrha′gia.** Hæmatothorax.

**Pleurorrhœ′a** (*pleura,* side, *rheo,* to flow). Accumulation of fluid in the pleura. **P. chylo′sa,** effusion of chyle into the chest, owing to the rupture of a chyliferous vessel. **P. lymphat′ica,** hydrothorax. **P. purulen′ta,** empyema. **P. sanguin′ea,** hæmatothorax. **P. sero′sa,** hydrothorax.

**Pleurorthopnœ′a** (*orthos,* erect, *pneo,* to respire). Pain in the side which does not permit the patient to breathe except when in the vertical position.

**Pleuroso′mus** (*pleura,* side, *soma,* body). Monster with a lateral fissure with eventration chiefly of the viscera of the upper part of the abdomen and chest; the upper extremity of the fissured side being more or less atrophied. The condition is called *pleuroso′mia.*

**Pleu′rospasm.** Cramp in the side.

**Pleurosto′sis.** Ossification of the pleura.

**Pleurotet′anus.** Pleurothotonos.

**Pleurothot′onos** (*pleurothen,* laterally, *tonos,* tension). Variety of tetanus in which the body is curved laterally by the stronger contraction of the muscles of one side of the body.

**Pleurot′omy** (*tome,* incision). Incision of the pleura.

**Pleurot′onos.** Pleurothotonos.

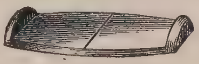
**Pleurotransversa′lis.** Muscular strip arising from the transverse process of the seventh cervical vertebra, inserted upon the apex of the pleural sac.

**Pleurovis′ceral.** Relating to the thoracic organs and the pleura investing them.

**Plex′al.** Relating to a plexus.

**Plex′iform.** Resembling a plexus.

**Plexim′eter** (*plesso,* to strike, *metron,* measure; measure of percussion). Ivory plate of a circular or ovoid shape, from an inch and a half to two inches in diameter, and about one-sixth of an inch in thickness; it has either a raised rim or edge, or projecting handles on the upper side, to permit its being held between the finger and thumb of the left hand while it is struck with the right. It is used in percussion of the chest. A piece of metal, a coin, or the finger of the left hand may be used with equal advantage.



Pleximeter.

**Pleximet′ric.** Relating to a pleximeter or to percussion. Having excellent powers of conduction of sound, as the bones of the chest and adjacent bones, and some of the abdominal viscera.

**Plex′or** (*plesso,* to strike). Any instrument employed in percussion. The ends of the fingers of the right hand brought together form the best *plexor;* the finger of the left is the best *pleximeter.*

**Plex′us** (*plecto, plexum,* to interlace). Network of blood-vessels or nerves. The nervous plexuses belong, some, to the system of cerebrospinal nerves; others, to that of the great sympathetic; while some, as the pharyngeal, seem to be formed of the two sets. The plexuses represent complex networks, with more or less loose meshes, formed by the numerous and diversified anastomoses of the nervous filaments, from which proceed other branches that are distributed to organs or to other plexuses. **Aor′tic p.,** intermesenteric plexus; plexus of the sympathetic placed along the abdominal aorta, and occupying the interval between the origins of the superior and inferior mesenteric arteries. **Acces′sory p.,** see *Ranvier.* **Au′erbach's p.,** a sympathetic-nerve plexus between the longitudinal and the transverse muscles of the intestine. **P. brachia′lis,** brachial plexus. **Car′diac p.,** see *Cardiac plexus.* **Carot′id p.,** see *Carotid nerve.* **P. caverno′sus,** bulb of the vestibule; also Walther's arterionervous plexus, a plexus lying in the cavernous sinus. **Cer′vical p.,** see *Cervical plexus.* **P. choroi′des,** see *Choroid.* **P. choroide′us me′dius,** choroidea tela. **P. cilia′ris,** ciliary ligament. **P. coccyge′us,** coccygeal plexus, same as caudal plexus. **Cœ′liac p.,** see *Cœliac plexus.* **P. col′icus,** colic plexus. **P. corona′rius ventric′uli,** gastric plexus. **Cor′onary p.,** see *Cardiac plexus* and *Coronary plexus.* **P. crura′lis,** crural plexus. **Cruveilhier's′ p.,** see *Cruveilhier.* **P. cys′ticus,** p. to the gall-bladder, formed by filaments from the hepatic plexus of the sympathetic. **Deep p.,** situated anterior to the bifurcation of the trachea. **P. deferentia′lis,** continuation of the vesical plexus upon the vasa deferentia and seminal vesicles. **Den′tal p.,** situated around the roots of the teeth in the lower jaw. **Diaphragmat′ic p.,** see *Diaphragmatic plexus.* **P. dorsa′lis spi′næ,** dorsispinal plexus of veins. **P. epigas′tricus,** solar plexus. **Ex′ner's p.,** see *Exner.* **Fa′cial p.,** situated around a portion of the facial artery. **P. ganglifor′mis,** a nervous ganglion. **P. ganglifor′mis semiluna′ris,** cœliac plexus. **P. ganglio′sus,** p formed at the places of union of the spinal branches of the pelvic plexus and elsewhere in the plexus. **Gas′tric p.,** branch of the cœliac plexus attending the gastric artery. **Gastroduod′enal p.,** secondary plexus, derived from the hepatic plexus. **Gastroepiplo′ic p.,** secondary plexus, derived from the hepatic plexus. **P. glandifor′mis,** a nervous ganglion. **P. glandulo′si Pey′eri,** Peyeri glandulæ. **Great p.,** deep plexus. **Hal′ler's p.,** see *Haller.* **Hemorrhoi′dal p.,** derived from the pelvic plexus near the rectum. **P. hedera′ceus,** corpus pampiniforme. **Hel′ler's p.,** see *Heller.* **Hepat′ic p.,** see *Hepatic plexus.* **P. hepat′icus,** hepatic plexus. **Ho′vius's p.** see *Hovius.* **Hypogas′tric p.,** see *Hypogastric plexus.* **P. ili′acus exter′nus,** external iliac lymphatic plexus. **Infraor′bital p.,** formed by the union of infraorbital branches of the superior maxillary nerve with branches of the facial. **Infrathyroi′deal p.,** see *Thyroideal veins.* **Interlam′inar p.,** see *Interlaminar.* **Intermesenter′ic p.,** aortic plexus. **P. intestina′lis,** Peyer's patch. **Le′ber's p.,** see *Leber.* **Lin′gual p.,** situated around the lingual artery. **Lum′bar p.,** see *Lumbar plexus.* **Lumboabdom′inal p.,** lumbar plexus. **Mag′nus profun′dus p.,** cardiac plexus. **P. of Meiss′ner,** see *Meissner, ganglion of.* **Me′dian p.,** cœliac plexus. **Mesenter′ic p.,** one situated around the inferior mesenteric artery; another around the superior mesenteric artery. **Myenter′ic p.,** situated between the muscular coats of the small intestine. **Nasopal′atine p.,** p. at the aperture of the incisor canal in the alveolar margin of the jaw. **P. nervo′rum anseri′nus,** facial nerve. **Ob′turator p.,** situated around the obturator nerve. **Occip′ital p.,** p. around the occipital artery. **Œsophag′eal p.,** formed by connecting cords between the right and left pneumogastric nerves while in contact with the œsophagus. **Ophthal′mic p.,** p. around the ophthalmic artery and optic nerve. **Ova′rian p.,** p. of the veins in the broad ligament; plexus of nerves to the ovaries. **Pampin′iform p.,** spermatic plexus. **Pancreat′ic p.,** p. of the sympathetic, derived from the splenic plexus. **Pancreaticoduod′enal p.,** p. situated near the head of the pancreas. **Paniz′za's p.,** see *Panizza.* **Patel′lar p.,** p. in front of the patella. **Pel′vic p.,** the inferior hypogastric plexus has been so called by some anatomists. **Pharyn′geal p.,** see *Pharyngeal nerve.* **Phren′ic p.,** p. attending the phrenic arteries to the diaphragm. **P. pneumogas′tricus,** see *Pneumogastric nerve.* **Pre-aor′tic p.,** see *Pre-aortic.* **Prever′tebral p.,** see *Prevertebral.* **Prostat′ic p.,** p. situated on the prostate gland. **Pter′ygoid p.,** venous plexus attending the internal maxillary artery as it passes between the pterygoid muscles. **Pul′monary p.,** one in front of the bronchus, the other at the back of the bronchus; branches of both are sent off to the lung. **Pylor'ic p.**, derived from the hepatic plexus of the sympathetic. **Ranvier's' p.**, see *Ranvier*. **Re'nal p.**, see *Renal plexus*. **P. reticula'ris**, bulbus vestibuli; choroides plexus. **P. retifor'mis**, corpus cavernosum vaginæ. **Sa'cral p.**, see *Sacral plexus*. **Santori'ni's p.**, see *Santorini*. **P. semina'lis**, rete testis. **So'lar p.**, cœliac plexus. **Spermat'ic p.**, see *Spermatic*. **Sphe'noid p.**, superior portion of the internal carotid plexus. **Sple'nic p.**, p. around the splenic artery. **Subsarto'rial p.**, situated at the posterior edge of the sartorius muscle. **Subtrape'zial p.**, situated beneath the trapezius muscle. **Suprare'nal p.**, p. formed by branches from the solar plexus, semilunar ganglion, and splanchnic and phrenic nerves. **Thy'roid p., infe'rior**, situated around the external carotid and inferior thyroid arteries. **T. p., supe'rior**, situated around the thyroid gland. **Ton'sillar p.**, situated in the tonsil. **Tympan'ic p.**, formed by communication between the nerve of Jacobson, a filament from the carotid plexus, a branch from the Vidian, and the small superficial petrosal nerve. **U'terine p.**, p. of veins on the wall of the uterus; plexus of nerves to the cervix uteri and inferior portion of the uterus. **Vag'inal p.**, see *Vaginal branches of the vena porta*. **P. vasculo'sus coccyge'us**, coccygeal gland. **P. v. funic'uli spermat'ici pampinifor'mis**, corpus pampiniforme. **Ver'tebral p.**, p. around the vertebral and basilar arteries. **Ves'ical p.**, p. around the vesical arteries. **Wal'ther's p.**, cavernous plexus.

**Pli'ca** (*plico*, to fold). In anatomy, a fold. In pathology, the same as p. polonica. See also *Plicæ*. **P. cachec'tica**, p. polonica. **P. centra'lis ret'inæ**, see *Optic nerve*. **P. glossoepiglot'tica**, fold of mucous membrane of the tongue and epiglottis, caused by the lifting up of the longitudinal fibres. **P. guberna'trix**, see *P. vascularis*. **P. longitudina'lis Va'teri**, diverticulum Vateri; vertical projection, about an inch in length, formed at the posterior part of the duodenum by the mucous membrane raised up by the common choledoch duct before it opens into the intestine. **P. luna'ta**, small doubling of the conjunctiva which lies between the caruncula lacrymalis and the ball of the eye. **P. neuropath'ica**, condition in which the hair is curled and twisted as the result of neuralgia. **P. polon'ica**, matted hair, plaited hair, trichomatose hair. Disease endemic in Poland, Lithuania, and other parts of Northern Europe, so called on account of its being characterized by interlacing, twisting, and agglutination or matting of the hair, saturated with a purulent discharge and infested with pediculi. By some it has been regarded as a real disease, by others as a result of want of attention to cleanliness. It generally appears upon the hair of the head, but sometimes on that of other parts, as the beard, the hair in the axilla, pubes, etc. Three chief species of plica are: 1. *P. multiformis*, in which the hairs are mixed and agglutinated in greater or smaller masses; if the meshes are almost straight it is called *plica caput Medusæ laciniata*. 2. *Plica longicauda:* the hairs are united into a single long mass. 3. *Plica cespitosa:* the hairs are matted into one large, shapeless mass. **P. præpylo'rica**, mucous fold on the inner surface of the stomach separating the antrum of that organ from the body. **P. saxon'ica**, plica. **P. semiluna'ris**, p. lunata. **P. sigmoide'a**, sharp elevation or fold on the internal surface of the colon. **P. ureter'ica**, ureteral fold, arched fold of the ureteral mucous membrane caused by the projection of muscular fibres. **P. vascula'ris**, peritoneal fold above the testicle, containing the spermatic vessels. The fold below the testicle, called *p. gubernatrix*, contains the lower part of the gubernaculum.

**Pli'cæ** (plural of plica). Folds. **P. adipo'sæ**, synovial ligaments. **P. a. pericardi'acæ**, processes due to the formation of adipose tissue under the pericardium. **P. alifor'mes**, alar ligaments of the knee. **P. cilia'res**, folds of the ciliary body situated between the ciliary processes; also ciliary process. **P. conniven'tes**, valvulæ conniventes. **P. membra'næ muco'sæ tym'pani**, folds of mucous membrane of the tympanum. **P. palma'tæ**, arborescent striæ in the interior of the cervix uteri. **P. rec'ti**, semilunar folds of the rectum. **P. retrovesica'les**, lines which bound the outer margin of the recti muscles of the abdomen. **P. semiluna'res**, see *Urinary bladder* and *Uterus*. **P. s. Douglass'ii**, lines which bound the outer margin of the recti muscles of the abdomen. **P. synovia'les patella'res**, alar ligaments. **P. vagi'næ**, folds of the vagina. **P. villo'sæ**, folds of the mucous membrane of the stomach.

**Plica'ria.** Lycopodium clavatum.

**Pli'cate.** Folded.

**Plica'tion.** Fold or plica.

**Plicot'omy** (*plica*, fold, *tome*, incision). Operation of division of the posterior fold of the membrana tympani.

**Pli'ers.** Small pincers or scissors with long jaws.

**Plim'mer's bod'ies.** Microorganisms found in mammary cancer and regarded as parasitic; they are round bodies, from 4 to 40μ in diameter, believed to be protozoa or possibly blastomycetes.

**Ploca'ria can'dida.** Fucus amylaceus. **P. helminthochor'ton**, Corallina corsicana.

**Ploess'lea floribun'da** (after Ploessl, an optician of Vienna). See *Juniperus lycia*.

**Plora'tion** (*ploro*, to weep). Lacrymation.

**Plo'tus.** Having a flat foot.

**Ploucquet's** (ploo-kaze') **stat'ic test.** See *Docimasia*.

**Ploughshare** (plow'share) **bone.** Vomer.

**Pluchea** (ploo'ke-ah) **camphora'ta.** Salt-marsh fleabane; North American plant possessing stimulant and aromatic properties. **P. odora'ta**, plant growing in West Indies; leaves and flowers are reputed to have tonic and stomachic virtues; plant is also applied externally to wounds.

**Plück'er's tubes.** Geissler's tubes.

**Plug.** Material employed to close an opening; also anything obstructing a hollow tube. **Dit'trich's p.**, see *Dittrich*. **Im'lach's p.**, see *Imlach*. **Kite-tail p.**, kite-tail tampon. **Mu'cous p.**, collection of secretion from the cervix uteri in the canal of the cervix during the pregnant state. **Trau'be's p.**, Dittrich's plug.

**Plug'ger.** Dental instrument for plugging cavities in teeth.

**Plug'ging.** Act of stopping a hole. Introduction of a plug or dossil of lint or rag into a wound or natural cavity—as the nostrils, uterus, or vagina—to arrest hemorrhage; or of some substance into the cavity of a carious tooth. **P. for'ceps**, dental instrument for compressing the filling in teeth.

**Plum.** Prunus domestica. **Assyr'ian p.**, sebestina. **Wild p.**, Pappea capensis.

**Plu'ma** (down). Lanugo.

**Pluma'ria lancifo'lia.** Plumifera lancifolia.

**Plumbagin'.** Substance derived from Plumbago europæa.

**Plumba'go.** Graphite. Also a plant, Persicaria graphites. **P. europæ'a**, leadwort, toothwort, ord. *Plumbaginaceæ;* formerly employed as a remedy for toothache. **P. ro'sea**, used in India for blistering. **P. scan'dens**, devil's herb; climbing plant of West Indies and South America; plant possesses irritant properties when applied externally; leaves are actively emetic; root is purgative. **P. zeylan'ica**, chittramoolum of India; said to possess powerful emmenagogue and parturifacient properties. The bark of the root is applied internally and given locally.

**Plum'bi.** Gen. of *plumbum*, lead. **P. ace'tas** (Ph. U. S. and Br.), acetate of lead, sugar of lead; occurs in white, crystalline masses or colorless plates; astringent, and in weak solution cooling and sedative; in strong solution stimulant; it is given internally in visceral and other hemorrhages, combined with opium, and used externally, in solution, in inflammation, burns, bruises, gonorrhœa, etc.; dose, gr. ss–iij (0.032–0.2); in overdoses it is an irritant poison.

**P. acid'ulus suc'cus**, plumbi superacetas. **P. carbo'nas** (Ph. U. S.), cerusse, white lead, flake white (prepared by exposing spiral rolls of lead to the fumes of vinegar in vessels placed in manure); it is astringent and sedative, and is sprinkled on parts affected with local inflammation or to prevent chafing in children; also used in the formation of ointments and plasters. **P. io'didum** (Ph. U. S.), lead iodide, formed by the double decomposition of iodide of potassium and nitrate of lead; used in scrofulous affections internally and externally; dose, gr. ss–iij (0.032–0.2). **P. ni'tras** (Ph. U. S. and Br.), nitrate of lead, formed by the action of diluted nitric acid on litharge, has the same medical action as the other soluble salts of lead, and is a valuable antibromic and an excitant antiseptic to wounds, ulcers, etc.; it is the basis of Ledoyen's disinfecting liquid. **P. ox'idum** (Ph. U. S. and Br.), oxide of lead or litharge, a yellow protoxide of lead prepared by heating in an atmosphere of carbonic acid gas; employed for pharmaceutical purposes, as in the preparation of liquor plumbi acetatis, emplastrum plumbi, etc. **P. sac'charas**, saccharate of lead, oxalhydrate of lead, a salt of saccharic acid and protoxide of lead; employed as a solvent of urinary calculi. **P. tan'nas**, tannate of lead; used as an external application to white swelling, gangrenous ulcers, excoriations, etc.

**Plum'bic.** Containing or relating to lead. **P. acid**, acid obtained when salts of lead are electrolyzed.

**Plum'bism.** Lead poisoning.

**Plum'bum.** Lead. Metallic element of a bluish-white color; very fusible and oxidizable when heated in the air, and existing in nature under a number of different shapes, the principal of which are the sulphuret and oxide. Chemical symbol, Pb; sp. gr., 11.352. In its metallic state it has no action upon the body, but when oxidized or united with an acid it acts, in large doses, as a powerfully astringent poison.

**Plumie'ra** or **Plumie'ria al'ba** (after Plumier, a French botanist). Plant of tropical America; has a milky juice which is carthartic. **P. dras'tica** is given in Brazil in jaundice and chronic obstructions, mixed with milk of almonds. **P. phagedæ'nica** is in repute in Brazil as an anthelmintic. **P. ru'bra**, jasmine mango, native of tropical America; fruit is edible; it has therapeutic properties like those of Plumiera alba.

**Plumif'era lancifo'lia.** The bark of this tree, indigenous to the Brazils, is employed under the name of agonia bark as a febrifuge.

**Plum'mer's pills.** Pilulæ hydrargyri submuriatis compositæ.

**Plu'mula.** Row of furrows on the superior wall of the aqueduct of Sylvius.

**Plu'ral birth.** The birth of two or more children at the same time. See *Multiparous*.

**Pluricel'lular.** Having many cells.

**Pluricor'donal.** Term employed to designate a variety of stellate cell with long axis-cylinders found in the posterior columns of the cord in the embryo.

**Pluriloc'ular** (*loculus*, a small space). Provided with numerous small spaces or compartments.

**Plurip'ara** (*plus*, many, *pario*, to bring forth). Multipara.

**Pluripar'ity.** The condition of being a pluripara.

**Plurip'arous.** Multiparous.

**Plu'tea.** Duplicatures of the dura mater, such as the falx cerebri.

**Plutoma'nia** (*ploutos*, wealth). Insane delusion in which the patient imagines himself to be very rich.

**Pluto'nium.** Barium.

**Plyntriopso'ra** (*plyntria*, washerwoman). Form of psoriasis occurring in washerwomen.

**Pneodynam'ics** (*pneo*, to breathe, *dynamis*, power). Science of mechanics of respiration.

**Pneogas'ter** (*pneo*, to breathe, *gaster*, stomach). Respiratory tract in the embryo.

**Pneograph**, ne'o-graf (*pneo*, to breathe, *grapho*, to write). Instrument for testing and indicating force and duration of respiration.

**Pneom'eter** (*pneo*, to breathe, *metron*, measure). Spirometer.

**Pneom'etry.** Measurement of the respiratory capacity.

**Pne'ophore** (*pneo*, to breathe, *phoreo*, to carry). Instrument intended, by artificial means, to overcome asphyxia.

**Pne'oscope** (*pneo*, to breathe, *skopeo*, to view). Instrument to measure the extent of movement of the thorax in respiration.

**Pneu'ma** (*pneuma*, air). Air; life. See *Pneumatic physicians*.

**Pneumaposte'ma** (*pneuma*, air, *apostema*, abscess). Abscess of the lung.

**Pneumapyotho'rax.** Pyopneumothorax.

**Pneumarthro'sis.** Effusion of air or gas into a joint.

**Pneumatelec'tasis.** Atelectasis pulmonum.

**Pneumathæ'mia** (*haima*, blood). Presence of air in the blood-vessels.

**Pneumatho'rax.** Pneumothorax.

**Pneumat'ic** (*pneumatikos*). Relating to air or respiration. **P. as'pirator**, see *Aspirator*. **P. cab'inet**, air-tight cabinet in which patients are treated by compressed or rarefied air. **P. differentia'tion**, causing patients to inhale air more rarefied than that which surrounds the body. **P. med'icine**, treatment of diseases by fumigation or inhalation. **P. occip'ital bones**, see *Occipital bone*. **P. physic'ians**, pneumatists; name given to a sect of physicians, at the head of whom was Athenæus, who made health and disease to consist in the different proportions of an element—which they called *pneuma*—to the other elementary principles. Pneuma was a fancied spiritual principal which the Stoics regarded as an element different from water, air, earth, and fire. The doctrine was called *pneumatism*. The epithet *pneumatic* is sometimes applied to those who treat diseases chiefly by the inhalation of gases. **P. pro'cess**, continuation, occasionally found, of air-cells of processus mastoideus to lateral regions of os occipitis. **P. repos'itor**, globe dilated with air and introduced into the vagina with the view of replacing the uterus. **P. spec'ulum**, see *Siegle's otoscope*.

**Pneumat'ica** (*pneuma*, air). Appertaining to the breathing; diseases of the respiratory function; agents that act on the respiratory organs.

**Pneumat'ics.** Division of science relating to the properties of air and gases.

**Pneumatocar'dia.** Condition in which gas collects in the cardiac cavities.

**Pneumat'ocele.** See *Pneumocele* and *Physocele*.

**Pneumatoceph'alus.** Emphysematous tumefaction of the head.

**Pneumato'dic.** Filled with air.

**Pneumatodyspnœ'a** (*pneuma*, air, *dys*, difficult, *pneo*, to breathe). Dyspnœa due to emphysema.

**Pneumat'ogram.** Tracing of respiratory movements.

**Pneumat'ograph.** Instrument designed to record the movements of the chest in respiration.

**Pneumatol'ogy.** Treatise on air and gases.

**Pneumatom'eter.** Spirometer.

**Pneumatom'etry.** Measurement of the capacity of the lungs for air.

**Pneumatom'phalocele** (*pneuma*, air, *omphalos*, navel, *kele*, hernia). Pneumatomphalus.

**Pneumatom'phalus.** Umbilical intestinal hernia containing a considerable quantity of flatus.

**Pneumator'rhachis** (*pneuma*, air, *rhachis*, spine). Accumulation of air in the vertebral canal.

**Pneumat'oscope** (*pneuma*, air, *skopeo*, to see). Instrument with which to detect the presence of pus or other foreign matter interfering with conduction of air in the cells of the mastoid; it consists of a sound-receiver, auscultation tubes, tuning-fork, etc.

**Pneumato'sis.** Flatulence; flatulent distention of the stomach or bowels, or both; emphysema; abnormal collection of gaseous matters in any part of the body. **P. abdom'inis**, tympanites. **P. enter'ica**, colica flatulenta. **P. pericar'dii**, pneumopericardium. **P. pulmo'num,** emphysema of the lung. **P. ventric'uli et enter'ica,** flatulence of the stomach and bowels.

**Pneumatother'apy.** Treatment of disease by means of compressed or rarefied air.

**Pneumatotho'rax.** Pneumothorax.

**Pneumatot'omy.** Pneumotomy.

**Pneumatu'ria.** Escape of gas from the urethra.

**Pneu'matype.** A glass which receives a deposit of moisture when breathed upon; used in the study of nasal obstruction.

**Pneumec'tasis** (*ektasis,* dilatation). Emphysema of the lungs.

**Pneumec'tomy** (*pneumon,* lung, *ektome,* excision). Excision of a portion of the lung.

**Pneu'mic acid.** An organic acid normally present in the lungs, the function of which is to seize upon the sodium in the sodium bicarbonate of the venous blood, setting free the carbonic acid gas.

**Pneumoactinomyco'sis.** Actinomycosis of the lung.

**Pneumobacillin'.** Toxic extract from cultures of the pneumobacillus.

**Pneumobacil'lus.** Bacillus pneumoniæ. **P. liquefa'ciens bo'vis,** bacillus met with in pleurapneumonia affecting cattle.

**Pneumobul'bous.** Relating to the lung and to the medulla oblongata or bulb, as *pneumobulbous asthma,* from irritation of the fibres of the pneumogastric nerve going to the lung.

**Pneumocace,** nu-mok'-a-se (*pneumon,* lung, *kakos,* evil). Gangrene of the lungs.

**Pneumocarcino'ma.** Carcinoma of the lungs.

**Pneu'mocele** (*pneumon,* lung, *kele,* rupture). Hernia of the lung through one of the intercostal spaces; pneumatocele.

**Pneumocente'sis** (*pneumon,* lung, *kentesis,* puncture). Puncture of the lung for evacuation of fluid.

**Pneumochirur'gia.** Surgery of the lung.

**Pneumocholo'sis.** Bilious pneumonia.

**Pneumochysis,** nu-mok'is-is (*chyo,* to pour out). Œdema of the lungs.

**Pneumococ'cus** (*pneumon,* lung, *kokkos,* kernel). Micrococcus lanceolatus, Diplococcus pneumoniæ.

**Pneumoconio'sis** or **Pneumonoconio'sis** (*pneumon,* lung, *konis,* dust). Disease of the lungs due to inhalation of dust or irritating particles.

**Pneumoder'ma.** Subcutaneous emphysema.

**Pneumodynam'ics** (*dynamis,* power). The physics of respiration.

**Pneumoenteri'tis.** Hog-cholera; swine-plague.

**Pneumogas'tric** (*pneumon,* lung, *gaster,* stomach). Belonging to the lungs and stomach. **P. lobe** or **lob'ule,** subpeduncular lobe, a lobule on the under surface of the cerebellum, posterior to the filaments of the p. nerves; see *Flocculus cerebelli.* **P. nerve,** eighth pair of nerves—tenth pair of some; middle sympathetic, so called because distributed especially to the organs contained in the chest and abdomen. It arises from behind the eminentiæ olivariæ and near the corpora restiformia by one or two rows of filaments regularly arranged. These filaments unite to form a flat cord, which issues from the cranium by the foramen lacerum posterius, behind the glossopharyngeal nerve. At its exit from the cranium the pneumogastric nerve has the appearance of a very compact plexus—plexus gangliformis, ganglion of the superior laryngeal branch of Sir Astley Cooper. It descends along the neck, deeply seated on the outer side of the carotid artery and the internal jugular vein. When it has attained the lower part of the neck it enters the chest, gliding behind the subclavian vein, and passing on the right side in front of the subclavian artery, and on the left before the arch of the aorta. It proceeds at first backward, increasing in size; afterward it passes from behind the bronchia to the œsophagus, which it accompanies through the diaphragm, and terminates on the stomach. In the neck the pneumogastric nerve anastomoses with the spinal, glossopharyngeal, great hypoglossal, and great sympathetic nerves, and furnishes the following branches: pharyngeal, superior laryngeal, and cardiac. In the chest it gives off the inferior laryngeal or recurrent, the pulmonary plexus, and the œsophageal branches. On entering the abdomen the œsophageal branches which terminate the pneumogastric are distributed upon the stomach, and give numerous filaments to that viscus, to the hepatic, cœliac, gastroepiploic, and solar plexuses; some go also to the pancreas, liver, gall-bladder, duodenum, etc. The pneumogastric nerve is interested in most important functions, being excitomotory, excitosecretory, and excitonutrient. Some of its branches are wholly motor, others sensory-motor, while one of its branches—the superior laryngeal—is the sensitive nerve of the larynx.

**Pneu'mogram.** Pneumatogram.

**Pneu'mograph.** Pneumatograph.

**Pneumog'raphy.** Descriptive anatomy of the lungs.

**Pneumohæmorrha'gia.** Pulmonary apoplexy

**Pneumohæmotho'rax** (*pneuma,* air, *haima,* blood, *thorax,* chest). Collection of gas or air and blood in the pleural cavity.

**Pneumohydrome'tra** (*pneuma,* air, *hydor,* water, *metra,* uterus). Condition in which gas is generated in the uterus by the decomposition of fluid.

**Pneumohydropericar'dium.** Collection of gas and serous fluid in the pericardium.

**Pneumohydrotho'rax** (*pneuma,* air, *hydor,* water, *thorax,* chest). Collection of air and serous fluid in the pleural cavity.

**Pneumokonio'sis.**—See *Pneumoconiosis.*

**Pneu'molith** (*pneumon,* lung, *lithos,* stone). Calculus in the lungs.

**Pneumolithi'asis.** Formation of calculi in the lungs.

**Pneumol'ogy.** Science relating to the lungs.

**Pneumomala'cia** (*malakia,* softening). Softening of the lungs.

**Pneumomassage'.** Massage of the tympanum with condensed or rarefied air; see *Siegle's otoscope.*

**Pneumom'eter.** Spirometer.

**Pneumom'etry.** Pneumatometry.

**Pneumomyco'sis** (*mykes,* fungus). Growth of fungi in the lungs. **P. aspergilli'na,** aspergillus growth in the lungs. **P. sarcin'ica,** disease caused by Sarcina pulmonum.

**Pneumonæ'mia** (*pneumon,* lung, *haima,* blood). Congestion of the lungs.

**Pneumonal'gia** (*algos,* pain). Pain in the lung.

**Pneumonatelec'tasis** (*pneumon,* lung, *ateles,* imperfect, *ektasis,* expansion). Imperfect expansion of the lungs at birth, giving rise to cyanosis.

**Pneumonecta'sia** or **Pneumonec'tasis** (*pneumon,* lung, *ektasis,* dilatation). Emphysema of the lungs.

**Pneumonec'tomy.** Pneumectomy.

**Pneumonemphrax'is** (*pneumon,* lung, *emphraxis,* obstruction). Congestion and infarction of the lungs.

**Pneumo'nia** (*pneumon,* lung). Any disease of the lung characterized by exudation into the alveoli and bronchioles resulting in consolidation and functional uselessness of the affected area. There are two main clinical forms of pneumonia, viz., croupous or lobar pneumonia and catarrhal or lobular pneumonia, which are entirely distinct diseases. See these forms below. When the term pneumonia is employed alone or without any qualification, croupous or lobar pneumonia is generally understood. **Abor'tive p.,** p. in which acute congestion is almost the only symptom. **P. al'ba,** syphilitic pneumonia of the newborn, the lung being pale, lacking the color that usually follows normal aëration. **Adynam'ic p.,** p. attended with extreme depression of the vital forces. **Alcohol'ic p,** croupous pneumonia of drunkards. **A'pex** or **ap'ical p.,** croupous pneumonia beginning at the apex of the lung, especially in old persons. **Aspira'tion p.,** p. caused by food or foreign matter drawn into the bronchial tubes. **Bil'ious p.,** pneumotyphus, typhoid pneumonia, pneumonia attended with jaundice, extreme weakness, and typhoid symptoms. **Bron′chial p.**, catarrhal pneumonia. **Catar′rhal p.**, lobular pneumonia, bronchopneumonia; a catarrhal affection beginning in the smaller bronchial tubes and extending to the alveoli of the lungs, which become filled with a mucopurulent secretion; small areas are affected at first, but the process may spread until an entire lobe is invaded; the affection is hardly distinguishable from capillary bronchitis; it attacks children most frequently. **Cen′tral p.**, croupous pneumonia beginning in the interior of the lobe of the lung. **Cer′ebral p.**, p. with delirium and other serious brain symptoms. **Chees′y p.**, p., generally chronic, in which there is caseous degeneration of the products of inflammation; usually a part of the history of the most fatal forms of tuberculous disease of the lung. **Chron′ic p.**, interstitial pneumonia. **Contu′sion p.**, p. caused by contusion of the chest. **Cot′ton p.**, mechanical form of pneumonia occurring in operatives employed in cotton mills. *Cotton phthisis* is similarly produced. **Crou′pous p.**, lobar pneumonia, an acute febrile disease caused by the toxins of the Diplococcus pneumoniæ or Micrococcus lanceolatus. There are three stages of pneumonia: *Stage of engorgement or congestion:* the affected lung is distended, of a red color, firmer, and crepitates less than normal lung tissue. *Red hepatization or consolidation:* the affected portion becomes solid, brownish in color, resembling normal liver tissue; alveoli and smaller bronchi are filled with solid exudation. *Gray hepatization and resolution* or *purulent infiltration;* affected portion becomes gray by the decoloration of the blood globules; infiltration or absorption takes place; gangrene or calcareous encapsulation may occur. *Predisposing causes:* Age, mostly under five years, then between 20 and 40, and after 60; poverty, intemperance, and sudden changes of temperature. *Exciting causes:* Exposure to changes of temperature; atmospheric conditions. *Symptoms:* Distinct chills (violent for one-half or two hours); these are absent only in old people after 70; prostration; pain underneath the nipple of affected side; increased respirations, more than thirty per minute; dyspnœa, cough; mucous expectoration at first, afterward becoming gelatinous, viscid, tenacious, yellow or brick-dust color; countenance is flushed; temperature, 102°–105° F. Catarrhal pneumonia has in general the same stages and symptoms as croupous: restrained movement, normal vocal fremitus, slight dulness, crackling sounds heard at the end of inspiration; crepitant râles heard in the first twelve or twenty-four hours. Crepitant râle is a characteristic sign of first stage of pneumonia. *Second stage:* Inspection—expansive movements are diminished on the affected and increased on the healthy side. Palpation—as a rule, increased vocal fremitus. Percussion—marked dulness. Auscultation—bronchial breathing; bronchophony. *Third stage:* Physical signs in early part of this stage are the same as those of the second stage. Rude (or bronchovesicular) respiration, subcrepitant and crepitant râles. *Prognosis* is bad in the very young or very old, alcoholics, or those debilitated by pre-existing disease. **Degluti′tion p.**, aspiration pneumonia. **Desquam′ative p.**, a form of chronic lobar pneumonia, involving successively various portions of the lung; induration occurs, followed by caseation; see *Parenchymatous p.* **P. dis′secans**, acute purulent pneumonia following destructive suppurative inflammation of the bronchi and surrounding tissues and blood-vessels. **Dissem′inated p.**, p. affecting distinct groups of vesicles in different portions of the lung. **Doub′le p.**, lobar pneumonia of both lungs. **Embol′ic p.**, from introduction of solid particles into the pulmonary circulation. **Erysipel′atous p.**, see *Bilious p.* **Fi′brinous p.**, p. characterized by coagulable fibrinous exudation; see *Croupous p.* **Ephem′eral p.**, congestion of the lungs, without other developed symptoms of pneumonia. **Fi′broid** or **fi′brous p.**, fibroid phthisis; cirrhosis of the lung; see *Fibrinous* and *Interstitial p.* **P. gangræno′sa**, necropneumonia. **P. hypostat′ica**, p. in a depending portion of the lung, caused by lying on the back. **P. intermit′tens**, p. characterized by periodicity. **Interstit′ial p.**, form of pneumonia affecting the connective tissue of the lungs; sclerosis of the lung. **Lar′val p.**, p. with only the commencing symptoms. **Lo′bar p.**, p. characterized by deposit of plastic material in the air-cells, and involving a lobe of a lung or the whole lung, or even the lobes of both lungs; see *Croupous p.* **Lob′ular p.**, catarrhal pneumonia. **Mas′sive p.**, lobar pneumonia, fully developed; the air-cells, bronchial tubes, etc., being almost choked with exudation-material. **Metastat′ic p.**, suppurative pneumonia, occurring by metastasis in pyæmia. **Mi′gratory p.**, p. travelling from one lobe to another; p. migrans. **P. no′tha**, bronchitis with pleurodynia simulating pneumonia. **Parenchy′matous p.**, a form of chronic lobar pneumonia, attacking different regions of the lung in succession, with induration and other tissue-changes and degenerations. **Pleurit′ic p.**, pleuropneumonia. **Pleurogen′ic p.**, p. following disease of the pleura. **Pri′mary in′durative p.**, see *Pneumonia, desquamative,* and *P., parenchymatous.* **Pu′rulent p.**, p. characterized by the formation of abscesses in the lungs, or along the lymphatic vessels in the interlobular tissue. **Sep′tic p.**, form of lobar pneumonia caused by aspiration or inspiration of septic matter. **Stoll's p.**, bilious pneumonia. **Superfic′ial p.**, inflammation involving only the portion of lung next to the pleura. **Sup′purative p.**, purulent pneumonia. **Syphilit′ic p.**, a form of pneumonia caused by syphilis. **Ty′phoid p.**, pneumonia with symptoms of a typhoid character. **Va′gus p.**, p. occurring after section or division of the vagus nerve. **Wan′dering p.**, p. which affects successively various portions of the lung; it frequently occurs in connection with erysipelas. **White p.**, pneumonia alba.

**Pneumon′ic.** Pulmonic. Relating to pneumonia. **P. fe′ver**, lobar pneumonia.

**Pneumonic′ula.** Slight inflammation of the lung.

**Pneumonit′ic.** Relating to pneumonitis.

**Pneumoni′tis.** Pneumonia. **P. metapleurit′ica**, p. following pleurisy.

**Pneumonocarcino′ma.** Cancer of the lungs.

**Pneumon′ocele.** Hernia of the lung. **Diaphragmat′ic p.**, hernia of the lung through the diaphragm. **Exter′nal p.** or **thorac′ic p.**, hernia through the parietes of the chest.

**Pneumonocirrho′sis.** Cirrhosis of the lungs.

**Pneumonococ′cus.** Pneumococcus.

**Pneumonoconio′sis** (*konia*, dust). Disease of the lungs due to the inhalation of dust. **Pot′ter's p.**, a form of phthisis due to the inhalation of fine particles of kaolin. **P. siderot′ica**, p. caused by the inhalation of fine particles of iron.

**Pneumonodyn′ia** (*odyne*, pain). Pain in the lungs.

**Pneumonœde′ma.** Œdema of the lungs.

**Pneumonokonio′sis.** Pneumonoconiosis.

**Pneumon′olith.** Pneumolith.

**Pneumonomala′cia.** Pneumomalacia.

**Pneumonomelano′sis.** Melanosis of the lungs.

**Pneumonom′eter** (*metron*, measure). Spirometer.

**Pneumonomyco′sis** (*mykes*, fungus). Vegetable parasitic growth in the lungs.

**Pneumonoparal′ysis.** Paralysis of the lungs.

**Pneumonop′athy.** Any disease of the lungs.

**Pneumonopericardi′tis.** Pneumopericarditis.

**Pneumonopericar′dium.** Pneumopericardium.

**Pneumonoperitoni′tis.** Peritonitis with gaseous distention.

**Pneumonophlebi′tis.** Inflammation of pulmonary veins.

**Pneumonophthi′sis.** Phthisis pulmonalis.

**Pneumonopleuri′tis.** Pleuroperipneumony.

**Pneumonop′tysis** (*ptyo*, to spit). Hæmoptysis.

**Pneumonorrha′gia.** Hæmoptysis.

**Pneumonorrhœ′a.** Hæmoptysis.

**Pneumonoscirrhus**, nu-mon-o-skir′rus (*pneumon*, lung, *skirrhos*, induration). Induration of the lungs.

**Pneumon'oscope** (*skopeo*, to see). Stethoscope.

**Pneumonosep'sis.** Pneumosepsis; necropneumonia.

**Pneumono'sis.** Disease of the lungs, of whatever character it may be.

**Pneumonospas'mus** (*spasmos*, spasm). Asthma.

**Pneumonotelec'tasis** (*telos*, completion, *ektasis*, dilatation). Aggravated emphysema of lungs.

**Pneumonot'omy.** Pneumotomy.

**Pneu'mony.** Pneumonia.

**Pneumopal'udism.** Malarial disease of the lungs.

**Pneumopar'esis.** Paralysis of the lung from sudden failure of nervous stimulus.

**Pneumopericardi'tis** or **Pneumopericar'dium.** Effusion of air into the cavity of the pericardium.

**Pneumoperitone'um.** Presence of gas in the peritoneal cavity.

**Pneumoperitoni'tis.** Gas in the cavity of the peritoneum occurring in peritonitis.

**Pneumophthal'mos.** Air contained within the eye.

**Pneumophthi'sis.** Phthisis pulmonalis.

**Pneumophy'mata** (*phyma*, a growth). Tubercles of the lungs.

**Pneumopyopericar'dium** (*pyon*, pus). Collection of pus and gas in the pericardium.

**Pneumopyotho'rax.** Gas and pus in the pleural cavity.

**Pneumorrha'gia** (*pneumon*, lung, *rhage*, a breaking forth). Hæmoptysis. **P. inter'na,** hæmatothorax.

**Pneumorrhœ'a.** Bronchorrhœa.

**Pneu'moscope.** Pneumograph.

**Pneumosep'sis** (*sepsis*, putrefaction). Necropneumonia.

**Pneumoserotho'rax.** Pneumothorax in which effusion of serum is present.

**Pneumotherapeu'tic.** Relating to pneumotherapy.

**Pneumother'apy.** Medical treatment of lung diseases. Also pneumatotherapy, or treatment of disease by compressed or rarefied air, or by the introduction of air into a cavity, as in Politzer's plan of injecting air through the Eustachian tube into the cavity of the tympanum.

**Pneumothermomassage'.** Treatment by direct application of hot air to the external surface of the body.

**Pneumotho'rax** (*pneuma*, air+*thorax*). Accumulation of air in the pleural cavity; generally sudden in invasion and often fatal in character. In many instances along with the air a liquid is effused, consisting of a serous fluid, constituting *hydropneumothorax*, or of one that is purulent, *pyopneumothorax*. The disease may be spontaneous and simple, but in a large proportion of cases it is complicated with pleurisy and pulmonary tubercles; the signs vary according as there is or is not a communication between the pleura and the bronchia; the affected side gives a hollow, tympanitic sound, even where the thickness of the parietes of the thorax is great. When the effusion is considerable the affected side is dilated, but there is no râle of any kind. When a gaseous and a liquid effusion are present at the same time the sound on percussion is found to be clear at the superior part of the thorax, but dull inferiorly; hence by changing the position of the patient, and consequently that of the contained fluids, the seats of the clear and the dull sound will be varied. When the gaseous effusion is owing to a fistulous communication between the pleura and bronchia the metallic respiration and resonance are heard; and if there is both gaseous and liquid effusion, with a fistulous communication, in addition to these signs there is metallic tinkling. Presence of liquid may be ascertained by succussion.

**Pneumot'omy** (*pneumon*, lung, *tome*, incision). Opening into a cavity in the substance of the lung by incision or cautery.

**Pneumotoxin'.** Toxin produced by the pneumococcus.

**Pneumoty'phoid** or **Pneumoty'phus.** Typhoid pneumonia. Typhoid fever, with pulmonary complications.

**Pneumoü'ria.** Pneumaturia, or escape of gaseous matter through the urethra.

**Pnigopho'bia** (*pnigos*, strangulation, *phobos*, dread). Extreme dyspnœa.

**Pnix'is** (*pnixis*, strangulation). Orthopnœa; strangulation.

**Po'a abyssin'ica.** A plant the grain of which is used in Abyssinia for bread.

**Poad'milk.** Colostrum.

**Poa'ya bran'ca.** White ipecac.

**Po-bai'a.** Powder resembling chrysarobin, used in Cochin China in diseases of the skin.

**Pock.** Pustule of smallpox. **Black p.,** see *Variola*. **P.-broken,** see *P.-mark*. **Crys'talline p.,** variola verrucosa. **P.-hole,** pockmark. **Horn p.,** variola verrucosa. **Kine p.,** vaccina. **P.-mark,** mark or pit left from a smallpox pustule; one pitted with smallpox is said to be pockmarked or pockbroken. **Mas'ter p.,** the large pock following the inoculation of smallpox. **Stone p.,** old name given to acne pustule.

**Pock'et.** Sac-shaped cavity or receptacle. Cul-de-sac, such as is formed between a tooth and the gum, through the loss of the pericementum.

**Pock'eting.** Treatment of the pedicle in ovariotomy by bringing its extremity between the inner lips of the wound at its lower angle, the raw surface of the pedicle being thus attached directly to the raw surface of the abdominal wall. The collection and retention of pus in a dependent pouch in a wound.

**Pock'mark.** See under *Pock*.

**Pock'wood.** Lignum vitæ; Guaiacum officinale.

**Pock'y.** Infected with or appertaining to or resembling smallpox or syphilis.

**Podag'ra** (*pous*, foot, *agra*, seizure). Gout in the articulations of the foot. The word has also been used synonymously with gout in general. **P. aber'rans,** wandering gout. **P. arthri'tis,** gout. **P. aton'ica,** atonic gout. **P. retroce'dens** or **retrogra'da,** retrograde gout.

**Pod'agral.** Gouty.

**Podagra'ria.** Ligusticum podagraria. **P. ægopo'dium,** Ligusticum podagraria.

**Podag'ric** or **Pod'agrous.** Arthritic, gouty. Relating to gout; affected with or liable to gout.

**Pod'agrism.** The gouty diathesis.

**Podal'gia** (*pous*, foot, *algos*, pain). Pain in the foot; gout.

**Podal'ic.** Pedal. **P. ver'sion,** see *Turning*.

**Podalir'ia austra'lis.** Baptisia australis. **P. tincto'ria,** Sophora tinctoria.

**Podanenceph'alus.** A monster whose head is represented by a fleshy mass attached to the trunk by a pedicle. The condition is termed *podanenceph-al'ia*.

**Podarthri'tis.** Podagra. Gout of the feet.

**Podarthrocace,** pod-ar-throk'a-se (*pous*, foot, *arthron*, an articulation, *kakos*, bad). Caries of one of the joints of the foot.

**Podax'is** or **Podax'on.** A genus of fungi.

**Podelco'ma** (*pous*, foot, *helkoma*, ulcer). Fungus foot of India. Perforating ulcer of the foot.

**Podenceph'alus** (*pous*, foot, *enkephalos*, brain). Monster whose brain is outside the skull, seeming to be supported by a pedicle. This condition is termed *podencephal'ia*.

**Po'dex.** Anus; nates.

**Podiso'ma.** Genus of fungi. **P. macro'pus,** fungus reputed to cause outgrowths on Juniperus virginiana; among the laity employed as an anthelmintic.

**Podo-** (*pous*, foot). In composition, foot.

**Podobromhidro'sis** (*pous*, foot, *broma*, stench, *hidros*, perspiration). Bromidrosis.

**Podocace,** pod-ok'a-se (*pous*, foot, *kakos*, evil). Podarthrocace.

**Podocarpin'ic acid.** $C_{17}H_{22}O_3$. An acid contained in resin of Podocarpus cupressina.

**Pododyn'ia** (*odyne*, pain). Pain in the soles of the feet induced by long standing. Podalgia.

**Podœde'ma.** Œdema of the foot.

**Podol'ogy.** Science relating to the feet.

**Podom'eter.** Pedometer.

**Podophyl'lic acid.** Acid derived from podophyllin of commerce; devoid of active properties.

**Podophyllin'.** Resin of podophyllum.

**Podophyllin'ic acid.** Podophyllic acid.

**Podophylli'tis.** Inflammation of podophyllous tissue.

**Podophylloquercitin'.** Coloring principle of Podophyllum peltatum.

**Podophyllotoxin'.** Highly poisonous white powder, amorphous and acid, derived from podophyllin of commerce. It is a combination of picropodophyllin and picropodophyllic acid.

**Podophyl'lous** (*pous*, foot, *phyllon*, leaf). Relating to the foot and lamellar tissue of hoof of animals.

**Podophyl'lum.** The rhizome and rootlets of *P. peltatum*, May apple, mandrake, a common plant throughout North America; fruit is edible and esteemed by many; leaves are said to be poisonous; the rhizome and rootlets, *podophyllum* (Ph. U. S.), *podophylli radix* (Ph. Br.), are purgative in the dose of gr. xx (1.3). *Podophyllin*, obtained by evaporating an alcoholic solution of the root or by displacement by alcohol, throwing down the precipitate by water, and drying—*resina podophylli* (Ph. U. S. and Br.)—is an excellent purgative and a laxative in small doses. Dose of the powdered rhizome, gr. ij–xx (0.13–1.3). The following are the official preparations: *Extrac'tum podophyl'li* (U. S.); dose, gr. ss–v (0.032–0.32). *E. p. flu'idum* (U. S.); dose, ♏ij–xx (0.13–1.3). *Tinctu'ra p.* (Br.); dose, ♏ij–xx (0.13–1.3). *Res'ina p.* (U. S. and Br.); dose, gr. $\frac{1}{20}$–$\frac{1}{2}$ (0.0032–0.032). P. emodi or indicum and P. montanum have similar properties, the first being official in the India and Eastern Colonies' addendum to the Ph. Br.

**Podorrheu'ma.** Podagra.

**Podotrochili'tis** (*pous*, foot, *trochilia*, pulley). Navicular disease in the horse, frequently causing lameness.

**Pod'pepper.** Capsicum.

**Pœ'ciloblast.** Poikiloblast.

**Pœ'cilocyte.** Poikilocyte.

**Pœcilomelas'ma** (*poikilos*, various, *melas*, black). Gangræna senilis.

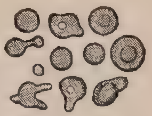
**Pœcilother'mal** or **Pœcilother'mic** (*poikilos*, various, *therme*, heat). Term applied to cold-blooded animals whose bodily temperature varies with that of the surrounding medium.

**Pœ'le bark.** Alstonia.

**Poi'kilocyte** (*poikilos*, varied, *kytos*, cell). Non-nucleated red blood corpuscle of irregular shape.

**Poikilocythæ'mia.** Presence of poikilocytes in the blood.

**Poikilocyto'sis.** Irregularity of shape of the red corpuscles, as seen in pernicious anæmia.



Poikilocytes.

**Poikilother'mal** or **Poikilother'mic.** Pœcilothermal.

**Point** (*pungo*, *punctum*, to prick). Sharp end of something. A minute area or spot. Stitch. To come to a head—said of an abscess. **Apoph'ysary, Bro'ca's, Pain'ful p., P. of elec'tion**, etc., see the qualifying words.

**Point'ing of an ab'scess.** See *Suppuration*.

**Poirier's** (pwar-yaze') **line.** Nasolambdoidal line, used in craniometry.

**Poiseuille's' space** or **still lay'er.** A thin stratum of blood serum, in contact with the walls of the capillary vessels, in which the white corpuscles are retarded, while the red cells are hurried along in the centre of the current.

**Poi'son.** Generic name for all substances which when introduced into the animal economy act in a noxious manner on the vital properties or the textures of an organ or the system at large. Hence we speak of *fever poison*, *cholera poison*, etc. Poisons exist in the three kingdoms of nature; poisons from animals are called venoms, as the venom of the viper, scorpion, tarantula, etc., while those that are the products of disease have the name *virus*. In common parlance, therefore, poison is restricted to deleterious articles furnished by the mineral and vegetable kingdoms. Orfila has divided poisons into four classes: 1. *Acrid*, *irritating*, *corrosive*, and *escharotic*, as the concentrated acids and alkalies—mercurial, arsenical, cupreous, and antimonial compounds, cantharides, etc. 2. *Narcotic*, those that act particularly upon the brain—as hyoscyamus, opium, etc.—but without inflaming the organ with which they come in contact. 3. *Narcotico-acrid* or *acronarcotic*, those that act on the brain or spinal marrow, or both, but at the same time irritate the parts to which they are applied, as aconite, belladonna, etc. 4. *Septic* or *putrescent*, those furnished by the animal kingdom; see *Venom* and *Virus*. Various classifications of a similar character have been recommended by different toxicologists, but they are liable to the objection that they throw substances together whose physiological action on the system is very different. The classification of Dr. A. S. Taylor is as follows:

| | | | |
|---|---|---|---|
| IRRITANTS | MINERAL | Non-metallic | Acids, alkalies, and their salts. |
| | | Metallic. | Metalloids. |
| | VEGETABLE. | | |
| | ANIMAL. | | |
| NEUROTICS | CEREBRAL. | | |
| | SPINAL. | | |
| | CEREBROSPINAL. | | |

**Pogoni'asis** (*pogon*, beard). Female beard. Also excessive growth of beard.

**Pogo'nion.** The anterior central point of the chin.

**Pogon'opus febrif'ugus.** Tree of South America with tonic bark, in which an alkaloid called howardine and a bitter substance is contained.

**Pogonot'rophy** (*pogon*, beard, *trophe*, nourishment). Growth and nutrition of the beard.

**Pogoste'mon interme'dius, patchou'li,** or **sua'vis.** A plant, native of Penang and the Malayan peninsula, the distilled oil of which, patchouli, is used as a perfume.

**Po'hon an'tiar.** Upas. **P. u'pas,** upas.

**Poi.** Paste made from root of Arum esculentum; eaten in Hawaii.

**Poi'kiloblast** (*poikilos*, varied, *blastos*, germ). Nucleated red blood corpuscle of irregular shape.

Arsenic may be cited as an example of the metallic, savin of the vegetable, and cantharides of the animal irritants. Of the neurotic, morphine is a cerebral and strychnine a spinal neurotic, and coniine and aconitine are cerebrospinal neurotics. *Irritants* produce speedy vomiting and purging, with pain in the stomach and bowels, which organs are irritated and inflamed. Some of this class are also *corrosive*, as the strong mineral acids, corrosive sublimate, etc. Others, as arsenic and carbonate of lead, are not chemically destructive, being pure irritants only. *Neurotics* act upon the nervous system, producing headache, giddiness, numbness, etc. They include *narcotics*, or *cerebral poisons*, which do not irritate the abdominal organs, and *narcotico-irritants*, as nux vomica and aconite, which do exert such an action. The following is a table of the chief poisons, the symptoms to which they give rise, and the treatment of the same:

## TABLE OF THE CHIEF POISONS.

*N. B.—In all cases the stomach-pump should be used as soon as possible, except when corrosive poisons have been swallowed.*

### I. INORGANIC POISONS.

| Poisons. | Symptoms. | Treatment. |
|---|---|---|
| ACIDS.<br>*Acetic Acid.*<br>*Citric Acid.*<br>*Muriatic Acid.*<br>*Nitric Acid* (*Aqua Fortis*).<br>*Nitromuriatic Acid* (*Aqua Regia*).<br>*Sulphuric Acid* (*Oil of Vitriol*).<br>*Tartaric Acid.*<br>*Oxalic Acid.* | Acids, generally, are strong corrosive poisons. Sour, acrid taste; burning in the throat, increased by pressure, swallowing, or coughing; eructation and excruciating pain in the stomach; more or less corrugation of the lining membranes of the mouth and alimentary canal; excoriation about the mouth or such other parts of the skin as the acid may have touched. The matter vomited effervesces with carbonate of lime. The countenance becomes glazed, extremities cold and clammy; convulsions and death. Nitric acid occasions yellow stains, and sulphuric acid, black. | The carbonates of sodium, potassium, calcium, and magnesium are all antidotes to the acids; chalk and calcined magnesia also are to be used with the following restrictions: for acetic, citric, muriatic, sulphuric, and tartaric acids they may be used indiscriminately. For nitric and oxalic, carbonates of magnesium and calcium can alone be employed with safety. The salts of potassium or sodium should not be given in oxalic-acid poisoning, as the oxalates formed are soluble. In the case of sulphuric acid water should not be drunk, on account of the great heat which is produced by their mixture. Subsequent inflammation to be treated by ordinary means. Flaxseed tea, milk, olive oil, soaps, white of egg, etc. may be employed to protect the inflamed mucous membrane.<br>Carbonates of the alkalies and of magnesium and calcium have the inconvenience that a large quantity of gas is extricated in the stomach. |
| *Prussic* or *Hydrocyanic Acid.*<br>*Oil of Bitter Almonds.*<br>*Laurel Water.* | Sedative poison; nausea, giddiness, debility, hurried pulse, weight and pain in the head, dyspnœa, and prolonged expiration; eructations having the flavor of the acid; spasms, tetanus, contractile pupil, insensibility; involuntary passages of fæces and urine; cyanosis, convulsions, paralysis, death. | Thorough stimulation; atropine hypodermically; ammonia inhaled or swallowed, but not in a very concentrated form. Cold douche to the head; douches hot and cold to the chest. |
| *Nitrobenzole* (*Essence of Mirbane*). | Narcotic irritant both in liquid and vapor, but differs from ordinary narcotics in its persistent odor and in the rapidity of its fatal effects; coma following stupor at uncertain intervals. | Nitrobenzole-poisoning must be treated on the same general principles as prussic-acid poisoning. |
| *Carbolic Acid.* | Irritant poison; gastro-enteritis; vomiting of frothy mucus; lining membrane of the mouth white and hardened; severe burning abdominal pain; purging; cold, clammy skin; insensibility, coma, stertorous breathing; pinched and distressed face; thready and indistinct pulse; dyspnœa; pupils contracted; odor of carbolic acid; collapse. | Treatment must be based on the general treatment indicated for other irritant acids, with free ingestion of sweet or castor oil or of soluble sulphates. Saccharate of lime is recommended, but alcohol is probably the best antidote. Mucilaginous drinks should be given; counter-irritation applied over the abdomen; stimulants given to excite respiratory and cardiac action; strychnine and digitalis administered, and ether and dilute sulphuric acid hypodermically. |
| ALKALIES AND THEIR SALTS.<br>AMMONIA.<br>*Strong Liquor* or *Water of.*<br>*Ammonium Chloride* or *Muriate, Sal Ammoniac.*<br>*Ammonium Carbonate.*<br>POTASSA.<br>*Caustic Potassa* and *Liquor Potassæ.*<br>*Potassium Sulphate.*<br>*Potassium Carbonate* or *Pearlash,* and *Salt of Tartar.* | Violent, caustic, acrid taste; great heat in the throat, with destruction of lining membrane; difficult and painful deglutition; vomiting of bloody matter, which turns the yellow of turmeric brown; acute pain in the stomach; gastro-enteritis; cold sweats, weakness, hiccough; violent colic pains, with purging of bloody stools and membranous flakes; stupor or coma, death. | Vegetable acids, such as vinegar, lemon-juice, citric and tartaric acid in solution, are antidotes to the alkalies and their carbonates. The fixed oils, such as castor, linseed, almond, and olive, form soaps with the free alkalies, and therefore destroy their caustic effects. |
| *Potassium Bitartrate* (*Cream of Tartar*). | Irritant poison, sometimes with paralysis of the lower extremities. | |
| *Potassium Nitrate* (*Saltpetre*). | Will not manifest the effect with turmeric paper. The carbonates when vomited will effervesce with acids; and the liver of sulphur will give rise to eructations of sulphuretted hydrogen. | Poisoning to be treated on general antiphlogistic principles; mucilaginous drinks. Same treatment as for amyl nitrite. |
| *Potassium Nitrite.* | Same symptoms as for amyl nitrite. | Same treatment as for amyl nitrite. |
| *Potassium Binoxalate.* | The symptoms of poisoning correspond to those of oxalic acid. | |
| *Potassium Sulphuret* (*Liver of Sulphur*). | | Liver of sulphur is said to be decomposed and neutralized by common salt. Liquid chloride of soda will also decompose it. |
| *Potassium Cyanide* (see *Hydrocyanic acid*). | | |
| SODA. | | |
| *Sodium Nitrate.*<br>*Sodium Nitrite.* | Same symptoms as for amyl nitrite | Same treatment as for amyl nitrite. |

| POISONS. | SYMPTOMS. | TREATMENT. |
|---|---|---|
| EARTHS AND COMPOUNDS.<br>BARYTA.<br>*Barium Carbonate.*<br>*Barium Chloride.*<br>*Baryta Nitrate.*<br>LIME AND PREPARATIONS OF CALCIUM. | Analogous to those of the corrosive metals. Violent burning in the stomach, vomiting, gripes, diarrhœa; excessive muscular debility, headache, convulsions, death. Lime differs from baryta in being a pure irritant. | The sulphates of sodium and magnesium are prompt and effective antidotes to all the poisonous salts of baryta. Phosphate of sodium will also counteract their effects. Lime may be neutralized by dilute acids, as vinegar, lemon-juice, etc. Carbonic acid in soda water, effervescing draught, or yeast, it is supposed, would answer a good purpose. The fixed oils may be employed either for baryta or lime when not in a compound state. |
| ALCOHOL.<br>*Brandy, Whiskey, Wines, and all Spirituous Liquors.* | Intoxication, and when alcohol has been taken very freely, stupor, rapid pulse; complete insensibility, with apoplexy or paralysis of one side; the countenance swollen and of a dark-red color; the breathing difficult, and often stertorous, with a peculiar puffing out of the lips; the breath smells of liquor, which will distinguish the symptoms from those of spontaneous apoplexy. | A powerful emetic should be given as soon as possible; and if the person has lost the power of swallowing, a flexible catheter or tube should be the means of conveying it to the stomach. Vomiting should be encouraged as much as possible with warm water; and large and active glysters of salt and water should be thrown up. Apply heat externally; administer strychnine, ammonia, or atropine by hypodermatic injection. The patient should be placed erect, and cold wet cloths applied to the head, particularly if the body be hotter than natural. If the extremities become cold, warmth and friction should be perseveringly used until a more normal temperature results. |
| VOLATILE OILS.<br>*Creasote* (see also *Carbolic acid*).<br>*Dippel's Animal Oil.*<br>*Oil of Tar.*<br>*Oil of Tobacco.*<br>*Oil of Turpentine.*<br>*Amylic Alcohol (Fusel Oil).*<br>*Other Volatile Oils.* | General action, that of irritant poisons. Burning pain, vomiting, pungent taste, purging, etc. The oils of turpentine and tobacco affect the nervous system: the peculiar odor of each oil will be manifested in the matter vomited. The vapor of fusel oil when inhaled in a diluted state irritates the respiratory organs, produces headache, nausea, and giddiness. It is more potent in its effects in vapor than when swallowed as a liquid. | Creasote is immediately coagulated by albumen. Dippel's animal oil may be counteracted with dilute acids and the fixed oils. The other oils have no particular antidotes, and their effects must, therefore, be counteracted upon general principles. The sulphates, of magnesia particularly, may be given in turpentine-poisoning with demulcent or albuminous drinks. |
| GASES.<br>*Carbonic Acid* or *Fixed Air.*<br>*Carbonic Oxide.*<br>*Fumes of Burning Charcoal.*<br>*Chlorine.*<br>*Sulphuretted Hydrogen.*<br>*Sulphurous Acid.*<br>*Nitrous Acid.*<br>*Hydrochloric Acid.*<br>*Ammonia.*<br>*Carburetted Hydrogen (Coal Gas).* | Chlorine, sulphurous, nitrous, and hydrochloric acid gases produce, when inhaled, violent irritation of the organs of respiration; cough, bloody expectoration, inflammation of the lungs, and permanent pulmonary disease. Ammonia vapor is poisonous, exciting inflammation of the larynx, bronchial tubes, and lungs. The other gases, although producing some effect on the respiratory organs, act as poisons in consequence of their sedative agency. The symptoms, therefore, are those of apoplexy or narcotic poisoning. | The antidotes to chlorine are the cautious inhalation of ammonia or sulphuretted hydrogen. The inflammatory symptoms from chlorine to be treated on general principles. For the other gases alternate warm and cold effusions to the head and chest, friction, mustard plasters, etc., artificial respiration. In poisoning by chlorine, ether may be cautiously inhaled or steam may be similarly employed. For carbonic oxide, fresh air and artificial respiration, and even transfusion or infusion of physiological salt solution may be resorted to. For sulphuretted hydrogen, chlorine may be cautiously inhaled. The vapor of vinegar may be used for vapors of ammonia-poisoning. |
| CHLOROFORM, ETHER, CHLORAL, ETC.<br>*Chloroform.*<br>*Bichloride of Methylene.*<br>*Ether.*<br>*Amylene.*<br>*Nitrous Oxide.*<br>*Hydrate of Chloral.*<br>*Amyl Nitrite.*<br>*Ethyl Nitrite.* | These substances, as therapeutic agents, belong to the class of anæsthetics or neurotic poisons, which act on the brain and produce insensibility.<br>Chloroform vapor, inhaled in a concentrated form, produces speedily fatal effects. Diluted with atmospheric air, it causes insensibility and total loss of muscular power, stertorous breathing, death sometimes resulting from shock, syncope, or convulsions. Dilatation of the pupil, associated with anæsthesia, is an unfavorable sign. When swallowed as a liquid, it is a much less active poison.<br>Ether in its effects, when swallowed, resembles alcohol; the vapor, when inhaled, has, however, been fatal in several instances. Blueness of the skin, paralysis of movements of the chest, weak and quick pulse, stertorous respiration and depression of temperature are the chief symptoms. | The treatment must be conducted on general principles and according to the symptoms.<br>At once cease the application of the anæsthetic; invert the patient; attempt resuscitation by hypodermic injections of digitalis, strychnia, atropia, etc., not alcohol or ether; use electricity.<br>Treatment similar to that for chloroform. |

| Poisons. | Symptoms. | Treatment. |
|---|---|---|
| | Amylene, seldom employed as an anæsthetic, may induce narcotism and paralysis of the heart.<br>Nitrous oxide, in addition to its exhilarating effects, produces loss of consciousness and insensibility to pain, which may be pushed so far as to produce death; although such a result is very rare.<br>Hydrate of chloral is a sedative, hypnotic, and narcotic, without producing a stage of excitement; and sudden death has resulted after profound sleep and coma from excessive doses. The pulse is slow and thready; respiration weak and labored; the temperature much reduced. The fatal effects have been ascribed by some toxicologists and therapeutists to the conversion of chloral in the system into chloroform and formic acid, through the instrumentality of the alkalies of the blood. | Treatment of chloral-poisoning is by emetics; hypodermic injection of strychnine, digitalis, ammonia, atropia, etc. Keep head low; apply heat externally; stimulate with oxygen inhalation, artificial respiration, etc. |
| NITROGLYCERIN. | Vertigo; headache, irregular pulse; dilated pupil; pain over the heart; partial suppression of urine; nausea, etc. | General principles of stimulation, externally and internally; cold applications to the head; ergotin internally; subcutaneous injection of atropine. |
| IODINE.<br>*Potassium Iodide.*<br>BROMINE. | Analogous to those of irritant poisons; burning pain in the throat, lacerating pain in the stomach, and fruitless efforts to vomit; gastro-enteritis; salivation; feeble pulse; excessive thirst; pallor of the face; suffusion of the eyes; excessive pain and tenderness of the epigastrium; suppression of urine; albuminuria, convulsions, and death. | Iodine combines with starch and forms an insoluble compound. The prompt administration of starch, wheat flour, or other vegetable matter containing fecula, beat up in water, is recommended. Iodide of potassium has no antidote. Vomiting should be promoted by draughts of warm water, and inflammation be subdued by general treatment. Steam inhalations should be employed; also in bromine-poisoning. Alcohol, digitalis, strychnine, etc. may be given hypodermically whenever indicated, in either iodine- or bromine-poisoning. |
| ANTIMONY.<br>*Tartar Emetic.*<br>*Chloride* or *Butter of Antimony.*<br>*Antimony Oxide.* | Vomiting of mucus, bile, or even blood. If vomiting do not occur promptly, violent irritant effects are produced. Gastro-intestinal disturbances; burning pain in the pit of the stomach; purging, fecal or bilious, or even blood; subsequently rice-water discharges, resembling those of Asiatic cholera; colicky pains, sense of tightness in the throat, violent cramps; repeated recurrence of vomiting; weak, slow, almost imperceptible pulse; pinched face; reduced temperature, delirium, unconsciousness, convulsions, and perhaps death. | If vomiting have not been produced, it should be brought about by tickling the fauces and administering copious draughts of warm water. Tannic acid. Astringent infusions, such as of galls, oak bark, Peruvian bark, act as antidotes, and should be given promptly; powdered yellow bark may be used until the infusion is prepared. White of egg. General stimulation internally and externally. |
| ARSENIC.<br>*Arsenious Acid* or *White Arsenic.*<br>*Arsenic Acid.*<br>*Orpiment,* or *Yellow Sulphuret of Arsenic.*<br>*King's Yellow.*<br>*Realgar,* or *Red Sulphuret of Arsenic.*<br>*Fly Powder.*<br>*Solution of Arsenite of Potash (Fowler's Solution).*<br>*Arsenical Paste.*<br>*Arsenical Soap.*<br>*Copper Arsenite (Scheele's Green, Emerald Green).*<br>*Arseniuretted Hydrogen.*<br>*Paris Green* or *Copper Arseniate.* | Violent burning pain in the œsophagus and region of the stomach and bowels; colic; tenderness on pressure; retching; vomiting; sense of dryness and tightness in the throat; excessive thirst; metallic taste in the mouth; hoarseness and difficulty of speech; the matter vomited greenish or yellowish, sometimes streaked with blood; purging; tenesmus; sometimes excoriation of the anus; urinary organs occasionally affected with violent burning pains and suppression; pulse is weak and small; respiration rapid and labored; convulsions and cramps; clammy sweats; lividity of the extremities; countenance at first swollen, afterward collapsed; eyes red and sparkling; delirium; convulsions, coma, and death. Eruptions in subacute or chronic cases are sometimes present. Some of these symptoms may be absent where the poisoning results from inhalation, as of arseniuretted hydrogen. | The hydrated peroxide or sesquioxide of iron diffused through water; or the precipitated carbonate; or the rubigo ferri, in very fine powder, to be administered every five or ten minutes until relief is obtained. It may be found already prepared in the drug-store, or be prepared at once, in an emergency, by adding ten troy oz. of solution of tersulphate of iron to eight troy ounces of water of ammonia. Ferrum oxidum hydratum cum magnesia (Ph. U. S.) is a still better antidote. This is particularly efficacious when the *white arsenic* has been swallowed. If the arsenic have been taken in the form of Fowler's solution, lime-water, in copious draughts, may be given. For either of the other forms, emetics of sulphate of zinc; diluents; demulcents, such as flaxseed tea, infusion of slippery elm, etc. Counter-irritants may be used to relieve the spasm and violent pain in the stomach. Bleeding, as promoting absorption, should not be employed until the stomach is completely evacuated. Magnesia, freshly precipitated or not too highly calcined, has been used with advantage in arsenious-acid poisoning. If there should be suppression of urine, sweet spirits of nitre should be freely given. |
| BISMUTH.<br>*Bismuth Nitrate.*<br>*Bismuth Subnitrate (Pearl Powder.)*<br>*Bismuth Oxide.*<br>*Bismuth Subcarbonate.* | Similar to those produced by other irritant poisons. General inflammation of the whole alimentary canal; suppression of urine; hiccough; disagreeable metallic taste; vomiting; cramps; delirium; death. | Milk and sweet mucilaginous drinks are recommended. Leeches, general bleeding; glysters; fomentations to be employed on the general principles of treatment for inflammatory symptoms. |

| POISONS. | SYMPTOMS. | TREATMENT. |
|---|---|---|
| COPPER.<br>*Copper Sulphate* (*Blue Vitriol*).<br>*Copper Acetate.*<br>*Copper Subacetate* (*Verdigris*).<br>*Carbonate of Copper* (*Blue Verditer*).<br>*Arsenite of Copper* (*Scheele's Green*).<br>*Food cooked in dirty copper vessels; or pickles or other articles made green by copper.* | Very similar to those produced by arsenic. Coppery eructations and taste. Epileptiform convulsions, delirium; jaundice; suppression of urine. Fatal cases are generally terminated by convulsions, palsy, insensibility. | Emetics and the stomach-pump should be employed. Yellow prussiate of potash is an antidote. Albumen to be administered in either of its forms which can be most readily obtained, as milk or whites of eggs, with demulcent drinks, oils, milk, etc.; opium may be given to relieve pain. Vinegar should *not* be given. The inflammatory and nervous symptoms are to be treated on general principles. |
| GOLD.<br>*Chloride of Gold.*<br>*Fulminating Gold.*<br>*Other Preparations of Gold.* | Very analogous to those of other irritant poisons. This substance communicates a pink stain to the flesh, and patches of that color may be found about the lips and inside the mouth. | The salts of gold are decomposed by sulphate of iron, and this has therefore been recommended as an antidote. Inflammatory symptoms to be treated on general principles. |
| IRON.<br>*Sulphate of Iron, Copperas, Green Vitriol.*<br>*Chloride of Iron and the Tincture of the Chloride of Iron.* | Analogous to those of other irritant poisons; colicky pains, constant vomiting and purging. Violent pain in the throat, tension of the epigastrium, coldness of the skin, and feebleness of the pulse. | Carbonate of soda would be a most excellent antidote to either of these substances. Mucilaginous drinks might also be employed, and particular symptoms relieved by general treatment. |
| LEAD.<br>*Acetate of Lead* (*Sugar of Lead*),<br>*Subacetate of Lead* (*Goulard's Extract*).<br>*Carbonate of Lead* (*White Lead*, etc.).<br>*Red Oxide* or *Red Lead.*<br>*Litharge.*<br>*Wines sweetened by Lead.*<br>*Water which has been kept in leaden vessels.*<br>*Acid food, cooked or left standing for any length of time in vessels glazed with lead.* | Irritation of the alimentary canal; spasm; epigastric pain; nervous symptoms; paralysis, either partial or complete. When taken for some time in small quantity, violent and obstinate colic; rigidity of abdominal muscles, cramps; remission of pain; obstinate constipation, urine diminished, saliva increased; sweet taste in the mouth; countenance anxious and gloomy; pulse quick and weak; great thirst; subsultus. If relief be not promptly obtained, giddiness, debility, coma, convulsions, and death. The paralysis affects generally the upper extremities. | Emetics and stomach-pump; mucilaginous or other thick drinks; soluble sulphates, as of magnesium and sodium, and phosphate of soda, are good antidotes for the soluble salts of lead. Opium may be needed to relieve pain. For the solid forms dilute sulphuric acid may be drunk. These are applicable to the irritant forms of poisoning by lead. In the chronic form, or colica pictonum, purgatives and anodynes are resorted to, and external applications to relieve the cramps. The use of strychnia is recommended for the paralysis, and iodide of potassium for the chronic form generally. |
| MERCURY.<br>*Corrosive Sublimate.*<br>*Cyanide of Mercury.*<br>*Nitrate of Mercury.*<br>*Ammonio-chloride of Mercury* (*White Precipitate*).<br>*Red Oxide* or *Red Precipitate.*<br>*Sulphate* or *Turbith Mineral.*<br>*Vermilion*, or *Red Sulphuret.* | Similar to those of irritant poisons; harsh metallic astringent taste; burning pain in the stomach; vomiting and purging, frequently of bloody matter; often irritation of the urinary organs, and sometimes suppression; tightness and burning in the throat, occasionally so great as to prevent speech; fetor of the breath; pulse small and irregular; countenance not always pale, but sometimes flushed; tendency to doze; sometimes eruption on the skin; coma, convulsions, and death. | The stomach-pump. Albumen, in some form, must be promptly administered—either whites of eggs beaten up with water, milk, or wheat flour beaten up. The inflammatory symptoms to be counteracted by the usual means. Stimulation externally and internally on the heart and respiratory organs. In the chronic form iodide of potassium has been given. |
| *Mercuric Methide*, or *Methyl.* | As a result of exposure to the vapors of mercuric methide (which is a heavy colorless liquid containing 87 per cent. of mercury), dimness of vision, numbness of the hands, deafness, debility, swelling and tenderness of the gums, general impairment of the senses. | Same as for other mercurials, and treatment of symptoms on general principles. |
| *Mild Chloride of Mercury* (*Calomel*).<br>*Other Preparations of Mercury.* | Calomel is an irritant poison, when administered in large doses producing excessive salivation, and, at times, death. | |
| SILVER.<br>*Nitrate of Silver* (*Lunar Caustic*). | Those of other irritant poisons. | Chloride of sodium, or common salt, immediately decomposes this substance and destroys its activity. Antiphlogistic treatment is to be employed for the inflammatory symptoms, to counteract the irritating effects of the nitrate. |

| Poisons. | Symptoms. | Treatment. |
|---|---|---|
| TIN.<br>*Chloride of Tin.*<br>*Solution of Tin, used by Dyers.*<br>*Oxide of Tin,* or *Putty Powder.*<br>*Other Preparations of Tin.* | The same as those from other irritant poisons, and a peculiar tanned appearance of the villous coat of the stomach. | Milk to be given copiously, and the subsequent treatment to be regulated by the symptoms. |
| ZINC.<br>*Sulphate of Zinc* (*White Vitriol*).<br>*Acetate of Zinc.* | Violent vomiting; astringent taste, burning pain in the stomach; pale countenance; cold extremities; dull eyes; fluttering pulse. Death seldom ensues, in consequence of the emetic effects. | The vomiting may be relieved by copious draughts of warm water. Carbonate of sodium, administered in solution, will decompose the sulphate of zinc. Milk and albumen also act as antidotes. General principles are to be observed in the subsequent treatment, attention being paid to its effects as an irritant. |
| PREPARATIONS OF CHROMIUM. | The preparations of chromium belong to the class of irritants. The bichromate of potassium, used as a dye, has caused death. It produces also sloughing sores and foul intractable ulcers on the hands of those employed in its manufacture. | Emetics and magnesia or chalk. |
| PHOSPHORUS. | Those of other irritant poisons; burning pain in the stomach and bowels; gastro-enteritis; vomiting sometimes of coffee-grounds; delirium, vertigo; deficient and albuminous urine, coma, etc. The symptoms of phosphorus-poisoning resemble those of yellow atrophy of the liver. Diarrhœa, tenderness and tension of the abdomen are often prominent symptoms of this form of poisoning. Phosphorous taste. | An emetic to be promptly administered; copious draughts containing magnesia in suspension; mucilaginous drinks; purgatives, opium to relieve pain; general treatment for inflammatory symptoms. Sulphate of copper is an antidote; solution of potassium permanganate more positively so (¼ to ⅓ per cent.) Do not prescribe oils or fats. |
| SYNTHETIC COAL-TAR ANTIPYRETICS.<br>*Acetanilide. Antipyrin. Phenacetin,* etc. | Prostration, sweating, cold skin, cyanosis, weak pulse, nausea, headache, slow and shallow respiration, subnormal temperature. The symptoms vary in intensity and in relative prominence, according to the drug used. | The chief indication is to support the heart by means of heat to the cardiac region, strychnine, atropine, alcohol, caffeine, etc. If breathing fails artificial respiration must be resorted to, and inhalations of oxygen may be given. |
| GLASS OR ENAMEL. | If taken in very coarse powder, it produces irritation and inflammation of the bowels. | Large quantities of crumbs of bread should be eaten, to envelop the particles. An emetic of sulphate of zinc should then be given, and vomiting be promoted by tepid demulcent drinks. |

## II. ORGANIC POISONS.

### 1. VEGETABLE POISONS.

| Poisons. | Symptoms. | Treatment. |
|---|---|---|
| IRRITANT.<br>Aloë spicata, A. vulgaris, etc. (*Cape, Socotrine,* etc.). *Aloes.*<br>Anemone pulsatilla. *Wind Flower.*<br>Arum maculatum. *Wake Robin.*<br>Bryonia dioica. *Bryony.*<br>Calla palustris. *Water Arum.*<br>Chelidonium majus. *Celandine.*<br>Clematis vitalba. *Virgin Bower.*<br>Convolvulus jalapa. *Jalap.*<br>Convolvulus scammonia. *Scammony.*<br>Croton tiglium. *Purging Croton* (*Croton Oil*).<br>Cucumis colocynthis. *Colocynth.*<br>Daphne gnidium. *Spurge Flax.*<br>Daphne mezereon. *Mezereon.*<br>Delphinium staphisagria. *Stavesacre.*<br>Dioica palustris. *Swamp Leather-wood.*<br>Euphorbia officinarum. *Euphorbium Spurge.*<br>Gratiola officinalis. *Hedge Hyssop.*<br>Jatropha curcas. *Indian Nut.*<br>Jatropha manihot. *Cassada.*<br>Juniperus sabina. *Savin* (*Oil of*).<br>Momordica elaterium. *Squirting Cucumber.*<br>Narcissus pseudonarcissus. *Daffodil.*<br>Pastinax sativa. *Common Parsnip.*<br>Phytolacca decandra. *Poke.*<br>Piper cubeba. *Cubebs.*<br>Ranunculus acris and other species. *Crowfoot.*<br>Rhododendron chrysanthemum. *Oleander.*<br>Ricinis communis. *Castor Oil Plant.*<br>Sambucus ebulus. *Elder.*<br>Sedum acre. *Stone Crop.*<br>Stalagmitis cambogioïdes. *Gamboge.*<br>Tanacetum vulgare. Especially the oil (*Oil of Tansy*). | The general effects of this class of vegetable poisons are: an acrid pungent taste, with more or less of bitterness, excessive heat, great dryness of the mouth and throat, with sense of tightness there; violent vomiting, the efforts being continued even after the stomach is emptied; purging, with great pain in the stomach and bowels; pulse strong, frequent, and regular; breathing often quick and difficult; appearances of intoxication; the pupil of the eye frequently dilated, insensibility resembling death; the pulse becomes slow and loses its force, and death closes the scene.<br>If applied externally, many of them produce violent inflammation of the skin, with vesications or eruptions of pustules. | If vomiting has been occasioned by the poison, and the efforts are still continued, they may be rendered easier by large draughts of warm water or thin gruel; but if symptoms of insensibility have come on without vomiting, it ought to be immediately excited by the sulphate of zinc or some other active emetic substance, and after its operation a sharp purgative should be given. After as much as possible of the poison is got rid of, a very strong infusion of coffee, or vinegar diluted with water, may be given with advantage. Camphor mixture with ether may be taken frequently, and if insensibility be considerable, warmth, frictions, and blisters may be employed. Mucilaginous drinks and demulcents should be freely given; also opium, and all methods practicable for stimulation. If inflammation or other dangerous consequences have been induced, they are to be treated upon general principles.<br>The fruit of Feuillea cordifolia has been recommended as a powerful antidote against vegetable poisons; (?) it is to be used in as recent a state as possible.<br>N. B. Bromine, chlorine, and iodine are said to be antidotes to the alkaloids generally, and so are tannic acid and animal charcoal. |

| Poisons. | Symptoms. | Treatment. |
|---|---|---|
| ACRONARCOTIC.<br>Æthusa cynapium. *Common Fool's Parsley.*<br>Aconitum napellus. *Monkshood.*<br>Agaricus, five species. *Mushrooms (poisonous).*<br>Amanita muscaria. *Truffles (poisonous).*<br>Anagallis arvensis. *Meadow Pimpernel.*<br>Apocynum androsæmifolium. *Dogsbane.*<br>Aristolochia clematis. *Birthwort.*<br>Arnica montana. *Leopard's Bane.*<br>Asclepias Syriaca. *Swallowwort.*<br>Atropa belladonna. *Deadly Nightshade.*<br>Æsculus Ohioensis. *Buckeye.*<br>Brucea antidysenterica. *False Angustura Bark.*<br>Calabar bean. See *Physostigma venenosum.* | The narcotic vegetable poisons, if taken into the stomach or applied to a wound, occasion the following effects: stupor, numbness, heaviness in the head; desire to vomit, slight at first, but afterward insupportable; a sort of intoxication, stupid air, pupil of the eye generally dilated; diplopia; furious or lively delirium, sometimes pain; convulsions of different parts of the body or palsy of the limbs. The pulse is variable, at first generally strong and full, but sometimes feeble and slow, as after aconite; the breathing is quick, and there is great anxiety and dejection, which, if not speedily relieved, soon ends in death.<br>With atropia belladonna there is dryness of the mouth and fauces; flushed face, dilated pupil; delirium, scarlatinal rash; retention of urine; stupor, etc. | In treating this class of poisons the stomach must be effectually evacuated, the emetic to be repeated every quarter of an hour till the full effect is produced. These means may be assisted by tickling the throat with a feather or the finger. Large and strong glysters of soap dissolved in water, or of salt and gruel, should be speedily administered, to clear the bowels and assist in getting rid of the poison; and active purgatives may be given after the vomiting has ceased. When as much as possible of the poison has been expelled, the patient may drink, alternately, a teacupful of strong hot infusion of coffee and vinegar diluted with water. The drowsiness is sometimes extreme, and the insensibility bordering on apoplexy. If the heat declines, warmth and frictions must be perseveringly used. Vegetable acids are on no account to be given *before* the poison is expelled, and it is desirable that but little fluid of any kind should be administered. Tannic acid is used in poisoning by conium, digitalis, colchicum, etc.<br>Bromine, chlorine, and iodine are said to be antidotes to the alkaloids generally. Electro-magnetism has been found efficacious in the drowsiness and sleep of narcotic poisoning. Where myositic narcotic poisons, as opium, have been taken, mydriatics, as belladonna and stramonium, have been recommended. In aconite and other active poisoning of this class digitalis, ether, or alcohol may be given hypodermically. Better wash out the stomach than administer direct emetics. Apply heat externally; use atropine, ammonia, etc. Tannic acid is given as an antidote to belladonna or atropia, and also pilocarpine, on account of its physiological antagonism, a matter worthy remembering in poisoning by other substances. |
| Cannabis Indica. | Feeling of excitement and exhilaration, succeeded by drowsiness and sleepiness; loss of muscular power; dilated pupils; quick pulse; perhaps convulsions. | Stimulation; atropia; artificial respiration. |
| Chenopodium. *Wormseed.*<br>Cicuta maculata. *American Hemlock.*<br>Cicuta virosa. *Water Hemlock.*<br>Cocculus Indicus. *Fish Berries.*<br>Colchicum autumnale. *Meadow Saffron.*<br>Conium maculatum. *Hemlock.*<br>Curare. *Indian War Poison.*<br>Cystisus laburnum. *Laburnum.*<br>Datura stramonium. *Thorn Apple.* | | |
| Digitalis purpurea. *Foxglove.* | Vomiting; headache; disturbance of vision; giddiness; full pulse, sometimes dicrotic; pallor; diarrhœa; syncope; stupor; convulsions, etc. | |
| Ergot. See *Secale.*<br>Gaultheria procumbens. *Wintergreen (Oil of).*<br>Gelsemium sempervivens. *Yellow Jessamine.*<br>Helleborus niger. *Black Hellebore.*<br>Ipecacuanha. *Ipecacuanha.*<br>Laurus camphora. *Camphor.*<br>Lobelia inflata. *Indian Tobacco.*<br>Lolium temulentum. *Darnel.*<br>Melia azedarach. *Pride of China.*<br>Nerium oleander. *Common Oleander.* | | |
| Nicotiana tabacum. *Tobacco.* | Great depression, vertigo, cold skin, and the usual symptoms of intense sedation. | |
| Œnanthe crocata. *Hemlock Dropwort.*<br>Phelandrium aquaticum. | | |
| Physostigma venenosum. *Calabar Bean.* | Muscular tremor; contraction of the pupils; slow irregular breathing; absence of various forms of reflexes, etc. | Stimulants; atropine; chloral; strychnine; artificial respiration. |
| Picrotoxin. | Epileptiform or circular spasms, slowness of pulse, stoppage of the motion of the diaphragm are the chief symptoms observed. | Chloral; bromide of potassium. |

| Poisons. | Symptoms. | Treatment. |
|---|---|---|
| Pilocarpine. | Dimness of vision; vomiting; sudden collapse; swelling of the salivary glands and tonsils; hiccough; diminution in quantity of urine; albuminuria, strangury, etc. | Atropine, by subcutaneous injection. |
| Piscidia erythrina. *Jamaica Dogwood.* | | |
| Polygala venenosa (of Java). | | |
| Rhus radicans. *Poison Vine.* | | |
| Rhus toxicodendron. *Poison Oak.* | | |
| Ruta graveolens. *Rue.* | | |
| Sanguinaria Canadensis. *Bloodroot.* | | |
| Scilla maritima. *Squill. Sea Onion.* | | |
| Secale cornutum. *Ergot. Spurred Rye.* | | |
| Sium latifolium. *Procumbent Water Parsnep.* | | |
| Spigelia Marilandica. *Pink Root.* | | |
| Strychnos Ignatii. *St. Ignatius's Bean.* | | |
| Strychnos nux vomica. *Nux vomica.* | In addition to other symptoms of this class, there is tetanic rigidity or spasm, with convulsions, opisthotonos, fixation of the eyes, cramps, pallor, involuntary evacuations of the bowels and bladder, accompanied with tetanus, etc. | |
| Symplocarpus fœtida. *Skunk Cabbage.* | | |
| Veratrum album. *White Hellebore.* | | |
| Veratrum sabadilla. | Loss of muscular power, coldness of the surface, vomiting, thin rapid pulse, tetanic convulsions; depression of temperature; evidences of intense sedation. | General stimulation, externally and internally. |
| Veratrum viride. *Green Hellebore.* | Symptoms similar to those of veratrum sabadilla. | All the means suggested for external and internal stimulation should be employed, such as hypodermic injections of ammonia, digitalis, strychnia, etc. |
| Woorara. *War Poison of Guiana.* | | |
| Zea mays. *Maize (diseased).* | | |
| NARCOTIC. | | |
| Actæa spicata. *Baneberry.* | | |
| Amygdalus communis. *Bitter Almond.* | | |
| Amygdalus Persica. *Peach.* | | |
| Coca and its alkaloid, Cocaine. | Depression, faintness, vertigo, rapid pulse, retarded respiration, dilated pupils, nausea. | Give stimulants and cardiac tonics; nitrite of amyl or nitroglycerin; employ artificial respiration if necessary. |
| Hyoscyamus albus. *White Henbane.* | | |
| Hyoscyamus niger. *Black Henbane.* | | |
| Kalmia latifolia. *Mountain Ivy.* | | |
| Lactuca virosa. *Strong-scented Lettuce.* | | |
| Opium (and its proximate principles). | Drowsiness; somnolency, full slow pulse, contraction of the pupils, followed by stertorous breathing; blueness of the surface; slow respiration, cold sweat, and symptoms of approaching death from narcotism. | Empty the stomach; give warm coffee; stimulate with ammonia; arouse the patient by flagellation with a towel; apply the galvanic battery; keep him walking about; administer atropine subcutaneously; and practise artificial respiration if the conditions are such as to render this procedure necessary; permanganate of potassium has been given with good results. |
| Papaver somniferum. *Poppy.* | Same symptoms. | Same treatment. |
| Prunus laurocerasus. *Cherry-laurel.* | | |
| Prunus Virginiana. *Wild Cherry.* | | |
| Solanum dulcamara. *Bittersweet.* | | |
| Sorbus aucuparia. *Mountain Ash.* | | |
| POISONOUS MUSHROOMS (FUNGI). | | |
| Agaricus. | Nausea, heat, and pain in the stomach and bowels, with vomiting and purging, thirst; convulsions and faintings; pulse small and frequent; delirium, dilated pupil, and stupor; cold sweats and death.<br>Poisonous mushrooms may be distinguished from the edible by their botanical characters, and by the following criteria: the former grow in wet, shady places, have a nauseous odor; are softer, more open and porous; have a dirty-looking surface, sometimes a gaudy color, or many very distinct hues, particularly if they have been covered with an envelope; they have soft, bulbous stalks, grow rapidly, and corrupt quickly. | The stomach and bowels to be cleared by an emetic of tartarized antimony, followed by frequent doses of Glauber's or Epsom salt, and large, stimulating glysters. After the poison is evacuated ether may be administered, with small quantities of brandy and water; but if inflammatory symptoms manifest themselves, such stimuli should be omitted and other appropriate means be had recourse to. |

## 2. ANIMAL POISONS.*

| Poisons. | Symptoms. | Treatment. |
|---|---|---|
| POISONOUS FISH.<br>Balistes monoceros. *Old Wife.*<br>Cancer astacus. *Crawfish.*<br>Cancer ruricolus. *Land Crab.*<br>Clupea thryssa. *Yellow-billed Sprat.*<br>Coracinus fuscus major. *Gray Snapper.*<br>Coracinus minor. *Hyne.*<br>Coryphæna splendens. *Dolphin.*<br>Mormyra. *Blue Parrot Fish.*<br>Muræna major. *Conger Eel.*<br>Mytilus edulis. *Mussel.*<br>Ostracion globellum. *Smooth Bottle Fish.*<br>Perca major. *Barracuda.*<br>Perca venenosa. *Grooper.*<br>Perca venenata. *Rock Fish.*<br>Physalia. *Portuguese Man-of-War.*<br>Scomber cœruleus. *Spanish Mackerel.*<br>Scomber maximus. *King Fish.*<br>Scomber thynnus. *Bonetta.*<br>Sparus chrysops. *Porgee.*<br>Tetrodon sceleratus. *Tunny.*<br>Tetrodon ocellatus. *Blower.* | In an hour or two, or often in a much shorter time, after the fish has been eaten, a weight at the stomach comes on, with slight vertigo and headache, sense of heat about the head and eyes, considerable thirst, and often an eruption of the skin (urticaria), and in many cases death. | An emetic should be speedily administered, or, in the absence of it, vomiting may be excited by tickling the throat with the finger and taking large draughts of warm water. After full vomiting an active purgative should be given to remove any of the noxious matter that may have found its way into the intestines. Vinegar and water may be drunk after the above remedies have operated, and the body sponged with the same. Water, made very sweet with sugar, to which ether may be added, may be drunk freely, and a very weak solution of alkali to obviate the poisonous effects. If spasm ensue after evacuations, laudanum in considerable doses is necessary. If inflammation occur, the usual means of combating it must be employed. |
| POISONOUS SERPENTS.<br>Boa crotaloides. *Copperhead.*<br>Cenchris mockeson. *Mockeson.*<br>Cerastes nasicornis. *Horned Viper of Western Africa.*<br>Coluber berus. *Viper.*<br>Coluber prester. *Black Viper.*<br>Crotalus (5 species). *Rattlesnake.*<br>Scytale piscivorus. *Water Viper.*<br>Naja tripudians. *Cobra di Capella.* | A sharp pain in the wounded part which soon extends over the limb or body; great swelling, at first hard and pale, then reddish, livid, and gangrenous in appearance; faintings, vomitings, convulsions, and sometimes jaundice; pulse small, frequent, and irregular; breathing difficult, cold sweats, the sight fails, and the intellectual faculties are deranged. Inflammation, and often extensive suppuration and gangrene, followed by death. | A cupping-glass to be applied over the wound, or a moderately tight ligature above the bites, and the wound left to bleed after being well washed with warm water; the actual cautery, lunar caustic, or butter of antimony to be then applied freely to it, and afterward covered with lint dipped in equal parts of olive oil and spirit of hartshorn. The ligature to be removed if the inflammation be considerable. Warm, diluting drinks and small doses of ammonia or hartshorn to cause perspiration; the patient to be well covered in bed, and a little warm wine given occasionally. In some cases alcoholic drinks must be very liberally administered. Arsenic has been recommended, also Bibron's antidote, but neither is reliable. Prof. Halford of Australia recommends hypodermic injection into a vein of 20–30 ♏ of a solution of one part of strong solution of ammonia to two parts of distilled water. |
| CANTHARIS VESICATORIA.<br>Spanish or Blistering Fly.<br>Lytta vittata. *Potato Fly.* | Gastro-enteritis; the stomach should be emptied; mucilaginous or other thick drinks given, oils being avoided. Nauseous odor of the breath; acrid taste; burning heat in the throat, stomach, and abdomen; frequent vomitings, often bloody, with copious bloody stools; excruciating pain in the stomach; painful and obstinate priapism, with burning pain and heat in the bladder, and strangury or retention of urine; stupor, frightful convulsions, delirium, and, in some instances, death. | Vomiting to be excited by drinking sweet oil, sugar and water, milk, or linseed tea, very freely. Emollient glysters should be administered, and if symptoms of inflammation of the stomach, kidney, or bladder supervene, they must be subdued by appropriate treatment. Opium may be necessary to relieve pain, and leeches applied to the abdomen. |
| VENOMOUS INSECTS.<br>Tarantula.<br>Scorpio. *Scorpion.*<br>Vespa crabro. *Hornet.*<br>Vespa vulgaris. *Wasp.*<br>Apis mellifica. *Bee.*<br>Culex pipiens. *Gnat.*<br>Œstrus bovis. *Gad-fly.* | In general, the sting of these insects produces only a slight degree of pain and swelling; but occasionally the symptoms are more violent, and sickness and fever are produced by the intensity of the pain. | Hartshorn and oil may be rubbed on the affected part, and a piece of rag moistened in the same, or in salt and water, kept upon it till the pain is removed. A few drops of hartshorn may be given frequently in a little water, and a glass or two of wine may be taken. The sting may be removed by strong pressure made around it with the barrel of a small watch-key. |

---

* In addition to the animal poisons here enumerated may be mentioned narcotico-irritant poisoning from sausage-meat, poisoning from diseased pork, from trichinæ (see *Trichiniasis*), from putrescent food, poisoned game, etc.

The most energetic poisons are used therapeutically, and often with considerable advantage. They have, of course, to be administered in extremely small doses to avoid the production of true poisoning.

**Poi′son, ar′row.** See *Arrow poison.* **Ital′ian p.,** liquor arsenicalis. **P.-i′vy,** Rhus toxicodendron. **P.-oak,** Rhus toxicodendron and R. diversiloba. **P.-root,** Cicuta maculata. **Saus′age p.,** allantotoxicum. **P.-vine,** Rhus radicans; also Periploca græca or milk-vine.

**Poi′sonberry tree.** Melia azedarach.

**Poi′soning.** Venenation. The administration of a poison. The symptoms induced in the animal body by any poisonous substance. **Blood p.,** see *Pyæmia* and *Septicæmia.* **Crowd p.,** ochlesis.

**Poi′sonous.** Toxic. Having the qualities of a poison.

**Poke.** Phytolacca decandra. **In′dian p.,** Veratrum viride. **P.-root,** Phytolacca root. **Stink p.,** Dracontium fœtidum. **P.-weed,** Phytolacca decandra; Veratrum viride.

**Polanis′ia feli′na.** See *Cleome felina.* **P. grave′olens,** clammyweed, stinkweed, wormweed, clammy mustard, false mustard; indigenous plant, ord. *Capparidaceæ,* found in every part of North America; anthelmintic.

**Po′lar.** Relating to a pole. **P. bod′ies,** p. cells.

**P. cat'aract,** form of capsular cataract with a central dead white, opaque spot projecting forward from the surface. **P. cells,** term applied to ovum cells and nerve-cells. **P. glob'ule** or **ves'icle,** small, globular mass separated in the maturation of the ovum. **P. meth'od,** mode of applying electricity, by placing one pole over the part or region to be treated and the other over some other part or region. **P. mi'croscope,** instrument consisting of a combination of a microscope and polariscope. **P. plant** (so called from its leaves pointing quite uniformly north and south), Silphium laciniatum. **P. stars,** two asteroid or star-like figures making up a diaster; see *Mitosis*.

**Polarim'eter** (*polaris*, polar, *metron*, measure). Polariscope.

**Polarim'etry.** Process of determining the amount of rotation which a beam of polarized light undergoes.

**Polar'iscope** (*skopeo*, to view). Instrument consisting essentially of a polarizer and an analyzer, employed for polarizing and analyzing light.

**Polaristrobom'eter** (*strobos*, a whirling movement). Delicate form of polarimeter.

**Polar'ity.** The quality of a body having poles or possessing in itself opposite properties or powers.

**Polariza'tion.** Separation of a ray of light by reflection from or transmission through certain media whose planes of vibration are at right angles to each other. When the vibrations occur in one plane only it is called *plane polarization;* when in circles, *circular polarization;* in ellipses, *elliptical polarization.* When the plane may be rotated it is called *rotary polarization.*

**Po'larizer.** That part of a polariscope which receives and polarizes light.

**Pole** (Gr. *polos*). One of the opposite directions in which a polar force manifests itself, as the poles of a magnet, the poles of a battery. One of the two points on a sphere equidistant from every point of its equator. See *Poles.* **Cephal'ic p.,** the extremity of the elongated ovum where the head of the embryo will be formed. **Ger'minal p.,** the point of the ovum where the embryo begins to be formed. **Neg'ative p.,** the electrode which is in direct connection with the positive element of an electric battery; cathode. **Pel'vic p.,** the opposite of cephalic pole. **Pos'itive p.,** anode; the opposite of negative pole.

**Pole'cat weed.** Dracontium fœtidum.

**Polemo'nii ra'dix.** Root of Valeriana officinalis.

**Polemo'nium rep'tans.** False Jacob's ladder, Greek valerian, sweatroot; ord. *Polemoniaceæ;* indigenous; has been used as a diaphoretic and expectorant.

**Poles.** Plural of pole, which see. Chalazæ. **P. of the eye,** summit of the cornea and point exactly opposite, called respectively the anterior and the posterior pole.

**Polian'thes tubero'sa.** A plant of the order *Liliaceæ.* Root is cut into slips and laid upon the bites of serpents by the Peruvian Indians.

**Police', med'ical.** Public medicine; regulations intended to promote the general sanitary welfare of the people.

**Police'man's disease'.** Tarsalgia.

**Policlin'ic** (*polis*, town, *kline*, bed). City or town clinic or hospital.

**Poliencephali'tis** or **Polioencephali'tis** (*polios*, gray, *enkephalos*, brain). Inflammation of gray brain matter; applied to inflammation of the cortex and of the nuclei of the cranial nerves. **P. acu'ta infan'tum,** occurring in young children, marked by fever, convulsions, vomiting, apoplectiform symptoms, and paralysis. **P. cortica'lis,** p. acuta infantum. **P. infe'rior,** inflammation involving the nuclei of origin of the tenth and twelfth nerves. **P. supe'rior,** ophthalmoplegia progressiva; nuclear ophthalmoplegia.

**Polioencephalomyeli'tis.** Poliomyelencephalitis.

**Poliomyelencephali'tis** (*polios*, gray, *myelos*, marrow, *enkephalos*, brain). Poliomyelitis coexisting with poliencephalitis.

**Poliomyeli'tis** (*polios*, gray, *myelos*, marrow). Inflammation of gray matter of the spinal cord. **P. ante'rior,** inflammation of the anterior cornua of gray matter of the spinal cord; infantile paralysis. **P. bul'bi,** p. anterior restricted to the medulla oblongata. **Chron'ic p.,** progressive muscular atrophy.

**Poliomyelop'athy** (*polios*, gray, *myelos*, marrow, *pathos*, disease). Disease of gray matter of the spinal cord.

**Po'lioplasma.** Granular protoplasm.

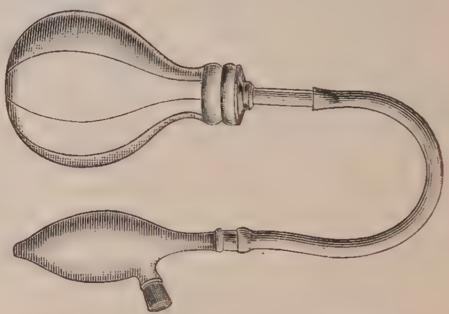
**Polio'sis** (*polios*, hoary, gray). Turning gray of the hair, especially premature canities. **P. circumscrip'ta acquis'ita,** a condition of acquired leucoderma in which the hairs are blanched, sometimes in a small area of unaffected scalp.

**Po'liothrix** (*polios*, gray, *thrix*, hair). Canities.

**Po'lish plait** or **ring'worm.** Plica polonica.

**Politzera'tion** or **Politzeriza'tion.** Treatment with Politzer's method.

**Pol'itzer's bag.** See *Politzer's method.* **P.'s lu'minous cone,** Wilde's luminous triangle. **P.'s meth'od,** method for rendering the Eustachian tube pervious, used by Politzer, of Vienna, which consists in blowing air into one nostril from a flexible rubber bag, the other nostril and the mouth being closed, and the patient swallowing at the moment the air is blown in; the middle ear is thus inflated. **P.'s test,** a test of patency of the Eustachian tube by means of the tuning-fork.



Politzer's bag, with glass inhaler attached.

**Po'lium.** See *Teucrium.*

**Poll.** Head. **P.-e'vil,** deep abscess ending in an ulcerous sore, with numerous sinuses in the forward part of the neck, in horses and cattle.

**Pollakiu'ria** (*pollakis*, often, *ouron*, urine). Frequent micturition.

**Pol'len** (fine dust). Fecundating dust contained in the anthers of flowers, which is dispersed on the stigma. It is conveyed to the ovary through the stigma by the pollen tube. **P. catarrh',** hay fever.

**Pol'lex** (*polleo*, to have much strength). Thumb. First of the fingers in size and strength. See *Digitus.* **P. pe'dis,** great toe.

**Pol'licar ar'tery.** Arteria princeps pollicis.

**Pol'lock's amputa'tion.** Disarticulation at the knee-joint, a long anterior flap being used.

**Pollu'tion** (*polluo*, to profane). Act of rendering impure, as of the water-supply by the waste of factories, excreta, etc. Excretion of the seminal liquor or sperm, or the production of orgasm in male or female at other times than during coition. When occasioned by a voluntary act it is called *self-pollution* or masturbation; when excited during sleep by lascivious dreams it takes the name *nocturnal pollution.*

**Polon'ica.** Plica polonica.

**Polo'nium.** A substance, possibly an element, derived from a Bohemian mineral, pitchblende, which possesses the property of radioactivity, affecting a photographic plate like the *x*-rays.

**Polonych'ia.** Polyonychia.

**Polt'foot.** Club-foot.

**Po'lus.** Pole; also the patella.

**Pol′y.** Teucrium polium.

**Poly-** (*polys*, many, much). In composition, many, much, more than two; multi-.

**Polyac′tium tris′te.** Pelargonium triste.

**Polyade′nia** (*polys*, many, *aden*, gland). Pseudoleukæmia.

**Polyadeni′tis.** Inflammation of several glands. **Malig′nant p.**, bubonic plague.

**Polyadeno′ma.** Tumor formed by the simultaneous hypertrophy of a large number of small glands of the same nature in the immediate vicinity.

**Polyadenop′athy** (*polys*, many, *aden*, gland, *pathos*, disease). Disease of several glands.

**Polyad′enous.** Having many glands.

**Polyæ′mia** (*polys*, much, *haima*, blood). Plethora; increase in the quantity of blood without qualitative changes. **P. aquo′sa**, p. serosa. **Cel′lular p.**, polycythæmia. **P. hyperalbumino′sa**, excess in the albuminous constituents of the blood plasma. **P. polycythæ′mica**, polycythæmia. **P. sero′sa**, increase in the volume of blood caused by drinking of large quantities of fluid or the infusion of a saline solution.

**Polyæmic**, pol-e-e′mik. Plethoric.

**Polyæsthe′sia** (*polys*, many, *aisthesis*, sensation). Abnormality of sensation in which a pin-point is felt as two, three, or more points; as in tabes dorsalis, in which stimulation of the skin at a single point produces a sensation as if several points were touched.

**Polyal′thia corin′ti.** Plant growing in the East Indies. Bark is employed as a febrifuge, in diarrhœa, etc. **P. macrophyl′la**, plant of Java; bark is employed in typhoid and other fevers.

**Polyan′dria.** A class of hermaphrodite flowering plants. Polyandry.

**Polyan′dry.** Condition of having several husbands.

**Polyarthri′tis.** Inflammation of many joints. **P. defor′mans**, nodular rheumatism. **Ver′tebral p.**, name given to a malady which attacks the intervertebral substance without causing caries of the bodies of the vertebræ.

**Polyatom′ic.** Containing several atoms of replaceable hydrogen.

**Polyax′on.** A neuron with several axons.

**Polyba′sic.** Combining with more than two univalent bases.

**Polyblen′nia** (*polys*, much, *blenna*, mucus). Excessive secretion of mucus.

**Polybrachia**, pol-e-bra′ke-ah (*polys*, many, *brachion*, arm). Monstrosity characterized by one or more supernumerary arms.

**Polybreph′ia** (*polys*, many, *brephos*, fœtus, child). Multiple pregnancy; plural birth.

**Polycar′dia.** Rapid pulse; tachycardia.

**Polycarpæ′a corymbo′sa.** Plant, native of East India and Malabar, employed in treatment of hypochondriasis and bites of serpents.

**Polycar′pon tetraphyl′lum.** All-seed; herb employed in treatment of paronychia and œdematous indurated conditions.

**Polycen′tric.** Having many centres or nuclei.

**Polyceph′alus.** Genus of *Tæniadæ* in the larval condition. **P. cerebra′lis**, Cœnurus cerebralis. **P. echinococ′cus**, Echinococcus hominis. **P. ovi′nus**, Cœnurus cerebralis.

**Polyche′zia** (*polys*, much, *chezo*, to defecate). Chronic diarrhœa.

**Polycho′lia** (*polys*, much, *chole*, bile). Superabundance of bile.

**Pol′ychrest** (*polys*, many, *chrestos*, useful). Having many virtues, as a medicine.

**Pol′ychroism** (*polychroos*, many-colored). Property of some bodies showing different colors when viewed in direction of different axes.

**Polychro′ite.** Substance of an orange-red color derived from saffron.

**Polychromat′ic.** Having many colors.

**Polychromat′ophile** (*polys*, many, *chroma*, color, *phileo*, to love). Degenerate form of red blood corpuscle in which the stroma takes not only the normal acid staining elements, but also the blue basic or purple neutral stain.

**Polychromatophil′ia.** Condition in which polychromatophiles are present in the blood.

**Polychromatophi′lic.** Staining with both acid and basic dyes.

**Pol′ychrome.** Having many colors.

**Polychro′mia.** Condition of increase of pigment or coloring-matter.

**Polychro′mic acid.** Aloetic acid.

**Polychy′lia** (*polys*, much, *chylos*, juice). Fulness of juices. A superabundance of chyle.

**Polychy′mia.** Polychylia. **P. sanguin′ea**, plethora.

**Polyclin′ic** (*polys*, many, *kline*, bed). A hospital or place at which practical clinical teaching is imparted, usually to advanced students or graduates.

**Polyco′pria** (*polys*, much, *kopros*, excrement). Excessive defecation.

**Polyco′ria** (*polys*, many, *kore*, pupil). Multiple pupils; a condition in which there are openings in the iris in addition to the normal pupil.

**Polycrot′ic** (*polys*, many, *krotos*, beat). Said of a pulse possessing more than two rhythms for each impulse of the heart.

**Polyc′rotism.** State of being polycrotic.

**Polycru′ria.** Condition of having supernumerary inferior extremities.

**Polycye′sia** or **Polycye′sis** (*polys*, many, *kyesis*, pregnancy). Frequent or quickly recurring pregnancies. Also multiple pregnancy.

**Polycys′tic.** Consisting of many cysts.

**Polycythæ′mia** (*polys*, many, *kytos*, cell, *haima*, blood). Increase of the red corpuscles in the blood.

**Polycythæ′mic.** Relating to polycythæmia.

**Polydac′rya** (*dakryon*, tear). Excessive lacrymation.

**Polydac′tylism** (*polys*, many, *daktylos*, finger). Condition of having supernumery fingers or toes.

**Polydac′tylus** (*polys*, many, *daktylos*, finger). One who has supernumerary fingers or toes.

**Polydip′sia** (*polys*, much, *dipsa*, thirst). Excessive thirst. Constant desire to drink, with a sense of dryness in the mouth and throat. Symptomatic of fever, inflammation, excessive discharges, etc., and is so much a part of diabetes that this has been called *polydipsia*.

**Polydissol′vent.** Capable of dissolving many substances; a universal solvent.

**Polyethylen′ic.** Containing numerous molecules of ethylene.

**Polyfor′min.** An insoluble preparation, used as a substitute for iodoform, made by dissolving resorcin in aqueous formaldehyde. A soluble preparation, so named, used as an antiferment, and also as an application to skin diseases, is made by combining resorcin with urotropin.

**Polyg′ala.** Common milkwort; ord. *Polygalaceæ*. Leaves are bitter, and are used in the same cases as Polygala amara. **P. ama′ra**, bitter milkwort; powerful bitter and tonic; it is balsamic, demulcent, and corroborant. P. rubella or bitter polygala of the United States has the same virtues. **P. amarel′la**, P. amara. **P. grandiflo′ra**, P. senega. **P. paucifo′lia**, dwarf milkwort, little pollom, evergreen snakeroot, has the same properties as P. senega. **P. rubel′la**, see *Polygala amara*. **P. sen′ega**, P. virginiana, seneka, rattlesnake milkwort, senega or rattlesnake root; see *Senega*. **P. serpenta′ria**, shrub of Caffraria; the root is considered by the natives as a sure antidote against the bites of venomous serpents. **P. venena′ta**, flower called kakulutun in Java; regarded by the natives as highly poisonous. **P. virginia′na**, P. senega. **P. vulga′ris**, P. amara.

**Polygalac′tia** (*polys*, much, *gala*, milk). Superabundant secretion of milk; galactorrhœa.

**Polyg′alic acid.** Polygalin.

**Polygalin′.** A bitter glucoside from senega; has been given in doses of gr. ss–j (0.032–0.065).

**Polygamarin′.** Bitter principle of Polygala amara.

**Polyg′amy** (*polys*, many, *gamos*, marriage). Plurality of husbands or wives.

**Polyganglion′ic** (*polys*, many, *ganglion*, knot). Having a number of lymphatic glands.

**Polygas′trica.** The ciliate infusoria which were thought at one time to possess several digestive cavities.

**Polygen′esis** (*polys*, many, *genesis*, origin). Fecundity.

**Polyg′enism** or **Polygeny**, pol-ij′en-e. View according to which the various human races are descended from as many independent species.

**Polygnath′us** (*polys*, many, *gnathus*, jaw). See *Paragnathus*.

**Polygon′atum.** Convallaria polygonatum. **P. an′ceps**, Convallaria polygonatum. **P. canicula′tum**, Convallaria canaliculata. **P. latifo′lium**, Convallaria canaliculata. **P. multiflo′rum**, Convallaria multiflora. **P. pubes′cens**, Convallaria pubescens. **P. uniflo′rum**, Convallaria polygonatum. **P. vulga′re**, Convallaria polygonatum.

**Polyg′onic acid.** Acrid, insoluble principle found in polygonum.

**Polyg′onum.** Sanguinaria, knotgrass, knotweed, bindweed, doorweed, ord. *Polygonaceæ*. It is said to be a feeble astringent. **P. a′cre**, P. hydropiper. **P. amphib′ium**, water persicaria of Europe and this country; the roots have been used like sarsaparilla, especially in skin diseases. **P. bistor′ta**, official bistort, great bistort, or snakeweed; the root is a powerful astringent and tonic, and has been used in internal hemorrhage, atonic diarrhœa, ague, etc. **P. centino′dium**, P. aviculare. **P. coccine′um**, P. amphibium. **P. divarica′tum**, eastern buckwheat plant; the roots, reduced to a coarse meal, are said to be much used as an article of diet by the Siberians. **P. erec′tum**, P. aviculare. **P. fagop′yrum**, buckwheat; the grain of this plant constitutes a principal article of food with the inhabitants of Russia, Germany, and Switzerland; it is much used in the United States. **P. gla′brum**, the leaves have diuretic and the root purgative properties; the plant is also used externally in gout. **P. hydrop′iper**, poor man's pepper, biting arsesmart, smartweed, lakeweed, water pepper; the leaves have an acrid, burning taste, and resemble those of the arum; they are antiseptic, aperient, and diuretic; the fresh leaves have been applied externally as a stimulating cataplasm. **P. hydropiperoi′des**, P. hydropiper, P. punctatum; P. hydropiperoides of Michaux, mild water pepper; indigenous; has no acrid properties. **P. persica′ria**, lady's thumb, heart's-ease, is said to possess vulnerary and antiseptic qualities; it has been given in wine to arrest gangrene. **P. puncta′tum**, water pepper of America, smartweed, possesses similar properties to Polygonum hydropiper, and is occasionally used internally in gravel and in amenorrhœa; externally in chronic ulcers. See *Polygonum hydropiper*. **P. virginia′num**, wand-spiked persicaria, Virginia bistort; indigenous; astringent, diuretic, and tonic.

**Pol′ygraph** (*polys*, many, *grapho*, to write). Myograph.

**Polygro′ma** (*polys*, many, *hygroma*). Staphyloma.

**Polygyny**, pol-ij′en-e (*polys*, many, *gyne*, woman). Condition of having more than one wife.

**Polygyr′ia** (*polys*, many, *gyrus*, convolution). Condition in which the brain possesses more numerous and intricate convolutions than common.

**Polyhæ′mia.** Polyæmia.

**Polyhe′dral.** Having many surfaces.

**Polyhe′dron** (*polys*, many, *hedra*, base). Polyscope or multiplying glass.

**Polyhid′ria** (*polys*, much, *hidros*, sweat). Excessive sweating.

**Polyhydram′nios** (*polys*, much, *hydor*, water, *amnion*). Excessive production of liquor amnii.

**Polyhy′drate.** Hydrate in which several molecules of hydroxyl are contained.

**Polyhy′dria** (*polys*, much, *hydor*, water). Dropsy.

**Polyhyperæ′mia.** Plethora.

**Polyid′ria** or **Polyidro′sis.** Excessive sweating.

**Polyleucocythæ′mia.** Leucocythæmia.

**Polylym′phia.** Anasarca.

**Polymas′tia** (*polys*, many, *mastos*, breast). The presence in the human subject of more than two breasts.

**Polymas′todont** (*polys*, many, *mastos*, nipple, *odous*, tooth). Teeth having many tubercles attached by a pedicle.

**Polyma′zia** (*mazos*, breast). Having many breasts.

**Polyme′lia.** State of possessing supernumerary members.

**Polym′elus.** A monster having more than four limbs.

**Polyme′nia** or **Polymenorrhœ′a** (*polys*, much, *men*, month, *rheo*, to flow). Menorrhagia.

**Pol′ymer.** A substance that is polymeric with another substance.

**Polyme′ria.** Polymerism. **P. promis′cua transla′ti′va**, transposition of the viscera.

**Polymer′ic.** Appertaining to polymerism.

**Polym′eride.** Polymer.

**Polym′erism** (*polys*, many, *meros*, part). The condition of two or more bodies, which differ in physical and chemical properties and are yet made up of the same elements in the same proportions, but not in the same actual amounts. Such substances are said to be polymeric; for example, acetylene ($C_2H_2$), benzene ($C_6H_6$), and styrene ($C_8H_8$). Monstrosity characterized by supernumerary organs or other parts.

**Polym′erize.** To combine the molecules of a substance in such a way as to form polymerides.

**Polymetamer′ic.** Appertaining to several metameres, as when a muscle receives its nerve supply from different spinal nerves.

**Polymicro′bic.** Relating to or affected or caused by several microbes or several varieties of microbes.

**Polymi′crotome** (*polys*, many, *mikros*, small, *tome*, a cut). Instrument used to obtain quickly numerous sections for microscopic examination.

**Polym′itus** (*polys*, many, *mitos*, thread). Organism of a round shape, provided with filaments; a form which has been described as present in the blood of man and certain animals infected with malaria.

**Polym′nia.** Bear's-foot; root of this plant is reputed to aid secretion.

**Polymor′phic.** Varied in structure and appearance.

**Polymor′phism** (*polys*, many, *morphe*, form). Power of certain fungi and other organisms to assume various shapes.

**Polymorphonu′clear.** Having a variety of forms of nuclei, as in the *polymorphonuclear leucocytes*.

**Polymor′phous.** Polymorphic.

**Polymyosi′tis** (*polys*, many, *mys*, muscle). Inflammation of several muscles. **P. acu′ta progres-si′va**, acute inflammation of muscles, which generally terminates fatally in a short time.

**Polyne′sic** (*nesos*, island). Taking place in several different spots or locations, as in *polynesic* or *multiple sclerosis*.

**Polyneu′ral mus′cles.** Muscles which are innervated by more than one nerve.

**Polyneuri′tis.** Multiple neuritis.

**Polyneu′ron.** Plantago.

**Polynu′clear** or **Polynu′cleate.** Having several nuclei.

**Polynucleo′sis.** The presence of many polynuclear cells in the blood or any fluid exudate.

**Polyodon′tia** (*polys*, many, *odous*, tooth). Condition in which supernumerary teeth exist.

**Polyonych′ia.** Presence of supernumerary nails.

**Polyophthal′mia.** Monstrosity having more than two eyes.

**Polyo′pia.** Polyopsia.

**Polyop′sia** (*polys*, many, *opsis*, sight). Multiple sight, one object being seen as two or more.

**Polyor′chis.** One who has more than two testicles.

**Polyorex′ia** (*polys*, much, *orexis*, appetite). Excessive appetite or hunger.

**Polyorrhymeni′tis** (*polys*, many, *orrhos*, serum, *hymen*, membrane). Inflammation of serous membranes, progressive and malignant in character.

**Polyos′teon** or **Polyos′teum** (*polys*, many, *osteon*, bone). Tarsus and metatarsus taken as a whole.

**Polyo′tia** (*polys*, many, *ous*, ear). Condition in which two or more ears exist on one or both sides.

**Pol′yp.** See *Polypus*.

**Polypæ′dia** (*paidion*, small child). Superfœtation.

**Polypapillo′ma** (*polys*, many, *papilla*, nipple). Affection of the skin characterized by the presence of multiple papillomata. **P. trop′icum,** frambœsia.

**Polypar′esis.** Paralytic dementia.

**Polypath′ia.** A multiplicity of diseases.

**Polypath′ic** (*polys*, many, *pathos*, disease). Appertaining to several diseases in one person, or disease affecting several parts.

**Polype′ria** (*polys*, many, *peros*, mutilated). Congenital malformation of various parts or organs.

**Polypha′gia** (*polys*, many, *phago*, to eat). Voracity; desire for many kinds of food; omnivorousness.

**Polyph′agous.** Relating to polyphagia.

**Polyphar′macon** (*polys*, many, *pharmakon*, drug). "Shot-gun" prescription; remedy containing numerous ingredients. Also a panacea.

**Polyphar′macy.** Prescribing of too many remedies, or of a great number of drugs in one formula.

**Polypho′bia** (*polys*, many, *phobos*, fear). Morbid fear of numerous things.

**Polyphra′sia** (*polys*, many, *phrasis*, speech). Rambling speech.

**Polyphy′sia** (*polys*, much, *physa*, wind). Flatulence.

**Pol′ypiform.** Resembling a polypus.

**Polypio′nia.** See *Polysarcia*.

**Polypio′sis** (*polys*, much, *pion*, fat). Obesity.

**Pol′yplast** or **Polyplas′tic** (*polys*, many, *plasso*, to form). That which has many shapes, or is made up of many cells. **P. ele′ment,** in histology, is one which does not retain its primary shape, but undergoes transformation into others.

**Polypnœ′a** (*pneo*, to breathe). Panting; rapid breathing.

**Polypo′dia** (*polys*, many, *pous*, foot). Monstrosity having more than two feet.

**Polypo′dium.** Common polypody, fern root, rock brake or bracken, brake or bracken root, ord. *Filices*. Grows in the clefts of rocks, walls, etc., in both hemispheres. **P. adiantifor′me, ammifo′lium, argen′teum, calagua′la,** Calagualæ radix. **P. cetaræ′cinum,** P. incanum. **P. coria′ceum,** see *Calagualæ radix*. **P. denta′tum,** Asplenium filix fœmina. **P. fi′lix fœ′mina,** Asplenium filix fœmina. **P. fi′lix mas,** aspidium, male fern; rhizome of this plant (*filix mas*, Ph. U. S.; *filix*, Ph. Br.) has been much extolled as an anthelmintic in cases of tænia. **P. inca′num,** polypody, rock brake or bracken; indigenous; has been considered demulcent, cathartic, and anthelmintic. **P. inci′sum,** Asplenium filix fœmina. **P. mol′le,** Asplenium filix fœmina. **P. pennatif′idum,** P. vulgare. **P. pol′itum,** see *Calagualæ radix*. **P. trif′idum,** Asplenium filix fœmina. **P. virginia′num,** polypodium. **P. vulga′re,** polypodium.

**Pol′ypody.** Polypodium. **Male p.,** filix mas.

**Pol′ypoid** (*eidos*, resemblance). Resembling a polypus.

**Polyp′orus igniar′ius.** Boletus igniarius. **P. officina′lis,** Boletus laricis.

**Polypo′sia** (*polys*, much, *posis*, drink). Great thirst.

**Polypo′sis.** Condition characterized by multiple polypi.

**Pol′ypotome** (*tome*, incision). Polypus knife; instrument for the removal of polypus by excision.

**Pol′ypotrite** (*tribo*, to crush). Instrument used for crushing polypi.

**Pol′ypous.** Relating or belonging to or resembling polypus.

**Pol′ypus** (*polys*, many, *pous*, foot). Name given to tumors which may form on every mucous membrane, but are most commonly observed in the nasal fossæ, pharynx, and uterus; more rarely in the stomach, intestines, bronchial tubes, bladder, vagina, and meatus auditorius externus. They may be true neoplasms or simply hypertrophic outgrowths of the normal mucous membrane. They vary much in size, number, mode of adhesion, and structure. Accordingly, they have received various appellations: *Myxoma* (soft mucous polyp), mucous, soft, vesicular. *Fibroma* (hard, fibrous polyp), and these have been distinguished into fibrous or fleshy and scirrhous or cancerous; *fibrous polypi* are of a dense, compact texture and whitish color, containing few vessels; the *scirrhous* or *carcinomatous* are true cancerous tumors, painful and bleeding. They present all the pathological changes which belong to cancerous affections, and the prognosis is, of course, unfavorable. The mode of treating polypi must differ according to their character. The means used to destroy them have been: 1. To subject them to the action of certain astringent powders or solutions to obtain their resolution. 2. Cauterization, or the application of the actual cautery or caustics. 3. Excision, or ablation with a cutting instrument. 4. Extirpation with the fingers or with the polypus forceps. 5. Constriction by means of a ligature put around them so as to prevent their nutrition; a seton has also been sometimes used to gradually destroy the pedicle. 6. Evulsion by means of the galvanocautery snare or the cold-iron snare. The term polypi—*pseudopolypi, carditis polyposa, polypiform concretions*—has likewise been applied to collections of blood—fibrinous concretions—found in the heart—*heart clots, coagula cordis fibrinosa*—or great vessels after dissolution. The presence of these during life may be suspected when in the course of an acute or chronic affection of the heart or at the close of chronic diseases in general—especially those of the lungs—the heart's action becomes suddenly tumultuous, obscure, and accompanied with a soft bellows murmur, while the general symptoms indicate the effects of obstructed circulation. The right cavities are most frequently affected. **A′nal p.,** p. of the rectal mucous membrane, usually fibrous, but sometimes cancerous. **Blood p.,** fibrinous p. **P. bronchia′lis,** plastic, pseudomembranous, or croupous bronchitis; a membraniform secretion in the bronchical tubes, of a diphtheritic character, having the shape, when expectorated, of the bronchia; the result of inflammation of the lining membrane of those tubes. **P. carno′sus,** sarcoma. **Fi′brinous p.,** p. on the wall of the uterus produced by deposit from retained blood. **P. fibro′sus,** see *Polypus*. **P. for′ceps,** forceps for grasping and removing polypi. **Mu′cous p.,** see *Polypus*. **Na′sal p.,** polypi of the nasal passages are either mucous or fibrous, the former being more common; the mucous polypi are soft and almost jelly-like, but composed of fibrous tissue like the embryonic form; the fibrous form, growing from the periosteum, is firmer and still more vascular and more hemorrhagic than the mucous; it is probably a variety of fibrosarcoma. **Placen′tal p.,** p. of the uterus growing from the site of a bit of retained placenta. **Pulp p.,** hypertrophy of the pulp of a tooth.

**Polyrrhi′zon.** Polypodium filix mas.

**Polyrrhœ′a** (*polys*, much, *rheo*, to flow). Profuse discharge.

**Polysac′charides.** Carbohydrates.

**Polysalicyl′ic acids.** Anhydrous salicylic compounds obtained by treating phosphoric oxychloride with sodium salicylate.

**Polysar′cia** (*polys*, much, *sarx*, flesh). Excessive corpulency; obesity, adiposity. The morbid disposition to unusual fatness in children has been termed *polypionia infantum* and *chlorosis gigantea*. **P. cor′dis,** fatty heart. **P. vis′cerum,** physconia adiposa.

**Polysar'cous.** Pertaining to polysarcia; obese.

**Polyscel'ia** (*polys*, many, *skelos*, leg). Monstrosity characterized by the presence of one or more supernumerary legs.

**Polys'celus.** Monster with supernumerary limbs.

**Polyschidia**, pol-is-kid'e-ah (*polys*, many, *schidion*, splinter). Exaggerated tendency to subdivide and classify.

**Pol'yscope** (*polys*, many, *skopeo*, to see). Apparatus devised by Trouvé, combining all the instruments necessary for exploration, by light, of the larynx, ear, eye, urethra, etc. Electric light is employed in this apparatus for illuminating body-cavities.

**Polyserosi'tis.** Inflammation of serous membranes generally.

**Polysial'ia** (*polys*, much, *sialon*, saliva). Excessive discharge of saliva.

**Polysomat'ia** (*polys*, much, *soma*, body). Polysarcia.

**Polyso'mia** (*polys*, many, *soma*, body). Monstrosity characterized by the existence of more bodies than one.

**Polyso'mus** (*soma*, body). A double or triple monster; that is, one having two or more bodies.

**Polysper'mia** or **Polysperm'ism** (*polys*, much, *sperma*, sperm). Excessive secretion of semen.

**Polysperm'y.** Impregnation of an ovum with a number of spermatozoa.

**Polysthen'ic** (*polys*, much, *sthenos*, strength). Very strong.

**Polystichia**, pol-e-stik'e-ah (*polys*, many, *stichos*, row). Condition in which two or more rows of eyelashes are present.

**Polys'ticum callip'teris** or **fi'lix mas.** Polypodium filix mas.

**Polys'toma** or **Polys'tomum.** A genus of trematoid worms with one oral and six posterior suckers. **P. pinguic'ola,** a form found in the ovary. **P. sanguic'ola,** a form found in venous blood.

**Polysymmet'ria.** Symmetry of the two sides of the body at many points.

**Polythe'lia** or **Polythe'lism** (*polys*, many, *thele*, nipple). State in which supernumerary nipples exist.

**Polyto'cia** (*polys*, many, *tokos*, child). Fecundity.

**Polytrich'ia** or **Polytricho'sis.** Excessive growth of hair, or presence of hair on parts usually devoid of it.

**Polyt'richum.** Adiantum aureum, golden maidenhair; ord. *Musci;* astringent in lung diseases. **P. commu'ne,** Asplenium trichomanoides. **P. juniperi'num,** haircap moss, robin's rye; common in New England; said to be a powerful diuretic.

**Polyt'richus** (*polys*, many, *thrix*, hair). Very hairy.

**Polytroph'ia** or **Polyt'rophy** (*polys*, much, *trophe*, nourishment). Abundant or excessive nutrition.

**Polyure'sis** or **Polyu'ria** (*polys*, much, *ouron*, urine). Diabetes. Excessive secretion of urine.

**Polyu'ric.** Relating to excess of urinary secretion. *Ischuria polyurica* is ischuria caused by the accumulation of urine in the bladder.

**Poma'ceous.** Relating to apples.

**Pomade'** or **Poma'tum** (*poma*, apples). Ointment employed for the hair; it is usually scented and colored.

**Pombal'ea ipecacuan'ha.** See *Ipecacuanha*.

**Pomegranate**, pom'gran-at. Punica granatum.

**Pomegranine'.** Alkaloid derived from the rind of the pomegranate fruit. Local anæsthetic.

**Pom'mel.** A knob. **P.-foot,** clubfoot. **P.-joint,** condyloid joint.

**Pompholyg'mus.** Eruption of bullæ.

**Pompholygodermati'tis** (*pompholyx*+*derma*, skin). Pemphigus.

**Pomphol'ygoid.** Bullous; relating to pompholyx.

**Pom'pholyx** (*pomphos*, blister). Small vesicle on the skin. Eruption of bullæ or blebs, appearing without any inflammation around them, and without fever. Eruption of deep-seated vesicles on the palms is called chiropompholyx, and on the soles of the feet and elsewhere, dysidrosis. **P. tu'tia,** zinci oxidum.

**Pom'phus** (*pomphos*, blister). Vesicula; wheal.

**Pom'pion.** Cucurbita pepo.

**Po'mum.** Apple; see *Pyrus malus*. **P. Ada'mi,** projection formed by the thyroid cartilage in the neck—of males particularly. Is so called from a notion that it was caused by the apple sticking in the throat of our first parent. **P. hierosolymita'num,** Momordica balsamina. **P. melon'gena,** see *Solanum melongena*. **P. mirab'ile,** Momordica balsamina. **P. spino'sum,** Datura stramonium.

**Pond-dog'wood.** Cephalanthus occidentalis.

**Pond'shovel.** Unisema deltifolia.

**Pon'fick's shad'ows.** Decolorized red corpuscles found in the blood in hæmoglobinæmia.

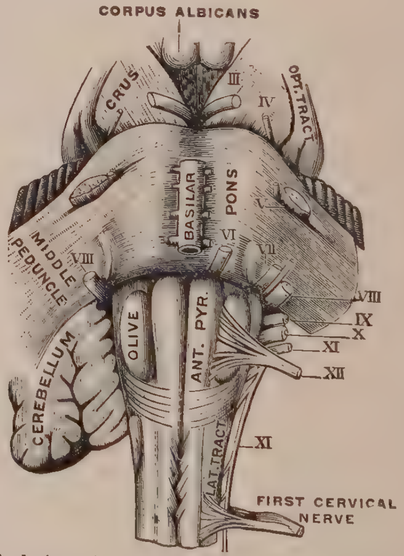
**Pon'gam oil.** Fixed oil from seeds of Pongamia glabra, employed in rheumatism and cutaneous affections.

**Ponga'mia gla'bra.** Tree, native of India, China, Australia, and the Fiji Islands. Seeds yield poonga or Kurung oil, employed in parasitic cutaneous affections.

**Pon'ogen** (*ponos*, fatigue, *gennao*, to produce). Waste-material of the nervous system.

**Po'nos** (fatigue). Endemic disease of the Greek archipelago.

**Pons** (bridge). Name given in anatomy to a part which connects others—by a bridge, as it were. **P. cerebel'li,** pons Varolii. **P. hep'atis,** see *Lobulus anonymus*. **P. Syl'vii,** quadrigemina tubercula. **P. Tari'ni,** see *Tarini*. **P. Varo'lii,** cerebral protuberance, annular protuberance, mesocephalon; an eminence at the upper part of the medulla oblongata, first described by Varoli, and formed by the union of the crura cerebri and crura cerebelli; it connects the cerebrum, cerebellum, and oblongata, and is composed of alternating layers of transverse and longitudinal white fibres with gray matter interspersed; the upper surface forms part of the floor of the fourth ventricle; a deep layer of transverse fibres posteriorly forms the trapezium; the transverse fibres pass from the middle peduncles of the cerebellum to the crura cerebri; the longitudinal fibres pass upward from the oblongata. **P. zygomat'icus,** zygomatic arch.



Ventral view of mesencephalon, pons, and oblongata. (Gerrish.)

**Ponteder'ia corda'ta.** Unisema deltifolia.

**Pontibra'chium.** Middle peduncle of the cerebellum.

**Pontic′ulus** (dim. of pons). A small bundle of transverse fibres crossing the pyramid just below the pons Varolii; propons. **P. auric′ulæ,** the point of attachment of the retrahens auris on the mastoid process. **P. hepat′icus,** arch of tissue, embracing blood-vessels, which reaches from the lobus Spigelii to the right lobe of the liver. **P. promonto′rii,** a faint ridge on the wall of the tympanum running from the pyramid to the promontory.

**Pon′ticum absin′thium.** Artemisia pontica.

**Pon′tile** or **Pon′tine.** Relating to the pons Varolii.

**Pook.** Abdomen.

**Pool′root.** Eupatorium ageratoides.

**Pool′wort.** Eupatorium aromaticum.

**Poon′ga oil.** See *Pongamia glabra.*

**Poop.** Term used in England for rupture of muscle resulting from tennis or ball playing.

**Poor man's plas′ter.** Plaster composed of resin, tar, and yellow wax.

**Pop′lar.** Populus. Liriodendron.

**Pop′les.** Popliteal space. The posterior part of the knee-joint, forming the popliteal region or space.

**Poplitæ′us.** Popliteal muscle. **P. accesso′rius** or **bi′ceps** or **ger′minus** or **mi′nor** or **supe′rior,** plantaris minor.

**Poplite′ad.** Toward the popliteal space.

**Poplite′al.** That which relates to the ham or part behind the knee-joint. **P. ar′tery,** popliteal portion of the crural, is really a continuation of the femoral, which changes its name on passing through the abductor magnus muscle. It descends a little obliquely outward into the hollow of the ham, and extends from the commencement of the lower third of the thigh to the end of the upper quarter of the leg, where it terminates by dividing into the posterior tibial and peroneal arteries. In the ham it gives off the three superior articular arteries, and at the top of the leg the arteries of the gemelli or gemini muscles, gemini branches, the two inferior articular arteries, and the tibialis antica. **P. as′pect,** aspect toward the ham. **P. fos′sa,** p. space. **P. glands,** lymphatic glands, four in number, seated in the popliteal region or space. **P. line,** linea poplitea; intercondyloid line. **P. mus′cle** is seated in the popliteal region. It is triangular, long, and flat, and is inserted by means of a strong tendon into the tuberosity at the outer condyle of the femur, terminating below at the upper part of the posterior surface of the tibia. It bends the leg on the thigh, and, reciprocally, the thigh on the leg. When the leg is bent it causes it to turn in rotation inward. **P. nerves** result from the bifurcation of the sciatic, and are two in number: 1. The external popliteal, peroneal nerve, is smaller than the internal, turns to the outside of the fibula at the upper part of the leg, and divides into the musculocutaneous branch and the anterior tibial. 2. The internal popliteal nerve is larger than the other, and seems to be the real continuation of the sciatic nerve. It descends vertically into the hollow of the ham, and passes beneath the aponeurotic arch of the solaris muscle, beyond which it takes the name tibial nerve. It furnishes the external saphena nerve and a number of branches that are distributed to the posterior muscles of the leg; it then passes to the sole of the foot, to be divided into two branches called plantar nerves. **P. notch,** posterior intercondyloid fossa. **P. plex′us,** plexus popliteus, formed by fine branches from the external and internal popliteal nerves around the popliteal artery. **P. re′gion** or **space,** poples, ham, hock, hough; the space posterior to the knee-joint. **P. vein** has the same arrangement as the artery behind which it is situated.

**Poplit′ic.** Popliteal.

**Pop′onax.** See *Pastinaca opopanax.*

**Pop′py.** See *Papaver.* **P. cel′andine,** Stylophorum diphyllum. **P.-corn,** Papaver rhœas. **P.-heads,** see *Papaver,* **P.-horn,** Stylophorum diphyllum. **P.-juice,** meconium. **Prick′ly p.,** Argemone mexicana. **Red p.,** Papaver rhœas. **Spat′ling p.,** Cucubalus behen. **Thorn p.,** Argemone mexicana. **White p.,** papaver.

**Populine′.** A bitter principle, resembling quinine or cinchonine, contained in Populus tremuloides.

**Pop′ulus.** Poplar. The leaf-buds afford balm of Gilead. The bark of Populus tremuloides, American aspen, of P. tremula, European aspen, and of P. candicans, balm of Gilead poplar, is antiperiodic and furnishes salicylin and populin. **P. balsamif′era,** see *Fagara octandra.* **P. can′dicans,** see *Populus.* **P. pe′nula,** P. tremula. **P. tacamaha′ca,** see *Fagara octandra.* **P. trem′ula,** see *Populus.* **P. tremuloi′des,** see *Populus.*

**Por′celain.** A translucent ceramic ware made from kaolin and other substances. **P. teeth,** artificial teeth having a siliceous and clay body, overlaid by glossy enamels. **P. tints,** salts, usually oxides of metals, added to dental porcelain enamels to give them color; *red colors* are produced by purple of Cassius, the chlorides of tin; *blue colors* are made by cobalt and by platinum sponge; *yellow colors,* by titanium oxide; *gray colors,* by platinum sponge; *black colors,* by iridium; *green colors,* by cobalt and titanium.

**Porcel′ia trilo′ba.** See *Carica payaya.*

**Porcel′lus** or **Por′culus.** Oniscus. Disease in which the skin becomes scaly and thickened.

**Por′cupine disease′.** Ichthyosis; hystriciasis. **P. men,** persons in whom the cuticle is produced in the form of pointed prolongations, as if moulded on the papillæ, like the shorter and blunter quills of the porcupine.

**Pore** (*poros,* passage). Interstice. Pores are the excessively minute spaces or interstices which separate the integrant molecules of bodies and render those bodies permeable. Minute openings on the surface. Pores have also been called *spiracula. Sweat pores* are conically dilated orifices of the ducts of the sweat glands, visible to the naked eye in some portions of the body. See *Pori.* A body possessing pores is said to be *porous.*

**Pore′blind.** Myopic.

**Porencephal′ia** or **Porenceph′aly** (*poros,* pore, *enkephalos,* brain). Depression in the cerebral hemisphere which may form connections with the ventricle. It is generally congenital; may be also due to inflammation, embolus, or hemorrhage. This term denotes also congenital absence of part of the cerebrum.

**Porencephal′ic** (*poros,* pore, *enkephalos,* brain). Relating to or affected with porencephalia.

**Porencephali′tis.** Encephalitis with tendency to formation of cavities in the brain substance.

**Porenceph′alous.** Relating to porencephalia.

**Po′ri** (pl. of *porus,* passage) **bilia′rii.** Ducts which receive the bile from the penicilli of the liver and convey it to the hepatic duct. **P. cuta′nei,** pores of the skin. **P. exhalan′tes,** p. cutanei. **P. pulmo′num,** bronchic cellules. **P. resorben′tes,** p. cutanei.

**Pornog′raphy** (*porneia,* prostitution, *grapho,* to describe). Description of prostitutes or of prostitution in relation especially to public hygiene.

**Por′ocele** (*poros,* callus, *kele,* tumor). Hard tumor of the testicle or its envelopes.

**Porokerato′sis** (*poros,* callus, *keras,* horn). A rare form of hypertrophic skin disease in which the surface is often depressed but callous, with sometimes a few small, round, horny elevations superimposed.

**Poro′ma.** Induration.

**Porom′phalon, Porom′phalus,** or **Porom′phalocele** (*poros,* callus, *omphalos,* navel). Umbilical hernia with hard and thickened parietes.

**Poro′sis** (*poroo,* to harden). Chalaza; induration.

**Poros′ity.** State of being porous or containing pores.

**Porot′ic** (*poros,* callus). Agent capable of assisting the formation of callus.

**Porot′omy** (*poros,* passage, *tome,* incision). Operation of enlarging the meatus of the urethra by incision.

**Po′rous plas′ter.** Spread plaster, with small holes to prevent wrinkling.

**Por′phyra.** Purple. **P. Græco′rum,** petechiæ. **P. hæmorrhag′ica,** purpura hæmorrhagica. **P. lacinia′ta** or **umbilica′lis,** ulva umbilicalis.

**Porphyrin′.** $C_{21}H_{25}N_3O_2$. White, amorphous substance in Alstonia constricta.

**Porphyris′ma** (*porphyra,* purple). Scarlatina.

**Porphyriza′tion** (so called because the process was formerly carried on on plates of porphyry). Levigation, pulverization.

**Porphyrotoxin′.** Alkaloidal substance found in the rhizome of Sanguinaria canadensis.

**Porphyroty′phus.** Typhus fever.

**Porphyroxin′.** Neutral, crystallizable substance obtained from aqueous solution of opium by precipitation and the action of ether and dilute sulphuric acid.

**Porphyru′ria** or **Porphyu′ria** (*porphyra,* purple, *ouron,* urine). State of the urine—purpuric urine—in which it deposits coloring-matter—purpurin, urosacin, rosacic acid, uroërythrin, urorhodin, urrhodin—in association with urate of ammonium. The pigment is considered a modification of urohæmatin, *hæmaphæin.*

**Por′phyry.** Species of very hard rock, susceptible of considerable polish, employed for mortars and slabs for the apothecary's use. **Black p.,** ophites.

**Por′poise oil.** Oleum delphini; made from the porpoise.

**Porra′ceous** (*porrum,* leek). Having the green color of the leek. Epithet given to certain excreted matters—the sputa, bile, and fæces particularly.

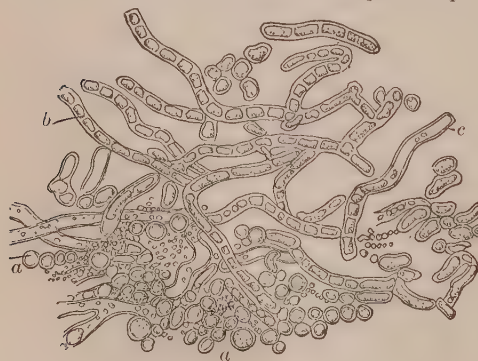
**Por′ret.** Allium porrum.

**Por′ret's mus′cle phenom′enon.** Swelling of muscular fibres occurring at the negative pole when a galvanic current is conducted through living muscle.

**Por′ridge.** Meal or flour boiled in water.

**Porriginous,** por-rij′in-us. Relating to porrigo.

**Porri′go** Tinea, favus, scalled head, scallard. Term often used like tinea for scalled head in general, and by some writers for disease of the hairy scalp, principally characterized by an eruption of the pustules, called favi and achores, unaccompanied by fever. **P. confer′ta,** p. scutulata. **P. contagio′sa,** impetigo contagiosa. **P. decal′vans,** alopecia areata, limited or partial baldness, consists of patches of baldness without decay or change of color in the surrounding hair, the exposed parts of the scalp being glabrous, white, and shining. The morbid condition sometimes spreads, so that the patches coalesce, rendering the baldness extensive. Its occurrence is attributed to a vegetable growth, forming a tube around the roots of the hair, to which the name *Microsporon* (or *Microsporum*) *audouini* has been given; also called *Trichophyton* or *Trichomyces decalvans.* Another vegetable parasite, called *Trichophyton* (or *Trichomyces*) *tonsurans,* is developed in the root of the hair. **P. favo′sa,** favus or tinea favosa; honeycomb scall or tetter; contagious vegetable parasitic disease due to the Achorion schönleinii. It consists of an eruption of pustules common to the head, trunk, and extremities, pea-sized, flattened at the top, in clusters, often uniting; discharge fetid; scabs honeycombed; the cells filled with fluid. It occurs both in early and in adult life. The crusts of favus are of vegetable nature, and were believed at one time to be formed of a parasitic plant, *Fungus porriginis,* belonging to the genus *Mycoderma.* The disease is now referred to a new genus under the name *Achorion schönleinii.* The name *Puccinia favi* has also been given to it. Eczema of the hairy scalp is often confounded with favus. **P. fur′furans,** tinea tonsurans, pityriasis, commences with an eruption of small vesicles, the fluid of which soon concretes and separates in innumerable thin, laminated scabs or scale-like exfoliations. It is attended with much itching and some soreness of the scalp, to which the disease is confined. It occurs chiefly in adults. **P. larva′lis,** milky scall or tetter, milkblotch, is almost exclusively a disease of infancy. It commonly appears first in the forehead and cheeks in an eruption of numerous minute, whitish vesicles on a red surface. These break and discharge a viscid fluid, which becomes incrusted in thin yellowish or greenish scabs. The patches spread until the whole face becomes, as it were, enveloped in a mask; hence the epithet *larvalis* (like a mask). Sometimes the eruption appears on the neck and breast, and occasionally on the extremities. In general the health of the child does not suffer, but the eruption is always attended with much itching and irritation. **P. lupino′sa,** favus dispersus, consists of minute pustules in small patches, mostly commencing on the scalp; the patches terminate in dry, delving scabs, resembling lupine seeds, the interstices often covered with a thin, whitish, and exfoliating incrustation. It occurs chiefly in early life. **P. scutula′ta,** ringworm of the scalp, scalled head; vegetable parasitic contagious disease due to the trichophyton. Commences with clusters of small, light yellow pustules, which soon dry to scabs, and these if neglected become hard by accumulation. If the scabs are removed the surface is left red and shining, but studded with slightly elevated points. If not attended to it involves the whole head. It usually occurs in children three or four years of age.



Achorion schönleinii. *a,* spores; *b, c,* sporophores.

**Por′rigophyte** (*phyton,* vegetable). Parasitic vegetation causing favus or porrigo favosa.

**Por′ro's opera′tion.** Amputation of the uterus and ovaries directly after cæsarean section; the stump is attached to the inferior angle of the abdominal wound.

**Por′ro-Mül′ler opera′tion.** An incision is made into the abdomen and the uterus is drawn out; after applying a ligature around the cervix the uterus is opened and the fœtus delivered.

**Por′ro-Veit opera′tion.** Modification of Porro's operation, which allows the stump to fall into the pelvis.

**Por′rum** or **P. sati′vum.** Allium porrum.

**Por′rus.** Thymion, a small wart.

**Port-wine stain.** Nævus.

**Por′ta.** Gate. The part—*hilus*—of the liver or other organ where its vessels enter as by a gate. Also the vulva. **P. hepat′ica** or **hep′atis,** transverse fissure of the liver. **P. labyrin′thi,** fenestra rotunda. **P. lie′nis,** see *Spleen.* **P. omento′rum,** foramen Winslowii. **P. pulmo′nis,** root of the lung. **P. re′num,** hilus of kidney. **P. spa′tii intra-aponeurot′icæ suprasterna′lis,** an opening between the suprasternal and intra-aponeurotic space and a blind sac back of the sternocleidoid muscle. **P. ve′na,** portal vein, vena portæ.

**Por′tal.** Relating to the porta of the liver, as the portal system or system of the vena porta. By extension, the term has been applied to an analogous system of vessels in the kidney. See *Kidney.* **P. circula′tion,** circulation through the portal vein and its hepatic branches. **P. fis′sure,** see *Liver.* **P. fos′sa,** see *Liver.* **P. sys′tem,** see *P. vein.* **P. s. of the kid′ney,** see *Kidney.* **P. vein,** vena porta or vena portæ; the system of the vena porta, or the abdominal venous system, or portal system, is a vascular apparatus of black blood, situated in the abdomen and resulting from two distinct orders of vessels united into one common trunk. 1. One of these orders, much more extensive than the other, is called *vena porta abdominalis*, because it arises from all the organs enclosed in the cavity of the abdomen, except the kidneys, the bladder, and, in the female, the uterus. The abdominal vena porta has two principal roots, the splenic vein and the superior mesenteric, which have their ramifications in all the digestive organs. 2. The other set of vessels, distributed solely to the liver, has been called the hepatic vena porta; it appears to be a continuation of the abdominal vena porta, and proceeds toward the inferior surface of the liver. Opposite the transverse fissure of that organ it divides, like an artery, into two branches, which at their union form a canal or duct, called the sinus of the portal vein. These branches are distributed in the substance of the liver, whither they are accompanied by a prolongation of the fibrous capsule of that organ—the capsule of Glisson. The different branches of the vena portæ are devoid of valves. See *Liver*. **P. veins of the kid′ney**, see *Kidney*.

**Porte-aiguille′.** Needle-holder. **P.-bougie′,** silver cannula similar to that of a trocar, except that it is longer; used for conducting bougies into the urethra. **P.-caustique′**, an instrument similar to a porte-crayon or pencil-holder for carrying lunar caustic. **P.-lig′ature,** an instrument for conveying a ligature to deep-seated parts. **P.-mèche,** a forked probe for pushing a strip of gauze or other material into a wound or sinus. **P.-mox′a,** small instrument for keeping the moxa applied to a part to be cauterized. **P.-nœud,** a device for tying a ligature around the pedicle of a neoplasm. **P.-sonde,** an instrument resembling a porte-bougie, employed for holding the style, and inserting it more readily into the nasal duct during the operation for fistula lacrymalis.

**Por′ter.** Dark brown malt liquor made of malt and hops; color is due to high-dried malt.

**Por′ter's symp′tom.** Oliver's symptom.

**Por′tio.** Portion or part. **P. axilla′ris,** second portion of axillary artery. **P. brachia′lis,** third part of brachial artery. **P. cervica′lis,** third portion of subclavian artery. **P. du′ra,** facial nerve; see *P. mollis*. **P. inter du′ram et mol′lem,** p. Wrisbergii. **P. interme′dia,** intermediary nerve; middle portion of cervix uteri; also p. Wrisbergii. **P. ma′jor trigem′ini,** sensory root of trifacial nerve. **P. me′dia inter portio′nem duram et portio′nem mol′lem,** portio Wrisbergii. **P. mi′nor trigem′ini,** motor root of trifacial. **P. mol′lis,** auditory nerve; this was formerly supposed to form with the facial a single nerve, its two parts being distinguished as p. dura and p. mollis. **P. muscula′ris,** second portion of the subclavian artery. **P. pectina′ta,** see *Lamina spiralis*. **P. pectora′lis,** first portion of subclavian artery. **P. supravagina′lis,** supravaginal part of neck of uterus. **P. thorac′ica,** first part of axillary artery. **P. vagina′lis,** part of cervix uteri within the vagina. **P. Wrisberg′ii,** small white fasciculus, intermediate between the portio mollis and portio dura of the seventh pair of nerves, first described by Wrisberg; it is the chorda tympani, and is a branch of the facial nerve.

**Por′tiplex.** The part connecting the choroid plexuses; it passes through the foramen of Monro.

**Portonar′ium** (*porta*, gate). Pylorus; duodenum.

**Portulac′a.** Purslane, purslain. This plant has a watery and somewhat acid juice; antiseptic and aperient.

**Po′rus.** Pore. Callosity. Canal, meatus. **P. acust′icus,** auditory canal. **P. bilia′rius,** choledoch duct. **P. carot′icus,** carotid foramen. **P. cranionasa′lis,** foramen cæcum. **P. Meckel′ii,** opening in the dura mater for trifacial nerve. **P. op′ticus,** opening in the centre of the cribriform lamella of the sclerotic, through which the central artery of the retina enters the eyeball.

**Posi′tion.** Situation, location, posture; see also *Presentation*. **Dun′can's p., Ed′ebohls's p., Sims's p.,** etc., see the qualifying word.

**Pos′itive.** The first of two things of opposite natures; opposed to negative. **P. elec′trode,** anode. **P. el′ement or plate,** the plate in a battery that is acted upon by the fluid. **P. pole,** p. plate, the chemically passive extremity of the voltaic pile.

**Pos′itor, u′terine.** Instrument for adjusting displacements of the uterus.

**Posological,** po-zo-loj′ik-al. Relating to posology. **P. ta′ble,** table of doses.

**Posol′ogy** (*posos*, quantity, *logos*, discourse). Science of the dosage of medicines.

**Posoque′ria dumeto′rum.** Randia dumetorum.

**Pos′set.** Milk curdled with wine or any acid, or treacle. Preparation of beer and milk.

**Pos′setting.** Regurgitation (of infants).

**Post-.** Latin preposition used as a prefix, and meaning after or behind.

**Postacces′sual.** Postconvulsive.

**Posta′nal.** Posterior to the anus.

**Postarytænoidæ′us.** Cricoarytænoideus posticus muscle.

**Postax′ial** (*post*, after, *axis*). See *Pre-axial*.

**Postbrachia′le.** Metacarpus.

**Postcar′pium** (*post*, after, *carpus*, wrist). Metacarpus.

**Postca′va.** Posterior vena cava.

**Postcen′tral.** Behind the central fissure, as the *p. convolution*.

**Postci′bal** (*post*, after, *cibus*, food). Following a meal.

**Postclavic′ular.** Behind the clavicle, as *p. region*.

**Postcli′val.** Behind the clivus. See *Fissure*.

**Postcom′missure.** Posterior commissure of the brain.

**Postconnu′bial.** After marriage.

**Postconvul′sive.** Coming on after a convulsion, as *p. stage*.

**Postdicrot′ic.** Occurring after a dicrotic condition of the pulse, as *p. elevation* on sphygmographic tracing.

**Postdiphthe′rial** or **Postdiphtherit′ic.** Coming on after diphtheria, as *p. paralysis*.

**Postepilep′tic.** After an epileptic attack.

**Poste′rior.** Toward the back; lying behind. **P. annula′ris,** an external interosseous muscle, arising from the corresponding sides of the metacarpal bones of the ring finger and little finger, and inserted into the inside of the tendon on the back of the ring finger. It draws the ring finger inward. **P. aud′itory fos′sa,** semilunar notch in the temporal bone dividing auditory plate from temporal ridge. **P. aur′is,** retrahens auris. **P. cen′tral convolu′tion,** ascending parietal convolution of the brain. **P. cen′tral sul′cus,** sulcus postcentralis cerebri. **P. cham′ber,** cavity of eye back of the lens. **P. cho′rioid** or **cho′roid ar′tery,** see *Choroid artery*. **P. col′umns,** see *Spinal cord*. **P. commu′nicating ar′tery,** see *Communicans*. **P. cor′nu,** posterior horn of lateral ventricle. **P. cor′nual bulb,** bulbus cornu posterioris. **P. digas′tricus,** posterior belly of digastric muscle. **P. dilata′tor,** dilatator naris posterior. **P. in′dicis ma′nûs,** internal interosseous muscle, which arises from the inner or ulnar side of the metacarpal bone of the forefinger, and is inserted into the inside of the tendon on the back of the forefinger. It draws the forefinger inward. **P. in′dicis pe′dis,** external interosseous muscle, which arises from the contiguous sides of the metacarpal bones of the great toe and second of the small toes, and is inserted into the outside of the root of the first bone of the great toe. It pulls this toe outward. **P. me′dii dig′iti ma′nûs,** external interosseous muscle, which arises from the corresponding sides of the metacarpal bones of the middle and ring fingers, and is inserted into the inside of the tendon on the back of the middle finger. It draws the middle finger inward. **P. me′dii dig′iti pe′dis,** external interosseous muscle, which originates from the contiguous sides of the metacarpal bones of the second and third of the small toes, and is inserted into the outside of the root of the first bone of the second of the small toes. It pulls the toe outward. **P. ter'tii dig'iti,** external interosseous muscle, which arises from the contiguous sides of the metacarpal bones of the third and fourth of the small toes, and is inserted into the outside of the root of the first bone of the third of the small toes. It pulls the toe outward. **P. umbili'cus,** pilonidal sinus.

**Postero-.** Prefix signifying posterior.

**Pos'tero-exter'nal.** On the outer side of the back part, as the p.-e. muscles.

**Pos'tero-inter'nal.** On the inner side of the back part, as p.-i. column of the cord.

**Posterolat'eral.** On one or the other side and to the back part. **P. groove,** sulcus intermedius posticus; groove along the spinal cord where the posterior nerve-roots issue.

**Posterome'dian.** In the central part and to the back.

**Posteropari'etal.** At the back part of the parietal bone. **P. gy'rus,** postcentral convolution of the brain. **P. lob'ule,** superior parietal lobule. **P. sul'cus,** sulcus centralis.

**Posterotem'poral.** At the back part of the temporal bone. **P. sul'cus,** sulcus temporalis cerebri medius.

**Poster'ula.** Portion of posterior parts of turbinated bones of nose.

**Postfront'al.** Distinct bone, temporary in birds, permanent in reptiles, extending downward from the postero-external part of the frontal bone.

**Postgem'inum.** Each of the two posterior bodies of the corpora quadrigemina is so called.

**Postgenera'tion.** Latter development.

**Postgenicula'tum** or **Postgenic'ulum.** Internal corpus geniculatum of brain between optic tract and cimbia.

**Postgle'noid.** Behind the glenoid fossa. **P. pro'cess,** tubercle in front of the outer part of the fissura Glaseri: much more largely developed in some of the other mammals.

**Postgracile,** post-gras'il. See *Fissure.*

**Postgrad'uate.** Relating to studies pursued after graduation.

**Posthal'gia** (*posthe,* prepuce, *algos,* pain). Pain in the penis or prepuce.

**Posthemiple'gic.** Occurring after hemiplegia.

**Posthet'omist** (*posthe,* prepuce, *tome,* incision). One who performs circumcision.

**Posthet'omy.** Circumcision.

**Posthioplas'tic** (*posthe,* prepuce, *plasso,* to form). An epithet applied to the operation for restoring the prepuce.

**Posthi'tis.** Inflammation of the prepuce.

**Posthit'omy.** Circumcision.

**Posthocalyp'tron** or **Posthocalym'ma** (*posthe,* prepuce, *kalyptra,* covering). Condom.

**Posthon'cus** (*onkos,* tumor). Swelling of the prepuce.

**Posthumous,** pos'tu-mus (*postumus,* last). Occurring after death. **P. child,** one born after the death of its father or taken from the dead body of its mother by cæsarean section.

**Posthypnot'ic.** Occurring after hypnotic attack has passed, as *p. suggestion.*

**Posthypoph'ysis.** Posterior lobe of hypophysis.

**Posti'cus.** Posterior; behind. Term employed as a qualification in names of muscles so situated.

**Postmas'toid.** Behind the mastoid process.

**Postme'dian.** Behind the transverse median line.

**Post mor'tem.** After death. **P.-m. examina'tion,** necropsy, autopsy, examination of a dead body with the view of determining the cause of death or of establishing some fact in pathology. **P.-m. tu'bercle** or **wart,** verruca necrogenica. **P.-m. wound,** dissection wound.

**Postna'rial.** Relating to the posterior nares.

**Postna'tus.** Born after; in the old law writers, the second son.

**Postnod'ular.** See *Fissure.*

**Postoblonga'ta.** Back part of medulla oblongata.

**Postoc'ular.** Behind the eye.

**Postop'erative.** After an operation.

**Postoper'culum.** Posterior portion of operculum.

**Posto'ral** (*post,* after, *os,* mouth). Situated behind the mouth; applied to certain visceral arches and clefts of the vertebrate embryo.

**Postparalyt'ic.** Occurring after paralysis.

**Post par'tum.** After delivery, as post partum hemorrhage.

**Postpedun'culus.** Inferior peduncle of cerebellum.

**Postperfora'tus.** Posterior perforated space.

**Postpharyn'geal.** Behind the pharynx, retropharyngeal. **P. ab'scess,** an abscess seated in the areolar tissue behind the pharynx.

**Postpitu'itary.** Situated behind the pituitary body.

**Postplex'us.** Term for plexus in vertebrates corresponding to the lumbosacral plexus in man.

**Postpneumon'ic.** Occurring after pneumonia.

**Postpone'.** To delay or put off. When the paroxysms of malarial fever recur at longer and longer intervals the disease is called a *postponing intermittent.*

**Postpon'tile.** Behind the pons Varolii.

**Postposi'tion** (*post,* after, *pono,* to place). A postponement. Delay in the return of a paroxysm; opposed to *anticipation,* which means the return of a paroxysm earlier than its accustomed hour. In this sense we speak of *anticipating* and *postponing* intermittents.

**Postpyram'idal.** Relating to the posterior pyramid; back of the pyramid. **P. nu'cleus,** nucleus of posterior pyramid of medulla, being termination of fibres of that pyramid.

**Postra'mus.** Horizontal branch of the cerebellar arbor vitæ.

**Postrolan'dic.** Behind the fissure of Rolando.

**Postscale'nus.** Posterior scalene muscle of neck.

**Postscap'ula.** Infraspinous portion of scapula.

**Postscap'ular fos'sa.** Infraspinous fossa.

**Postscapula'ris.** Infraspinatus muscle.

**Postscarlati'nal.** After scarlet fever.

**Postsphe'noid bone.** Posterior portion of the sphenoid bone in infancy; it includes the sella turcica and great wings. In animals this division of the sphenoid sometimes persists through life.

**Posttar'sal.** Back of the tarsus.

**Pos'tural** (*pono,* to place). Relating to posture or position, as postural treatment, the treatment by position—of a fracture, for example.

**Pos'ture** (*pono,* to place). Special attitude assumed by the limbs and other portions of the body under various circumstances.

**Postvac'cinal.** After vaccination. **P. dermato'sis,** affection of the skin succeeding vaccination.

**Postver'mis.** The inferior cerebellar vermis.

**Postzygapoph'yses** (*post,* after, *zygos,* yoke, *apophysis,* process). The inferior articular processes of the vertebræ, two to each dorsal vertebra. The superior articular processes, also two in number, are called *prezygapophyses.*

**Po'table** (*poto,* to drink, *habilis,* able). Drinkable; fit to drink. Water is said to be potable when it contains atmospheric air, is not brackish, has no mineral impregnation of consequence, and is free from organic impurities and bacterial contamination.

**Potain's' syn'drome.** Combination of dyspepsia and dilatation of the right ventricle, with intensified pulmonary sound, noticed in cases of dilatation of the stomach.

**Potamopho'bia** (*potamos,* river, *phobe,* fear). Morbid dread of rivers or large masses of water.

**Pot'ash.** So called from the pots or vessels in which it was made. Vegetable alkali. Any potassium compound, but chiefly potassium carbonate or hydrate. Potassa. **P. of com'merce,** impure potassa, pearlash of commerce; it is prepared from the ashes of land plants by calcination, solution in water, filtration, and evaporation; usually consists of potassium subcarbonate, potassium sulphate, potassium chloride, silex, oxide of iron, etc. Another variety of the alkali is afforded by burning argol in a crucible; is called *salt of tartar*. Wormwood burnt to ashes, dissolved in water, filtered, and evaporated to dryness affords another variety of vegetable alkali, *salt of wormwood*. Impure potash is used for preparing the subcarbonate for medicinal use. **Caus′tic p.**, potassa. **P. salts**, see under *Potassii*. **P. wa′ter,** liquor potassæ.

**Pot′ass.** Potassa; potash.

**Potas′sa.** (Ph. U. S.) Potassium hydrate or hydroxide; caustic potash, $KOH$; potassa fusa, lapis infernalis. Prepared in the form of dry, translucent, very deliquescent pencils. Employed externally as a powerful escharotic in the treatment of poisoned wounds, chancres, etc. Exhibited internally in the form of the liquor. The following are the official preparations: *Li′quor potas′sæ* (Ph. U. S. and Br.), containing about 5 per cent. of potassium hydrate, employed internally as an antacid in doses of ♏v–xx (0.32–1.3), and also locally as a caustic. *P. cum cal′ce* (U. S.), potassa with lime, Vienna caustic, a mixture of potassa and lime in equal parts; a greenish-white, very deliquescent powder; used externally as a caustic. *P. sulphura′ta* (U. S. and Br.), sulphurated potassa, liver of sulphur, hepar sulphuris; occurs in irregular pieces of a yellowish-green or, when fresh, liver color; alterative and antacid in doses of gr. ij–x (0.13–0.65). **P. fu′sa,** potassa. **P. liq′uida,** liquor potassæ. **P. sulphura′ta,** see under *Potassa*.

**Potas′sic.** Relating to or containing potassium.

**Potas′sii** (gen. of potassium) **ace′tas** (Ph. U. S. and Br.). Acetate of potassium; a deliquescent, white powder or crystalline mass; diuretic and antacid in doses of gr. x (0.65), purgative in doses of gr. xl–lx (2.6–4.0); used in dropsy, rheumatism, skin diseases, and gonorrhœa. **P. bicarbo′nas** (Ph. U. S. and Br.), occurs in large, transparent crystals; antacid and diuretic in doses of gr. x–ʒj (0.65–4.0). **P. bichro′mas** (Ph. U. S. and Br.), bichromate of potassium, $K_2Cr_2O_7$; occurs in large, translucent, orange-red crystals; is an irritant poison, used as caustic in cases of morbid growths, in the proportion of from half a drachm to a drachm of the salt to from an ounce to an ounce and a half of water; employed also as a preservative of histological and pathological specimens; not used internally. **P. bitar′tras** (Ph. U. S.), p. supertartras, cream of tartar, a white, gritty powder; mildly laxative, refrigerant, and diuretic in doses of gr. x–ʒj (0.65–4.0), cathartic in doses of ℥ss–j (16.0–32.0). **P. bro′midum** (Ph. U. S. and Br.), bromide of potassium; a colorless, crystalline salt, soluble in water; has the virtues of the iodide with the characteristic action of the bromides, and is therefore employed in the treatment of epilepsy, hysteria, mania, venereal excitement, chordee, insomnia, and restlessness accompanied by and dependent upon nervous excitement; apt, after long use, to produce an acneiform rash, which may be prevented by the addition of salicylic acid (gr. j to ℥j of solution) or liquor arsenicalis; dose, gr. x–xv (0.32–1.0) or more. **P. carbo′nas** (Ph. U. S. and Br.), occurs as a deliquescent, white, granular powder; is antacid, antilithic, diuretic; dose, gr. ij–xx (0.13–1.3). **P. chlo′ras** (Ph. U. S. and Br.), potassium chlorate, chlorate of potash, kali chloricum; occurs as a white powder or in colorless plates; prescribed externally and internally in diphtheritic and other forms of sore throat, in stomatitis, as a preventive of mercurial salivation, etc.; dose, gr. ij–x (0.13–0.65); in large doses it is destructive to the red blood globules, and the irritation of the proteids thus set free excites nephritis; the salt is explosive when in the presence of certain substances. *P. chloratis trochisci*, troches of potassium chlorate, each contain gr. v of the salt. **P. cit′ras** (Ph. U. S. and Br.), citrate of potassium, a deliquescent, white, granular powder; refrigerant, diaphoretic, and a mild alkaline laxative, and may be given in fever when to do little or nothing is the most advisable course; dose, gr. x–xxx (0.65–2.0). **P. c. efferves′cens** (Ph. U. S.), effervescing citrate of potassium; a coarse, white, granular powder, composed of citric acid 63, potassium bicarbonate 90, and sugar 47 gm.; dose, gr. xv–ʒj (1.0–4.0). **P. cyan′idum** (Ph. U. S. and Br.), cyanuret or cyanide of potassium, occurs as a white, granular powder or in hard, white masses; used in the same cases as hydrocyanic acid; dose, gr. $\frac{1}{16}$ to $\frac{1}{8}$ (0.004–0.008); five grains have caused death. **P. ferrocyan′idum** (Ph. U. S.), ferrocyanide or ferrocyanuret of potassium, prussiate of potash, a yellow double cyanide of potassium and iron, the salt from which the cyanide of potassium is obtained by calcination; astringent and sedative in doses of gr. v–x (0.32–0.65); in larger doses sometimes employed as an antidote to copper. **P. hydrar′gyro-iod′idum,** iodhydrargyrate or hydrargyro-iodide of potassium. This salt is made by the combination of iodide of potassium with red iodide of mercury. In fractional doses its properties are similar to those of the iodides of mercury, but in a less degree. **P. hypophos′phis** (Ph. U. S.), $KH_2PO_2$, hypophosphite of potassium, a very deliquescent white powder or in crystalline masses; is prepared by a method similar to that for hypophosphite of sodium, and is similarly employed, in doses of gr. v–xv (0.32–1.0). **P. i′odas,** potassium iodate, has been employed as a substitute for the chlorate. **P. iod′idum** (Ph. U. S. and Br.), occurs in colorless, translucent, cuboidal crystals; the hydriodate or iodide of potassium, kalium iodatum, may be obtained by treating a solution of potassa with iodine, evaporating to dryness, and treating with charcoal; it acts as a specific in syphilis; very useful in certain forms of rheumatism, in chronic pleuritis with effusion, and in pericarditis, also in lead poisoning; dose, gr. x–xx (0.65–1.3); very large doses are apt to produce frontal pain, coryza, and nervous irritability, which condition is termed iodism. **P. ni′tras** (Ph. U. S. and Br.), nitre, saltpetre, nitrate of potassium, $KNO_3$; a white, crystalline powder, diuretic, refrigerant, diaphoretic, and, in large doses, purgative; externally, cooling and detergent; dose, gr. x–xv (0.65–1.0); in large doses it is an acrid poison. Paper impregnated with nitre and burnt in the chamber has occasionally afforded relief in asthma. *Nitrous powder* is a combination of nitre with calomel and tartar emetic. **P. ox′alas,** oxalate of potassium, salt of sorrel, is prepared from the juice of wood sorrel; it is refrigerant, and is used to make lemonade, etc.; a mixture of two parts of salt of sorrel with one part of cream of tartar bears the name of salt of lemons. **P. perman′ganas** (Ph. U. S. and Br.), permanganate of potassium; occurring as very dark purple, nearly black, crystals; used externally as an antiseptic and disinfectant in diphtheria, ulceration, ozæna, etc., and internally in diabetes, dyspepsia, and amenorrhœa; dose, gr. ss–iij (0.032–0.2). *Li′quor potas′sii permangana′tis* is official in the Ph. Br. **P. phos′phas,** white, amorphous salt; alterative in scrofula and phthisis. **P. pic′ras,** potassium picrate or carbazotate; has been used as an antiperiodic. **P. et so′dii tar′tras** (Ph. U. S.), Rochelle salt, a mild, saline purgative; dose, ʒj–iv (4.0–16.0). **P. sul′phas** (Ph. U. S. and Br.), sulphate of potassium, $K_2SO_4$, occurring in hard, colorless crystals, purgative, diuretic, and hepatic stimulant; dose, gr. xv–ʒj (1.0–4.0), as a laxative; in large doses it is an irritant poison. **P. sul′phis,** potassium sulphite, $K_2SO_4,2H_2O$; occurs in large, translucent, colorless crystals; uses the same as those of sulphite of sodium; dose, gr. x–ʒj (0.65–4.0). **P. tar′tras** (Ph. Br.), neutral tartrate of potassium, soluble tartar; saline cathartic in the dose of ʒss–iv (2.0–16.0). **P. t. ac′idus** (Ph. Br.), p. bitartrate.

**Potassio-.** In combination denoting a compound salt with potassium as one of the bases.

**Potas′siofer′ric sul′phate.** Ferri et ammonii sulphas. Made by adding ammonium sulphate to a solution of tersulphate of iron. If potassium sulphate be used instead of ammonium sulphate, potassioferric alum results.

**Potas′sium.** Chemical symbol, K (Lat., *kalium*). Lightest of all metals except lithium, discovered by Davy in 1807. It is very soft, and may be cut with a knife. Only the salts and oxides are employed in medicine. Large doses of the compounds of potassium act as poisons on the heart, paralyzing the muscles, especially the nerve-tissues, and produce a condition of dyscrasia. For the salts of potassium employed in medicine, see *Potassa* and *Potassii*.

**Pota′to.** Solanum tuberosum. **P. bacil′lus,** B. mesentericus. **Caroli′na p.,** Convolvulus batatas. **P. cul′ture,** a growth of bacteria on prepared potato. **P.-fly,** Lytta vitata. **Hog p.,** Convolvulus panduratus. **P. oil,** an amylic alcohol obtained from potatoes; by distilling potato oil with anhydrous phosphoric acid a volatile, colorless, oily liquid is procured which is lighter than water and boils at 102° F., called *amylene* or amylen. It is best prepared from fusel oil by the action of chloride of zinc. The vapor has been employed as an anæsthetic, but it is seldom resorted to on account of the danger of administering it. **P. paste,** paste made from boiled potatoes for the culture of bacteria. **P. poul′tice,** cataplasma fæculosum; Convolvulus batatas. **P. starch,** a fecula from the potato; also called English arrowroot. **P.-vine,** Convolvulus panduratus. **Wild p.,** Convolvulus panduratus.

**Pot′belly.** Physconia.

**Po′tency** (*potens,* having power). Faculty. Power. A term used in homœopathic practice to denote the increased power imparted to a remedy by attenuation.

**Poten′tial** (*potentia,* power). Ready to act, but not yet acting; epithet for remedies which, although energetic, do not act until some time after their application; caustic alkalies, for instance, are called potential cauteries, in contradistinction to the hot iron, which is termed actual cautery. The condition of electrical tension in a body, manifested by the production of electrical effects in other bodies of different potential, or in a different state of electrical tension. When two bodies of different potential are brought together a current passes from the high to the low potential until the two are equal, when electrical action ceases.

**Potentil′la.** A plant of the order *Rosaceæ.* **P. anseri′na,** argentine, silverweed, wild tansy, moorgrass; the leaves are mildly astringent and tonic. **P. argenti′na,** P. anserina. **P. impo′lita,** P. anserina. **P. neglec′ta,** P. anserina. **P. norveg′ica,** Norway cinquefoil, an indigenous plant possessed of properties similar to those of Potentilla anserina. **P. palus′tris,** Comarum palustre. **P. rep′tans,** common cinquefoil; the roots are possessed of astringent properties. **P. tormentil′la,** tormentilla.

**Potentiza′tion.** The act of making potent or giving potency to medicines, as in homœopathy by shaking, trituration, etc.

**Pote′rium sanguisor′ba.** Pimpinella saxifraga.

**Pothomor′pha pelta′ta.** Caapeba; Brazilian plant, ord. *Piperaceæ,* possessed of diuretic properties, and given in strangury. **P. umbella′ta,** also called caapeba, given in Brazil to modify nutrition, as in glandular affections, in which it is also used externally in the form of decoction.

**Po′thos fœt′ida** or **puto′rii.** Dracontium fœtidum.

**Po′tio.** Drink; haustus; potion.

**Potoma′nia** (*potos,* drink, *mania*). Delirium tremens.

**Pototromoparanoi′a** (*potos,* drink, *tromos,* trembling, *paranoia,* insanity). Delirium tremens.

**Pot′ters’ bronchi′tis** or **consump′tion.** A bronchitis caused by the inhalation of dust, which leads finally to emphysema.

**Pott’s an′eurysm.** Aneurysmal varix; anastomotic aneurysm. **P.’s boss,** the deformity resulting from spinal caries. **P.’s cur′vature,** P.’s boss. **P.’s disease′,** vertebral osteitis, spinal caries. **P.’s frac′ture,** fracture of the fibula with displacement of the tibia, the foot being turned outward. **P.’s gan′grene,** gangræna senilis. **P.’s gib′bus,** deformity of Pott’s disease. **P.’s paraple′gia,** paraplegia resulting from spinal caries. **P.’s puf′fy tu′mor,** tumefaction of the scalp caused by osteomyelitis of the skull.

**Po′tus** (*potos,* drink). Drink. **P. hippocrat′icus,** claret. **P. imperia′lis,** imperial, made of potassium bitartrate, lemon, sugar, and water.

**Pouch.** A blind sac, cul-de-sac, or pocket in any part. **P. of Doug′las,** rectovaginal pouch; see *Uterus.* **Ileocæ′cal p.,** peritoneal folds at the terminal extremity of the ileum. **In′guinal p.,** peritoneal fold behind the inguinal ring. **Laryn′geal p.,** see *Laryngeal.* **Pres′sure p.,** prominence or bulging of the wall of the œsophagus from muscular or other weakness. **Rath′ke’s p.,** pituitary diverticulum. **Rec′to-u′terine p.,** p. of Douglas. **Subcæ′cal p.,** peritoneal fold behind and beneath the cæcum. **Uteroves′ical p.,** recess in the peritoneum between the uterus and bladder. **P. of Web′er,** vesicula prostatica. **P. of Wil′lis,** the lesser omentum.

**Pouched.** Encysted.

**Poul′tice** (*poltos,* porridge). Cataplasm.

**Pounce.** Sandarac.

**Pound** (*pondus,* weight). Libra. A weight, twelve ounces troy, sixteen ounces avoirdupois. See *Weights and Measures.*

**Pou′part’s lig′ament.** Crural arch.

**Pow′der.** Pulvis. **Aromat′ic p.,** pulvis cinnamomi compositus. **Bleach′ing p.,** calx chlorinata. **Chenevix’s′ p.,** pulvis antimonialis. **P. of Côme** or **Frère Côme,** a caustic of arsenous acid, red sulphuret of mercury, and powdered animal charcoal, made into a paste with mucilage. **Do′ver’s p.,** pulvis ipecacuanhæ compositus. **Dupuytren’s′ p.,** a caustic of arsenous acid and calomel. **Faynard’s′ p.,** powdered charcoal used as a hæmostatic. **Greg′ory’s p.,** pulvis rhei compositus. **In′sect p.,** pyrethrum. **James’s p.,** pulvis antimonialis. **Jes′uits’ p.,** cinchona. **Ring′worm p.,** chrysarobin. **Se′rum p.,** see *Serum.* **Seid′litz p.,** pulvis effervescens compositus. **Sneez′ing p.,** see *Veratrum album.* **P. of sym′pathy** or **Sympathet′ic p.,** see *Sympathetic.* **Tooth p.,** dentifrice. **Tul′ly’s p.,** pulvis morphinæ compositus. **Vien′na p.,** equal parts of quicklime and potassa; this is made into a paste, Vienna paste, with spirit of wine, and applied on the diseased part; by fusing the potassa and lime, and raising the heat so as to cause ebullition, the caustic may be run into cylinders, when it is called caustique Filhos, from the name of the author of the process. **Vi′got’s p.,** hydrargyrioxidum rubrum.

**Pow′er** (*posse,* to be able). Faculty, force.

**Pox.** A disease characterized by a pock eruption. Vulgarly, syphilis. **Black p.,** hemorrhagic smallpox. **Chicken-p.,** varicella. **Cow-p.,** vaccina. **French p.,** syphilis. **Glass-p.,** varicella. **Grease-p.,** see *Grease.* **Horn-p.,** varicella. **Horse-p.,** grease. **Nod′dle p.,** syphilomania. **Sheep-p.,** varicella. **Small-p.,** variola. **Swine-p.,** varicella. **Wa′ter-p.,** water itch; also varicella.

**P. p.** Abbv. signifying punctum proximum, near point.

**P. r.** Abbv. signifying punctum remotum, far point.

**Prac′tice.** The exercise of medical knowledge in the care and cure of the sick.

**Practi′tioner.** One who practises the healing art in any of its branches.

**Præ-.** In composition, before. See also *Pre-.*

**Præbra′chium.** One of the two superior or anterior brachia of the quadrigeminal bodies.

**Præca′va.** Vena cava superior.

**Præcip′itans** (*præcipito,* to throw down). Absorbent. **P. mag′num,** sepia.

**Præcipita′tum al′bum.** White precipitate. **P. fla′vum,** yellow oxide of mercury. **P. ru′brum,** red precipitate.

**Præclavicula'ris latera'lis.** Acromioclavicularis muscle. **P. me'dius,** sternoclavicularis muscle. **P. subcuta'neus,** muscular fascicle, seldom met with, running from internal to external clavicular extremities in a fold of the fascia of the neck.

**Præco'cia.** Prunus armeniaca.

**Præcommissu'ra.** Anterior commissure of brain.

**Præcor'dia** (*præ*, before, *cor*, heart). Præcordium.

**Præcor'dial.** Precordial.

**Præcor'dium.** Region in front of the heart and stomach; epigastrium. **P. pe'dis,** metatarsus.

**Præcor'nu** (*præ*, before, *cornu*, horn). Anterior horn of lateral ventricle of brain.

**Præcrib'rum.** Locus perforatus anticus.

**Præcu'neus** (*cuneus*, wedge). Quadrate lobule on the middle surface of the cerebral hemisphere.

**Prædigas'tricus.** Anterior belly of the digastricus.

**Prædilata'tor.** Dilatator anterior naris.

**Prædormit'ium.** The period of light slumber preceding that of sound sleep.

**Prægenicula'tum.** External corpus geniculatum.

**Præhypoph'ysis.** Anterior lobe of hypophysis.

**Prælin'gua.** The anterior part or tip of the tongue.

**Prælumba'ris.** Prelumbar.

**Prælum'bo-suprapubia'nus.** Psoas minor muscle.

**Præmaxil'la.** Intermaxillary bone of the mammalia.

**Præmedul'la.** Medulla oblongata.

**Præmorphis'mus.** Premorphism.

**Præna'ris.** Anterior opening of the nasal chamber.

**Præoblonga'ta.** The portion of the medulla oblongata between the pons Varolii and the fourth ventricle.

**Præoper'culum.** The frontal portion of the operculum insulæ. Part of the gill-cover in bony fishes.

**Præop'ticus.** One of the anterior corpora quadrigemina.

**Præpedun'culus.** Superior peduncle of the cerebellum.

**Præperfora'tus.** Anterior perforated space at the base of the brain.

**Præphthis'is.** Initial stage of phthisis.

**Præpoten'tia** (*præ*, before, *potens*, powerful). Great power or strength. **P. viri'lis,** great or too great procreative power on the part of the male.

**Præpu'tium.** Prepuce. **P. clitor'idis,** see *Prepuce.*

**Præscap'ula.** Part of scapula above the spine.

**Præscapula'ris.** Supraspinatus muscle.

**Præsepi'olum** or **Præse'pium** (*præ*, before, *sepes*, enclosure). Alveolus.

**Præster'num.** Manubrium sterni.

**Præver'mis.** The anterior portion of the vermis.

**Præ'via** (*præ*, before, *via*, way). See *Placenta prævia.*

**Pragmatagno'sia** (*pragma*, thing, *agnosia*, not knowing). Inability to recognize objects.

**Pragmatamne'sia** (*pragma*, thing, *amnesia*, forgetfulness). Inability to remember the appearance of objects.

**Pragmid'iothrix multisep'ta** (Engler). A microorganism found in ocean water.

**Pragmow'ski's bacil'lus.** Bacillus butyricus.

**Prague grasp.** A procedure resorted to in impaction of the fetal head. One hand grasps the feet, thus drawing the body well back over the mother's perineum. The fingers of the other hand are hooked over the shoulders, and traction is made downward by both hands, the body being gradually carried toward the pubes as the face is delivered over the perineum. **P. pel'vis,** see *Spondylolisthesis.*

**Prai'rie bush.** Ptelea trifoliata. **P. dock,** Parthenium integrifolium. **P. hys'sop,** Pycnanthemum lanceolatum; indigenous; plant possessing stimulating, diaphoretic, and carminative properties. **P. in'digo,** reputed to possess emetic, purgative, and, externally, stimulating qualities. **P. itch,** see *Itch.* **P. pines,** Liatris scabiosa.

**Pras'inum vir'ide** (*prasinos*, leek-green). Cupri subacetas.

**Pra'sium.** Marrubium.

**Pra'sum.** Allium porrum.

**Pravaz's' syr'inge.** Syringe for hypodermic injections.

**Prax'is.** Action. **Mal-p.,** malpractice. **P. med'ica,** see *Practice.*

**Prealbuminu'ric.** Before the appearance of albuminuria.

**Pre-aor'tic.** Situated in front of the aorta; the pre-aortic plexuses of the great sympathetic, for example.

**Pre-aryt'enoid mus'cle.** Cricoarytenoideus lateralis muscle.

**Pre-atax'ic.** Previous to development of ataxia.

**Pre-ax'ial.** In the study of the spinal skeleton of man and animals, all parts in man which are relatively superior, and in the beast anterior to either limb, when the latter is extended so as to make a right angle with the long axis of the body, are called pre-axial. Parts relatively inferior in man and posterior in other animals are called post-axial.

**Precan'cerous.** Prior to the occurrence of cancer.

**Precar'diac.** Precordial.

**Precen'tral convolu'tion.** Ascending frontal convolution of the brain.

**Precerebel'lar ar'tery.** Superior cerebellar artery.

**Precer'ebral ar'tery.** Anterior cerebral artery.

**Prechor'dal.** Anterior to the notochord.

**Precho'rioid** or **Precho'roid ar'teries.** Anterior choroid arteries.

**Precommu'nicant ar'tery.** Anterior communicating artery.

**Precip'itate.** To throw down solid particles held in suspension or solution in a fluid. Also the deposit so made. Very rapid. **P. la'bor,** labor in which the child is born with abnormal rapidity. **Red p.,** red oxide of mercury. **White p.,** ammoniated mercury. **Yel'low p.,** yellow oxide of mercury.

**Precipita'tion** (*præcipito*, to throw headlong). The action by which a body abandons a liquid in which it is dissolved and becomes deposited at the bottom of the vessel.

**Precipitin'.** An antibody protective against foreign proteids. If casein is injected into the body of a rabbit, for example, the serum of this animal will acquire the property of precipitating casein from a solution; this property depends upon the presence of precipitins formed in the serum as a protection against the foreign proteid.

**Precli'val.** Anterior to the clivus of the cerebellum.

**Precocity,** pre-kos'it-e (*præcox*, ripening early). Precociousness, rapid development before the usual time.

**Precor'acoid.** The sternal epiphysis of the clavicle.

**Precor'dial.** Relating to the præcordium. Anterior to the heart. **P. re'gion,** the epigastric region. More properly, the region of the heart. A line drawn from the inferior margins of the third ribs across the sternum passes over the valves of the pulmonary artery a little to the left of the mesial line, and those of the aorta are behind them, but about half an inch lower down. A vertical line coinciding with the left margin of the sternum has about one-third of the heart, comprising the upper portion of the right ventricle, on the right, and two-thirds, comprising the lower portion of the right ventricle and the whole of the left, on the left. This is the precordial region.

**Precu'neal.** Anterior to the cuneus.

**Precu'neate.** Relating to the præcuneus.

**Precur'sory** (*præ*, before, *curro*, to run). Premonitory; that which precedes or foretells. **P. signs** or **symp'toms,** those indicating an approaching disease.

**Prediastol'ic.** That which precedes the diastole of the heart, as prediastolic friction sound.

**Predicrot'ic wave.** Wave preceding the dicrotic wave, as indicated by sphygmogram.

**Prediges'tion.** Partial digestion of food by artificial means, before it is eaten.

**Predispo'sing** (*præ*, before, *dispono*, to put in order). Making liable or susceptible, as *predisposing cause* of disease.

**Predisposi'tion.** Constitution or condition of the body which renders it liable to disease under the application of an exciting cause. Thus, in hereditary diseases the conformation is such that but a slight exciting cause may be required to produce them.

**Predor'sal** (*præ*, before, *dorsum*, back). That which is in front of the back. **P. re'gion** of the vertebral column is the anterior surface of the dorsal region.

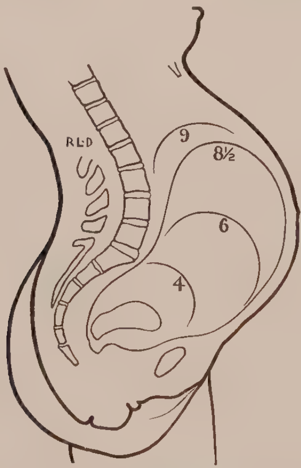
**Pre-erup'tive.** Prior to the appearance of the eruption in one of the exanthemata.

**Preforma'tion.** Ancient theory of generation, which maintained that the germs of every part exist, but not visibly, before fecundation, and that fecundation occasions their development. It was the doctrine of *pre-existence of germs*.

**Prefor'mative mem'brane.** Membrana præformativa.

**Prefron'tal.** Term applied by Owen to the middle part of the ethmoid bone. **P. lobe,** that portion of the frontal lobe situated anterior to the ascending convolution. **P. re'gion,** p. lobe. **P. sec'tion,** a vertical section of the brain made through the p. lobe.

**Preglob'ulin.** Proteid or albuminoid derived from the decomposition of cytoglobin with acids.



Size of uterus at various months of pregnancy. (Jewett.)

**Preg'nancy.** Gestation, fœtation, gravidity, uterogestation. State of a woman who has within her a fecundated germ, which gradually becomes developed. When placed in the cavity of the uterus, by virtue of the vital force by which it is animated it becomes attached to the inner surface of that viscus, and obtains from it indirectly the nutriment necessary for its gradual development, during the space of ten lunar months or two hundred and eighty days—the ordinary *term* or *duration of gestation*, although the period may be protracted to three hundred days or upward—at the expiration of which parturition occurs. Pregnancy is commonly limited to a single fœtus; at times the uterus contains two or three—twin or trigeminal pregnancy. In certain cases, and owing to accidental circumstances, the fecundated ovum remains in the ovarium or is arrested in the Fallopian tube, or falls into the peritoneal cavity. Pregnancy has, accordingly, been distinguished into natural or uterine, when the fœtus is carried in the cavity of the womb; preternatural or ectopic or extra-uterine, when it occurs in the ovarium, tube, or cavity of the abdomen During pregnancy the woman experiences remarkable changes in the condition of her organs and functions. The genital apparatus is, of course, most affected. The uterus changes its shape, situation, size, and texture. The usual *signs of pregnancy* are: Suppression of the catamenia; morning sickness; the abdomen gradually enlarging and forming a hard tumor; the umbilicus prominent in the latter months; the breasts increasing in size; the areola around the nipple becoming darker, and the follicles more developed; a bluish tint of the vagina after the fourth week; about the fifth month the evidence by *ballottement*, the placental *souffle*, and the sound of the fetal heart heard on auscultation; the motion of the fœtus perceptible, and the neck of the uterus diminishing in length at the advanced periods. **Abdom'inal p.,** that in which the ovum has escaped into the cavity of the abdomen. **Afe'tal p.,** pregnancy without a fœtus; produced by a false or degenerate conception or any other affection which has given place to unusual development of the uterus; included in this class are *sarcohysteric*, *hydrohysteric*, *gazohysteric*, and *hæmatohysteric pregnancies*, according to the contents, whether fleshy, watery (cystic), gaseous, or sanguineous. **Bigem'inal p.,** double pregnancy; twins in utero. **Cer'vical p.,** when the development of the ovum takes place in the canal of the cervix uteri. **Com'plex p.,** when the womb, besides the fœtus, contains much water, hydatids, a mole, etc. **Com'pound p.,** when there are two or three fœtuses in the cavity of the uterus. **Cor'nual p.,** p. occurring in one of the horns of a bicornate uterus. **Doub'le p.,** bigeminal pregnancy. **Ectop'ic** or **extra-u'terine p.,** see *Pregnancy*. **False p.,** different affections of a more or less serious character which resemble pregnancy. Seated in the uterus or its dependencies, in the intestines or some other part of the abdomen, there may be a mole, hydatids, water, blood, or a polypus distending the parietes of the uterus—chronic enlargement of the uterus; development of tumors, etc., in its substance; scirrhus; dropsy of the ovary; ascites; tympanites, etc. **Fe'tal p.,** in which there is a fœtus, or more than one, in the uterus or out of it. **Gazohyster'ical p.,** false pregnancy caused by development of air or gas in the cavity of the womb. **Hæmohyster'ical p.,** false pregnancy caused by accumulation of blood in the uterus. **Hydat'id p.,** p. with the formation and development of an hydatid mole. **Hydrohyster'ical p.,** false pregnancy occasioned by the secretion and accumulation of serous fluid in the uterus. **Intermu'ral** or **intramu'ral p.,** interstitial p. **Interstit'ial p.,** the development of the embryo in that portion of the Fallopian tube which traverses the wall of the uterus; the case generally terminates fatally at an early period of gestation, the thin external wall of the uterus being ruptured, and the ovum passing into the abdominal cavity. **Mo'lar p.,** p. in which the ovum is blighted, the result being the formation of a mole. **Mor'bid p.,** the progress of pregnancy disturbed or endangered by the supervention of general or local disorder. **Mul'tiple p.,** when the uterus contains several fœtuses. **Mu'ral p.,** interstitial p. **Ova'rian p.,** pregnancy in which the fœtus is developed in the interior of the ovary. **Phan'tom p.,** false p. **Plea of p.,** a plea which a woman, capitally convicted, may set up in arrest of execution until she is delivered. **Plu'ral p.,** when more than one fœtus is developed in the uterus at the same time. **Pretend'ed p.,** criminal act of a female who, not having been delivered, presents an infant as having been born of her. This term, in French, likewise includes the case of a female who, having been delivered of a dead child, substitutes for it a living child which is not hers. **Sarcofe'tal p.,** in which there are one or more fœtuses and one or more moles. **Sarcohyster'ical p.,** false pregnancy due to the presence of a mole or hydatids. **Sol'itary p.,** in this there is a single fœtus. **Trigem'inal p.,** in this there are three fœtuses in the cavity of the uterus. **Tu'bal p.,** the

ovum remains and is developed in the Fallopian tube. **Tu′bo-abdom′inal p.,** when the fœtus is developed partly in the Fallopian tube and partly in the cavity of the abdomen. **Tubo-ova′rian p.,** p. in which the developing ovum is attached to both ovary and Fallopian tube. **Tu′bo-u′terine p.,** interstitial p. **Twin p.,** p. with twins. **U′terine p.,** see *Pregnancy*. **U′tero-abdom′inal p.,** pregnancy in which there are two fœtuses—one in the uterus, the other in the abdominal cavity. **U′tero-ova′rian p.,** pregnancy with two fœtuses—one in the womb, the other in the ovary. **Uterotu′bal p.,** there is at the same time a fœtus in the womb and another in the Fallopian tube

**Preg′nant.** Gravid; one in a state of pregnancy; one with child.

**Prehemiple′gic.** Preceding the occurrence of hemiplegia.

**Prehen′sile.** Parts capable of seizing or grasping, as the hands.

**Prehen′sion** (*prehendo*, to lay hold of). Act of laying hold of.

**Prelac′rymal.** In front of the lacrymal sac.

**Prelim′bic fis′sure.** Anteror portion of the callosomarginal fissure.

**Pre′lum.** Press. **P. abdomina′le,** abdominal pressure; expulsive force exercised by contraction of muscles, as in straining at stool or bearing down during labor. **P. arteria′le,** tourniquet.

**Prelum′bar.** That which is placed before the loins. Prelumbar surface of the spinal column is the anterior surface of the lumbar portion.

**Premalig′nant.** Occurring prior to evidences of malignancy in a neoplasm or disease.

**Premature′ la′bor.** See *Parturition*. **P. respira′tion,** respiration occurring before the fœtus is completely born.

**Premax′illary bone.** Intermaxillary bone.

**Prem′na taiten′sis.** Plant of the order *Verbenaceæ*, of the Fiji Islands; bark is used in preparing the drug tonga.

**Premo′lar teeth.** Bicuspid teeth, the two anterior molar teeth on each side of each jaw.

**Premon′itory** (*præ*, before, *moneo*, to admonish). See *Precursory*.

**Premor′phism** (*morphe*, shape). The aggregate of laws by which a new-formation is developed from the primordial cell.

**Prenan′thes.** Lion's foot. Indigenous plant, whose root and milky juice are very bitter. Used in popular practice in dysentery, and in the form of cataplasm to bites of serpents. **P. al′ba** or **serpenta′ria,** Nabalus albus.

**Prena′tal.** Before birth.

**Preoccip′ital.** In front of the occiput. **P. notch,** notch indicating the division between the occipital and temporal lobes of the brain.

**Preoccupa′tion.** Condition of mind symptomatic of some forms of insanity, in which the patient is thoroughly absorbed in his own thoughts, so that he cannot be roused.

**Preos′seous** (*præ*, before, *os*, bone). Term applied to substance from which bone is formed.

**Prepara′tion.** Act of making ready any substance whatever that has to be employed for any purpose. Also the product of any pharmaceutical operation. Any part of a body preserved for the use of the anatomist or others, is also so called.

**Prepared′.** Ready for use. **P. chalk,** creta præparata; chalk freed from impurities by pulverization, levigation, and elutriation, forming white powder. **P. oys′ter-shell,** testa præparata; the inner powdered shell of Ostrea edulis or oyster.

**Prepatel′lar.** Anterior to the patella.

**Prepe′duncle.** Anterior peduncle of the cerebellum.

**Prepu′bic.** Anterior to the pubes. **P. an′gle,** bend in the urethra anterior to the pubic bone, when the penis is in a flaccid state.

**Pre′puce.** Foreskin; the prolongation of the integuments of the penis which cover the glans. It is composed of two membranous layers: one external or cutaneous, the other internal or mucous, separated by areolar membrane. The mucous membrane lines the inner surface of the cutaneous layer; behind the glans it is reflected over the latter, forming behind the corona a small cul-de-sac; this is interrupted by a triangular duplicature of the mucous membrane, called the *frœnum*, fixed in the furrows at the inferior part of the glans, and terminating at a little distance from the orifice of the urethra. **P. of the clit′oris,** the clitoris is covered by a semilunar fold formed by a continuation of the skin of the labia, called *præputium clitoridis*.

**Prepu′tial.** Belonging or relating to the prepuce; as the preputial secretion, or that which takes place from the glands of the prepuce. **P. her′pes,** herpes præputialis.

**Prepyr′amid.** Anterior pyramid of the medulla oblongata.

**Prepyram′idal.** Anterior to the pyramid, as *p. fissure* of the cerebellum.

**Prerec′tal.** Anterior to the rectum. **P. lithot′omy,** Nélaton's modification of the bilateral operation, a careful dissection being made in front of the rectum, so as to open the urethra at the apex of the prostate without coming in contact with the bulb.

**Presbycou′sis** (*presbys*, old, *akouo*, to hear). Decrease of hearing power due to old age.

**Presbyon′osi** (*presbys*, old, *nosos*, disease). Diseases of old age.

**Pres′byope** (*presbys*, old, *ops*, eye). One who is long-sighted or affected with presbyopia.

**Presbyo′pia.** Condition of the vision, common in old persons, in which near objects are confusedly seen, while those at a greater distance are clearly distinguished. It depends generally on diminution of the convexity of the cornea, whence results an alteration in the convergency of the rays, so that they form a focus behind the retina. This defect is remedied by the use of convex glasses, which augment the convergence of the luminous rays. Also called long-sightedness, far-sightedness.

**Presbyop′ic.** Relating to presbyopia or long-sightedness.

**Presbyspha′celus** (*presbys*, old, *sphakelos*, gangrene). Gangræna senilis.

**Presbytia,** pres-bish′e-ah. Presbyopia.

**Prescap′ular fos′sa.** Supraspinous fossa.

**Prescrip′tion** (*præ*, before, *scribo*, to write). Recipe. Formula which the physician writes for the composition of medicines adapted to any case of disease. A compound prescription has been divided into four parts: the basis, or principal ingredient of the prescription; the adjuvant, or that which is designed to promote the action of the former; the corrigent, or that intended to correct its operation or obviate any unpleasant symptom which it may be apt to produce; and the constituent, excipient, or vehicle, the substance which gives to the other ingredients consistence or form. All these are seen in the following formula for cathartic pills:

℞—Aloës, ʒj .....Basis.
Hydrarg. chlorid. mit., gr. x....Adjuvant.
Olei carui, gtt. v....Corrigent.
Syrupi, q. s. ....Constituent.
M. et fiant pilulæ xx.

It is obvious, however, that most prescriptions are more simple than this. The basis, for example, may require neither adjuvant, corrigent, nor constituent.

**Present′.** To appear first, precede; said of the part of the body of the fœtus which meets the finger passed through the os uteri; see *Presentation*.

**Presenta′tion.** Part of the fœtus which is felt presenting on examination per vaginam. When the head, and especially the vertex, presents, or the feet, knees, or breech, the presentation is said to be natural; when any other part, preternatural, and the labor is styled perverse or preternatural cross-birth. When any part except the head, feet, knees, or breech presents, the operation of *turning* becomes necessary. When a portion of the presenting mass of the fœtus becomes changed for another in complicated presentations the case is termed one of substituted presentation. The six positions of the cranium, in a presentation of the head, are three occipito-anterior and three occipito-posterior:

| | | |
|---|---|---|
| Occipito-anterior | First position | Head in right oblique diameter; forehead backward. |
| | Second position | Head in left oblique diameter; forehead backward. |
| | Third position | Head in anteroposterior diameter; forehead backward. |
| Occipito-posterior | Fourth position | Head in right oblique diameter; forehead forward. |
| | Fifth position | Head in left oblique diameter; forehead forward. |
| | Sixth position | Head in anteroposterior diameter; forehead forward. |

**Preser′vative** (*pre*, before, *servo*, to serve). Prophylactic.

**Presphe′noid bone.** Anterior portion of the sphenoid bone in infancy, including the body in front of the olivary processes and the small wings. In animals this division sometimes persists through life.

**Prespi′nal.** Situated before the spine; the prespinal surface of the vertebral column is the anterior surface.

**Press** (*premo*, *pressum*, to squeeze). Instrument for subjecting matters to considerable pressure for separation of the liquid from the solid portion. **P. of Heroph′ilus,** torcular Herophili.

**Pres′sor.** Causing vasoconstriction. **P. fi′bres,** nerve-fibres capable of stimulating the vasomotor centres and increasing arterial tension. **P. sub′stance,** one of two substances found by Schafer and Vincent in the infundibular part of the pituitary body, one of which, the *pressor substance*, produces a rise, the other, the *depressor substance*, a fall in blood pressure.

**Pres′sure.** Action of pressing. Evidences of the effects produced on the walls of the thorax or its contents by pressure from within the chest, such as bulging, protrusion of the intercostal spaces, or pressure of fluid on the heart, lungs, etc., are called *pressure signs.* **Abdom′inal p.,** mode of examination as to sensibility, size, suppleness, or hardness of any morbid abdominal viscus by exerting a pressure from below upward on the abdominal organs so as to crowd them upon the diaphragm, and thus to diminish the dimensions of the cavity of the chest, noticing to what extent respiration is affected; see also *Prelum abdominale.* **P. arrest′ing points,** certain points, pressure on which in spasmodic affections causes the spasm or convulsion to cease. **P. excit′ing points,** points, pressure on which produces spasm or convulsion. **P. myeli′tis,** see *Myelitis.* **P. pal′sy** or **paral′ysis,** paralysis due to pressure on the motor nerve supply of the part. **P. phos′phenes,** see *Phosphenes.* **P. points,** see *P. arresting* and *P. exciting points.* **P. pouch,** see *Pouch.* **P. sense,** the modification of tactile sense by which the existence of pressure on a part is felt and its degree appreciated. **P. signs,** see *Pressure.*

**Pres′ton's salt.** Ammonium carbonate.

**Presyl′vian sul′cus.** Anterior ascending branch of the fissure of Sylvius.

**Presys′tole.** The period preceding the systole.

**Presystol′ic.** Preceding the contraction of the heart, as presystolic friction sound.

**Pretar′sal.** Anterior to the tarsus.

**Pretib′ial.** Situated before the tibia, as the ilio-pretibial and ischiopretibial muscles.

**Pretuber′culous.** Preceding the occurrence of tuberculosis.

**Pretympan′ic.** Anterior to the tympanum.

**Preven′tive** (*prævenio*, to come before). Prophylactic.

**Prever′tebral** Situated in front of the vertebræ. **P. aponeuro′sis,** the aponeurosis covering the muscles of the prevertebral region. **P. ar′tery,** ramus of the meningeal branch, and sometimes even of the trunk, of the pharyngeal artery, which is distributed to the prevertebral region. **P. fas′cia,** the layer of fascia descending on the prevertebral muscles and lying between the pharynx and œsophagus. **P. mus′cles,** see *Cervical region, anterior.* **P. plex′uses,** the cardiac, solar, and hypogastric plexuses, lying in front of the spine, in the thorax, abdomen, and pelvis. **P. re′gion,** anterior cervical region.

**Prevertiginous,** pre-ver-tij′in-us. Dizzy with a tendency to fall forward.

**Preves′ical.** Anterior to the bladder.

**Prevost's** (prev-oze′) **symp′tom.** Noticed in cerebral hemorrhage; conjugate deviation of vision, the eyes looking in the direction of the hemisphere involved in the hemorrhage.

**Prezygapoph′ysis.** See *Postzygapophysis.*

**Priapei′a.** Nicotiana rustica.

**Pri′apism** (*priapos*, phallus). A condition of constant and distressing erection, with or without any voluptuous desire; often symptomatic of disease of the spinal cord.

**Priapi′tis.** Inflammation of the penis.

**Prick′et.** Sedum acre.

**Prick′ing.** A variety of pain compared to that which pointed bodies would occasion.

**Prick′le cells.** Certain cells found in the rete Malpighii of the skin. **P. lay′er,** inner layer of the epidermis.

**Prick′ly ash.** See *Xanthoxylum.* **P. heat,** lichen tropicus; miliaria. **P. el′der,** see *Aralia spinosa.* **P. let′tuce,** Lactuca virosa. **P. pear,** see *Cactus opuntia.* **P. pop′py,** see *Argemone mexicana.*

**Pride of Chi′na** or **of In′dia.** Melia azedarach.

**Pride′weed.** Erigeron canadense.

**Priest's crown.** Taraxacum. **P.'s pin′tle,** Arum maculatum.

**Priest′ley's mass.** Chromogenic fungous deposit on the incisor and canine teeth.

**Prim.** Ligustrum vulgare.

**Pri′mæ vi′æ** (the first passages). The stomach and intestinal canal; the lacteals being the *secundæ viæ* or *second passages.*

**Pri′maries.** Term applied to syphilitic lesions resulting from contact or infection,

**Pri′mary** (*primus*, first). First in place, time, or character; as primary symptoms in contradistinction to secondary. **P. cell,** see *Cell.* **P. coil,** coil of coarse wire through which the primary current passes in an induction machine. **P. cur′rent,** the current from a galvanic battery, the passage of which through the primary coil of an induction machine gives rise, at the instants of opening and closing the circuit, to the induced or secondary current in the secondary coil. **P. joint,** amphiarthrosis. **P. lat′eral sclero′sis,** sclerosis of lateral column of spinal cord, causing spastic paralysis. **P. mus′cular at′rophy,** myopathic atrophy. **P. spas′tic paral′ysis,** condition similar to that due to myelitis transversalis; generally considered to be due to primary degeneration of the pyramidal tract. **P. sul′ci,** those first appearing upon the brain of the embryo. **P. ver′tebra,** first rudiment of a vertebra formed in the embryo.

**Primigrav′ida.** Woman in her first pregnancy.

**Primip′ara** (*primus*, first, *pario*, to bring forth). A woman who gives birth to a child for the first time.

**Primipar′ity.** The state of bearing or having borne but one child.

**Primip′arous.** Referring to a primipara.

**Primipartu′riens** (*primus*, first, *parturio*, to bring forth). Primipara.

**Primister′nal** (*primus*, first, *sternon*, sternum). The bony portion of the sternum.

**Primi′tiæ** (*primus*, first). First waters, or the waters discharged before the extrusion of the fœtus.

**Prim′itive.** Primary. **P. ax′is,** see *Nerve-fibres.* **P. band,** see *Nerve-fibres.* **P. carot′id ar′tery,** common carotid artery. **P. cho′rion,** see *Chorion.* **P. groove,** see under *Groove.* **P. il′iac ar′tery,** common iliac artery. **P. streak** primitive groove. **P. trace,** primitive groove.

**Primor′dial.** First in point of development, original, primitive. **P. cell,** a simple cell without envelope. **P. cra′nium,** membranous skull of embryo. **P. kid′ney,** corpus Wolffianum. **P. o′va,** cells situated between germinal epithelium of embryological ovary, which later become egg-cells. **P. u′tricle,** see *Utricle*. **P. ver′tebræ,** protovertebræ.

**Primor′dium** (*primus*, first, *ordior*, to begin). The earliest stage in the development of any structure. First attack of a disease.

**Prim′rose.** Primula. **Eve′ning p.,** Œnothera biennis.

**Prim′ula.** A genus of gamopetalous plants. Primrose. **P. officina′lis, P. elat′ior,** oxlip. **P. variab′ilis,** P. veris. **P. ve′ris,** cowslip, paigil or peagle, herb Peter, palsywort; flowers have been considered to be mildly tonic, antispasmodic, and anodyne. **P. vulga′ris,** primrose; leaves and roots of this plant have been used as sternutatories.

**Pri′mum vi′vens** (the first living). See *Punctum saliens*.

**Pri′mus quadrigem′inus.** Pyramidalis muscle.

**Prin′ceps.** Rectum. A chief artery. **P. cervi′cis (arte′ria),** cervical artery; branch of the occipital artery which descends between the splenius and complexus muscles, and may be followed down to the lower part of the neck. **P. pol′licis (arte′ria),** when the two collateral arteries of the thumb take origin from a common trunk, the trunk is the princeps pollicis.

**Prince's feath′er.** Amaranthus hypochondriacus. **P.'s pine,** Chimaphila umbellata.

**Prin′cipal fo′ci.** Two points in every refractory system. **P. planes of space** consist of the median plane, the main horizontal, and frontal planes of space. **P. points,** see *Cardinal*.

**Princip′ium** (*princeps*, first). First attack of a disease; element; principle.

**Prin′ciple** (*princeps*, first). Element; principium. **Act′ive p.,** an alkaloid or glucoside present in a crude drug, upon which its therapeutic action mainly depends. **Imme′diate, organ′ic,** or **prox′imate p.,** one of a considerable number of substances composed of at least three elements, obtained from animals and vegetables without alteration by simple processes, which unite in forming more complex compounds; such are the albumins, gelatins, fats, etc. **Vi′tal p.,** see *Vital*. **Zymot′ic p.,** see *Enzymes* and *Ferments*.

**Pringle′a antiscorbu′tica.** Plant of order *Cruciferæ*, native of Kerguelen's Land; has antiscorbutic properties.

**Pri′nos.** Ilex aquifolium. **P. gla′ber,** see *P. lævigatus*. **P. grono′vii,** prinos. **P. læviga′tus** smooth winterberry, and **P. gla′ber,** inkberry, indigenous, have the same properties as prinos. **P. padifo′lius,** prinos. **P. verticilla′ta,** black alder, Virginia or whorled winterberry, feverbush; ord. *Aquifoliaceæ;* bark of this common shrub of the United States—*prinos*—is astringent, bitter, and pungent. Berries are likewise bitter. Bark has been used as a substitute for cinchona in intermittents and as a tonic; dose of the fluid extract, ♏x–xxx (0.65–2.0).

**Pri′or.** First, foremost. **P. annula′ris,** internal interosseous muscle, arising from the outside of the metacarpal bone of the ring finger, and inserted into the outside of the tendon on the back of the ring finger; it draws the ring finger outward. **P. in′dicis,** arises from the outer or radial side of the metacarpal bone of the forefinger, and is inserted into the outside of the tendon on the back of the forefinger. It draws the finger outward toward the thumb. **P. in′dicis pe′dis,** external interosseous muscle of the foot; arises from the contiguous sides of the metatarsal bones of the great and foretoes, and is inserted into the inside of the root of the first bone of the foretoe. It pulls the foretoe inward. **P. me′dii,** prior medii digiti. **P. me′dii dig′iti,** second interosseous of Douglas; external interosseous muscle of the hand; arises from the corresponding sides of the metacarpal bones of the fore and middle fingers, and is inserted into the outside of the tendon on the back of the middle finger. It draws the middle finger outward. **P. me′dii dig′iti pe′dis,** internal interosseous muscle of the foot; arises from the inside of the metarsal bone of the middle toe, and is inserted into the inside of the root of the first bone of the middle toe. Pulls the middle toe inward or toward the inner side of the foot. **P. min′imi dig′iti,** internal interosseous muscle of the foot; originates from the inside of the metatarsal bone of the little toe, and is inserted into the inside of the foot of the first bone of the little toe. It pulls the middle toe inward. **P. ter′tii dig′iti pe′dis,** internal interosseous muscle of the foot; arises from the inner and under part of the metatarsal bone of the third of the small toes, and is inserted into the side of the root of the first bone of the third of the small toes. It pulls the third of the small toes inward.

**Prism.** A solid the sides of which are parallelograms and the bases parallel and equal surfaces. A triangular prism of glass or other transparent medium breaks up a ray of white light traversing it into its component colors, producing the spectrum. **Achromat′ic p.,** a compound p. which deflects the ray of light without decomposing it into its constituent colors. **Com′pound p.,** one made of two substances of unequal refractive powers, such as crown and flint glass. **Enam′el p.,** histological elements of the tooth enamel having the form of wavy prisms. **Nic′ol p.,** see *Nicol*.

**Prismat′ic.** Decomposed or separated by a prism. **P. anal′ysis,** spectrum analysis.

**Prisoptom′eter.** Prismatic instrument for determining ametropia.

**Pri′vates.** Genital organs.

**Priv′et.** Ligustrum vulgare.

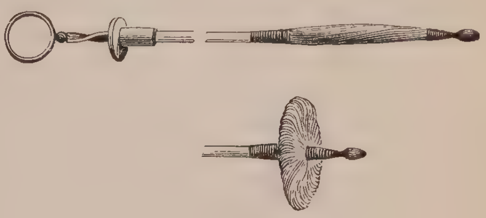
**Priv′y.** Ligustrum vulgare. **P. mem′bers,** genital organs. **P. parts,** genital organs.

**P. r. n.** Abbreviation for pro re nata. Phrase added to prescriptions, signifying "according as the indications may arise."

**Pro-** (for, before). Common prefix to words, and meaning for or before.

**Proam′nion.** Primitive amnion of the fetal enclosure around the head, which is followed later by the definitive amnion.

**Pro′bang.** Long, slender rod of whalebone, with a piece of sponge or other material at its extremity, intended to push down extraneous bodies, arrested in the œsophagus, into the stomach. Another kind is made with an insertion of bristles or horse-hair; this is passed down below the point of arrest, and the ends of the bristles are then approximated, forming an expansion by which the foreign body can be swept upward upon the withdrawal of the probang.



Bristle probang.

**Proba′tionary.** Term applied in hospital construction to a ward in which patients are kept apart, until the contagious character of the disease is satisfactorily determined, if such exists.

**Probe** (*probo*, to try). To catheterize. A slender, flexible pencil used for exploration of wounds, sinuses, and cavities. **Anel's′ p.,** see *Anel*. **Bow′man's p.,** see *Bowman*. **Elec′tric p.,** p. provided with two insulated wires, which when a bullet is touched are brought into the electric circuit. **Eyed p.,** see *Specillum*. **Len′te's p.,** see *Lente*. **Lil′ienthal's p.,** see *Lilienthal*. **Nélaton's′ p.,** porcelain sound for detecting a bullet, the latter making a mark when touched by the porcelain tip of the probe. **U′terine p.**, uterine sound. **Ver′tebrated p.**, a probe made of separate pieces, jointed so as to give great flexibility.

**Pro′bing.** Act of introducing a probe.

**Procar′dium.** Pit of the stomach; scrobiculus cordis.

**Proce′dure.** Process.

**Proceph′alus.** A fœtus whose head is so large as to render labor difficult.

**Pro′cerus na′si.** Pyramidalis nasi.

**Pro′cess** (*procedo*, to go forward). Apophysis; processus. Procedure; method of performing any operation. See also *Processus*. **Acro′mion p., Alve′olar p., Au′ditory p.**, etc., see the qualifying words.

**Proces′sus.** Process. An apophysis or eminence of a bone. See *Apophysis*. Also any part which seems prolonged beyond others with which it is connected, as the ciliary processes. **P. abdomina′lis os′sis il′ii**, broad part of the ilium. **P. accesso′rius**, accessory process of the lumbar vertebræ. **P. a. spu′rius**, embryonic transverse process of the sacrum. **P. acromia′lis**, acromion process. **P. acu′tus hel′icis**, crus or process of helix. **P. alæfor′mis**, alar ligament. **P. ala′ris**, alar process. **P. alifor′mes**, pterygoid processes. **P. anconæ′us**, olecranon. **P. annula′ris**, pons Varolii. **P. anon′ymus**, jugular tubercle. **P. ante′rior mal′lei**, p. gracilis malleus. **P. arcifor′mis**, arciform fibre. **P. ascen′dens**, upper jaw-bone. **P. ascenden′tis**, superior articular process of vertebra. **P. az′ygos**, rostrum of the sphenoid bone. **P. basila′ris**, delicate process of bone from the posterior portion of the body of the sphenoid, and forming a part of the lateral wall of the inferior petrosal sinus. **P. belenoi′dis**, styloid p., see *Belenoid*. **P. Blumenbach′ii**, unciform process. **P. bre′vis incu′dis**, short process of the incus. **P. b. mal′lei**, short process on the malleus to which the tensor tympani is attached. **P. bul′bi olfacto′rii**, filaments of the olfactory nerve. **P. calcari′nus**, bony extension of the septum narium. **P. cartilagin′ei**, sesamoid cartilaginous nodules in the cartilaginous portion of the Eustachian tube. **P. cartilagin′eus hel′icis**, process of the helix. **P. cauda′tus**, lobulus caudatus. **P. cerebel′li ad cer′ebrum**, superior peduncles of the cerebellum. **P. c. ad medul′lam oblonga′tam**, inferior peduncle of the cerebellum. **P. c. ad pon′tem**, middle peduncle of the cerebellum. **P. c. ad tes′tes**, superior peduncle of the cerebellum. **P. e cerebel′lo ad medul′lam oblonga′tam**, inferior peduncle of the cerebellum; corpus restiforme. **P. e c. ad pon′tem**, middle peduncle of the cerebellum. **P. e c. ad tes′tes**, superior peduncle of the cerebellum. **P. cer′ebri latera′lis**, hippocampus major; cornu Ammonis. **P. c. ma′jor**, falx cerebri. **P. cilia′ris**, ciliary process. **P. clava′tus**, enlargement of the funiculus at the calamus scriptorius. **P. clinoi′dei**, clinoid process. **P. cochlea′ris**, cochleariform process; see *Tympanum*. **P. costa′rii**, transverse process of lumbar vertebra. **P. cricoide′us**, slight eminence on the inferior border of the thyroid cartilage. **P. crucia′tus**, crucial appearance of tentorium, falx cerebelli, and falx cerebri, near the internal occipital protuberance. **P. cubita′lis**, lower and articular extremity of the humerus. **P. cuneifor′mis**, unciform process. **P. c. os′sis occip′itis**, basilar process. **P. denta′lis**, alveolar process. **P. denta′tus**, odontoid process. **P. descen′dens**, process of the rectovesical fascia, between the rectum and bladder; inferior articular process of a vertebra. **P. du′ræ ma′tris**, falx cerebri and tentorium. **P. ensifor′mis**, lesser wing of the sphenoid; see *Sternum*. **P. enteroide′i cer′ebri**, cerebral convolutions. **P. excep′tus**, inferior articular process of a lumbar vertebra. **P. excipien′tes**, superior articular process of a lumbar vertebra. **P. falcifor′mis cerebel′li**, falx cerebelli. **P. f. du′ræ ma′tris**, falx cerebri. **P. f. ma′jor**, falx cerebri. **P. f. mi′nor**, falx cerebelli. **P. folia′ceus**, process of the ethmoid bone projecting into the frontal cells. **P. folia′nus** or **Fo′lii**, p. gracilis of the malleus. **P. fronta′lis**, nasal process; frontal process; see *Maxillary bone, superior*. **P. frontosphenoida′lis**, frontal process. **P. glot′tidis**, projection of the arytenoid cartilage for the attachment of the vocal cord. **P. grac′ilis mal′lei**, delicate process of bone from the body of the malleus inserted in the Glaserian fissure; see *Malleus*. **P. hama′tus**, unciform process. **P. hel′icis** or **hel′icis cauda′tus**, a tail-like process at the posterior and inferior extremity of the helix. **P. horizonta′lis incu′di**, short process of the incus. **P. incisu′ræ trigem′ini**, occasional projections on the side of the impression for the Gasserian ganglion, at the apex of the petrous portion of the temporal bone. **P. infe′rior**, a wedge-like plate from the tegmen tympani to the internal extremity of the Glaserian fissure. **P. i. incu′di**, long process of the incus. **P. inframalleola′ris**, ridge between the grooves for the peroneal muscles on the exterior of the calcaneum. **P. of Ingras′sias**, lesser ring of the sphenoid bone. **P. innomina′tus**, jugular tubercle. **P. inter′nus calca′nei**, sustentaculum tali. **P. intrajugula′ris**, spine passing across the jugular foramen from the petrous portion of the temporal bone, or even from the occipital bone. **P. juga′lis**, malar process; zygoma; external angular process. **P. jugula′ris accesso′rius** or **jugula′ris ante′rior**, prominence on the occipital bone, forming the anterior boundary of the jugular notch. **P. j. me′dius**, intrajugular process. **P. lacryma′lis**, nasal process. **P. l. ante′rior**, anterior lacrymal crest. **P. l. con′chæ inferio′ris**, lacrymal process. **P. latera′lis u′teri**, Fallopian tube. **P. latera′lis**, portion of the transverse process of a lumbar vertebra representing a rib. **P. l. calca′nei**, sustentaculum tali. **P. l. spu′rius**, occasional process above the outer condyle of the femur; eminence above the inner condyle of the femur for the insertion of the internal head of the gastrocnemius muscle. **P. lenticula′ris**, orbicularis bone. **P. lon′gus incu′dis**, long process of the incus. **P. l. mal′lei**, p. gracilis of malleus. **P. mala′ris**, zygoma; external angular process. **P. mammilla′ris**, mammillary tubercle of the cerebrum; olfactory nerve; papilla of the kidney. **P. m. os′sis tem′poris**, mastoid process. **P. m. vertebra′rum**, mammillary process. **P. margina′lis**, elevated ridge in the posterior border of the frontal process of the malar bone. **P. mastoide′us**, mastoid process. **P. maxilla′ris con′chæ inferio′ris**, maxillary process of the inferior turbinated bone. **P. m. os′sis zygomat′ici**, maxillary process of the malar bone. **P. muscula′res vertebra′rum**, secondary processes upon the vertebræ for the insertion of muscles. **P. muscula′ris**, muscular process. **P. nasa′lis**, maxillary process of the palate-bone; lacrymal process; nasal spine. **P. na′si**, pyramidalis nasi. **P. obli′quomammilla′res**, rudimentary articular processes of the vertebræ forming the sacrum. **P. obli′quus**, articular process. **P. obtu′sus**, short process of malleus. **P. occipita′lis**, basilar process. **P. occul′tus**, small, denticulate border of the upper orbital plate of the superior maxillary bone. **P. odontoide′us**, see *Axis*. **P. oliva′ris**, olivary process. **P. orbicula′ris**, orbicular bone. **P. o. cer′ebri**, infundibulum of the brain. **P. papilla′res** or **papilla′rum**, olfactory nerves. **P. paracondyloide′us** or **paramastoide′us**, paracondyloid process. **P. petro′sus anti′cus**, delicate, lamellated portion of the petrous portion of the temporal bone. **P. p. os′sis sphenoide′i me′dius**, basilar process. **P. p. poste′rior** or **supe′rior os′sis sphenoide′i**, posterior clinoid processes. **P. pneumat′icus**, process between the auricular process of the occipital and mastoid process of the temporal bone, consisting of cells in direct communication with the cells of the mastoid process which contain air; any process which contains air. **P. ad pon′tem**, middle peduncle of the cerebellum. **P. pri′mus**, handle of the malleus. **P. pyramida′lis**, pyramidal process of the palate-bone; pyramid of the thyroid. **P. Rav′ii**, p. gracilis of malleus. **P. rhachidia′nus**, spinal cord. **P. rostrifor′mis**, coracoid process. **P. Sömmering′ii**, marginal process. **P. spelæ′us**, process of the ethmoid bone projecting into the sphenoidal sinuses. **P. sphenoida′lis**, prolongation from the posterior inferior angle of the cartilage of the septum narium. **P. sphe′nomaxilla′ris**, occasional projection of the lower extremity of the anterior border of the great wing of the sphenoid. **P. spino′sus mal′lei**, p. longus of malleus. **P. s. sphenoida′lis**, spine of the sphenoid. **P. ster′ni xiphoi′des**, xiphoid process. **P. sulca′tus**, process of the palate-bone uniting the orbital and sphenoidal processes. **P. supe′rior incu′dis**, short process of the incus. **P. supracondyloide′us fem′oris latera′lis**, occasional process above the outer condyle of the femur. **P. s. f. media′lis**, eminence above the inner condyle of the femur for the insertion of the internal head of the gastrocnemius muscle. **P. s. hu′meri**, occasional unciform process above the inner condyle of the humerus. **P. ta′li exter′nus**, prominence for the reception of the articular facet of the astragalus. **P. t. inter′nus**, process at the posterior internal aspect of the astragalus. **P. tegmen′ti tym′pani pro′prius**, plate-like portion of the tegmen covering the cavities of the ear. **P. tempora′lis**, occasional process of the frontal bone articulating with the temporal. **P. tere′tes**, two slightly convex bodies forming the anterior wall or floor of the fourth ventricle of the brain; they are separated by a longitudinal groove continuous, inferiorly, with the sulcus longitudinalis posterior of the spinal cord; they are crossed transversely by several white and gray fasciculi—*lineæ transversæ, striæ medullares*—the origin of the auditory nerves. **P. ad tes′tes**, see *Valvula Vieussenii.* **P. transver′sus accesso′rius**, accessory process of a lumbar vertebra. **P. t. du′ræ ma′tris**, tentorium. **P. t. occipita′lis**, jugular process. **P. trochlearifor′mis**, processus cochleariformis. **P. trochlea′ris**, groove in a bone for a tendon. **P. t. calca′nei**, p. inframalleolaris. **P. tuba′rius**, projection from the internal pterygoid plate of the sphenoid, on which the cartilaginous portion of the Eustachian tube rests. **P. tuberosita′tis navicula′ris**, process from the tuberosity of the scaphoid bone of the foot. **P. tym′pani**, tegmen or roof of the tympanum. **P. uncifor′mis**, coracoid process. **P. uncina′tus**, uncinate process; unciform process; olecranon. **P. u. mi′nor**, lamina of the ethmoid bone covering the lacrymal or maxillary cells. **P. u′vifer**, uvula. **P. vagina′lis**, projection of the male embryonic cavity to form the cavity of the scrotum; see *Gubernaculum testis.* **P. v. fas′ciæ transver′sæ**, infundibuliform fascia. **P. ventric′uli**, duodenum. **P. vermifor′mis**, vermiform appendix. **P. voca′lis**, projection of the arytenoid cartilage for the attachment of the vocal cord. **P. v. ante′rior**, slight protrusion on the internal surface of the thyroid cartilage, to which the vocal cords are attached. **P. ad vo′merem**, vaginal process of the sphenoid. **P. vo′merosphenoida′lis**, sphenoidal process. **P. xiphoi′des**, ensiform process. **P. xi′phosterna′lis**, ensiform cartilage. **P. zygomat′ico-orbita′lis**, malar process. **P. zygomat′icus**, zygoma; malar process; external angular process.

**Procheil′on** or **Procheilid′ion** (*pro*, before, *cheilos*, a lip). The extreme projecting part or margin of the lips, or a similar portion of the labia.

**Prochore′sis** (going forward). Activity of motion of the stomach.

**Prociden′tia.** Prolapsus. **P. a′ni**, proctocele. **P. intesti′ni rec′ti**, proctocele. **P. ir′idis**, ptosis iridis. **P. oc′uli**, exophthalmia. **P. se′dis**, proctocele. **P. testic′uli tubulo′rum**, hernia testis. **P. u′teri**, prolapsus uteri.

**Procne′mium** (*pro*, before, *kneme*, leg). Tibia.

**Procœ′lia.** Lateral ventricles.

**Procœ′lius** (*pro*, before, *koilia*, belly). One who has a large, pendulous abdomen.

**Procœ′lous** (*koilos*, hollow). Having a concavity anteriorly.

**Procon′dylos** (*kondylos*, a condyle). The first joint of the fingers; the second being called condylos; the third, metacondylos.

**Procrea′tion.** Fecundation; generation.

**Proctag′ra** (*proktos*, anus, *agra*, seizure). Proctalgia.

**Proctal′gia** (*proctos*, anus, *algos*, pain). Pain in the anus; generally symptomatic of disease, as hemorrhoids, scirrhus, etc. **P. hæmorrhoida′lis**, hemorrhoids. **P. inflammato′ria**, rectitis. **P. intertrigino′sa**, chafing in the vicinity of the anus. **P. rheumat′ica**, rheumatism of the anus.

**Proctatre′sia** (*proctos*, anus, *atresia*, imperforation). Imperforate state of the anus.

**Proctec′tomy** (*proctos*, anus, *ektome*, excision). Excision of portion of the rectum.

**Proctenclei′sis** or **Procten′clisis** (*proctos*, anus, *enkleio*, to lock up). Constriction of the anus.

**Procteuryn′ter** (*proctos*, anus, *euryno*, to make broad). Instrument for dilating the anus.

**Procthæmorrha′gia.** Hemorrhage from the anus.

**Proc′tica** (*proctos*, anus). Pain or derangement around the anus, without primary inflammation. **P. exa′nia**, proctocele. **P. maris′ca**, hemorrhoids. **P. sim′plex**, proctalgia. **P. tenes′mus**, tenesmus.

**Procti′tis.** Inflammation of the anus and rectum. **P. gangræno′sa**, proctocace.

**Proctocace**, prok-tok′a-se (*proktos*, rectum, *kakos*, evil). Disease of the rectum, said to be common in Peru near Lima, on the Honduras and Mosquito coasts, in Brazil, etc. It is called by the Portuguese *bicho* and *bicho di Culo;* by the people of Quito, *mal del valle*, from its prevalence in the valleys; and in Africa, *bitios de kis.* An adynamic, inflammatory condition, frequently ending in gangrene. It has been attributed to bad food and the use of spices.

**Proc′tocele** (*proktos*, rectum, *kele*, hernia). Inversion and prolapse of the mucous coat of the rectum, from relaxation of the sphincter, with more or less swelling.

**Proctococcypex′ia** or **Proctococ′cypexy** (*proktos*, rectum, *coccyx*, *pexis*, fastening). Operation of attaching the rectum to the coccyx by suture.

**Proctocolonos′copy** (*skopeo*, to see). Examination of interior of rectum and colon.

**Proctocystot′omy** (*proctos*, anus, *kystis*, bladder, *tome*, section). Cystoproctotomy.

**Proctodæ′um** (*proctos*, anus, *hodos*, way). Posterior part of alimentary canal in embryo.

**Proctodyn′ia** (*odyne*, pain). Pain in the anus or rectum.

**Proctome′nia.** Vicarious menstruation by the rectum.

**Procton′cus** (*onkos*, swelling). Tumor of the anus.

**Proctoparal′ysis.** Paralysis of the anus or rectum.

**Proctopex′ia** or **Proc′topexy** (*proktos*, rectum, *pexis*, fixation). Operation of fastening the rectum to another part by sutures.

**Proc′toplasty.** Plastic operation upon the anus.

**Proctople′gia** (*plege*, stroke). Proctoparalysis.

**Proctopto′ma** (*ptoma*, fall). Proctocele.

**Proctopto′sis** (*ptosis*, falling). Proctocele.

**Proctorrha′gia.** Hemorrhoidal flux.

**Proctor′rhaphy** (*proctos*, anus, *rhaphe*, suture). Suture of the anus and rectum in operations for lacerated perineum.

**Proctorrhœ′a.** Discharge of mucus from the anus.

**Proctoscir′rhus.** Scirrhus of the anus.

**Proc′toscope.** Instrument for exploring or examining the rectum.

**Proctos′copy.** Visual inspection of the rectum.

**Proc′tospasm.** Tenesmus.

**Proctosteno′sis** (*stenos*, narrow). Stricture of the rectum.

**Proc′totome** (*proktos*, rectum, *tome*, incision). Instrument for dividing rectal stricture.

**Proctot′omy.** Division of a stricture of the rectum or anus, or of an anal fistula.

**Proctotoreu′sis** (*proctos*, anus, *toreuo*, to perforate). Cutting through an imperforate anus.

**Procum′bent** (*procumbo,* to lie down flat). Prostrate with the head forward.

**Procur′sive** (*curro,* to run). Having a tendency to run or go forward, as *p. epilepsy.*

**Prodigio′sus toxin′.** Toxin derived from cultures of Bacillus prodigiosus, and employed in sarcoma.

**Prodro′mata** (assumed pl. of a non-existent word, *prodroma*). Prodromes.

**Pro′drome.** Symptom in anticipation of disease.

**Prodrom′ic, Prod′romal,** or **Prod′romous.** Relating or belonging to the invasion of a disease.

**Prod′romus** (*pro,* before, *dromos,* course). Prodrome; anticipatory symptom of a disease.

**Produc′tion.** Act of producing; the thing produced.

**Produc′tive.** Formative, especially of new tissue.

**Prœ′lum.** Press; tourniquet; see *Prelum.*

**Proem′inent** (*pro,* forward, *emineo,* to project). Term applied to the seventh cervical vertebra on account of the length of its spinous process, which projects beyond the others.

**Proenceph′alus** (*pro, enkephalos,* encephalon). Monster whose encephalon is situated, in a great measure, outside the anterior portion of the cranium, which is open in the frontal region.

**Proen′zymes.** Zymogens or ferment producers.

**Profes′sional neuro′sis.** Neurosis due to continuous use of certain groups of muscles, as seen in writers' cramp, etc.

**Profe′ta's law.** Children born healthy, whose parents are syphilitic, are not necessarily liable to infection from the disease.

**Pro′file line.** Line for measuring the general facial contour.

**Proflu′vii cor′tex.** Nerium antidysentericum.

**Proflu′vium** (*profluo,* to flow forth). Flux, discharge. A term under which—in the plural, *profluvia*—some nosologists have comprised all discharges or fluxes; others, increased excretions attended by fever.

**Profun′da** (fem. of profundus). Deep (*arteria,* understood). **P. bra′chii,** p. humeri. **P. cer′ebri,** posterior cerebral artery. **P. cervi′cis,** posterior cervical artery, branch of the subclavian. **P. clitor′idis,** cavernous artery of the clitoris, a branch of the internal pudic. **P. fem′oris,** this large branch arises commonly from the posterior part of the crural, between the pubis and lesser trochanter. It descends deeply, situated before the abductors, passes through the third abductor above the opening in it for the trunk of the femoral, and terminates in the short portion of the biceps. The muscularis profunda gives off the external circumflex, the internal circumflex, and the three perforantes. **P. hu′meri,** origin variable. When it arises from the brachial artery it is given off opposite the groove of the humerus destined for the radial nerve, and descends backward between the three portions of the triceps, accompanied by the nerve, giving branches to that muscle and to the humerus. When it reaches the posterior part of the bone it divides into two branches, which are distributed to the triceps, supinator longus, etc. **P. infe′rior** is often a branch of the last, but commonly is given off from the brachial, near the middle of the arm; gives off branches to the muscles, etc., about the inner side of the os humeri; also called large communicating ulnar or profundo-ulnar. **P. lin′guæ,** ranine artery. **P. mi′nor,** p. inferior. **P. pe′nis,** the cavernous artery which arises from the artery of the penis, furnished by the internal pudic. **P. supe′rior,** profunda humeri. **P. vein,** distribution similar to that of the femoris profunda arteria. **P. vo′læ,** deep ulnar artery, deep palmar arch.

**Profundis′sima** (sup. of profunda) **il′ii.** An arterial branch from the deep gluteal to the hip-joint.

**Profun′dus** (*pro,* forth, *fundus,* bottom, having a deep base). Name given to different parts which are seated deeply as regards others. Certain muscles are distinguished by the names profound, or deep-seated, and superficial. Thus we speak of the superficial and deep-seated muscles of the neck, etc.; the flexor profundus perforans, etc.

**Profu′sion** (*pro,* forth, *fundo,* to pour). Pouring out, shedding; see *Hemorrhage.* Abundance.

**Progas′ter** (*pro,* forward, *gaster,* belly). Having a pendulous belly.

**Prog′eny,** proj′en-e (*progigno,* to bring forth). Offspring.

**Proglos′sis** (*pro,* for, *glossa,* tongue). The extremity or tip of the tongue.

**Proglot′tis** (pl. proglot′tides). Each segment, separate joint, or sexual zooid of a tapeworm.

**Prog′nathism.** Condition of being prognathous.

**Prog′nathous** (*pro,* forward, *gnathos,* jaw). Having a projecting jaw. Term applied to the form of the head in which there is a forward extension of the jaw, as in the negro.

**Prognose′.** To form a prognosis.

**Progno′sis** (*pro,* before, *gnosis,* knowledge). Judgment formed by the physician regarding the future progress and termination of any disease. **Gen′eral p.,** opinion formed of a disease in the abstract; thus, the general prognosis of tonsillitis is favorable; of yellow fever unfavorable. **Partic′ular p.,** opinion formed of any particular case of disease. The particular or special prognosis of one case of pneumonia may be favorable, while that of another may be unfavorable.

**Prognos′tic.** Relating to prognosis.

**Prognos′ticate.** To form a prognosis.

**Progres′sion** (*pro,* forward, *gradior,* to step). Augmentation. Forward movement or advance.

**Progres′sive.** Advancing, growing continually worse or better. **P. bul′bar paral′ysis,** paralysis of the tongue, lips, and pharynx. **P. mus′cular at′rophy,** see *Atrophy.* **P. paral′ysis,** general paralysis of the insane.

**Proio′tia** (*proi,* early). Premature development of sexual power.

**Projec′tion.** Image or figure resulting from an impression on the sensorium. **P. sys′tems of Mey′nert,** arrangement of apparatus by means of which the impressions of the exterior surroundings are projected upon consciousness.

**Projec′tor ure′thræ.** Levator prostatæ muscle.

**Prola′bial.** Relating to the prolabium.

**Prola′bium** (*pro,* before, *labium,* lip). Procheilon; vermilion border of the lip.

**Prolapse′.** Prolapsus.

**Prolap′sus** (*prolabor,* to slip down). Protrusion; a falling down. Falling down of a part through the orifice with which it is naturally connected. **P. a′ni,** proctocele. **P. bul′bi oc′uli,** exophthalmia. **P. cor′neæ,** staphyloma of the cornea. **P. ir′idis,** iridauxesis, staphyloma iridis, and ptosis iridis. **P. lin′guæ,** glossocele, paraglossa. **Morgagn′i's p.,** see *Morgagni.* **P. œsoph′agi,** pharyngocele. **P. of the o′vary,** prolapse of ovary. **P. pal′pebræ,** blepharoptosis. **P. pharyn′gis,** pharyngocele. **P. umbili′ci,** exomphalus. **P. u′teri,** a falling down of the uterus, owing to relaxation of the parts about the utero-vaginal region. The horizontal position must be insisted upon, and the injection of astringent substances per vaginam. If the affection be not remedied by these means a pessary may be employed as a palliative, or the operation of episiorraphy performed. Some use the term *procidentia uteri* for a less degree than prolapsus—*relaxatio uteri* expressing the slightest state of all. Prolapsus uteri without inversion has been termed *orthysteroptoma* and *orthysteroptosis.* **P. u′vulæ,** staphylœdema. **P. vagi′næ,** protrusion of the upper part of the vagina into the lower; this, like the descent of the uterus, may be relaxation, procidentia, prolapsus, or complete inversion. **P. vesi′cæ,** prolapsus of the bladder into the urethra.

**Prolecta′tion** (*prolecto,* to entice). Action of separating the finer parts of a body from the grosser.

**Prolep′sis.** Prognosis. Anticipation.

**Prolep′tic.** Anticipating or returning before the proper time. Prognostic.

**Prolep'tics** (*pro*, before, *lambano*, to seize hold of). The art and science of predicting in medicine.

**Pro'les** (*proles*, offspring). Progeny.

**Pro'licide** (*proles*, offspring, *cædo*, to kill). Destruction of offspring; fœticide as well as infanticide.

**Prolif'erate.** To reproduce similar parts, to bud.

**Prolifera'tion** (*proles*, offspring, *fero*, to carry). Growing by the multiplication of similar elemental parts. See *Cytogeny.*

**Prolif'erous.** Characterized by proliferation.

**Prolif'ic** (*proles*, offspring, *facio*, to make). That which has the faculty of engendering; applied to man and animals, and to their sperm or seed. Fruitful.

**Proligerous**, pro-lij'er-us (*proles*, offspring, *gero*, to carry). That which is connected with carrying the offspring. **P. disk** or **lay'er**, germ disk or hill; granular layer, situated generally toward the most prominent part of the ovarian vesicle, in the centre of which the true ovum or ovule exists.

**Prometo'pis** (*pro*, before, *metopon*, forehead). The skin of the forehead in which are wrinkles.

**Prominen'tia** (*promineo*, to jut out). Protuberance. **P. annula'ris cer'ebri**, pons Varolii. **P. cana'lis facia'lis**, prominence of the aqueduct of Fallopius on the inner wall of the tympanum. **P. cor'neæ**, see *Ceratocele.* **P. laryn'gis**, pomum Adami. **P. os'sis contin'ua**, apophysis.

**Prominen'tiæ** (pl. of prominentia) **albican'tes.** Mammillary tubercles. **P. semiöva'les medul'læ oblonga'tæ**, corpora olivaria. **P. tuba'ria pharyn'gis**, prominence at the opening of the Eustachian tube into the pharynx.

**Prom'ontory** (*pro*, forward, *mons*, mountain). Small projection at the inner wall of the cavity of the tympanum, corresponding to the external scala of the cochlea, and especially to the outer side of the vestibule. **P. of sa'crum**, see *Sacrum.*

**Pro'nate.** To turn the hand with the palm downward.

**Prona'tion** (*pronus*, inclined forward). Anatomists understand by pronation the motion by which the inferior extremity of the radius passes before the ulna, and thus causes the hand to execute a kind of rotation from without inward.

**Prona'toflex'or mass.** Mass of the pronator and flexor muscles at the median and palmar surface of the forearm.

**Prona'tor.** That which produces the motion of pronation. **P. obli'quus**, p. radii teres. **P. quadra'tus**, this muscle is situated deeply at the anterior and inferior part of the forearm, is flat and square, and is attached, within, to the inferior quarter of the anterior surface of the ulna, and without to the inferior quarter of the anterior surface of the radius. It produces the motion of pronation. **P. ra'dii te'res**, muscle seated at the upper and anterior part of the forearm; is long, flat, and larger above than below; is attached above to the inner tuberosity of the humerus and to the coronoid process of the ulna; thence it passes obliquely downward and outward, and terminates at the middle of the outer surface of the radius. It causes the radius to turn on the ulna, to produce the motion of pronation; can also bend the forearm on the arm, and conversely. **P. rotun'dus**, p. radii teres. **P te'res**, p. radii teres. **P. tib'iæ**, peroneotibialis.

**Prona'us** (*pro*, before, *naos*, temple). Vestibulum.

**Prone.** Lying on the abdomen, face downward.

**Proneph'ric duct.** Duct of the primordial or head kidney.

**Proneph'ron** or **Proneph'ros** (*pro*, *nephros*, kidney). Primordial or head kidney.

**Pronu'cleus.** Primitive nucleus of an ovum or spermatozoon. The female element is called the *female p.;* the male element is the *male p.* The two unite in impregnation to form the fertilized ovum.

**Pronuncia'tion** (*pronuncio*, to proclaim). Mode of articulating or giving accent or utterance to words.

**Proödon'tus** (*pro*, forward, *odous*, tooth). Term relating to skulls in which a line between the subnasal and alveolar points makes an angle of from 23° to 50° with the radius fixus.

**Proof spir'it.** A liquid containing 57 per cent. by volume, 49 per cent. by weight, of absolute alcohol; sp. gr. 0.920; made by mixing 5 volumes of alcohol, sp. gr. 0.838, with 3 volumes of distilled water.

**Proö'tic** (*ous*, *otos*, ear). In front of the ear or of the otic ganglion. **P. cen'tre**, a centre of ossification starting over the superior semicircular canal, and constituting the superior portion of the petrous and mastoid portions of the temporal bone.

**Proöva'rium.** See *Parovarium.*

**Prop cells, Hen'sen's.** The outer layer of the organ of Corti consists of the outer hair cells and cylindroid epithelial cells, which last have received this name.

**Propaga'tion** (*propago*, to multiply). Reproduction; increase.

**Propal'inal** (*pro*, before, *palin*, backward). Backward and forward.

**Propath'ia** or **Prop'athy** (*pro*, *pathos*, disease). Prodrome.

**Prop'enyl.** Glyceryl. Allyl alcohol. **P. hy'drate,** glycerin.

**Propep'sin.** Zymogen already existing in cell-granules convertible into pepsin; pepsinogen.

**Propep'tone.** Result of digestion in the stomach and pancreas; same as hemialbumose.

**Propeptonu'ria** (*ouron*, urine). Excretion of propeptone in the urine

**Properitone'al.** Anterior to the peritoneum.

**Prop'erty** (*proprius*, proper). That which belongs distinctively to a thing. Characteristic. Faculty.

**Proph'asis** (*prophaino*, to announce). Cause, especially remote cause. Prognosis.

**Prophetin'.** Bitter principle derived from Cucumis prophetarum and Ecballium elaterium.

**Prophthal'mus** (*pro*, forward, *ophthalmos*, eye). Exophthalmus.

**Prophylac'tic** (*phylasso*, to defend). Preservative or preventive. **P. med'icine,** hygiene.

**Prophylax'is.** Preventive treatment.

**Pro'pion.** Diethylketone, hypnotic in doses of gr. x–xxx (0.65–2.0); sedative in doses of gr. vij–x (0.5–0.65).

**Propion'ic acid** (*pion*, fat). Monobasic liquid organic acid. $C_3H_6O_2$. Found in sweat, chyme, and as a result of alcoholic fermentation.

**Proplex'us.** Choroid plexus of the lateral ventricles of the brain.

**Propodial'ia** (*propodon*, before the feet). Proximal segment of the humerus and tibialis.

**Prop'olis** (*pro*, before, *polis*, city; literally, that which is before the city). Bee-bread or bee-glue. Red, resinous matter with an odor like storax, with which the bees cover the bottom of the hive. Has been employed in simple mucous diarrhœa and dysentery; smelling of it has been esteemed antiasthmatic.

**Pro'pons.** Ponticulus.

**Propor'tion.** Symmetry.

**Pro'prius au'ris exter'næ.** Retrahens auris.

**Propto'ma** (*pro*, forward, *pipto*, to fall). Prolapsus. **P. auricula'rum**, flap ear; lobe of the ear broad, loose, and pendent from birth. **P. scro'ti**, relaxation of the scrotum.

**Propto'sis** (*pro*, forward, *ptosis*, falling down). Prolapsus. **P. öc'uli**, exophthalmia. **P. pal'pebræ**, blepharoptosis. **P. u'vulæ**, staphylœdema.

**Propul'sion** (*pello*, to drive). Act of pushing forward. Inclination to push the body forward, even to falling, as in paralysis agitans.

**Pro'pyl.** Radical of propylic acid.

**Propylam'ine.** $C_3H_7NH_2$. Occurs in Chenopodium vulvaria, in the flowers of Cratægus oxyacantha, the fruit of Sorbus aucuparia, in Secale cornutum, herring pickle, cod-liver oil, urine, etc., and in cultures of bacteria from human fæces on gelatin. Two forms of this substance are known, both having ammoniacal and fish-like odor. Propylamine has been used in acute and chronic rheumatism, but its virtues have been greatly exaggerated. The chloride and iodide have been given in like cases.

**Prop'ylene.** $C_3H_6$. Gaseous substance; a hydrocarbon.

**Pro'ra.** Occiput.

**Pror'sad.** Toward the anterior part.

**Prosarthro'sis.** Diarthrosis.

**Prosco'lex** (*pro*, before, *scolex*, worm). First embryonic stage of scolex after leaving the egg.

**Prosec'tion.** Anatomy.

**Prosec'tor** (*pro*, before, *seco*, to cut). Dissector. One who dissects cadavers for anatomical lectures.

**Prosencephal'ic arch.** Neural arch of frontal vertebra.

**Prosenceph'alon** (*pros*, before, *encephalos*, brain). Forebrain. One of the principal secondary divisions of the primordial medullary tube. From it are developed the cerebral hemispheres, corpus callosum, corpora striata, fornix, lateral ventricles, and olfactory nerve.

**Pros'ocœle.** Common ventricle of the prosencephalon.

**Pros'odos** (*pros*, before, *hodos*, a way). Entrance to a canal or duct.

**Prosogas'ter.** Foregut.

**Prosopal'gia** (*prosopon*, face, *algos*, pain). Facial neuralgia.

**Prosopantri'tis.** Inflammation of the frontal sinuses.

**Prosopan'trum** (*prosopon*, face, *antron*, cavity). Frontal sinus.

**Prosopecta'sia** (*prosopon*, face, *ektasis*, enlargement). Enlargement of the face due to disease.

**Proso'pis dul'cis.** Large tree, ord. *Leguminosæ;* native of Peru; fruit—*pacay*—is a pod from 20 to 24 inches long, containing black seeds imbedded in a white, soft, flaky substance, which last is eaten.

**Prosopodid'ymus** (*prosopon*, face, *didymos*, twin). Diprosopus.

**Prosopodyn'ia** (*odyne*, pain). Facial neuralgia.

**Prosopol'ogy** (*prosopon*, face, *logos*, discourse). Physiognomy.

**Prosoponeural'gia.** Facial neuralgia.

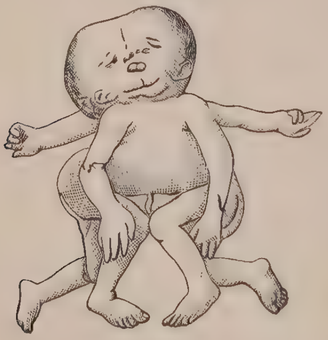
**Prosopoparal'ysis** (*prosopon*, face). Bell's palsy.

**Prosoposchisis**, pros-o-pos'kis-is (*prosopon*, face, *schisis*, fissure). Congenital unilateral fissure of the face.

**Pros'opospasm** (*prosopon*, face). Risus sardonicus.

**Prosoposternodym'ia** (*prosopon*, face, *sternum*, *didymos*, twin). Double monster joined by face and sternum; a form of cephalosomatodymia.

**Prosopothoracop'agus.** Thoracopagus with coalescence of head, chest, and abdomen.



Prosopothoracopagus.

**Prosopoto'cia** (*prosopon*, face, *tokos*, parturition). Labor with face presentation.

**Prosoproso'pus** (*proso*, forward, *prosopon*, face). Name given to skulls in which the line from nasion to alveolar point forms an angle of from 66.5° to 78° with the radius fixus (Lissauer).

**Prosorrhi'nus** (*proso*, forward, *rhis*, nose). Name given to skulls in which the line drawn from nasion to subnasal point makes with the radius fixus an angle of from 66.5° to 77° (Lissauer).

**Prosothoracop'agus.** Double monster fused anteriorly at the chest.

**Prosta'den** (*aden*, gland). Prostate gland. Extract of the prostate gland, used. in doses of 30 grains daily, in diseases of that gland.

**Pros'tata.** Prostate. **P. adenoi'des**, prostate. **P. Bartholi'ni**, Cowper's glands in the female. **P. glan'dula**, prostate. **P. mulie'bris**, Cowper's glands in the female. **P. sicca'ta**, dried prostate gland of cattle, used therapeutically in hypertrophy of the prostate gland.

**Pros'tatal.** Prostatic.

**Prostatal'gia** (*algos*, pain). Pain in the prostate.

**Prostataux'e** (*auxe*, increase). Enlargement of the prostate.

**Pros'tate** (*pro*, before, *istemi*, to stand). Prostate gland. Glandular, cordiform body, the size of a chestnut, situated before the neck of the bladder, behind the symphysis pubis, and surrounding the first portion of the urethra. Its excretory outlets, to the number of 10 or 12, open into the part of the urethra that traverses it, and pour into it a whitish, viscid humor—*liquor prostaticus*—intended to lubricate the interior of the urethra and to serve as a vehicle for the sperm in its ejaculation. It is usually described as consisting of three lobes, two *lateral*, and one *middle* fitted in between them on the under side, and lying beneath the neck of the bladder and the immediately adjacent part of the urethra. This is the lobus medius, caruncula or tuberculum Morgagnii, isthmus prostatæ, lobus pathologicus or inferior. **Ante'rior p.**, see *Cowper's glands*.

**Prostatec'tomy** (*ektome*, cutting out). Excision of more or less of the prostate gland

**Prostatelco'sis** or **Prostathelco'sis** (*helkos*, ulcer). Ulceration of the prostate.

**Prostat'ic.** Belonging or relating to the prostate. **P. bisec'tor**, an instrument at one time used in bilateral lithotomy; resembling a large olive, with a beak at the extremity, cutting edges at the sides parallel to its longest axis, and with a straight handle. **P. liq'uor**, the fluid secreted by the prostate, which mixes with the sperm during emission. **P. mus'cles**, the *superior prostatic muscles* pass from the pubis to the lateral parts of the prostate; the *inferior prostatic muscles* are fleshy fibres which, from the lateral parts of the urethra, near its membranous portion, pass to be inserted into the pubis. **P. plex'us of nerves**, continuation of pelvic plexus anteriorly between the prostate and levator ani. **P. plex'us of veins**, pudendal plexus. **P. por'tion of the ure'thra**, the part of the canal of the urethra included by the prostate; about 15 lines long. **P. si'nus**, see *Sinus*.

**Prostat'icus inter'nus.** Superior transverse fibres of the ischio-urethralis. **P. supe'rior**, compressor prostatæ.

**Pros'tatism.** Depressed nervous state induced by prostatic disease.

**Prostati'tis.** Inflammation of the prostate.

**Prostat'ocele** (*kele*, tumor). Tumor of the prostate.

**Prostatocysti'tis** (*kystis*, bladder). Inflammation of the prostate and bladder.

**Prostatol'ithus** (*lithos*, stone). Prostatic calculus.

**Prostat'omy.** Prostatotomy.

**Prostaton'cus** (*onkos*, tumor). Swelling of the prostate.

**Prostatoparec'tasis** (*parekteino*, to extend). Enlargement of the prostate, *prostatauxe;* also induration of the same, *prostatoscirrhus*.

**Prostatorrhœ'a** (*rheo*, to flow). Morbidly increased discharge from the prostate.

**Prostatoscir'rhus.** Enlargement with induration of the prostate.

**Prostatot'omy** (*tome*, incision). Incision into the prostate.

**Prostatovesiculi'tis.** Inflammation of the prostate and seminal vesicles.

**Proster′num** (*pro*, before, *sternum*). Manubrium.

**Prosthenceph′alon** (*prosthen*, in front). Part of the brain comprising the oblongata and cerebellum.

**Pros′theon.** Central point on the anterior surface of the upper alveolar arch; alveolar point.

**Pros′thesis** (*pros*, to, *tithemi*, to put). Addition; application. Supplying of a missing part of the human body by artificial means. Sometimes written *prothesis*.

**Pros′theta.** Medicines introduced into some one of the natural cavities.

**Prosthet′ic.** Relating to prosthesis. **P. appara′tus**, a wooden leg, glass eye, false tooth, etc.

**Prosthet′ics.** The science of the adaptation of artificial substitutes for missing parts of the body.

**Pros′thion.** Alveolar point; prostheon.

**Prostitu′tion.** Submitting to promiscuous sexual intercourse for pay. In many countries of Europe prostitution is a matter of public hygiene, the prostitutes being regularly examined medically, and licensed. In Great Britain and in this country, as a general rule, it is not subjected to any regulation.

**Prosto′mia** (*stoma*, mouth). The commissure of the lips.

**Prostra′tion** (*pro*, before, *sterno*, to throw down). Great depression of strength; almost total loss of power over the muscles of locomotion. **Ner′vous p.**, neurasthenia.

**Pro′tagon.** A crystalline, nitrogenous proximate principle obtained from brain substance, and also present in the spleen, pus, spermatozoa, and the stroma of red blood corpuscles.

**Protal′bumose.** Protoalbumose.

**Protam′ine.** $C_{16}H_{32}N_9O_4$. Base from spermatozoa. Amorphous base found in salmon-spawn in combination with nuclein.

**Protar′gol.** A yellow, soluble powder, silver albumose, in which there is 8 per cent. of silver. Used in wounds and in gonorrhœa, in solutions of ½ to 3 per cent. It is not caustic or irritating. Much stronger solutions may be painted on external surfaces when their use is indicated.

**Pro′tea mellif′era.** A South African plant, ord. *Proteaceæ*, whose involucra and flowers contain a great deal of honey. By inspissation it forms a delicious syrup, *syrupus proteus*, which is much used in pulmonary affections. *P. lepidocarpon* and some other proteæ supply the same kind of juice.

**Pro′tean.** Assuming different forms.

**Protec′tive.** Affording protection or immunity. **P. dress′ing**, carbolized oiled silk used in antiseptic surgery, placed over the wound to exclude bacteria. **P. pro′teid**, an alexin, socin, or phylaxin; a proteid within the organism protecting it against bacteria and their derivatives; substance having the power of destroying microorganisms, and therefore regarded as an important preventive or curative agent, when its microbicidal properties can be successfully applied; present naturally in the interior of the body or introduced through artificial channels, as by inoculation.

**Pro′teic.** Proteinous. **P. sub′stances**, proteids.

**Proteid**, pro′te-id. In the classification of aliments, such as are made up of albumin, casein, gluten, and their allies, and gelatin, and which contain carbon, hydrogen, oxygen, and nitrogen, and some of them sulphur and phosphorus, have been called by Kirkes *proteids*. **Bacte′rial p.**, albuminous, peptonoid, or other substance formed by the fermentative action of germs. **B. cell′ular p.**, similar substance forming an integral part of the bacterial cells. **Defen′sive p.**, see *Protective*. **Float′ing p.**, a proteid circulating in the body and finally excreted without having entered into the constitution of any of the tissues. **Protec′tive p.**, see *Protective*.

**Pro′teiform.** Protean.

**Protein′** (*proteia*, first rank or place). An obsolescent term for the product of the decomposition of albumin, etc., by potassa. Proteid.

**Proteina′ceous** or **Proteinous**, pro′te-in-ous. Composed of or containing protein.

**Proteol′ysis** (*lysis*, dissolving). Change brought about in proteids during digestion.

**Proteolyt′ic.** Capable of causing proteolysis or digestion of proteids.

**Proteo′ses.** Substances resulting from hydration of proteids by the enzymes of digestion or mineral acids, and changed into peptones by continued digestion. They are named, from their source, caseoses, globuloses, albumoses, etc.

**Pro′teus.** Genus of *Schizomycetes*, forming cocci and rods. **P. capsula′tus sep′ticus**, Bacillus hominis capsulatus. **P. fluores′cens**, Bacillus proteus fluorescens. **P. haus′eri**, see *Kedani disease*. **P. hom′inis**, Bacillus anthracis. **P. hom′inis capsula′tus**, Bacillus hominis capsulatus; B. capsulatus septicus. **P. of Karlin′ski**, Bacillus murisepticus pleomorphus. **P. letha′lis**, Bacillus lethalis; B. proteus lethalis. **P. mirab′ilis**, Bacillus mirabilis; B. proteus. **P. sep′ticus**, Bacillus septicus; B. proteus septicus. **P. sulfu′reus**, Bacillus sulfureus. **P. s. of Holochenikoff′**, Bacillus vulgaris. **P. vulga′ris** (Hauser), Bacillus proteus; B. vulgaris. **P. zenk′eri**, Bacillus zenkeri; B. proteus.

**Proth′esis.** Prosthesis.

**Prothet′ic.** Prosthetic.

**Prothrom′bin.** Fibrinogen. See *Thrombin*.

**Prothym′ia** (*thymos*, mind). Quickness of intellect.

**Protis′ta** (*protistos*, the very first). According to Haeckel, unicellular organisms between the animal and vegetable; first forms of living matter.

**Proto-** (*protos*, first). In composition, first.

**Protoal′bumose.** Form of albumose, soluble in water, and convertible into deuteroalbumose and peptone.

**Pro′toblast** (*blastos*, germ). Protoplasm.

**Protoca′seose.** First product formed in digestion of casein.

**Protocatechu′ic acid.** $C_7H_6O_4$. An acid occasionally noticed in the urine.

**Protochlo′ride.** When there are two or more chlorides of the same base, the one having the least amount of chlorine is the protochloride.

**Protococ′cus denta′lis.** A fungus occurring in connection with vegetable decay or caries of the teeth.

**Pro′tocone.** Anterior internal cusp of an upper molar tooth.

**Protoco′nid.** Anterior internal cusp of a lower molar tooth.

**Protoco′nule.** Anterior intermediate cusp of an upper molar tooth.

**Pro′todont.** Simple molar tooth in which the cusps are not well defined.

**Protoëlas′tose.** Primary product of elastin by cleavage.

**Protog′ala** (*protos*, first, *gala*, milk). Colostrum.

**Protogas′ter** (*protos*, first, *gaster*, stomach). Rudimentary alimentary canal of the embryo.

**Pro′togens.** Albuminoid substances produced by the action of formaldehyde on serum or egg-albumen. When heated in watery solution they do not coagulate. They are dietary articles, and may be given by the rectum as well as by the mouth.

**Protoglob′ulose.** Product of globulin, formed by action of gastric juice.

**Protoï′odide.** When there are two or more iodides of the same base, the one containing the smallest amount of iodine is the protiodide or protoiodide.

**Protom′eter.** Instrument for measuring the degree of forward projection of the eyeball.

**Protomy′osinose.** Primary product formed in digestion of myosin with gastric juice, convertible into deuteromyosinose by further action of pepsin.

**Pro′ton.** The earliest germ or rudiment of an organ. Primary or original nature or disposition.

**Protoneph′rium** (*protos*, first, *nephros*, kidney.) Corpus wolffianum.

**Protoni′trate.** When there are two or more nitrates of the same base, this term is applied to the one which contains the smallest amount of the nitric acid radical.

**Protonu′clein.** $C_{29}H_{49}N_{10}P_5O_{32}$. A constitutional remedial agent prepared from the lymphoid tissues of animals.

**Protoör′ganism.** Microorganism, protophyte or protozoon; also one of unknown nature, whether animal or vegetable; one of the protista.

**Protopath′ia** (*protos*, first, *pathos*, affection). Idiopathia.

**Protopath′ic** (*pathos* disease). Idiopathic.

**Protopep′sia** (*protos*, first, *pepsis*, digestion). Primary digestion occurring in the alimentary tract independent of the products of the walls of the intestine, the liver, or other organs.

**Pro′tophyte** (*protos*, first, *phyton*, plant). Vegetable production at the foot of the scale, as a cryptogamous plant—a fungus. Various diseases have been ascribed to the reception of protophytes into the blood.

**Protopine′.** $C_{20}H_{19}NO_5$. Alkaloid derived from the poppy and one or two other plants of same order; similar to cryptopine.

**Protopla′sis.** First stage in formation of tissue. Formation of protoplasmic tissue.

**Pro′toplasm** (*protos*, first, *plasso*, to form). The blastema in the sense of cytoblastema; the cell-sap or cell-contents. Also the liquid contained in the cavities of vegetable cells, or in the embryonic cells, when the embryo has as yet no blood, which liquid is capable, like the liquor sanguinis, of furnishing materials for the origin of other anatomical elements.

**Protoplas′mic.** Relating to the protoplasm. **P. pro′cesses of Die′ters,** the thick-branched processes of the large centric ganglion cells.

**Pro′toplast** (*protos*, first, *plasso*, to form). Primary formation; first-formed organized body, the parent of all others.

**Protoplas′tic.** Protoplasmic.

**Protoplas′tin.** Basis of protoplasm.

**Protopro′teose.** Product of digestion of syntonin in the stomach. When still further digested it becomes deuteroproteose.

**Pro′tosalt.** When a metal combines with an acid in two or more proportions, that combination which contains the least metal is called the protosalt.

**Protoso′mite** (*protos*, first, *soma*, body). One of the primitive segments of an embryonic worm.

**Pro′tospasm.** Spasm commencing in a limited area and extending to other parts. If beginning in the arm, it is called *brachial p.;* if in the lower limb, *crural p.*

**Protosul′phate.** When there are two or more sulphates of the same base, the one having the smallest amount of the sulphuric acid radical is the protosulphate.

**Protosul′phide.** When there are two or more sulphides of the same base, the one containing the smallest amount of sulphur is the protosulphide.

**Protover′tebræ.** Primitive vertebræ in embryo.

**Protover′tebral col′umn** or **plate.** Column of cells situated along the medullary groove, from which the protovertebræ originate.

**Protovitel′lose.** Product of phytovitellin by the gastric juice, convertible into deuterovitellose when subjected to further action of pepsin and acid.

**Protox′ide.** That member of a series of oxides containing a single atom of oxygen combined with a single bivalent atom.

**Protox′oid.** See *Toxoid.*

**Protozo′on** (*protos*, first, *zoon*, animal). An animal lowest in the scale, as the infusoria, sponges, etc.

**Protrac′tor.** Name given to several muscles. Also a surgical instrument.

**Protracto′res an′guli o′ris.** Accessorii orbicularis oris.

**Pro′trahens len′tis** (*pro*, forward, *traho*, to draw). Ciliary muscle.

**Protropine′.** $C_{20}H_{19}NO_5$. Protopine; alkaloid derived from opium.

**Protru′sion** (*pro*, forward, *trudo*, to thrust). Prolapsus. Projection beyond the normal position, as of the jaw.

**Protru′sor.** Detrusor urinæ.

**Protryp′sin.** A substance derived from the spleen which can be converted into trypsin.

**Protu′berance** (*pro*, before, *tuber*, projection). Boss. Name given to rough, unequal projections seen at the surface of certain organs: parietal protuberances, for example. **An′nular p.,** pons Varolii. **Cer′ebral p.,** medulla oblongata; pons Varolli.

**Protuberan′tia.** Eminence; protuberance. **P. annula′ris Willis′ii,** pons Varolii. **P. basila′ris,** pons Varolii. **P. cylin′drica,** cornu ammonis.

**Proty′le** (*protos*, first, *yle*, matter). An hypothetical first principle, from which it has been assumed that all living matter springs.

**Proud flesh.** Fungous or exuberant granulations springing from an ulcer or a sluggish wound surface. **P. peo′ple,** term applied to the subjects of a peculiar anal reflex, who are thrown into uncontrollable hysterical paroxysms by the application of a finger to the anal region.

**Prove′.** To determine the therapeutic virtues of a drug (in homœopathic practice) by recording the symptoms and sensations observed after a definite quantity of the same has been ingested.

**Proventric′ulus.** Second stomach. Bulbous expansion at the termination of the œsophagus, of birds, immediately above the gizzard, the walls of which are thickly studded with glands or follicles which secrete a digestive fluid.

**Prover′sion** (*pro*, forward, *verto*, to turn). Anteversion.

**Prov′ing.** Testing a drug by homœopathic methods.

**Provi′sional.** Of temporary utility or application, as *provisional callus.*

**Provocato′rius** (*provoco*, to call forth). Intercalary.

**Prox′imad.** In a direction toward the trunk.

**Prox′imal** (*proximus*, next). Proximate, nearest, next. **P. as′pect,** aspect toward the trunk in the course of an extremity.

**Prox′imate.** Proximal, nearest, first. **P. prin′ciples,** see *Principles* and *Organic.*

**Pru′na.** Anthrax.

**Prune.** Prunum.

**Prune-juice expectora′tion** or **spu′ta.** Sputa resembling prune-juice occurring in grave cases of pneumonia and certain other pulmonary affections.

**Prunel′la.** Angina pectoris. Aphthæ. Cynanche. Pupil. **P. officina′lis,** self heal, healall, bugle; ord. *Labiatæ;* this plant has been recommended as an astringent in hemorrhages and fluxes, and also in gargles against aphthæ, and in inflammation of the fauces. **P. vulga′ris,** P. officinalis.

**Prunel′læ sal.** Potassæ nitras fusus sulphatis paucillo mixtus.

**Prunel′loe.** Prunum brignolense.

**Prune′ola sylves′tris.** Prunus spinosa.

**Pru′ni virgian′æ cor′tex.** (Ph. Br.) Wild cherry bark. See *Prunus virgiana.*

**Prunin′.** Cerasin.

**Pru′num.** Dried plum, prune. Three sorts of prunes have been usually ranked among the articles of the materia medica: 1. Prunum brignolense, Brignoli plum, or prunelloe, from Brignole, in Provence, is of a reddish-yellow color, and has a very grateful, sweet, subacid taste. 2. Prunum gallicum, French prune. 3. Prunum damascenum, damson. All these possess the same general properties as the other summer fruits, and are emollient and laxative. *Prunum* (Ph. U. S.) is the fruit of Prunus domestica, a gentle laxative. Under the name of *medicated prunes* a confection is made by adding prunes to concentrated infusion of senna, and evaporating with a gentle heat, adding sugar. **P. stella′tum,** Averrhoa carambola.

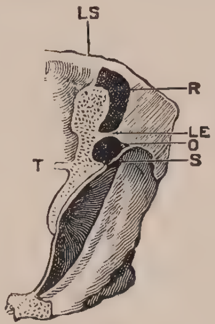
**Pru′nus aca′cia.** P. padus. **P. armeni′aca,** apricot; ord. *Rosaceæ;* the apricot, Melum armeniacum, when ripe, is easily digested, and considered a great delicacy. **P. a'vium,** black cherry tree; the fruit is eaten, and a gum exudes from the tree, the properties of which are like those of gum arabic. **P. capulin',** capuli, grows in the open fields of Peru; is cultivated in gardens in towns; fruit is acid, and not often eaten, but has an agreeable odor. **P. cer'asus,** red cherry tree; fruit, *cerasum,* has a pleasant, acidulous, sweet flavor; see *Prunus avium.* **P. cocomil'ia,** tree, native of Italy, where it is used as a febrifuge. **P. domes'tica,** plum or damson, the source of the official (Ph. U. S.) *prunum;* gently laxative. **P. horten'sis,** P. cerasus. **P. insit'ia,** Bullace plum tree; fruit of this tree is used like the damson. **P. laurocer'asus,** poison laurel, cherry laurel, common laurel; the leaves, *Laurocerasi folia,* have a bitter, styptic taste, with the flavor of bitter almonds; the powdered leaves applied to the nostrils excite sneezing; the flavor of the leaves has given occasion to their being employed in tarts, custards, etc., but in large quantities they are poisonous; the poisonous principle is prussic acid; the distilled water, *aqua laurocerasi,* cherry-laurel water, is official in the Ph. Br. **P. macrophyl'la,** P. avium. **P. pa'dus,** wild cluster or bird cherry tree; bark of the tree has a fragrant smell and a bitter, subastringent taste, somewhat similar to that of bitter almonds; has been recommended in intermittents, etc., in the form of decoction; berries have been used in dysentery. **P. sebeste'na,** sebestena. **P. seroti'na,** Cerasus serotina. **P. spino'sa,** sloe tree; the fruit—sloe—is sometimes employed in gargles, and was formerly much used in hemorrhage, owing to its astringent properties; the Acacia nostras, Pruneola sylvestris, is obtained from this. **P. sylves'tris,** P. avium, P. spinosa. **P. virginia'na,** choke cherry, wild cherry tree. P. virginiana (Ph. U. S.) is the bark of P. serotina, collected in the autumn. Bark of this tree has been found useful in intermittents; leaves are poisonous to certain animals, and the berries intoxicate different kinds of birds. The Indians use the bark in the cure of syphilis; it is bitter and astringent, and possesses some aromatic warmth, and likewise a sedative quality; is stimulant and tonic; the leaves and bark yield prussic acid. Distilled oil of the bark is very nearly identical with that of the bitter almond; a strong decoction of the bark is anthelmintic. The official preparations are: *Extrac'tum pru'ni virgian'æ flu'idum* (U. S.); dose, ʒss–j (2.0–4.0). *Infu'sum p. v.* (U. S.); dose, ℥ss–j (16.0–32.0). *Syr'upus p. v.* (U. S. and Br.); dose, ʒss–j (2.0–4.0). *Tinctu'ra p. v.* (Br.); dose, ʒss–j (2.0–4.0). **P. vulga'ris,** P. padus.

**Pruriginous,** pru-rij'in-us. Relating to or resembling prurigo; itching.

**Pruri'go** (*prurio,* to itch). The word is often used synonymously with itching. The term has been used for a genus of cutaneous diseases, the characteristic symptoms of which are a severe itching, accompanied by an eruption of papulæ of nearly the same color as the adjoining cuticle. It affects the whole surface of the skin, under several varieties of form—p. mitis, p. formicans, p. senilis, etc.—as well as some parts of the body, as p. ani or podicis, pruritus ani, and p. pudendi muliebris, pudendagra pruriens, pruritus vulvæ. **P. æstiva'lis,** summer p. **P. fe'rox,** an intense form, usually congenital, characterized by the presence of giant papules and enlarged lymph glands from irritation induced by the scratching. **He'bra's p.,** true idiopathic prurigo. **P. hiema'lis,** pruritus hiemalis. **Hutch'inson's p.,** p. occurring during dentition. **P. pedicula'ris,** phtheiriasis. **P. sim'plex,** a mild but persistently recurrent form of p. **Sum'mer p.,** hydroa vacciniforme.

**Pruri'tus** (*prurio,* to itch). Itching. **P. a'ni,** itching of the anus; usually a symptom of rectal or intestinal irritation, worms, constipation, etc.; symptoms may be relieved by external applications, but the cause must also be sought for and treated. **Duhr'ing's p.** or **P. hiema'lis,** winter itch. **P. seni'lis,** itching in the aged due to senile changes in the skin. **P. vul'væ,** itching of the vulva.

**Prus'sack's fi'bres.** Bands of fibres of elastic and connective tissue forming lateral boundaries of Shrapnell's membrane. **P.'s pouch,** small space in the attic of the middle ear. **P.'s space,** P.'s pouch.



Prussack's pouch, section through the tympanic membrane, malleus, upper and outer tympanic wall of a decalcified preparation. (Politzer.) LS, superior ligament of the malleus; LE, external ligament of the malleus; S, Shrapnell's membrane, or the membrana flaccida; O, Prussack's pouch; R, system of cavities between the body of the malleus and the incus and the external tympanic wall; T, tendon of the tensor tympani muscle.

**Prus'sian blue.** Ferrocyanide of iron. It is chiefly used in the preparation of hydrocyanic acid and the cyanide of mercury; has been advised in the treatment of intermittents and in epilepsy and scrofulosis.

**Prus'siate.** Cyanide.

**Prus'sic acid.** Hydrocyanic acid.

**Prus'sin.** Cyanogen.

**Psalid'ium** (*psalidion,* dim. of psalis). Fornix.

**Psalis,** sal'is (*psalis,* arch). Fornix.

**Psal'ter** or **Psalte'rium** (*psalterion,* dim. of *psalter,* a psaltery). Lyre. Omasum.

**Psam'ma.** Sand. See *Gravel.*

**Psammocarcino'ma** (*psammos,* sand + *carcinoma*). Carcinoma containing calcareous deposits.

**Psammo'ma** (*psammos,* sand). Tumor which consists of globular lime-concretions, or sand-bodies, corpora chalcedonica, limited to the choroid plexuses and the dura mater.

**Psammother'apy.** Therapeutic use of the sand-bath.

**Psam'mous** (*psammos,* sand). Sandy.

**Pselaph'ia** or **Pselaphe'sis** (*pselaphao,* to grope after). Carphalogia.

**Psel'lism** (*psellizo,* to stutter). Imperfect articulation; stammering; stuttering. **P. na'sitas,** speaking through the nose; a nasal voice.

**Pseudaca'cia odora'ta.** Robinia pseudacacia.

**Pseudaconine'.** $C_{27}H_{41}NO_8$. Amorphous alkaloid derived from pseudaconitine.

**Pseudaconitine'.** $C_{36}H_{49}NO_{11}$. Crystallizable alkaloid obtained from Aconitum ferox; very poisonous.

**Pseudac'orus.** Iris pseudacorus.

**Pseudacou'sis** or **Pseudacous'ma.** Subjective sensation of noise. Apparent change of pitch or quality of one's own voice.

**Pseudæsthe'sia** or **Pseudæsthe'sis** (*pseudes,* false, *aisthesis,* sensation). Imaginary sense of touch or general feeling in organs that have no existence; common to those who have suffered amputation. Subjective sensation with little or no stimulus to excite it.

**Pseuda'lius trichi'na.** Trichina spiralis.

**Pseudamne'sia** (*amnesia,* memory). False memory.

**Pseudaph'ia** (*haphe,* touch). Pseudæsthesia.

**Pseudarthri'tis.** Simulated or hysterical arthritis.

**Pseudarthro'sis** (*pseudes,* false, *arthron,* a joint). False joint or articulation.

**Pseu'delminth.** Anything resembling an intestinal worm.

**Pseudenceph'alus** (*pseudes,* false, *enkephalos,* brain). Paracephalus. Monster whose cranium is open in its whole extent, from before to behind, its base supporting a vascular tumor. The vertebræ may also be seriously implicated.

**Pseudino'ma** (*pseudes,* false, *is,* fibre). Phantom tumor.

**Pseudo-,** su'do (*pseudes,* false). As a prefix, false.

**Pseudoacromeg′aly.** Enlargement of the extremities that is not true acromegaly.

**Pseudoactinomyco′sis.** An affection, usually phthisis, in which the sputum contains bodies like actinomycosis grains.

**Pseudoæsthe′sia.** See *Pseudæsthesia*.

**Pseudoalbuminu′ria.** Cyclic albuminuria.

**Pseudoanæ′mia.** Great pallor unaccompanied by the blood changes of anæmia.

**Pseudoangi′na.** Hysterical or false angina pectoris, emotional in character, and not associated with cardiac disease.

**Pseudoap′oplexy.** A comatose or comatoid condition like that produced by apoplexy, but without effusion of blood or serum.

**Pseudoatax′ic.** Resembling locomotor ataxia in symptoms, but without the structural changes of that disease.

**Pseudoathero′ma.** Steatoma.

**Pseudobacte′ria.** Bacteria-like bodies; may be organic or inorganic.

**Pseudoblep′sia** or **Pseudoblep′sis** (*blepsis*, sight). False sight. Perversion or illusion of vision.

**Pseudobul′bar paral′ysis.** Disease resembling bulbar paralysis, but in reality due to a lesion of both cerebral hemispheres.

**Pseudocal′culi.** Coagulated blood, fibrin, etc., may assume such a shape as to resemble calculi and be mistaken for them.

**Pseudocarcino′ma la′bii.** Cancer aquaticus.

**Pseudocat′aract.** False cataract, when the obstacle to vision is between the capsule of the lens and the uvea.

**Pseudocerebrin′.** $C_{24}H_{92}NO_8$. Substance resulting from the chemical action of baryta on protagon.

**Pseudochala′zion.** Syphilitic or malignant affection of the conjunctiva resembling chalazion.

**Pseudochore′a.** Under this head—false chorea—may be included tic de salaam, chorea of the diaphragm, chorea of the larynx, etc.

**Pseudochromæsthe′sia.** Illusional perception of things seen, words or letters appearing of different colors.

**Pseudochro′mia.** Faulty perception of colors.

**Pseu′docœle** or **Pseudocœ′lia.** Fifth ventricle.

**Pseudocœliot′omy.** Simulation of operation of abdominal section.

**Pseudocol′loid.** Mucoid substance obtained from ovarian cysts.

**Pseudocolobo′ma.** A simulation of coloboma by a linear thinning of the iris, a highly pigmented streak, or a very slightly pigmented one.

**Pseudoc′risis.** A false crisis. In fevers, a sudden diminution of symptoms, followed by higher temperature and intensified symptoms.

**Pseudocroup′.** Asthma thymicum.

**Pseudocurarine′.** Alkaloid found in Nerium oleander.

**Pseudocye′sis** (*pseudes*, false, *kyesis*, pregnancy). False pregnancy. **P. mola′ris**, molar pregnancy.

**Pseudocyl′indroid.** A bit of mucus or other substance in the urine resembling a renal cast.

**Pseu′docyst.** A space in the substance of an organ or in the tissues resembling a cyst.

**Pseudodes′ma.** False ligament.

**Pseudodiphthe′ria.** Condition having symptoms like those of diphtheria, but not caused by the specific bacillus of that disease. **P. bacil′lus**, described by a number of observers as present in the pharyngeal secretions of different forms of sore throat, and even in apparently healthy throats.

**Pseudodiplococ′cus of pneumo′nia.** Streptococcus meningitidis. Found in exudate of persons dying of pneumonia and meningitis. Causes septicæmia, without enlargement of the spleen, in rabbits, mice, etc.

**Pseu′dodont** (*pseudes*, false, *odous*, tooth). Having structures resembling teeth, as in the monotremata.

**Pseudodonto′sis.** Formation of anomalous teeth.

**Pseudoencephali′tis.** Hydrencephaloid disease.

**Pseudoephedrine′.** Alkaloid in Ephedra antisyphilitica and E. vulgaris; hydrochloride is used in syphilis and rheumatism.

**Pseudoerysip′elas.** Diffuse phlegmonous inflammation of the skin, red and painful, with fever, and generally ending in suppuration.

**Pseudofi′brin.** Parafibrinogen.

**Pseudogan′glion.** False ganglion; thickening of a nerve. **P. of Boch′dalek**, enlargement of branch of the middle alveolar nerve. **P. of cir′cumflex nerve**, expansion of branch of the nerve which goes to the teres major. **P. of Cloquet** (kloka′), thickening of the palatine rami of the nasopalatine nerve. **Valen′tin's p.**, thickening at the junction of divisions of the middle alveolar ramus of the nervus maxillaris.

**Pseudogeusæsthe′sia.** Condition in which sensations of taste and color are mingled.

**Pseudogeu′sia** or **Pseudogeus′tia** (*pseudes*, false, *geusis*, taste). False taste.

**Pseudoglio′ma.** Condition like retinal glioma; purulent choroiditis, with considerable deposit of white color in the vitreous humor.

**Pseudogonococ′cus.** Microorganism like a gonococcus, said to have been found in the healthy urethra.

**Pseudogonorrhœ′a.** Simple urethritis.

**Pseudohel′minth.** Pseudelminth.

**Pseudohermaphrod′itism.** Condition in which the reproductive glands of one sex are present, usually those of the male, with other portions of the genital apparatus mixed or intermediate. See *Hermaphrodite*.

**Pseudoher′nia.** Empty hernial sac, which when inflamed resembles, in its symptoms, strangulated hernia.

**Pseudohydropho′bia.** Convulsive actions, of a hysterical kind, in one who thinks he has been bitten by a mad dog. Lyssophobia.

**Pseudohyoscyamine′.** Alkaloid in Duboisia myoporoides. Used in mania and hysteria. Hypodermic dose, gr. $\frac{1}{20}$–$\frac{1}{10}$ (0.0032–0.0065).

**Pseudohypertroph′ic mus′cular dys′trophy, paral′ysis, or pal′sy.** See *Paralysis, pseudohypertrophic*.

**Pseudohyper′trophy.** Enlargement without increase of substance. *Pseudohypertrophy of the muscles* is not associated with any lesion of the central or peripheral nervous system, but is a marked atrophy of the muscles in young persons, which is hidden by a decided increase in adipose or fibrous tissue.

**Pseudo-il′eus.** Ileus simulated by intestinal paralysis.

**Pseudo-isochromat′ic.** Apparently of the same color, yet actually of different colors.

**Pseudojaun′dice.** Hæmatogenous jaundice not associated with hepatic disease.

**Pseudojervine′.** Alkaloid obtained from white hellebore.

**Pseudoleucocythæ′mia** or **Pseudoleukæ′mia.** Hodgkin's disease.

**Pseudoli′en** (*pseudes*, false, *lien*, spleen). Enlarged glands situated in the neighborhood of the spleen.

**Pseudolipo′ma.** An œdematous swelling resembling a fatty tumor.

**Pseudolu′pus.** A skin affection resembling lupus, but not tuberculous in nature.

**Pseudomam′ma.** A structure resembling a breast sometimes found in dermoid tumors.

**Pseudoma′nia.** Hysterical form of insanity in which an innocent person accuses himself of a crime he did not commit.

**Pseudomechoaca′na.** Convolvulus panduratus.

**Pseudomelano′sis** (*melas*, black). Post-mortem patches, black or greenish-black, seen in the intestinal canal and peritoneum, due to combination of hydrogen sulphide with hæmosiderin.

**Pseudomelanot′ic forma′tion.** See *Anthracosis*.

**Pseudomem′brane.** False membrane.

**Pseudomem′branous.** Relating to or marked by the presence of false membranes.

**Pseudomeningi'tis.** Functional disturbance of the brain with symptoms resembling those of meningitis.

**Pseudomenstrua'tion.** Flow of blood from the uterus, resembling the menstrual flow, but due to a pathological cause.

**Pseudomorphine'.** $C_{17}H_{19}NO_4$. An alkaloid of opium, seldom used medicinally.

**Pseudomor'phism.** Pseudomorphosis.

**Pseudomorpho'sis** (*morphosis*, shaping). Acquiring a form different from the normal.

**Pseudomu'cin.** Mucin-like substance in ovarian cysts.

**Pseudomyco'sis sarcin'ica.** Pulmonary disease in which the presence of Sarcina pulmonum in the sputa has been noted; believed to have been an accidental occurrence and of no pathogenic significance.

**Pseudomyxo'ma peritone'i.** Peritonitis arising from colloid contents of cysts of the ovaries.

**Pseudonar'cotism.** Nervous condition having the appearance of narcosis, sometimes met with at the menstrual periods or at the change of life.

**Pseudonavicel'la** (*navicella*, small boat). Embryonic shape of a gregarine.

**Pseudoneuro'ma.** A false neuroma; a heterologous neoplasm, such as fibroma, myxoma, glioma, sarcoma, etc., growing from a nerve.

**Pseudonu'clein.** A substance allied to nuclein, resulting from the digestion of nucleo-albumin with gastric juice.

**Pseudoœde'ma.** An œdema-like swelling, or a condition having the appearance of malignant œdema.

**Pseu'do-osteomala'cic pel'vis.** Pelvis triloba due to rickets.

**Pseudoparal'ysis.** Loss of power over the muscles without actual paralysis, due to pain, ataxia, or hysteria; dystaxia. **P. ag'itans,** paralysis agitans.

**Pseudopar'asite.** Pseudelminth. Ectoparasite. Facultative parasite.

**Pseudopar'esis.** A morbid condition resembling paresis; seems to be a form of general paresis, but is remediable, and is usually dependent on poisoning by alcohol or lead.

**Pseudopelletierine'.** Alkaloid discovered by Tanret in bark of pomegranate.

**Pseudopep'tone.** Ovomucoid. A mucoid substance obtained from albumen of egg.

**Pseudophleg'mon.** A condition resembling a furuncle, due to trophic nerve lesion.

**Pseudophlogo'sis ventric'uli.** Gastromalacia.

**Pseudophthi'sis.** Emaciation occasioned by other causes than organic lesion of the lungs.

**Pseudo'plasm** or **Pseudoplas'ma.** A false neoplasm or one which disappears spontaneously; also a malignant heterologous tumor.

**Pseudople'gia.** Hysterical paralysis.

**Pseudopleuri'tis.** Pleurodynia.

**Pseudopneumo'nia.** Bronchitis with pleurodynia.

**Pseudopo'dial.** Relating to or having the characters of pseudopodium.

**Pseudopo'dium** (*pseudes*, false, *pous*, foot). Protrusion of protoplasm in an amœba by which locomotion and prehension are effected.

**Pseudop'sia** (*opsis*, vision). Pseudoblepsia.

**Pseudopterygium,** su-do-ter-ij'e-um. A condition having the appearance of pterygium, but dependent on bands of cicatricial tissue.

**Pseudora'bies.** A disease resembling rabies; generally called lyssophobia or paralytic hydrophobia.

**Pseudor'rhaphe** (*rhaphe*, suture). False suture, as the transverse fissure running into the lambdoidal suture on each side.

**Pseudorrhon'cus** (*rhonchos*, rattle). Râle heard during respiration which appears to be produced like the ordinary râle in the air-tubes, but is exterior to them—as in the case of pleural pseudorrhonchi.

**Pseudoscarlati'na.** Eruptive scarlatiniform fever met with after surgical operations, etc.

**Pseudosclero'sis.** Disease with the symptoms of spinal sclerosis, but without the anatomical lesions of this affection.

**Pseudoscop'ic** (*skopeo*, to view). Conveying false impressions to the eye, as when projecting surfaces are seen depressed and conversely.

**Pseudos'mia** (*osme*, smell). False perception of odors.

**Pseudosphre'sia** (*osphresis*, smell). Pseudosmia.

**Pseu'dospleen.** See *Pseudolien.*

**Pseudosto'mata** (*stoma*, mouth). Apparent openings on the surface of a serous membrane. Apparent communications between cells seen in stained sections.

**Pseudosyph'ilis.** A term applied to an affection marked by the presence of ulcers and other lesions resembling those of syphilis, but yielding readily to simple treatment or subsiding spontaneously.

**Pseudota'bes.** Disease simulating tabes dorsalis or tabes mesenterica.

**Pseudotoxin'.** Extractive from belladonna.

**Pseudotrichino'sis.** Variety of acute parenchymatous polymyositis, in which the muscles generally are inflamed, but not dependent on the presence of Trichina spiralis.

**Pseudotropine'.** Exists in hyoscine in combination with tropic acid.

**Pseudotuberculo'sis.** Condition having the appearance and symptoms of tuberculosis, but not caused by the Bacillus tuberculosis. See *Paratuberculosis.* Also disease of rabbits, caused by zoöglœa-forming bacillus; hence called zoöglœic tuberculosis, and produced in them by the Bacillus pseudotuberculosis. Also disease produced in other animals by the Bacillus pseudotuberculosis murium, Streptothrix cuniculi, S. eppingeri, and S. farcinica.

**Pseudovari'ola.** Varicella.

**Pseudoxanthin'.** Leucomain found in fresh beef. Also a substance isomeric with xanthin obtained from uric acid.

**Pseu'dymen.** False membrane.

**Psid'ium pomif'erum.** Guava, guayava; ord. *Myrtaceæ.* This plant and *P. pyriferum* bear fruits; those of the former like apples, of the latter like pears. The apple kind has an acid flavor, the other is sweet. They are somewhat astringent, and this quality exists in every part of the tree, and abundantly in the leaf-buds, which are occasionally boiled with barley and licorice as a drink in diarrhœa. Simple decoction of the leaves is said to be useful in itch and most cutaneous eruptions.

**Psilo'sis** (*psilos*, bare or barren). Depilation. Falling out of the hair, as in alopecia and madarosis. Also a chronic disease of Asia and Africa, in which the lining membrane of the whole alimentary canal is ulcerated and otherwise involved, as manifested by sore mouth, diarrhœa, pale, yeasty evacuations, and emaciation, with often a fatal result.

**Psilo'thrum.** Bryonia alba. Depilatory.

**Psilot'ic.** Belonging to or affected with psilosis.

**Psimythion,** sim-ith'e-on (*psimythion*). Plumbi subcarbonas.

**Psimyth'us.** Plumbi subcarbonas.

**Psittacosis,** sit-a-ko'sis (*psittakos*, a parrot). Infectious disease of parrots, which may be communicated to man as a dangerous form of pneumonia.

**Psoad'ic.** Relating to the loins or psoas muscles.

**Psoadot'omy.** Incision into the psoas muscles.

**Pso'æ.** Psoas muscles. See *Psoas.*

**Pso'as** (so'as) (*psoa*, loins) **ab'scess.** Lumbar abscess. **P. mag'nus,** muscle seated on the lateral parts of the lumbar portion of the vertebral column, and passing down to the superior and anterior part of the thigh. It is long, fusiform, and attached above to the body and transverse processes of the first four lumbar vertebræ and last dorsal. Below, it terminates by a very thick tendon, common to it and the iliacus muscle, which is inserted into the top of the lesser trochanter. This muscle bends the thigh upon the pelvis and carries it in rotation outward. It may also bend the pelvis on the thigh and the loins on the pelvis. It acts considerably in standing and progression. **P. par'vus,** muscle situated anteriorly to the last; is long, thin, flat, and narrow, and is attached, above, to the body of the last dorsal vertebra, and, below, to the linea ileopectinea, by means of a slender tendon which furnishes two expansions—one to the iliac aponeurosis, and the other to the pelvis. This muscle bends the vertebral column on the pelvis and, reciprocally, the pelvis on the vertebral column.

**Psod′ymus** (*psoa*, loins, *didymos*, twin). A double monster fused in the lumbar region.

**Psoï′tis.** Inflammation of the psoas muscles and of the parts anterior to the lumbar vertebræ; accompanied from its commencement by considerable fever, and violent pains in the affected part and in the thigh of the same side, which remains commonly half bent. Psoitis may terminate by suppuration, and form a lumbar abscess.

**Psolon′cus** (*psole*, penis, *onkos*, tumor). Swelling of the glans or of the penis generally.

**Psora**, so′rah (*psoo*, to rub or scratch). Itch, scratch, scabies. Also psoriasis. **P. a′gria**, psoriasis inveterata. **P. ebrio′rum**, drunkards' itch, an eruption, attended by afflicting itching, to which elderly people who have been much addicted to drinking alcoholic liquors are liable. **P. lepro′sa**, psoriasis. **P. squamo′sa**, psoriasis.

**Psoral′ea.** A genus of leguminous herbs. **P. eglandulo′sa**, see *P. glandulosa*. **P. esculen′ta**, breadroot, Indian turnip, resembling the beet in shape, which is found near the Rocky Mountains; it contains a white pulpy substance, which is sweet and palatable. **P. glandulo′sa**, shrub used in Chile as a vulnerary; see *Ilex paraguensis*. A leguminous plant called *Psoralea eglandulosa*, *P. mellitotoides*, growing in Ohio, Illinois, and southern Virginia, is a gently stimulant tonic. **P. mellitotoi′des**, see *P. glandulosa*. **P. pentaphyl′la**, Mexican contrayerva; root is similar to the contrayerva in its medical properties, which are, however, unimportant.

**Psorelco′ma** (*helkoma*, ulcer). Scabious ulcer.

**Psorelco′sis.** Ulceration occurring in scabies.

**Psorente′ria, Psorenteri′tis,** or **Psoren′tery** (*psora*, mange, *enteron*, intestine). A peculiar condition of the solitary glands, in which they become smaller, yellowish, and prominent, the ileum appearing as if speckled with grains of sago.

**Psori′asic.** Relating to, caused by, or affected with psoriasis.

**Psori′asis.** Scaly tetter, dry scale, dry scall. A cutaneous affection, consisting of patches of rough, amorphous scales, continuous or of indeterminate outline; the skin is often chappy. Psoriasis occurs under a considerable variety of forms. The surface under the scales is more tender and irritable than in lepra, which psoriasis in some respects resembles. There are many recognized varieties of psoriasis, the chief of which are *psoriasis guttata; p. diffusa*, one form of which is the bakers' itch, *psoriasis pistorum* or *pistoris*, and another the washerwoman's scall or itch, *p. lotricum; p. gyrata; p. inveterata* or *psora agria*. **P. annula′ris** or **circina′ta**, p. extending to the periphery and disappearing in the centre. **Buc′cal p.**, disease of the mucous membrane of the mouth, marked by the presence of white or whitish spots. **P. diffu′sa**, form of psoriasis in which there is involvement of large areas of skin. **P. figura′ta**, p. in which coalescence and extension of the patches produce fantastic figures. **P. follicula′ris**, p. involving chiefly the coil glands and hair follicles. **P. gutta′ta**, p. in which the scales are about the size of a drop of water. **P. gyra′ta**, p. figurata. **P. infanti′lis**, infantile psoriasis affecting young infants. **P. nummula′ris**, p. in patches resembling coin. **P. orbicula′ris**, p. circinata. **P. palma′ris**, p. involving the palms of the hands. **P. puncta′ta**, p. in the early stage; eruptions are about the size of a pin-head. **P. rupioi′des**, lepra alphoides, with the scales heaped up to form crusts. **P. universa′lis**, p. occupying a large surface of the body.

**Psoriat′ic.** Psoriasic.

**Pso′ric.** Relating to or curative of psora or itch.

**Pso′roid** (*eidos*, resemblance). Resembling psora.

**Psorophthal′mia.** Ophthalmia tarsi. **P. neonato′rum**, ophthalmia purulenta infantum.

**Psorosperm**, so′ro-sperm (*psora*, canker, *speiro*, to sow). A protozoon of the order *Myxosporidia*.

**Psorosper′mia.** Rainey's capsules, corpuscles, or bodies; small, oval, transparent bodies, the spores of psorosperms.

**Psorospermo′sis.** A disease associated with the presence of psorosperms. **Cuta′neous p.** (Cajal), Paget's disease. **P. follicula′ris**, cutaneous affection in which papules are scattered over the whole body, associated with the presence of unicellular parasitic organisms belonging to the animal kingdom.

**Pso′rous.** Relating to or affected with the itch.

**Psorozo′on.** Psorosperm; sporozoon.

**Psychal**, si′kal. Psychical.

**Psychalgia**, si-kal′je-ah (*psyche*, mind, *algos*, pain). Painful mental feeling in melancholia; mind-pain.

**Psychasthe′nia** (*psyche*, mind, *astheneia*, weakness). Mental weakness or fatigue.

**Psyche**, si′ke. The mind; the breath.

**Psychi′ater.** One who treats diseases of the mind, alienist.

**Psychiat′ria** (*psyche*, mind, *iatreia*, healing). Treatment of diseases of the mind.

**Psychiat′ric.** Relating to the treatment of diseases of the mind.

**Psychiat′rics** or **Psychi′atry.** Psychiatria.

**Psychiatrist**, sik-i′at-rist. Psychiater.

**Psy′chic** or **Psychical**, si′ke-kal (*psyche*, mind). Relating to the mind or mental endowments. Psychological is not infrequently used with the like signification. **P. blind′ness**, mind-blindness. **P. cells**, the cortical brain cells. **P. conta′gion**, contagion by imitation, the cause of epidemics of the dancing mania of the middle ages, and of other widespread nervous affections. **P. deaf′ness**, mind-deafness. **P. med′icine**, includes the history, pathology, treatment, etc., of mental affections. **P. pal′sy** or **paral′ysis**, hysterical palsy. **P. ver′tigo**, the impulse experienced at times, in looking down from a great height, to throw one's self into the abyss.

**Psychlamp′sia.** Mania, so named under the view that it is a form of mental chorea.

**Psycho-** (*psyche*, mind, soul). In composition, the mind, the soul.

**Psychoco′ma.** Stupor of mind.

**Psychocor′tical.** Relating to the portion of the cortex cerebri controlling the operations of the mind. **P. cen′tre**, brain-centre having control over mental operations.

**Psychogen′esis.** Origin and development of the mind.

**Psychokine′sia.** Impulsive form of insanity.

**Psycholog′ical.** Relating to psychology; psychic.

**Psychol′ogy** (*psyche*, mind, *logos*, discourse). Science of the mind, of the intellectual and moral faculties.

**Psychom′etry.** Measure of time and labor employed in mental operations.

**Psychomo′tor** (*psyche*, mind, *motor*, mover). Pertaining to such mental action as induces muscular contraction, or to the cortical nerve-centres which control voluntary movement. **P. cen′tres**, brain-centres immediately connected with voluntary movements. **P. nerve′-fibres**, nerve-fibres from the psychomotor centres to the place of apparent origin of the motor nerves.

**Psychoneuro′sis.** Mental disease.

**Psychonose′ma** (*psyche*, mind, *nosema*, disease). Psychosis.

**Psychonosol′ogy** (*psyche*, mind, *nosos*, disease, *logos*, description). Science of mental diseases.

**Psychopar′esis.** Mental weakness.

**Psychopath′ia** (*psyche*, mind, *pathos*, affection). Disease of the mind. **P. sexual′is**, perversion of the sexual instinct.

**Psychop′athist.** Psychiatrist; alienist.

**Psychopathol′ogy.** Psychonosology.

**Psychop′athy.** Mental disease.

**Psychophys′ical.** Relating to psychophysics. **P. law,** Fechner's law. **P. meth′ods,** methodical experiments for estimating small variations of sensation.

**Psychophys′ics.** Science of relation existing between physical stimuli and the sensations which they cause. The application of physical laws to the study of mental phenomena.

**Psychophysiol′ogy** (*psyche,* mind). Physical psychology. Mental physiology.

**Psy′choplasm.** Protyle.

**Psychople′gic** (*psyche,* mind, *plege,* stroke). Diminishing the excitability of the brain.

**Psychorrhagia,** si-ko-rhaj′e-ah (*psyche,* mind, *rhage,* rupture). Death agony.

**Psy′chorrhythm.** Varying mental conditions in the same individual.

**Psychosen′sory.** Relating to the subjective perception of an object which is not really present.

**Psychosin′.** Cerebroside found in brain tissue.

**Psycho′sis.** Psychopathy; disease of the mind.

**Psychotherapeu′tics.** Psychotherapy.

**Psychother′apy** (*psyche,* mind, *therapeuo,* to treat). Application of the influence of the mind on the body to the treatment of disease. Treatment by hypnotic suggestion.

**Psychot′ic** (*psychoo,* to animate). Restorative.

**Psychot′ria cro′cea.** Palicourea crocea. **P. emet′ica,** ipecacuanha.

**Psychot′rophum.** Betonica officinalis.

**Psychroæsthe′sia** (*psychros,* cold, *aisthesis,* sensation). A perversion of sensation, in which the body, although warm, feels cold.

**Psychroäl′gia** (*psychros,* cold, *algos,* pain). An exaggerated psychroæsthesia.

**Psychrom′eter** (*psychros,* cold, *metron,* measure). Instrument for determining the relative humidity of the atmosphere. Hygrometer.

**Psychrophil′ic** (*psychros,* cold, *phileo,* to love). Term applied to bacteria which develop at a low temperature, such as 0° C. to about 30° C. Water bacteria are an example.

**Psychropho′bia** (*psychros,* cold, *phobos,* fear). Excessive dread of cold, especially of cold water.

**Psychrophore,** si′kro-for (*psychros,* cold, *phoreo,* to carry). An apparatus for applying cold to the deep portions of the urethra or rectum, a double-action catheter being employed.

**Psychrother′apy** (*psychros,* cold, *therapeuo,* to cure). Application of cold to the treatment of disease.

**Psychtica,** sik′tik-ah (*psychros* cold). Refrigerants.

**Psydra′cia** (*psydrax,* small blister or pustule). Plural of psydracium. An obsolete term for a pustular, vesicular, or papular skin disease.

**Psydra′cium.** A pimple or vesicle. See *Psydracia.*

**Psyl′lium** or **P. erec′tum.** Plantago psyllium.

**Ptarmic,** tar′mik (*ptarmos,* sneezing). Causing sneezing.

**Ptar′mica.** Achillea ptarmica. **P. monta′na,** Arnica montana. **P. vulga′ris,** Achillea ptarmica.

**Ptarmicum,** tar′mik-um. Errhine; sternutatory.

**Ptarmus,** tar′mus. Sneezing.

**Ptelea,** tel′e-ah. Ulmus. **P. trifolia′ta,** shrubby trefoil, swamp dogwood, stinking ash, stinking prairie bush, wingseed, wafer ash, hop tree; indigenous; ord. *Xanthoxylaceæ.* Said to be possessed of antiperiodic virtues and to be anthelmintic.

**Pteleïn′.** A tonic remedy extracted from the bark of the root of Ptelea trifoliata.

**Ptel′eorrhine** (*ptelea,* elm, *rhis,* nose). Condition of anterior nares when asymmetry of apertures exists.

**Pte′rion** (*pteron,* feather). In craniometry, that region where the end of ala magna of the sphenoid approaches the frontal, parietal, and temporal bones.

**Pter′is.** Polypodium filix mas. **P. aquili′na,** common brake or bracken, female fern, eagle fern, ord. *Filices.* Root is considered to be anthelmintic, and as efficacious as that of the male fern in cases of tapeworm. **P. palus′tris,** Asplenium filix fœmina.

**Pter′na** (heel). Calcaneum.

**Pter′nion** (dim. of *pterna,* heel). Calcaneum.

**Pterocar′pus erina′cea.** See *Kino.* **P. marsu′pium,** see *Kino.* **P. sandali′nus,** P. santalinus. **P. santali′nus,** ord. *Leguminosæ,* red saunders wood; see *Santalum.* The juice of this tree, like that of P. draco, affords a species of *dragon's blood.*

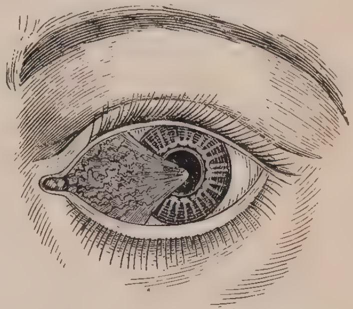
**Pterocau′lon pycnostach′yum.** Blackroot, indigenous plant, ord. *Compositæ.* Root is used as an alterative in the form of decoction; said to possess cathartic properties.

**Pterospo′ra andromede′a.** Scaly dragon-claw, dragon-root, fever-root, Albany beechdrop. Indigenous plant, ord. *Monotropeæ,* found in the State of New York. The root has been regarded as an anthelmintic, diuretic, emmenagogue, etc.

**Ptero′tic cen′tre** (*pteron,* wing, *ous,* ear). Centre of ossification constituting a covering for semicircular canals and the osseous roof of the tympanum.

**Pteryg′ion** (dim. of *pteryx,* wing). Pterygium.

**Pterygium,** ter-ij′e-um. Pterygion. Patch of thickened conjunctiva, of a triangular shape, and commonly occurring at the inner angle of the eye, whence it extends over the cornea. Sometimes two or three pterygia occur on the same eye, and cover the whole cornea with a thick veil, which totally prevents vision; to this the ancients gave the name *panniculus.* Also scapula. **P. dig′iti,** paronychia. **P. larda′ceum,** pinguecula. **P. pin′gue,** pinguecula. **P. un′guis,** condition in which the epidermis coats, as it were, the nail with a thin, transparent layer, that might be compared to the wing of a bat.



Pterygium. (Guthrie.)

**Pterygo-.** As a prefix in anatomical terms, refers to the pterygoid processes.

**Pter′ygoid,** ter′e-goid (*pteryx,* wing, *eidos,* form). Name given to two processes at the inferior surface of the sphenoid bone, the two laminæ which form them having been compared to wings. These alæ or wings or processes—*processus aliformes*—have been distinguished, according to their position, as internal or entopterygoid and external. **P. ar′tery,** Vidian artery, arises from the internal maxillary artery, at the bottom of the zygomatic fossa, and enters the pterygoid canal with the nerve of the same name, to proceed to be distributed on the Eustachian tube and velum palati. The name pterygoid arteries is likewise given to the branches which the internal maxillary and some of its divisions, as the meningea media and posterior temporalis profunda, furnish to the pterygoid muscles behind the neck of the lower jaw. **P. bone,** sphenoid. **P. canal′,** Vidian or pterygopalatine canal, is a narrow channel which traverses, in a direction from before to behind, the base of the pterygoid process, and gives passage to the pterygoid nerve. The foramina of the sphenoid, which terminate the canals, have the same epithets applied to them. **P. fos′sa,** depression separating the two laminæ or alæ of the pterygoid process. **P. mus′cles** are two in number: 1. *Pterygoideus externus* is a thick, short muscle which arises, by short aponeuroses, from the outer surface of the external ala of the pterygoid process and from the outer surface of the great ala of the sphenoid bone, and is inserted at the anterior part of the neck of the lower jaw-bone and the corresponding part of the interarticular fibrocartilage. This muscle draws the condyle of the lower jaw and the interarticular ligament forward; carries the chin forward and to the opposite side; if the two external pterygoids act together the jaw is carried directly forward. 2. *Pterygoideus internus*, thick, quadrilateral muscle which is attached, by short and very strong aponeuroses, above to the pterygoid fossa, whence it proceeds downward, backward, and outward, to be inserted into the inner surface of the ramus of the lower jaw, near its angle. It raises the lower jaw and carries it a little forward. It also performs the grinding motion. **P. nerves,** two in number: I. *Pterygoid* or *Vidian nerve* arises from the posterior part of the sphenopalatine ganglion, traverses the Vidian canal of the sphenoid, and, beyond, divides into two filaments: 1. *Superior cranial, nervus superficialis* or *petrosus,* which ascends into the cranium, and enters the hiatus of Fallopius to unite with the facial nerve. 2. *Inferior* or *carotid, nervus profundus* or *major,* which traverses the carotid canal, and unites with the ascending branches of the superior cervical ganglion of the trisplanchnic. II. *Pterygoid nerve,* properly so called, *nervus musculi pterygoidei,* is given off by the inferior maxillary branch of the fifth pair. **P. notch,** incisura pterygoidea in sphenoid bone, into which the processus pyramidalis of the palate-bone is inserted. **P. pro′cesses,** see *Pterygoid.* **P. ridge,** infratemporal ridge on outer surface of alisphenoid. **P. tu′bercle,** tubercle on inner surface of the inferior maxillary, to which the internal pterygoid muscle is attached.

**Pterygoide′us.** Pterygoid; see *Pterygoid muscles.* **P. pro′prius,** occasional muscle running from alisphenoid to tuberosity of palate. **P. ter′tius,** occasional muscular band running from interarticular cartilage to temporomaxillary articulation.

**Pterygo′ma.** Swelling of the vulva, preventing coition.

**Pterygomax′illary.** Relating to the pterygoid processes and maxillary bones. **P. fis′sure,** fissura sphenopalatina. **P. fold,** formed in the mouth by the pterygomaxillary ligament, behind the last molar tooth. **P. lig′ament,** tendinous band of buccopharyngeal fascia, extending from apex of internal pterygoid plate to posterior end of internal oblique line of lower jaw. **P. mus′cles,** pterygoid muscles.

**Pterygopal′atal pro′cess.** Palatal process.

**Pterygopal′atine.** Relating to both pterygoid process and palate. **P. ar′tery,** see *Pharyngeal artery.* **P. canal′,** a small canal formed by the internal ala of the pterygoid process and the palate-bone; it gives passage to the vessels of the same name.

**Pterygopharynge′us.** Constrictor pharyngis.

**Pterygosalpin′gohyoide′us.** Petrohyoid muscle.

**Pterygosalpingoide′us.** Occasional muscular band of the tensor palati, attached to a process of the sphenoid bone.

**Pterygosalpin′gostaphyli′nus inter′nus.** Levator palati.

**Pterygospino′sus.** Muscular fascicle, occasionally met with, running between the spine of the sphenoid and posterior edge of the external pterygoid plate.

**Pterygospi′nous lig′ament.** Fibrous band extending from the spine of the sphenoid to the outer pterygoid plate.

**Pterygostaphyli′nus** (*staphyle,* uvula). Tensor palati. **P. exter′nus,** circumflex muscle of the palate. **P. inter′nus,** levator palati.

**Ptilo′sis** (Gr.). Falling out of the eyelashes.

**Ptis′an** or **Ptisana,** tiz′an-ah. See *Tisane.*

**Ptochi′atry** (*ptochos,* poor, *iatreia,* medicine). Science of the diseases especially afflicting the very poor, due to want, starvation, insufficient clothing, etc.

**Ptochoco′mium** (*ptochos,* poor, *komeo,* to take care of). Almshouse; hospital for the poor.

**Ptomain′,** to-mah-een′ (*ptoma,* a corpse). One of the putrefactive alkaloids; certain chemical compounds, alkaloidal bodies, which are produced from animal or vegetable substances during putrefaction; that is, formed by the action of bacteria on organic matter. See *Leucomain.* Ptomains constitute a transition stage between an organic and an inorganic condition of matter in process of putrefaction. The greater number of ptomains contain only C, H, and N. Most of them exert little or no poisonous influence. The following table by Vaughan and Novy presents a complete list of the ptomains described up to the present date:

TABLE OF PTOMAINS.

| Formula. | Name. | Discoverer. | Physiological action.* |
|---|---|---|---|
| $CH_5N$ | Methylamin | Bocklisch | Non-poisonous. |
| $C_2H_7N$ | Dimethylamin | Brieger | “ “ |
| $C_3H_9N$ | Trimethylamin | Dessaignes | “ “ |
| $C_2H_5N$ | Spermin(?) | Kunz | “ “ |
| $C_2H_7N$ | Ethylamin | Hesse | “ “ |
| $C_4H_{11}N$ | Diethylamin | Bocklisch | “ “ |
| $C_5H_{15}N$ | Triethylamin | Brieger | “ “ |
| $C_3H_9N$ | Propylamin | “ | |
| $C_4H_{11}N$ | Butylamin | Gautier and Mourgues | Poisonous(?) |
| $C_5H_{11}N$ ? | Tetanotoxin | Brieger | Poisonous. |
| $C_5H_{13}N$ | Amylamin | Hesse | “ |
| $C_6H_{15}N$ | Hexylamin | “ | “ |
| $C_7H_{11}N$ | Dihydrolutidin | Gautier and Mourgues | “ |
| $C_8H_{11}N$ | Collidin(?) | Nencki | |
| $C_8H_{11}N$ | Pyridin base(?) | O. de Coninck | |
| $C_8H_{13}N$ | Hydrocollidin ? | Gautier and Etard | Poisonous. |
| $C_9H_{13}N$ | Parvolin(?) | Gautier and Etard | |
| $C_{10}H_{15}N$ | Unnamed | Guareschi and Mosso | Poisonous. |
| $C_{10}H_{16}N$ | Pyridin base(?) | O. de Coninck | |
| $C_{32}H_{31}N$ | Unnamed. | Delezinier | |
| $C_2H_8N_2$ | Ethylidenediamin(?) | Brieger | Poisonous. |
| $C_3H_6N_2$ | Anthracin | Hoffa (1889) | |
| $C_3H_8N_2$ | Trimethylenediamin(?) | Brieger | Poisonous. |
| $C_4H_{12}N_2$ | Putrescin | “ | Not very poisonous. |
| $C_5H_{14}N_2$ | Cadaverin | “ | Not very poisonous. |
| $C_5H_{14}N_2$ | Neuridin | “ | Non-poisonous. |
| $C_5H_{14}N_2$ | Saprin | “ | “ “ |
| $C_6H_{16}N_2$ | Hexamethylenediamin | Garcia | |
| $C_7H_{10}N_2$ | Unnamed | Morin | Non-poisonous. |
| $C_{10}H_{26}N_2$ ? | Susotoxin | Novy | Poisonous. |
| $C_2H_7N_3$ | Methylguanidin | Brieger | “ |
| $C_{19}H_{27}N_3$ | Morrhuin | Gautier and Mourgues | Diuretic, etc. |
| $C_{13}H_{20}N_4$ | Unnamed | Oser | |
| $C_{17}H_{38}N_4$ | “ | Gautier and Etard | |
| $C_{25}H_{32}N_4$ | Asellin | Gautier and Mourgues | Poisonous. |
| $C_5H_{13}NO$ | Neurin | Brieger | “ |
| $C_8H_{11}NO$ | Mydin | “ | Non-poisonous. |
| $C_5H_{11}NO^2$ | δ-Amido-valerianic acid | E. and H. Salkowski | “ “ |
| $C_5H_{15}NO^2$ | Cholin | Brieger | Poisonous. |
| $C_6H_{13}NO_2$ | Mydatoxin | “ | “ |
| $C_6H_{13}NO_2$ | Unnamed | “ (1888) | Non-poisonous. |
| $C_6H_{15}NO_2$ | Mytilotoxin | “ | Poisonous. |
| $C_7H_{17}NO_2$ | Gadinin | “ | “ |
| $C_7H_{17}NO_2$ | Typhotoxin | “ | “ |
| $C_7H_{17}NO_2$ | Unnamed | “ | “ |
| $C_{14}H_{14}N_2O$ | Pyocyanin | Ledderhose | Non-poisonous. |
| $C_{15}H_{13}NO_3$ | Betain | Brieger | “ “ |
| $C_5H_{15}NO_3$ | Muscarin | “ | Poisonous. |
| $C_9H_{13}NO_3$ | Morrhuic acid | Gautier and Mourgues | |
| $C_5H_{12}N_2O_4$ | Unnamed | Pouchet | Poisonous. |
| $C_{13}H_{30}N_2O_4$ | Tetanin | Brieger | “ |
| $C_{14}H_{20}N_2O_4$ | Unnamed | Guareschi | |
| $C_{10}H_{23}N_2O_4$ | “ | Lepierre | Poisonous. |
| $C_7H_{18}N_2O_6$ | “ | Pouchet | “ |
| | “ | “ | “ |
| | Tyrotoxicon | Vaughan | “ |
| | Mydalein | Brieger | “ |
| | Spasmotoxin | “ | “ |
| | Adiamin(?) | “ | “ |
| | Peptotoxin | “ | “ |
| | Phlozosin | Leber | Inflammatory. |

---

* Only those bases are here denoted as poisonous which possess decided toxicity.

Some of these products are narcotic, others resemble strychnine in their action.

**Ptomainæ′mia.** Presence of ptomains in the blood

**Ptomatin′.** Ptomain.

**Ptosis,** to′sis (*ptosis,* fall). Prolapsus. Falling or drooping of the eyelid caused by paralysis or an atrophied condition of the levator palpebræ superioris muscle. **Abdom′inal p.,** Glénard's disease. **P. adipo′sa,** condition of the lid in which the fascial bands connecting it with the tarsus are relaxed. **P. bul′bi oc′uli,** exophthalmia. **P. diplo′pia,** synechia posterior. **False p.,** condition in which the lid itself is not ptotic, but the skin is redundant and hangs below the free edge. **P. i′ridis,** prolapsus of the iris through a wound of the cornea; known by a blackish tubercle, which projects a little from the cornea in various forms, and which, owing to its supposed resemblance to the head of a fly, has been called *myïocephalon* and *myocephalon* (*myia,* fly, *kephale,* head). **P. pal′pebræ,** falling down of the upper eyelid over the eye. **Sympathet′ic p.,** p. associated with disease of the cervical sympathetic system.

**Ptot′ic.** Relating to or in a condition of ptosis.

**Ptyal′agogue** (*ptyalon,* saliva, *ago,* to lead). Sialagogue.

**Ptyalin′** (*ptyalon,* saliva). Ferment found in saliva, exerting a special action on starchy and saccharine matters.

**Ptyalin′ogen.** An inert substance present in the salivary glands, which by the action probably of the mouth bacteria is rapidly converted into ptyalin.

**Ptyalism,** ti′al-izm. Salivation.

**Ptyalis′mus.** Salivation. **P. acu′tus melli′tus,** p. mellitus. **P. a. sympathet′icus,** see *Salivation.* **P. hydrargyra′tus,** mercurial salivation. **P. in′ers,** slavering. **P. melli′tus,** secretion of sweet-tasting saliva. **P. mercuria′lis,** mercurial salivation. **P. pyros′icus,** pyrosis.

**Pty′alized.** Salivated.

**Pty′alocele** (*ptyalon,* saliva, *kele,* tumor). A salivary cyst. Ranula.

**Ptyal′ogogue** (*ptyalon,* saliva, *ago,* to drive). Sialagogue. An agent producing increased flow of saliva.

**Pty′alose.** Maltose.

**Pty′chodont** (*ptyche,* fold, *odous,* tooth). Molar tooth with folded crowns.

**Ptysis,** ti′sis (*ptysis*). Exspuition.

**Ptysmagogue,** tis′ma-gog (*ptysma,* saliva, *ago,* to drive). Sialagogue, ptyalogogue.

**Pu′bens** or **Pu′ber.** At the age of puberty.

**Pubeot′omy.** Pubiotomy.

**Pu′beral** or **Pu′beric.** Relating to the age of puberty.

**Pu′berty** (*pubertas*). Period of life at which sexual maturity occurs. The period varies somewhat in different climates and in different individuals in the same climate, but is presumed by the law to be at the age of fourteen years in the male and twelve years in the female; in northern climates it is usually later than this. See *Nubile.*

**Pu′bes** (Lat., hair on the genitals). Pubic region. The middle part of the hypogastric region; so called because it is covered with hair in both sexes at the period of puberty. The hair is also called *pubes, lanugo,* or *pili pudendorum, plantarium,* and *feminal.* The pubic bone.

**Pubes′cence.** Puberty.

**Pubes′cent.** Arrived at the age of puberty; nubile.

**Pu′bic.** Pubian. Belonging to or concerning the pubis. **P. an′gle,** the angle formed by the inner border and the crest of the pubic bone. **P. arch,** arch of the pubis, the arch at the anterior part of the inferior circumference of the pelvis. It is more expanded in the female than in the male, to permit of childbirth. **P. ar′tery,** branch from the deep epigastric anastomosing with branch from the obturator. **P. articula′tion,** p. symphysis, the junction of the ossa pubis; the medium of union is cartilage. **P. bone,** os pubis, share-bone; the anterior part of the os innominatum; so called because it corresponds to the genital organs and pubic region. **P. crest,** crista pubis, the posterior sharp edge on the upper surface of the pubic bone. **P. lig′aments** are two very solid, fibrous fasciæ situated before and beneath the symphysis pubis, which they strengthen. The one is called the anterior pubic ligament, the other the inferior or subpubic. **P. ra′mus,** one of the two parts of the pubic bone: the superior or horizontal forming part of the brim of the pelvis; the inferior or descending forming one side of the pubic arch. **P. re′gion,** region of the pubes. **P. spine,** tuberculum pubis; process at the anterior extremity of the iliopectineal line, at the point where it passes into the crest of the pubis; Poupart's ligament is attached to it. **P. sym′physis,** the immovable joint formed by the union in the median line of the pubic bones. **P. vein,** anastomotic branch to the external iliac vein from the obturator vein.

**Pubiococcyge′o-annula′ris** (*annularis,* ring-shaped). Levatores ani and ischiococcygei muscles.

**Pu′bio-in′fraumbilica′lis.** Pyramidalis abdominis.

**Pubiosterna′lis.** Rectus abdominis.

**Pubiot′omy** (*tome,* incision). Operation of division of the pubis in order to increase the diameter of the pelvis at the time of delivery. Modification of the operation of symphyseotomy.

**Pu′bio-umbilica′lis.** Pyramidalis abdominis.

**Pu′bis.** Pubes. Pubic bone.

**Pubocaverno′sus.** Separate slip of the ischiocavernosus arising from the pubic arch.

**Pubococcyg′eal rha′phe.** Rhaphe due to the union of the levatores ani.

**Pubococcyge′us.** Relating to the pubic bone and coccyx; muscle so called.

**Pubofem′oral lig′ament.** Accessory bundle of fibres which help to form the hip-joint capsule.

**Puboischiat′ic bone.** Ischium and pubis as one.

**Puboperinea′lis.** Occasional muscular strip extending from the pubis to the deep perineal fascia.

**Puboperitonea′lis.** Pubotransversalis.

**Puboprostat′ic lig′aments.** Ligaments running from the back of the pubis to the prostate gland and neck of the bladder.

**Pubopuden′dus.** Occasional muscular slip running from the pubis and combining with the ischiopubicus.

**Puborecta′lis.** Anterior fibres of the sustentator recti.

**Pubotransversa′lis.** Thin, muscular slip arising from the upper edge of the superior pubic ramus and inserted into the transversalis fascia.

**Pu′bo-ure′thral mus′cle.** Fibres from the posterior part of the pubis to the prostate, or, in the female, to the base of the bladder.

**Pu′bo-urethra′lis.** Occasional muscle passing from the pubis to the urethra.

**Puboves′ical fos′sa.** Abdominovesical pouch. **P. lig′aments,** puboprostatic ligaments. **P. mus′cles,** fibres of the external longitudinal muscular layer of the bladder, arising from the posterior surface of the pubis.

**Puccine′.** Alkaloid in sanguinaria.

**Puccin′ic acid.** Acid in sanguinaria.

**Puccoön′.** Sanguinaria canadensis. **Yel′low p.,** Hydrastis canadensis.

**Pu′cha-pat.** Pogostemon patchouli.

**Puchu′ry.** See *Pichurim beans.*

**Pud′ding-grass.** Mentha pulegium.

**Pud′ding-pipe tree.** Cassia fistula.

**Puden′da** (pl. of pudendum) (*pudeo,* to be ashamed). Genital organs. **P. mulieb′ria,** external genital organs of woman; vulva. **P. viro′rum,** male genital organs.

**Pudendag′ra** (*agra,* seizure). According to some, this term means pain in the genitals; according to others, it is synonymous with syphilis. **P. pru′riens** pruritus vulvæ.

**Puden′dal.** Pudic. Relating to the pudenda. **P. hæmat′ocele,** tumor consisting of a collection of clotted blood in one labium or in the tissue in the immediate vicinity of the vaginal wall. **P. her′nia,** hernia which descends between the vagina and the ramus ischii, and forms an oblong tumor in the labium; traceable in the pelvis as far as the os uteri. **P. nerve, infe′rior,** nervus cutaneus perinei; branch of small sciatic. **P. plex′us of nerves,** inferior part of the sacral plexus. **P. p. of veins,** situated behind the pubis, around the urethra and neck of the bladder.

**Puden′dum.** See *Pudenda.*

**Puden′dus lon′gus infe′rior.** Nervus cutaneus perinei.

**Pu′dic** (*pudeo,* to be ashamed). Pudendal; relating to the pudenda. **P. ar′teries** are distributed to the organs of generation; they are: 1. *Internal pudic,* genital artery, which is furnished by the hypogastric, and divides into two branches: the one—the inferior or perineal—which gives off the inferior hemorrhoidal and the artery of the septum; the other—the superior—which furnishes the transverse perineal artery, and divides into two branches—the artery of the corpus cavernosum and the dorsalis pedis; this latter, in the female, has the name dorsalis clitoridis. 2. The *external pudic arteries* are two in number; the one is superficial or subcutaneous, and the other deep-seated or subaponeurotic. They are given off from the femoral artery or some one of its branches, and are distributed to the external parts of generation. **P. nerve,** branch furnished by the sacral plexus, which is distributed to the genital organs and especially to the penis in man and the clitoris in woman. **P. vein, inter′nal,** similar distribution as internal pudic artery. **P. v., superfic′ial exter′nal,** tributary of the external saphenous, collecting blood from the genitals and inner part of the thigh.

**Puericul′ture** (*puer,* child, *cultura,* culture). The careful physical and moral training of children.

**Pu′erile** (*puer,* child). Appertaining or relating to childhood. **P. respira′tion,** term applied to the respiration when it is heard loud through the stethoscope, as in healthy children.

**Pueril′ity.** Dementia of the aged.

**Puer′pera** (*puer,* child, *pario,* to bring forth). Lying-in woman; female in childbed; one recently delivered.

**Puer′peral.** Relating to parturition and its sequences. **P. colpi′tis,** vaginitis of lying-in women. **P. convul′sions,** eclampsia gravidarum et parturientium. **P. diabe′tes,** diabetes occurring sometimes in pregnancy and ceasing after delivery. **P. fe′ver,** a septic fever occurring during the puerperal state; childbed fever; p. septicæmia. **P. ma′nia,** delirious condition of females near the end of pregnancy. **P. peritoni′tis,** peritonitis complicating p. fever. **P. septicæ′mia,** puerperal fever. **P. state,** state of a female in and directly after childbirth. **P. tet′anus,** dangerous tetanic state of the body, not often happening in the puerperium.

**Puer′peralism.** A term which includes all the pathological conditions associated with the puerperal state.

**Puer′perant.** A woman in a puerperal condition.

**Puerpe′rium.** Childbed state.

**Puer′perous.** Parturient; puerperal.

**Puer′pery.** Puerperal state; puerperium.

**Puff** (D., *poffen,* to blow). Lycoperdon. **Veiled p.,** see *Cavernous respiration.*

**Puff′ball.** Lycoperdon; Leontodon taraxacum.

**Puf′finess.** Soft intumescence without redness, which may be partial or general, and be produced by accumulation of serous fluid, extravasation of blood, effusion of air into the subcutaneous areolar tissue, etc. Puffiness is most frequently seen in the face and legs, and sometimes appears around a wound.

**Pu′gil** or **Pugil′lus** (dim. of *pugnus,* fist). The quantity of any substance which may be taken with the ends of two or three fingers; a pinch; the eighth part of a handful.

**Pug′nus.** A handful.

**Pug′teeth.** Canine teeth.

**Puke.** Emetic. To vomit.

**Puke′weed.** Lobelia inflata.

**Pu′king.** Vomiting; regurgitation. **P. fe′ver,** milk sickness.

**Pule′gium.** Mentha pulegium. **P. cervi′num,** Mentha cervina.

**Pu′lex.** Flea. **P. ca′nis,** the flea of dogs and cats. **P. ir′ritans,** the common flea, a parasitic insect infesting man. **P. pen′etrans,** chique. **P. vulga′ris,** pulex.

**Pulica′ria dysenter′ica.** Inula dysenterica.

**Pulica′ris.** An old name for eruptions resembling flea-bites.

**Pul′ley.** Trochlea.

**Pullula′tion** (*pullulo,* to bud). Budding.

**Pul′mo.** The lung.

**Pulmocar′diac re′gion** (*pulmo,* lung, *kardia,* heart). That part of the thorax where the heart is covered by a thin layer of lung.

**Pulmogas′tric re′gion** (*pulmo,* lung, *gaster,* stomach). That region of the thorax where the edge of the left lung projects over the stomach and spleen.

**Pulmohepat′ic re′gion.** That part of the thorax where an edge of liver is covered by lung.

**Pulmom′eter** (*pulmo,* lung, *metron,* measure). Spirometer.

**Pulmom′etry.** Measuring the capacity of the lungs.

**Pulmona′ria.** Lungwort, Jerusalem cowslip, Jerusalem sage, spotted comfrey; ord. *Boraginaceæ.* Leaves of this plant have been used as demulcents and pectorals. **P. arbo′rea,** Lichen pulmonaris. **P. gal′lica,** Hieracium murorum. **P. officina′lis,** pulmonaria. **P. virgin′ica,** Mertersia virginica.

**Pul′monary** (*pulmo,* lung). Relating to the lungs. **P. ar′tery** arises from upper and left part of the right ventricle of the heart, whence it passes obliquely upward and to the left side, dividing into two trunks opposite the second dorsal vertebra, one passing to each lung. At its origin it is furnished with three sigmoid or semilunar valves. It carries the blood to the lungs for aëration. **P. car′tilage,** second costal cartilage of left side. **P. circula′tion,** lesser circulation, the passage of the blood through the pulmonary artery, the lungs, and the pulmonary veins from the right ventricle to the left auricle of the heart. **P. consump′tion,** phthisis pulmonalis. **P. glands,** lymphatic glands on bronchioles in lung-substance. **P. groove,** groove inside of thorax on both sides of spinal column. **P. lob′ules,** see *Lung.* **P. mat′ter, black,** see *Lung.* **P. mur′rain,** contagious pleuropneumonia. **P. nerves,** branches from pneumogastric and sympathetic nerves going to root of lungs. **P. pleu′ra,** pleura pulmonalis. **P. plex′us,** considerable nervous network, situated behind the bronchia, which is formed by the filaments of the pneumogastric nerve or par vagum, and by other filaments from the inferior cervical ganglion and the first thoracic ganglia. This plexus forms a kind of areolar web, with numerous meshes of different sizes, in which vessels are lodged, surrounded by much areolar tissue. The plexus sends filaments to the bronchia, which they accompany to their extremities. **P. si′nuses,** sinuses of Valsalva in pulmonary artery. **P. valves,** the three semilunar valves at opening of pulmonary artery. **P. veins,** these arise in the lungs from the final terminations of the arteries of the same name, collect in ramusculi and rami of greater and greater size, and ultimately unite in four trunks, two of which issue from each lung to open into the left auricle of the heart. The pulmonary veins have the same structure as the other veins of the body, from which they differ in conveying arterial blood, as the pulmonary artery differs from the others in conveying venous blood. They carry the blood back to the heart after aëration. **P. ves′icles,** the air cells in the lungs, the terminal expansions of the bronchioles.

**Pulmonec′tomy.** Pneumonectomy.

**Pulmo′nia.** Phthisis pulmonalis; pneumonia.

**Pulmon′ic.** Pneumonic. Affected with phthisis; one laboring under disease of the lungs; anything relating to or belonging to the lungs; medicine for the lungs. **P. circula′tion,** pulmonary circulation.

**Pulmonine′.** Extract from the lungs of the calf; has been advised in the treatment of pulmonary affections.

**Pulmoni′tis.** Pneumonia.

**Pulp.** Soft and parenchymatous parts of vegetables reduced to paste. Applied, also, to parts of the human body which have the characters of or resemble pulp. **Athero′matous** or **bran′-like p.**, see *Atheroma*. **P. canal′**, central canal of the root of a tooth. **P. cav′ity** or **cham′ber**, central cavity of a tooth containing the dental pulp. **Dent′al p.**, pultaceous substance of a reddish-gray color, very soft and sensitive, containing capillary vessels and nerves, which fills the central cavity of a tooth. **P. of the fin′gers**, fleshy extremity of the fingers. **Fun′gous p.**, hypertrophic condition of the dental pulp which extends through a carious opening into the central cavity. **P. nod′ule** or **stone**, a deposit of dentinal substance in the pulp. **Pul′sating p.**, condition in which the dental pulp pulsates synchronously with the heart beat. **Splen′ic p.**, the parenchyma or soft substance filling the trabeculæ of the spleen. **P. of the tooth**, dental pulp.

**Pul′pa.** Pulp.

**Pulpa′men.** Pulp.

**Pulpa′tion.** Pulping.

**Pulpefac′tion.** Pulpy degeneration. See *Pulpy*.

**Pulpe′zia.** Apoplexy.

**Pulp′ing.** Pulpation. Operation of reducing substances to a pulp.

**Pulpi′tis.** Inflammation of the pulp of a tooth. **Hypertroph′ic p.**, fungous pulp. **Sclerot′ic p.**, inflammation of dental pulp, with increase of its fibrous elements.

**Pul′py** (*pulpa*). Relating to or full of pulp; pultaceous. **P. degenera′tion or disease′**, pulpefaction; affection of the synovial membrane, in which the different points of bone, usually distinguishable, are obscured, and a doughy or pulpy sensation is detected by palpation over the articular ends of the bones, of the patella especially; white swelling. When connected with syphilis—*syphilitic joint of Colles*—it is often complicated with periosteal thickening.

**Pulque**, pool′ka. Fermenting juice of Agave americana.

**Pul′satile** (*pulso*, to throb). Pulsating; beating.

**Pulsatil′la.** (Ph. U. S.) Herb of Anemone pulsatilla, A. pratensis, and A. patens, collected soon after flowering. Used in amenorrhœa, dysmenorrhœa, ophthalmia, and catarrh of nose, throat, and respiratory passages. There are no official preparations, but an *extract* (dose, gr. ss–j—0.032–0.065), a *fluid extract* (dose, ♏j–v—0.065–0.32), and a *tincture* (dose, ♏j–v—0.065–0.32) are used. **P. cam′phor**, anemonin; given in doses of gr. ⅙–½ (0.01–0.032). **P. pa′tens**, Anemone patens. **P. praten′sis**, Anemone pratensis. **P. vulga′ris**, Anemone pulsatilla.

**Pul′sating.** Throbbing or beating like a pulse.

**Pulsa′tion** (*pulso*, to beat). Beating of the heart and arteries. Also the beating felt in an inflamed part. **Aor′tic p.**, peculiar functional affection, characterized by violent throbbing, in the abdominal portion of the aorta especially, which may be confounded with aneurysm; occurring in uterine disease, structural gastroduodenal affections, etc. **Ret′inal p.**, pulsation of vessels noticed in the eye, due to some interference with the relative pressure within and without the eye. **Ve′nous p.**, see *Pulsus venarum*.

**Pul′sative** or **Pul′satory.** Throbbing.

**Pulse** (*pello*, *pulsum*, to beat). Beating of the arteries, produced by the afflux of the blood propelled by the heart in its contractions. For the sake of convenience we choose the radial artery at the wrist to detect the precise character of the pulse. These characters relate to the number of pulsations in a given time; to their degrees of quickness, hardness, and strength; to the equality or inequality either of the pulsations themselves or of their intervals; to the development or fulness of the artery; and to the different impressions it may produce on the finger. The following table exhibits the effect of age upon the number of pulsations per minute. It will be noticed that at birth and in early life the contractions and dilatations of the heart take place with much greater rapidity than at later periods:

| Age. | Number of pulsations per minute. | | |
|---|---|---|---|
| | Heberden. | Sömmering. | Müller. |
| In the embryo . . | …………… | …………… | 150 |
| At birth . . . . | 130 to 140 | …………… | 150 |
| One month . . . | 120 | | |
| One year . . . . | 108 to 120 | 120 | 115 to 130 |
| Two years . . . | 90 to 108 | 110 | 100 to 115 |
| Three years . . . | 80 to 90 | 90 | 90 to 100 |
| Seven years . . . | 72 | …………… | 85 to 90 |
| Twelve years . . | 70 | | |
| Puberty . . . . | …………… | 80 | 80 to 85 |
| Adult age . . . | …………… | 70 | 70 to 75 |
| Old age . . . . | …………… | 60 | 50 to 65 |

Various interesting facts may be mentioned in regard to the pulse (Vierordt): While sitting the pulse is about 3 beats faster than while lying down; while standing the pulse is about 9 beats faster than while sitting (Guy); and about 14 (2–34) faster than while lying down (Schapiro). Exceptions, even the reverse of this rule, are not infrequent. In six children from 5–14 years of age Heilbut found a middle difference between lying down and sitting of 18.6. Easy exercise increases the pulse 10–20 beats; rapid running, bicycling, strong swimming, etc., to 140 and more; the increase in rapidity can be noticed for ½ to 1 hour (Lichtenfels and Fröhlich). Ingestion of food increases the frequency of the pulse; a hearty dinner without wine increases the beats 13.1 (Vierordt); with wine, 17.5. Omission of dinner decreases the pulse 1–2 beats. After ten hours' fasting, early in the morning, Lichtenfels and Fröhlich observed an average pulse of 69.3 beats; eight hours afterward, still fasting, 50; four hours later, 53.3. Rise of the barometer 1¼ ctm. increases the frequency of the pulse 1.3 per minute (Vierordt). In the morning the frequency of the pulse is increased after breakfast; decreases until dinner; increases then somewhat; decreases after 1½–2 hours until supper; then increases a little. In the morning the pulse is 8 beats faster than late at night (Guy, from observations on himself). In nine women (average age 25.4 years) Heilbut found a maximum difference of 3.6 beats. The difference can also be observed in entirely healthy children (Knox, Guy). The pulse is slower during sleep, particularly in children. Vogel found the average in twenty-four sleeping children, raised at the breast, to be 109 beats. According to Trousseau, however, the pulse in infants from four to six months is: sleeping 140, waking 121; from six to twenty-one months: sleeping 128, waking 112. It does not appear that the pulse of the aged is less frequent, but the contrary. In general it is more frequent in females and in irritable persons than in males and those of an opposite temperament. In the healthy state the pulse, besides having the proper number of pulsations, is neither hard nor unusually soft; it is moderately developed, of a medium strength, and perfectly equal as regards both the strength of the pulsations and their intervals. In disease it wanders more or less from these physiological conditions. See also *Pulsus*. **Allorhyth′mic p.**, variation in the interval, or disturbance of the usual rhythmic regularity, of the pulse. **Anacrot′ic p.**, first wave is not the highest, ascending limb of pulse-curve being notched. **Anadicrot′ic p.**, p. with triple beat, two elevations being seen in the ascending line of the sphygmographic tracing. **Ar′dent p.**, one in which the pulse seems to raise itself to a point in order to strike the finger. **Bam′berger's p.**, beating noted in the bulbus of the jugular vein synchronously with the systole of the heart, a sign of tricuspid insufficiency. **Bigem′inal p.**, two regular beats followed by a longer pause. **P.-breath**, see *Breath*. **Bul′bar p.**, Bamberger's p. **Cap′illary p.**, observed in dilatation of capillaries and when blood pressure is increased. **Cap′rizant p.**, goat-leap pulse, seems to leap like a goat, an imperfect dilatation of the artery being succeeded by a fuller and a stronger one. **Catacrot′ic p.**, p. with double beat, an elevation being seen in the line of descent in the sphygmographic tracing. **Catadicrot′ic p.**, p. with triple beat, two elevations being seen in the descending line of the sphygmographic tracing. **P.-clock**, an instrument which indicates tension, diameter of artery, and volume of pulse; sphygmograph. **Com′plex p.** has the character of several critical pulses united. **Compres′sible p.**, soft p. **Contract′ed p.**, pulsations are narrow, deep, and slightly hard. **Convul′sive p.**, unequally frequent or unequally hard, resembling the irregular pulsation of a muscular fibre in a state of convulsion. **Cord′y p.**, tense pulse. **Cor′rigan's p.**, water-hammer p.; this pulse indicates aortic regurgitation; large, quick pulse, which collapses suddenly. **Crit′ical p.**, pulse which, after having possessed the characters of irritation, becomes free, open, soft, etc. **P. curve**, sphygmographic tracing of the pulse; see *Sphygmograph*. **Decur′tate p.**, pulsus myurus; see also *Myurus*. **Deep p.**, cannot be felt without difficulty and without strong pressure by the finger. **Defic′ient p.**, flickering pulse, which seems every instant about to cease. **Depressed′ p.**, deep and weak. **Devel′oped p.** is broad, full, strong, and frequent. **Dicrot′ic** or **dicro′tal p.**, double p., one in which the finger is struck twice at each pulsation—once lightly, the other time more strongly. **Entop′tic p.**, a subjective sensation of light occurring synchronously with the heart beats. **E′qual p.**, pulsations resemble each other and return at equal intervals. **Fe′brile p.**, very frequent. **Fee′ble p.**, weak pulse; strikes the finger feebly. **Fil′iform p.**, thready pulse; resembles a thread slightly vibrating. **Flick′ering p.**, deficient pulse. **For′micant p.** resembles, by being small and scarcely perceptible, the motion of an ant; met with especially in fatty degeneration of the heart. **Fre′quent p.** strikes more frequently than usual in a given time. **Full p.** gives the notion of vascular depletion. **Gas′eous p.**, a full but soft p. **Goat-leap p.**, caprizant p. **Gut′tural p.**, a pulsating sensation in the throat; has been supposed to indicate the termination of affections of that part. **Hard p.**, the pulp of the finger seems to yield to the pulsation. **Hec′tic p.**, weak, frequent pulse observed in hectic fever. **Hemorrhoid′al p.**, critical pulse, announcing the appearance of the hemorrhoidal flux; is described as unequal, the pulsations not being alike in force, and still less the intervals. **High-ten′sion p.**, one in which the force of the pulsation is relatively increased, as in hypertrophy of the heart, apoplexy, tumors, certain neuroses, under the influence of some medicines, etc. **Hyperdicrot′ic** or **hyperdic′rotous p.**, dicrotic p. in which the second elevation takes place just at the end of the line of descent. **Infre′quent p.**, bradycardia, a slow p. below 60. **Intercur′rent p.**, superfluous pulsation seems to occur from time to time. **Intermit′tent p.**, pulsations fail from time to time. **In′tricate p.**, but little developed and unequally slow. **Irreg′ular p.**, pulsations are unequal and return at irregular intervals. **P. of irrita′tion**, frequent, hard, and contracted. **Jar′ring p.**, vibrating p. **Jerk′ing p.**, sharp pulse. **Kuss′maul's p.**, paradoxical p. **Lan′guid p.**, slow and feeble pulse. **Large p.**, large and full pulse. **Long p.** strikes the finger to a great extent in length. **Low p.**, pulsations are scarcely perceptible. **Low-ten′sion p.**, condition of pulse opposite to that described as high-tension p., noticed in certain degenerative cardiac conditions, debility, fevers, etc. **Monocrot′ic p.**, pulse in which dicrotism is wholly absent. **Mouneret's′ p.**, a slow, gaseous p., occurring frequently in jaundice. **Mouse-tail p.**, pulsus myurus. **Nail p.**, a pink suffusion of the nail-bed occurring in pulsations synchronous with the heart beats. **Nat′ural p.**, equal and regular in strength and frequency, compressible and devoid of hardness. **Paradox′ical p.**, absence of the beat of the pulse during inspiration, due particularly to morbid conditions of the heart. **Pec′toral p.**, critical pulse, announcing the termination of some pulmonary irritation. **Pis′ton p.**, Corrigan's or water-hammer p. **Quick p.**, strikes sharply, but not forcibly, against the finger. **Quinck′e's p.**, nail pulse. **Ra′dial p.**, beat of radial artery, felt at the wrist. **P.-rate**, the number of arterial pulsations in a minute. **Recur′rent p.**, return of the pulse in the distal part of an artery after compression. **Reg′ular p.**, pulsations are equal and succeed each other at equal intervals. **Resist′ing p.**, a little tense, a little hard. **Respi′ratory p.**, the alternate condition of fulness and emptiness of the great vessels of the neck, synchronous with expiration and inspiration. **Retroster′nal p.**, venous pulsation above the suprasternal notch. **Sharp p.**, strikes the finger sharply and rapidly; when exaggerated it is called a *jerking pulse*. **Sharp′-tailed p.**, see *Myurus*. **Short p.**, pulse in which the impulse is of very brief duration. **Sim′ple p.**, a critical pulse, indicating evacuation by one organ only. **Slow p.**, strikes the finger slowly. **Small p.**, pulsations are slender and weak. **Soft p.**, yields under the finger. **Strong p.**, strikes the finger strongly. **Supe′rior p.**, a critical pulse, supervening on irritation of organs situated above the diaphragm. **Sup′ple p.**, pulsations have strength without hardness. **P. of sweat**, a critical pulse, supposed to indicate an approaching perspiration. **Tense p.**, cordy pulse; the artery resembles a cord fixed at its two extremities; when resembling a wire it is called *wiry*. **Thread′y p.**, filiform p. **P. trace**, in the registration of the pulse by the sphygmograph a trace consists of a series of curves, each of which corresponds to a complete cardiac revolution; see *Sphygmograph*. **Trem′ulous p.**, each pulsation oscillates. **Tricrot′ic** or **tric′rotous p.**, the normal pulse-trace is so called from possessing three principal waves. **Trigem′inal p.**, three regular beats followed by a longer pause. **Un′dulating p.**, resembles in its movements those of the waves. **Une′qual p.**, pulsations are not alike, or return at unequal intervals. **U′terine p.**, indicates the flow of the menses or the occurrence of metrorrhagia. **Vag′inal p.**, pulsation of the vaginal artery, which is increased in pregnancy, during abortion, labor, etc. **Ve′nous p.**, see *Pulsus venarum*. **Vermic′ular p.**, imitates the movement of a worm. **Vi′brating p.**, jarring pulse; the artery seems to vibrate like a musical string. **Wa′ter-hammer p.**, short, strong beat of the pulse followed by collapse, due to aortic regurgitation and incompetency of valves; Corrigan's p. **P.-wave**, pulsatory blood wave beginning with each systole of the heart and propagated through the arterial system. **Wi′ry p.**, see *Pulse, tense*.

**Pulse′less.** Devoid of pulsation.

**Pulse′lessness.** Asphyxia.

**Pulse-meas′urer.** Instrument which conveys the pulse beats to a fluid and measures their extent.

**Pulsif′ic** (*pulsus*, pulse, *facio*, to make). Causing or exciting pulsation.

**Pulsile′gium** or **Pulsilo′gium** (*pulsus*, pulse, *lego*, to read). Pulsimeter; any instrument for measuring the quickness or force of the pulse.

**Pulsil′ogram.** Pulsilegium.

**Pulsim′eter** (*pulsus*, pulse, *metron*, measure). See *Sphygmoscope* and *Sphygmomometer*.

**Pul′sion** (*pello*, to strike). Driving, pushing, or striking. **P. divertic′ulum**, a diverticulum caused by pressure.

**Pul′sus.** Pulse. **P. acrit′icus**, pulse of irritation. **P. æqua′lis**, equal pulse. **P. al′terans**, a condition in which the heart beats are irregular in force, but regular in rhythm. **P. an′nuens et circum′nuens**, deficient pulse. **P. anorma′lis**, irregular pulse. **P. bi′crotus**, dicrotic pulse. **P. bifer′iens**, dicrotic pulse.

**P. capri′zans**, caprizant pulse. **P. cel′er**, a quick pulse. **P. celer′rimus**, water-hammer pulse. **P. cor′dis**, see *Heart*. **P. cras′sus**, large pulse. **P. deb′ilis**, feeble pulse. **P. defic′iens**, deficient pulse. **P. di′crotus**, dicrotic pulse. **P. dorcadi′zans**, caprizant pulse. **P. du′plex**, dicrotic pulse. **P. du′rus**, hard pulse. **P. elas′ticus**, supple pulse. **P. fluctuo′sus**, undulating pulse. **P. flu′ens**, undulating pulse. **P. formi′cans**, formicant pulse. **P. for′tis**, strong pulse. **P. fusa′lis**, caprizant pulse. **P. gazel′lans**, caprizant pulse. **P. heterochron′icus**, a pulse of varying rhythm. **P. hu′milis**, low pulse. **P. in′cidens Sola′ni**, undulating pulse. **P. infre′quens**, bradycardia. **P. inter′cidens**, intercurrent pulse. **P. interci′sus**, dicrotic pulse. **P. intercur′rens**, intercurrent pulse. **P. intestina′lis**, dicrotic pulse. **P. intrica′tus**, intricate pulse. **P. mag′nus**, large pulse. **P. mallea′ris**, dicrotic pulse. **P. mol′lis**, soft pulse. **P. monoc′rotus**, pulse in which the dicrotic wave is absent. **P. myu′rus**, decurtate or sharp-tailed pulse; one which goes on diminishing; see *Myurus*. **P. nervi′nus**, pulse of irritation. **P. norma′lis**, regular pulse. **P. paradox′us**, feeble beat during inspiration, due to pathological conditions of the heart and large vessels. **P. par′vus**, small pulse. **P. ple′nus**, full pulse. **P. quadrigem′inus** and **trigem′inus**, pulse in which deviations are noticed after each third and fourth beat. **P. ra′rus**, slow pulse. **P. serri′nus**, strikes sometimes strongly, at others feebly, and recalls the idea of a saw. **P. stria′tus**, one that strikes the finger to a small extent in breadth. **P. sudora′lis**, pulse of sweat. **P. tar′dus**, slow pulse. **P. urina′lis**, urinal pulse. **P. uteri′nus**, uterine pulse. **P. vac′uus** gives the idea of emptyness of the artery. **P. vagina′lis**, vaginal pulse. **P. vena′rum**, venous pulse; pulsation occasionally noticed in the jugular veins, owing to some of the blood of the right ventricle reflowing into the right auricle and communicating an impulse to the venous blood arriving in the auricle through the descending cava. Is often a sign of impediment to the flow of blood along the pulmonary artery.

**Pulta′ceous** (*puls*, pap). Resembling pap. Of a soft, semifluid appearance and consistency.

**Pulta′tio** (*puls*, pap). Atheroma.

**Pul′verable.** Pulverizable.

**Pulvera′tio.** Pulverization.

**Pulveri′zable** (*pulvis*, powder, *habilis*, able). Capable of being reduced to powder.

**Pulveriza′tion.** Operation of dividing substances so as to reduce them to powder. The term *pulverization* as well as *atomization* and *nebulization* has been applied to the dispersing of liquids into fine spray, to be projected on wounds or on morbid surfaces. The liquids, in the form of spray, are said to be pulverized, nebulized, or atomized, and the instruments to disperse them are called pulverizers, atomizers, nebulizers, spray-producers. Atomized medicated fluids are employed in affections of the mucous membrane of the nose and fauces, in croup and diphtheria, asthma, laryngitis, etc. Under the name *inhalatoria*, apartments have also been constructed for the introduction into them of mineral waters in the form of spray, for the purposes of inhalation, at some of the European springs especially.

**Pul′verized i′ron.** Ferrum pulveratum. Powder made from iron filings.

**Pul′verizer.** Atomizer.

**Pulver′ulence.** State of being pulverulent.

**Pulver′ulent** (*pulvis*, powder). Reduced to a fine powder. Covered, as it were, with dust; epithet applied to the eyes when they appear dirty and, as it were, sprinkled with dust, due to the presence of granulations or grayish striæ.

**Pulvi′nar.** Pillow; posterior tubercle of thalamus opticus. **P. epiglot′tidis**, tubercle of epiglottis. **P. hu′muli**, hop pillow. **P. medica′tum**, medicated pillow, as of hops. **P. par′vum**, pad. **P. ventric′uli**, pancreas.

**Pul′vis** (pl. pulveres). Powder. A substance reduced to small particles by pulverization. *Simple powders* are those of a single substance; *compound*, those resulting from a mixture of several different powders. All the official powders are compound. An impalpable powder is one which is so fine that it can scarcely be felt under the finger. Compound powders have been called *species*. The following are the official and other important pulveres, of which the Ph. U. S. provides for nine, the Ph. Br. for seventeen. **P. aëroph′orus**, p. effervescens. **P. al′oës compos′itus**, contains aloes, resin of guaiac, and cinnamon; dose, gr. x–xx (0.65–1.3). **P. al′oës cum canel′lâ**, hiera picra, hikry pikry, 1 part of canella to about 6 of aloes, a mild, non-griping cathartic; dose, gr. x–xx (0.65–1.3). **P. antimonia′lis** (U. S. and Br.), antimonial powder, James's powder, contains oxide of antimony 1, and precipitated calcium phosphate 2; dose, gr. iij–x (0.2–0.65). **P. aromat′icus** (U. S.), p. cinnamomi compositus (Br.), contains cinnamon and ginger, each 35, and cardamom and nutmeg, each 15; dose, gr. x–xxx (0.65–2.0). **P. bu′teæ sem′inum** (Br.), from B. frondosa, Bengal kino; dose, gr. x–xx (0.65–1.3). **P. cat′echu compos′itus** (Br.), composed of catechu 4, kino and krameria, each 2, and cinnamon and nutmeg, each 1; dose, gr. x–xl (0.65–2.6). **P. cinnamo′mi compos′itus** (Br.), p. aromaticus (U. S.). **P. cre′tæ aromat′icus** (Br.), compounded of chalk, cinnamon, nutmeg, saffron, cloves, cardamon, and sugar; dose, gr. x–xxx (0.65–2.0). **P. cre′tæ aromat′icus cum o′pio** (Br.), contains 2½ per cent. opium; dose, gr. x–xx (0.65–1.3). **P. cre′tæ compos′itus** (U. S.), contains prepared chalk 30, acacia 20, and sugar 50; antacid, stomachic, absorbent; dose, gr. v–ʒj (0.32–4.0). **P. diaphoret′icus**, p. ipecacuanhæ compositus. **P. efferves′cens compos′itus** (U. S), Seidlitz powder; each blue paper contains sodium and potassium tartrate, ʒij, and sodium bicarbonate, gr. xl; each white paper contains tartaric acid, gr. xxxv; the contents of a blue and a white packet are added to a glass of water and taken during effervescence. **P. elateri′ni compos′itus** (Br.), a trituration of elaterin, 1, in milk sugar, 39; dose, gr. j–iv (0.065–0.26). **P. glycyrrhi′zæ compos′itus** (U. S. and Br.), compound licorice powder; contains senna 18, licorice 23.6, sulphur lotum 8, oil of fennel 0.4, and sugar 50; dose, ʒss–ij (2.0–8.0). **P. ipecacuan′hæ compos′itus** (Br.), p. ipecacuanhæ et opii (U. S.), Dover's powder; contains opium and ipecac, each 10, sugar of milk 80; dose, gr. x (0.65), containing gr. j (0.065) of opium. **P. ipecacuan′hæ et o′pii** (U. S.), p. ipecacuanhæ compositus. **P. Jaco′bi**, p. antimonialis. **P. jalap′æ compos′itus** (U. S. and Br.), contains jalap 35, potassium bitartrate 65; dose, gr. xv–xxx (1.0–2.0). **P. jesuit′icus**, cinchona. **P. kalanda′næ compos′itus** (Br.), contains kalandana (Ipomœa hederacea, Pharbitis nil) 5, potassium bitartrate 9, ginger 1; substitute for p. jalapæ compositus; dose, gr. xx–ʒj (1.3–4.0). **P. ki′no compos′itus** (Br.), contains kino 75, opium 5, cinnamon 20; dose, gr. v–xx (0.32–1.3). **P. morphi′næ compos′itus** (U. S.), Tully's powder, contains morphine sulphate, camphor, licorice, and precipitated calcium carbonate, each 10 grains (0.65), containing gr. ⅙ (0.01) of morphine. **P. o′pii compos′itus** (Br.), contains opium 3, black pepper 4, ginger 10, caraway 12, tragacanth 1, or 10 per cent. of opium; dose, gr. ij–x (0.13–0.65). **P. rhe′i compos′itus** (U. S. and Br.), compound powder of rhubarb, contains rhubarb 25, magnesia 65, ginger 10; dose, ʒss–j (2.0–4.0). **P. scammo′nii compos′itus** (Br.), contains scammony resin 4, jalap 3, ginger 1; dose, gr. x–xx (0.65–1.3). **P. so′dæ tartara′tæ efferves′cens** (Br.), p. effervescens (U. S.), Seidlitz powder. **P. tragacan′thæ compos′itus** (Br.), contains tragacanth, gum acacia, and starch, each 1, and sugar 3; dose, gr. xx–ʒj (1.3–4.0).

**Pu′mex.** Pumice. Formerly employed as a desiccative and as a dentifrice.

**Pumil′io** or **Pu′milus.** One who is much below the usual stature.

**Pum′melfoot.** Clubfoot.

**Pump.** An apparatus for moving gases or fluids. **Alvergniat's′ p.**, see *Alvergniat.* **Breast-p.**, an appliance for extracting milk from the human breast. **Stom′ach-p.**, see *Stomach.*

**Pump′kin.** Cucurbita pepo.

**Pu′na.** Mountain sickness. Sickness common in the elevated districts of South America, Switzerland, and elsewhere, attacking those unaccustomed to breathe the rarefied atmosphere. It strongly resembles seasickness, with acute and depressing throbbing in the head. It does not often affect the respiration greatly.

**Punch** (*pungo, punctum,* to prick). Surgical instrument for piercing or removing portions of tissue.

**Punc′ta** (pl. of punctum). Points; pricks; punctures. **P. doloro′sa,** tender or painful points along inflamed nerves. **P. lacryma′lia,** orifices of the lacrymal canals near the inner canthus of the eye. **P. ossificatio′nis,** points of ossification. **P. vasculo′sa,** numerous minute red spots studding the surface of the centrum ovale majus, produced by the escape of blood from divided blood-vessels.

**Punc′tate.** Pointed. Having many points.

**Punctic′ula** (dim. of *punctum,* point). Petechiæ.

**Punc′tio.** Paracentesis; puncture.

**Punc′tum.** Point, prick, puncture. See also *Puncta, Puncture,* and *Stitch.* **P. adhæsio′nis,** origin of a muscle. **P. a′læ vom′eris,** hormion. **P. aur′eum,** formerly, when an intestinal hernia was reduced by an incision made through the integuments down to the upper part of the spermatic vessels, a golden wire was fixed and twisted, so as to prevent the descent of anything down the tunica vaginalis; hence the term; see also *Foramen centrale retinæ.* **P. cæ′cum,** blind spot; see *Optic nerve.* **P. fix′um,** origin of a muscle. **P. foram′inis mag′ni ante′rius,** basion. **P. f. m. poste′rius,** opisthion. **P. insertio′nis,** insertion of muscle. **P. lacryma′le,** lacrymal punctum. **P. mo′bile,** insertion of muscle. **P. nasa′le infe′rius,** rhinion. **P. na′sofronta′le,** nasion. **P. occipita′le,** lambda. **P. præmaxilla′re,** alveolar point. **P. protuberan′tiæ occipita′lis,** inion. **P. prox′imum,** nearest point that can be focused by the eye on the retina. **P. remo′tum,** far-point; farthest point which can be focused by the eye on the retina. **P. sa′liens** (leaping point), first moving point which makes its appearance after the fecundation of the germ; it has been generally, but erroneously, applied to the heart of the embryo, which has been described as the first to live—*primum vivens*—the last to die—*ultimum moriens.* **P. spi′næ nasa′lis anterio′ris,** subnasal point. **P. s. n. posterio′ris,** staphylon.

**Punctu′ra.** Paracentesis; puncture.

**Punctura′tion.** Act of puncturing.

**Punc′ture.** Wound made by a pointed instrument, as a sword, bayonet, needle, thorn, etc. A puncture is generally of trifling consequence, but sometimes it becomes important from the parts implicated and the after-consequences. **P. cul′ture,** see *Culture.* **Explor′atory p.,** p. of a part and withdrawal of some of the contents for examination. **Lum′bar, Quinck′e's,** or **spi′nal p.,** puncture or perforation of the spinal membranes in the lumbar region, as for relief of hydrocephalus.

**Punc′turing.** Operation of opening, by means of a trocar, lancet, etc., a natural or accidental cavity, with the view of evacuating any fluid effused or accumulated therein.

**Pun′gent.** Sharp, piercing, stinging, said of pain and of odors.

**Pu′nica grana′tum.** Pomegranate, ord. *Myrtaceæ.* The rind of the fruit and the flowers have been employed both internally and externally as astringents; seeds are called *coccones.* The portion, however, that has attained most celebrity is the bark of the root, *granatum* (Ph. U. S.), *granati radicis cortex* (Ph. Br.), which appears to be very efficacious in tænia; is given in doses of ʒss–j (16.0–32.0). Three or four doses are usually sufficient to expel the worm. The bark contains a peculiar matter called *granatin.* Another principle has also been obtained from the bark, called *punicine.* The latter is generally known as pelletierine, under which name it is prescribed.

**Punicine′.** Pelletierine.

**Pu′nicotan′nic acid.** Tannic acid in bark of the pomegranate.

**Punk.** Boletus igniarius.

**Pun′tos.** An epidemic contagious spotted fever which prevailed in Spain in the sixteenth century.

**Pu′pil** (*pupilla,* little babe; so called from the image seen in the eye). Apple of the eye. The aperture of the iris through which the rays of light pass that have to impress the image of an object on the retina. This aperture can be dilated or contracted so as to allow a greater or smaller quantity of luminous rays to penetrate. The pupil in man is round, and by it the anterior and posterior chambers of the eye communicate with each other. In the fœtus during the first six months of gestation it is closed by the pupillary membrane. The contraction of the pupil is an important symptom in diseases and injuries of the brain. Certain medicines always dilate the pupil, while others contract it. See *Mydriatics* and *Myotics.* **Argyll′-Rob′ertson p.,** p. which does not respond to the action of light, but to accommodation for short distances; frequent symptom in tabes dorsalis. **Artific′ial p.,** an operation is sometimes necessary to form a new pupil in lieu of the natural one, which has become obliterated by disease; see *Iridectomy.* **Cat′s-eye p.,** p. resembling that of a cat, being an elongated slit. **Clo′sure of the p.,** synizesis. **Contrac′tion of the p.,** mydriasis. **Dilata′tion of the p.,** corectasis. **Exclu′sion of the p.,** total posterior synechia; see *Synechia.* **Hutch′inson's p.,** see *Hutchinson.* **Occlu′sion of the p.,** see *Synechia.* **Pin′hole p.,** a condition of the pupil in which it is so contracted as to resemble a pinhole; it is seen in opium poisoning and in the cerebral complications of certain fevers.

**Pupil′la.** Pupil. **P. factit′ia,** artificial pupil.

**Pupil′læ ve′lum** (curtain). Pupillary membrane.

**Pu′pillary.** That which belongs to the pupil. **P. mem′brane**, the central aperture of the iris is closed in the fœtus during a certain period of gestation by a very thin membrane. It disappears in the seventh month. The term *membrana pupillaris perseverans* has been applied by Graefe to an adventitious membrane with holes or fissures in front of the iris, which he considers to be the remains of the anterior part of the vascular capsule of the lens. **P. re′flex,** dilatation and contraction under the influence of light or other stimulus.

**Pupillom′eter** (*pupilla,* pupil, *metron,* measure). An instrument for measuring the size of the pupil.

**Pupillos′copy** (*pupilla,* pupil, *skopeo,* to see). Examination of the pupil.

**Pupillostatom′eter.** Instrument for measuring the distance between the central points of two pupils.

**Pup′pis os.** Frontal bone.

**Pup′pit root.** Veratrum viride.

**Pu′pulæ.** The pulps or extremities of the fingers.

**Pur′blind.** Myopic.

**Pur′blindness.** Myopia.

**Pure.** Unadulterated; free from admixture of any kind.

**Pur′gament** (*purgo,* to cleanse). Purgative.

**Purga′tion.** Catharsis.

**Purgatio′nes** (pl. of purgatio). Menses.

**Pur′gative.** Cathartic, purgament, purge. Medicine which operates more powerfully on the bowels than a laxative, stimulating the muscular coat and exciting increased secretion from the mucous membrane. See *Cathartics.*

**Purge.** Purgative. To move the bowels powerfully; to induce catharsis. **P. root,** Euphorbia corollata.

**Pur′ging.** Diarrhœa. Inducing catharsis. **P. ag′aric,** white agaric, Polyporus officinalis. **P. ber′ries,** fruit of Rhamnus catharticus. **P. cas′sia,** fruit of Cassia fistula; pulp is slightly laxative. **P. flax,** Linum catharticum; decoction is cathartic and diuretic. **P. nut,** Jatropha curcas.

**Purifican′tia.** Medicines that purify the blood.

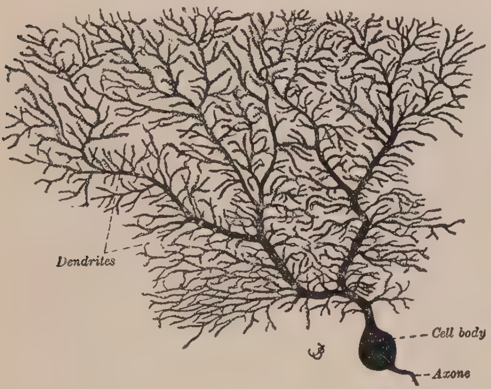
**Pu′rified.** Freed from extraneous admixture.

**Pu′riform** (*forma*, form). Having the appearance of pus.

**Pu′rify.** To cleanse; to free from impurities.

**Purin′.** A hypothetical substance, having the formula $C_5H_4N_4$. **P. ba′ses,** xanthin bases, alloxuric bases, nucleinic bases; various bodies, closely related to each other and to uric acid, assumed to be derived from purin; they comprise xanthin, hypoxanthin or sarcin, episarcin, heteroxanthin, paraxanthin, theophyllin, guanin, epiguanin, adenin, carnin, theobromine, and caffeine. **P. bod′ies,** p. bases.

**Purkin′je's cells.** Cells provided with processes in deep layers of cortex cerebelli. **P.'s cor′puscles,** lacunæ of bone. **P.'s fi′bres,** fibres resembling a net found beneath the endocardial tissue lining the ventricles of the fetal heart, sometimes seen in adults. **P.'s fig′ures,** figures made by shadows of retinal blood-vessels on the retina. **P.'s gran′ular lay′er,** interglobular spaces of Czermak in dentine. **P.'s im′ages,** see *Image*. **P.'s net′work,** network or plexus of fibres in the wall of the cardiac ventricles beneath the endocardium. **P.'s ves′icle,** germinal vesicle.



Purkinje cell from the human cerebellum.

**Purkin′je-San′son im′ages.** See *Image*.

**Purl.** Medicated malt liquor in which wormwood and aromatics are infused.

**Purohepati′tis.** See *Hepatitis*.

**Puromu′cous.** Having the character or appearance of pus and mucus; mucopurulent.

**Pur′ple a′vens.** Geum rivale. **P. of Cas′sius,** a precipitate obtained by adding the protochloride of tin to a dilute solution of gold, or by dipping rods of tin in a solution of gold in diluted chlorohydric acid; used in syphilis. **P. fe′ver,** cerebrospinal fever. **Vis′ual p.,** see *Rhodopsin*. **P. wil′low herb,** Lythrum salicaria.

**Pur′ples.** Purpura hæmorrhagica.

**Pur′pura.** Purple color. This word has been employed in many senses. It generally means livid spots on the skin from extravasated blood, a hemorrhage into the cutis, with languor and loss of muscular strength, and pains in the limbs. The effusion of blood in purpura may have the appearance of bruises, ruptured vessels, bullæ, papules, petechiæ, vibices, etc. Purpura was formerly sometimes used as a synonym of scarlatina. Some of the varieties of purpura are supposed by some to be dependent upon a peculiar diathesis, which has been termed *scorbutic cachexia*, *lues scorbutica*, and *cacochymia scorbutica*. In addition to the numerous remedies suggested in these varied morbid conditions much good will be accomplished by change from low to cheerful spirits, from filth to cleanliness, and from a cold and damp to a temperate and dry climate, with sufficiency and change of food, and especially the use of green vegetables. The general principles of management are the same in sea as in land scurvy; that is, in p. nautica as in p. hæmorrhagica. **P. al′ba benig′na et malig′na,** miliary fever. **P. arthrit′ica,** p. rheumatica. **P. ful′minans,** Henoch's p., p. marked by rapidly formed and large ecchymoses and accompanied by intestinal complications; a frequently fatal form, occurring usually in children. **P. hæmorrhag′ica,** land scurvy, purples; morbus maculosus Werlhoffii, or Werlhoff's disease; the spots are circular and of different sizes, often in stripes or patches, irregularly scattered over the thighs, arms, and trunk, and there are occasional hemorrhages from the mouth, nostrils, or viscera, and great debility and depression of spirits; black leg is one form of this disease. **Hen′och's p.,** p. fulminans. **P. maculo′sa,** p. associated with a papular, acneiform eruption. **Landou′zy's p.,** a malignant form attended with constitutional symptoms. **P. milia′ris,** miliary fever. **P. minera′lis Cas′sii,** purple of Cassius. **P. nau′tica,** scurvy or sea scurvy; there are spots of different hues intermixed with the livid, principally at the roots of the hair; the teeth are loose, the gums are spongy and bleeding, the breath is fetid, and the debility universal and extreme. This occurs chiefly at sea, after exposure to a moist, cold, atmosphere, with long use of salted animal food and of stagnant water. **P. neonato′rum,** purpura of the new-born child. **P. papulo′sa,** form of purpura in which the ecchymoses are interspersed with small papules. **P. puerpera′rum,** miliary fever. **P. pulico′sa,** ecchymoses due to the bites usually of fleas and bedbugs. **P. rheumat′ica,** peliosis rheumatica, purpura characterized by a petechial eruption, with fever and rheumatic pains in certain joints. **P. scorbu′tica,** scurvy. **P. seni′lis,** p. of old age. **P. sim′plex,** petechial scurvy, p. unaccompanied by constitutional symptoms. **P. ur′ticans** or **urtica′ta,** urticaria complicated by a purpuric eruption, or p. accompanied by the occurrence of wheals on the skin.

**Purpuræ′mia.** Malarial hæmoglobinuria.

**Purpu′ric.** Relating to purpura, as purpuric fever; or to purpurine, as purpuric urine. **P. u′rine,** see *Porphyruria*.

**Purpurin′.** Uroërythrin, rosacic acid, a dark reddish coloring-matter, supposed to be altered blood pigment.

**Purpurinu′ria.** Porphyruria; presence in the urine of purpurin, occurring sometimes in acute rheumatism.

**Purpuris′sum.** Hydrargyri sulphuretum rubrum.

**Pur′ring thrill.** Thrill in an aneurysm perceptible to the touch. **P. tre′mor,** tremor sensible to the hand when applied over the precardial region, and supposed to be a sign of ossification or other contraction of the auriculoventricular openings.

**Purse** (*bursa*). Scrotum. **Shep′herd's p.,** Thlaspi bursa.

**Pur′siness.** Dyspnœa accompanied with oppressive fatness. The word is also applied to dyspnœa of every kind. One so affected is pursy or short-winded, short of wind (Prov. short of puff).

**Purs′lane.** Portulaca. **Milk p.,** Euphorbia corollata and E. maculata. **Speed′well p.,** Veronica peregrina. **Wa′ter p.,** Ludwigia palustris, Veronica beccabunga.

**Pur′sy.** Very fat and short of breath.

**Pu′rulence** or **pu′rulency.** Pus; suppuration.

**Pu′rulent.** That which has the character of pus or consists of pus; as purulent matter, a purulent collection, purulent infiltration, etc. **P. depos′it,** abscess. **P. diath′esis** or **infec′tion,** pyæmia.

**Pu′ruloid** (*pus* + *eidos*, resemblance). Pyoid.

**Pur′vain.** Verbena officinalis.

**Pus.** Matter, purulence. Secretion from inflamed textures, almost always of the same nature, whatever may be the part it proceeds from. Pus of a good quality, such as is secreted from a healthy granulating surface, formerly called healthy or laudable pus, *pus bonum et laudabile*, is of a yellowish-white color, opaque, inodorous, and of a creamy appearance; heat, acids, and alcohol coagulate it.

When analyzed it affords albumin and water, a particular extractive substance, and a small quantity of soda, calcium phosphate, and other salts; it consists essentially of two distinct parts—pus corpuscles or globules, cytoid corpuscles of Henle, leucocytes, and a colorless, aqueous fluid, liquor puris, in which the corpuscles are suspended. The chief microbes concerned in pyogenesis or pus-formation are the Streptococcus pyogenes and forms of staphylococci. **Blue p.**, p. of a bluish color, due to the presence of Bacillus pyocyaneus. **P. bo'num**, see *Pus*. **P. cor'puscles**, leucocytes suspended in the liquor puris. **P. corrosi'vum**, sanies. **Cur'dy p.**, pus having a cheesy appearance like the flakes of curds. **P. glob'ules**, p. corpuscles. **Health'y p.**, see *Pus*. **I'chorous p.**, so called when thin and acrid. **Laud'able p.**, see *Pus*. **P. malig'num**, ichor; sanies. **Mu'co-p.**, pus mixed with mucus. **P. nutriti'vum**, p. bonum. **Sa'nious p.**, greenish or reddish pus mixed with blood. **Se'ro-p.**, pus mixed with serum. **P. ve'rum**, p. bonum.

**Pusil'lus.** Dwarf.

**Pus'tula** (*pus*). Pustule. **P. aleppen'sis** or **P. ar'dens**, eczema. **P. gangræno'sa**, see *Anthrax*. **P. o'ris**, aphthæ. **P. liv'ida Estho'niæ**, see *Anthrax*. **P. malig'na**, see *Anthrax*.

**Pus'tulæ sic'cæ** (dry pustules). Lichen.

**Pus'tulant.** Anything irritating the skin and causing pustules to form.

**Pus'tular.** Relating to or affected with pustules.

**Pus'tulate.** Blistered.

**Pustula'tion.** Formation of pustules.

**Pus'tule.** A small blister or elevation of the cuticle containing pus and resting on an inflamed base. Two varieties of pustules are described—the *simple*, containing a single cavity, and the *compound*, in which there are several compartments in the one lesion. The variolous pustule is called pock. **Malig'nant p.**, see *Anthrax*.

**Pus'tulous.** Pustular.

**Puta'men** (shell). The outer layer of the lenticular nucleus. **P. o'vi**, the membrane adherent to the inner surface of the egg-shell.

**Put'nam-Da'na symp'tom-com'plex.** Sclerosis of the lateral and posterior columns of the spinal cord.

**Putrefac'tion** (*putris*, rotten, *facio*, to make). Putrid or putrefactive fermentation. Decomposition experienced by animal substances when deprived of life and placed under special circumstances. Such change is now, in the light of modern research, known to result from the action of microorganisms. Presence of moisture is indispensable; the temperature most favorable to it is from 60° to 90° F. The most common products of putrefaction are fatty acids, amido-acids, and various ptomains, and, as the process continues, water, carbonic acid, ammonia, carbureted hydrogen, and marsh-gas. It was formerly supposed that something like putrefaction occurred in the living body in cases of so-called putrid fever, and to this condition the name *typhohæmia* was given, upon the supposition of alteration of the blood by putrid animal matters. *Putrefaction* or *putrescence* properly signifies the state of becoming putrid; *putridity*, the state of rottenness.

**Putrefac'tive.** Relating to or having a tendency to produce putrefaction. **P. al'kaloid**, ptomain.

**Putres'cence.** Beginning putrefaction.

**Putres'cent.** Growing putrid; slightly putrid.

**Putrescen'tia.** Putrefaction. **P. u'teri grav'idi**, softness of the uterus during pregnancy.

**Putrescibil'ity.** Capacity for putrefaction.

**Putrescin'** (*putresco*, to rot). $C_4H_{12}N_2$. Ptomain which is not poisonous, and usually occurs with cadaverin, obtained from putrefying internal organs of man, from herring and other fish, from flesh, cultures of fæces on gelatin, etc. It is a clear liquid with a spermatic odor.

**Pu'trid** (*putreo*, to rot). Rotten; characterized by the signs of putrescence. **P. fe'ver**, a name which formerly included typhoid, typhus, and other fevers. **P. infec'tion**, septicæmia.

**Putrid'ity.** Putrefaction, rottenness.

**Pu'trilage** or **Putrila'go** (*putris*, rotten). Pultaceous matter or slough which forms in certain gangrenous and other ulcers, and is thrown off.

**Pu'tror.** Putrefaction.

**Put'tyroot.** Aplectrum hiemale.

**Put'zochill.** See *Myroxylon peruiferum*.

**Puxi'ri.** See *Pichurim beans*.

**Pyæ'mia** (*pyon*, pus, *haima*, blood). Suppurative fever. Purulent contamination of the blood, producing marked depression of the vital powers, chills, fever, sweating, sometimes jaundice, the formation of abscesses in various regions of the body, etc., constituting what was formerly called purulent diathesis, purulent infection. It is due to the presence of the microbes of suppuration in the blood. Chronic or relapsing pyæmia resembles the acute form, but is slower and attended with relapses.

**Pyæ'mic.** Relating to or caused by pyæmia.

**Py'ar** (*pyar*). Colostrum.

**Pyarthro'sis** (*pyon*, pus, *arthron*, joint). Suppuration of a joint.

**Pyar'thrum.** A suppurated joint.

**Pycnan'themum inca'num.** Common mountain mint, wild basil. Indigenous plant of the mint family—ord. *Labiatæ*—having the aromatic properties of the mints. **P. linifo'lium**, Virginia thyme, has like virtues.

**Pycnicma'sia** or **Pycnic'masis** (*pyknos*, thick, *ikmas*, moisture). A thickening of the body fluids.

**Pycnom'eter** (*pyknos*, thick, *metron*, measure). An apparatus for determining specific gravity.

**Pycnomor'phous** (*pyknos*, thick, *morphe*, shape). Staining deeply because of the density of the cell arrangement.

**Pycno'sis** (*pyknos*, thick). Thickening, as of a secretion. Act of rendering thick, as in the formation of an extract. Contraction of the nucleus of a cell, with condensation.

**Pyec'chysis** (*pyon*, pus, *ekchysis*, effusion). Effusion of pus.

**Pyeli'tis** (*pyelos*, pelvis). Inflammation of the pelvis and calices of the kidney. The chief symptoms are pain in the lumbar region, increased by flexing the thigh, pus and perhaps blood in the urine, irritability of the bladder, and fever. The disease may be due to extension upward of inflammation of the bladder, to the presence of calculi, to retention of urine, or may occur as a complication of scarlatina, typhoid fever, smallpox, purpura, and other general diseases.

**Pyelocysti'tis** (*kystis*, bladder). Inflammation of the renal pelvis and of the bladder.

**Pyelom'eter** (*metron*, measure). Pelvimeter.

**Pyelonephri'tis** (*pyelos*, pelvis, *nephros*, kidney). Inflammation of the kidney and of its pelvis and calices.

**Pyelonephro'sis.** Surgical kidney; affection of the kidney and its pelvis due to the extension of inflammation from the lower urinary passages.

**Pyelot'omy** (*pyelos*, pelvis, *tome*, incision). Incision into or operation on the pelvis of the kidney.

**Pyem'esis** (*pyon*, pus). Vomiting of pus.

**Pyenin'.** Paranuclein.

**Pye'sis** (*pyon*, pus). Suppuration.

**Pye'tia.** Colostrum; rennet.

**Py'gal** (*pyge*, nates). Relating to the nates.

**Pygal'gia** (*algos*, pain). Pain in the nates.

**Pyg'me.** Fist; forearm.

**Pyg'my** (*pygme*, fist or forearm). A dwarf.

**Pygodid'ymus** (*pyge*, nates, *didymos*, twin). Twins united by the sacrum and coccyx.

**Pygom'elus** (*pyge*, nates, *melos*, limb). A monster with an accessory limb on the nates.

**Pygop'agus** (*pyge*, nates, *pago*, to fix). Pygodidymus.

**Pygoparasit'icus** (*pyge*, rump, *parasitikos*, parasitic). Pygopagus, one fœtus being a parasite.

**Pyin'.** A constituent of pus, in general characters resembling mucin.

**Pyknom'eter.** Pycnometer.

**Py′la.** Communication between the third ventricle and the aqueduct of Sylvius.

**Pylæ′ma** (*pyle*, gate or porta, *haima*, blood). Blood of the portal vein.

**Py′le** (*pyle*, gate). Porta.

**Pylemphrax′is** (*pyle*, gate, *emphraxis*, obstruction). Obstruction of the vena portæ.

**Pylephlebecta′sia** or **Pylephlebec′tasis.** Dilatation of the vena portæ.

**Pylephlebi′tis** (*pyle*, porta, *phleps*, vein). Inflammation of the vena portæ.

**Pylethrombo′sis.** Thrombosis of the portal vein.

**Py′lic** (*pyle*, porta). Relating to the portal vein.

**Pylom′eter** (*pyle*, gate, *metron*, measure). Instrument to measure obstructions at the entrance to the bladder.

**Pyloral′gia.** Pain at the pylorus.

**Pylorec′tomy** (*pylorus* + *ektome*, excision). Excision or resection of the pylorus.

**Pylor′ic.** That which relates to the pylorus. **P. ar′tery** arises from the hepatic, and is distributed to the pylorus and to the lesser curvature of the stomach, anastomosing particularly with the arteria coronaria ventriculi and arteria gastroepiploica dextra. **P. glands,** in the vicinity of the pyloric orifice of the stomach. **P. incon′tinence,** weakness or defect of the pylorus resulting in incomplete closure; regurgitation is the chief symptom, the intestinal contents and bile being returned into the stomach. **P. plex′us,** branches from the plexus hepaticus upon the pyloric artery. **P. steno′sis,** narrowing of the pylorus. **P. valve,** pylorus. **P. vein** is distributed like the artery.

**Pylori′tis.** Inflammation of the pylorus.

**Pyloroclei′sis** (*kleisis*, closure). Condition in which the pylorus is obstructed.

**Pylorodio′sis.** Surgical dilatation of the stenosed pylorus. See *Hahn* and *Loreta*.

**Pylor′oplasty.** Plastic operation on the pylorus.

**Pylor′ospasm.** Spasm of the pylorus.

**Pylorosteno′sis.** Morbid contraction of the pyloric orifice.

**Pylor′us** (*pyle*, gate, *ouros*, guardian, janitor). The lower or right orifice of the stomach is called pylorus because it closes the entrance into the intestinal canal; it is furnished with a circular, flattened, fibromucous ring which effects the total closure of the stomach during digestion in that organ; this is called the valve of the pylorus, pyloric valve, sphincter pylori, pylorus (properly so called). It is a fold of the mucous and muscular membranes of the stomach—pyloric muscle of some authors.

**Pyo-** (*pyon*, pus). In composition, pus.

**Pyoblen′nic** (*pyon*, pus, *blenna*, mucus). Mucopurulent.

**Pyoblennorrhœ′a.** Discharge of muco-pus.

**Py′ocele** (*kele*, hernia). A hernial sac containing pus.

**Pyoceno′sis,** (*pyon*, pus, *kenosis*, evacuation). Evacuation of pus.

**Pyocœ′lia** (*pyon*, pus, *koilia*, belly). Pus in the abdominal cavity.

**Pyocol′pocele** (*pyon*, pus, *kolpos*, vagina, *kele*, tumor). Suppurating tumor of the vagina.

**Pyocol′pos.** Abscess in the walls of the vagina.

**Pyoctanin′** (*pyon*, pus, *kteino*, to destroy). Two substances have appeared under this name, one blue, the other yellow. The *blue* is methyl-violet, the *yellow* is an auramine dye. Blue pyoctanin is used in powder, solution, ointment, pencil, or other form of application in croup, affections of the nose, gonorrhœa, diseases of the eye, ear, and throat, tumors, etc. It is antiseptic, disinfectant, and analgesic. Yellow pyoctanin has been used in diseases of the eye. *Ethyl* pyoctanin possesses still stronger antiseptic properties than the blue.

**Pyocyanin′** (*kyanos*, blue). $C_{14}H_{14}NO_2$. Bluish coloring-matter or ptomain isolated from blue pus, produced by the action of the Bacillus pyocyaneus.

**Py′ocyst** or **Pyocys′tis** (*pyon*, pus, *kystis*, sac). Vomica.

**Py′ocyte** (*pyon*, pus, *kytos*, cell). Pus-cell or corpuscle.

**Pyoder′mia.** Any suppurative skin disease.

**Pyœde′ma.** Tumefaction of a surface owing to the effusion of pus.

**Pyoem′esis.** Vomiting of pus.

**Pyogen′esis** or **Pyoge′nia** (*pyon*, pus, *gennao*, to generate). Generation of pus. The theory or mechanism of the formation of pus. **P. corrosi′va,** ulceration. **P. sim′plex,** suppuration.

**Pyogenet′ic** or **Pyogen′ic.** Having relation to the formation of pus. **P. mem′brane,** term applied to a thin, yellowish, flaky layer on the interior of the wall of an abscess, under the idea that the pus is secreted by it.

**Pyogenin′.** $C_{63}H_{128}N_2O_{19}$. Substance derived from cell-body of pus-cells.

**Pyogenous,** pi-oj′en-us. Produced from or caused by pus.

**Pyohæ′mia.** Pyæmia.

**Pyohæmotho′rax.** Collection of pus and blood in the pleural sac.

**Py′oid** (*pyon*, pus, *eidos*, resemblance). Resembling pus.

**Pyoktanin′.** Pyoctanin.

**Pyo′ma.** Suppurating sore.

**Pyome′tra** (*pyon*, pus, *metra*, uterus). Collection of pus in the uterus.

**Pyonephro′sis.** Renal abscess and ulceration.

**Pyo-otorrhœ′a.** Purulent discharge from the ear.

**Pyo-ova′rium.** Abscess of the ovary.

**Pyopericardi′tis.** Suppurative pericarditis.

**Pyopericar′dium.** Collection of pus in the pericardium.

**Pyoperitoni′tis.** Suppurative inflammation of the peritoneum.

**Pyophthal′mia** or **Pyophthalmi′tis.** Purulent ophthalmia. Hypopyon. **P. neonato′rum,** see *Ophthalmia*.

**Pyophylac′tic** (*phylasso*, to guard). Preventing the inflow or outflow of pus, as *p. membrane*, lining membrane of abscess cavity.

**Pyophysome′tra.** Condition in which pus and gaseous matter are present in the uterus.

**Pyopla′nia** (*pyon*, pus, *planos*, wandering). Extension of pus to other parts. Purulent infiltration.

**Pyopneumopericar′dium.** The presence of gas and pus in the pericardial sac.

**Pyopneumoperitoni′tis.** Suppurative peritonitis with the presence of gas in the peritoneal cavity.

**Pyopneumotho′rax.** Pneumothorax complicated with suppuration. **Subphren′ic p.,** subphrenic abscess; false pneumothorax.

**Pyopoië′sis** (*pyon*, pus, *poieo*, to make). Pyogenia.

**Pyopoiet′ic.** Suppurative.

**Pyop′tysis** (*pyon*, pus, *ptyo*, to spit). Spitting of pus.

**Pyorrha′gia.** Sudden discharge of pus.

**Pyorrhœ′a** (*pyon*, pus, *rheo*, to flow). Discharge of pus. **P. alveola′ris,** Riggs's disease, suppurative inflammation of the root membrane of the tooth in relation with the connective tissue of the gums beneath the mucous membrane. **P. au′rium,** otorrhœa. **P. nasa′lis,** ozæna. **P. pal′pebræ,** secretion of pus from the eyelids. **P. urina′lis,** pyuria.

**Pyosalpingi′tis** (*pyon*, pus, *salpinx*, tube). Suppurative inflammation of the Fallopian tube.

**Pyosalpin′go-oöphori′tis.** Suppurative inflammation of the Fallopian tube and ovary.

**Pyosal′pinx** (*pyon*, pus, *salpinx*, tube). Formation of pus in the Fallopian tube.

**Pyosapræ′mia** (*pyon*, pus, *sapros*, rotten, *haima*, blood). Infection of blood with pus.

**Pyosepthæ′mia.** Pyosepticæmia.

**Pyosepticæ′mia.** Combined septic and purulent toxæmia.

**Pyosin′.** $C_{57}H_{110}N_2O_{15}$. Substance obtained from body-plasma of pus-cells.

**Pyo′sis.** Hypopyon; pterygion. Suppuration. **P. pec′toris,** empyema.

**Pyostat′ic** (*pyon*, pus, *stasis*, stagnation). Arresting secretion of pus; agent having such effect.

**Pyotho′rax.** Empyema.

**Pyo-u′reter.** Retention of pus in a ureter.

**Pyoxanthin′.** Yellow pigmentary matter caused by Bacillus pyocyaneus.

**Pyoxan′those** (*pyon*, pus, *xanthos*, yellow). Yellow coloring-matter in pus.

**Py′ra** (*pyr*, fire). Anthrax.

**Pyraloxin′.** Oxidized pyrogallol, employed in skin diseases.

**Pyr′amid.** Any anatomical structure having the shape of a pyramid. A small, bony projection in the cavity of the tympanum, which is excavated to lodge the muscles of the stapes, eminentia papillaris or pyramidalis tympani. The centre-pin of the trephine. One of the four columns of the oblongata. A small, obtusely pointed eminence of the inferior vermiform process of the cerebellum. Third or middle lobe of the thyroid gland. **Ante′rior p.,** one of the two anterior columns of the medulla oblongata. **P. of the cerebel′lum,** projection from the inferior vermiform process. **P. of Ferrein′,** see *Ferrein.* **P. of Lalouette′,** pyramid of thyroid gland. **Lat′eral p.,** restiform body. **P. of Malacarne′,** inferior vermiform process. **P. of Malpigh′i,** see *Malpighi.* **P. of the medul′la oblonga′ta,** one of four columns of the medulla oblongata, two anterior and two posterior. **P. of thy′roid gland,** third or middle lobe of thyroid gland. **Poste′rior p.,** fasciculus gracilis, one of the two posterior columns of the medulla oblongata. **Re′nal p.,** p. of Malpighi. **Tem′poral p.,** petrous portion of temporal bone. **Thy′roid p.,** Lalouette's p. **P. of tym′panum,** eminence on inner wall of middle ear. **Wis′tar's p.,** sphenoidal cornu.

**Pyram′idal.** Of the shape of a pyramid, or relating to one of the anatomical pyramids. **P. an′gle,** anterior parietal angle of Quatrefages. **P. bone,** cuneiform bone of the carpus. **P. cat′aract,** anterior capsular cataract projecting from the surface. **P. decussa′tion,** see *Corpora pyramidalia.* **P. em′inence,** pyramis vestibuli. **P. lay′er, large,** third layer of cortex of brain. **P. lay′er, small,** second layer of cortex of brain. **P. nu′cleus,** nucleus olivæ accessorius medialis. **P. papil′læ,** conical papillæ. **P. pro′cess of cu′boid,** posterior inferior angle of cuboid bone. **P. pro′cess of pal′ate-bone,** processus pyramidalis ossis palatini. **P. radia′tion,** nervous fibres passing from the pyramidal tract to the cortex. **P. si′nus of lar′ynx,** pyramidal space continuous with the pharynx, the laryngopharyngeal sinus. **P. skull,** name given to skulls termed Mongolian. **P. tract,** tract of nerve-fibres, originating in the cortex, which connect the central convolutions of the brain and the spinal cord; at the decussation of the pyramids it divides into direct and pyramidal tracts.

**Pyramida′le.** Cuneiform bone.

**Pyramida′lis.** A flat, triangular muscle situated at the posterior part of the pelvis. By its base it is attached to the anterior surface of the sacrum, to the corresponding surface of the great sacrosciatic ligament, and to the posterior part of the ilium. It terminates by a tendon which is attached to the inner surface of the great trochanter. This muscle rotates the thigh outward. **P. abdom′inis,** a small, fleshy, pyramidal fasciculus whose existence is not constant, and which is inserted by its base into the upper part of the pubis, and terminates by its summit at the inferior part of the linea alba. When it contracts it stretches the linea alba. **P. fem′oris,** pyramidalis. **P. na′si,** a thin, triangular muscle which has its summit upward. Above, it is continuous with the occipitofrontalis. It descends vertically before the root of the nose, on which it terminates, becoming confounded with the transversalis. It wrinkles the skin of the root of the nose transversely, and stretches that which covers the tip.

**Pyram′ides** (pl. of pyramis) or **pyr′amids.** Corpora pyramidalia.

**Pyram′idoante′rior tract.** Column of Türck. Formed by continuation of motor fibres, which form pyramids of the medulla by non-decussating fibres.

**Pyram′idolat′eral tract.** Formed by continuation downward by decussating fibres of the motor fibres, which form the pyramids of the medulla.

**Pyram′idon.** $C_{13}H_{17}N_3O$. Dimethylamidophenyldimethylpyrazolon. Derivative of antipyrin. Yellowish-white, soluble powder; resembles antipyrin in therapeutic effect; dose, gr. iij–vj (0.2–0.4).

**Pyr′amis.** Pyramid. See *Thyroid gland.* **P. coch′leæ,** modiolus. **P. poste′rior,** fasciculus teres. **P. trigo′na,** see *Temporal bone.* **P. ver′mis acces-so′ria,** accessory lobule of inferior vermiform process of the cerebellum. **P. vestib′uli,** p. vermis accessoria.

**Pyrantin′.** Phenosuccin; antipyretic.

**Pyrazin′.** Antipyrin.

**Py′razol.** Phenylmethylpyrazol-carbonic acid.

**Pyrec′tic.** Febrile.

**Pyrenæ′mata** (*pyren*, nucleus, *haima*, blood). Vertebrata with nucleated colored corpuscles—as the oviparous.

**Pyrenæ′mia.** Condition of the blood characterized by the presence of nucleated colored corpuscles.

**Pyrenin′.** Nuclein of the nucleoli.

**Pyrenoi′des** (*pyren*, kernel, *eidos*, resemblance). Odontoid. **P. auric′ulæ,** fibres of tragicus muscle going to process of helix. **P. jun′gii,** pyramidalis auriculæ. **P. men′ti,** depressor anguli oris. **P. na′rium,** levator labii superioris alæque nasi.

**Pyrethrine′.** Alkaloid derived from pyrethrum.

**Pyrethrotox′ic acid.** Active principle derived from the flowers of Pyrethrum roseum.

**Pyre′thrum.** (Ph. U. S.) Pellitory; the root of Anacyclus pyrethrum; used as a masticatory in doses of ʒss–j (2.0–4.0). The *tincture* is official; it is employed as a local stimulant application to mucous membranes. Also powdered flowers of P. corneum and roseum, or Persian insect powder; bubach. Urticaria. **P. cor′neum,** see *Anthemis pyrethrum.* **P. german′icum,** Anacyclus officinarum. **P. partheni′um,** Matricaria parthenium. **P. ro′seum,** see *Anthemis pyrethrum.* **P. sylves′tre,** Achillea ptarmica. **P. tanace′tum,** Tanacetum balsamita.

**Pyret′ic.** Febrile.

**Pyretico′sis** (*pyretos*). Febrile affection.

**Pyretin′.** Name given to a combination of various empyreumatic resinous products from pitch. Also an antipyretic and analgesic drug; dose, gr. iij–v (0.2–0.32).

**Pyretogen′esis** or **Pyretogen′ia** (*pyretos*, fever, *genesis*, generation). Origin of fever.

**Pyretogenet′ic** or **pyretogen′ic.** Producing fever.

**Pyretogenous,** pi-ret-oj′en-us. Caused by fever.

**Pyretog′raphy.** Description of fever.

**Pyretol′ogy** (*pyretos*, fever, *logos*, discourse). Science of fever.

**Pyrex′ia** (*pyrexis*). Fever; febrile condition.

**Pyrex′ial.** Pertaining to pyrexia or fever.

**Pyridin′** (*pyr*, fire). $C_5H_5N$. Colorless liquid, with an empyreumatic odor, obtained from coal-tar; useful for inhalations in asthma. It has been given in doses of ♏iij (0.2) three times a day as a cardiac stimulant. In diphtheria it has been applied in watery solution, being painted on the affected surface, and injections of it have been used in gonorrhœa.

**Pyr′iform** (*pyros*, pear, *forma*, shape). Pear-shaped. **P. ap′erture,** anterior opening of the nasal fossæ in the cranium. **P. fas′cia,** part of pelvic fascia over the inner surface of the pyriform muscle. **P. mus′cle,** pyramidalis. **P. si′nus,** see *Pyramidal sinus.*

**Pyrifor′mis.** Pyramidalis muscle.

**Pyr′isol.** Pyrosal.

**Pyri′tes, i′ron.** Ferri sulphuretum.

**Pyroace′tic e′ther** or **spir′it.** Acetone.

**Pyroarsen′ic acid.** $H_4As_2O_7$. One of the forms of arsenic acid resulting from combination of the pentoxide with one, two, or three molecules of water.

**Pyrobo′ric acid.** $H_2B_4O_7$. Obtained by heating boric acid. Its salts are *pyborates.*

**Pyrocatechin,** pir-o-kat-e-kin′. Oxyphenol. Derived by dry distillation from catechu; a constituent of kino; antiperiodic. It is also occasionally found in the urine. **P.-monoeth'yl-e'ther,** gnæthol. **P.-monoace'tic acid,** guaiacetin.

**Pyrocatechinu'ria.** Presence of pyrocatechin in the urine.

**Pyrocatechu'ic acid.** An acid constituent of kino.

**Pyrocome'nic acid.** An acid derived from meconic acid.

**Pyrodex'trin.** Compound obtained by subjecting starch to heat at 220° to 230° C.

**Pyrodin'.** White powder, sparingly soluble in water, antipyretic; also called phenacethydrazin.

**Py'roform.** Bismuth oxyiodide pyrogallol.

**Pyrogal'lic acid.** White, soluble product obtained by action of heat on gallic acid; used externally in some forms of cutaneous affections. Taken internally it is destructive to the red blood corpuscles.

**Pyrogal'lol.** The official (Ph. U. S.) name of pyrogallic acid. **P. ac'etates,** see *Eugallol* and *Lenigallol*. **P. bis'muth,** see *Lenigallol*. **Ox'idized p.,** externally employed in skin diseases, such as seborrhœa and pityriasis of the scalp, in ointment; less irritating than pyrogallol.

**Pyrogallopyrin'.** Crystalline compound resulting from the action of pyrogallol on antipyrin.

**Pyrogen'ic** or **Pyrogenous,** pi-roj'e-nus (*pyr*, fever, *genesis*, production). Fever-exciting.

**Pyroguaiacin'.** $C_{19}H_{22}O_3$. Produced by dry distillation of guaiaretic acid.

**Pyr'ola.** A genus of plants, ord. *Ericaceæ*. **P. macula'ta,** spotted pipsissewa, spotted wintergreen, whiteleaf, white pipsissewa, kingcure, ground holly, rheumatism weed, etc., has similar properties to P. rotundifolia. **P. rotundifo'lia,** round-leaved pyrola or wintergreen, shinleaf; plant was once used as a gentle astringent and tonic. **P. umbella'ta,** ground holly, pipsissewa, wintergreen, rheumatism weed, prince's pine. This common American plant is allied to the uva ursi in botanical as well as medical qualities. Tonic and diuretic. The bruised leaves irritate the skin. From the decoction or infusion an agreeable beverage may be formed by adding sugar, ginger to flavor it, and yeast to produce fermentation. Under the name pipsissewa beer it has been used in scrofulous affections.

**Pyro'leum** (*pyr*, fire, *oleum*, oil) **junip'eri.** Oil of cade. **P. os'sium rectifica'tum,** oleum animale Dippelii. **P. pe'træ,** crude petroleum. **P. pi'ni,** tar. **P. suc'cini,** oil of amber.

**Pyrolig'neous acid** (*pyr*, fire, *lignum*, wood). Acid obtained by distillation from wood, coal, etc., which was once believed to be of a peculiar character. Now known to be formed of acetic acid and an empyreumatic oil, from which it may be freed, and in this state is sold as commercial acetic acid or wood vinegar. Used for similar purposes as distilled vinegar and for preserving animal substances. It has also been used as an antiseptic in gangrene and sphacelus and to foul ulcers—wherever, indeed, creosote is indicated. The dose of the impure pyroligneous acid internally is from five to thirty drops three or four times a day. **P. al'cohol,** methyl alcohol. **P. spir'it,** methylic alcohol.

**Py'rolusite.** Black oxide of manganese.

**Pyroma'nia** (*pyr*, fire). Incendiary monomania. Insanity, with an irresistible desire to destroy by fire.

**Pyrom'eter** (*pyr*, fire, *metron*, measure). Instrument for measuring higher temperatures than can be estimated by the thermometer.

**Pyronyx'is** (*pyr*, fire, *nyxis*, puncture). Ignipuncture.

**Pyrophlyc'tis endem'ica** (*pyr*, fire, *phlyktis*, a blister). Endemic ulcer; Aleppo evil.

**Pyropho'bia** (*pyr*, fire, *phobos*, fear). Morbid dread of fire.

**Pyrophos'phas.** Pyrophosphate.

**Pyrophos'phate.** See *Pyrophosphoric acid*.

**Pyrophosphor'ic acid.** Acid formed by heating phosphoric acid. Of the salts formed by its union with bases, *pyrophosphates*, the pyrophosphates of iron and of sodium are official in the Ph. U. S.

**Py'ropuncture.** Ignipuncture, pyronyxis.

**Py'rosal.** Salicyl acetate of antipyrin. Dose, gr. viij–xv (0.5–1.0), in pleurisy, influenza, rheumatism, migraine, etc.

**Pyrosco'pium** (*pyr*, fire, *skopeo*, to see). Pyrometer.

**Pyro'sis** (*pyroo*, to burn). Waterbrash, waterqualm, waterpang, heart burn. This affection consists of a hot sensation in the stomach, with eructations of an acrid, burning liquid, which causes a distressing sensation in the parts over which it passes. Attention to diet and the use of bitter absorbents will usually relieve when the disease is functional. Occasionally it is symptomatic of organic disease of the stomach. Pyrosis also signified, of old, inflammation, gangrene, and a burn.

**Pyroso'ma** (*soma*, body). Genus of *Protozoa*. **P. bigem'inum,** protozoön of Texas cattle-fever; considered by some as identical with Babesia bovis.

**Py'rosphere** (*pyr*, fire, *sphaira*, ball). Hammer heated in boiling water and applied to the skin for the purpose of cauterization.

**Pyrosulphu'ric acid.** $H_2S_2O_7$. A combination of sulphurous and sulphuric acids.

**Py'rotechny.** Art of making fireworks, etc. Also chemistry. **Sur'gical p.,** art of applying fire or the actual cautery in surgery.

**Pyroth'onide** (*pyr*, fire, *othone*, linen). A kind of pyrogenous or empyreumatic oil produced by the combustion of textures of hemp, linen, or cotton in a copper vessel. The brown product is acid. Its medical properties probably resemble those of creosote. When prepared from rags is it called *rag oil;* when from paper, *paper oil*.

**Pyrot'ic** (*pyroo*, to burn). Caustic; inflammable.

**Pyrotoxin'.** A poisonous product obtained from the substance of various bacteria; it causes fever when injected in animals.

**Pyroxyl'ic spir'it.** See *Acetone*.

**Pyroxylin'** (*pyr*, fire, *xylon*, wood). Soluble guncotton, made by treating absorbent cotton with a mixture of nitric and sulphuric acids; used in the manufacture of *collodion*, which see.

**Pyroxyli'num.** (Ph. U. S.) Pyroxylin.

**Py'rozone.** A solution of 3 per cent. of absolute anhydrous hydrogen peroxide, $H_2O_2$, in water; employed externally and internally as an antiseptic. Also used in 5 and 25 per cent. ethereal solution. **Caus'tic p.,** 25 per cent. solution of pyrozone; applied externally in follicular pharyngitis.

**Pyrrhopine'.** Alkaloid from chelidonium.

**Pyr'rol.** Product of dry distillation of ammonium saccharate and mucate. **P. tetri'odide,** iodol.

**Pyr'us.** Pear. Triticum. **P. america'na,** Sorbus americana. **P. cydo'nia,** quince tree. Quince seed—*cydonium*, the seed of Cydonia vulgaris—is sometimes used in decoction as a demulcent. **P. domes'tica,** Sorbus domestica. **P. ma'lus,** apple or pear.

**Pythogen'ic** (*pytho*, to putrefy, *gennao*, to generate). Causing putrefaction, or resulting from putrefaction. **P. fe'ver,** typhoid fever.

**Pythogenous,** pi-thoj'en-us. Produced by filth or rottenness. **P. fe'ver,** typhoid fever.

**Pyu'ria** (*pyon*, pus, *ouron*, urine). Discharge of purulent urine; a symptom occurring in many diseases, particularly in cases of renal calculi and in organic affections of the bladder. It is called, according to the part whence the pus proceeds, pyuria urethralis, renalis, vesicalis, etc. **P. chylo'sa,** chyluria. **P. lac'tea,** chyluria. **P. muco'sa, sero'sa,** or **vis'cida,** presence of mucus in the urine.

**Pyxida'ria macrocar'pa.** The bark of this plant is much used in Brazil as an astringent.

# Q.

**Q. l.** Abbv. for quantum libet, as much as is required.

**Q. h.** Abbv. for quâque horâ, every hour; **q. 2 h.**, **q. 3 h.**, etc., every two, three hours, etc.

**Q. R.** Abbv. for quantitas recta, used in prescription writing, when an unusual dose of the active ingredient is ordered, to indicate that it is done intentionally.

**Q. s.** Abbv. for quantum sufficit, as much as is sufficient.

**Quabe′be.** Piper cubeba.

**Quack.** Charlatan. **Q. med′icine,** arcanum.

**Quack′ery.** The methods of a quack.

**Quack′salver.** Charlatan.

**Quadran′gular** (*quattuor*, four, *angulus*, angle). Having four angles. **Q. mem′brane,** membrana quadrangularis.

**Quad′rant** (*quadrans*, fourth part). Fourth part of a circle or ninety degrees. **Q. electrom′eter,** instrument for determining the degree and intensity of electricity.

**Quadran′tal.** See *Amphora.*

**Quad′rate.** Square or quadrangular. **Q. car′tilages,** quadrangular cartilages of small size, often found in alæ of the nose. **Q. lobe,** superior anterior lobe of the cerebellum. **Q. lob′ule,** square lobe of the liver. Precuneus of the cerebrum.

**Quadra′tus** (Lat., square). Name for muscles whose figure approaches a square. **Q. dor′si,** q. lumborum. **Q. fem′oris,** muscle situated at the posterior and upper part of the thigh; thin, flat, and quadrilateral, and attached to the outer part of the tuberosity of the ischium, whence it proceeds transversely to the inferior part of the posterior margin of the great trochanter. Rotates the limb, turning the toe outward. **Q. ge′næ,** platysma myoides. **Q. lumbo′rum,** flat, somewhat thick, irregularly quadrilateral muscle, situated in the loins, at the sides of the vertebral column. It is attached below to the crista ilii and iliolumbar ligament, and above to the inferior margin of the last rib, and, besides, to the base of the transverse processes of the last four lumbar vertebræ. This muscle inclines the loins to its side, depresses the last rib, and is thus a muscle of respiration. It can also raise the hip. **Q. men′ti,** depressor labii inferioris. **Q. plan′tæ,** flexor accessorius plantæ. **Q. ra′dii,** pronator radii quadratus. **Q. supe′rior,** quadratus labii superioris.

**Quadri-** (*quattuor*, four). As a prefix, four.

**Quadriba′sic.** Term applied to an acid having four hydrogen atoms replaceable by a base.

**Quad′riceps exten′sor mus′cle** (*quattuor*, four, *caput*, head). Great extensor muscle of the leg, including the rectus femoris, vastus externus, vastus internus, and cruræus. **Q. su′ræ,** two heads of the gastrocnemius, with the soleus and plantaris as one muscle.

**Quadrigem′ina** (pl. of quadrigeminum). Corpora or tubercula quadrigemina, optic lobes or tubercles, optic ganglia, quadrigeminal bodies. Four medullary tubercles situated at the posterior surface of the tuber annulare; white externally, gray internally; oblong, rounded, connected by pairs, and separated by two grooves which divide them crucially. Of these tubercles, the superior, called *nates, natulæ, tubercula anteriora, glutia,* are larger and more prominent than the lower, called *testes, tubercula posteriora.* The pineal gland corresponds exactly to the point of intersection of the two furrows that separate them. They give origin to the optic nerves.

**Quadrigem′inal bod′ies.** Quadrigemina.

**Quadrigem′inous.** Relating to the quadrigemina.

**Quadrigem′inum** (neut. of quadrigeminus). Corpus quadrigeminum, one of the four quadrigeminal bodies.

**Quadrigem′inus** (fourfold) **bra′chii.** Biceps brachii. **Q. cap′itis,** sternocleidomastoid muscle. **Q. pri′mus et supe′rior,** pyramidalis. **Q. quar′tus quadra′tus,** quadratus femoris. **Q. secun′dus et ter′tius,** ischiotrochanterianus.

**Quadrilat′eral** (*latus*, side). Four-sided.

**Quadrimamma′tus** (*mamma*, breast). Four-breasted.

**Quadrip′ara** (*pario*, to give birth). One who has borne four children.

**Quadristerna′lis.** Quartisternal.

**Quadriu′rate.** Quadrurate.

**Quadriv′alent** (*quattuor*, four, *valeo*, to be worth). Having quantivalence of four; replacing or combining with four hydrogen atoms.

**Quadroon′.** The child of a mulatto and a white person. **Black q.,** see *Mulatto.*

**Quadru′mana** (*quattuor*, four, *manus*, hand). Mammalia in which each of the four extremities is provided with a hand or prehensile foot.

**Quad′ruped** (*quattuor*, four, *pes*, foot). Four-footed animal.

**Quad′ruplets.** Four children at one birth.

**Quadru′rate.** A hyperacid urate, constituting all the urine of birds and serpents, and also the normal urates of human urine. See *Urate.*

**Quaf′adil.** Melanthium virginicum.

**Quahoil′.** Cacao.

**Quai.** Akasja.

**Quail** (Low Lat., *qualea*). Tetrao coturnix.

**Quain's degenera′tion.** Form of hypertrophy of the heart characterized by increase of the connective tissue. **Q.'s fat′ty heart,** fatty degeneration of the muscular fibres of the heart.

**Qua′ker black drop.** Acetum opii. **Q. but′tons,** nux vomica.

**Qual′itative** (*qualitativus*). Referring to quality. **Q. anal′ysis,** process for determining in chemistry the component elements of a compound. **Q. percep′tion,** vision which enables one to distinguish objects separately.

**Quamash′** Camassia esculenta. **East′ern q.,** Scilla esculenta.

**Quan′titative.** Relating to quantity. **Q. anal′ysis,** process for determining in chemistry the proportional quantity of each part in a compound **Q. percep′tion,** vision which just enables the individual to distinguish between light and darkness.

**Quantiv′alence** (*quantus*, how much, *valeo*, to be worth). The combining value of any atom compared with that of hydrogen; atomicity; valence.

**Quaran′hem.** Monesia.

**Quar′antine** (*quaranta*, forty). Time during which travellers, returning from a country where any epidemic disease exists, or in whose ship anyone is sick with smallpox or other infectious or contagious disease, are compelled to remain on board ship or in a lazaretto. They, as well as the ship, are said *"to perform quarantine"* and to be *"quarantined."* Quarantine is sometimes extended beyond forty days, while its duration is generally much less. It is sometimes enforced by land, as when contagious diseases require the establishment of *cordons sanitaires,* to prevent the sick or those recently exposed to contagion from leaving infected districts. During quarantine no communication is allowed between the travellers and the inhabitants of the country. *Shot-gun quarantine* is a land quarantine inspired by unreasoning fear and not established by lawfully constituted sanitary authorities. The term quarantine is also extended to apply to the isolation of a sick person and of the inmates of the house where he lies.

**Quar'tan** (*quartus*, the fourth) **fe'ver.** Quartan ague. An intermittent the paroxysms of which recur every fourth day, leaving between them two days' interval. We speak also of the *quartan type.* A double quartan is one in which one paroxysm occurs on the third and another on the second day, so that there is only one day of apyrexia with two days of paroxysms in succession, the paroxysms of every fourth day resembling each other. A triple quartan is one in which there is a paroxysm every day, each usually at a different hour, but each third corresponding. A redoubling or repeating quartan is one in which there are two paroxysms every fourth day. **Remit'ting q.,** one in which the intermission is inordinately short or imperfect.

**Quar'ter e'vil.** Quarter ill. Black leg. A form of symptomatic anthrax in cattle; marked by subcutaneous hemorrhages and frequently fatal.

**Quar'teron.** Quadroon.

**Quar'tio.** Astragalus.

**Quartister'nal.** Fourth osseous portion of the sternum, corresponding to the fourth intercostal space.

**Quassa'tion.** Breaking barks and roots into small bits.

**Quas'sia.** (Ph. U. S.) Wood of Quassia amara and of Q. excelsa, Picræna excelsa, Bittera febrifuga, lofty bitterwood tree, bitter ash, Simaruba excelsa; ord. *Simarubaceæ;* West India trees. The former is the Jamaica quassia, the one in common use; the latter the Surinam quassia. It is called after Quassi, a Surinam negro, who first employed it in the fevers of the country; intensely durable bitter, without astringency; tonic and stomachic. The bitter principle is called *quassin, quassiin, quassit,* and *bitterin,* $C_{41}H_{42}O_9$. The official preparations are: *Extrac'tum quas'siæ;* dose, gr. j–iij (0.065–0.2). *E. q. flui'dum;* dose, ♏v–x (0.32–0.65). *Tinctu'ra q.;* dose, ʒss–j (2.0–4.0). An infusion is used in doses of one-half to one pint by rectal injection in the treatment of pin-worms or ascarides. **Q. cup,** a vessel made of quassia wood, in which water stands over night, becoming thus a weak infusion of quassia. **Q. lig'num,** quassia. **Q. simaru'ba,** euonymus, bitter simaruba, mountain damson; bark of the root, *simaruba,* is bitter and not unpleasant; water and alcohol extract its virtues; exhibited wherever a simple tonic is required.

**Quassiin'.** Quassin.

**Quassin'.** See *Quassia.*

**Quas'sit.** See *Quassia.*

**Quat'ernary.** Fourth, as to time, place, or condition, as *q. stage* of a fever. Also made up of four elements, as *q. compound.*

**Quater'nio** or **Quat'rio.** Astragalus.

**Quea'siness.** Nausea.

**Quebrabun'da.** A tropical disease of horses and pigs, having symptoms similar to beriberi; called also the *straddling disease.*

**Quebrachamine'.** Alkaloid from quebracho.

**Quebrachine'.** Alkaloid derived from quebracho bark; given as hydrochloride in dyspnœa and croup; dose, gr. j–ij (0.065–0.13).

**Quebracho,** ka-brah'cho. Aspidosperma (Ph. U. S.). Bark of Aspidosperma quebracho; tree is a native of Chile; ord. *Apocynaceæ.* Very bitter and tonic; antispasmodic; recommended in cardiac and asthmatic dyspnœa. Dose of the fluid extract, *extrac'tum aspidosper'matis flui'dum,* ʒss–j (2.0–4.0).

**Queen of the mead'ow.** Spiræa lobata. **Q. of the prai'rie,** Spiræa ulmaria.

**Queen's delight'** or **Queen's root,** stillingia.

**Quenu's' opera'tion.** Thoracotomy for empyema.

**Querce'ra.** Cold stage of malarial fever.

**Querce'tic acid.** Result of action of potassa upon quercetin.

**Quercetin'.** Neutral principle due to decomposition of quercitrin by acids.

**Quercin'.** Bitter principle from Quercus alba.

**Quer'cit.** Saccharine substance in acorns.

**Quercitan'nic acid.** Tannin found in oak bark.

**Quercitrin'.** Crystallizable glucoside; coloring-matter of bark of black oak.

**Quer'citron.** Quercus tinctoria, black oak or dyer's oak. Also the yellow inner bark of this tree, used in dyeing and tanning.

**Quer'cula æ'gilops.** Valonia is derived from this tree. **Q. ballo'ta,** native of Morocco; oil resembling olive oil is obtained from the acorns of this tree, which can be eaten. **Q. cor'tex,** oak bark. **Q. falca'ta,** Spanish oak. **Q. mi'nor,** Teucrium chamædrys. **Q. pri'nus,** chestnut oak.

**Quer'cus.** Oak. **Q. al'ba** (Ph. U. S.), white oak, *Q. robur* (common oak), *Q. tinctoria* (black oak), *Q. rubra montana* (red oak or Spanish oak), *Q. pedunculata* (common British oak), ord. *Cupuliferæ.* The bark of all these varieties—*quercus*—is probably alike in medicinal properties; astringent and tonic, and used internally as a tonic and in intermittents, externally in decoction, as an astringent wash. The acorn was at one time used as food, and a decoction in dysentery and diarrhœa, glandular obstructions, etc. A pessary made of it has been advised in immoderate flow of the menses. Roasted acorns have been used in the same cases. **Q. cer'ris,** Quercus infectoria. **Q. coccif'era,** see *Kermes.* **Q. cor'tex,** oak bark. **Q. infecto'ria,** tree of Asia minor, affording Turkey galls or nut-galls. The nut-gall—galla (Ph. U. S.)—is a morbid protuberance or tubercle produced by the puncture of the Diplolepsis or Cynips gallæ tinctoriæ, Cynips quercus folii; powerfully astringent and tonic, and employed in diarrhœa, intestinal hemorrhage, and intermittents, but chiefly used externally in gargles and injections. The powder, made into an ointment with lard, is used in piles. The ordinary nut-galls of the shops are procured from the Levant. The large Mecca or Bussorah galls—at times called Dead Sea apples, mad apples, and apples of Sodom—are produced on Quercus infectoria. **Q. mari'na,** Fucus vesiculosus. **Q. pedunculata,** see *Quercus alba.* **Q. ro'bur,** see *Quercus alba.* **Q. ru'bra monta'na,** see *Quercus alba.* **Q. su'ber,** see *Suber.* **Q. tincto'ria,** see *Quercus alba.* **Q. vi'vens,** live oak.

**Quer'quera.** Cold stage of an intermittent.

**Quevenne's' i'ron.** Ferrum redactum.

**Quick.** Living. Pregnant with a live fœtus.

**Quick'en tree.** Sorbus aucuparia.

**Quick'ening.** Period of gestation when the motion of the fœtus first becomes perceptible—usually about the eighteenth week; it was formerly believed to mark the time at which the fœtus becomes endowed with life—*animatio fœtûs.* When the motion is felt the woman is said to be "quick with child."

**Quick'ens.** Triticum repens.

**Quick-in-the-hand.** Impatiens.

**Quick'lime.** Calx viva.

**Quick'silver.** Metallic mercury.

**Quies'cent.** At rest.

**Quilla'ia** (Ph. Br.), **Quilla'ja** (Ph. U. S.), or **Quilla'ya.** The inner bark of Q. saponaria, Panama bark or soap bark, an evergreen tree growing in Chile; it is sometimes given as a febrifuge and as a sternutatory in coryza. The bark contains saponine, which is poisonous. The *tincture* is official in the Ph. U. S. and Br.—dose, ♏xv–xxx (1.0–2.0)—but chiefly used externally.

**Quillain'.** Aqueous extract of quillaia bark.

**Quilled su'ture.** See *Suture.*

**Quilt** or **Quilt'ed su'ture.** See *Suture.*

**Qui'na.** Quinine. **Q. qui'na,** cinchona.

**Quinaldin'.** $C_{10}H_9N$. A combination of anilin, paraldehyde, and hydrochloric acid.

**Quinal'gene.** Analgene. A derivative of quinoline, resembling phenacetin in composition and therapeutic action. Dose, gr. vii–xv (0.5–1.0).

**Quinamidine'.** Artificial alkaloid obtained from sulphate of quinamine.

**Quinamine'.** White alkaloid, insoluble in water; obtained from Cinchona succirubra of India and other barks.

**Quinap′thol.** Chinapthol. Antipyretic and intestinal antiseptic.

**Quinasep′tol.** Internal antiseptic. See *Diaphthol.*

**Quin′ate.** A salt of quinic acid. **Q. of lith′ium,** urosin; an antiarthritic. **Q. of piperazin′,** sidonal. **Q. of urotropin′,** quinotropin.

**Quince.** Scrofula. Pyrus cydonia. **Bengal′ q.,** covolam. **Q. tree,** Pyrus cydonia.

**Quinck′e's disease′** or **Q.'s œde′ma.** Angioneurotic œdema. **Q.'s pulse,** blanching of the bed of the finger-nail when the heart is in diastole, indicating aortic insufficiency. **Q.'s punc′ture** or **Q.'s spi′nal punc′ture,** puncture of meninges of lumbar vertebræ for aspiration of the cerebrospinal fluid.

**Quineth′ylene.** A homologue of quinine. The basic sulphate is an antiperiodic.

**Quine′tum.** A mixture of cinchona alkaloids.

**Quinhy′drone.** $C_{66}H_6O_2,C_6H_4O_2$. A compound of quinone and hydroquinone.

**Quin′ia.** Quinine.

**Quin′ic acid.** A crystalline acid obtained from cinchona; has been employed in the treatment of gout. **Q. fe′ver,** fever with eruption caused by quinine in persons with an idiosyncrasy in respect to quinine.

**Quinicine′.** When a salt of quinine is exposed to heat with certain precautions the alkaloid is changed into another isomeric with it, to which this name is given. Quinicine and its sulphate possess the medical properties of quinine and its salts; dose, gr. v–xv (0.32-1.0).

**Quinidamine′.** Conchinamine. $C_{19}H_{24}N_2O_2$. An alkaloid of Cinchona rosulenta, C. succirubra, and other barks.

**Quinid′ia.** Quinidina.

**Quinidi′na.** Quinidine. A cinchona alkaloid obtained by the same process as that by which quinine is obtained. Its sulphate, *quinidinæ sulphas* (Ph. U. S.), is soluble in acidulated water and alcohol, and is given as an antiperiodic in doses of gr. v–xx (0.32–1.3). The tannate is also used in dyspepsia, diarrhœa, nephritis, etc., and in veterinary medicine. Salts of quinidine are markedly antiperiodic.

**Quinim′etry.** Quiniometry.

**Quini′na.** (Ph. U. S.) $C_{20}H_{24}N_2O_2,3H_2O$. Quinine. Is given in doses of gr. ij–viij (0.13–0.5), but its salts are preferred. See *Quininæ.*

**Quini′næ ace′tas.** Acetate of quinine, prepared by saturating quinine with diluted acetic acid. Has the properties of other salts of quinine. **Q. ar′senis,** arsenite of quinine, a salt resulting from the double decomposition of arsenite of potassium and sulphate of quinia; has been used in chronic cutaneous diseases; an antiperiodic in ague, neuralgia, etc.; dose, gr. $\frac{1}{3}$ (0.02). **Q. bisul′phas** (Ph. U. S.), quinine bisulphate, $C_{20}H_{24}N_2O,H_2So_4,7H_2O$; its medicinal effects resemble those of the sulphate, but it is more soluble than that salt. **Q. bo′ras,** a yellow powder; antiseptic and antipyretic; dose, gr. viij–xv (0.5–1.0). **Q. hydri′odas,** hydriodate or iodhydrate of quinine, formed by precipitating sulphate of quinine by means of iodide of potassium; given in scrofulous affections; gr. ss–j (0.032–0.065), to a child. **Q. hydrobro′mas** (Ph. U. S.); $C_{20}H_{24}N_2O_2HBr,2H_2O$; used hypodermically; dose, same as that of other quinine salts. **Q. hydrochlo′ras** (Ph. U. S.), **Q. hydrochlor′idum** (Ph. Br.), same action and doses as the sulphate. **Q. hydrochlor′idum ac′idum** (Ph. Br.), acid quinine hydrochloride; is more soluble than the hydrochloride and therefore prepared for hypodermic use, the dose for which is gr. ss–ij (0.032–0.13). **Q. hydrochlo′ras carbamida′ta** or **hydrochlo′rocarbami′dum,** muriate of quinine and urea or carbamide hydrochlorate of quinine; adapted for hypodermic use; dose, gr. j–xv (0.065–1.0). **Q. sul′phas** (Ph. U. S. and Br.), the salt usually employed in medicine; occurs in needles of a pearly and satiny appearance; employed in the treatment of intermittents, and is available in many cases where the bark in substance could not be retained or would be injurious; dose, as a tonic, gr. iij–x (0.2–0.65) in the twenty-four hours; as an antiperiodic it may be given in much larger doses. **Q. tan′nas,** tannate of quinine; made by precipitating infusion of bark, or solution of sulphate of quinine, by infusion of galls or solution of tannic acid; astringent, tonic, and antiperiodic in the same doses as the sulphate. **Q. valeria′nas** (Ph. U. S.), valerianate or valerate of quinine; has the properties of the salts of quinine with the added properties of valerian; dose, gr. j–v (0.065–0.32).

**Quinine′.** Alkaline, uncrystallizable substance; in the form of a porous, whitish mass; almost insoluble in water, soluble in alcohol and ether; obtained from different cinchonas, but chiefly from the yellow, and is the active principle of those valuable drugs; forms, with acids, salts that are in general soluble. The sulphate, bisulphate, hydrobromate, hydrochlorate, and valerianate, and the citrate of iron and quinine, are official; but quite a variety of other salts have been used medicinally, as the arsenite, borate, ferrocyanide, tannate, etc. For the official and other salts of quinine, see under *Quininæ.* **Q. amauro′sis** or **amblyo′pia,** temporary blindness in poisoning by quinine. **Q. fe′ver,** eruptive fever occurring among workmen engaged in manufacturing and handling quinine. The effect of an overdose of quinine, the symptoms being increased temperature, disintegration of blood corpuscles, erythema, or other cutaneous lesion, transient blindness, permanent deafness, and perhaps death from failure of respiration. **Q. flow′er,** root of Sabbatia elliottii; tonic and antiperiodic. **Q. pois′oning,** cinchonism; quinine fever.

**Quinin′ism.** Quinism, cinchonism. The aggregate of encephalic or neuropathic phenomena induced by overdoses of quinine.

**Quiniom′etry.** Estimation of the amount of quinine in any sample of cinchona bark.

**Quiniretin′.** Flocculent precipitate deposited from quinine solutions by the action of sunlight; has the same chemical composition as quinine.

**Quin′ium.** An alcoholic extract made from cinchona barks the composition of which is known, and which are mixed together in such proportions that the quinine and the cinchonine exist in the relation of two of the former to one of the latter. It is used in pills or in wine.

**Quin′lan's test.** Test for bile, the examination being made through the spectroscope. If bile is present, a part of the violet end of the spectrum will be absorbed.

**Qui′noa** The seeds of Chenopodium quinoa, herbaceous annual of Peru and Chile, have been used as an article of food.

**Quin′oform.** Chinoform. A combination of extract of cinchona and formaldehyde.

**Quinoidine′.** Chinoidine. **An′imal q.,** see *Chinoidine.*

**Quin′ol.** Hydroquinone.

**Quinolin′.** Oleaginous base, $C_6H_7N$, procured by distillation of quinine with a caustic alkali. Tertiary amine derived from coal-tar. Antiseptic and antiperiodic. See *Chinolin* and *Leukoleinum.* **Q. sal′icylate,** external application in purulent otitis. **Q. tar′trate,** antipyretic and antiseptic; dose, gr. viij–xv (0.5–1.0).

**Quinol′ogy** (*logos,* discourse). Cinchonology. A treatise on the cinchonas or on quinine.

**Quin′one.** $C_6H_4O_2$. Oxidation product of anilin. Compound obtained from quinic acid by treating with diluted sulphuric acid.

**Quinopropyline.′** A homologue of quinine; a powerful antiperiodic and antipyretic.

**Quinopyrin′.** Chinopyrin. Concentrated solution of quinine hydrochloride in water and antipyrin. Used hypodermically in malarial affections, and internally also, as a substitute for quinine.

**Quin′osol.** Neutral compound of oxyquinolin. Used externally as an antiseptic.

**Quinotan′nic acid.** Cinchotannic acid.

**Quinotropin′.** Quinate of urotropin; used in cystitis and gout.

**Quino'vic acid.** Kinovic acid.

**Quinovin'.** Kinovin.

**Quinox'ime.** Nitrosophenol. $C_6H_4(NO)OH$. A soluble substance, produced by acting on phenols with nitrous acid.

**Quinquaud's** (kang-koze') **disease'.** A form of follicular alopecia, in which miliary abscesses involve the follicles; the latter are not fused into a mass, but are atrophied. **Q.'s sign,** let the subject press the tips of the fingers lightly into the palm of the examiner, and then attempt to extend the fingers; if the subject is alcoholic the examiner will feel a series of slight shocks, as if the bones of the fingers struck against each other successively, the tips finally tapping the palm of the examiner. It is said the sign occurs only in chronc alcoholism and never in epilepsy or other neurosis, but its value is disputed.

**Quinquefo'lium.** Potentilla reptans. **Q. ma'jus,** Potentilla reptans.

**Quinqui'na.** Cinchona. **Q. bi'color,** Cinchonæ caribææ cortex.

**Quinquini'na.** Indian antiperiodic remedy which includes a number of the alkaloids of cinchona.

**Quinqui'no.** Myroxylon peruiferum.

**Quin'sy.** Suppurative tonsillitis. **Ner'vous q.,** hysterical feeling of strangulation, with dread of suffocation. **Wolf q.,** wolf-choak; lycanche.

**Quin'tan** (*quintus*, a fifth). A fever whose paroxysms return only every five days inclusively, and between them there are, consequently, three days of apyrexia.

**Quin'teron.** See *Mulatto.*

**Quintes'sence** (fifth essence). Name formerly given to alcohol impregnated with the principles of some drug; often synonymous, therefore, with alcoholic tincture. The most volatile principles of bodies were called *quintessences.*

**Quintip'ara** (*quintus*, fifth, *pario*, to bring forth). A woman who gives birth to her fifth child.

**Quintister'nal.** Fifth osseous portion of the sternum, corresponding to the fifth and sixth intercostal spaces.

**Quint'uplet.** One of five children born in the same labor.

**Quin'tus col'umns.** Fasciculi marginales aquæducti.

**Quin'ua.** Chenopodium quinoa.

**Quionin'.** A combination of the alkaloids of cinchona, in which the bitter taste has been disguised.

**Quiri'ca.** Mal de los pintos.

**Quiricu'a.** See *Chloasma.*

**Quisqua'lis in'dica.** Shrub, ord. *Combretaceæ,* native of the East Indies; used in China as a vermifuge.

**Quitch.** Triticum repens.

**Quit'tor.** Fistulous wound upon the quarters or heel of the coronet of a horse's foot, resulting from chronic suppuration of the lateral cartilage of the hoof.

**Quiz'zer.** One who examines and prepares students in medical colleges on the subjects taught in them. The term quizzer, in this sense, is restricted to the United States. To "hold a quiz" is to give an examination in this manner.

**Quotid'ian** (*quotidie*, daily). That which takes place every day. **Q. fe'ver,** q. ague; an intermittent the paroxysms of which recur every day; a simple, double, or triple quotidian is a quotidian which has one, two, or three paroxysms in the twenty-four hours.

**Quotient,** kwo'shent. Result of division of one number by another. **Blood q.,** result obtained by dividing the amount of hæmoglobin in the blood by the number of red corpuscles, in each case expressed as a percentage of the normal amount. **Pro'teid q.,** result of dividing the quantity of globulin in the liquor sanguinis by the amount of albumin in the same. **Respi'ratory q.,** proportion of oxygen excreted by the lungs to that absorbed by them in the same time.

**Q. v.** Abbreviation for quantum volueris or vis, as much as you wish; also for quod vide, which see.

# R.

**R.** Abbv. of Réaumur, far-point, and right. ℞ is placed at the commencement of a prescription as a contraction of *recipe*. Originally it was the sign (♃) of Jupiter, and was placed at the top of a formula to propitiate the king of the gods, that the compound might act favorably.

**Raa'be's test.** If a crystal of trichloracetic acid is dropped into a test-tube of filtered urine, a white ring will form around it if albumin or uric acid in quantity is present, most marked in the former case.

**Rab'ic.** Affected with rabies.

**Rab'id** (*rabies*, canine madness). Relating to or suffering from rabies.

**Ra'bies.** Lyssa, hydrophobia. A specific infectious disease of the dog, wolf, cat, fox, and other animals, and communicable to man by inoculation, through a bite or other means, with the saliva of the infected animal. At an uncertain interval after the bite, generally, however, between the twentieth day and third or fourth month, pain or uneasiness occurs in the bitten part, though the wound may have been long healed. Anxiety, uneasiness, languor, spasms, horror, disturbed sleep, and difficult respiration succeed, and are soon very much increased; violent convulsions affect the whole body, hideously distorting the muscles of the face; the eyes are red and protruded, the tongue swells and often hangs out, and viscid saliva flows from the mouth; there is pain in the stomach, with bilious vomiting, a horror of fluids, and impossibility of drinking them. All these symptoms are aggravated until the sufferer is relieved by death. The wound from the bite of a rabid animal should be cauterized immediately, if possible, or the neighboring parts excised. The treatment most in vogue is that of preventive inoculation, introduced by Pasteur.

**Raccoon' ber'ry.** Podophyllum montanum.

**Race** (*radix*, root). Breed. Union or aggregate of individuals descended from a common stock; a nation or tribe; one of the great divisions of the human family.

**Race'mic acid.** An acid isomeric with tartaric acid.

**Rac'emose** (*racemus*, a bunch of grapes). In clusters, like grapes; hence racemose glands, glandulæ racemosæ. **R. an'eurysm,** aneurysm by anastomosis. **R. cells,** cells in clusters surrounding central ducts.

**Rachi-.** For words so commencing, not found here, see under *Rhachi-*.

**Rachiæ'i** (*rhachis*, spine). Muscles of the spine.

**Rachial'gia** (*rhachis*, spine, *algos*, pain). Pain in the spine; vertebral disease. **R. mesenter'ica,** tabes mesenterica. **R. pictonien'sium,** lead colic.

**Rachialgi'tis.** Myelitis; spinal irritation.

**Rachicocainiza'tion.** Induction of anæsthesia by subarachnoid injections of cocaine into the spinal canal.

**Rachid'ian** (*rhachis*, spine). Spinal. **R. ar'teries,** spinal arteries. **R. bulb,** medulla oblongata. **R. canal',** vertebral canal.

**Rachil'ysis** (*rhachis*, spine, *lyo*, to loose). Method of treating lateral curvature of the spine by opposing with proper apparatus the unnatural curvature.

**Rachiokypho'sis** (*rhachis*, spine, *kyphosis*, curvature). Backward curvature of the spine.

**Rachiophy'ma** (*rhachis*, spine, *phyma*, growth). Tumor on the spine or on the back.

**Rachis,** rak'is (more correctly **Rhachis**). Vertebral column.

**Rachisag'ra** (*rhachis*, spine, *agra*, seizure). Gouty or rheumatic affection of the spine.

**Rachischisis,** rak-is'kis-is (*rhachis*, spine, *schizo*, to split). Congenital fissure of the spinal column, a variety of spina bifida.

**Rachi'tæ.** Muscles of the spine.

**Rachit'ic.** Relating to or affected with rickets. Weak, feeble in the joints; defective in development. **R. ro'sary,** beaded appearance presented by nodular thickenings on the end of the ribs in rachitis.

**Rachi'tis** (*rhachis*, spine). English disease, rickets. Disease characterized by a softened condition of the long bones, leading to curvature of their shafts and swelling of their extremities, a crooked spine, prominent abdomen, large head, and often precocity of intellect, and is accompanied by leanness, general debility, and indigestion. It frequently induces atrophy and hectic. Rickets occurs particularly during the first years of existence of weakly children brought up in damp or dark dwellings, and badly nourished. Some children gradually recover their health; others become more and more deformed, and ultimately die of consumption, dropsy, or other organic disease. Pure air, a healthy situation, nourishing diet, exercise, sea or common cold bathing, and tonics and eutrophics afford the best prospect of success. See also *Rickets*. **R. adulto'rum,** mollities ossium. **R. spina'lis,** pain in the spine.

**Rachitism,** rak'it-ism. Tendency to rickets.

**Rach'itome** (*rhachis*, spine, *tome*, incision). Anatomical instrument for opening the spinal canal without injuring the cord.

**Rack'et incis'ion.** See *Crupper incision*.

**Raco'sis.** Rachosis.

**Rad'cliffe's elix'ir.** Compound tincture of aloes.

**Radesyge** (rad-es-ig'a) or **Radezyge.** Radzyge.

**Ra'diad.** Toward the radial aspect.

**Ra'dial** (*radius*). That which relates to the radius. **R. ar'tery** arises from the brachial at the upper and anterior part of the forearm; descends on the outer side as far as the lower part of the radius, and proceeds downward and backward toward the superior extremity of the space which separates the first two metacarpal bones, then buries itself in the palm of the hand, where it forms the profound or radial palmar arch. The radial artery gives off the recurrent radial, several radiomuscular branches, the transverse palmar, radiocarpal artery, the external superficial artery of the palm of the hand, the external dorsal of the thumb, the dorsalis carpi, dorsal interosseous artery of the index, etc. **R. as'pect,** aspect toward the side on which the radius is situated. *Radiad* is used in the same sense, adverbially. **R. fi'bres of ret'ina,** Müller's fibres. **R. fos'sa,** slight depression on the humerus for the reception of the head of the radius when the arm is thoroughly flexed. **R. groove,** musculospiral groove. **R. lymphat'ic glands,** glands in the forearm distributed along the radial vessels. **R. nerve,** spiral nerve, musculospiral nerve, arises from the four inferior branches of the brachial plexus. At first it is situated behind the other nerves of the plexus, then becomes engaged between the three portions of the triceps brachialis, passes behind the humerus, and descends between the supinator longus and brachialis internus as far as opposite the upper extremity of the radius. In its course it gives numerous filaments to the triceps, supinator longus, extensor carpi radialis longior, and to the integuments. Opposite the upper extremity of the radius it divides into two branches—the one, posterior, which turns backward into the substance of the supinator brevis, and, when it has reached the space between the two layers of muscles on the posterior surface of the forearm, divides into a great number of filaments distributed to those muscles and to the integuments of the hand. The other branch is the anterior; it descends before the supinator brevis and the radius until, near the inferior third of that bone, it engages itself between the tendons of the supinator longus and extensor carpi radialis longior, and, becoming afterward subcutaneous, divides into two branches, whose filaments are distributed to the integuments of the thumb, index, middle finger, to the outside of the ring finger, and to the first interosseous muscle of the back of the hand. **R. veins,** the deep-seated follow the same course as the radial artery.

**Radia′le.** Scaphoid bone.

**Radia′lis anti′cus.** Flexor carpi radialis. **R. exten′sor lon′gior,** r. externus longior. **R. exter′nus bre′vior,** extensor muscle of the wrist, situated beneath the extensor carpi radialis longior; it is attached above to the external tuberosity of the humerus, and terminates below by a long tendon inserted into the posterior part of the upper extremity of the third bone of the metacarpus; has the same uses as the next muscle. **R. e. lon′gior,** grand radial, is seated at the outer part of the forearm, is thin, but thicker on the outside than on the inside; it is attached above to the inferior part of the outer edge and to the corresponding tuberosity of the humerus, and terminates below by a long tendon which is attached to the superior extremity of the second bone of the metacarpus; it extends the hand on the forearm. **R. e. pri′mus,** r. externus longior. **R. inter′nus,** palmaris magnus. **R. i. profun′dus,** flexor carpi radialis brevis. **R. secun′dus,** r. externus longior.

**Ra′diant.** Emitting rays, as of heat or light. **R. en′ergy,** a form of energy emitted by matter and propagated by undulations in the ether; it varies in different bodies and according to the temperature of the same bodies; heat, light, magnetism, and radioactivity are forms of radiant energy. **R. mat′ter,** extremely tenuous, highly rarefied, gaseous matter, having peculiar luminous and other effects when electricity is passed through it; as the matter in an exhausted Crookes tube.

**Ra′diate.** Radiating. Passing off like rays, as the *radiate arteries* of the kidney. To emit rays.

**Ra′diated** (*radius*, ray). Arranged in rays, in lines diverging from a common centre. Epithet given to several ligaments, as those which unite the ribs to the sternum, those which unite the tibia and fibula at their inferior extremity, etc. **R. sub′stance of kid′ney,** see *Kidney*.

**Ra′diating fi′bres of ret′ina.** Müller's fibres. **R. pains** or **points,** pains symptomatic of disease of the spine, caused by irritation of the posterior roots of the spinal nerves.

**Radia′tion.** The divergence of rays, as of light or heat, from a central point. Radioactivity. A group of fibres of nervous matter passing from the base of the brain to the cortical portion. **Op′tic r.,** collection of nerve-fibres continuous with those of the corona radiata, and radiating into the occipital lobes. **Striothal′amic r.,** collection of nerve-fibres uniting the corpus striatum, thalamus opticus, and the region beneath it. **Tegmen′tal r.,** nerve-fibres radiating from the posterior part of the internal capsule. **Thal′amic r.,** nerve-fibres that radiate into the hemispheres from the thalamus opticus.

**Rad′ical** (*radix*, root). An atom or group of atoms regarded as the chief constituent of a compound substance and which remains on decomposition of the compound. Going to the very root, therefore complete and thorough; as radical cure, in which the disease is rooted out, as it were; used in opposition to palliative cure. **Acid r.,** a group of non-metallic atoms or one containing oxygen, constituting a radical. **Ba′sic r.,** a group of metallic atoms forming a radical. **R. opera′tion,** one designed to cure completely and prevent recurrence. **R. ves′sels,** vascular radicles; small vessels that take their origin in the tissues, and by their union form larger vessels. **R. vin′egar,** acetic acid.

**Radi′ces** (pl. of radix, which see) **accesso′riæ bre′vis.** Filaments occasionally met with connecting the ciliary ganglion with the three branches of the oculomotor nerve. **R. a. me′diæ,** filaments occasionally seen connecting the ciliary ganglion with the carotid plexus. **R. cau′dicis,** fibres of the corona radiata extending from the brain-stem to the cortex. **R. centra′lis,** corona radiata. **R. cor′poris callo′si,** fibres of the corona radiata running from the corpus callosum to the cortex. **R. cor′porum caverno-so′rum pe′nis,** crura of the corpora cavernosa; see cut under *Urethra*. **R. hyoi′dei os′sis,** cornua of the hyoid bone. **R. medulla′ris cer′ebri,** corona radiata. **R. olfacto′riæ,** olfactory roots. **R. thal′ami op′tici,** fibres of the corona radiata extending from the thalamus opticus to the cortex.

**Rad′icle.** Small root or rootlet. Radical.

**Radic′ula** (dim. of *radix*, root). Radicle. Small root or rootlet; also Raphanus hortensis.

**Radic′ular.** Relating to a root. **R. ar′teries,** vessels following nerve-roots into the substance of the spinal cord. **R. fi′bres, exter′nal,** name given by Charcot to fibres of the posterior roots of the spinal nerves that pass through the substantia gelatinosa Rolandi, then ascend and go to the posterior cornu. **R. f., inter′nal,** posterior roots of the spinal nerves, supposed to run to some extent in the posterior columns of the cord before they pass through the gray. **R. pulp,** the portion of dental pulp contained in the root. **R. ves′sels,** branches of the vertebral arteries supplying blood to the nerve-roots in the brain.

**Ra′dii cilia′res** (pl. of *radius*, ray). Ciliary processes. **R. fron′tis,** folds or wrinkles of the forehead. **R. len′tis,** lines which radiate at the poles of the crystalline lens.

**Radio-** (*radius*). In composition, the radius, or relating to rays, especially $x$-rays and the various manifestations of radioactivity.

**Radioac′tive.** Possessing the property of radioactivity or of emitting Becquerel rays.

**Radioactiv′ity.** A property of matter, analogous to magnetism, heat, etc., consisting in the emission of certain as yet not well understood rays, called Becquerel rays. See *Rays*. Among the known radioactive substances are uranium, radium, polonium, and actinium. Like magnetism, a temporary radioactivity may be induced in a non-radioactive body by proximity to a radioactive substance.

**Radiobicip′ital bur′sa.** Bursa between the tendon of the biceps and the tuberosity of the radius.

**Radiocar′pal.** Relating to the radius and carpus. **R. articula′tion,** the wrist-joint or articulation of the os scaphoides, os semilunare, and os cuneiforme of the carpus with the inferior surface of the radius and the fibrocartilage situated below the ulna. It is strengthened, by the lateral, anterior, and posterior ligaments. **R. trans′verse pal′mar ar′tery,** transverse branch given off by the radial artery opposite the lower edge of the pronator quadratus, which sends several branches to the anterior or palmar surface of the carpus.

**Radiocar′po-metacarpa′lis.** Flexor carpi radialis brevis, attached to the carpus and metacarpus.

**Radiodermati′tis.** Dermatitis provoked by the action of the Roentgen or Becquerel rays.

**Radiodig′ital.** Radial nerve.

**Ra′diogram** or **Ra′diograph.** Skiagram.

**Radiog′raphy.** Skiagraphy; Roentgenography.

**Radiohu′meral articula′tion.** Articulation of the elbow-joint.

**Radi′olus.** A sound or probe.

**Radiometacarpa′lis.** Flexor carpi radialis brevis, attached to the bones of the metacarpus.

**Radiomus′cular.** Name given to the branches sent off from the radial artery to the muscles of the forearm in the first part of its course, as well as to the nervous filaments which the radial nerve sends to the same muscles.

**Radiopal′mar ar′tery.** Superficial volar artery.

**Radiopalma′ris.** Occasional muscle attached with the palmaris longus.

**Ra′diopraxis.** Employment of the Roentgen or Becquerel rays in the diagnosis and treatment of disease.

**Radios′copy.** Fluoroscopy.

**Radiother′apy.** Treatment of disease by means of the Roentgen rays and other forms of radioactivity. See *Ray*.

**Ra′dio-ul′nar fibrocar′tilage.** Triangular cartilage of the wrist. **R.-u. lig′aments,** ligaments connecting the radius and ulna.

**Rad′ish.** Raphanus hortensis. **Wa′ter r.,** Nasturtium amphibium.

**Ra′dium.** A very rare element, hitherto obtained only as a chloride; it is derived from pitchblende, and possesses radioactivity in marked degree.

**Ra′dius** (a staff). Long, prismatic bone, one of the two bones of the forearm; the upper and lesser extremity, which is called the head, is supported by a cervix or neck; at the part where the neck is confounded with the body of the bone is the tubercle or bicipital tuberosity or eminence for the insertion of the biceps. The radius is articulated above with the os humeri and with the lesser sigmoid cavity of the ulna; below, with the scaphoides, semilunare, and the head of the ulna. Its inferior extremity, which is larger than the superior, is flattened before and behind, is regularly quadrilateral, and has below a double facette to be articulated with the first two bones of the carpus. On the outer side is the styloid process, and on the inner a concave facet which joins the ulna. Behind are grooves for the passage of the extensor tendons. **R. fix′us,** a hypothetical line connecting the hormion and inion.

Anterior view of radius of right side. 1, surface of the head articulating with the lesser sigmoid cavity of the ulna; 2, tubercle for insertion of biceps muscle; 3, interosseous ridge; 4, styloid process.

**Ra′dix.** Root. Radix, root, or fang of a tooth is the part contained in the alveolus. Radix or root of the nail is the portion hidden under the skin. Surgeons give the name to a prolongation sent by scirrhous, cancerous, or other tumors into the neighboring parts. See *Radices*. **R. accesso′ria sphenopalati′na,** filaments occasionally connecting the ciliary and sphenopalatine ganglia. **R. aor′tæ,** bulb of the aorta. **R. ascen′dens for′nicis,** main part of the anterior pillar of the fornix, situated between the body and tubercula mammillaria; also applied to the radix descendens fornicis. **R. asclepi′adis cris′pa,** see *Gomphocarpus crispus*. **R. brazilien′sis,** ipecacuanha. **R. bre′vis gan′glii cilia′ris,** motor branch given off from the oculomotor nerve to the ciliary ganglion. **R. b. g. sphenopalati′na,** sensitive root of the sphenopalatine ganglion. **R. b. g. submaxilla′ris,** sensitive root of the submaxillary ganglion. **R. carot′ica,** deep petrosal nerve. **R. cerebel′li,** posterior cerebellar peduncle. **R. cochlea′ris,** cochlear auditory root. **R. colum′næ for′nicis,** anterior pillar of the fornix. **R. cor′dis,** base of the heart. **R. gin′seng,** see *Panax quinquefolium*. **R. in′dica lopezia′na,** Lopez radix. **R. lin′guæ,** root of the tongue. **R. lopezia′na,** Lopez radix. **R. moto′ria,** motor root of the fifth cranial nerve. **R. nin′si pa′nax schin′seng,** Sium ninsi. **R. ru′bra,** rubia. **R. senso′ria,** sensory root of the fifth cranial nerve. **R. serpen′tum,** see *Ophiorrhiza mungos*. **R. un′guis,** root of the nail. **R. ursi′na,** Æthusa meum. **R. ven′tris,** umbilicus.

**Rad′ula** (*rado*, to scrape). Raspatorium.

**Radzyg′e** (Danish, scratching sickness). An ulcerative skin disease, in Norway, which is regarded by some as a form of leprosy, by others as a syphiloid affection.

**Raf′finose.** $C_{18}H_{32}O_{16}+5H_2O$. Saccharine substance derived from beets.

**Raffle′sia arnold′i** (after Sir Stamford Raffles). Plant of Java, a decoction of which is employed there as an astringent in relaxed conditions of the genito-urinary apparatus.

**Rage.** Violent passion, characterized by contraction of the muscles of the face, violence in every movement, extreme irritation of the nervous system, acceleration of the blood's motion, and generally redness and swelling of the face. Rabies.

**Rag′ged la′dy.** Nigella damascena.

**Rag′-pickers′ disease.** Rag-sorters' disease.

**Rag′-sorters′ disease.** Fever, with headache and cough, caused by the Proteus hominis. Malignant anthrax.

**Rag′weed.** See *Ambrosia elatior*. **Gold′en r.,** Senecio aureus. **Great** or **tall r.,** Ambrosia trifida.

**Rag′wort.** Senecio jacobæa.

**Rai′a.** A genus of fishes, the rays or skates.

**Rail′way brain.** Cerebral and nervous disorders following the concussion experienced in a railway accident; similar to r. spine. **R. kid′ney,** renal affection caused by concussion of railway train. **R. spine,** Erichsen's disease, paretic and other nervous symptoms following concussion of the spine in a railway accident; the pathogenesis is obscure and the affection is regarded by some as purely hysterical in nature.

**Rain′bow worm.** Herpes iris.

**Rai′ney's bod′ies, cap′sules,** or **cor′puscles.** See *Psorospermia*.

**Rais′ing.** Expectoration.

**Rai′sins.** Uvæ passæ, dried grapes. **Cor′inth r.,** dried currents.

**Rakasi′ra.** An American balsam; softening and exhaling an agreeable smell when heated. It has been used as a balsam in gonorrhœa and urinary affections.

**Rake′teeth.** A term used in the north of England for teeth wide apart, like those of a rake.

**Rak′li pi′li.** An Indian name for leprosy.

**Râle** (Fr.) Rattle, rhonchus. Noise produced by the air in passing through mucus and other fluid secretions in the air-passages. The tracheal râle is chiefly observed at the approach of death, and is commonly called "the rattles." The term râle has also been given to different abnormal sounds heard on auscultation of the thorax during respiration. Râle was formerly used for a "moist" sound, heard on auscultation of the chest, while rhonchus meant a "dry" sound, but this distinction is no longer observed. Many of the descriptive terms applied to râles, such as creaking, rubbing, whistling, are self-explanatory. **Bub′bling r.,** subcrepitant r. **Crack′ling r.,** crepitant r. **Crep′itant r.,** rhonchus crepitans; see *Crepitant*. **Mu′cous r.,** mucous rattle; sound produced by the passage of air through mucus or other liquid matter accumulated in the larger bronchi or trachea; this râle occurs in catarrh and in softened tubercle; when carried to a very high degree it constitutes gurgling. **R. re′dux,** a crackling râle heard during the stage of resolution in pneumonia. **Sib′ilant r.,** sibilant rattle; slight, though prolonged, whistling sound, occurring at the commencement either of inspiration or of expiration, owing to the presence of mucus, thin and viscid, but not abundant, which obstructs more or less completely the smaller bronchial ramifications; it is seated in the small tubes, and occurs in the first stage of bronchitis. The *clicking* and *whistling* varieties differ in that the former is short, the latter prolonged. The former is a quick, sharp sibilus or whistle, which ceases almost instantaneously; the latter a prolonged sibilus, of less sharpness, lasting almost the whole time of the movement which it accompanies. To these may be added the *hissing* variety, the name sufficiently indicating its character. **Sono′rous r.,** sonorous rattle; sound resembling at times the snoring of a person asleep, at others the sound of the bass string of an instrument when rubbed with the finger, and not infrequently the cooing of a dove; it seems to be caused by a contraction of the bronchial tubes, and is characteristic of chronic catarrh. **Subcrep′itant r.,** the subcrepitant rhonchus, is produced by the bubbling of air through liquid of variable consistence in the minute bronchial tubes. When heard at the base of both lungs it is a sign of capillary bronchitis; when heard at the base of one only it is generally connected with tubercles higher up. **Tra′cheal r.,** see *Râle.* **Vesic′ular r.,** see *Crepitation.*

**Ralfe's test.** A test for peptones in the urine, which give a pink reaction with Fehling's solution. A test for acetone in the urine, which gives a yellow reaction when boiled with a mixture of potassium iodide and liquor potassæ.

**Ra′mal.** Relating to a ramus or branch.

**Rama′lis ve′na.** Vena porta and its branches.

**Ramaninja′na.** A tic or convulsive disorder, observed in Madagascar.

**Ram′botham's hook.** A scythe-like instrument for decapitation of the fœtus.

**Ram′dohr's su′ture.** Suture applied to unite the two ends of a transversely divided intestine.

**Ramen′ta intestino′rum** (scrapings of the intestines). Mucous or pseudomembranous shreds or scrapings, as it were, of the mucous membrane of the bowels, often discharged in colitis.

**Ram′ex.** Hernia. **R. varico′sus,** varicocele.

**Ra′mi** (pl. of ramus). Branches. See also *Ramus.* **R. adipo′si,** from lumbar arteries to adipose capsule of kidney. **R. ala′res,** from angular artery to alæ of nose. **R. alveola′res,** from infraorbital and inferior dental arteries supplying the alveolar processes. **R. articula′res,** supplying temporomaxillary articulation; also from posterior auricular artery to pinna. **R. bronchia′les,** from the arch of the aorta to the bronchi. **R. bucca′les,** from alveolar nerves to mucous membrane of cheeks. **R. cardi′aci,** from gastric artery to cardiac orifice of stomach. **R. cervicospina′les,** from ascending cervical artery to spinal canal. **R. clavicula′res,** from transverse cervical artery to subclavius muscle. **R. communican′tes no′ni,** communicating branches of ninth pair. **R. cuta′nei,** branches of perforating nerves, anterior and posterior. **R. denta′les,** from inferior dental artery to the teeth. **R. diplo′ici,** alveolar branches of inferior dental artery. **R. dorsa′les na′si,** from angular artery to posterior portion of nose. **R. epiplo′ici,** from gastroduodenal artery to great omentum. **R. episclera′les,** from anterior ciliary arteries, anastomosing with posterior ciliary. **R. exter′ni of intercos′tal nerves,** lateral perforating branches. **R. fascia′les,** branches of infraorbital nerve on the face, of inferior palpebral nerves, external nasal nerves, and superior lateral nerves. **R. fronta′les,** from supratrochlear nerve to skin of forehead. **R. gas′trici,** branches of gastric artery to walls of the stomach; also branches of gastroduodenal artery to the walls of the stomach. **R. gingiva′les,** from dental arteries, passing through small canals in the alveolar process to the gums. **R. glandula′res,** branches of superior thyroid artery to thyroid body. **R. of is′chium,** the two arms of which this bone consists. **R. labia′les inferio′res,** from mental nerve to lower lip. **R. mamma′rii exter′ni,** from intercostal arteries to the mammary gland. **R. margina′les,** from palpebral arteries to edge of eyelids. **R. masseter′ici,** from external carotid to masseter muscle. **R. mastoide′i,** from stylomastoid artery to mastoid cells. **R. meninge′i,** from posterior auricular artery; from lacrymal artery; from vertebral artery and intercostal arteries. **R. meninge′i anti′ci,** from anterior ethmoidal artery to falx cerebri and dura mater. **R. nasa′les,** from ethmoidal artery to septum and sides of nose. **R. œsophage′i,** from inferior thyroid artery to the œsophagus near thyroid gland. **R. orbita′les,** from infraorbital artery to periosteum and muscles of orbit; from middle meningeal artery to the orbit; from sphenopalatine ganglion to the orbit and periosteum. **R. palpebra′les exter′ni,** from transverse facial artery to the eyelids. **R. palpebra′les superio′res,** from supratrochlear nerve to upper eyelid. **R. pancreat′ici,** from hepatic artery to the pancreas. **R. parenchymato′si,** from hepatic artery to the liver. **R. parotide′i,** from external carotid artery to parotid gland. **R. pectora′les,** from thoracicoacromial artery to pectoral muscles. **R. perforan′tes,** from hepatic artery to liver. **R. perforan′tes anterio′res,** from intercostal nerves to skin of thorax and abdomen. **R. perforan′tes latera′les,** lateral from intercostal nerves. **R. pericardi′aci va′gi,** from the pneumogastric nerve to the pericardium. **R. periostea′les,** from posterior dental artery to periosteum of maxillary sinus. **R. pharynge′i,** from inferior thyroid gland to the pharynx near the thyroid gland. **R pinna′les,** from angular artery to alæ of nose. **R. pterygoide′i,** from external carotid artery to pterygoid muscles. **R. of pu′bis,** see *Pubic.* **R. semicircula′res tempora′les,** from middle temporal artery to upper edge of temporal muscles. **R. sphenoorbita′les,** orbital branches from sphenopalatine ganglion. **R. superficia′les,** from hepatic artery to the portal fissure and biliary ducts. **R. tarsa′les,** branches from palpebral arteries to edges of the eyelids. **R. thyroide′i,** from inferior thyroid artery to thyroid gland. **R. trachea′les,** from inferior thyroid artery near the thyroid gland.

**Ramifica′tion** (*ramus,* branch, *facio,* to make). Division of arteries, veins, or nerves into branches. Also a branch itself.

**Ramollisse′ment** (Fr.). Mollities; softening.

**Ram′ose.** Branched or branching.

**Ram′phos** (a beak). Rostrum.

**Rams′den's eye′piece.** Eyepiece with two planoconvex lenses, used in micrometry.

**Ram′sted.** Linaria vulgaris.

**Ram′uli** (pl. of ramulus) **gingiva′les.** Gingival nerves. **R. isth′mi fau′cium,** ramuli mandibulares. **R. mandibula′res,** twigs given off from submaxillary ganglion to mucous membrane of posterior part of the mouth. **R. sabi′næ,** sabina. **R. sphenoida′les,** branches from Vidian nerve to body of sphenoid bone.

**Ram′ulus** (dim. of ramus). A subdivision of a ramus; a terminal branch. **R. ampul′læ horizonta′lis,** branch from vestibular nerve to ampulla of horizontal vertical semicircular canal. **R. ampul′læ inferio′ris,** branch from cochlear nerve to ampulla of inferior semicircular canal. **R. ampul′læ sagitta′lis,** ramulus ampullæ superioris. **R. ampul′læ superio′ris,** branch from vestibular nerve to ampulla of superior vertical semicircular canal. **R. coch′leæ,** branch of cochlear nerve running to cochlea. **R. reces′sûs utric′uli,** branch from vestibular nerve to utriculus. **R. sac′culi,** branch from cochlear nerve to sacculus.

**Ra′mus.** Branch or division of an artery, vein, or nerve. Portion of a bone forming an angle with the body, as the ramus of the jaw or of the pubis. See also *Rami.* **R. abdomina′lis,** branch from lumbar artery to the wall of the abdomen; hypogastric nerve. **R. acromia′lis,** acromial artery. **R. acus′ticus,** petrosus superficialis. **R. anastomot′icus profun′dus,** deep facial vein. **R. anastomot′icus pu′bicus,** pubic artery. **R. ante′rior of great auric′ular nerve,** branch to parotid gland and region of parotid gland and masseter muscle. **R. ante′rior of inter′nal cuta′neous nerve,** branch from cutaneous nerve to ulnar portion of forearm. **R. ante′rior of lac′rymal nerve,** superior branch of lacrymal nerve. **R. ante′rior na′rium,** external nasal nerve. **R. ante′rior of obtura′tor nerve,** branch to adductor brevis, a. longus, and gracilis. **R. ante′rior radia′lis,** dorsal radial nerve of the thumb. **R. ante′rior of spi′nal nerve,** anterior division of spinal nerve. **R. articula′ris ge′nu,** from long saphenous nerve to knee-joint. **R. articula′ris ge′nu supe′rior** and **R. articula′ris ge′nu infe′rior,** from peroneal nerve to knee-joint. **R. ascen′dens,** from transverse cervical artery to splenius and deep muscles of the neck. **R. ascen′dens fos′sæ Syl′vii,** anterior ramus or branch of the fissure of Sylvius. **R. auricula′ris Arnol′di** or **R. va′gi,** auricular branch of vagus. **R. auricula′ris**

**infe′rior**, anterior branch of great auricular nerve. **R. auricula′ris ner′vi glossopharynge′i**, tympanic nerve. **R. auricula′ris poste′rior superficia′lis**, posterior branch of great auricular nerve. **R. auriculoventricula′ris**, see *Ramus circumflexus*. **R. basila′ris**, see *Ramus meningeus of ascending pharyngeal artery*. **R. brachia′lis**, thoracic branch of inferior thyroid artery. **R. cana′lis spina′lis**, from spinal branch of the intercostal artery to walls of the spinal canal. **R. caroticotympan′icus**, caroticotympanic artery. **R. cerebella′ris**, from posterior spinal artery to cerebellum. **R. cervica′lis**, ascending branch of transverse cervical artery. **R. cervica′lis prin′ceps**, princeps cervicis artery. **R. cervicofacia′lis**, cervicofacial portion of facial nerve. **R. circumflex′us of left cor′onary ar′tery**, branch passing around the heart in the auriculoventricular furrow. **R. collatera′lis ulna′ris**, branch of musculospiral nerve to inner head of triceps. **R. commu′nicans**, branch from anterior division of spinal nerve to the sympathetic. **R. commu′nicans facie′i profun′dus**, deep facial vein. **R. commu′nicans radia′lis**, branch of radial artery forming deep palmar arch. **R. crura′lis**, lumbo-inguinal nerve. **R. cubita′lis**, r. cutaneus volaris antibrachii. **R. cuculla′ris**, from cervical plexus to trapezius muscle. **R. cuta′neo-ulna′ris**, branch of internal cutaneous nerve to ulnar side of forearm. **R. cuta′neus**, superficial branch of external plantar nerve; radial nerve; branch from anterior branch of obturator nerve to skin on inner side of upper part of the thigh. **R. cuta′neus palma′ris**, branch of internal cutaneous nerve of arm to anterior surface of forearm. **R. cuta′neus perone′us**, from communicans peronei nerve to skin on outer side of leg. **R. cuta′neus ulna′ris antibra′chii**, from cutaneous nerve to ulnar portion of forearm. **R. cuta′neus vola′ris antibra′chii**, branch of internal cutaneous nerve of arm to anterior part of the forearm. **R. deltoide′us**, branch of brachial artery to deltoid muscle; branch of thoracicoacromial artery; deltoid artery. **R. descen′dens**, descending ramus of pubis and ischium; branch of transverse cervical artery to dorsalis scapulæ artery. **R. descen′dens no′ni**, descendens noni nerve. **R. diplo′icus**, branch of supraorbital to diploë of os frontis. **R. dorsa′lis**, branch of intercostal artery to muscles near the spine. **R. dorsa′lis antibra′chii**, r. cutaneo-ulnaris. **R. dorsa′lis ma′nûs**, dorsal nerve of the hand. **R. dorsa′lis of musculospi′ral nerve**, radial nerve. **R. dorsa′lis of spi′nal nerve**, deep muscles along the vertebral canal. **R. dorsospina′lis**, dorsal branch of intercostal artery. **R. du′ræ ma′tris va′gi**, from jugular ganglion to the meninges. **R. du′rior sep′timæ conjugatio′nis**, facial nerve. **R. epitrochlea′ris**, r. cutaneo-ulnaris. **R. exter′nus of genitocru′ral nerve**, lumbo-inguinal nerve. **R. e. of great auric′ular nerve**, anterior branch of great auricular nerve. **R. e. of lac′rymal nerve**, inferior branch of that nerve. **R. e. na′rium**, external nasal nerve. **R. e. ner′vi accesso′rii**, branch of spinal accessory nerve, occurring only as an anomaly in extra-uterine life. **R. e. radia′lis**, dorsal radial nerve of the thumb. **R. facia′lis**, anterior branch of great auricular nerve. **R. femora′lis of genitocru′ral nerve**, lumbo-inguinal nerve. **R. fibula′ris**, from anterior tibial or anterior tibial recurrent to region of the fibula. **R. genita′lis of genitocru′ral nerve**, external spermatic nerve. **R. horizonta′lis** or **h. poste′rior fos′sæ Syl′vii**, posterior portion of fissure of Sylvius. **R. ili′acus**, iliac nerve. **R. infe′rior**, descending ramus of the pubis and of the ischium. **R. infe′rior of lac′rymal nerve**, branch anastomosing with orbital nerve. **R. infe′rior ner′vi inframaxilla′ris**, inferior and larger portion of inframaxillary nerve. **R. infe′rior of oculomo′tor nerve**, portion of that nerve to internal rectus, inferior rectus, and inferior oblique muscles and to ciliary ganglion. **R. infe′rior of or′bital nerve**, branch to the cheek. **R. infracosta′lis**, branch of intercostal nerve along inferior edge of rib. **R. inframaxilla′ris**, inferior maxillary nerve. **R. infraspina′tus**, from subscapular artery to infraspinous fossa. **R. inter′nus of great auric′ular nerve**, posterior branch of great auricular nerve. **R. i. of lac′rymal nerve**, superior branch of lacrymal nerve. **R. i. of spi′nal nerve**, see *R. lateralis*. **R. intestina′lis**, visceral branch of spinal nerve. **Ischiopu′bic r.**, the descending rami of ischium and pubis united. **R. of the is′chium**, either of the two branches forming this bone. **R. of jaw**, the ascending portion on either side of the inferior maxilla. **R. latera′lis na′rium**, from ethmoidal nerve to sides of nose. **R. latera′lis of spi′nal nerve**, branch of posterior division along transverse processes of vertebræ. **R. mag′nus ner′vi media′ni**, musculocutaneous nerve. **R. mala′ris**, inferior branch of orbital nerve. **R. margina′lis**, dorsal radial nerve of the thumb. **R. mastoide′us**, occipital branch of posterior auricular artery; small occipital nerve; posterior branch of great auricular nerve. **R. media′lis**, inner nerve of spinal branch of posterior division along spinous processes of vertebræ. **R. medul′læ spina′lis** or **R. medulla′ris**, from spinal branch of intercostal artery to spinal cord. **R. meninge′us of ascend′ing pharyn′geal ar′tery**, branch ramifying and penetrating the skull and supplying the meninges. **R. meninge′us poste′rior**, from the jugular ganglion to the meninges. **R. mi′nor ner′vi vidia′ni**, great superficial petrosal nerve. **R. muscula′ris**, part of dorsal branch of intercostal artery to deep muscles of back. **R. mus′culo-auricula′ris**, from posterior auricular nerve to retrahens aurem muscle. **R. nasa′lis**, branch of anterior dental nerve to mucous membrane of nasal fossa. **R. ner′vi facia′lis**, branch of middle meningeal artery anastomosing with stylomastoid artery. **R. ner′vi saphe′ni inter′nus**, from anastomotica magna artery of thigh, with accompanying saphenous nerve, to insertion of sartorius. **R. occipita′lis**, posterior auricular artery to the occipital region; posterior division of superficial temporal artery. **R. ophthal′micus**, ophthalmic nerve. **R. palma′ris lon′gus**, palmar cutaneous nerve. **R. palma′ris ulna′ris**, from ulnar nerve, accompanying the ulnar artery. **R. palpebra′lis**, from superior division of lacrymal nerve to upper eyelid. **R. parieta′lis**, from occipital artery to the dura mater. **R. patella′ris**, from long saphenous nerve to anterior surface of patella. **R. petro′sus superficia′lis**, from middle meningeal artery anastomosing with the stylomastoid artery. **R. pharynge′us**, from superior thyroid artery to inferior constrictor of the pharynx. **R. pharynge′us descen′dens**, inferior pharyngeal branch of ascending pharyngeal artery anastomosing with branches from superior thyroid. **R. phren′icoabdomina′lis dex′ter**, a terminal branch of the right phrenic to the vena cava, liver, etc. **R. phren′icoabdomina′lis sinis′ter**, a terminal branch of the left phrenic to the left crus of the diaphragm, cœliac plexus, and suprarenal capsule. **R. poplite′us**, from posterior tibial nerve to popliteus muscles and tibia. **R. poste′rior**, dorsal branch of intercostal artery. **R. p. of great auric′ular nerve**, to back part of the pinna and vicinity. **R. p. of inter′nal cuta′neous nerve**, ulnar cutaneous branch of the forearm. **R. p. of lac′rymal nerve**, inferior branch of that nerve. **R. p. of ob′turator nerve**, branch passing through obturator externus to hip-joint and to adductor minimus and adductor magnus. **R. prævertebra′lis**, from ascending pharyngeal to prevertebral fascia. **R. pri′mus quin′ti**, ophthalmic nerve. **R. profun′dus of ante′rior cru′ral nerve**, posterior terminal branch of anterior crural nerve. **R. p. of exter′nal plan′tar nerve**, to external interossei, adductor hallucis, and outer head of flexor brevis hallucis. **R. p. ner′vi media′ni**, anterior interosseous nerve of arm. **R. p. of obtura′tor nerve**, posterior branch of obturator nerve. **R. radia′lis**, dorsal radial nerve of thumb. **R. recur′rens hypoglos′si**, from hypoglossal nerve to the meninges. **R. r. va′gi**, branch from jugular ganglion to the meninges. **R. scapula′ris of transverse′ cer′vical ar′tery**, dorsalis scapulæ artery.

**R. secun′dus quin′ti,** superior maxillary nerve. **R. sep′ti na′rium,** from ethmoidal nerve to septum of nose. **R. sinua′lis,** recurrent branch from ophthalmic nerve, supplying the tentorium. **R. spina′lis,** part of dorsal branch of intercostal artery to spinal canal. **R. pro stape′dio,** branch of stylomastoid artery to stapes. **R. sternocleidomastoide′us,** see *Sternomastoid arteries.* **R. subscapula′ris ante′rior,** from subscapular artery to anterior part of scapula. **R. superficia′lis of ante′rior cru′ral nerve,** terminal branch of that nerve. **R. s. of brachia′lis anti′cus,** from the inferior profunda or the brachial artery along the middle portion of that muscle. **R. s. cuta′neus,** from musculocutaneous nerve to radial side of forearm. **R. s. of exter′nal plan′tar nerve,** branch to the skin on the fibular side of the sole of the foot. **R. s. of musculospi′ral nerve,** radial nerve. **R. s. ner′vi vidia′ni,** great superficial petrosal nerve. **R. supe′rior,** horizontal ramus of the pubis and of the ischium. **R. s. of lac′rymal nerve,** branch to lacrymal gland and upper eyelid. **R. s. ner′vi inframaxilla′ris,** superior division of inferior maxillary nerve. **R. s. of oculomo′tor nerve,** portion to superior rectus and levator palpebræ muscles. **R. s. of or′bital nerve,** branch to inferior branch of lacrymal nerve. **R. s. quin′ti,** ophthalmic nerve. **R. supracosta′lis,** branch of an intercostal nerve along upper margin of a rib. **R. supramaxilla′ris,** superior maxillary nerve. **R. supraspina′tus,** from transverse cervical artery to the supraspinous fossa. **R. tempora′lis of or′bital nerve,** superior branch of that nerve. **R. temporofacia′lis,** temporofacial portion of the facial nerve. **R. termina′lis ante′rior,** division of the main trunk of anterior crural nerve to the skin and sartorius. **R. termina′lis poste′rior,** division of main trunk of anterior crural nerve of the thumb. **R. termina′lis radia′lis,** terminal branch of median nerve to middle and ring fingers. **R. termina′lis ulna′ris,** terminal branch of median nerve to thumb and index finger. **R. testicula′ris,** cremasteric artery. **R. thorac′icus,** branch of inferior thyroid artery to the thorax; branch of transverse cervical artery to outer surface of thorax. **R. tonsilla′ris,** from ascending palatine artery to the tonsil. **R. transver′sus,** acromial artery. **R. trochanter′icus,** terminal portion of external circumflex artery to trochanteric fossa. **R. ulna′ris antibra′chii,** ulnar cutaneous branch of the forearm. **R. u. radia′lis,** dorsal nerve of the hand. **R. veno′sus profun′dus facie′i,** internal maxillary vein. **R. ventra′lis of spi′nal nerve,** anterior division to muscles of ventral and lateral portions of body, including the limbs. **R. vertebra′lis,** spinal branch of intercostal artery. **R. viscera′lis of spi′nal nerve,** from anterior division to the sympathetic. **R. vola′ris profun′dus,** deep ulnar artery. **R. vola′ris radia′lis,** dorsal radial nerve of the thumb. **R. vola′ris superficia′lis,** termination of ulnar artery, forming superficial palmar arch. **R. xiphoide′us,** branch of internal mammary artery to the ensiform process.

**Ramus′culus** (dim. of ramus). Ramulus.

**Ra′na.** Frog. Ranula. **R. esculen′ta,** this frog and the bullfrog, **R. tauri′na,** are edible.

**Ran′cid** (*ranceo,* to be stale). Epithet given to fatty bodies which have become acrid, with the formation of fatty acids, from age or the contact of air. Mild ointments may thus become irritating.

**Rancid′ity.** Condition of being rancid.

**Ran′dia** (after J. Rand, botanist, of London). A genus of tropical plants, ord. *Rubiaceæ.* **R. dumeto′rum,** coromandel shrub, ord. *Cinchonaceæ;* the fruit, bruised and thrown on the water, intoxicates or even kills fish; the powder is a powerful emetic; it is a cardiac stimulant and antispasmodic nervine. **R. spino′sa,** R. dumetorum.

**Range.** Scope, extent. **R. of accommoda′tion,** distance between the nearest and most remote points of distinct vision.

**Rangoon′tar.** Semisolid petroleum found in India.

**Ra′nine** (*rana,* frog). Relating to the under side of the anterior portion of the tongue, so called from its fancied resemblance to a frog. **R. ar′tery,** the portion of the lingual artery which advances horizontally between the genioglossus and lingualis muscles as far as the point of the tongue. **R. vein,** this follows the same course as the artery, and opens into the internal jugular or into the superior thyroid.

**Ran′tree.** Sorbus aucuparia.

**Ran′ula** (dim. of rana). Frog-tongue, sublingual cyst. Small, soft, fluctuating cystic tumor which forms under the tongue; it results from obstruction to the outlet of a salivary gland or of one of the mucous glands beneath the tongue, as a Blandin-Nuhn or Rivinian gland. Sometimes the salivary duct is found plugged by a small calculus. Several other forms of sublingual swelling are included in the term ranula. **R. lapide′a,** salivary calculus. **R. pancreat′ica,** a retention cyst of the pancreas.

**Ran′ular.** Relating to a ranula.

**Ranun′culus.** Crowfoot, yellow gowan, ord. *Ranunculaceæ.* Genus of plants, most of the species of which when taken internally act as acrid poisons. They are also acrid and vesicant when applied to the skin, and have accordingly been often used as counterirritants. Ranunculus (formerly in the Ph. U. S.) is the cormus and herb of R. bulbosus. The following species answer to the above description: **R. aborti′vus,** smallflowered crowfoot, chickenpepper. **R. a′cris,** upright meadow or tall crowfoot, buttercups, guilty cups, yellowweed, blisterweed, pilewort, burwort, meadowbloom, yellows. **R. al′bus,** anemone nemorosa. **R. aquat′icus,** R. sceleratus. **R. bulbo′sus,** bulbous or bulbous-rooted crowfoot, buttercups. **R. declina′tus,** R. flammula. **R. digita′tus,** R. sceleratus. **R. fica′ria,** lesser celandine, pilewort; the leaves and root have been used medicinally—the leaves as an antiscorbutic, the root as a cataplasm in piles. **R. flam′mula,** flammula, surrecta alba, smaller water crowfoot, lesser spearwort. **R. illyr′icus, R. læ′tus,** R. bulbosus. **R. lin′gua, R. nemoro′sus,** Anemone nemorosa. **R. palus′tris,** R. sceleratus. **R. pennsylva′nicus,** bristly crowfoot. **R. præ′cox,** R. ficaria. **R. praten′sis,** R. acris. **R. pubes′cens,** growing in ditches and marshes in South Africa; the expressed juice is used by the Cape Colonists in cancerous ulcers. **R. re′pens,** creeping crowfoot. **R. ru′fulus,** R. acris. **R. scelera′tus,** marsh or crushed or celery-leaved crowfoot. **R. sic′ulus,** R. acris. **R. steve′nii,** R. acris. **R. umbella′tus,** R. sceleratus. **R. ver′nus,** R. ficaria. **R. virginia′nus,** Lobelia syphilitica.

**Ranvier′s** (ron-ve-aze′) **acces′sory plex′us.** Superficial plexus of the cornea. **R.′s cros′ses,** black or brown crucial figures visible at R.′s nodes after staining with silver nitrate. **R.′s nodes,** constrictions at equal distance along the nerve-fibres.

**Ra′pa.** This term was formerly applied to plants of the cabbage or turnip kind.

**Rape** (*rapio,* to ravish). Unlawful sexual connection with a woman without her consent. **R. oil,** oleum rapæ, a thick, yellowish-brown oil expressed from rape seed. **R. seed,** seed of Brassica campestris or wild turnip.

**Raphane′don** (*raphanis,* a radish). A transverse fracture of a long bone, leaving no splinters.

**Raphan′ia.** Convulsive disease, convulsio cerealis, resembling ergotism, not uncommon in Germany and Sweden, and attributed to the seeds of the wild radish being mixed with the grain. The convulsions are seated in the limbs, and are attended with acute pain. **R. maïz′tica,** pellagra.

**Raph′anus.** A genus of plants of the order *Cruciferæ.* **R. horten′sis,** radish; the root of this plant is a common esculent; it has also been given as a diuretic in calculous affections; the juice, made into a syrup, is exhibited to relieve hoarseness; radishes have long been regarded as antiscorbutics. **R. mari′nus** or **rustica′nus,** Cochlearia armoracia. **R. sati′vus,** garden radish. **R. sylves′tris,** wild radish.

**Raph′e** (suture). More correctly, *rhaphe.* Name given to any prominent line resembling a raised stitch, as that which divides the scrotum into two parts, and extends from the anterior part of the anus to the extremity of the penis. **R. of ampul'la,** longitudinal ridge on the upper part of the ampulla of the semicircular canal. **Anococcyg'eal r.,** a fibrous septum extending from the anus to the coccyx. **R. of the cor'pus callo'sum,** one of two prominent lines, longitudinal and parallel, seen at the upper surface of the corpus callosum, extending from the anterior to the posterior extremity of that commissure. **R. of medul'la oblonga'ta,** median septum, consisting of fibres running principally in the median plane. **R. of pal'ate,** linear median ridge extending from the small papilla anteriorly to the uvula posteriorly. **R. of phar'ynx,** median seam on the posterior wall of the pharynx. **R. of tongue,** median furrow on the dorsum linguæ. **R. of ure'thra,** ridge along the inferior part of the urethra.

**Raph'ex.** Chenopodium vulvaria.

**Raphidoph'ora vitien'sis.** Creeping plant, ord. *Aroidæ,* native of the Fiji Islands; used in making tonga.

**Raph'ion** or **Raph'is.** Needle.

**Rap'tus** (*rapio,* to seize). Violent and sudden attack or seizure. **R. hæmorrhag'icus,** hemorrhagic attack or seizure. **R. melanchol'icus,** sudden and violent seizure of melancholy. **R. nervo'rum,** sudden and violent nervous seizure; spasm or cramp. **R. post-terga'neus,** opisthotonos.

**Rapun'tium syphilit'icum.** Lobelia syphilitica.

**Rarefa'cient** (*rarus,* thin, *facio,* to make). Possessed of the power of thinning or giving more bulk to the blood or other fluids of the body.

**Rarefac'tion.** Act of rarefying or decreasing in weight but not in size.

**Rar'efying ostei'tis.** Osteitis in which the Haversian canals enlarge and the bone becomes rarefied; also called osteoporosis.

**Rar'itas.** Rarity; scantiness; fewness. **R. den'tium,** condition in which there are large spaces between the teeth.

**Rasce'ta.** Carpus; transverse lines on palmar aspect of wrist. **R. pe'dis,** tarsus.

**Rasch's sign.** Fluctuation felt when the hand is applied to the cervix in early pregnancy, due to presence of liquor amnii.

**Rash.** Exanthem; eruption. **Can'ker r.,** malignant scarlatina. **Cat'erpillar r.,** eruption caused by contact with caterpillar hairs. **Drug r.,** medicinal r. **Fe'ver r.,** scarlatina. **Lich'enous r.,** lichen. **Medic'inal r.,** eruption following or dependent upon the administration of medicines, as the blue condition of the skin from nitrate of silver, etc. **Mercu'rial r.,** eczema mercuriale. **Mul'berry r.,** eruption resembling that of measles sometimes seen in typhus fever. **Net'tle r.,** urticaria. **Rose r.,** roseola. **Scar'let r.,** scarlatina. **Tooth r.,** strophulus. **Wild'fire r.,** ignis sylvaticus.

**Rasmus'sen's an'eurysm.** Dilatation of artery in a tuberculous cavity; a cause of hemorrhage.

**Rasmusse'nia bucca'lis** (Saccardo). Leptothrix buccalis.

**Raso'rian.** Relating to Rasori or Rasorism.

**Raso'rism.** The Italian medical doctrine of contrastimulus, of which Rasori was the founder.

**Raso'rium** (*rado,* to scrape). Raspatorium.

**Raspail's' sed'ative wa'ter.** Lotion consisting of camphor and ammoniac.

**Raspato'rium.** Raspatory; instrument used for rasping bones, to detach the periosteum, in surgical operations or for anatomical purposes.

**Rasp'berry.** Rubus idæus. **Black r.,** Rubus strigosus. **Ground r.,** Hydrastis canadensis. **R. sore,** an abnormal vaccine sore, beginning like the true vaccina papule, but, instead of becoming vesicular, remaining hard, bright red, and nodular, resembling a nævus. If it persists a plaster of mercury and carbolic acid will disperse it. **Steppe r.,** ephedra. **Wild r.,** Rubus strigosus. **R. vin'egar,** acetum rubi idæi.

**Rasp'ing.** Eructation.

**Rasu'ra** (*rado,* to scrape). Rasure, scratch, or erosion. Rasping or shaving of any substance, as rasuræ cornu cervi, hartshorn shavings.

**Ratafi'a.** Liquor prepared by imparting to ardent spirits the flavor of various fruits, adding sugar.

**Ratan'hia-tan'nic acid.** See *Rhatania.*

**Rat'anhy.** Rhatany or krameria.

**Rath'ke's duct.** Portion of Müller's duct between it and the sinus pocularis. **R.'s folds,** duplicatures of fetal mesoderm between the orifice of the intestine and the allantois. **R.'s glands,** see *Jacobson's organ.* **R.'s invest'ing mass,** a mass of tissue in which the cephalic end of the notochord is embedded. **R.'s pouch,** pituitary diverticulum. **R.'s trabec'ulæ,** trabeculæ cranii.

**Ra'tio.** Proportion; cause; explanation; mode or manner; as *ratio symptomatum,* reason of the symptoms. **R. meden'di,** reason, mode, or manner of cure. **R. symptoma'tum,** see *Ratio.* **R. vic'tûs,** dietary.

**Ra'tion** (*ratio,* proportion). Daily allowance of necessaries, especially of food.

**Ra'tional.** Conformable to reason; this epithet is often opposed to empirical. **R. symp'toms,** subjective symptoms which are not submitted to any elaborate investigation. **R. treat'ment,** that which recognizes nature as the great agent in the cure, employing art as an auxiliary, to be resorted to when useful or necessary, and avoided when prejudicial.

**Rats'bane.** Arsenous acid.

**Rat'tle.** Râle.

**Ratt'lebush.** Sophora tinctoria.

**Rat'tlefern.** Botrychium virginicum; astringent, vulnerary.

**Rat'tleflag.** Eryngium yuccæfolium.

**Rat'tle-herb.** Actæa spicata.

**Rat'tlesnake.** Crotalus horridus. **R. leaf,** Goodyera pubescens. **R. mas'ter,** Agave virginica; Liatris scariosa; Nabalus albus. **R. plan'tain,** Goodyera pubescens. **R. root,** Nabalus albus; Polygala senega; Trillium latifolium. **R. weed,** Hieracium venosum.

**Rat'tleweed.** Actæa racemosa.

**Rat'ula.** Raspatorium.

**Rau's pro'cess.** Processus gracilis of the malleus.

**Rau'ber's lay'er.** Stratum of flat cells found in primary development of membranes of blastoderma.

**Rauce'do** (*raucus,* hoarse). Hoarseness; change in the voice, which loses its smoothness and becomes low and obscure; common symptom in diseases of the larynx and trachea. **R. catarrha'lis,** hoarseness from cold.

**Rau'cous.** Hoarse, as a raucous voice.

**Rauwol'fia nit'ida.** Native of tropical America; root is cathartic and emetic.

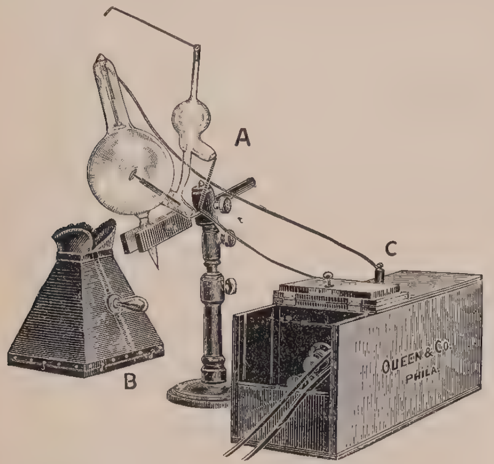
**Ravaton's' amputa'tion.** Operation consisting of a circular incision down to the bone, and of a longitudinal incision on the side for obtaining flaps.

**Ravena'la madagascarien'sis.** Tree, native of Madagascar; leaves yield refreshing juice; seeds are edible.

**Ravensa'ra.** Tree, native of Madagascar. **R. aromat'ica** has an aromatic flavor, and its fruit has an odor like cloves.

**Ra'very.** Delirium.

**Ray.** A line of light, heat, or other form of radiant energy. **Actin'ic rs.,** rays associated with those of light, upon the action of which the chemical effects of light depend. **Becquerel' rs.,** rays emitted by radioactive substances, such as radium, first discovered by Becquerel in uranium; they are of two kinds, the one deviable by a magnet, the other undeviable, the former possessing properties similar to those of the cathode rays of a Crookes tube, the latter having those of the Roentgen rays. **Cath'ode rs.,** rays emitted from the negative pole when electricity is discharged from it in a vacuum tube; they are not identical with Roentgen rays, for they are deviable by a magnet and by refracting media, and are rapidly absorbed by opaque bodies into which they are projected and by the atmosphere. **R. of direc'tion,** light propagated in a straight line from a luminous point. **R.-fun′gus**, actinomyces. **Med′ullary rs.**, see *Medullary*. **Niewenglow′ski rs.**, rays emitted by a phosphorescent substance, such as calcium sulphide, after exposure to light; they have properties similar to those of Becquerel rays, penetrating opaque substances and affecting a photographic plate in the dark. **Roent′gen rs.**, rays emitted from a source of radiant energy generated by a discharge of electricity in a vacuum (Crookes or Geissler) tube; these rays are not deviated by a magnet or refracting medium; they pass through opaque bodies, cause certain substances to fluoresce, affect a photographic plate like light rays, and exert a sort of caustic action upon the tissues of the animal body; the source of these rays is the surface within the vacuum or on its wall upon which the cathode rays first impinge; the undulations in the ether constituting Roentgen rays are longitudinal instead of transverse; these rays are much used in medicine; see *Fluoroscopy*, *Radiotherapy*, and *Skiagraphy*. **Ultravi′olet rs.**, invisible rays deflected beyond the violet of the spectrum when sunlight is decomposed by a prism; they produce chemical effects and were supposed to include all the actinic rays, but these are now known to exist in all parts of the spectrum. **X-rays**, Roentgen rays.



Roentgen-ray apparatus. A, Crookes tube; B, fluoroscope; C, battery.

**Ray′s ma′nia.** Moral insanity.

**Raynaud′s** (ra-noze′) **disease′.** Peculiar disease characterized by coldness and whiteness of the fingers, toes, and tip of the nose, which may later become dark and painful, or even gangrenous, *local* or *symmetrical gangrene*. **R.′s gan′grene,** see *R.′s disease*.

**Ra′zor** (*rado*, to shave). Instrument for shaving; used in surgery to remove hairs where they would interfere with any operation.

**R. D. d.** Abbreviation for reaction of degeneration at a distance; see *Ghilarducci*.

**Re-** (Lat.). In composition back, in return, again.

**Reach′ing.** Retching.

**Reacquired′ move′ments.** Movements restored to normal after injury to motor portions of the brain.

**Reac′tion** (*re*, again, *ago*, to act). Resistance to a power applied; counteraction. Also the continuance of this state after the original action has ceased; this reaction is often greater than the result of the original force; it is the state of activity in vital processes which succeeds the depression caused by physical or psychical shock. The chemical changes induced by the influence of two or more bodies upon each other. **Acid r.**, reddening of blue litmus paper by a fluid, which is then said to possess an acid reaction. **Al′kaline r.**, turning blue of red litmus paper by a fluid, which is then said to possess an alkaline reaction. **Amphig′enous** or **amphoter′ic r.**, turning blue of red litmus paper and reddening of blue litmus paper by the same fluid; see *Neutral r.* **Bechter′ew′s r.**, see *Bechterew*. **Consen′sual r.**, involuntary muscular contraction in response to stimulus. **R. of degenera′tion**, loss or decrease of normal reaction of nerves and muscles to faradic stimuli while the galvanic irritability of the muscles remains. **R. of d. at a dis′tance**, see *Ghilarducci*. **Elec′trical r.**, muscular reaction that is in response to stimulation by electricity. **Hemio′pic pu′pil** or **pu′pillary r.**, inertia of the pupil, when the amaurotic half-eye is illuminated, when the lesion of the optic nerve is at a certain point. **Myoton′ic r.**, r. in myotonia in which there is augmented galvanic irritability. **Neu′tral r.**, absence of color change in either red or blue litmus paper when moistened by a fluid, which is then said to possess a neutral reaction; see *Amphigenous reaction*. **R. pe′riod** or **time**, time that elapses between the application of a stimulus and the muscular contraction. **Wer′nicke′s r.**, hemiopic pupil reaction; see *Wernicke′s sign*. **R. time**, time passing between the stimulation of a nerve and a certain result.

**Read′ers′ cramp.** Spasm or cramp of the muscles of the eye after using them too continuously for reading.

**Read′y meth′od.** Marshall Hall′s method. Mode of restoring respiration in cases of apnœa, proposed by Dr. Marshall Hall; consists in placing the body in the prone position, making gentle pressure on the back, then removing the pressure and turning the body on its side and a little beyond, executing these movements sixteen times in the minute. Also termed the method of prone and natural respiration in apnœa. See *Drowning, resuscitation from*.

**Rea′gent.** Substance used for determining the component parts of other substances; a test.

**Real′gar.** Red sulphide of arsenic.

**Reamputa′tion.** Amputation repeated in a limb, part of which has already been removed.

**Reap′ers′ kerati′tis.** Severe keratitis caused by particles of grain penetrating the cornea of reapers.

**Rea′son.** Faculty or property of the mind by means of which man perceives the distinction between right and wrong in physics as well as in morals. Reason is a just conclusion resulting from the comparison of two ideas by virtue of which we form a judgment.

**Reas′oning ma′nia** or **monoma′nia.** Paranoia.

**Réaumu′ria.** Polypetalous shrubs, ord. *Tamariscineæ;* leaves of **R. vermicula′ta** are used as an external application in itch.

**Réaumur′s′ scale** or **thermom′eter.** See *Thermometer*.

**Rebo′lea** or **Rebo′na.** Mummy; also dried fæces.

**Récam′ier′s caus′tic.** Escharotic solution of chloride of gold in dilute nitromuriatic acid. **R.′s curette′**, instrument of a double S-shape, being graduated and provided with a loop at one end.

**Recei′ver** (*recipio*, to receive). In pharmacy, a globular vessel, whose neck widens gradually outward, to receive the tapering beak of the retort in distillation.

**Receiv′ing tubes of kid′ney.** Uriniferous tubes or ducts of Bellini.

**Recep′ta.** Prescription.

**Receptac′ulum.** Receptacle. A sac or reservoir for the storage of fluid. **R. cerebel′li**, that part of the squamous bone below the internal occipital protuberance and sulcus transversalis. **R. chy′li**, receptacle of the chyle; lumbar cistern, reservoir or cistern of Pecquet, a considerable dilatation of the thoracic duct in front of the lumbar region of the vertebral column; commencement of the duct. **R. Cotun′nii**, a triangular space formed by a separation of the two laminæ of the dura mater near the middle of the posterior surface of the petrous portion of the temporal bone, where the aquæductus vestibuli terminates; it is always filled with the fluid of Cotugno or of Cotunnius. **R. du′ræ ma′tris**, one of the sinuses of the dura mater. **R. lo′bi occipita′lis,** that part of the occipital bone above the internal occipital protuberance and the sulcus transversalis. **R. Pecquet′i,** r. chyli. **R. sel′læ equi′næ later′ibus appos′itum,** cavernous sinus. **R. sem′inis,** ampulla of the Fallopian tube.

**Receptiv′ity** (*recipio,* to receive). Susceptibility of certain organs to receive morbific impressions.

**Recep′tors.** The side-chains of the living protoplasm molecule, the office of which is to seize upon the nutritive substances and anchor them to the cell; they also unite with the haptophore group of the toxin molecule and anchor it to the cell. When produced in excess and cast off into the fluids of the body these receptors constitute antitoxin. They possess special affinities for special poisons, and, while united to the cell protoplasm, are the causes of the receptivity of the organism in relation to particular poisons.

**Recep′tum.** Prescription. **R. acetab′uli,** acetabular fossa.

**Reces′sus.** A recess or small cavity. See *Cavitas* and *Sinus.* **R. ampulla′ceus,** ampulla of the bony semicircular canal; see *Cavitas elliptica.* **R. ante′rior,** passage from the fenestra rotunda into the scala tympani. **R. chias′matis,** space in the third ventricle of the cerebrum between the chiasma and lamina terminalis. **R. cochlea′ris,** cochlear fossa. **R. cona′rii,** occasional hollow in the pineal gland. **R. Cotugn′ii,** sac of the dura mater into which the ductus endolymphaticus enters. **R. duodenojejuna′lis,** recess between the duodenum and the jejunum. **R. ellip′ticus,** hemielliptical fossa. **R. epitympan′icus,** pyramidal cavity in the tympanum. **R. glossoepiglot′ticus,** glossoepiglottic fossa. **R. hemiellip′ticus,** hemielliptical fossa. **R. hemisphær′icus,** hemispherical fossa. **R. hepat′icorena′lis,** pocket in the peritoneum for the reception of the lobe of the liver. **R. hypotympan′icus,** depression in the floor of the cavity of the tympanum. **R. ileocæca′lis,** ileocæcal fossa. **R. incisi′vus,** recess on the nasal septum above the anterior palatine canal. **R. infrapinea′lis,** r. conarii. **R. infundib′uli,** continuance of the third ventricle into the infundibulum. **R. infundibulifor′mis,** fossa of Rosenmüller on the pharyngeal wall. **R. jugula′ris,** jugular fossa. **R. labyrin′thi,** depression leading to the aqueduct of the vestibule; see *Crista vestibuli.* **R. laryngopharynge′us,** pyramidal sinus or space continuous with the pharynx. **R. latera′lis ventric′uli,** pouch on each side of the fourth ventricle. **R. nasopalati′nus,** infundibular recess on the nasal septum above the anterior palatine canal. **R. occipita′lis,** pouch in the side of the lateral ventricle of the embryo, developing subsequently into the posterior cornu. **R. op′ticus,** space in the third ventricle between the chiasma and the lamina terminalis. **R. peritone′i,** retroperitoneal fossæ. **R. pharynge′us,** fossa of Rosenmüller. **R. p. me′dius,** pouch in the mucous membrane of the back part of the pharynx in the middle line. **R. pinea′lis,** occasional hollow in the pineal gland. **R. sac′ci lacryma′lis,** occasional dilatation forward of the lacrymal sac. **R. salpin′gopharynge′us,** occasional diverticulum into the pharynx near the opening of the Eustachian tube. **R. sphær′icus,** hemispherical fossa. **R. sphe′noethmoida′lis,** small groove above the superior turbinate bone on the lateral walls of the nasal fossæ. **R. stensonia′nus,** infundibular recess on the nasal septum above the nasopalatine canal. **R. subcæca′lis,** subcæcal fossa. **R. subsigmoide′us,** peritoneal pouch made by the mesentericomesocolic ligament. **R. sulcifor′mis,** see *Fovea vestibuli.* **R. suprapinea′lis,** recess between the superior portion of the pineal gland and the roof of the third ventricle. **R. tympan′icus,** the attic. **R. utric′uli,** pit at the upper part of the utricle. **R. vesi′cæ urina′riæ,** sinus of the bladder.

**Rechamel′ca.** Rachamelca.

**Recidi′va mor′bi.** Relapse.

**Recidiva′tion.** Relapse.

**Recipe,** res′ip-e (*recipio,* to take). A Latin word which signifies "take," and with the abbreviation of which, ℞ (formerly the symbol of Jove), prescriptions are commenced. Substantively, a prescription or receipt.

**Recipiomo′tor.** Afferent; receiving a motor stimulus.

**Recip′rocal.** Mutual; alternating. **R. propor′tions,** see under *Law.* **R. recep′tion,** a form of joint in which the articular surface is concave one way and convex the other, each bone being thus received in the other.

**Reck′linghausen's canals′.** Very small canals in the connective tissue which are the beginnings of lymphatics. **R.'s disease′,** a morbid entity including: 1. Tumors of the skin, of the nature of molluscum fibrosum. 2. Small multiple tumors situated on nerves. 3. Pigmentation of skin, with pain, arthralgia, impaired mental activity, etc.; it may be called neurofibromatosis.

**Reclina′tio.** Reclination. **R. palpebra′rum,** ectropion.

**Reclina′tion** (*reclino,* to bend back). A mode of operating for cataract, which consists in applying the needle in a certain manner to the anterior surface of the cataract, and depressing it into the vitreous humor in such a way that the front surface of the cataract is the upper and its back surface the lower one.

**Reclu′sor palpebra′rum** (*recludo,* to open). Levator palpebræ superioris.

**Réclus's′ disease′.** Cystic disease of the mammary gland.

**Recoil′ wave.** Dicrotic wave of sphygmogram.

**Recomposi′tion.** Reunion of bodies after temporary dissolution.

**Recon′dite.** Concealed.

**Reconstitu′tion.** Act of forming anew or bringing together missing parts.

**Reconvales′cence.** Convalescence.

**Recov′ery** (*recupero,* to regain). Return to a normal condition.

**Rec′rement** (*re,* again, *cerno,* to separate). A secretion which, after having been separated from the blood, is again returned to it, such as the saliva, the secretion of serous membranes, etc. Such fluids are said to be *recrementitial.*

**Recrementi′tial** or **Recrementi′tious.** See *Recrement.*

**Recremen′to-excrementi′tial.** Term applied to secreted fluids, as the bile, etc., which are in part reabsorbed and in part excreted.

**Recrudes′cence** (*re,* again, *crudus,* raw). Increase after temporary remission.

**Recrudes′cent.** Starting anew, as an epidemic after a remission.

**Rec′tal.** Relating to the rectum. **R. alimenta′tion,** administration of nutritive enemata. **R. cri′ses,** attacks of intense pain in the rectum met with in locomotor ataxia. **R. di′aphragm,** a muscle sheet which occludes the rectal outlet of the pelvis, consisting of sphincter ani externus superficially, and a deeper layer, made up of levator ani and coccygeus. **R. expres′sion,** name given to an obstetrical manipulation, consisting of the introduction of two fingers into the rectum of the woman before the end of the stage of expulsion, and thereby helping delivery of the child; rectal expression is intended to avoid laceration of the perineum. **R. pouch′es, inflamma′tion of,** these pouches become inflamed, enlarged, especially in old people, and ulcerated; the condition is sometimes called encysted rectum or sacciform disease of the anus. **R. re′flex,** reflex caused by the presence of fæces in the rectum, which stimulates the process of defecation. **R. tube,** see *Tube.*

**Rectal′gia** (*algos,* pain). Pain in the rectum.

**Rectec′tomy** (*ektome,* excision). Excision of portion of the rectum.

**Rectifica′tion** (*rectum,* right, *facio,* to make). Operation by which certain liquids are purified by distilling them, either singly or after admixture with other substances.

**Rec'tified.** Purified, distilled.

**Recti'tis.** Inflammation of the rectum.

**Recto-.** In composition, relating to the rectum.

**Rec'tocele** (*ke'le*, rupture). Vaginal rectocele, rectovaginal hernia. Prolapse of the posterior wall of the vagina, constituting hernia of the rectum.

**Rectococcyge'us.** Muscle which originates on the anterior surface of the second and third coccygeal vertebræ, and is inserted into the posterior wall of the rectum; it draws the rectum backward.

**Rectococcypex'ia** or **Rectococ'cypexy** (*pexis*, fastening). Fixation of the rectum to the coccyx by sutures.

**Rectocystot'omy** (*kystis*, bladder, *tome*, incision). Incision in or operation on the rectum through the bladder.

**Rectola'bial.** Relating to rectum and labium.

**Rectopex'ia** or **Rec'topexy** (*pexis*, fastening). Fixation of the rectum by suture in a new position.

**Rectopho'bia.** Morbid fear of rectal disease.

**Rec'toscope** (*skopéo*, to see). A rectal speculum.

**Rectosteno'sis.** Stricture of the rectum.

**Rectos'tomy** (*stoma*, mouth). The formation of an artificial anus in the rectum above the site of a stricture.

**Rec'totome.** An instrument for incising the rectum in cases of stricture.

**Rectot'omy** (*temno*, to cut). Operative division of rectal stricture.

**Rec'to-ure'thral.** Relating to rectum and urethra.

**Rec'to-u'terine.** Relating to rectum and uterus. **R.-u. cul-de-sac** or **pouch,** see *Uterus*. **R.-u. folds,** see *Uterus*.

**Rectovaginal,** rek-to-vaj'i-nal. Relating or belonging to the rectum and vagina. **R. cul-de-sac** or **pouch,** formed by the reflection of the peritoneum from the upper third of the vagina to the rectum. **R. fis'tula,** preternatural communication between the rectum and vagina through the r. septum. **R. her'nia,** rectocele. **R. sep'tum** is formed by the junction, back to back, of the rectum and vagina; it separates these two canals from each other.

**Rectoves'ical.** Having relation to the rectum and bladder, as the **R. excava'tion, fold, pouch,** or **cul-de-sac** of the peritoneum, between the rectum and bladder. **R. fas'cia,** fascia recta vesicalis; portion of pelvic fascia covering internal surface of levator ani and forming ligaments of prostate gland or uterus.

**Rec'tum** (*rectus*, straight, so called from a notion that it is straight, which it is not). The third and last portion of the large intestine. It forms the continuation of the sigmoid flexure of the colon, occupies the posterior part of the pelvis, and extends from the left side of the sacrovertebral articulation to the coccyx, before which it opens outward by the orifice called the anus. It is cylindrical, but saccated, as it were, at its inferior portion, where it is consequently larger, and is attached to the sacrum by the mesorectum. Like the other portions of the canal, it is formed of three membranes. Toward the lower extremity some parallel and longitudinal wrinkles are observable on its inner surface. These are the *columns, columnæ carneæ of the rectum* or *of Morgagni*. They are merely folds of the mucous membrane, between which are a number of lacunæ. The arteries of the rectum are numerous; they proceed from the inferior mesenteric, hypogastric, and internal pudic, and are called hemorrhoidal. The veins open partly into the hypogastric vein, partly into the inferior mesenteric. The nerves proceed from the sciatic and hypogastric plexuses. The rectum receives the fecal matters as they pass from the colon, which serves as a reservoir for them, to be discharged at the anus. **Encyst'ed r.,** a pouched condition of the rectum, the mucous membrane forming hernial protrusions through the outer coat of the gut.

**Rec'tus** (straight). Term used in anatomy for parts, especially muscles, that pursue a straight course. **R. abdom'inis,** long, flat muscle, situated at the anterior part of the abdomen, and separated from that of the opposite side by the linea alba. It is attached above to the cartilages of the last three true ribs, and below to the pubis by a very strong tendon, the outer edge of which is continuous with the fascia transversalis. This muscle is enclosed in an aponeurotic sheath, and in its course has three or four transverse aponeurotic intersections. It bends the chest on the pelvis, and conversely. **R. abdom'inis anti'cus ma'jor,** rectus abdominis. **R. abdom'inis anti'cus mi'nor,** pyramidalis abdominis. **R. abdom'inis posti'cus,** quadratus lumborum. **R. ante'rior bre'vis,** rectus capitis internus minor. **R. ante'rior lon'gus,** r. capitis internus major. **R. cap'itis anti'cus lon'gus,** r. capitis internus major. **R. cap'itis anti'cus me'dius,** occasional muscle situated between the recti capitis antici muscles. **R. cap'itis anti'cus min'imus,** rectus capitis anticus medius. **R. cap'itis anti'cus mi'nor,** small muscle of the prævertebral region. **R. cap'itis inter'nus ma'jor,** long in proportion to its breadth, flat, and broader above than below. Situated at the anterior and lateral part of the neck, and arising from the transverse processes of the third, fourth, fifth, and sixth cervical vertebræ, and inserted into the basilar process of the occipital bone. **R. cap'itis inter'nus mi'nor,** situated more deeply than the last; is thin, flattened, irregularly quadrilateral, and passes from the anterior surface of the body of the first vertebra, near the origin of the transverse process, to be inserted into the basilar process. **R. cap'itis latera'lis,** there is a muscle of this name on each side of the head; flat, quadrilateral, and passing from the transverse process of the atlas to the occiput, behind the jugular fossa; inclines the head to one side. **R. cap'itis posti'cus ma'jor,** flat, triangular muscle, situated at the posterior and superior part of the neck, extends from the spinous process of the second cervical vertebra to the external surface of the lower semicircular ridge of the occipital bone; extends the head, inclines it to one side, and causes it to experience a rotary motion, which directs the face to its side. **R. cap'itis posti'cus mi'nor,** flat, triangular muscle, situated beneath the last, which passes from the posterior arch of the atlas to the occipital bone; extends the head; see also *Rectus capitis posticus major*. **R. cap'itis posti'cus profun'dus,** rectus capitis posticus minor. **R. cap'itis posti'cus superficia'lis,** rectus capitis posticus major. **R. cap'itis posti'cus supe'rior,** rectus capitis posticus major. **R. col'li,** vertical portion of the long muscle of the neck. **R. cru'ris,** r. femoris. **R. exter'nus oc'uli,** all the recti muscles of the eye, four in number, arise from the bottom of the orbit and are inserted into the sclerotic coat of the eye. The rectus externus is divided at its posterior extremity into two portions, one of which is attached to the outer part of the foramen opticum, and the other to the sphenoid bone. **R. fem'oris,** a straight muscle seated at the anterior part of the thigh. It extends from the anterior and inferior spine of the ilium and the cotyloid cavity of the patella. It extends the leg upon the thigh, and conversely. It can also bend the thigh upon the pelvis or carry the pelvis forward. **R. infe'rior fem'oris,** gracilis. **R. infe'rior oc'uli** arises below the optic foramen from the sphenoid bone; depresses the eye. **R. inter'nus ma'jor,** r. capitis internus major. **R. inter'nus mi'nor,** r. capitis internus minor. **R. inter'nus oc'uli** arises from the sphenoid at the inferior part of the foramen opticum; turns the eye toward the nose. **R. la'bii,** compressor labii. **R. latera'lis,** r. capitis lateralis; also an occasional muscle consisting of a few fibres passing between the ilium and the floating ribs. **R. latera'lis accesso'rius,** atlanticomastoideus. **R. latera'lis Fallo'pii,** r. capitis lateralis. **R. latera'lis oc'uli,** rectus externus oculi. **R. ma'jor,** r. capitis posticus major. **R. media'lis,** rectus internus. **R. media'lis oc'uli,** rectus internus oculi. **R. mi'nor,**

r. capitis posticus minor. **R. oc′uli,** see *R. externus oculi, R. inferior oculi, R. lateralis oculi, R. medialis oculi,* and *R. superior oculi.* All the recti muscles are concerned in the voluntary movements of the eye. **R. poste′rior,** funnel-shaped muscle which retracts the eyeball. **R. sterna′lis,** sternalis muscle. **R. supe′rior oc′uli** is attached to the circumference of the foramen opticum. **R. thora′cis,** extension of rectus abdominis upon the thorax. **R. thora′cis superficia′lis,** sternalis muscle.

**Recupera′tion** (*recupero,* to recover). Recovery of strength and health.

**Recu′perative** or **Recu′peratory.** Restorative; recovering; belonging to recovery.

**Recur′rence.** Relapse; return of a febrile paroxysm or other symptom.

**Recur′rens.** Relapsing fever.

**Recur′rent** (*recurro,* to run back). Name given to several arterial and nervous branches which seem to reascend toward the origin of the trunk whence they emanate; also to a disease that relapses—a recurrent tumor, for example. **R. ar′teries,** this name has been given to several arteries of the forearm and to one of the leg. In the forearm there are: 1. The radial recurrent, which arises from the superior part of the radial and ascends between the supinator longus, supinator brevis, and brachialis internus. 2. The anterior cubital recurrent arises from the upper and inner part of the cubital and ascends between the pronator teres and brachialis internus. 3. The posterior cubital recurrent arises from the preceding artery or from the cubital itself, and ascends between the olecranon and internal tuberosity of the humerus. 4. The posterior radial recurrent, which arises from the posterior interosseous and ascends between the posterior cubital and anconeus muscles. In the leg the recurrent tibial is furnished by the anterior tibial, and ascends to the tibialis anticus muscle. **R. artic′ular nerve,** branch from external popliteal nerve to knee-joint. **R. band′ages** are formed by convolutions of bandages, which make a kind of cap for the part—as the head—to which they are applied. **R. branch of infe′rior max′illary nerve,** branch of lower division of inferior maxillary nerve. **R. branch of supe′rior max′illary nerve,** recurrent superior maxillary nerve; branch of superior maxillary nerve to middle fossa of skull. **R. choroid′al ar′teries,** recurrent superior maxillary arteries. **R. dor′sal nerves,** branches of spinal nerves to vertebræ and adjacent parts. **R. fe′ver,** relapsing fever. **R. fi′broid,** a spindle-celled sarcomatous growth. **R. laryn′geal nerve,** inferior laryngeal nerve. **R. sensibil′ity,** see *Vertebral nerves.* **R. stric′ture,** see *Stricture.*

**Recurva′tion** (*re,* back, *curvus,* crooked). Backward curvature.

**Red.** One of the primary colors found at the extreme of the spectrum at the opposite end from violet. **R. ant,** Formica rufa. **R. bacil′lus,** B. ruber. **R. bane′berry,** root of Acetata rubra; violent purgative; dose, of fluid extract, ♏v–x (0.32–0.65). **R. bark,** red cinchona. **R. bay,** Persea carolinensis; indigenous; has edible fruit; leaves are pectoral and vulnerary, seeds astringent. **R. bean,** Abrus precatorius. **R. ber′ry,** Arbutus uva ursi; gaultheria; Panax quinquefolium. **R. ber′ry, bitt′er,** Cornus florida. **R. ber′ry, swamp,** Vaccinium oxycoccus. **R. blind′ness,** inability to distinguish red. **R.-green blind′ness,** inability to distinguish between red and green. **R. buck′eye,** Æsculus pavia. **R. bud,** Cercis canadensis. **R. cab′bage,** Brassica oleracea rubra. **R. ce′dar,** Juniperus virginiana. **R. cen′taury,** Sabbatia angularis. **R. chalk,** native hydrated aluminum silicate. **R. chick′weed,** Anagallis arvensis. **R. cincho′na,** Cinchona rubra. **R. clo′ver,** Trifolium pratense. **Con′go r.,** a red pigment used as a test for hydrochloric acid, which turns it blue. **R. cor′al,** see *Coral.* **R. cur′rants,** Grossularia rubra. **R. elm,** Ulmus fulva. **R. gown,** see *Strophulus.* **R. gum,** see *Strophulus.* **R. head,** Asclepias curassavica. **R. i′odide of mer′cury,** mercuric iodide. **R. lead,** plumbi oxidum rubrum. **R. mailk′es,** Papaver rhœas. **R. nu′cleus,** reddish-gray nerve-cells in tegmentum of brain. **R. oil,** oleum hyperici. **R. o′sier,** Cornus sericea. **R. ox′ide of mer′cury,** hydrargyri oxidum rubrum. **Par′is r.,** cinnabar. **R. pep′per,** powdered capsicum. **R. phos′phorus,** amorphous phosphorus. **R. pop′py pet′als,** Rhœados petala. **R. precip′itate,** hydrargyri nitrico-oxidum. **R. prus′siate of pot′ash,** potassium ferrocyanide. **R. puccoon′,** Sanguinaria canadensis. **R. rod,** Cornus sericea. **R. root,** celastrus, Lachnanthes tinctoria; Sanguinaria canadensis. **R. rose,** Rosa gallica. **R. san′dal-wood,** red saunders. **R. saun′ders,** Santalum rubrum. **R. shanks,** Polygonia persicaria. **R. sof′tening,** softening of the brain or spinal cord, the affected parts being of a red color from congestion. **R. sol′dier,** erysipelas. **R. sul′phide of mer′cury,** mercuric sulphide. **R. tar′tar,** crude potassium bitartrate. **R.-tongue fe′ver,** typhoid fever. **Vene′tian r.,** iron peroxide. **R. wa′ter,** see *Red-water fever.* **R. weed,** Phytolacca decandra.

**Redib′ia.** Paronychia.

**Redintegra′tion** (*re,* again, *integer,* entire). Regeneration; restoration of strength after disease or fatigue.

**Redresse′ment** (Fr.). Correction of a deformity. **R. forcé′,** forcible straightening of knock-knee.

**Red-Riv′er snake′root.** Aristolochia reticulata.

**Reduce′.** To restore to its normal condition, as a luxated limb. See *Reduction.*

**Reduced′ eye.** The two nodal points of the refractive system are taken as one, and also the two principal points. **R. i′ron,** ferrum redactum.

**Redu′cible.** Capable of reduction, as a *reducible hernia.*

**Reducin′.** $C_{12}H_{24}N_6O_9$. Leucomain from urine; so called from its reducing effect on metallic salts.

**Reduc′tion.** Surgical operation restoring displaced parts to their original situation, as in the case of a fracture. The reduction of a hernia is the restoration of the protruded parts to the cavity of the abdomen; the manipulation by which this is effected is called taxis. In pharmacy, the process of restoring oxides, chlorides, sulphurets, etc., to the metallic state.

**Redu′plicated** (*duplex,* double). Redoubled, a term applied to the sounds of the heart. The reduplication implies that the valves of the two sides of the heart do not act perfectly synchronously.

**Reduplica′tion.** Redoubling, as in paroxysms of an intermittent when its type is doubled.

**Re′dux.** Term signifying the return of certain physical signs after their absence during disease; see *Râle redux.*

**Redu′xia.** Paronychia.

**Red′-water fe′ver.** Hæmoglobinuria in cattle occurring as a symptom of tick fever; due to the liberation of hæmoglobin by the invasion of the red corpuscles by Pyrosoma bigeminum. **R.-w. tree,** see *Sassy bark.*

**Reed mace.** Typha latifolia.

**Reef-knot.** Sailor's knot, for ligating arteries.

**Reënforce′ment.** Reinforcement.

**Refecti′va.** Restoratives.

**Reficien′tia.** Restoratives.

**Reflect′ed ten′don of rec′tus.** Tendon taking its origin immediately above the acetabulum.

**Reflec′tion** (*re,* back, *flecto,* to bend). Bending or turning back; duplicature. The act of turning the mind back on its actions, so as to constitute contemplation or deliberation. Bending or turning backward of a ray of light.

**Reflec′tor epiglot′tidis.** Muscle arising from the arytenoid cartilage and inner part of the thyroid, and inserted into the lateral edges of the epiglottis.

**Re′flex.** Term applied to an action which consists in the reflection by an efferent nerve of an impression conveyed to a nervous centre by an afferent nerve; hence reflex movement, reflex paralysis, etc. A reflex action is generally regarded to be one executed without consciousness. **Abdom′inal r.,** see *Su-*

*perficial r.* **Accommoda′tion r.**, see *Deep r.* **Achil′les r.**, see *Deep r.* **A′nal r.**, contraction of sphincter ani from direct stimulation of nerves in that region. **An′kle r.**, see *Deep r.* **R. arc**, the complete circle of a reflex movement, including the afferent and efferent nerves and the nervous centre acting in unison with them. **Aud′itory r.**, r. caused by irritation of auditory nerve. **Bi′ceps r.**, contraction of the biceps muscle of the arm when the tendon is struck. **Bulbocav′ernous r.**, muscular action, such as retraction, of the bulbocavernous urethra when the back part of the penis is struck. **Chin r.**, see *Deep r.* **Cho′king r.**, r. produced by tickling the pharynx. **Cil′iary r.**, see *Deep r.* **Ciliospi′nal r.**, see *Centre, ciliospinal.* **Cor′neal r.**, spasmodic closure of eyelid from conjunctival irritation. **Cra′nial r.**, see *Superficial r.* **Cremaster′ic r.**, see *Superficial r.* **Crossed r.**, r. on side opposite to that originally impressed. **Cuta′neous r.**, muscular action induced by irritation of the cutaneous sensory nerves, and not having its origin in central irritation. In some nervous diseases there is increase of reflex action; in others, diminution. The abdominal reflex is a variety of cutaneous reflex, and the cremasteric reflex is another (see table). **Deep r.**, tendon r., r. excited by tapping a tense tendon, muscle, or fascia; its preservation indicates the integrity of the reflex arc; its exaggeration is noted in various diseases, especially of the spinal cord; its absence is not always indicative of disease. The following table shows the most important of the different forms of deep reflexes (the ankle, jaw, and usually the wrist reflexes do not occur in health):

THE DEEP REFLEXES.

| *Reflexes.* | *Description.* |
|---|---|
| Ankle | Consists of a rhythmical contraction of the calf muscles elicited by a quick movement of flexion of the foot upon the leg made by the hand of the physician while the patient sits with the leg held out in a semiflexed position; it does not occur in health, but is seen in lateral spinal sclerosis. A modification of this reflex, called "paradoxical contraction," consists in a tonic contraction of the anterior tibial muscles when sudden passive flexion of the foot is made. |
| Achilles tendon | The Achilles tendon reflex is a contraction of the calf muscles when the Achilles tendon is tapped, the foot being held slightly flexed by the physician; this reflex occurs in health. |
| Accommodation | This reflex is elicited by causing the patient to look suddenly at a near object after having been looking at a distant one; in health the pupil then contracts. |
| Elbow or triceps tendon | This is elicited by tapping the triceps tendon while the forearm hangs loosely at a right angle to the arm supported on a table or back of a chair. It occurs in health. |
| Jaw or chin | A papercutter or other flat object is made to rest on the teeth of the lower jaw while the mouth is open and the muscles of mastication are relaxed. A sharp tap on the papercutter elicits a sudden raising of the jaw. The reflex does not occur in health. |
| Knee or patella | Consists in a contraction of the anterior thigh muscles when the patellar tendon is tapped, the leg hanging free at a right angle to the supported thigh. The reflex occurs in health. It is absent in tabes dorsalis, anterior poliomyelitis, and various other paralyses; is exaggerated in sclerosis of the brain and cord, spinal irritability, and lesions of the pyramidal tract. It is usually absent also in old age. |
| Light or pupillary | The eye is suddenly exposed to a bright light, when normally the pupil contracts. |
| Wrist | This reflex is elicited by tapping the tendons of the wrist while the forearm is supinated and rests in the examiner's hand. This reflex is sometimes present in apparent health. |

**Dor′sal r.**, spasmodic action of erector spinæ muscles by stimulating the skin covering them. **El′bow r.**, see *Deep r.* **Epigas′tric r.**, see *Superficial r.* **Erec′tor spi′næ r.**, see *Superficial r.* **Fau′cial r.**, irritation of the fauces, causing vomiting. **Fem′oral r.**, reflex muscular action causing flexion of the foot and several of the toes and the sudden placing of the knee in extension, when the anterior upper part of the thigh is percussed or the skin irritated. **Front-tap r.**, Achilles-tendon r. **Func′tion r.**, function due to reflex action. **Glu′teal r.**, see *Superficial r.* **Interscap′ular r.**, contraction of muscles between the scapulæ when irritated. **Jaw-jerk r.**, see *Deep r.* **Knee r.**, see *Deep r.* **Laryn′geal r.**, cough produced by muscular action when the throat and larynx are irritated. **Lum′bar r.**, dorsal r. **R. move′ments**, see *Motion.* **Na′sal r.**, sneezing, a reflex muscular action from irritation of the Schneiderian membrane. **R. neuro′sis**, nervous condition due to irritation in a distant part. **Oblique′ r.**, contraction of external oblique muscle when the skin below Poupart's ligament is irritated. **Organ′ic r.**, one of the many acts of organic life, performed without volition and often unconsciously in answer to specific stimuli, upon which in many cases health or life depends; they are more complex than the deep or superficial reflexes, often requiring coordinate movements of many muscles; among the organic reflexes are deglutition, peristalsis, vomiting, parturition, cardiac action, and respiration. **Pal′atal r.**, the act of swallowing following stimulation or tickling of the palate. **Pal′mar r.**, see *Superficial r.* **Paradox′ical r.**, dilatation of the pupil when the retina is stimulated by the presence of light. **Patel′lar paradox′ical r.**, contraction of abductor muscles of the thigh when the tendon of the patella is tapped, while the patient is on his back. **Patel′lar-ten′don r.**, see *Deep r.* **Pe′nile r.**, retraction of penis when its under surface is tapped far back near its root. **Perios′teal r.**, prompt muscular contraction when the bones of the forearm or leg are tapped. **Perone′al r.**, muscular response when the tightly drawn peroneal muscle is tapped, while the foot is inverted. **Pharyn′geal r.**, choking r. **Plan′tar r.**, see *Superficial r.* **Platys′mal r.**, dilatation of pupil when the platysma myoides muscle is pinched. **Pu′pillary r.**, contraction of the iris under the influence of light. **Rec′tal r.**, promotion or performance of act of defecation under stimulus of a fecal collection in the rectum. **Reinforced′ r.**, see *Reinforcement.* **Scap′ular r.**, see *Superficial r.* **Skin r.**, platysmal r. **Sole r.**, palmar r. **R. spasm**, spasm limited to area of particular nerves, from lesion situated in afferent fibres. **Spi′nal r.**, see *Superficial r.* and *Motion.* **Superfic′ial r.**, reflexes excited by stimulation of the skin and accessible mucous membranes. The tests for estimating their various degrees are tickling, pricking, pinching, or gently scratching the surface, or the application of the faradic current to the surface by means of dry electrodes or the faradic brush. The following table (after Ross) exhibits the different forms of superficial reflexes:

THE SUPERFICIAL REFLEXES.

| *Reflexes.* | *Description.* |
|---|---|
| Abdominal | Consists of a contraction of the abdominal muscles, chiefly the rectus, caused by stroking the skin on the side of the abdomen from the edge of the ribs downward, and requires the integrity of the arc through the nerves from the eighth to the twelfth dorsal nerves. |
| Cranial | The chief reflexes of the cranial nerves are the contraction of the palatal muscles caused by irritation of the fauces, the facial contortions caused by irritation of the fifth nerve, the sneezing and lacrymation caused by irritation of the mucous membrane of the nose, the cough caused by irritation of the mucous membrane of the larynx, the closure of the eyelids caused by irritation of the conjunctiva, and the reflex contraction of the iris caused by light. |

The Superficial Reflexes (*Continued*).

| *Reflexes.* | *Description.* |
|---|---|
| Cremasteric | By it the testicle is drawn up when the skin on the inner side of the thigh is stimulated, demanding the integrity of the first and second pairs of lumbar nerves. |
| Epigastric | Produces a dimpling of the epigastrium on the side stimulated. It is induced by stimulation of the side of the chest in the sixth, fifth, and sometimes fourth intercostal spaces. This dimpling probably depends upon contraction of the highest fibres of the rectus abdominis, and its presence requires the integrity of the cord from the fourth to the sixth or seventh pairs of dorsal nerves. |
| Erector spinal | Consists of a local contraction of these muscles, caused by stimulation of the skin along their edge from the angle of the scapula to the iliac crest, and demands the integrity of the reflex arcs in the dorsal region of the spinal cord. |
| Gluteal | Consists of contraction of the gluteal muscles, caused by stimulating the skin over the buttock, and depends upon the integrity of the loops through the fourth and fifth lumbar nerves. |
| Palmar | Consists of a contraction of the flexors of the fingers induced by tickling the palm of the hand. It requires the integrity of the reflex arcs through the greater part of the cervical enlargement. This reflex is not readily induced during waking hours and consequent cerebral activity, probably because the hand is much more under cerebral influence than the foot. During sleep, however, and in young infants, when the cerebral influence is suspended or not yet fully established, this reflex is as readily induced as the reflex of the sole of the foot.<br>Another palmar reflex is an extension of the hand and fingers following slight irritation of the palm with a pointed instrument; it is observed in disseminated sclerosis and hemiplegia. |
| Plantar | Obtained by tickling the sole of the foot, and depending upon the integrity of the reflex loops through the lower end of the cord (conus medullaris). |
| Scapular | Consists of a contraction of some, or nearly all, of the scapular muscles according to its degree, and demands the integrity of the cord at the level of the upper two or three dorsal and lower two or three cervical nerves. |

**R. sys′tem of nerves**, see *Excitomotor* and *Nerve.* **Ten′don r.**, muscle reflex action; myotatic contraction; see *Deep r.* **R. time**, time intervening between stimulation of sensory nerve and the manifestation of motor symptoms. **Toe r.**, r. affecting toe, foot, leg, and thigh, resulting from flexion of the great toe while patient is supine with his legs extended. **Tri′ceps r.**, extension of forearm when the tendon at the elbow is tapped. **Vir′ile r.**, bulbocavernous r. **Wrist r.**, see *Deep r.*

**Reflex′ophile** (*phileo*, to love). Having a considerable amount of reflex contractility or action.

**Re′flux** (*re*, back, *fluo*, to flow). Return of blood from the head or from the extremities to the heart.

**Refrac′tion** (*re*, back, *frango*, to break). Change of direction which rays of light experience when they pass obliquely from one medium into another of different density. If the light passes from a rarer to a denser medium it approaches the perpendicular raised at the point of immersion; the contrary occurs when it goes from a denser to a rarer medium. The theory of lenses, telescopes, and of the eye rests entirely on this property of light. **Dou′ble r.**, property of certain transparent minerals; double image of an object being due to the division of light, as by means of Iceland spar. **Dynam′ic r.**, refraction of the eye as increased in accommodation. **R. er′rors**, deficiency in producing a perfect image upon the retina, due to ametropia. **R. in′dex**, refractive power of substances in comparison with that of air. **Stat′ic r.**, refraction of the eye when entire relaxation of accommodation is present.

**Refrac′tionist.** One who discovers and endeavors to correct errors of refraction in the eye.

**Refrac′tive.** Relating to refraction.

**Refractiv′ity.** Power, or degree of power, to refract.

**Refractom′eter.** Instrument for measuring the refraction of the eye.

**Refrac′tory.** Not yielding readily to treatment.

**Refrac′ture.** Fracture by the surgeon of a bone already broken which has been united in a bad position.

**Refrangibil′ity** (*refringo*, to refract). The property of being refrangible, as the disposition of rays of light to be turned out of a direct course in passing into a denser or rarer medium.

**Refran′gible** (*refringo*, to refract). Possessing the property of being refracted.

**Refresh′** or **Refresh′en.** To make raw anew, as the edges of a wound, in order to promote or hasten union.

**Refrigerants**, re-frij′er-ants (*refrigero*, to make cool again). Agents which depress an elevated temperature of the body.

**Refrigera′tion.** Act or process of cooling.

**Refu′sion** (*fundo*, to pour). Restoring to the circulation blood which has been temporarily withdrawn from it; a process used in asphyxia.

**Regard′.** Look, view. **Field of r.**, see *Field of fixation.* **Plane of r.**, see *Field.* **Point of r.**, point at which the eye is directed; the centre of the field of fixation.

**Regenera′tion** (*re*, again, *genero*, to beget). Reproduction of a part of the body which has been destroyed.

**Re′gent's oint′ment.** Unguentum ophthalmicum, an ointment of impure oxide of zinc.

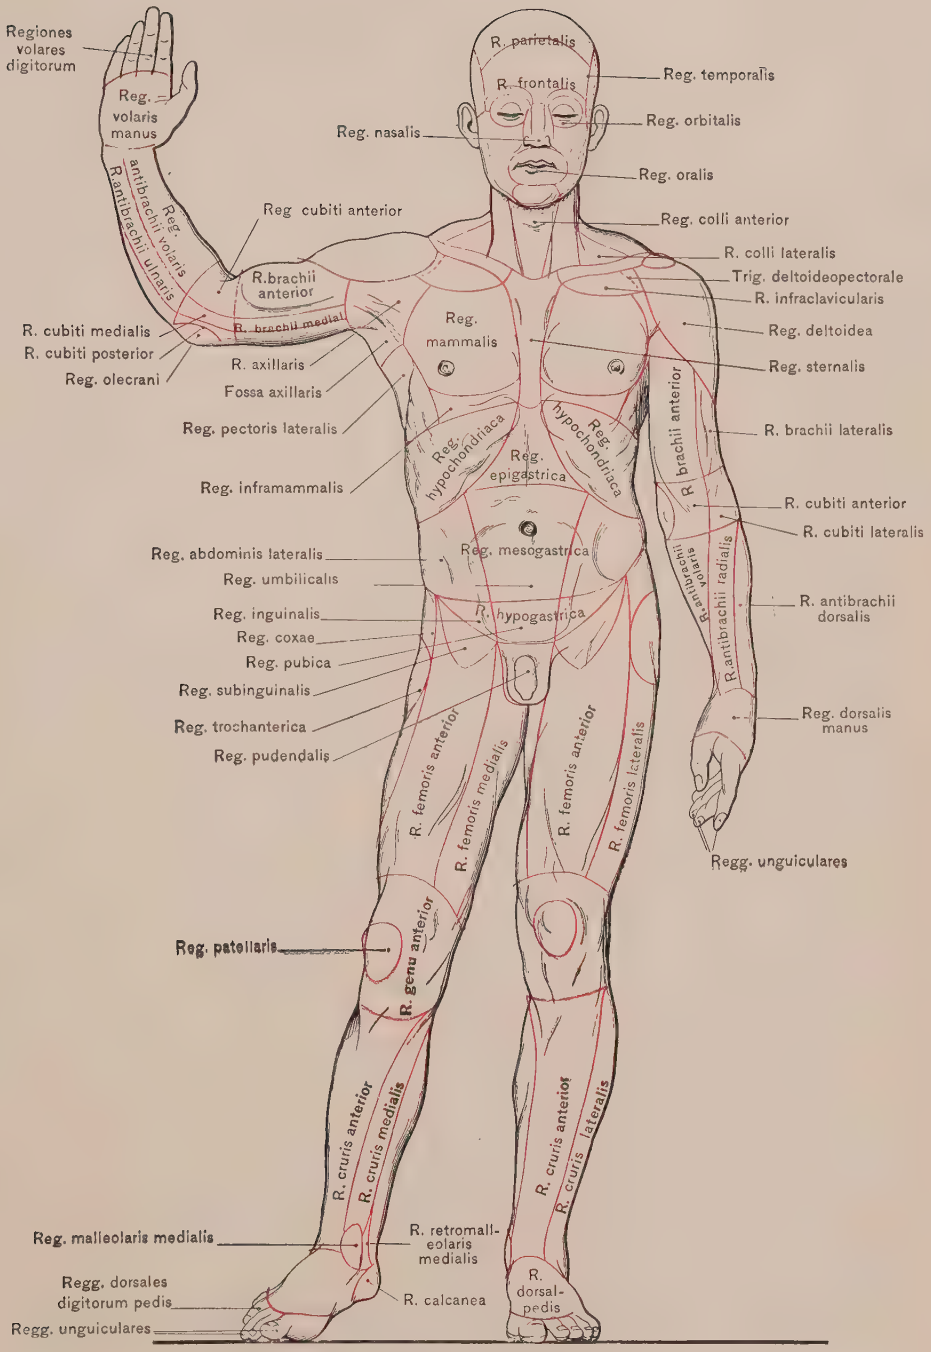
**Regimen**, rej′im-en (*rego*, to govern). Rational and methodical use of food and of everything essential to life, both in a state of health and in disease. It is often restricted in its meaning to diet, and sometimes used synonymously with hygiene.

**Regim′inal** (*regimen*). Relating to regimen, as regiminal treatment or treatment by regimen.

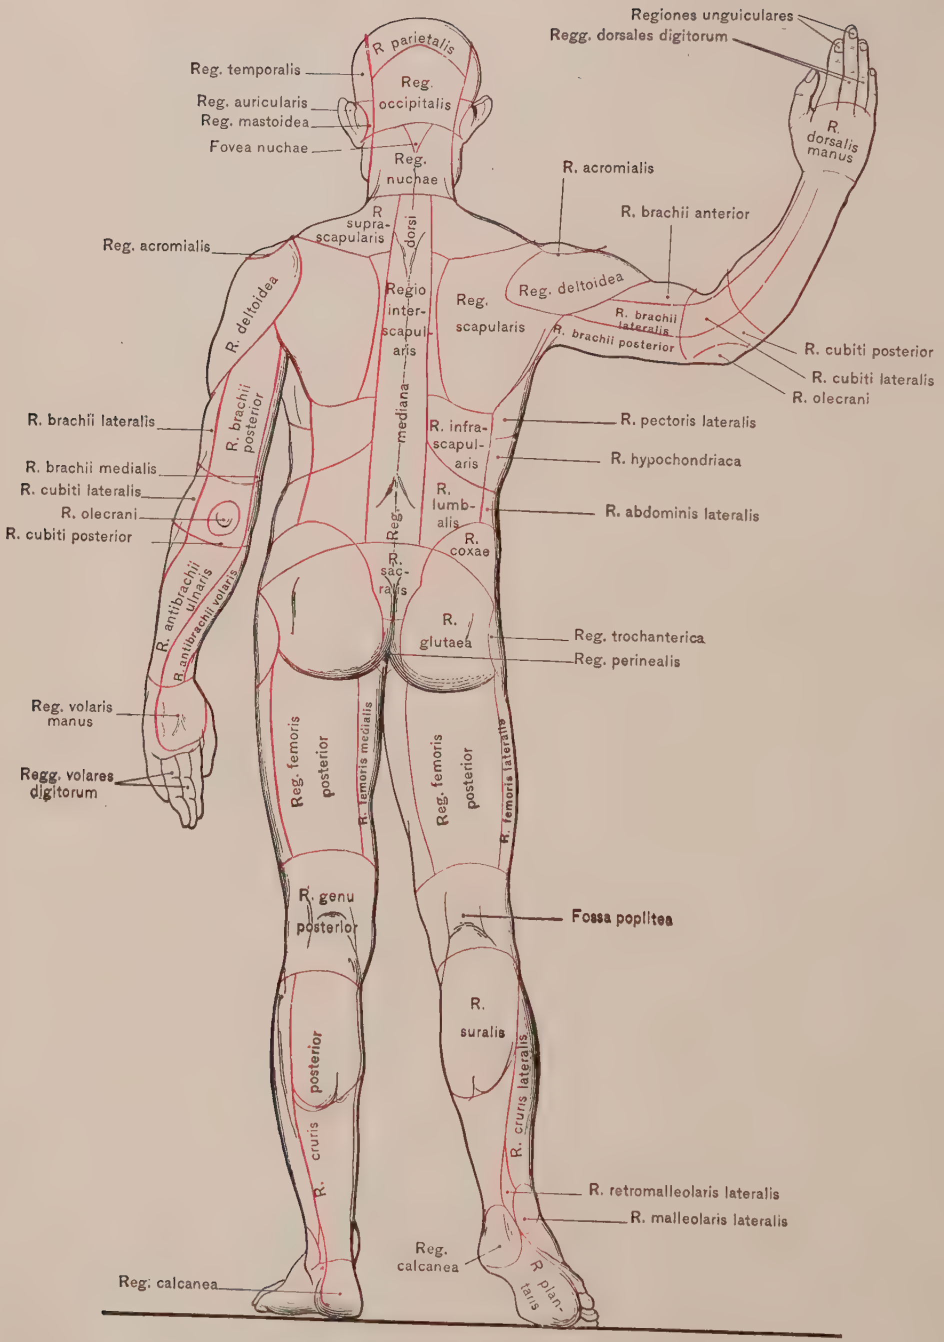
**Regi′na pra′ti.** Spiræa ulmaria.

**Re′gio.** Region. **R. auricula′ris**, region of the ear. **R. bucca′lis**, region of the cheek. **R. cardi′aca**, epigastric region. **R. cervica′lis**, region of the neck; cervical region. **R. epigas′trica**, epigastrium. **R. facia′lis**, facial region. **R. fronta′lis**, frontal region. **R. gas′trica**, umbilical region. **R. hypochondri′aca**, each lateral and superior region of the abdomen is so called. **R. hypogas′trica**, hypogastrium. **R. h. latera′lis**, inguinal region. **R. ili′aca**, iliac region. **R. infraclavicula′ris**, infraclavicular region. **R. infrahyoide′a**, carotid triangles of the neck considered as a whole. **R. infrainguina′lis**, infrainguinal region. **R. inframamma′lis**, inframammary region. **R. inframaxilla′ris**, inframaxillary region. **R. inguina′lis**, inguinal region. **R. ischiad′ica**, ischiadic region. **R. juga′lis**, jugal region. **R. jugula′ris**, the two inferior carotid triangles considered as a whole. **R. lumba′lis**, lumbi. **R. mammilla′ris**, mammary region. **R. media′na col′li**, trigonum colli medianum. **R. menta′lis**, mental region. **R. mesogas′trica**, umbilical region. **R. nasa′lis**, nasal region. **R. nu′chæ**, nuchal region. **R. nucha′lis**, nuchal region. **R. occipita′lis**, occiput. **R. o. infe′rior**, nuchal region. **R. olfacto′ria**, see *Locus luteus.* **R. perinæ′i**, perineum. **R. præcordi′aca**, precordial region. **R. pu′bis**, pubic region. **R. retromaxilla′ris**, fossa parotidea. **R. spina′lis**, spinal region. **R. sternocleidomastoide′a**, sternocleidomastoid region. **R. stomacha′lis**, epigastric region. **R. stomach′ica**, epigastric region. **R. subauricula′ris**, depression below the ear. **R. tempora′lis**, temple. **R. umbilica′lis**, umbilical region.

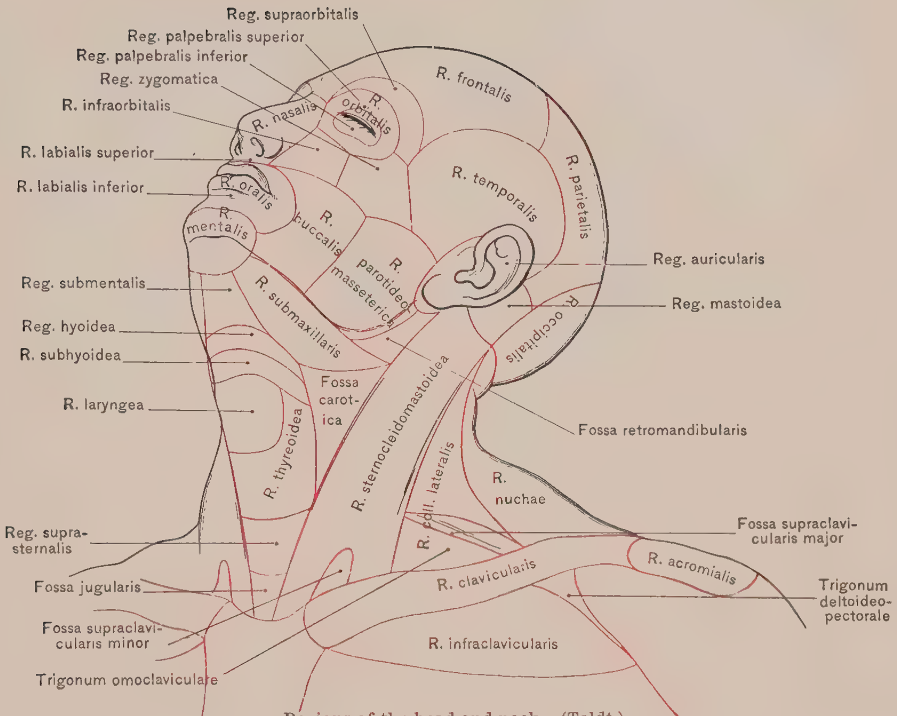
**Re′gion** (*rego*, to direct). Determinate spaces on the surface of the body or of different organs. **Bas′-**



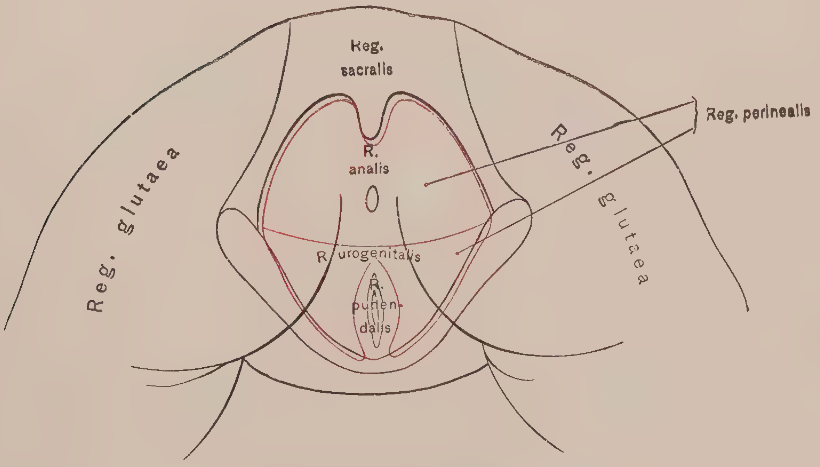
Regions of the body: anterior view. (Toldt.)



Regions of the body: posterior view. (Toldt.)



Regions of the head and neck. (Toldt.)



Regions of the female perineum. (Toldt.)

**ilar, r.**, r. of the base of the cranium. **Cil'iary r.**, r. at the inferior portion of the cornea and ciliary body. **Clavic'ular r.**, r. of the clavicles. **Epigas'tric r.**, see *Epigastric*. **Hypochon'driac r.**, see *Hypochondriac*. **Hypogas'tric r.**, see *Hypogastrium*. **Infraäx'illary r.**, r. below the axilla. **Infraclavic'ular r.**, r. below the clavicle. **Inframam'mary r.**, r. below the mammary gland. **Infrascap'ular r.**, r. below the scapula. **Infraspi'nous r.**, r. below the spine of the scapula. **In'guinal r.**, inferior lateral region of the abdomen. **Interscap'ular r.**, r. between the scapulæ. **Ischiorec'tal r.**, r. between the ischium and rectum. **Lum'bar r.**, the loins; see *Lumbi*. **Mam'mary r.**, thoracic region, containing the mammæ. **Mo'tor r.**, motor area, embracing the convolutions on each side of the fissure of Rolando, in which are the centres of voluntary motion. **Pal'pebral r.**, r. of the eyelids. **Paraster'nal r.**, see *Parasternal*. **Perine'al r.**, perineum. **Poplite'al r.**, posterior portion of the knee-joint; the popliteal space. **Precor'dial r.**, see *Precordial*. **Prefron'tal r.**, middle part of the ethmoid bone. **Scap'ular r.**, portion of the back bounded by the scapulæ. **Sens'ory r.**, sensorium; the common centre of sensations. **Supraclavic'ular r.**, r. above the clavicle. **Suprain'guinal r.**, see *Suprainguinal*. **Suprascap'ular r.**, portion of the back above the scapula. **Umbil'ical r.**, see *Umbilical r.*

**Re'gional.** Relating to a region. **R. anat'omy**, topographical anatomy; see *Anatomy*.

**Register**, rej'is-ter. Series of tones having the identical quality produced in the same way, as the chest register.

**Regres'sion** (*regredior*, to go back). A going backward, degeneration.

**Regres'sive.** Passing back; abating. **R. paral'ysis**, acute spinal paralysis. **R. stage**, the stage of a disease when the morbid action is becoming less, and the symptoms are abating.

**Reg'ular** (*regula*, rule). According to rule. Applied to the types of a disease; also to the pulse when each beat resembles all the others and all take place with the same intervals. **R. practi'tioner**, one who practises his profession according to the rules established by law and professional custom, and makes no claim to follow any special system.

**Regula'tor ra'dii.** Supinator longus.

**Reg'ulus.** Pure metal reduced from its ore.

**Regur'gitant.** Throwing or flowing backward.

**Regurgita'tion** (*re*, back, *gurgito*, to flood). Act by which a canal or reservoir throws back substances accumulated in it. Mitral regurgitation means the reflux of blood through the left auriculoventricular opening during the contraction of the left ventricle. Regurgitation is also applied to the puking or possetting of infants, and to the rising of solids or fluids into the mouth in the adult. Vomiting at will is regurgitation.

**Reich'el's clo'acal duct.** Cleft between Douglas's septum and the cloaca in embryonic life.

**Reich'ert's canal'.** Hensen's canal. **R.'s car'tilage**, cartilage appearing during embryonic life in the hyoid arch, which later on becomes the styloid process, the stylohyoid ligaments, and the cornua minora of the hyoid bone. **R.'s mem'brane**, Bowman's membrane.

**Reich'mann's disease'.** Permanent gastric hypersecretion, followed by ulcer. **R.'s sign**, a symptom of hypersecretion of gastric juice and narrowness of the pylorus, indicated by the presence in the stomach, in the early morning, of an acid combined with remnants of food.

**Reid's lines.** Three hypothetical lines for craniocerebral measurements, involving the orbit, the external auditory meatus, and the mastoid process. **R.'s meth'od**, method of reducing dislocations of the femur by manipulation; also applied to the treatment of aneurysm by means of Esmarch's bandage.

**Reil's an'sa.** Ansa peduncularis, a collection of nerve-fibres between the optic thalamus and the white substance of the hemisphere. **R.'s cov'ered band**, lateral longitudinal striæ. **R.'s isl'and**, insula cerebri. **R.'s line**, a ridge passing backward from the top of the pyramid of the cerebellum. **R.'s mod'erator band**, one of the columnæ carneæ passing from the interventricular septum to the yielding wall in the right ventricle. **R.'s sul'cus**, groove or furrow in the bottom of the fissure of Sylvius isolating the insula.

**Reimplanta'tion.** Replacing in its socket a tooth which has been extracted.

**Reinfec'tion.** Infection occurring a second time by the same agent.

**Reinforce'ment.** Increase of strength; added force. **Fascic'ulus of r.**, a band of fibres from the corpus innominatum or lateral part of the antero-lateral column of the medulla, continued up behind and around the corpus olivare; lined on its inner or central surface with cineritious substance. It enlarges as it ascends, passes over the upper surface of the pons Varolii, and is expanded into the optic thalamus. It thus forms, in its course, the anterior wall of the fourth ventricle. It has received its name owing to its constantly increasing as it ascends, and being mixed up with gray matter on its inner face, from which it seems to derive new fibres. **R. of re'flexes**, heightened myotatic irritability when certain muscles act at the same time on different parts than that embraced in the reflex circle, as when the patient pulls against the fingers of the two hands hooked into each other while the patellar reflex is being tested.

**Reinfu'sion.** Refusion.

**Reinocula'tion.** Inoculation occurring a second time.

**Reins** (*renes*, kidneys). Kidneys; loins.

**Reinsch's test.** Test for arsenic with hydrochloric acid and copper, a gray deposit of arsenic being deposited on the copper.

**Reinver'sion.** Operation of reinverting an already inverted organ, as the uterus by invagination of its fundus.

**Reiss'eisen's mus'cles.** Muscular fibres of the bronchial tubes.

**Reiss'ner's canal'.** Scala media of the cochlea. **R.'s mem'brane**, fine connective tissue in the internal ear which divides the vestibular passage from the duct of the cochlea. See *Lamina denticulata*.

**Rejec'tio** (*rejicio*, to cast back). Every excretion by the mouth—expectoration, regurgitation, or vomiting.

**Rejuvenes'cence** (*rejuvenesco*, to grow young). A renewal of youth; the state of being young again; the assumption of the characteristics of youth by the aged.

**Relapse'** (*relabor*, to fall back). The return of a disease during or shortly after convalescence.

**Relap'sing fe'ver.** Famine typhus, famine fever, bilious remittent fever, remitting icteric fever, typhus or febris recurrens or recidiva, hunger pest. A specific infectious fever caused by the presence in the blood of Obermeier's spirochæte. It begins with a chill, elevation of temperature, and headache and pains in the back and limbs; this continues for about a week, when the fever breaks by crisis accompanied with sweating; but the disease is not at an end, for after a variable interval the symptoms return. There may be several such paroxysms separated by intervals of apyrexia. The disease prevails at the present time chiefly in the cities of Russia. It is thought to be spread mainly through the bites of bedbugs. The disease is not ordinarily fatal.

**Relax'.** To make less tense; to loosen, as to relax the bowels.

**Relax'ant** (*relaxo*, to loosen). Medicine diminishing the tension of organs. Mucilaginous and fatty substances are relaxants.

**Relaxa'tion.** In physiology, relaxation is opposed to contraction; in pathology it means great looseness of a part.

**Relief' incis'ion.** Incision made to relieve pain or pressure from overdistention.

**Religio′sus.** The rectus oculi superior muscle, because it rolls the eye upward.

**Relig′ious diseas′es.** Diseases of the nervous system arising from the excitement of religious emotions.

**Remak's′ band.** Axis-cylinder. **R.'s fi′bre,** nonmedullated nerve-fibre. **R.'s fi′brils,** fibrils composing R.'s fibre. **R.'s gan′glion,** intramural ganglion of auricle of frog's heart. **R.'s lay′er,** internal fibrous layer of tunica intima of the large arteries. **R.'s pal′sy,** paralysis of several important muscles of the arm, as the biceps, brachialis anticus, supinator longus, and deltoid. **R.'s sign,** double sensation, the second only being painful, when the flesh is pricked with a needle; a sign of tabes dorsalis. **R.'s symp′tom,** postponed reception and appreciation of painful impressions, a symptom of tabes dorsalis.

**Reme′dial** or **Reme′diate.** Medicinal.

**Rem′ediless.** Incurable.

**Rem′edy.** Medicament.

**Remij′ia.** Named after a surgeon, Remijo, who substituted its bark for cinchona. Small trees or shrubs in Brazil, having resemblance to the cinchonas, ord. *Rubiaceæ*. **R. peduncula′ta** and **R. purdia′na** furnish cuprea bark.

**Remis′sion.** In a more extensive signification, a temporary diminution of the symptoms of a disease, either acute or chronic. Diminution in the febrile symptoms, as in remittent fever between the exacerbations.

**Remit′tens.** Remittent. **R. ictero′des,** yellow fever.

**Remit′tent** or **Remit′ting.** Any disease which presents remissions. **R. fe′ver,** formerly called exacerbating, paroxysmal, subcontinuous, or endemic fever. A form of continued malarial fever in which the temperature falls at certain intervals, but does not reach the normal before the new paroxysm occurs. Remittent fevers frequently vary in severity with the climate, being more fatal in the tropics.

**Ren.** Kidney. **R. mo′bilis,** movable kidney. **R. unguifor′mis,** horseshoe kidney.

**Ren′aden** (*ren*, kidney, *aden*, gland). Extract prepared from the kidneys; used in chronic nephritis.

**Re′nal** (*ren*, kidney). Relating to the kidney. **R. al′teratives,** see *Alteratives*. **R. ap′oplexy,** hemorrhage into the renal substance. **R. ar′teries,** emulgent arteries, are very large and short, and commonly two in number—one to each kidney. They arise from the sides of the abdominal aorta, forming with it a right angle. The left is commonly a little more anterior and elevated than the right. After a short course they arrive at the fissure of the kidney, where they divide, before entering it, into three or four very considerable branches. **R. cal′culus,** calculus in the kidney or its pelvis. **R. cap′sule,** see *Capsule, renal*. **R. gan′glia,** ganglia of small size in the renal plexus. **R. glands,** suprarenal capsules. **R. inad′equacy,** condition in which there is a deficiency of solids in the urine, and also of the nitrogenous elements, urea and uric acid, without any marked lesion of the kidney itself. **R. nerve,** see *Splanchnic nerves*. **R. plethysmom′eter,** see *Oncometer*. **R. plex′uses,** emulgent plexuses; these are two, one on each side. They proceed from fasciculi of the solar and cœliac plexuses; from the outer side of the semilunar ganglion and the final expansion of the small splanchnic nerves. These plexuses begin by three or four ganglions, situated at the commencement of the renal artery, and they give off from their circumference many fine, straight filaments, which do not anastomose, and which enter the kidney with the divisions of the renal artery. These divisions they accompany. **R. veins,** emulgent veins, are very large; their roots follow the same course as the arteries in the substance of the kidney. In the fissure or pelvic portion of the kidney they unite into a single trunk, which passes transversely inward and opens at the side of the vena cava descendens.

**Renaut's** (ren-oze′) **follic′ular points.** Langerhans's islands.

**Renculin′.** Albuminoid principle of the suprarenal capsules.

**Ren′culus** (dim. of ren). Small kidney; lobe of the kidney.

**Rendu's′ tre′mor.** A form of tremor of hysterical origin, caused or augmented by voluntary movements.

**Reneal′mia exalta′ta** (after F. and M. L. Rénéaulme, botanical writers of France). Plant of British Guiana, possessed of diaphoretic and diuretic properties, and, in large doses, emetic; much used there in dropsy, rheumatism, dysentery, etc. The bruised rhizome is the part employed.

**Re′nes** (pl. of ren) **loba′ti.** Condition of kidneys resembling lobes, observed in new-born infants. **R. sicca′ti,** dried and powdered kidneys of sheep, employed in nephritis. **R. succenturia′ti** (*succenturio*, to substitute or recruit), suprarenal capsules. **R. succenturia′ti accesso′rii,** accessory suprarenal capsules.

**Renicap′sule.** Suprarenal body.

**Renic′ulus** (dim. of ren). Renculus.

**Ren′iform** (*ren*, kidney, *forma*, shape). Nephroid or kidney-shaped.

**Renipor′tal.** Relating to the portal system of the kidney.

**Renipunc′ture.** Puncture of the kidney or its capsule.

**Ren′itent** (*renitor*, to strive against). Resisting pressure.

**Ren′net.** When the fourth stomach or abomasus of the calf is salted and dried it possesses the property of coagulating milk when a portion of it is soaked in water and the infusion, rennet, added to milk. **R. fer′ment,** any milk-curdling ferment; rennin.

**Rennin′.** A coagulating enzyme, precipitating caseinogen as casein. It is secreted by the central or chief cells of the cardiac and pyloric glands of the stomach.

**Rennin′ogen** or **Ren′nogen.** A granular zymogen existing in the cardiac and pyloric gland cells in combination with pepsinogen.

**Renova′tion** (*renovo*, to make new). Renovation or renewal, as of the blood by the chyliferous vessels and lymphatics.

**Rensselaer′ia virgin′ica** (after General Van Rensselaer, of Albany). Peltandra virginica.

**Renu′ens** (*renuo*, to deny by a motion of the head). Rectus capitis internus minor.

**Ren′ulus** (dim. of ren). Small kidney; lobe of the kidney.

**Re′num ato′nia.** Atony of the kidney. **R. paral′ysis,** atony of the kidney.

**Repanda′tion** (*repandus*, bent backward). Curvature of bones in general, particularly of the vertebral column.

**Repara′tion** (*reparo*, to set in order). Recovery; restoration to health.

**Repar′ative.** Reparatory; having the power of restoring or repairing.

**Repel′lents** (*re*, back, *pello*, to drive). Repercussives. Agents which, when applied to a tumefied part, cause the fluids that render it tumid to recede, as it were, from it. Astringents, cold, etc., are repellents.

**Repercola′tion.** Repeated percolation of the same menstruum to fresh parts of the substance.

**Repercus′sion.** Disappearance of a tumor or cutaneous eruption in consequence of the application of a repellent. The action of a repellent remedy. Contrafissure. Ballottement.

**Repercus′sives.** Repellents.

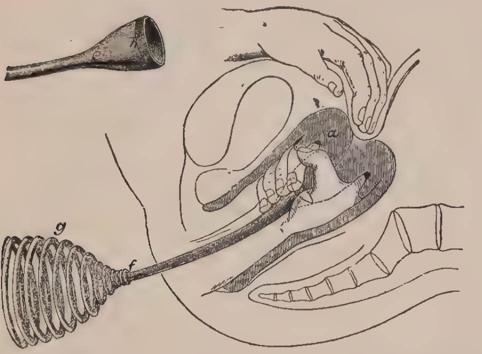
**Replanta′tion.** Operation of replacing a tooth in a socket from which it has been extracted. Reimplantation.

**Reple′tion** (*re*, again, *pleo*, to fill). Fulness; plethora.

**Replica′tion** (*replico*, to fold back). Turning back of a part so as to make a fold.

**Reposi′tion** (*re*, again, *pono*, to place). Reduction; taxis.

**Repos′itor.** Instrument intended to restore the displaced or inverted uterus to its proper position.



Reduction of inverted uterus by the repositor. Operator grasps uterus, *a*, and presses his chest against spiral spring, *g*, *f*, which forces cup of repositor against fundus.

**Reproduc′tion** (*re*, again, *produco*, to bring forth). Function by which living bodies produce bodies similar to themselves. See *Generation*. As a general rule, the larger animals are uniparous, and the smaller, which are more exposed to destruction, multiparous.

**Reproduc′tive.** Relating to reproduction. **R. func′tion,** power of begetting. **R. or′gans,** organs by which the begetting of offspring is effected. See *Generative organs*.

**Reproductiv′ity.** Capability of reproducing.

**Repullula′tion** (*repullulo*, to sprout again). Term used to designate the return of a morbid growth.

**Repul′sion** (*re*, back, *pello*, to drive). Driving away or back or apart.

**Resec′tion** (*reseco*, to cut off). Excision of part of an organ, of a bone, nerve, etc.

**Rese′da.** A genus of polypetalous plants. **R. crispa′ta, lanceola′ta,** or **lute′ola,** dyer's weed; European plant naturalized in the United States, at one time used as a diaphoretic and diuretic.

**Reserve′ air.** See *Respiration*.

**Res′ervoir.** Receptaculum; a hollow sac for the storage of fluids.

**Resid′ual.** Remaining; left behind. **R. ab′scess,** an abscess forming in or about the remains of a previous inflammation, such as a cicatrix or thickening of the tissues; also an abscess the contents of which have been nearly absorbed. **R. air,** see *Respiration*.

**Res′idue** or **Resid′uum** (remainder). That which remains after filtration and other processes.

**Resil′ience** or **Resil′iency.** The act of springing back after compression or distortion; elasticity.

**Resil′ient.** Tendency to rebound or contract; elastic. **R. stric′ture,** contractile tissue formed of elastic tissue, making permanent dilatation difficult or impossible.

**Res′in.** Vegetable product, commonly dry and concrete, more or less brittle, inodorous or slightly odorous, insipid or of an acrid, warm taste; inflammable, insoluble in water, soluble in alcohol, ether, and yolk of egg, and negatively electrifiable by friction. Many resins are used in medicine; the greater part are purgative and irritating; some act like acrid poisons. Five resins are official in the Ph. U. S.; see *Resina*. Specifically, colophony, rosin, a resin from turpentine; see *Pinus sylvestris*. **Ac′aroid r.,** see *Xanthorrhœa*. **R. of al′oes,** precipitate from hot, aqueous solution of aloes. **Bot′any Bay r.,** see *Xanthorrhœa*. **Cayenne′ r.,** caoutchouc. **R. ce′rate,** ceratum resinæ, basilicon ointment. **R. of copai′ba,** residue after volatile oil is distilled from copaiba. **Cow′die** or **cow′rie r.,** see *Pinus damarra*. **R. of guai′ac,** guaiac. **R. of may′apple,** resina podophylli. **R. of New Hol′land,** see *Xanthorrhœa*. **R. plas′ter,** emplastrum adhæsivum; sticking-plaster. **R. of the spruce fir,** see *Pinus abies*. **R. of xanthorrhœ′a,** see *Xanthorrhœa*.

**Resi′na.** (Ph. U. S.) Resin. Residue left after distilling off volatile oil from turpentine; rosin or colophony; dose, gr. j–v (0.065–0.32); see *Pinus sylvestris*. **R. copai′bæ** (Ph. U. S.), resin of copaiba. **R. jala′pæ** (Ph. U. S.), occurs in yellowish-brown pieces or powder; dose, gr. ij–iv (0.13–0.26). **R. podophyl′li** (Ph. U. S. and Br.), podophyllin; prepared from the powdered rhizome of podophyllum by the action of alcohol, muriatic acid, and water; dose, gr. $\frac{1}{20}$–$\frac{1}{2}$ (0.003–0.032). **R. scammo′nii** (Ph. U. S.), occurs in yellowish-brown pieces or powder; dose, gr. ij–viij (0.13–0.5).

**Resin′eon.** Volatile oil obtained from resin or rosin; antiseptic.

**Resinoce′rum.** Mixture of resin and wax.

**Res′inoid.** Resembling resin.

**Res′inol.** Retinol.

**Res′inous.** Containing resin; like resin. **R. elec-tric′ity,** negative electricity; electricity developed by friction of a resin with flannel.

**Resis′tance.** Term used in electricity to denote the ratio of electromotive force to the current strength, the flow being supposed to be steady. **R. coil,** wire coil used for calculating or reducing the amount of electric r. **Essen′tial r.,** r. to electrical conduction, having its origin in the battery itself.

**Res′ol.** A solution of wood-tar and soap; used as an antiseptic in surgery.

**Resolu′tion.** Removal or disappearance, as of a disease. Resolution is one of the terminations of inflammation, in which the inflamed part returns gradually, and without suppuration, to the healthy condition. Certain inflammatory affections which terminate in this manner, as mumps, gout, rheumatism, and some forms of scrofula, have been termed resolving inflammations.

**Resol′vents** (*resolvo*, to loosen). Discutients.

**Resol′ving inflamma′tions.** See *Resolution*. **R. pow′er,** capacity of the objective of a microscope to show fine points.

**Res′onance** (*resono*, to resound). Return of sound; resounding; reverberation of sounds. Thrilling of the voice, more loud than natural, or its existence in a part where it is not heard in health—as detected by auscultation. A thickened and hardened state of the lungs, caused either by a mass of crude tubercles or by inflammation, is generally considered to produce this phenomenon by rendering the lung a better conductor of the murmur of the voice in the bronchi. Resonance is also used in the sense of resounding, as when the chest is said to be resonant on percussion. **Amphor′ic r.,** sound heard on auscultation, like that caused by blowing across the mouth of a bottle (*amphora*, a bottle). **R. cham′ber,** an adjunct to a tuning-fork to assist in the diagnosis of ear diseases. **Cracked-pot r.,** see *Bruit de pot fêlé*. **Hydat′id r.,** see *Hydatid fremitus*. **Skoda′ic r.,** see *Skoda's resonance*. **Tympanit′ic r.,** sound produced by percussion over cavities distended by air. **Vesic′ular r.,** normal sound heard when auscultation is made of a healthy lung. **Vesiculotympanit′ic r.,** see *Vesiculotympanitic*. **Vibra′tions of r.,** see *Sound*. **Vo′cal r.,** sound elicited by auscultation of the chest during natural ordinary conversation or speaking. **Whis′pering r.,** similar to vocal r., except that the individual is whispering.

**Res′onant.** Resounding. See *Resonance*.

**Resopyrin′.** Compound of resorcin and antipyrin, in colorless crystals.

**Resor′bent** (*resorbeo*, to suck up). Absorbent.

**Resorbin′.** Mixture of wax, gelatin, soap, and lanolin in emulsion of almond oil, easily absorbable, and a convenient vehicle for other substances employed in inunction.

**Resorcin′.** Derivative of benzol; odorless, antiseptic, and antipyretic; yellowish-white crystalline powder obtained by fusing different resins, as asafœtida, guaiacum, etc., with caustic alkalies, or prepared synthetically from benzene. Antiseptic and antipyretic; dose, gr. j–x (0.065–0.65). Used externally in cutaneous affections, diphtheria, whooping-cough, etc., and in surgery in gauzes, sprays, injections, etc. A compound resembling carbolic acid in some of its properties. Its chemical name is metadioxybenzene. **R. cam′phor,** compound of these two substances; employed in pruritus and pediculosis. **R.-eucalyp′tol,** a combination of the two agents, resorcin and eucalyptol; employed externally in skin diseases and as a dressing for wounds and injuries. **R. monac′etate,** eurosol. **R.-phthaleïn′,** fluorescin. **R. sal′ol,** compound of salol and resorcin; intestinal antiseptic.

**Resor′cinism.** A toxic condition resulting from the abuse or excessive use of resorcin.

**Resor′cinol.** Resorcin. Also a product obtained by melting together equal parts of resorcin and iodoform. Used surgically as an antiseptic in chancres, ulcers, and wounds, and in some cutaneous affections, as scabies, psoriasis, eczema, etc., as a dusting-powder or in ointment.

**Resorcinopyrin′.** Resopyrin; obtained by treating antipyrin with resorcin in solution.

**Resorci′num.** Official name (Ph. U. S.) of resorcin.

**Resorcylalgin′.** Resalgin; formed by adding potassium resorcylate to antipyrin; in delicate acicular crystals.

**Resorp′tion.** Absorption of a fluid which has been previously deposited in a part, as of pus, blood, serum, etc. **R. tu′bercle,** a miliary tubercle forming in the course of the lymph channels leading from other miliary tubercles.

**Resorp′tive fe′ver.** Fever thought to be due to absorption of toxic material, as the hectic fever of phthisis.

**Respi′rable** (*respiro*, to breathe, *habilis*, fit). Capable of being breathed; adapted for respiration.

**Respira′tion.** Function proper to animals, the object of which is to place the materials of the blood—the mixture of the venous blood with lymph and chyle—in contact with atmospheric air, in order that it may acquire the vivifying qualities which belong to arterial blood. The organs for executing this function are, in the mammalia, birds, and reptiles, the lungs. In man the respiration consists of mechanical and chemical phenomena. The mechanical are *inspiration* and *expiration*. The muscles concerned in respiration are the following (Chapman):

### MUSCLES OF RESPIRATION.

ORDINARY.

| Inspiration. | Expiration. |
|---|---|
| Diaphragm | Internal intercostals, osseous portion. |
| External intercostals. | |
| Internal intercostals, sternal portion | Triangularis sterni. |
| Scaleni | Infracostales. |
| Levatores costarum. | |

AUXILIARY.

| | |
|---|---|
| Serratus posticus superior | Oblique. |
| Accessorius | Transversalis. |
| Sterno-cleido-mastoid | Sacrolumbalis. |
| Levator anguli scapulæ. | |
| Trapezius, superior portion. | |
| Serratus magnus. | |
| Pectorales major, inferior portion. | |
| Pectorales minor. | |

The evident chemical phenomena consist in the formation of a certain quantity of carbonic acid, the absorption of a part of the oxygen of the air, and the disengagement of a quantity of water in the state of vapor. In the healthy condition the respiration is easy, gentle, regular, and without noise. In man the respirations are generally about 35 per minute in the first year of life, 25 during the second, 20 at puberty, and 18 in the adult age. The chief ways in which the respirations may be rendered quicker or slower are the following, according to Brunton:

| | | |
|---|---|---|
| The respiratory movements may be quickened by | Excitement of nerves. | Stimulation of the vagus.<br>Stimulation of optic nerve.<br>Stimulation of acoustic nerve. |
| | Greater excitement of respiratory centre. | Action of brain (voluntary).<br>Increased temperature of blood.<br>Increased venosity of blood.<br>Action of drugs. |
| The respiratory movements may be rendered slow by | Diminished excitement of respiratory centre. | Diminished venosity of blood.<br>Action of drugs.<br>Action of brain (voluntary). |
| | Nervous influences. | Paralysis of vagi.<br>Stimulation of superior laryngeal nerves.<br>Stimulation of inferior laryngeal nerves.<br>Stimulation of nasal nerves.<br>Stimulation of cutaneous nerves.<br>Stimulation of splanchnic nerves. |

The frequency of respiration in adults and children and at various ages has been thus arranged by Vierordt from various authorities:

In healthy adults, average, 16–18 respirations per minute; 20 (16–24) Hutchinson; 18 (Herman); 16 (Quetelet); 13.5 (Funke); 12 (Vierordt).

In the new-born, average, 35 (35.3); 44 (Quetelet); 41 (Gorham); 37 (Allix); 35 (Mignot); 33.5 (Monti); 30 (Valleix); 26.4 (A. Vogel).

In the first months of life, 40–35; 2d year, 28; 3d–4th years, 25; 6th–10th years, 28–20 (Valleix); 6½–14th years (boys), 24.9–21.5 (Rameaux); older boys, 24–16 (Valleix).

Frequency of respiration in various ages (Quetelet): new-born, 44; 5th year, 26; 15th–20th years, 20; 20th–25th years, 18.7; 25th–30th years, 16; 30th–50th years, 18.1.

Other influences exerted on the frequency of respiration may be stated, according to Guy: while standing the respirations are 22 to the minute; while sitting, 19; while lying down, 13. The new-born child breathes, when the body is in a vertical position, one-third more frequently. Ingestion of food increases the frequency of respiration; during digestion the frequency is 1.72 respirations per minute higher (if no nourishment had been taken seven hours previously); eating with or without wine increases frequency 1.22 (Vierordt). When dinner is omitted respiration is decreased one-half. Increase of temperature of the air decreases the respiration for 1° C. per minute about 0.054. At 8.47°, 12.16; at 19.4°, 11.57 respirations on an average were noted. A rise of the barometer increases the respiration about 0.74 per minute. Greater muscular exercise increases the frequency of respiration. In the sleeping adult the decrease in frequency of respiration amounts to about one-quarter (Quetelet).

The air of respiration has been divided into: 1. The *residual air*, or that which cannot be expelled from the lungs, but remains after a full and forcible expiration, estimated at 120 cubic inches. 2. The *supplementary* or *reserve* air, or that which can be expelled by a forcible expiration after an ordinary outbreathing, valued at 130 cubic inches. 3. The *breath*, *tidal*, or *breathing* air, valued at 26 cubic inches. 4. The *complementary* or *complemental* air, or that which can be inhaled after an ordinary inspiration, which amounts to 100 cubic inches. This estimate gives 250 cubic inches as the average volume of air which the chest contains after an ordinary inspiration. According to Hutchinson, the capacity of respiration in the adult increases about 60 cm. for every 1 cm. length of body in men; in women about 40 cm. The contents of the stomach have an influence to a certain extent, as large quantities of fluid decrease the quantity of the expiratory air 1 cm. for every 24 cm. of fluid. At 8–12° C. the air, while passing through the nose, is brought up to the temperature of 30–31° C. The average temperature of expired air is 29–31° C. (23–24°, Semon; 37.3°, Brunner and Valentin; others, 36–37°). **Abdom′inal r.,** diaphragmatic respiration. **Accel′erated r.,** r. in which the number of respiratory periods is increased above the normal. **Amphor′ic r.,** blowing respiratory sound in large cavities. **Artific′ial r.,** attempt to supply the place of natural respiration when the latter is in abeyance from any cause, as asphyxia; see *Drowning*. **Biot's′ r.**, see *Biot*. **Bron′chial r.**, sound of air passing through the bronchi. **Bronchovesic′ular r.**, morbid modification of the respiratory murmur, having more or less of the characters of the bronchial and vesicular respiration combined. It denotes incomplete solidification of the lung, as from the presence of tubercle. **Cav′ernous r.**, sound made by air in its passage through cavities in the lungs. **R. of the cells**, respiratory murmur. **Cheyne-Stokes r.** is a rhythmical increase of respirations from shallow to strong and deep, and then a recession again to feeble, followed by temporary cessation. **Cog-wheel r.**, jerking respiration. **Cos′tal r.**, respiration in which the movements of the ribs predominate over abdominal movements. **Cuta′neous r.**, passage of gases through the skin by transpiration. **Forced r.**, r. induced by blowing air into the lungs. **Diaphragmat′ic r.**, respiration produced principally by the diaphragm. **Interrupt′ed r.**, jerking respiration. **Jerk′ing r.**, interrupted, cog-wheel, or wavy respiration; when the murmur of inspiration, in place of being continuous, is interrupted as by starts, it is called jerking; it is noted in incipient pleurisy, pleurodynia, spasmodic asthma, and tuberculosis of the lung, with corresponding pleuritic adhesion. **Lab′ored r.**, r. effected with difficulty, as in the oppression of cardiac disease. **Metamor′phosing r.**, bronchocavernous r. **Post′ural r.**, see *Ready method*. **Prone r.**, see *Ready method*. **Proof r.**, docimasia pulmonum. **Pu′erile r.**, see *Puerile*. **Rude r.**, rough form of bronchovesicular respiration. **Ster′torous r.**, snoring. **Tu′bular r.**, bronchial r. **Vag′inal r.**, the movement of rise and fall of the vagina under the influence of similar movements on the part of the diaphragm. **Vesic′ular r.**, natural sound of the air-cells in healthy respiration. **Vesiculobron′chial r.**, bronchovesicular respiration. **Vesiculocav′ernous r.**, r. that is vesicular and cavernous. **Wa′vy r.**, jerking respiration.

**Res′pirator.** Various instruments under this name have been contrived for the purpose of tempering the air before it reaches the lungs in winter; they are made of several layers of fine wire tissue.

**Respirato′rium ven′tris.** Diaphragm.

**Respi′ratory.** Appertaining to respiration. An epithet applied to the murmur heard by auscultation in a healthy adult during inspiration and expiration. It marks the entrance of the air into the cells and its passage out of them. See *Murmur*. **R. bron′chiole**, same as lobular bronchial tube. **R. bun′dle**, solitary funiculus. **R. cav′ities**, see *Cavities, respiratory*. **R. cen′tre**, nervous centre controlling and coordinating the respiratory movements. **R. col′umn**, r. bundle. **R. food**, food which when it undergoes chemical change passes off through the lungs or bronchial tubes, such as carbonic acid or water. **R. gan′glia**, see *Encephalon*. **R. glot′tis**, posterior part of the glottis. **R. nerve, exter′nal**, see *Thoracic nerves*. **R. nerve of the face**, facial nerve. **R. nerve, supe′rior**, spinal nerve. **R. nerves, inter′nal**, diaphragmatic nerves. **R. ox′ygen**, oxygen concerned in respiration. **R. percus′sion**, see *Percussion*. **R. pe′riod**, the time from the commencement of one inspiration to the occurrence of the next. If this period be regarded as four seconds, one second, it has been considered, may be occupied in health by inspiration, one second in expiration, and two seconds in repose. **R. pulse**, see *Pulse, respiratory*. **R. quo′tient**, ratio of oxygen inspired by the lungs to that expired by them in the form of carbonic acid. **R. re′gion of nose**, inferior part of nasal cavity, not including the olfactory region. **R. tract**, middle column of the spinal marrow, described by Sir Charles Bell as that whence the respiratory nerves originate; see *Nerves*.

**Respirom′eter.** Apparatus with which to investigate the character and properties of respiration.

**Responsibil′ity.** State of being responsible. The term in medical jurisprudence usually embraces the question of sound mental condition and capability of acting properly.

**Rest.** Repose. Freedom from exertion. Remainder. **R. cure**, a method of treatment suggested by Dr. S. Weir Mitchell in cases of nervous prostration and other conditions, including a continuous systematic treatment, of several weeks' duration, by rest, isolation or separation from relatives or friends, regular diet at fixed hours, massage, and the application of electricity if essential to the case. **Supra-re′nal r.**, accessory suprarenal body.

**Res′ta bo′vis.** Ononis spinosa.

**Restagna′tio** (*re*, again, *stagno*, to overflow). Eructation.

**Restauran′tia.** Analeptics; restorative medicines.

**Restaura′tion** (*restauro*, to repair). Recovery, recuperation, reparation. Return of strength after disease or great fatigue. Return of the organs to their normal condition.

**Rest-har′row.** Ononis spinosa.

**Restibra′chium** (*restis*, rope, *brachium*, arm). Inferior peduncle of cerebellum. Also called myelobrachium.

**Res′tiform** (*restis*, rope, *forma*, shape). Shaped like a rope, as the corpus restiforme, restiform body. **R. pro′cess**, coracoid.

**Res′tis** (rope). Restiform body; lateral column of medulla oblongata passing to the cerebellum, and connecting the latter with the posterior roots of all the spinal nerves.

**Restitu′tio** (*restituo*, to set up again). Reduction; restoration. **R. an′imæ**, resuscitation. **R. ad in′tegrum**, complete restoration to a healthy condition. **R. organ′ica**, plastic surgery.

**Restitu′tion.** Act by which, after the head is born, the child's face turns again to the side of the pelvis toward which it was directed at the beginning of labor.

**Rest′lessness.** Agitation. **Antiperistal′tic r.**, in this condition the peristaltic waves proceed from right to left in the stomach. **Peristal′tic r.**, the peristaltic waves proceed from left to right.

**Restora′tion.** Recovery of health.

**Restor′ative.** Analeptic; corroborant.

**Restraint′ neuro′ses.** See *Inhibitory*.

**Resu′pinate** (*resupino*, to lie back). Appearing as if turned upside down.

**Resurrec′tionist.** Body-snatcher. An individual who robs graves to obtain subjects for dissection.

**Resuscita′tion.** Restoration of persons, apparently dead, to life. **Oga′ta's meth′od of r.**, **Sha′king r.**, **Stroke r.**, see *Ogata*.

**Retain′ing pits.** Depressions made to retain the initial portions of a dental filling.

**Retamine′.** $C_{15}H_{26}N_2O$. Alkaloid from twigs and bark of Retama sphærocarpa or Genista sphærocarpa.

**Retarda′tion** (*retardo*, to retard). The act of impeding; term used in obstetrics to denote delay in expulsion of the fœtus.

**Retch.** To strain in the effort to vomit.

**Retch′ing.** Vomiturition.

**Re′te** (net). Interlacing and decussation of blood-vessels, lymphatics, fibres, and nerves when they form a kind of network. Plexus. Epiploon. **R. acromia′le**, network of vessels formed by anastomosis between acromial thoracic artery and acromial branches of transverse scapular artery. **R. arterio′sum cap′itis**, network of arteries over upper part of cranium, formed by anastomosis of frontal, temporal, and occipital arteries. **R. a. facie′i**, formed by end branches of facial, infraorbital, ophthalmic, and internal maxillary arteries. **R. articula′re cu′biti**, network of arteries around the elbow-joint, given off by superior and inferior profunda and arteries anastomosing above the joint, and anterior and posterior recurrent, radial, and interosseous recurrent below the joint. **R. a. ge′nu**, network of arteries around the knee-joint. **R. bipola′re**, a vascular plexus, the components of which branch out from a single vessel and again unite at the other end in a single vessel. **R. calca′neum**, network of arteries on ball of heel, formed by branches from malleolar and calcanean arteries. **R. carpe'um,** carpal arches. **R. car'pi dorsa'le,** posterior carpal arch. **R. c. vola're,** anterior carpal arch. **R. cubita'le,** rete articulare cubiti. **R. dorsa'lis pe'dis,** network of arteries on the dorsum of the foot, formed by branches from the tarsal and metatarsal arteries, communicating by perforating branches with the palmar arch. **R. epiderma'le,** r. mucosum. **R. Hal'leri,** r. testis. **R. ma'jus,** gastrocolic epiploon. **R. malleola're exter'num,** network of arteries around the external malleolus, composed of branches from the external malleolar, tarsal, and anterior and posterior peroneal arteries. **R. m. inter'num,** network of arteries around the internal malleolus, formed by branches from the internal malleolar to the internal tarsal arteries. **R. Malpigh'ii,** r. mucosum. **R. mirab'ile,** name given to the ramifications and anastomoses of the internal carotid and vertebral arteries at the base of the brain; in a general manner the term has been applied to any dense, interlacing network of arterioles and venules made by the sudden breaking up of larger vessels. **R. m. conjuga'tum** or **gem'inum,** one composed of both arterial and venous vessels. **R. m. sim'plex,** one composed of venules or of arterioles only. **R. muco'sum,** the lower layer of the epidermis, between cutis vera and cuticle. **R. tar'seum dorsa'le,** network consisting of branches of the tarsal arteries on the back of the foot. **R. tes'tis,** an irregular plexus or network formed by the communication of the vasa recta, tubuli or ductuli recti, tubuli seminiferi recti, at the upper and back part of the testicle. These vasa recta are sent out at the back part of the testicle, from the convoluted seminal tubes; the rete vasculosum testis sends out from twelve to eighteen straight tubes, called vasa efferentia, which convey the semen from the testis to the epididymis. **R. unipola're,** a vascular plexus, the arterioles of which do not come together again in a single trunk, but further divide into capillaries. **R. veno'sum dorsa'le ma'nûs,** network giving off veins on the back of the hands. **R. veno'sum dorsa'le pe'dis,** plexus of veins on the dorsum pedis. **R. veno'sum vola're ma'nûs,** plexus of veins on palmar surface of the hand.

**Re'tene.** $C_{18}H_{18}$. A derivative of wood-tar.

**Reten'tion** (*reteneo*, to hold back). Accumulation of solid or liquid substance in canals intended for its excretion, or in a reservoir intended to contain it for a short period. **R. cyst,** dilatation cyst or tumor; cystic formation having its origin in obstruction and dilatation of the larger gland-ducts, and retention of the natural secretion in a modified form. **R. tu'mor,** r. cyst. **R. of u'rine,** accumulation of urine in the bladder which cannot be evacuated, or, at least, cannot be passed without extreme difficulty. In the former case the retention is said to be complete; in the latter, incomplete. Writers formerly distinguished three degrees of this affection, to which they gave the names dysury, strangury, and ischury. Retention of urine may depend upon loss of contractility, paralysis of the bladder, etc., or on some obstacle to the passing of the urine, as in cases of pressure of the womb on the bladder, of tumors in its vicinity, foreign bodies in its cavity, inflammation or stricture of the urethra, swelling of the prostate, etc. The pain is extremely violent, and the bladder may be found distended above the pubis.

**Re'tia.** Plural of rete.

**Re'tial.** Relating to a rete.

**Retic'ula.** Network of nerve-fibres associated with the lateral border of the posterior gray horn of the spinal cord.

**Retic'ular.** Retiform. Resembling a net. Epithet applied to many structures in the body. **R. bod'y,** corpus mucosum. **R. car'tilage,** yellow elastic cartilage. **R. forma'tion,** network of longitudinal and transverse fibres occupying the medulla oblongata anteriorly and laterally and reaching up to the pons. **R. lam'ina,** membrane resembling a network reaching over the region of the outer hair cells of the organ of Corti. **R. lay'er of skin,** deeper part of corium, in which are the hair follicles and several glands, situated below the papillary layer. **R. lay'ers,** molecular layers. **R. mem'brane,** r. lamina or r. tissue. **R. pro'cess of spi'nal cord,** extension of gray matter, resembling a net, into the lateral column of the cord. **R. sub'stance,** cellular tissue. **R. tis'sue,** cellular tissue; adenoid tissue. **R. white sub'stance,** arrangement of white fibres resembling a net on the upper part of the uncinate brain convolution.

**Reticula'ria officina'lis.** Lichen pulmonarius.

**Retic'ulated.** Having net-like meshes.

**Reticulin'.** Albuminoid substance from the connective-tissue fibres of reticular tissue.

**Retic'ulum** (dim. of rete). Bonnet or honeycomb bag or stomach; second stomach of the ruminant animal. Also any delicate framework supporting soft material, such as the proper nervous substance of the brain and spinal cord, the parenchyma of an organ, or the semifluid protoplasm of cells. **R. cuta'neum,** rete mucosum. **R. muco'sum,** rete mucosum. **Stel'late r.,** immature enamel organ, seen in section.

**Ret'iform** (*rete*, a net, *forma*, shape). Reticular. **R. tis'sue,** adenoid tissue.

**Ret'ina** (*rete*, a net). A soft, pulpy, grayish, semi-transparent, very thin membrane extending from the optic nerve to the crystalline, embracing the vitreous humor and lining the choroid, without, however, adhering to either of these parts. It terminates by a defined edge—margo dentatus—at the posterior extremities of the ciliary processes. It is constituted, according to most anatomists, by the expansion of the optic nerve. The retina appears to be formed of several laminæ so joined together that it is difficult to discriminate them. It is now generally considered to consist of ten layers, which have received the following names, from within outward: 1. Membrana limitans interna. 2. Fibrous layer, consisting of nerve-fibres. 3. Vesicular layer, consisting of nerve-cells. 4. Inner molecular or granular layer. 5. Inner nuclear layer. 6. Outer molecular or granular layer. 7. Outer nuclear layer. 8. Membrana limitans externa. 9. Layer of rods and cones (Jacob's membrane or bacillary layer). 10. Pigmentary layer or tapetum nigrum. The thin layer of transparent nucleated cells continued from the indented border, near the outer ledge of the ciliary processes, is called the pars ciliaris retinæ. The retina is the essential organ of vision; on it the images of objects are impressed. Both it and the optic nerve are devoid of general sensibility. The nerve of general sensibility distributed to the eye is the fifth pair. The retina is liable to various morbid conditions, as hyperæmia,

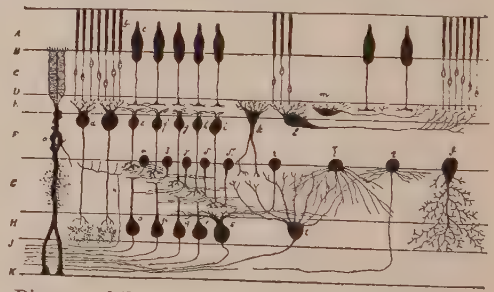


**Diagram of the retina, compiled by Kallius, from the work of Ramón y Cajal.** *A*, layer of rods and cones; *B*, membrana limitans externa; *C*, outer granular layer; *D*, Henle's fibre layer; *E*, outer reticular layer; *F*, outer ganglionic layer; *G*, inner reticular layer; *H*, inner ganglionic layer; *J*, nerve-fibre layer; *K*, membrana limitans interna; *a*, Müller's supporting cell; *b*, rods; *c*, cones; *d*, bipolar cell belonging to rods; *e–i*, bipolar cell belonging to cones; *k–m*, horizontal cells; *n*, centrifugal nerve-fibre; *o–t*, ganglion cells of optic nerve; *α–ε*, spongioblasts (amacrine cells); *ζ–ϑ*, diffuse amacrine cells; *η*, nervous spongioblast.

inflammation—*retinitis*—apoplexy, anæmia, atrophy, fatty degeneration, tumors, embolism of the central artery, separation or detachment, etc. **Anæ′mia of r.**, a peculiar pallid condition of the retina dependent on contraction of the retinal vessels; it has sometimes been termed epilepsy of the retina when occurring during an epileptic attack. **At′rophy of r.**, an occasional result of inflammation of the structures of the eye, glaucoma, etc.; it may be partial or complete, and accompanied with degeneration and atrophy of the optic nerve. **Detach′ment of r.**, disconnection from the choroid. **Em′bolism of the cen′tral ar′tery of r.**, a condition produced by obstruction from emboli, characterized by sudden and total blindness, and usually dependent on valvular disease of the left side of the heart. **Ep′ilepsy of r.**, see *Anæmia of the r.* **Glio′ma of r.**, see *Glioma*. **Ischæ′mia of r.**, ischæmia retinæ. **Physiolog′ical mid′dle point of r.**, fovea centralis. **Separa′tion of r.**, detachment of the retina in consequence of excessive elongation of the coats of the eye in severe myopia, diminution in the bulk of the vitreous humor, tumors, effusion, etc.

**Retinac′ulum** (*reteneo*, to hold back). A surgical instrument formerly used in the operation of castration and in that of hernia to prevent the intestines from falling into the scrotum. A band-like structure which holds a part in place. **Bar′ry's r.**, one of the filaments which seem to suspend the ovum with the Graafian follicle; they correspond to the chalazæ of a bird's egg. **R. cu′tis**, one of the bundles of connective tissue extending from the deep layers of the skin to the superficial and deep fasciæ. **R. of ileocæ′cal valve**, r. Morgagnii. **R. ligamen′ti arcua′ti**, external lateral ligament of the knee. **R. Morgagn′ii**, one of the ridges formed by the junction of the lips of the ileocæcal valve; also called frænum of the valve of Bauhin. **R. muscula′re ten′dinis subscapula′ris majo′ris**, brachiocapsularis. **R. patel′læ**, one of the bands extending from the tibia to the ligamentum patellæ. **R. peroneo′rum infe′rius**, a ligamentous band over the peroneal tendons passing through the grooves on the exterior of the calcaneum. **R. p. supe′rius**, external annular ligament on the ankle, the fascia stretching from the external malleolus to the calcaneum, embracing the tendons of peroneus longus and brevis. **R. ten′dinum**, annular ligament of wrist; annular ligament of ankle. **R. t. peroneo′rum**, the ligamentous sheaths that retain in situ at the outer ankle the tendons of the peroneal muscles. **R. val′vulæ co′li**, r. Morgagnii. **R. of Weit′brecht**, one of several ligaments attached to the great trochanter of the femur.

**Ret′inal.** Relating to the retina. **R. ap′oplexy**, see *Retinitis*. **R. field of vis′ion**, expanse perceived by the eye when at rest and all external light is excluded. **R. hori′zon**, name given by Helmholtz to the horizontal plane which passes through the transverse axis of the eyeball. **R. pur′ple**, rhodopsin; pigment found during life in outer segments of retinal rods. **R. red**, retinal purple.

**Retini′tis.** Inflammation of the retina. When it occurs it is usually an accompaniment of other ophthalmic affections. When there is an extreme tendency to extravasation of blood into the retina the affection is called *r. apoplectica, retinal apoplexy*. Retinitis may be associated with syphilis, and is then called *r. syphilitica*. When this form is confined to the region of the yellow spot and has a marked tendency to recur it is termed *central recurrent r.* A form of retinitis often met with in Bright's disease of the kidney is designated *r. albuminurica, nephritic retinitis*. *R. leukæmica* is an affection of the retina connected with leucocythæmia. *R. pigmentosa* is characterized by a deposit of black pigment in the retina, which encroaches on the field of vision, the patient seeing better in the daytime than at night. In *r. hæmorrhagica* there is infiltration of the nerve-fibre layer by extravasation, congestion of the veins, etc. **R. albuminu′rica**, see *Retinitis*. **R. apoplec′tica**, see *Retinitis*. **Cen′tral recur′rent r.**, see *Retinitis*. **R. circina′ta**, r. in which there is an appearance of a circle. **Diabet′ic r.**, r. occurring in diabetes. **Embol′ic r.**, a form of suppurative r. from pyæmic infection. **R. gutta′ta**, r. in which the surface shows drop-shaped spots. **R. hæmorrhag′ica**, see *Retinitis*. **R. leukæm′ica**, see *Retinitis*. **Nephrit′ic r.**, see *Retinitis*. **R. paralyt′ica**, condition of the retina usually found in general paralysis. **R. pigmento′sa**, see *Retinitis*. **Plas′tic r.**, r. having a plastic exudation. **Prolif′erous r.**, r. with tendency to production of more highly organized structures. **R. puncta′ta**, r. in which the exudation occurs in points. **Se′rous r.**, r. accompanied with a serous exudation. **Splen′ic r.**, r. due to leukæmia. **Stri′ate r.**, r. in which the exudation is striated or striped. **Sup′purative r.**, r. due to pyæmic infection. **R. syphilit′ica**, see *Retinitis*.

**Ret′inochoroidi′tis.** Inflammation of retina and choroid.

**Ret′inol.** Product of destructive distillation of resin of pine or fir; yellowish, oily liquid, employed as a solvent agent for a number of remedies, as aristol, iodol, cocaine, carbolic acid, creosote, some of the alkaloids, etc., or because of its own therapeutic value in combination with other substances. Internally, antiseptic.

**Retinos′copy** (*retina*+*skopeo*, to view). Examination of the retina; skiascopy.

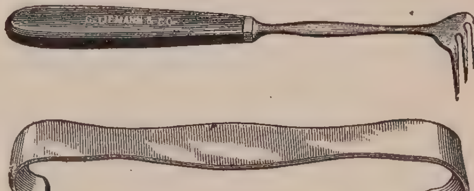
**Retort′** (*retorqueo*, to bend back). Vessel, commonly of glass or earthenware, employed in distillation.

**Retract′.** To draw back, as to retract protruding teeth.

**Retrac′tile.** Capable of being drawn back, said of the prepuce, for example.

**Retrac′tion** (*retraho*, to draw back). State of a part when drawn toward the centre of the body or backward, as retraction of the testicles. Sometimes it is used synonymously with shortening or drawing up, as in retraction of the thigh.

**Retrac′tor.** Piece of muslin split into two tails, applied around the bone to prevent the soft parts from being injured by the saw during amputation. Metallic instrument for holding soft parts out of the way during operation. A muscle that retracts or draws back any part. **R. an′guli o′ris**, buccinator. **R. glot′tidis**, genioepiglotticus. **R. mus′cle of eye**, an infundibular muscle—the choanoid muscle—retracting the eyeball. **R. rec′ti**, rectococcygeus. **R. tu′bæ**, levator veli. **R. ure′thræ**, occasional muscular band passing from tuberosity of ischium to corpus cavernosum urethræ. **R. u′teri**, small, non-striped muscle-fibres extending from the uterus to the sacrum within the retro-uterine folds.



Retractors.

**Re′trad** (*retro*, backward). Toward the back part.

**Re′trahens au′ris** or **au′rem** (*retraho*, to draw back). Consists of one or more small fasciculi, or fleshy, thin, somewhat irregular fibres, situated behind the ear; attached to the mastoid process, and passing horizontally forward, to terminate at the convexity formed by the concha of the ear. If this muscle had any use it would carry the ear backward.

**Retrimen′tum.** Excrement, dregs.

**Retro-** (Lat.). In composition, behind, backward.

**Retroac'tion.** Action opposed to a preceding action.

**Retroauric'ular.** Behind the auricle, whether of the ear or of the heart.

**Retrobul'bar.** Behind the bulb or ball of the eye, as *retrobulbar neuritis*, inflammation of the portion of the optic nerve back of the eyeball.

**Retrocæ'cal.** Relating to the back part of, or the part back of, the cæcum.

**Retroce'dent.** Relapsing; going back. **R. gout,** see *Gout*.

**Re'troceps** (*retro*, behind, *capio*, to take). Form of obstetric forceps which grasps the back portion of the fetal head.

**Retroces'sion** (*retrocedo*, to give place). Act of going back; disappearance or metastasis of a tumor, eruption, etc., from the outer part of the body to the inner.

**Retroclavicula'ris.** Sternoclavicularis posticus.

**Retroclu'sion** (*retro*, behind, *claudo*, to close). Method of acupressure in which the pin is passed through the tissue over the artery, then, turning in a semicircle, is brought out behind the artery, the point of the pin coming out near its entrance.

**Retrocol'ic.** Behind the colon.

**Retrocol'lic** (*retro*, behind, *collum*, neck). Referring to the back of the neck. **R. spasm,** spasm of muscles of the back of the neck.

**Retrodevia'tion.** Displacement backward of the uterus.

**Re'troflect** or **Re'troflex** (*retro*, behind, *flecto*, to bend). To put in a state of retroflexion; said of certain operations on the uterus.

**Re'troflected** or **Re'troflexed.** In a state of retroflexion.

**Retroflec'tion** or **Retroflex'ion.** A bending backward upon itself of an organ, said especially of the uterus when the body is tipped back, the cervix being little if at all out of its normal axis.

**Retroflex'io u'teri.** Retroflection or retroflexion of the uterus.

**Ret'rograde** (*retrogradior*, to go backward). Going back. **R. em'bolism,** the passage of an embolus in a direction contrary to that of the blood stream. **R. metamorpho'sis,** catabolism.

**Retrog'raphy** (*retro*, backward, *grapho*, to write). Writing backward; mirror-writing.

**Retrogres'sus.** Retrocession.

**Retroin'sular.** Behind the insula. **R. convolu'tions,** temporoparietal convolutions lying within the fissure of Sylvius.

**Retrojec'tion** (*retro*, backward, *jaceo*, to throw). Washing a cavity or canal from within outward.

**Retromalle'olar fos'sæ.** Depressions behind the malleoli on either side of the tendo Achillis.

**Retromam'mary.** Back of the mammary gland.

**Retromas'toid.** Behind the mastoid process.

**Retromax'illary re'gion.** Parotid fossa.

**Retrona'sal.** Behind the nose. Nasopharyngeal.

**Retro-oc'ular.** Situated behind the eyeball.

**Retro-œsophag'eal.** Behind the œsophagus, as in the areolar tissue—retro-œsophageal abscesses, for example.

**Retroperitone'al.** Relating or belonging to internal parts behind the peritoneum, as retroperitoneal hernia. **R. fos'sæ,** fossæ in different parts of the abdominal cavity behind the peritoneum, in which retroperitoneal herniæ may occur.

**Retroperitoni'tis.** Inflammation of structures situated behind the peritoneum.

**Retropharyn'geal.** Relating to parts behind the pharynx—as retropharyngeal abscess, an abscess in the areolar tissue behind the pharynx.

**Retroposi'tion.** Displacement of the uterus backward, but without flexion or version.

**Retropul'sion.** Pushing or forcing back of fetal head in labor. Disorder of locomotion observed in paralysis agitans, in which a tendency to walk backward exists.

**Retrostal'sis.** Antiperistalsis.

**Retroster'nal.** Situated behind the sternum.

**Retrotar'sal fold.** Fornix of the conjunctiva.

**Retro-u'terine.** Behind the uterus, as retro-uterine abscess, an abscess seated behind the uterus. **R.-u. hæmat'ocele,** tumor consisting of blood behind the uterus in the pouch of Douglas.

**Retrovaccina'tion.** Vaccination with matter obtained from the cow after inoculating the animal with vaccine matter from the human subject.

**Retrover'sio u'teri.** Retroversion of the uterus.

**Retrover'sioflex'ion.** Retroflexion and retroversion combined.

**Retrover'sion** (*retro*, backward, *verto*, to turn). A tipping backward of a part or organ without bending upon itself. **R. of the u'terus,** a change in the position of the uterus so that the fundus of the organ is turned toward the concavity of the sacrum while the neck is directed toward the symphysis pubis.

**Retrovert'.** To put in a state of retroversion.

**Ret'zius's cap'sule.** Fascial investment of the intrapelvic and bulbous portions of the urethra and Cowper's glands. **R.'s cave,** space sometimes existing between the two layers of subserous tissue in front of the bladder. **R.'s fi'bres,** structure resembling a thread seen in the cells of Dieters and running longitudinally through them. **R.'s lig'ament,** outer part of anterior annular ligament of the leg, forming a loop around the peroneus tertius and extensor longus digitorum muscles; the fundiform ligament. **R.'s space,** R.'s cave. **R.'s stri'æ,** lines of brownish color extending almost parallel to the external surface of the enamel of the tooth, indicating the stages of deposit. **R.'s veins,** anastomotic veins between the mesenteric veins and vena cava inferior.

**Reu'nion.** Synthesis; union of parts that have been disjoined.

**Reus'ner's sign.** Indicative of early pregnancy, being a pulsation of the uterine arteries felt through the vagina in the fourth week.

**Reuss's test.** Test for atropine, consisting in treating the suspected substance with sulphuric acid and an oxidizing agent, which gives the odor of blossoms if atropine is present.

**Revaccina'tion.** Vaccination in one previously vaccinated.

**Revalen'ta arab'ica.** Ervum.

**Revel'lent** (*re*, again, *vello*, to pluck). Derivative.

**Reverbera'tion** (*reverbero*, to beat back). Resonance.

**Reverdin's' meth'od.** Operation of skin-grafting.

**Rever'sion** (*reverto*, to turn back). A turning back. Return to a former type. The union of two monosaccharids to constitute a disaccharid.

**Rev'ery.** Aphelxia.

**Revilliod's' sign.** Symptom of paralysis of superficial facial nerve, the patient being unable to close the eye of the side affected.

**Revivifica'tion** (*re*, again, *vivo*, to live, *facio*, to make). Resuscitation. Refreshening or making raw two opposing surfaces in order to effect their union.

**Reviv'ify.** Refreshen.

**Revivis'cence.** Renewal of life. Awakening from torpidity in animals after hibernation.

**Revul'sant.** Derivative.

**Revul'sion.** Act of turning the principle of a disease from the part in which it seems to have taken its seat. Rubefacients, vesicatories, bleeding in the foot, etc., are used for this purpose. See *Derivation*.

**Revul'sive.** Derivative. **R. bleed'ing,** see *Bloodletting*.

**Rex amaro'rum** (king of bitters). Bitter shrub of the Moluccas, used in cholera, pleurisy, etc. **R. metallo'rum,** aurum.

**Reybard's' su'ture.** Interrupted or loop suture, used to unite wounds of intestines. A small disk of wood is placed in the intestine and fastened by sutures; when the sutures become absorbed the disk passes by stool.

**Rez'zle.** Wheeze.

**Rha** or **Rhabar'barum.** Rheum. **R. al'bum,** Convolvulus mechoacan. **R. antiquo'rum** or **dioscor'-**

**dis,** Rheum rhaponticum. **R. monacho'rum,** Rumex patienta. **R. ni'grum,** Convolvulus jalapa. **R. pau'perum,** thalictron. **R. plebeio'rum,** see *Rhamnus frangula.* **R. siber'icum,** rheum. **R. tartar'icum,** rheum. **R. tur'cicum,** rheum.

**Rhabdi'tis** (*rhabdos,* rod). Generic name of small nematoid worms. **R. genita'lis,** minute round worm which has been found in urine. **R. stercora'lis,** Anguillula stercoralis.

**Rhab'doid su'ture.** Sagittal suture.

**Rhabdomyo'ma.** Myoma involving the striped muscular fibres.

**Rhabdomyosarco'ma.** Combination of rhabdomyoma and sarcoma.

**Rhabdone'ma** (*rhabdos,* rod, *nema,* thread). Rhabditis. **R. strongyloi'des,** Anguillula intestinalis.

**Rhachiag'ra.** Rachidagra.

**Rhachial'gia.** Pain in the spine; spinal irritation.

**Rhachialgi'tis.** Spinal irritation; myelitis.

**Rhachias'mus.** Name given by M. Hall to the first symptoms of epilepsy, made up of spasmodic action of muscles at the back of the neck.

**Rhachidag'ra.** Pain in the spine; spinal irritation.

**Rhachil'ysis** (*rhachis,* spine, *lysis,* loosening). Treatment of lateral spinal curvature, to effect straightening of the spine, by heavy pressure on the curve in the lumbar region, and by heavy traction applied to the dorsal curve.

**Rhachiocamp'sis** (*kampsis,* bending). Curvature of the spine.

**Rhachiochysis,** rak-e-ok'is-is (*rhachis,* spine, *chysis,* gathering). Accumulation of water in the spinal cord.

**Rhachiodyn'ia** (*odyne,* pain). Pain in the back.

**Rhachiokypho'sis.** Gibbosity; humpback.

**Rhachiom'eter** (*rhachis,* spine, *metron,* measure). Instrument for measurement of curvature of the spine.

**Rhachiomyeli'tis.** Myelitis.

**Rhachiomyelophthi'sis** (*myelos,* marrow). Tabes dorsalis.

**Rhachiop'agus.** Rhachipagus.

**Rhachioparal'ysis.** Spinal paraplegia.

**Rhachiophy'ma** (*phyma,* growth). Tumor of the spine.

**Rhachiople'gia.** Spinal paraplegia.

**Rhachioscolio'ma** or **Rhachioscolio'sis.** Lateral curvature of the spine.

**Rhachiostropho'sis** (*strepho,* to turn). Curvature of the spine.

**Rhach'iotome** (*rhachis,* spine, *tome,* incision). Instrument for dividing the laminæ of the vertebræ.

**Rhachiot'omy.** Incision into the spinal canal.

**Rhachipa'gia** (*pegnymi,* to fasten). Twin monstrosity with union at the spine.

**Rhachipagus,** rak-ip'a-gus. Double monster joined at the spine.

**Rhachiparal'ysis.** Spinal paralysis.

**Rhachiphy'ma.** Rhachiophyma.

**Rhachirrheu'ma.** Lumbago.

**Rhachis,** rak'is. Vertebral column. Spine. **R. na'si,** bridge of the nose.

**Rhachisag'ra.** Pain in the spine; spinal irritation.

**Rhachischisis,** rak-is'kis-is (*schizo,* to cleave). Fissure into the spinal canal due to deficiency of the vertebral arches; spina bifida.

**Rhachit'ic.** Rachitic. Relating to rhachitis.

**Rhachi'tis.** Rickets; rachitis.

**Rhach'itism.** Predisposition to rickets.

**Rhach'itome.** Rachiotome.

**Rhach'us** (*rhachoo,* to wrinkle). A wrinkle.

**Rhaco'ma** (*rhakos,* a rent or tear). Chap; excoriation. Pendulousness of the scrotum.

**Rhaco'sis.** Condition of rhacoma.

**Rha'cous** (*rhakos,* torn). Torn; corrugated.

**Rhæbocra'nia** (*rhaibos,* crooked, *kranion,* skull). Torticollis.

**Rhæbo'dere** (*rhaibos,* crooked, *dere,* neck). Torticollis.

**Rhæboscelia,** rhe-bo-skel'e-ah (*rhaibos,* crooked, *skelos,* leg). Crookedness of the legs; genu varum or valgum.

**Rhæbo'sis** (*rhaibos,* crooked). Crookedness of any part.

**Rhæstocythæ'mia** (*rhaistos,* broken, *kytos,* cell, *haima,* blood). Presence in the blood of deteriorated corpuscles.

**Rhag'ades** or **Rhaga'dia** (*rhagas,* fissure). Fissures, chaps, or narrow and long ulcers which form near the junction of skin and mucous membranes, especially around the anus, usually due to syphilis.

**Rhagoidei'tis.** Uveitis.

**Rhagoi'des** (*rhax,* berry, *eidos,* resemblance). Grape-like, as *tunica rhagoides,* the uvea. Also the choroid coat of the eye.

**Rhag'us** (*rhagos,* wrinkle). Wrinkle.

**Rhamnegin'** or **Rhamnegi'num.** Glucoside in buckthorn berries; similar to rhamnin excepting its solubility in cold water.

**Rhamnetin'.** Substance produced by the action of dilute acids upon rhamnin.

**Rham'ni purshia'ni cor'tex.** (Ph. Br.) Dried bark of Rhamnus purshiana, Cascara sagrada.

**Rhamnin'.** Crystallizable glucoside extracted from buckthorn berries.

**Rhamnocathartin'.** Bitter active principle of buckthorn berries; yellow and amorphous.

**Rhamnoxanthin'.** Frangulin.

**Rham'nus** (*rhamnos*). A genus of plants, ord. *Rhamnaceæ.* **R. alater'nus,** the leaves have been used as detergents and astringents, as a gargle especially. **R. carolinia'na,** buckthorn of Southern U. S. **R. cathart'icus,** purging buckthorn; blackthorn; the berries—*rhamni baccæ*—have a faint, disagreeable odor and bitterish, nauseous taste. Their juice—*rhamni succus*—is cathartic, and excites griping, which must be obviated by the use of diluents. The name *cathartin, cathartic acid,* has been given to a purgative principle derived from the buckthorn. **R. fran'gula,** black alder; all the parts of this tree, as well as of the common alder, are astringent and bitter. The bark is most so. The inner, yellow bark of the trunk or root, once called *rhabarbarum plebeiorum,* is a cathartic; has been employed as an anthelmintic. **R. hispan'icus,** R. alaternus. **R. infecto'rius** produces French berries. **R. juju'ba,** see *Jujube.* **R. lo'tus,** see *Jujube.* **R. purshia'na** (Ph. U. S.), Cascara sagrada, sacred bark, chittem bark, the bark of a shrub growing on northwestern coast of U. S.; see *Cascara.* The *extractum rhamni purshianæ fluidum* is official; dose, ♏xv–xxx (1.0–2.0). **R. ziz'iphus,** Ziziphus vulgaris; see *Jujube.*

**Rhan'ter** (a sprinkler). The greater canthus.

**Rhaphan'ia.** Raphania.

**Rhaph'e.** Raphe; suture.

**Rhaph'ion** (dim. of rhaphis). Needle.

**Rhaph'is.** Needle.

**Rhaphosym'physis** (*rhaphe,* suture, *symphysis,* union). Union by suture—as of cranial bones.

**Rhapon'tic.** Relating to rhubarb.

**Rhapon'ticum.** Rheum rhaponticum. **R. vulga're,** Centaurea centaurium.

**Rhata'nia.** Krameria rhatania. **R.-tan'nic acid,** a form of tannin from krameria.

**Rhat'any.** Krameria.

**Rheg'ma** (*rhegma*). Cramp. Contusion; laceration. Fracture. Rhexis. **R. ligamenta're,** rupture of a ligament. **R. oc'uli,** rupture of the eyeball.

**Rheg'mus.** Cramp. Contusion; laceration.

**Rhe'i ra'dix.** (Ph. Br.) Rhubarb root; see *Rheum.*

**Rhe'ic acid** or **Rhein'.** $C_{15}H_{10}O_4$. Chrysophanic acid. Rhubarb yellow. Coloring-matter from root of rheum; antiseptic.

**Rhembas'mus.** Somnambulism; a wandering condition of the mind.

**Rhem'be.** Irregularity in the return of febrile paroxysms.

**Rhe'ocord** (*rheos,* current). Instrument for regulating the strength of electrical currents.

**Rheom'eter** (*rheos*, current, *metron*, measure). Galvanometer; measure of electromotive force of a current.

**Rhe'ophore** (*rheos*, current, *phoreo*, to bear). Wire connecting poles of electric battery; electrode.

**Rhe'oscope** (*rheos*, a current, *skopeo*, to inspect). Instrument for determining the presence of electrical currents. **Physiolog'ical r.**, see *Rheoscopic limb.*

**Rheoscop'ic limb.** Sensitive nerve-muscle preparation, contraction of which determines the existence of the electrical current of muscles.

**Rhe'ostat** (*rheos*, current, *histemi*, to stand). Instrument for regulating the resistance of an electric current. To lessen or make the current uniform a rheostat is placed in the circuit, in order that exact uniformity of electrical force may be obtained.

**Rheotan'nic acid.** $C_{26}H_{26}O_{14}$. Kind of tannic acid found in rhubarb.

**Rhe'otome** (*rheos*, current, *temno*, to cut). Instrument used to cut off or interrupt the faradic current.

**Rhe'otrope** (*rheos*, current, *trepo*, to turn). Instrument or apparatus for reversing an electrical current.

**Rhe'um.** (Ph. U. S.) The root of *R. officinale* (Chinese rhubarb). Odor is aromatic, peculiar, and rather nauseous; taste somewhat aromatic, subacrid, bitterish, and astringent; it colors the saliva and the urine yellow. It is easily pulverized, forming a powder of a bright buff-yellow color. Water and alcohol extract its virtues. Rhubarb root is purgative, stomachic, and astringent. Externally the powder is sometimes sprinkled over ulcers to assist their granulation. In small doses taken internally it is stomachic. Numerous species of rheum, as *R. palmatum*, *R. undulatum*, and *R. compactum*, yield rhubarb root. The rhubarbs most used in the United States are the Chinese or India rhubarb, the Russian, Turkey, or Bucharian rhubarb, and the European rhubarb. Dose of the powder, gr. x–xxx (0.65–2.0). The following preparations are official: *Extrac'tum rhe'i* (U. S. and Br.); dose, gr. v–x (0.32–0.65). *E. r. flu'idum* (Ph. U. S.); dose, ♏x–xxx (0.65–2.0). *Mistu'ra r. et so'dæ* (Ph. U. S.); dose, ʒss–ij (2.0–8.0). *Pil'ulæ r.* (Ph. U. S.); dose, 1–3. *P. r. compos'itæ* (Ph. U. S. and Br.); dose, 1–3. *Pul'vis r. compos'itus* (Ph. U. S. and Br.); dose, ʒss–j (2.0–4.0). *Syr'upus r.* (U. S. and Br.); dose, ʒss–iv (2.0–16.0). *S. r. aromat'icus* (Ph. U. S.); dose, ʒss–iv (2.0–16.0). *Tinctu'ra r.* (Ph. U. S.); dose, ʒj–ij (4.0–8.0). *T. r. aromat'ica* (Ph. U. S.), *compos'ita* (Ph. Br.); dose, ʒss–j (2.0–4.0). *T. r. dul'cis* (Ph. U. S.); dose, ʒj–ij (4.0–8.0). **R. compac'tum**, rheum. **R. in'dicum**, see *Rheum.* **R. officina'le**, rheum. **R. palma'tum**, rheum. **R. rhapon'ticum**, rhapontic rhubarb; rhubarb of the ancients; it is more astringent than R. palmatum, and less purgative. French, rhapontic, or Crimea rhubarb is obtained from this species, as well as from R. undulatum and R. compactum. R. rhaponticum is the pie rhubarb or pie plant, cultivated for its fleshy, esculent leaf-stalks. **R. rus'sicum**, see *Rheum.* **R. sinen'se**, see *Rheum.* **R. tur'cicum**, see *Rheum.* **R. undula'tum**, see *Rheum.*

**Rheum**, rume (*rheuma*, flux). Any thin, watery discharge from mucous membranes or skin, as the thin discharges from the air-passages due to cold. **Salt r.**, popular name in the United States, like "tetter," for various cutaneous affections, of the eczematous and herpetic forms especially; at times applied to a kind of chronic psoriasis; likewise to cutaneous affections in those who immerse the hands in metallic or acid solutions.

**Rheuma**, ru'mah. Catarrh. Diarrhœa. Rheumatism. In composition, a flow, a defluxion; also rheumatism. **R. catarrha'le**, chronic bronchitis. **R. epidem'icum**, chronic bronchitis; epidemic catarrh. **R. pec'toris**, catarrh. **R. u'teri**, leucorrhœa.

**Rheumarthri'tis** or **Rheumarthro'sis.** Articular rheumatism.

**Rheumatal'gia** (*algos*, pain). Rheumatic pain. **R. arthrit'ica**, acute rheumatism.

**Rheumat'ic.** Belonging to rheumatism, as rheumatic fever. Also applied to one affected with rheumatism. **R. diath'esis**, the special condition of the body that gives occasion to rheumatism; it may exist without presenting the usual phenomena in the joints, while the heart may be seriously affected. **R. fe'ver**, see *Rheumatism.* **R. gout**, a term used indefinitely to denote polyarticular gout, gout with the constitutional symptoms of rheumatism, arthritis deformans, etc. **R. tem'perament**, sanguine temperament.

**Rheu'matism.** Rheumatism is a word commonly used to denote a variety of clinical states, the underlying cause of which is supposed to be essentially the same. The disease may attack joints, muscles, or fibrous or serous structures; hence the terms *muscular*, *articular*, *synovial*, *cardiac*, *cerebral*, etc. It may be acute, subacute, or chronic in its course and duration. It is characterized subjectively by pain chiefly, which may be severe, lancinating, shifting, or dull and boring, according to the variety of the disease and to the structures involved. Objectively there may be fever, local redness, and swelling when acute, or no perceptible change in the affected part, or in certain cases great deformity may result from inflammatory changes with secondary contraction and disability. The morbid anatomy and etiology of rheumatism remain doubtful. The causes commonly ascribed are the presence of lactic acid, uric acid, or excess of fibrin in the blood, cold, and microorganisms. **Acute' artic'ular r.** usually comes on with the ordinary symptoms of fever; soon after which or simultaneously, or even before the appearance of febrile signs, excruciating pains are felt in different parts of the body, particularly in the larger joints, which are more or less red and swollen, the pain shifting from one to another at times with great rapidity. The disease rarely terminates in less than six weeks, during the greater part of which period the febrile symptoms remain severe, and, what is peculiar to the disease, the skin, feeling extremely hot, may be covered daily with a profuse perspiration, and the pulse appear in no way modified by it. The sweating is one of the essential symptoms of the affection, and gives no relief to the fever. The chief danger to be apprehended from acute rheumatism is the extension of the disease to the fibrous structures of the heart. This tendency must always be borne in mind. Acute rheumatism seldom terminates in chronic; those liable to the former are rarely so to the latter, and conversely. Sometimes it assumes a subacute form. After a few weeks the disease usually goes off, but leaves the patient very liable to a recurrence. **R. of the arm**, brachiorrheuma. **Arthrit'ic r.**, see *Acute r.* **Besnier's' r.**, chronic synovitis. **R. of the blad'der**, cystorrheuma. **R. of the bow'els**, enterorrheuma. **Cap'sular r.**, rheumatism seated in the lining membrane of the joints and bursæ of the tendons. The parts most liable to attacks are the feet and hands, where it is generally easily recognized by the enlargement of the joints; but the peculiar characters of the disease are most strikingly seen when it attacks the knee. **Cer'ebral r.**, rheumatic meningitis, rheumatic apoplexy; meningitis occurring during the course of acute rheumatism, probably metastatic. **Chron'ic r.** is attended with pains in the hips, shoulders, knees, and other large joints, at times confined to one joint, at others shifting from one to another without occasioning inflammation or fever. The complaint often continues thus for a long time, and then ceases. There is no danger attendant upon it, but the patient may become lame, and is always liable to painful recurrences. Effusion of coagulable lymph is apt to occur, so as to occasion permanent thickening of the parts. **R. of the extrem'ities**, acrorrheuma. **R. of the face**, prosoporrheuma. **Gonorrhœ'al r.**, rheumatism associated with gonorrhœa and due to the action of the toxin of the gonococcus. **Gout'y r.**, rheumatic gout. **R. of the heart**, cardiorrheuma. **Inflam′matory r.**, acute r. **Mus′cular r.**, pain in the muscular structures increased by motion. **Nod′ular r.**, see *Rheumatism, acute*. **R. root**, Jeffersonia bartoni. **Syno′vial r.**, a rheumatic affection in which an accumulation of nonpurulent fluid occurs in the synovial sacs, especially of the knee-joints. **Ure′thral r.**, urethral fever, stricture fever; a peculiar affection, apparently pyæmic, probably due to absorption of morbid materials from the urethra, accompanied with subacute inflammation of the synovial membranes and fibrous tissues about the ankle, heels, etc.; gonorrhœal r. **Vis′ceral r.**, r. affecting the muscular or fibrous tissues of the viscera. **R. weed**, Pyrola maculata; P. umbellata.

**Rheumatis′mal.** Rheumatic. **R. œde′ma**, a condition sometimes attendant upon rheumatism, characterized by red, painful, œdematous tumefaction, caused by subcutaneous exudation.

**Rheumatis′moid.** Rheumatoid.

**Rheumatis′mus.** Rheumatism. **R. abdom′inis**, cœliorrheuma. **R. articulo′rum**, rheumatism. **R. bra′chii**, rheumatism of the arm. **R. cancro′sus**, neuralgia faciei. **R. cervi′cis**, torticollis. **R. col′li**, torticollis. **R. cor′dis**, rheumatism of the heart. **R. cru′ris**, rheumatism of the leg. **R. dorsa′lis**, lumbago. **R. facie′i**, rheumatism affecting the face. **R. febri′lis**, dengue. **R. frig′idus**, chronic rheumatism. **R. habitua′lis**, chronic rheumatism. **R. intestino′rum**, enterorrheuma. **R. intestino′rum cum ul′cere**, dysentery. **R. invetera′tus**, chronic rheumatism. **R. larva′tus**, neuralgia faciei. **R. metal′licus**, rheumatic pains of lead poisoning. **R. muscula′ris** or **musculo′rum**, muscular rheumatism. **R. pec′toris**, pleurodynia. **R. spu′rius nervo′sus**, neuralgia. **R. synovia′lis**, rheumatic synovitis. **R. universa′lis febri′lis**, acute rheumatism. **R. u′teri**, metrorrheuma. **R. vesi′cæ urina′riæ**, rheumatism of the urinary bladder. **R. vulga′ris**, chronic rheumatism.

**Rheumatodyn′ia.** Chronic rheumatism.

**Rheu′matoid.** Resembling rheumatism. **R. arthri′tis**, arthritis deformans.

**Rheumatophthal′mia.** Rheumophthalmia.

**Rheu′mic.** Relating to rhubarb or to rheum or watery or mucous discharge. **R. acid**, acid derived from rhubarb. **R. diath′esis**, dartrous diathesis; a general condition of the system which predisposes to or excites a form of constitutional skin disease, such as eczema, psoriasis, and pityriasis.

**Rheumophthal′mia.** Rheumatophthalmia; sclerotitis. Ophthalmia of rheumatic origin.

**Rhex′is** (*rhexis*, rupture). Rupture of a vessel or organ. Spontaneous opening of an abscess. **R. oc′uli**, bursting of the eye from any cause, spontaneous or excited.

**Rhicno′sis** (*rhiknoomai*, to become wrinkled). Wrinkling of the skin from emaciation.

**Rhig′olene** (*rhigos*, cold). Petroleum naphtha, used as a local anæsthetic; boils at 70° F., sp. gr. 0.625; is applied in the form of spray in the smaller operations, evaporation of the rhigolene producing a freezing temperature. There is danger of gangrene, however, from its abuse.

**Rhi′gos.** Rigor.

**Rhinacanthin′.** Active principle of rhinacanthus.

**Rhinacan′thus.** Root and leaves of R. communis. The active principle is *rhinocanthin*, which resembles hydroquinone; employed in parasitic affections of the skin.

**Rhinæsthe′sia** (*rhis*, nose, *aisthesis*, sensation). The sense of olfaction or smell.

**Rhinæ′us** (*rhis*, nose). Compressor naris.

**Rhi′nal** (*rhis*, nose). Relating to the nose.

**Rhinal′gia** (*algos*, pain). Pain in the nose.

**Rhinan′chone** or **Rhinan′gia.** Snuffles.

**Rhinantral′gia** (*rhis*, nose, *antron*, cavity, *algos*, pain). Pain in the frontal sinuses.

**Rhinel′cus** (*rhis*, nose, *helkos*, ulcer). Nasal ulcer.

**Rhinencepha′lia.** Cyclopia. See *Rhinocephalus*.

**Rhinenceph′alon.** The part of the brain connected with the olfactory nervous system; olfactory lobe.

**Rhinenceph′alus.** Rhinocephalus.

**Rhi′nes** (pl. of rhis). Nares.

**Rhineuryn′ter** (*rhis*, nose, *euruno*, to dilate). An apparatus consisting of a bag or sac to be inflated after its introduction into the nose in epistaxis. It resembles the colpeurynter of the obstetricians.

**Rhin′ion** (*rhis*, nose). Lower extremity of suture between the nasal bones; superior median point of the anterior nasal aperture.

**Rhini′tis.** Inflammation of the nose or nasal mucous membrane. **Acute r.**, coryza, cold in the head. **Atroph′ic r.**, ozæna; chronic inflammation of the nasal mucous membrane, with sensation of dryness in the nasopharyngeal region, thick, purulent discharge of hard crusts, offensive odor, impaired sense of smell. **Ca′seous r.**, a form characterized by an accumulation of cheesy masses in the nares. **Catar′rhal r.**, simple r., either acute or chronic. **Chron′ic r.**, sluggish catarrhal r., occurring as such from the beginning, or the result of repeated acute attacks; it may be atrophic or hypertrophic. **Crou′pous r.**, r. characterized by the formation of false membranes. **Diphtherit′ic r.**, nasal diphtheria. **Fi′brinous r.**, croupous r. **Hypertroph′ic r.**, inflammation with thickening of the nasal mucous membrane, accompanied by a discharge of thick mucus from the nose, nasal obstruction, breathing through the mouth, nasal tone of voice, frontal headache, impaired smell. **R. ulcero′sa**, ozæna. **R. vasomoto′ria**, autumnal catarrh, hay fever.

**Rhino-** (*rhis*, nose). Prefix referring to the nose.

**Rhinoblennorrhœ′a.** Rhinorrhœa.

**Rhino′byon** (*rhis*, nose, *byo*, to stop up). Instrument consisting of a tube and bladder of goldbeaters' skin, intended for tamponing the nasal fossæ.

**Rhinocace**, ri-nok′as-e (*rhis*, nose, *kakos*, evil). Offensive discharge and other symptoms indicating inflammation of the nasal mucous membrane.

**Rhinocarcino′ma.** Nasal cancer

**Rhinocatar′rhus.** Coryza.

**Rhi′nocaul.** Pedicle of olfactory bulb.

**Rhinocephal′us** (*rhis*, nose, *kephale*, head). Monstrosity characterized by a projection of the nose and two orbits fused into one.

**Rhinoc′eros leg.** Elephantiasis.

**Rhinoclei′sis** (*kleio*, to close). Nasal obstruction.

**Rhinocnes′mus** (*knesma*, itching). Itching of the nose.

**Rhi′nocœle** or **Rhinocœ′lia** (*rhis*, nose, *koilia*, cavity). Olfactory ventricle.

**Rhinodac′ryolith** (*rhis*, nose, *dakryon*, tear, *lithos*, stone). Calculus of the lacrymal passages.

**Rhinoder′ma** (*rhis*, nose, *derma*, skin). Keratosis pilaris.

**Rhinodyn′ia** (*odyne*, pain). Pain in the nose.

**Rhinœop′rion pen′etrans.** Pulex penetrans.

**Rhinogram′ma.** Nasal line.

**Rhinolal′ia** (*laleo*, to speak). Nasal speech; impediment to the use of the voice caused by abnormal openness (*r. aper′ta*) or closure (*r. clau′sa*) of the nasopharyngeal passage.

**Rhinolaryngol′ogy.** Rhinology and laryngology regarded as one specialty.

**Rhinolere′ma** or **Rhinolere′sis** (*rhis*, nose, *leros*, trifling). Abnormal olfaction.

**Rhi′nolite** or **Rhin′olith** (*rhis*, nose, *lithos*, stone). Calculus in the nasal cavity. See *Dacryolite*.

**Rhinolithi′asis.** The state of having nasal calculi.

**Rhinol′ogist.** Specialist in the treatment of affections of the nose.

**Rhinol′ogy** (*rhis*, nose, *logos*, science). Science of nasal disease.

**Rhinom′eter.** Instrument for measuring the nose.

**Rhinomio′sis** (*meiosis*, contraction). Operation for reduction of the size of a hypertrophied nose.

**Rhinommec′tomy.** Operation for removal of a portion of the inner canthus of the eye.

**Rhinonecro′sis.** Nasal diseases attended by necrosis of bone.

**Rhinophar′ynx.** Nasopharynx.

**Rhinopho′nia** (*rhis*, nose, *phone*, voice). Nasal voice; speaking through the nose.

**Rhinophy′ma** (*rhis*, nose, *phyma*, growth). Acne rosacea of long standing, in which, by cell-infiltration and hyperplasia of connective tissue deep in the skin, a red, lobulated tumor of considerable size is formed.

**Rhinoplas′tic** (*rhis*, nose, *plasso*, to form). Relating to rhinoplasty.

**Rhi′noplasty** (*rhis*, nose, *plasso*, to form). Operation for forming a new nose. Three chief methods have been described: 1. *Method of Celsus*, consisting in bringing forward the skin of the cheeks, and forming a septum, if necessary, from the lip. 2. *Italian* or *Tagliacotian method* or *operation*, called also the German method, on account of the application made of it by von Graafe, consisting in paring the edges of the nostrils, and uniting them to a graft taken from an arm, but left attached to it until union has taken place. 3. *Indian method*, now generally adopted, the graft being taken from the forehead.

**Rhinopol′ypus.** Polypus of the nose.

**Rhinop′tia** (*rhis*, nose, *optomai*, to see). Internal strabismus; squinting over the nose.

**Rhinorrha′gia** (*rhage*, a breaking forth). Bleeding at the nose; epistaxis.

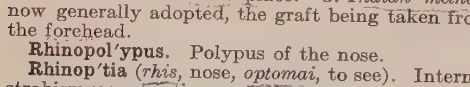
**Rhinor′rhaphy** (*rhis*, nose, *rhaphe*, a suture). Operation for the removal of epicanthis, consisting in pinching up a longitudinal fold of the skin, including this fold in two elliptical incisions, removing it, and bringing together the edges of the wound by harelip suture.

**Rhinorrhœ′a** (*rhis*, nose, *rheo*, to flow). A discharge of limpid mucus from the nose without any inflammatory symptom.

**Rhinosclerin′.** Glycerin extract prepared (like tuberculin) from cultures of the bacillus of rhinoscleroma; employed as a remedy for that disease.

**Rhinosclero′ma** (*rhis*, nose, *skleros*, hard). Chronic tuberculated induration of the nose and its vicinity, slowly developed and unaccompanied with œdema or inflammatory symptoms.

**Rhi′noscope** (*rhis*, nose, *skopeo*, to view). Nasal speculum. Instrument resembling the laryngoscope for inspecting the nasal passages.



Rhinoscopic mirror.

**Rhinos′copy.** Inspection of the posterior nares by means of the rhinoscope.

**Rhino′sis** (*rhinos*, skin). State of looseness and excess of skin observed in cases of emaciation.

**Rhinostegno′sis** (*stegnosis*, constriction). Narrowing of the nares.

**Rhi′nothrix** (*thrix*, hair). Fine hair in the external nasal passages. See *Vibrissæ*.

**Rhi′za.** Root; radix.

**Rhizo-** (*rhiza*, root). Prefix referring to a root.

**Rhizodon′totrypy** or **Rhizodon′trypy** (*rhiza*, root, *odous*, tooth, *trypao*, to perforate). Perforation of the root of a tooth for the discharge of fluid. Also pivoting of a crown on the root of a tooth.

**Rhizogly′phus parasit′icus.** An acarus supposed to be the cause of "water itch."

**Rhizog′raphy** (*rhiza*, root, *grapho*, to write). A treatise describing roots of plants.

**Rhizo′ma** or **Rhiz′ome.** Part of a plant on or beneath the earth, running more or less horizontally, and consisting of joints, with leaves in form of scales; subterranean stem.

**Rhi′zoneure.** A neuron or nerve-cell entering into the formation of a nerve-root.

**Rhizonychial**, riz-o-nik′e-al (*rhiza*, root, *onyx*, nail). Giving root to a nail.

**Rhizoph′agus.** One who lives on roots.

**Rho′a.** Punica granatum.

**Rhodallin′.** Thiosinamin.

**Rhodelæ′on** (*rhodon*, rose, *elaion*, oil). Oil of roses.

**Rhodeorrhetin′.** Convolvulin.

**Rho′dium lig′num.** Rosewood. Wood or root of Genista canariensis, ord. *Leguminosæ*. The essential oil is a perfume, and possesses cordial and tonic virtues.

**Rhodoceph′alus carcinomato′sus.** A supposed protozoan parasite (ord. *Gregarinæ*) of cancer, described by Kosotneff.

**Rhododaph′ne** or **Rhododaph′nis.** Nerium oleander.

**Rhododen′dron chrysan′themum.** Oleander, rose bay, yellow or yellow-flowered rhododendron, mountain laurel; ord. *Ericaceæ*. This plant has been recommended in rheumatism, gout, and syphilis. Overdoses produce acronarcotic symptoms. **R. max′imum**, great laurel, American rose bay; indigenous shrub, ord. *Ericaceæ*, flowering in July; stimulant and astringent, being used by the Indians in gout and rheumatism. **R. puncta′tum**, indigenous, has similar properties.

**Rhodogen′esis.** Reproduction of visual purple which has been deteriorated under the influence of light.

**Rhodome′la palma′ta.** Dulse; one of the algæ, eaten largely throughout the maritime countries of the north of Europe and in the Grecian Archipelago.

**Rho′dophane** (*rhodon*, rose, *phanos*, luminous). Rose-colored pigment obtained from the retina of birds.

**Rhodophylax′is** (*rhodon*, rose, *phylaxis*, protection). Power to reproduce the visual purple possessed by the epithelium of the retina.

**Rhodop′sin** (*rhodon*, rose, *ops*, eye). Purple color of the retina observed in the external segment of the rods; visual purple.

**Rhœ′a** (*rhoia*). Punica granatum.

**Rhœad′ic acid.** Coloring material discovered in red poppy petals.

**Rhœadine′.** $C_{21}H_{21}N_6O$. An alkaloid obtained from all parts of Papaver rhœas, the ripe capsules of P. somniferum, and from opium, soluble and in white prisms. *Rhœagenine* is derived from it.

**Rhœ′ados pet′ala.** Fresh petals of Papaver rhœas.

**Rhœagenine.′** See *Rhœadine*.

**Rhœ′as.** See *Papaver rhœas*.

**Rhœbde′sis** (*rhoibdeo*, to sup up). Absorption.

**Rhog′mus.** Râle.

**Rhombenceph′alon.** The part of the brain surrounding the fourth ventricle.

**Rhom′bocœle** (*rhomboid*, *koilia*, cavity). Terminal expansion of canal of spinal cord.

**Rhom′boid** (*rhombus*, an equilateral parallelogram with two obtuse and two acute angles, *eidos*, resemblance). Having the shape of a rhombus. **R. fos′sa**, fourth ventricle of the brain. **R. lig′ament**, costo-clavicular ligament. **R. mus′cle**, rhomboideus.

**Rhomboi′dal si′nus.** Fourth ventricle of the brain.

**Rhomboide′us.** A muscle situated at the posterior inferior part of the neck and at the posterior part of the back, having a rhomboidal shape, and attached, by its inner edge, to the posterior cervical ligament and to the spinous processes of the last cervical vertebræ, and of the first four or five dorsal. By its outer edge it is attached to the spinal or posterior edge of the scapula. It is divided into two fasciculi, constituting the rhomboideus major and r. minor, the latter being situated higher than the other. This muscle draws the scapula backward and upward, bringing its inferior angle nearer to the spine, and consequently depresses the anterior angle and the shoulder.

**Rhom′bo-occipita′lis.** A muscle arising from the spinal border of the scapula and inserted below the middle third of the superior curved line of the occipital bone.

**Rhon′chal** or **Rhon′chial.** Relating to a rhonchus. **R. frem′itus,** a vibration felt by the hand on the chest when there is much mucus in the bronchial tubes.

**Rhonchus,** rong′kus. Râle.

**Rhopalo′sis** (*rhopalon*, club). Plica polonica.

**Rhophalis′mus.** Priapism.

**Rho′tacism** (Greek letter *rhota*, ρ). Faulty pronunciation of the letter *r*.

**Rhox** (*rhox*, fissure). Pupil; uvea.

**Rhu′barb** (*rha*, rheum, *barbaros*, foreign). Rheum. **Chinese′ r.,** see *Rheum*. **Crime′a r.,** Rheum rhaponticum. **French r.,** Rheum rhaponticum. **In′dia r.,** see *Rheum*. **Monk's r.,** Rumex alpinus, Rumex patientia. **Pie r.,** Rheum rhaponticum. **Poor man's r.,** thalictron. **Rhapon′tic r.,** Rheum rhaponticum. **Rus′sia r.,** see *Rheum*. **Tur′key r.,** see *Rheum*. **Wild r.,** Convolvulus panduratus.

**Rhus aromat′ica.** The bark of the root of sweet sumach. **R. bel′gica,** Myrica gale. **R. copalli′na,** mountain sumach, has properties similar to those of R. glabra. **R. coria′ria,** sumach, shumach, elm-leaved sumach, ord. *Anacardiaceæ;* not poisonous; both the leaves and berries are used as astringents and tonics. **R. gla′bra** (Ph. U. S.), smooth or Pennsylvania sumach; indigenous; infusion of the fruit, which is acid and astringent, has been used as a cooling drink and as a gargle; infusion of the inner bark of the root has been recommended in mercurial ptyalism; the official preparation is *extractum rho′is glab′ræ flu′idum;* dose, ♏x–xxx (0.65–2.0); employed chiefly as a gargle. **R. meto′pium,** tree growing in tropical zone of America. **R. pu′mila,** exceedingly poisonous variety; grows in Southern U. S. **R. radi′cans,** poison vine; this plant is extremely acrid when applied to the skin, produces erysipelas and vesications, and has been used, like R. toxicodendron, in paralysis and other nervous affections. **R. semial′ta,** Chinese and Japanese tree yielding Chinese galls, which contain 70 per cent. of tannic acid. **R. succeda′nea,** see *Wax, Japan*. **R. sylves′tris,** Myrica gale. **R. toxicoden′dron** (Ph. U. S.), poison oak, the fresh leaves of which are employed in paralytic affections, eczema, erysipelas, etc.; poisonous, like R. radicans; an *extrac′tum rho′is toxicodendro′nis flui′dum* (not official) is used in doses of ♏ss–v (0.032–0.32). **R. typhi′na,** stag's horn sumach, has similar properties to Rhus glabra. **R. venena′ta,** poison sumach, and **R. pu′mila** have similar properties to R. toxicodendron. **R. ver′nix,** R. radicans.

**Rhusin′.** A preparation of Rhus glabra; dose, gr. j–ij (0.065–0.13).

**Rhynchop′rion pen′etrans.** Pulex penetrans, sand-flea, or chique.

**Rhypar′ia** (*rhypos*, dirt). Rupia. Sordes. Embarras gastrique.

**Rhypopho′bia** (*rhypos*, dirt, *phobos*, fear). Morbid dread of dirt.

**Rhyp′tic** (*rhyptikos*, adapted for cleansing). Detergent.

**Rhythm** (measured movement). Order of proportion as regards time reigning between the different movements of an organ or of the organism in health or disease.

**Rhyth′mical.** Periodical. **R. chore′a,** see *Chorea*. **R. contrac′tions of mus′cles** are those succeeding one another after regular intervals.

**Rhyth′mophone** (*rhythmos*, rhythm, *phone*, sound). Instrument for examining the beat of the heart.

**Rhyth′mus.** Rhythm.

**Rhytido′sis.** Act of wrinkling. Corrugation and subsidence of the cornea.

**Rhy′tis.** Wrinkle.

**Rib.** Costa. **False, Float′ing r.,** etc., see *Costa*.

**Rib′bon of Vicq d'Azyr′** or **Vicq d'Azyr's′ line.** Whitish streak seen microscopically on section of the cortex of the brain, especially in the region of the calcarine fissure.

**Ri′bes** (of Arab. origin). Currants. **R. glossula′ria,** R. uva crispa. **R. ni′grum,** black currant, gazel; ord. *Grossulaceæ;* black currants have been recommended in sore throat and as diuretics; the leaves have been advised for the same purpose; chiefly used as preserves. **R. officina′le,** R. rubrum. **R. ol′idum,** R. nigrum. **R. ru′brum,** red currant, of which the white is a variety. **R. u′va cris′pa,** common gooseberry. **R. vulga′ris,** R. rubrum.

**Ri′bes's gan′glion.** Small ganglion from the carotid plexus which has been described as sometimes present on the anterior communicating artery.

**Rib′grass.** Plantago lanceolata.

**Rib′wort.** Plantago virginica.

**Rice.** Oryza. **R. bod′ies,** corpora oryzoides. **Can′ada r.,** Zizania aquatica. **R. disease′,** cholera. **R. starch,** rice flour, smallest commercial starch, with polygonal granules. **R.-water dischar′ges,** the evacuations of cholera have been so termed, from their resemblance to rice-water, and in India they are called congee discharges—congee, in Hindoostanee, meaning rice-water. **Wild r.,** Zizania aquatica.

**Richet's** (re-shaze′) **fas′cia.** A fascial fold covering the remains of the umbilical vein.

**Rich′leaf.** Collinsonia canadensis.

**Rich′ter's her′nia.** Enterocele partially strangulated, so that the lumen of the intestine is partly open; parietal enterocele.

**Rich′ter-Monro′ line.** Hypothetical line between the umbilicus and the anterior superior process of the ilium.

**Rich′weed.** Actæa racemosa; Ambrosia trifida; Collinsonia canadensis; Pilea pumila.

**Ricin′.** Toxalbumin of castor-oil bean, which when administered hypodermically in dose of gr. $\frac{1}{10}$ (0.006) produces gastric and intestinal hemorrhage.

**Ricinela′idic acid.** Acid produced by saponification of ricinelaidin.

**Ricinelaidin′.** Substance resulting from acting on castor oil with peroxide of nitrogen.

**Ricini** (ris′in-i) **o′leum.** Castor oil; see *Ricinus*.

**Ric′inic.** Relating to castor beans or oil. **R. acid,** acid obtained from castor oil (oleum ricini).

**Ricinine′.** Non-purgative alkaloid in castor oil.

**Ricinoi′des.** Jatropha curcas.

**Ricino′leate of glyc′eryl.** Ricinoleic acid in combination with the base glyceryl in castor oil.

**Ricinole′ic acid.** $C_{18}H_{34}O_3$. Liquid, fatty acid made by saponification of castor oil.

**Ricinoleïn′.** A saponifiable oil like olein, one of the component parts of castor oil, stearin and palmitin being the other ingredients.

**Ricinus commu′nis,** ris′in-us (*ricinus*, a tick, which the seed resembles). Castor-oil plant, ord. *Euphorbiaceæ*. Castor seeds, whence the oil is obtained, are inodorous, of acrid and slightly sweetish taste. One or two seeds—semina cataputiæ majoris or ricini vulgaris—will act as a cathartic, but the oil is alone used. It is obtained by bruising the castor seeds, previously decorticated, and then expressing the oil without the application of heat. Recently drawn castor oil is inodorous, nearly insipid, cathartic, operating speedily, and may be used when powerfully stimulating purgatives would be injurious. Dose, ʒj–℥j (4.0–32.0). At the Cape of Good Hope the oil is obtained from Ricinus lividus. A variety of ricinus at Cape Verde is employed by the inhabitants to increase the secretion of milk, being applied in the form of poultice made with the green leaves to the mammæ, or of a strong decoction with which the mammæ and external parts of generation are washed. See *Ricinolein*. **R. liv′idus,** see *Ricinus communis*. **R. ma′jor,** Jatropha curcas. **R. mi′nor,** Jatropha manihot. **R. vir′idis,** R. communis. **R. vulga′ris,** R. communis.

**Rick.** Malleolus.

**Rick′ets.** Rachitis. **Acute′ r.**, Barlow's disease or infantile scorbutus. **Fe′tal r.**, a trophic disorder of intrauterine life. **Hemorrhag′ic r.**, Barlow's disease. **Late** or **tar′dy r.**, a disease resembling rickets occurring in adolescents. **Scur′vy r.**, Barlow's disease.

**Rick′ety.** Rachitic, affected with rickets.

**Ricord's′ chan′cre.** Initial lesion of syphilis, parchment-like in texture. **R.'s meth′od**, treatment of syphilis by the alternate exhibition, for periods of from three to six months, of mercury and iodide of potassium.

**Ric′tus** (*ringor*, *rictus*, to show the teeth). Yawning. Risus sardonicus. **R. lupi′nus** (*lupus*, wolf), fissure of the palate; see *Harelip*.

**Ri′der's bone.** Bone-like body developed in adductor muscles of the leg from saddle pressure. See *Drill bone* and *Exercise bone*. **R.'s bur′sa**, fluctuating swelling of the groin from enlarged bursa; same causation as rider's bone. **R.'s leg** or **sprain**, sprain of adductor longus muscle of the thigh, caused by a sudden twist or strain while on horseback.

**Ridge.** A crest or projecting line or border. **Bicip′ital r.**, prominent edge on either side of the bicipital groove. **Den′tal r.**, maxillary r. **Front′al r.**, frontal crest. **Gen′ital r.**, longitudinal eminence in the embryo containing the genital glands. **Glu′teal r.**, prominence in the femur for the attachment of the glutæus maximus. **Infratem′poral r.**, pterygoid r. **Max′illary r.**, a ridge of epithelium in the embryo at the part where the teeth are to be developed. **Mylohy′oid r.**, a line on the lower maxilla giving attachment to the mylohyoid muscle. **Neu′ral r.**, prominence along the medullary plates in the embryo where the spinal nerves are to develop. **Pal′atine r.**, see *Palatine*. **Pectin′eal r.**, line on the femur serving for the attachment of the pectinæus muscle. **Pec′toral r.**, see *Pectoral*. **Pter′ygoid r.**, infratemporal r. on the outer surface of the alisphenoid. **Sphenoid′al r.**, see *Crest*. **Sphenomax′illary r.**, see *Crest*. **Taste r.**, one of the rows of papillæ containing taste bulbs. **Tem′poral r.**, see *Crest*.

**Ridg′ling.** Term applied to an animal half castrated, or a sheep having only one testicle. Also, in general, a half-castrated male animal.

**Ri′ding.** Displacement of the fragments of a bone in fracture, chiefly produced by the contraction of muscles, which occasions shortening of the limb, the fractured extremities *riding* over each other instead of being end to end. **R. hag**, incubus.

**Rid′ley's si′nus.** Circular sinus.

**Rie′del's pro′cess.** A process of the liver detected in cases of cholelithiasis over the hypertrophied gallbladder.

**Rie′gel's syn′drome.** Abnormal rapidity of action of the heart complicated with asthma, or other disease resembling asthma.

**Rieux's′ her′nia.** Retrocæcal hernia.

**Rife.** Prevailing; as applied to diseases.

**Ri′ga's disease′.** Papilloma of frænum of tongue, with ulceration and with a diphtheria-like patch.

**Ri′gal's su′ture.** Twisted suture made with rubber rings.

**Rigg's disease′.** Pyorrhœa alveolaris.

**Right-hand′edness.** The condition in which the right hand is used in general with greater ease and skill than the left. By some this is considered to be due to the greater development of the left side of the brain, to the larger size of the arteries on that side, and to the left carotid being less tortuous, and therefore more direct, than the right.

**Rigid′ity** (*rigo*, to be stiff). Great stiffness of fibre or want of suppleness. The stiffness of the dead body, cadaveric rigidity, is one of the signs of the cessation of life. It may be removed, however, for a time, by the injection into the arteries of oxygenated defibrinated blood. See *Rigor mortis*.

**Ri′gor.** Coldness, rigidity, chill. Sensation of cold, with involuntary shivering or shaking of the whole body—a symptom of the onset of a fever. **R. ar′tuum**, contractura. **R. cadavero′sus**, rigor mortis. **R. congesti′vus**, congestive chill. **R. cor′poris mor′tui**, rigor mortis. **R. emortua′lis**, rigor mortis. **R. maxil′læ inferio′ris**, trismus. **R. mor′tis**, death stiffening; rigidity of limbs occurring soon after death and disappearing as decomposition sets in; see *Rigidity*. **R. nervo′rum** or **nervo′sus**, tetanus. **R. tre′mens**, paralysis agitans.

**Ri′ma.** A fissure; a cleft. The opening of the glottis. The opening of the vulva. The opening of the mouth. **R. cana′lis orbita′rii**, suborbital fissure. **R. clu′nium**, see *Nates*. **R. glot′tidis**, the opening of the glottis. **R. hel′icis**, slit occasionally found in the cartilage of the ear at the junction of the helix and crus helicis. **R. hyperglot′tica**, see *Larynx*. **R. ad infundib′ulum**, vulva cerebri. **R. laryn′gis**, rima glottidis. **R. mag′na vul′væ**, see *Rima*. **R. o′ris**, see *Rima*. **R. palpebra′rum**, see *Palpebra*. **R. puden′di**, see *Rima*. **R. respirato′ria**, space between the arytenoid cartilages posterior to their vocal processes. **R. transver′sa mag′na cer′ebri**, transverse fissure of the brain. **R. ventric′uli**, opening between the ventricle of the larynx and general laryngeal cavity. **R. voca′lis**, glottis. **R. vul′væ**, see *Rima*.

**Ri′mæ** (pl. of rima). Rhagades.

**Ri′mous** or **Rimose′** (*rima*, a cleft). Cracked or fissured.

**Rim′ula** (dim. of rima). A small fissure or cleft.

**Ri′mule.** Rimula.

**Rin′derpest** (*rinder*, cattle, *pest*, plague). Cattle-plague; the steppe disease, Russian cattle-plague, contagious typhoid fever, pestilential fever, typhus contagiosus bovum of different writers.

**Ring.** A name given to natural circular or roundish apertures, with muscular or aponeurotic edges, serving for the passage of some vessel or part—as the umbilical ring, inguinal ring, etc. **Ab′be's r.**, see *Abbe*. **Abdom′inal r.**, see *Obliquus externus abdominis*. **Arthrit′ic r.**, see *Sclerotic zone*. **Bandl's r.**, constricting ring above the internal os uteri observed during labor. **Ben′zol r.**, see *Benzol*. **R. bod′ies**, granulations arranged in the shape of a ring, figure-of-8, oval, and other forms, observed in the erythrocytes in pernicious anæmia, lead-poisoning, leukæmia, and possibly other conditions. **R. bone**, deposit of bony material about the coronet of horses' feet. **Contrac′tion r.**, Bandl's r. **Cramp r.**, see *Cramp rings*. **Cru′ral r.**, crural canal. **Fem′oral r.**, opening between Gimbernat's and Poupart's ligaments and the pubic bone. **Festooned′ r.**, tough, tendinous tracts in the heart. **Fibrocartilag′inous r.**, festooned r. **R.-fin′ger**, annular or fourth finger. **Lymphat′ic throat r.**, Waldeyer's r. **Lö′we's r.**, see *Maxwell*. **Max′well's r.**, see *Maxwell*. **Mül′ler's r.**, see *Müller*. **R. mus′cle**, circular muscular fibres of the ciliaris. **R. pes′sary**, circular pessaries made of hard or soft rubber. **Umbil′ical r.**, opening in the abdominal wall giving passage to the umbilical vessels. **Wal′deyer's r.**, see *Waldeyer*.

**Ringed hair.** Trichinosis versicolor.

**Ring′man.** Annular or fourth finger.

**Ring′worm.** Tinea trichophytina; herpes circinatus. **R. of the beard**, sycosis parasitica; tinea trichophytina. **Boat′man's r.**, see *Boatman*. **R. of the bod′y**, tinea trichophytina. **Bow′ditch Isl′and r.**, tinea. **Burmese′ r.**, tinea imbricata. **Chinese′ r.**, tinea imbricata. **Crust′ed r.**, favus. **Gi′ant r.**, see *Giant*. **Hon′eycomb r.**, favus. **In′dian r.**, tinea imbricata. **R. pow′der**, araroba. **R. of the scalp**, see *Tinea trichophytina*. **Scrof′ulous r.**, lupus erythematosus. **To′kelau r.**, tinea imbricata. **R. of tongue**, geographical tongue. **Ul′cerative r.**, herpes exedens. **Vesic′ular r.**, herpes præputii.

**Rin′mann's sign.** Thread-like cords passing in different directions from the nipple in early pregnancy, indicating a hypertrophied condition of acini of the glands.

**Rinné's′ test.** Method of examining the hearing to determine whether the conductive or perceptive mechanism is diseased, by the application of a vibrating tuning-fork over the mastoid process; just before vibrations cease it is transferred to a position opposite the meatus; the distinctness with which it is heard determines whether conduction is better by air or by bone.

**Ri′olan's arch.** Mesenteric arch connected with the transverse mesocolon. **R.'s bouquet′**, collection of muscles associated with the styloid process—the styloglossus, stylohyoid, and stylopharyngeus. **R.'s mus′cle**, certain fibres of orbicularis palpebrarum. **R.'s os′sicles**, small bones occasionally found in the suture between the occipital and temporal bones.

**Ri′o Ne′gro sarsaparil′la.** Para sarsaparilla.

**Ri′pa.** Line of reflection of the ependyma, or lining membrane of the ventricles of the brain and spinal cord, on any plexus of the brain.

**Ripault's′ sign.** Change effected in the pupil by pressure on the eye, this change remaining permanent only after death.

**Ris′agon.** Cassumuniar.

**Rish′teh.** Dracunculus.

**Risk.** Hazard, venture, degree of danger. The danger of loss assumed by the company in life insurance; applied also to the policy of insurance and to the person insured. **Substand′ard r.**, see *Substandard*. **Superstand′ard r.**, see *Superstandard*.

**Riso′rius** (*risus*, to laugh). Upper part of the platysma myoides. It arises from the parotid fascia and is inserted into the angle of the mouth. It causes certain motions of the lips in the act of laughing. **R. no′vus**, portion of the platysma myoides which passes from the cheek toward the commissure of the lips.

**Ri′sus** (*rideo*, to laugh). Laughing, laughter, laugh. Involuntary movement of the muscles of the face, and of the lips in particular, accompanied with a sonorous and interrupted expiration, commonly indicating mirth or satisfaction. **R. a′pium**, ranunculus sceleratus. **R. cani′nus**, canine laugh. **R. involunta′rius**, canine laugh. **R. sardon′icus** or **sardo′nius**, canine laugh. **R. spas′ticus**, canine laugh.

**Rit′gen's meth′od.** Introduction of fingers into the rectum to guide the head of the child in order to prevent laceration of the perineum.

**Rit′ter's disease′.** Dermatitis exfoliativa neonatorum. **R.'s fi′bre**, slight nerve-fibre in the axis of a retinal rod. **R.'s law**, at the moment of either opening or closing the electrical current the nerve is stimulated. **R.'s tet′anus**, tetanus after breaking of the electrical current.

**Rit′ter-Rol′let's phenom′enon.** Weak galvanic current flexes the foot, strong one extends it.

**Rit′ter-Val′li's law.** Division of a nerve is attended at first with increase of irritability, afterward with loss.

**Rivallie's′ caus′tic.** Solidified nitric acid. A gelatinous paste made by adding nitric acid in its highest degree of concentration to lint in an earthen vessel. Applied as a caustic, being usually left on a part for fifteen or twenty minutes, or even, as in encephaloid cancer, for twenty-four hours.

**Ri′valry.** Competition for supremacy. **R. of col′ors**, when visual fields present different colors. **R. of con′tours**, contours situated in the monocular fields in such a manner as to overlap each other in the binocular field. **R. stripe**, tremulous condition of the eyes when it is found impossible to concentrate them on one image.

**Rive′rius's draft.** Solution of sodium citrate.

**Riv′erweed.** Conferva rivalis.

**Ri′ving.** Eructation.

**Rivin′ian ducts.** Ducts of sublingual gland. **R. fora′men**, Bochdalek's canal. **R. gland**, sublingual gland. **R. lig′ament**, membrana flaccida of the tympanic membrane. **R. notch**, irregular notch at the superior edge of the sulcus tympanicus. **R. seg′ment**, R. notch.

**Rivi′nus, duct of, fora′men of**, etc. See *Rivinian*.

**Rivol′ta's disease.** Actinomycosis.

**Ri′vus lacryma′lis** (*rivus*, small stream). See *Palpebra*.

**Riz′iform.** Like rice in physical characteristics.

**Rizzo′li-Es′march opera′tion.** Operation making section of ramus of lower jaw for ankylosis.

**Roan tree.** Sorbus aucuparia.

**Rob.** This word, of Arabic extraction, means the juice of any fruit thickened to the consistence of honey by evaporation before fermentation.

**Rob′erts's differen′tial den′sity meth′od.** Take sp. gr. of urine; mix f℥iv of the urine with half a cake of yeast; warm for twenty-four hours; then estimate sp. gr. and deduct from that previously taken. Each degree of the remainder is equivalent to one grain of sugar to the fluidounce. Multiply by 0.219 to obtain the percentage. **R.'s pel′vis**, double synostotic or transversely contracted pelvis; ankylosed pelvis. **R.'s rea′gent**, for purpose of doing away with objections to the nitric acid in Heller's test for albumin add one volume of strong $HNO_3$ to five volumes of saturated and filtered solution of magnesium sulphate; perform the test in the same manner as Heller's. **R.'s test**, test for sugar; see *Fermentation test*.

**Rob′ertson's pu′pil.** Argyll-Robertson pupil; condition of myopic pupil responding to accommodation, but not to light; an early symptom of tabes.

**Robin's′ my′eloplaxes.** Osteoclasts.

**Robine′.** Poisonous alkaloid from the bark of Robinia pseudacacia.

**Robin′ia** (after the Robins, French botanists). A genus of trees, ord. *Leguminosæ*. **R. ama′ra**, plant of Cochin China; the root is bitter and has been recommended, especially in that country, in diarrhœa and dyspepsia. **R. pseudaca′cia**, false acacia, black locust, locust tree; native of America. Flowers are said to possess antispasmodic properties, and the bark of the root is considered emetic and cathartic.

**Rob′in-run′away.** Glechoma hederacea.

**Rob′in-run-the-hedge.** Galium aparine.

**Rob′in's rye.** Haircap moss; stem and leaves of Polytrichum juniperum. Powerful diuretic. **R.'s plan′tain**, Erigeron bellidifolium.

**Ro′borans** (*roboro*, to make strong). Roborant.

**Ro′borant.** Invigorating, strengthening.

**Roccel′la** or **R. tincto′ria.** Lichen roccella.

**Rochelle′ salt.** Sodium tartrate.

**Rock cress.** Aralis lyrata; supposedly diuretic and antiscorbutic. **R. fern**, Adiantum pedatum. **R. fe′ver**, Malta fever. **R. oil**, petroleum. **R. rose**, herb, Helianthemum corymbosum; used in diarrhœa, secondary syphilis, and scrofula as astringent, tonic, and alterative. **R. weed**, Geranium robertianum.

**Rock′ett.** Brassica eruca.

**Rock′y Moun′tain fe′ver.** Mountain fever.

**Rod.** An anatomical structure in the shape of a wand or straight stick. Especially one of the many structures, which, with others, called cones, make up Jacob's membrane, or the layer of rods and cones of the retina. **R. of Cor′ti**, see *Corti*. **Enam′el r.**, see *Enamel*. **R. fi′bres**, minute fibrils attached to the base of the retinal rods, and prolonged throughout the outer nuclear layers. **R. gran′ules**, granules in the outer nuclear layer of the retina, connected with the retinal rods. **R. of Hei′denhain**, one of the fibrils in endothelial cells of tubules of the kidney, running vertically to the basement membrane. **R. of Koe′nig**, see *Koenig*. **R. of ret′ina**, one of the minute cylinders placed perpendicularly upon the outer layer of the retina, except at the position of the macula lutea, forming with the cones Jacob's membrane. **R. seg′ments**, parts into which the rods of the retina are divided.

**Ro′dagen.** A preparation made from the milk of a goat from which the thyroid gland has been excised; recommended in the treatment of exophthalmic goitre.

**Rod′dikin.** Abomasus.

**Ro′den tree.** Sorbus aucuparia.

**Ro′dens.** See *Sorbus aucuparia*.

**Ro′dent** (*rodo*, to gnaw). Phagedenic. **R. can′cer** or **R. ul′cer**, see *Ulcer*.

**Rodri′guez's an′eurysm.** A form of varicose aneurysm in which the sac is in direct contact with the artery.

**Rod-wax.** Accumulations upon machinery about oil wells; it has been used in bronchial affections.

**Roe′derer's ecchymo′ses.** Bayard's ecchymoses. **R.'s obliq′uity,** flexion of the chin of child at the superior strait in labor.

**Roent′gen rays.** See *Rays.*

**Roentgenog′raphy** or **Roentgog′raphy.** Skiagraphy.

**Rog′er's disease′.** Congenital defect consisting in an abnormal communication between the ventricles of the heart. There is a systolic murmur without propagation to the vessels; there may also be a systolic purring thrill felt over the seat of the murmur; cyanosis is not present. **R.'s symp′tom,** a temperature below normal in an advanced stage of tuberculous meningitis.

**Rohe′na bark.** Swietenia.

**Ro′hun bark.** Bark of Soymida febrifuga, having tonic, astringent, and antiperiodic virtues.

**Ro′ka.** Trichilia emetica.

**Rokitans′ky's disease′.** Acute yellow atrophy of the liver. **R.'s pel′vis,** the pelvic deformity resulting from spondylolisthesis; Prague pelvis. **R.'s tu′mor,** tumor of the ovary made up of many cysts.

**Rolan′dic.** Relating to or named from Rolando. **R. an′gle,** angle formed between the fissure of Rolando and the superior edge of the cerebral hemisphere. **R. a′rea,** area including the ascending frontal and ascending parietal convolutions.

**Rolan′do's ar′ciform fi′bres.** External arcuate fibres of the medulla oblongata. **R.'s cells,** ganglion cells in R.'s gelatinous substance. **R.'s fis′sure,** transverse fissure above the fissure of Sylvius, between two superior cerebral convolutions. **R.'s funic′ulus,** lateral cuneate funiculus. **R.'s fur′row,** R.'s fissure. **R.'s gelat′inous sub′stance,** column extending from the lumbar portion of the spinal cord into the pons Varolii. **R.'s tu′bercle,** tubercle formed by the blending of the lateral crescentic portions of the gray matter of the medulla oblongata with the fibres of the restiform bodies.

**Roll cul′ture.** See *Culture.*

**Roll sul′phur.** Crude sulphur run into cylindrical moulds.

**Roll′er.** Bandage; fascia.

**Rol′ler's nu′cleus.** Nucleus of nervous matter near the hilum of the olivary body. A collection of minute ganglion cells anterior to the nucleus of the hypoglossal nerve.

**Rollet's** (rol-laze′) **chan′cre.** A mixed form of chancre.

**Rol′lett's nerve cor′puscles.** See *Golgi's corpuscles.* **R.'s sec′ondary sub′stance,** narrow belt of transparent substance situated on each side of Krause's disk.

**Ro′man.** Relating to or derived from Rome. **R. al′um,** a good variety of alum coming from Tolfa, near Rome, made from alunite. **R. cham′omile,** Anthemis nobilis. **R. cli′mate** is considered one of the best in Italy; is very still, hence a good winter climate for consumptives, admitting of open-air exercise. **R. fen′nel,** fennel fruit of large size and aromatic. **R. fe′ver,** a malignant type of malarial fever, now found only in the Campagna outside of Rome. **R. worm′wood,** absinthium.

**Rom′berg's disease′.** Progressive condition of impaired nutrition of one side of the body. **R.'s sign,** an early symptom in tabes dorsalis and other diseases, the patient not being able to stand when his eyes are shut and the feet brought together; also pain along the obturator nerve, indicating the existence of obturator hernia. **R.'s spasm,** spasm, in mastication, of muscles to which the fifth pair is distributed. **R.'s symp′tom,** R.'s sign. **R.'s trophoneuro′sis,** facial hemiatrophy.

**Rom′melaere's law.** That in carcinoma there is a regular falling off in the amount of nitrogen in the urine. **R.'s sign,** a falling off in the amount of phosphates and of sodium chloride in the urine is a diagnostic sign of a cancerous diathesis.

**Rone.** Sorbus aucuparia.

**Rongeur′** (Fr.). Bone forceps, having sharp, semicircular, concave points for cutting away the bone.

**Ron′nachs.** Triticum repens.

**Roof of the mouth.** Palate. **R. nu′cleus,** red nucleus, tegmental nucleus, Stilling's nucleus, a gray nucleus over the roof of the fourth ventricle, in the lobus centralis and lingula.

**Root.** Radix. **A′gue r.,** Aletris farinosa. **R.-ar′teries,** see *Radicular.* **Bit′ter r.,** Apocynum androsæmifolium. **Can′ada r.,** Asclepias tuberosa. **R.-canal′,** portion of pulp canal traversing the root of a tooth. **R.-cells,** cells in the roots of the spinal nerves. **Col′ic r.,** aletris. **Fe′ver-r.,** Triosteum perfoliatum. **Red r.,** celastrus; Lachnanthes tinctoria. **Rough r.,** liatris. **R. of scar′city,** Beta hybrida. **R. sheath of hair,** portion of hair follicle derived from the epidermis, being composed of outer and inner layers, corresponding, respectively, to the rete mucosum and the horny layer. **R. s. of tooth,** epithelium over the tooth root of the embryo. **Squaw r.,** Actæa racemosa. **Sweet r.,** Acorus calamus. **U′nicorn r.,** Aletris farinosa. **R. ves′sels,** see *Radicular arteries.* **White r.,** Ligusticum actæifolium. **Yel′low r.,** Jeffersonia bartoni; Xanthorhiza apiifolia. **R. zones,** the anterior include all fibres of the anterior columns of the spinal cord except those of the pyramidal tracts; the posterior zone is the fasciculus cuneatus.

**Rope′bark.** Dirca palustris.

**Rorel′la** (*ros,* dew). Drosera rotundifolia.

**Rorif′erous** (*ros,* dew, *ferro,* to carry). An epithet given to vessels pouring exhaled fluids on the surface of organs. **R. duct,** thoracic duct.

**Ros** (dew). Sperm. **R. calabri′nus,** see *Fraxinus ornus.* **R. so′lis,** Drosera rotundifolia. **R. syri′acus,** see *Fraxinus ornus.*

**Ro′sa** (rose). Erysipelas. Rose. **R. afzelia′na,** R. canina. **R. al′ba,** the white rose; ord. *Rosaceæ;* the flowers of this species possess similar but inferior qualities to those of the damask. **R. arma′ta,** R. canina. **R. astu′rica,** see *Pellagra.* **R. austri′aca,** R. gallica. **R. calyci′na,** R. canina. **R. cani′na,** dog rose, wild brier; the fruit of this variety, called heps or hips, hops, has a sourish taste and is formed into a conserve. **R. centifo′lia,** damask, pale, hundred-leaved, or cabbage rose; the petals of this rose (Ph. U. S.) have an extremely fragrant odor and subacidulous taste; they are laxative, but are scarcely used for any purposes except for the distillation of rose-water, oil of roses, attar, otto, or essence of roses, and the formation of a syrup. The official preparations are: *Aq′ua ro′sæ, a. r. for′tior,* stronger rose-water, *ol′eum r.,* and *unguen′tum aquæ rosæ.* **R. damasce′na,** R. centifolia. **R. gal′lica,** red rose; the petals of this variety (Ph. U. S.) are astringent and are used in infusion, conserve, etc. The official preparations are: *Confec′tio ro′sæ, extrac′tum r. flu′idum, mel r.,* and *syr′upus rosæ.* **R. leucan′tha,** R. alba. **R. pal′lida,** R. centifolia. **R. ru′bra,** R. gallica. **R. ru′bra vulga′ris,** R. canina. **R. sal′tans,** essera. **R. sentico′sa,** R. canina. **R. swartzia′na,** R. canina. **R. sylves′tris,** R. canina. **R. usitatis′sima,** R. alba.

**Rosa′cea.** Acne rosacea. **R. erythemato′sa,** general redness of the skin of a part. **R. hypertroph′ica,** red skin due to dilated capillaries. **R. papulo′sa et pustulo′sa,** red skin accompanied by eruption of papules and pustules.

**Rosa′go.** Nerium oleander.

**Rosa′lia.** Scarlatina.

**Rosanilin′.** Fuchsin. Derivative of anilin, employed as a parasiticide and in the preparation of staining fluids.

**Ro′sary, rachit′ic.** Row of elevations, like beads, on the cartilages of the ribs in rickets.

**Rose.** Erysipelas. Rosa. **R. ap′ple,** fruit of Eugenia jambos. **R. bay,** rhododendron. **Cab′bage r.,** Rosa centifolia. **R. cam′pion,** Lychnis githago. **R. catarrh′,** rose fever, June cold, an affection analogous to hay asthma, but occurring earlier in the summer. **R. ce′rate,** white wax, 50 parts; oil of almond, 100 parts; melt together; add carmine, 0.5 part; oil of rose, 0.5 part. **Christ′mas r.,** Helleborus niger. **R. cold,** r. fever. **Cop′per r.,** Papaver rhœas. **Corn r.,** Papaver rhœas. **Dam′ask r.,** Rosa centifolia. **Dog r.,** Rosa canina. **R. drop,** gutta rosea. **R. gar′land, rachit′ic,** see *Rosary.* **Hun′dred-leaved r.,** Rosa centifolia. **R.-laur′el,** Kalmia centifolia; calico bush. **Marine′ r.,** rosmarinus. **Pale r.,** Rosa centifolia. **R. rash,** roseola; erythema; rötheln; erysipelas. **Red r.,** Rosa gallica. **Rock r.,** Helianthemum corymbosum. **R. spots,** see *Spots, red.* **R. wa′ter,** aqua rosæ. **White r.,** Rosa alba. **R. wil′low,** swamp dogwood; see *Cornus sericea.*

**Rose′balm, scar′let.** Monarda coccinea.

**Rose′bay, Amer′ican.** Rhododendron maximum.

**Rosein′.** Fuchsin.

**Roselli′na.** Roseola.

**Rose′mary.** Rosmarinus. **Marsh r.,** Statice limonium and S. caroliniana. **Wild r.,** Eriocephalus umbellulatus.

**Ro′senbach's disease′.** Probably same as Heberden's nodes, being a nodular, painful affection of the last phalanges on the dorsal surface. **R.'s putrefac′tion bacil′lus,** Bacillus saprogenes. **R.'s sign,** absence of abdominal reflex in inflammation of the bowels; tremulous condition of the eyelids and inability to close them perfectly, a condition met with in neurasthenia. **R.'s syn′drome,** condition characterized by abnormal rapidity of the pulse and various attacks of stomach, heart, and lung trouble.

**Ro′senbach-Se′mon law.** See *Semon's law.*

**Ro′senberg's meth′od.** The easier production of the knee-jerk while the patient is induced to read aloud some difficult matter, or otherwise to concentrate his mind.

**Ro′senheim's sign.** Friction murmur heard on auscultation over the left hypochondrium, when a patient with fibrous perigastritis is thus examined.

**Ros′enmüller's body.** Parovarium. **R.'s cav′ity,** space between the posterior wall of the pharynx and the posterior fold of the pharyngeal orifice of the Eustachian tube. **R.'s fold,** semilunar duplication of mucous membrane in the lacrymal sac. **R.'s fos′sa,** R.'s cavity. **R.'s gland,** lower part of the lacrymal gland; also a lymphatic gland in the femoral ring. **R.'s or′gan,** parovarium. **R.'s valve,** a crescentic fold of mucous membrane in the lacrymal duct.

**Ro′senthal's canal′.** Ganglionic canal; spiral canal of modiolus. **R.'s hyperac′id vom′iting,** gastronyxis. **R.'s sign,** pains caused in spondylitis when an electrical current is applied to the sides of the vertebral column. **R.'s vein,** basilar vein.

**Rose′ola.** Rose rash. An efflorescence in blushing patches, gradually deepening to rose color, mostly circular or oval; often alternately fading and reviving; sometimes with colorless nucleus; chiefly on the cheeks, neck, or arms. It is frequently found, as a symptom, in dentition, dyspepsia, rheumatism, etc., but is of no consequence. *Infantile rose, summer rose,* etc., are all forms of rose rash. **R. acno′sa,** gutta rosea. **R. æsti′va,** the form of the affection which prevails in summer. The eruption is of darker color, and is attended with more itching; occurring in autumn it is called *roseola autumnalis.* **R. annula′ta,** characterized by patches in the form of rose-colored rays, with central areas of the color of the skin. **R. autumna′lis,** see *Roseola æstiva.* **R. choler′ica,** erythema papulatum; an eruption occasionally seen in cholera. **Epidem′ic r.,** rubella. **R. febri′lis,** r. miliaris. **R. fico′sa,** sycosis. **R. furfura′cea,** pityriasis rosea. **R. infanti′lis,** see *Roseola.* **R. milia′ris,** r. febrilis; a rosy blush accompanying miliary fever. **R. puncta′ta,** roseola distributed as a punctate eruption. **R. rheumat′ica,** rose rash accompanying rheumatism and gout. **R. scarlatinifor′mis,** erythema scarlatiniforme. **R. symptomat′ica,** see *Roseola.* **Syphilit′ic r.,** macular erythema, in rose-colored spots, manifesting itself in the early part of the second stage of syphilis. **R. typho′sa,** red spots. **R. vaccin′ia,** an eruption coexistent with the formation of the vaccine vesicle, and commencing around and about the seat of the vaccination; vaccine lichen. **R. variolo′sa,** an eruption often preceding that of smallpox, termed also erythema variolosum.

**Rose′pink.** Chironia angularis.

**Ro′ser's posi′tion.** Position of body having the head hanging over the end of the table.

**Ro′ser-Nélaton′ line.** See *Nélaton's line.*

**Ro′ser-Praun sign.** Lack of pulsations of the dura mater in abscesses, tumors, etc., of the brain.

**Rosette′.** See *Karyokinesis.*

**Rose′wood.** Rhodium lignum.

**Rose′wort.** Rhodia.

**Ros′in.** Colophony, resin; see *Pinus sylvestris.* **R. weed,** Silphium laciniatum.

**Rosmari′nus** (*ros,* dew, *marinus,* marine). Rosemary; ord. *Labiatæ.* The leaves of this plant have a fragrant, grateful smell, and an aromatic, warm, bitterish taste, depending on an essential oil combined with camphor. Rosemary has been recommended in nervous headaches in the form of infusion. It is rarely used, except for its odor. Its oil —*oleum rosmarini* (Ph. U. S. and Br.)—is official. From two to six or ten drops are given in nervous complaints, rubbed up with sugar. **R. horten′sis, latifo′lius,** or **officina′lis,** rosmarinus. **R. stœ′chadis fa′cie,** Teucrium creticum. **R. sylves′tris,** Ledum sylvestre.

**Rosol′ic acid.** $C_{20}H_{16}O_3$. A phenol acid derivative, made by the action of nitric acid upon rosanilin. Insoluble in water, soluble in alcohol or ether; crystalline in form; used as a dye, especially for histological purposes.

**Ross′bach's disease′.** Gastroxynsis; abnormal acidity of the contents of the stomach.

**Rostel′lum** (dim. of rostrum). A prominence on the head of Tænia solium.

**Ros′trum** (a beak). A name given to several anatomical projections on account of their resemblance to the beak of a bird. **R. cor′poris callo′si,** the anterior inferior extremity of the corpus callosum. **R. exter′num,** olecranon. **R. porci′num,** acromion. **R. poste′rius,** olecranon. **R. sphenoida′le,** azygous process of sphenoid bone.

**Ro′sy Pet′ty.** Erigeron bellidifolium. **R. bush,** Spiræa tomentosa. **R. drop,** gutta rosea. **R. whelk,** gutta rosea.

**Rot.** Wasting disease in sheep, occasionally affecting man, involving the lungs; caused by the presence of Distoma hepaticum. Decay, decomposition. **Grind′ers′ r.,** grinders' asthma.

**Ro′tacism.** Rhotacism.

**Ro′tang palm.** The source of dragon's blood.

**Rota′tio** (*roto,* to turn round). Rotation; diarthrosis. **R. spi′næ,** revolving spine; congenital disposition in some animals, as the calf, similar to the twist of the spinal column seen in lateral curvature.

**Rota′tion.** The action of turning of a limb upon its axis. **Cen′tre of r.,** point of intersection of axes, when an organ is capable of rotation about several different axes. **R. joint,** lateral ginglymus. **Specif′ic r.,** arc through which the plane of polarization is rotated by any body. **R. stage of la′bor,** so called because of the rotation of the presenting portion of the fœtus; it is internal when in the parturient canal; external after the birth of the presenting portion of the child.

**Rota′tor** (*roto,* to turn round). Name given to several muscles turning the parts to which they are attached upon their axes; such as the oblique muscles of the eye, the pronators, supinators, etc. Trochanter.

**Rotato′res** (pl. of rotator) **dor′si.** Eleven small muscles on each side of the dorsal vertebræ, arising from the point or upper edge of each transverse process, passing to the lower edge of the arch of the vertebra above as far as the base of the transverse process, their action rotating the individual vertebræ on each other. **R. fem′oris,** obturator muscles. **R. oc′uli,** oblique muscles of the eye. **R. spi′næ,** r. dorsi.

**Rotch's sign.** In pericardial effusion, dulness on percussion over the right fifth intercostal space.

**Rot′coll.** Cochlearia armoracia.

**Roth's disease′.** See *Bernhardt's parœsthesia.* **R.'s spots,** in septic inflammation of the retina, white spots like those of albuminuric retinitis. **R.'s symp′tom-com′plex,** R.'s disease. **R.'s vas aber′rans,** occasional diverticulum of the central portion of the rete testis.

**Röth′eln.** Rubella.

**Rotoïn′.** A combination of bases derived from Scopolia japonica.

**Rot′tlera schim′peri.** A large tree of Abyssinia, ord. *Euphorbiaceæ,* the bark of which, called cortex musenæ, formerly known as cortex brayeræ anthelminticæ, mixed with koosso, is used in that country against tapeworm. **R. tincto′ria,** a euphorbiaceous plant of India; a powder is attached to the fruit-capsule of this plant, which is brushed off and collected when the fruit is dry; it is called *kamala* (Ph. U. S.), which see. It is used in Northern India as a vermifuge for dogs, proving effectual also against tapeworm in man. The purgative dose is two or three drachms. Crystals of what has been called *rottlerin′* are deposited from an ethereal extract of rottlera.

**Rot′ula** (*rota,* wheel). Patella. Trochiscus.

**Rot′ulad.** Toward the patella.

**Rot′ular** (*rotula*). Relating or appertaining to the patella. **R. as′pect,** an aspect toward the side on which the patella is situated.

**Rotu′lian.** Relating to the rotula or patella.

**Rotun′dus** (*rota,* wheel). Round.

**Rouge's opera′tion.** Operation for exposure of the nares for removal of tumors or dead bone. The upper lip and lower end of the nose are cut loose from the upper jaw and the flap is displaced upward.

**Rouget** (roo-zhā′) **de porc** (Fr.). Swine erysipelas.

**Rouget's** (roo-zhaze′) **bulb.** Bulb of the ovary; a plexus of veins on the surface of that organ. **R.'s moto′rial end-plates,** minute cells forming part of endings of motor nerves. **R.'s mus′cle,** Müller's muscle, the circular part of the ciliary muscle.

**Rough′root.** Liatris.

**Rougnon′-Heb′erden's disease′.** Angina pectoris.

**Rouleau,** roo-lo′ (Fr.). A collection of red blood corpuscles having the appearance of a roll of coins.

**Round** ([Lat.] *rotundus*). Anatomists have given this name to many structures whose fibres are collected in round fasciculi. See *Teres.* **R. car′damoms,** amomum cardamomum, native of East Indies. **R. fora′men,** a foramen of the sphenoid bone, a little behind the *foramen lacerum superius,* which gives passage to the second branch of the fifth pair of nerves, called superior maxillary. **R. lig′aments of the u′terus,** two cords arising from the lateral and superior parts of the uterus, whence they proceed toward the abdominal rings, which they pass through, terminating by vanishing in the areolar tissue of the groins, mons veneris, and labia majora. These cords are whitish, flattened, and narrower in the middle than at the extremities. **R. ul′cer,** a clean-cut ulcer, often perforating, of the stomach or duodenum; also a malignant ulcer of the uterus. **R. win′dow,** fenestra rotunda. **R. worm,** Ascaris lumbricoides.

**Round′heart.** Thaspium atropurpureum.

**Round′tree.** Sorbus aucuparia.

**Roup.** Infectious throat disease of fowls.

**Rousselot's** (roo-sel-oze′) **caus′tic.** A caustic of arsenic and red sulphide of mercury.

**Roux's amputa′tion.** Amputation of the whole foot, tibia, and fibula, treated as in Syme's operation, with an internal flap.

**Rovi′ghi's sign.** Hydatid fremitus or resonance, heard in percussion of a liver affected with hydatid cysts.

**Ro′ving** (wandering). Delirium.

**Row′an tree.** Sorbus aucuparia.

**Roy′al stitch.** Ligature about the neck of a hernial sac. **R. touch,** see *Touch.*

**Rub′ber.** Caoutchouc. A masseur. **R. dam,** rubber tissue employed in dentistry to keep the saliva away from the field of operation. **R. tis′sue,** thin sheet of soft rubber employed in surgery and dentistry. **Hard r.,** ebonite, hardened caoutchouc. **Soft r.,** flexible caoutchouc.

**Rub′bing.** Friction; massage. **R. sound,** bruit de frottement.

**Rube′do** (*rubeo,* to be red). A diffused redness on any part of the skin, like that seen in blushing.

**Rubefa′cient** (*rubeo,* to be red, *facio,* to make). Producing redness. An agent which produces redness of the skin; a gentle local irritant.

**Rubel′la** (*rubeo,* to be red). Bastard or false, French, or German measles, rötheln. A form of eruption resembling measles, sometimes not unlike scarlatina, yet neither, as is shown by an attack affording no protection against either. The eruption is dusky red, uniformly distributed, without catarrhal symptoms; it is contagious, but of very favorable prognosis.

**Rube′ola** (*rubeo,* to be red). Measles, morbilli. One of the major exanthemata; generally affecting individuals but once, and produced by specific contagion. The rash usually appears on the fourth, but sometimes on the third, fifth, or sixth day of a febrile disorder; after continuing four days it gradually declines with the fever. The disease usually commences from ten to fourteen days after the contagion has been received. The eruption first shows itself in distinct, red, nearly circular spots, somewhat less than the ordinary areolæ of flea-bites. As these increase in number they coalesce, forming small patches of an irregular figure, but approaching nearest to that of semicircles or crescents; these patches are intermixed with single circular dots, the interstices being of the natural color of the skin. On the face they are slightly raised, so as to give the sensation of inequality of surface to the finger passed over the cuticle. The disappearance of the eruption is followed by desquamation of the cuticle. Measles is not dangerous of itself, but is liable to be complicated by pneumonia in winter and dysentery in summer, which are apt to come on at the time of or soon after the disappearance of the eruption. A form of rubeola called *r. spuria* or *r. sine catarrho* has been described in which the rash runs its regular course, with little fever or catarrhal affection. *R. nigra* or black measles is a name given to an unusual appearance about the seventh or eighth day, when the rash becomes suddenly livid, with a mixture of yellow, due to hemorrhage in the skin. In the uncomplicated forms of measles but little treatment is necessary. Epidemic measles has occasionally prevailed largely in armies, when it has been called camp measles. **R. gal′lica,** rubella. **R. german′ica,** rubella. **R. no′tha,** rubella. **R. spu′ria,** see *Rubeola* and *Rubella.*

**Rubes′cent.** Becoming red.

**Ru′bia** (*ruber,* red). A genus of plants, ord. *Rubiaceæ.* Madder. The root has a bitterish, somewhat austere taste, and a slight, not agreeable smell. It was formerly considered deobstruent, detergent, and diuretic.

**Rubid′ium.** Uncommon metal, resembling potassium chemically and physically; symbol, Rb. **R. ammo′nium bro′mide,** $RbBr(NH_4Br)_3$; white, soluble powder, suggested as a substitute for potassium bromide in epilepsy; sedative and hypnotic. **R. bro′mide** has been employed in heart affections and when bromides are indicated. **R. chlo′ride** lowers the pulse-rate, increases arterial tension. **R. i′odide,** white, soluble crystals; employed in cutaneous disease and ophthalmic practice; dose, gr. ij (0.13). **R. tar′trate,** useful in nervous palpitation of the heart; dose, gr. iij–v (0.2–0.32).

**Rubiginous,** ru-bij′in-us (*rubigo,* rust). Rusty. Having a rusty color. Epithet given to the sputa in certain cases of pneumonia.

**Rubijervin′.** A principle, traces of which are found in veratrum viride.

**Rubin′.** Fuchsin.

**Rubi′nus ve′rus** (*ruber*, red). Anthrax.

**Ru′bor** (redness). Rubedo.

**Rubri′ca fabri′lis.** Red, heavy, earthy matter, formerly employed for making drying powders; red chalk. **R. sinop′ica**, a heavy, compact, reddish earth from Sinope, formerly used in diarrhœa.

**Rubrin′** (*ruber*, red). Hæmatin.

**Ru′brum.** The red nucleus.

**Ru′bus** (*ruber*, red). The pharmacopœial name (Ph. U. S.) of the bark of the root of Rubus canadensis, R. villosus, and R. trivialis, the blackberry; used in diarrhœa, especially of children, in doses of ʒss–j (2.0–4.0) in decoction. The official preparations are: *Extrac′tum ru′bi flu′idum*, dose, ʒss–j (2.0–4.0); and *syr′upus r.*, dose, ʒj–ij (4.0–8.0). Also genus of plants, ord. *Rosaceæ*. **R. affi′nis**, R. fruticosus. **R. arc′ticus**, shrubby strawberry; fruit is antiseptic, refrigerant, and antiscorbutic. **R. ba′tus** or **R. cæ′sius**, dewberry plant; fruit resembles the blackberry in appearance and properties; bark of the root of American dewberry or low blackberry is astringent. **R. canaden′sis**, see *R. cæsius*. **R. chamæmo′rus**, cloudberry tree, cloudberries, knotberries; the ripe fruit is sometimes prepared as a jam, and used in fevers, etc., to allay thirst. It has been much extolled as an antiscorbutic. **R. flagella′ris**, see *R. cæsius*. **R. frambœsia′nus**, R. idæus. **R. frondo′sus**, R. fruticosus. **R. frutico′sus**, common bramble, which affords blackberries, brambleberries; the berries are eaten as a summer fruit; the bark of the root of the American blackberry, high or standing blackberry, hairy American bramble, is astringent, having been used in the last stages of dysentery and in cholera infantum. **R. idæ′us**, raspberry; *syr′upus ru′bi idæ′i* is official in the Ph. U. S. **R. ni′ger**, R. fruticosus. **R. occidenta′lis**, see *R. strigosus*. **R. panicula′tus**, R. fruticosus. **R. procum′bens**, see *R. cæsius*. **R. strigo′sus**, wild red raspberry of the United States; leaves are a mild astringent, like those of R. occidentalis, black raspberry. **R. trivia′lis**, see *Rubus cæsius*. **R. vulga′ris**, R. fruticosus.

**Ruck′ing** (*ructus*). Eructation.

**Ructa′men** (*ructo*, to belch). Eructation.

**Ruc′tus.** Eructation. **R. ac′idus**, acid eructation.

**Rudbeck′ia lacinia′ta** (after the Rudbecks, of Upsal). Coneflower, thimbleweed; indigenous plant, ord. *Compositæ*. Diuretic; has been given in nephritic affections.

**Rud′dle, hard.** Rubrica fabrilis.

**Rudimen′tal** or **Rudimen′tary** (*rudis*, the first beginning). Slightly developed.

**Rudol′phia frondo′sa** (after C. A. Rudolphia, a botanist of Jena). Butea frondosa.

**Ruffi′ni's cor′puscles** or **end-organs.** Corpuscles of nerve-matter and fibrous tissue in the skin accompanying Pacinian corpuscles.

**Ru′fus's pills.** Pills of aloes and myrrh.

**Ru′gæ** (pl. of ruga). Wrinkles. Term especially applied to folds in the mucous membrane of the stomach and vagina; also to ridges on bones for insertion of muscles and ligaments. **Pal′atal r.**, serial elevations occupying the anterior portion of the hard palate. **R. pennifor′mes**, palmæ uteri plicatæ.

**Ru′gose** (*ruga*, a wrinkle). Wrinkled.

**Rugos′ity.** Fold, wrinkle, or roughness.

**Ru′gous.** Wrinkled.

**Ruhm′korff coil.** Powerful induction coil.

**Rui′zia fra′grans.** Species of Pneumus boldus, ord. *Monimiaceæ*. Evergreen shrub, native of Chile. Wood is used to make charcoal, and the bark for tanning purposes.

**Rum.** Spirit distilled from sugar or molasses. **Bay r.**, spiritus myrciæ. **R. blos′som**, acne rosacea. **R. buds**, gutta rosea. **R. cher′ry**, Prunus virginiana; choke-cherry. **Cher′ry r.**, rum in which choke-cherries have been soaking; somewhat astringent.

**Ru′ma.** Mamma.

**Ru′men.** Paunch of animals.

**Rumenot′omy.** Operation of opening the rumen or paunch of animals.

**Ru′mex.** (Ph. U. S.) The root of R. crispus, yellow dock, and other species of rumex; an astringent cholagogue and tonic. The official preparation is the *extrac′tum ru′micis flu′idum;* dose, ʒss–j (2.0–4.0). **R. acetosel′la**, sheep sorrel, field sorrel. **R. aceto′sus**, sour dock, common sorrel, ord. *Polygonaceæ;* leaves are sour, being used in cookery and also as a refrigerant. **R. acu′tus**, sharp-pointed wild dock; decoction of the root has long been used in cutaneous affections; sometimes employed for the cure of the itch. **R. ætnen′sis**, R. scutatus. **R. alpi′nus**, the systematic name of the plant that affords monk's rhubarb; see *Rumex patientia*. **R. aquat′icus**, Rumex hydrolapathum. **R. britan′nica**, Rumex hydrolapathum. **R. confer′tus**, R. patientia. **R. cris′pus**, native of Europe, but common in America; see *Rumex obtusifolius*. **R. dig′ynus**, Oxyria reniformis. **R. gigan′tea**, vegetable mercury, mudar, muddar, mudarrh; bark of the root has a reputation in the East Indies for the treatment of leprosy, elephantiasis, etc. **R. glau′cus**, R. scutatus. **R. hasta′tus**, R. scutatus. **R. hastifo′lius**, R. scutatus. **R. hydrolap′athum**, water dock; the leaves of this plant are subacid and said to be laxative; the root has been used as a tonic, astringent, and antiscorbutic, having also been employed externally in some cutaneous affections. **R. interme′dius**, R. acetosus. **R. obtusifo′lius**, blunt-leaved dock, bitter dock; root of this, as well as of R. crispus, curled or sour or yellow dock—rumex (Ph. U. S.)—has similar virtues to those of the other species, both being used in decoction in the same cases as sarsaparilla. **R. oxyo′tus**, R. scutatus. **R. paludo′sus**, R. acutus. **R. patien′tia**, patientia, monk's rhubarb; this root is supposed to possess the virtues of rhubarb, but in an inferior degree. **R. pusil′lus**, R. acutus. **R. sanguin′eus**, bloody dock or bloody-veined dock; root has an austere, astringent taste, and has been employed in dysentery. **R. scuta′tus**, Roman or garden sorrel, green sauce, French sorrel; virtues the same as those of the common sorrel. **R. tubero′sus**, R. acetosus.

**Rumicin′.** Chrysophanic acid.

**Rumin′.** Alcoholic extract of root of Rumex crispus, yellow dock. Alterative and astringent.

**Rumina′tion** (*ruminatio*, chewing of the cud). Function peculiar to ruminating animals, by which the food they have swallowed is regurgitated to be chewed a second time. An analogous phenomenon is sometimes seen in man.

**Ru′mis.** Mamma.

**Rum′met.** Pityriasis.

**Rump.** The crupper; the region of the coccyx; the buttocks. **R. bone**, coccyx.

**Rumpf's sign** or **symp′tom.** Temporary acceleration of pulse in neurasthenia on very slight provocation. Twitching of small fibres of muscles in neuroses of traumatic origin.

**Run′around.** Paronychia.

**Run′ches.** Sinapis arvensis.

**Ru′neberg's type.** A form of pernicious anæmia in which there are remissions.

**Run′ning.** Rapid progression by leaps to transport the body from one point to another. Pathologically, a discharge of pus.

**Run′round.** See *Paronychia*.

**Ru′pes** (cliffs). Lips of the vulva. See *Lip*.

**Ru′pia** (*rhypos*, filth). An eruption of large, flattish blebs, which contain a fluid—at first serous, afterward puriform, and often bloody—which rapidly concretes into crusts, beneath which are ulcers of variable depths. If the spots are of inconsiderable size, it is called rupia simplex; if the crusts are large and prominent, rupia prominens. **R. cachec′tica**, Pompholyx epinyctis. **R. escharot′ica**, known in Ireland under the names white blisters, eating hives, and burnt holes; an affection which bears a close similarity to pemphigus, particularly in the absence of a thick, rugous crust, while in its chief feature, that of ulceration, it evidently belongs to rupia. **R. prom′inens,** see *Rupia*. **R. sim′plex,** see *Rupia*. **R. syphilit′ica,** a term used to designate the thickly stratified crusts of flat, pustular syphilitic skin lesions.

**Ru′pial.** Appertaining or relating to rupia.

**Rupopho′bia** (more correctly, rhypophobia). Morbid dread of dirt or filth.

**Ruptibil′itas** (*rumpo*, to break, *habilis*, able). Fragility.

**Ruptil′itas.** Fragility.

**Rup′tio** (*rumpo*, to break). Rupture of a vessel or organ.

**Ruptu′ra** (*rumpo*, to break). Hernia. Laceration. Rupture of a vessel or organ.

**Rup′ture** (*rumpo*, to break or burst). Hernia. Tear or break. **R. of the groin,** bubonocele. **R. of the heart,** cardiorrhexis. **R. herb** or **wort,** Herniaria glabra.

**Rup′tured.** See *Hernial*.

**Rusco′ni's a′nus.** Blastopore or orifice of the blastula.

**Rus′cus.** Wild myrtle, centromyrine, butcher's broom, ord. *Liliaceæ;* root has been recommended as an aperient and diuretic. **R. aculea′tus,** European shrub, butcher's broom, knee holly; the root possesses diuretic virtues. **R. hypoglos′sum,** formerly used against relaxed uvula.

**Rush, sweet.** Acorus calamus; Juncus odoratus. **U′terine r.,** the placental bruit.

**Rus′ma.** See *Orpiment*.

**Ru′sot.** East Indian name of Berberis aristata.

**Rus′sell's bod′ies.** Fuchsin bodies, noticed in carcinoma and diseases affecting the mucous membrane of the nose and stomach.

**Rus′sian.** Relating to or derived from Russia. **R. cas′tor,** kind of castor gotten from the Russian beaver; is reputed better than the Canadian variety. **R. i′singlass,** official isinglass. **R. lic′orice root,** radix liquiritiæ mundata; more bitter than Spanish licorice. **R. mus′tard,** the seeds of Sinapis juncea, grown in south of Russia. **R. rhu′barb,** Chinese rhubarb, formerly taken overland into Russia and exported thence.

**Rust.** Hydrates, carbonates, and oxides which collect on metallic surfaces. Species of uredo growing on the stalks of several cereals.

**Rust's disease′.** Tuberculous inflammation of the two upper cervical vertebræ. **R.'s symp′tom,** in caries or cancer of the upper cervical vertebræ, the patient, whenever he changes his position, rests his head on his hand.

**Rus′wut.** See *Oxyacantha galeni*.

**Rut.** Heat in animals.

**Ru′ta.** Common rue; ord. *Rutaceæ*. The plant has a strong, disagreeable odor, and bitter, pungent taste. It is so acrid as to blister the skin. Its properties are reputedly tonic, stimulant, antispasmodic, and emmenagogue. The leaves were formerly official in the Ph. U. S. *Oleum rutæ*, distilled oil of rue, is antispasmodic; externally, rubefacient; dose, gtt. ij–vj (0.13–0.39). **R. al′tera,** ruta. **R. capra′ria,** Galega officinalis. **R. grave′olens,** ruta. **R. horten′sis,** ruta. **R. mura′ria,** Asplenium ruta muraria.

**Ruta′ceum** (*ruta*). Vinegar of rue.

**Ruth′erford's solu′tion.** Solution for hardening and decalcifying specimens of tissues; chromic acid 1 gm., water 200 c.c., with 2 c.c. of nitric acid.

**Ru′tic acid.** Capric acid. $C_{10}H_{20}O_2$. A fatty acid derived from ruta. The salts formed by it are called *rutates*.

**Rutido′ma** or **Rutido′sis** (*rhytidoo*, to wrinkle). Act of wrinkling. Corrugation and subsidence of the cornea.

**Rutilin′.** Resinoid substance created by the chemical reaction between sulphuric acid and salicin.

**Rutin′.** Glyceryl rutate. Obtained from cocoanut oil. $C_{25}H_{28}O_{15}$. Also a glucoside from ruta graveolens, or rue.

**Rut′ting.** Sexual excitement in female animals at time of rupture of the ovisacs.

**Ruysch's** (Dutch anatomist, 1638–1731) **glom′erules.** Malpighian corpuscles. **R.'s mem′brane,** R.'s tunic. **R.'s tube,** small cavity in nasal septum of fœtus, homologue of Jacobson's organ. **R.'s tu′nic,** the internal layer of the choroid; also a layer of areolar tissue beneath the peritoneal coat of the stomach. **R.'s u′terine mus′cle,** fibres at the fundus, which, according to R., have an independent action.

**Rye.** Secale. **Horned r.,** ergot. **Rob′in's r.,** Polytrichum juniperinum. **Spurred r.,** ergot.

**Rytido′sis.** Rutidosis.

# S.

**S.** Symbol for sulphur; abbrev. for left. **S. roma'num** (Roman S), sigmoid flexure.

**Sabadil'la.** (Ph. Br.) Dried ripe seeds of Schœnocaulon officinale. Veratrum sabadilla. See *Veratrina.*

**Sabadilline'.** $C_{21}H_{27}NO_7$. Alkaloid from sabadilla, but has little therapeutic significance or use.

**Sa'bal serrula'ta.** Saw palmetto. Grows in the Southern States; sedative, diuretic, expectorant, and nutritive. Given in laryngeal and bronchial troubles, urinary disorders, asthma, ozæna, etc.

**Sabatrine'.** $C_{102}H_{86}N_2O_{34}$. An alkaloid derived from sabadilla.

**Sabbat'ia** (after Sabbati, an Italian botanist). Chironia angularis. **S. angula'ris,** Chironia angularis. **S. elliot'ii,** quinine flower; plant of the order *Gentianaceæ,* whose habitat is Florida; flower is antiperiodic.

**Sabbatin'.** Glucoside from Sabbatia elliotii. Antiperiodic and antipyretic.

**Sabi'na.** (Ph. U. S.) Savine. Tops of Juniperus sabina, stimulant emmenagogue and abortive; dose, gr. v–xv (0.32–1.0). The official preparations are: *Extrac'tum sabi'næ flu'idum;* dose, ♏v–xv (0.32–1.0). *Ol'eum s.;* dose, ♏v–x (0.32–0.65). See also *Juniperus sabina.*

**Sab'ine.** Juniperus sabina.

**Sabu'cus.** Sambucus.

**Sab'ulous** (*sabulum,* sand). Sandy.

**Sab'ulum cona'rii.** See *Pineal gland.*

**Sabur'ra** (coarse sand or ballast). Sordes. Foulness of the stomach from the retention of undigested and decomposing matters in the stomach. **S. vermino'sa,** helminthiasis.

**Sabur'ral.** Relating to saburra. **S. fe'ver,** fever with much gastric disorder, coated tongue, and sordes.

**Saburra'tio.** Arenation.

**Sac.** A bag or pouch. **Air s.,** pulmonary vesicle. **Bro'ca's s.,** pudendal s. **Den'tal s.,** part of the dental groove investing the papillæ and teeth before eruption. **Gesta'tion s.,** the bag enclosing the fœtus in extra-uterine pregnancy. **Her'nial s.,** an envelope or pouch, formed by the serous membrane of the cavity, whence the viscus has escaped. We distinguish, in a hernial sac, its orifice or the opening by which it communicates with the great cavity lined by the serous membrane; its cervix or neck, the narrow portion on the outside of the orifice, where strangulation sometimes occurs; the body, which is the round, prominent part; and the fundus or bottom, the part opposite to the orifice. **Hil'ton's s.,** see *Hilton.* **Lac'rymal s.,** see *Lacrymal puncta.* **S. of the omen'tum,** see *Epiploon, gastrohepatic.* **Peritone'al s.,** one of two cavities, the greater and lesser, communicating by the foramen of Winslow, developed from original right and left symmetrical cavities. **Puden'dal s.,** Broca's s., an elastic sac in each labium majus, filled with fat and connective tissue. **Se'rous s.,** the shut cavity formed by any serous membrane, as the pleura or peritoneum. **Yolk s.,** umbilical vesicle.

**Sac'cate** or **Sac'cated** (*saccus,* a sac). Encysted. Also pouched, as the colon. *Sacculated,* a diminutive of saccated.

**Sac'charated** (*saccharum,* sugar). Made from or containing sugar. **S. car'bonate of iron,** a mixture of ferric oxide, ferrous carbonate, and sugar. **S. fer'rous i'odide,** consisting of ferrous iodide and sugar of milk, which prevents oxidation of the iron salt. **S. iron,** reddish-brown mixture of ferric hydrate and sugar, soluble in water. **S. pep'sin,** consisting of pepsin and sugar of milk.

**Saccharephidro'sis.** Sweet perspiration, a form of hyperidrosis.

**Sac'chari fæx** (dregs of sugar). Molasses.

**Sac'charic acid.** $C_6H_{10}O_8$. Acid made by action of nitric acid upon sugar. It is colorless, amorphous, and deliquescent.

**Sac'charide.** A group of carbohydrates, including the sugars, such as monosaccharide, disaccharide, polysaccharide, and other saccharides. See *Carbohydrate.*

**Saccharif'erous** (*saccharum,* sugar, *fero,* to carry). Consisting of or containing sugar.

**Saccharifica'tion** (*saccharum,* sugar, *facio,* to make). Process of conversion of starch into sugar.

**Saccharim'eter.** An apparatus to determine the quality or quantity of sugar. Polarimeter showing the amount of rotation of a beam of polarized light transmitted through a solution of sugar. Hydrometer, graduated to indicate the strength of a saccharine solution.

**Saccharin'.** Orthosulphamidobenzoic anhydride; sulphinide of benzoic acid. White, crystalline powder with a very sweet taste, derived from coal-tar; nearly three hundred times sweeter than sugar. Used in diabetes, cystitis, urethritis, and gastrohepatic disorders; antiseptic. **Sol'uble s.,** a mixture of aqueous solution of saccharin neutralized with sodium bicarbonate.

**Sac'charine.** Of the nature of or containing sugar.

**Sac'charinol** or **Sac'charinose.** Saccharin.

**Saccharo-.** Prefix signifying sugar.

**Saccharo-bacil'lus.** Bacillus pastorianus.

**Saccharocol'loid.** A group of the carbohydrates, containing gum and starch; they are in general non-crystallizable and non-dialyzable.

**Saccharogalactorrhœ'a** (*saccharum,* sugar, *gala,* milk, *rheo,* to flow). Excretion of an increased amount of sugar in the milk.

**Sac'charogen.** Substance existing in milk. Lactose is formed from it.

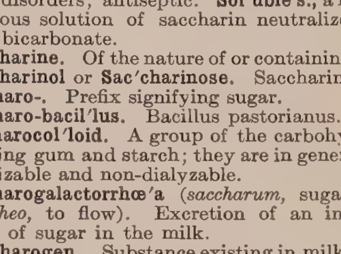
**Saccharogen'esis** (*genesis,* production). The process of sugar-formation.

**Saccharogum'mita.** Sweet principle of glycyrrhiza.

**Sac'charol.** Saccharin.

**Saccharom'eter.** Hydrometer adapted for determining the density of syrups. Saccharimeter.

**Saccharomy'ces** (*saccharon,* sugar, *mykes,* fungus). Unicellular organism belonging to a genus of ascomycetous fungi, and including the yeast fungus. These fungi multiply by process of budding, and sometimes by endogenous cell-formation, and are present most commonly in alcoholic fermentation. **S. al'bicans,** Oïdium albicans of thrush. **S. apicula'ta,** existing upon various berries, including the gooseberry. **S. capillit'ii,** a species found in some cases of pityriasis of the scalp. **S. cerevis'iæ,** the fungus of brewer's yeast. **S. ellipsoi'deus,** an ordinary alco-



Saccharomyces; *a,* cell with four spores.

holic ferment. **S. exig′uus**, present in syrups undergoing fermentation. **S. galactic′olus**, causes fermentation in milk. **S. glu′tinis**, occurs in yeast. **S. guttula′tus** (Robin), detected in the digestive organs of man and other animals, and in the intestinal discharges of ankylostomiasis. **S. hansen′ii**, changes sugars into oxalic acid. **S. hom′inis**, found in chronic infectious pyæmia. **S. lithog′enes**, found in lymph glands in carcinoma of the liver; causes calcareous tumors in some animals. **S. marxia′nus**, produces fermentation in wine and saccharine solutions. **S. membranifa′ciens**, causes a thick film on beerwort and produces liquefaction of gelatin. **S. mesenter′icus**, causes fermentation in fruit. **S. mi′nor**, a form occurring in baker's yeast. **S. mycoder′ma**, S. albicans. **S. pasteuria′nus**, a species found in low fermentation. **S. neofor′mans**, in the juice of fruit; causes a tumor, in some animals, at the point of inoculation. **S. pyrifor′mis** (Ward), found in fermented ginger-beer. **S. ru′ber** (Demme), reddens milk and cheese. **S. subcuta′neus tumefa′ciens**, found in myxoma; in mice and rats it causes local fungous growths. **S. vacci′næ** (Pfeiffer), a form noted in vaccine lymph.

**Saccharomyco′sis hom′inis.** Blastomycetic dermatitis.

**Saccharorrhœ′a** (*rheo*, to flow). Glycyrrhœa. **S. cuta′nea**, sudor dulcis, sweet sweat. **S. lac′tea**, a secretion of unusually sweet milk. **S. pulmona′lis**, the copious expectoration of unusually sweet matter from the lungs. **S. urino′sa**, diabetes mellitus.

**Sac′charose.** Crystalline carbohydrate, $C_{12}H_{22}O_{11}$, from sugar-cane or sugar-beet. Also one of the series of carbohydrates having this formula, including saccharose, maltose, lactose, etc. **S. ni′trate**, nitrosaccharose.

**Saccharosu′ria.** Discharge of saccharose in the urine.

**Sac′charure.** A preparation made by saturating sugar with a tincture, and drying and powdering the mixture.

**Sac′charum.** Sugar. The product of the juice of sugar-cane, ord. *Gramineæ*, and also of the beet, maple, Chinese sugar-cane, etc.; it is refined sugar. *True sugars* are those with which alcoholic fermentation may be effected by the addition of yeast and water. They are: Hard sugar of the cane, maple, beet, chestnut, etc.; liquid sugar, sugar of malt, of the sweet potato, molasses, honey, etc.; hard sugar of the grape, ripe fruits, starch, diabetes, etc.; and hard sugar of the mushroom. Imperfect sugars are those in which alcoholic fermentation cannot be effected by means of yeast and water, as manna, sugar of milk, sugar of jelly or glue, licorice, picromel. Sugar, cane-sugar, is prepared from the expressed juice of the sugar-cane, boiled with the addition of quicklime or common vegetable alkali. It is used in pharmacy for the preparation of syrups, conserves, lozenges, etc. It is nutritious, is employed as an aliment, and as a eutrophic demulcent and antiseptic. *Liver* or *hepatic sugar* has been found a normal formation by the liver. It is more readily assimilated than other varieties of sugar. See *Glucose* and *Glycogenic matter*. According to Tolleus, the various sugars may be thus classified, being arranged in groups, mainly according to their chemical composition: **S. acer′num**, S. canadense, maple sugar; often used as a demulcent. **S. al′bum**, white sugar, refined sugar, loaf-sugar; double-refined sugar has been called tabarzet. **S. alumina′tum**, equal parts of white sugar and alum, powdered; used as a styptic. **S. can′didum**, nabot, sugar candy, rock candy, is the crystallized juice of the cane. **S. commu′ne**, raw sugar. **S. hordea′tum**, barley sugar. **S. lac′tis** (Ph. U. S.), $C_{12}H_{22}O_{11},H_2O$; crystalline sugar from whey of cow's milk by evaporation and purification by recrystallization; sugar of milk. **S. non-purifica′tum**, raw, crown, or moist sugar, coarse sugar. **S. officina′rum**, see *Saccharum*. **S. penid′ium**, S. hordeatum. **S. purifica′tum**, refined sugar, *saccharum* of the Ph. U. S. **S. satur′ni**, sugar of lead.

**Sac′ciform.** Having the form of a sac; sac-shaped. **S. disease′ of the a′nus**, see *Rectal pouches*.

**Sac′cular glands.** Glands the acini of which are sacciform.

**Sac′culated.** Encysted. See *Saccated*.

**Sac′cule.** Sacculus proprius of the ear; also any small sac. **Den′tal s.**, dental follicle. **Vestib′ular s.**, portion of membranous labyrinth of vestibule of the ear connecting with the ductus cochlearis.

**Sac′culi** (pl. of sacculus) **adipo′si.** Fatty vesicles. **S. chalicoph′ori**, see *Lacunæ of bone*. **S. larynge′i**, ventricles of the larynx. **S. medicina′les**, bags containing medicinal substances. **S. medulla′res**, see *Medullary membrane*.

**Sac′culus** (dim. of *saccus*, a sac). A small pouch or sac. Marsupion. **S. cephal′icus**, cucupha. **S. chy′lifer**, receptaculum chyli. **S. commu′nis**, see *Semicircular canals*. **S. cor′dis**, pericardium. **S. ellip′ticus**, see *Semicircular canals*. **S. endolymph′icus**, saccus endolymphicus. **S. hemiellip′ticus**, see *Semicircular canals*. **S. lactif′erus**, see *Lactiferous vessels*. **S. laryn′gis**, a cæcal pouch of variable size formed by the mucous membrane in the ventricles of the larynx; its laryngeal surface is covered by the arytenoepiglottideus inferior muscle or compressor sacculi laryngis (muscle of Hilton). **S. medicina′lis**, medicated pillow, as of hops. **S. oblon′gus**, see *Semicircular canals*. **S. pro′prius**, see *Semicircular canals*. **S. ror′ifer**, receptaculum chyli. **S. rotun′dus**, see *Semicircular canals*. **S. semiova′lis**, see *Semicircular canals*. **S. sphæ′ricus**, see *Semicircular canals*. **Ves′ical s.**, see *Bladder, sacculated*. **S. vestib′uli**, see *Semicircular canals*.

**Sac′cus.** Sac. **S. cæ′cus**, see *Stomach*. **S. cæ′cus co′li**, cæcum. **S. co′li**, cæcum. **S. cor′dis**, pericardium. **S. endolymphat′icus**, sac formed by process of dura mater included in the aqueduct of Sylvius; see *Ductus endolymphaticus*. **S. epiplo′icus**, epiploon. **S. hernio′sus**, hernial sac. **S. intesti′ni cras′si**, cæcum. **S. lacryma′lis**, lacrymal sac. **S. lac′teus**, receptaculum chyli. **S. liena′lis**, pocket or sac formed by ligamentum phrenocolicum, which in the new-born regularly receives the spleen. **S. muco′sus**, see *Bursæ mucosæ*. **S. peritonæ′i retroventricula′ris**, see *Epiploon, gastrohepatic*. **S. pleu′ræ**, pleura. **S. vena′rum cava′rum**, sinus dexter cordis. **S. vena′rum pulmona′lium**, sinus pulmonalis. **S. ventric′uli**, see *Stomach*. **S. vitelli′nus**, yolk sac; umbilical vesicle.

**Sa′cer.** Sacred, holy. Sacral. **S. ig′nis**, herpes zoster; erysipelas. **S. mor′bus**, epilepsy. **S. mus′culus**, transversalis dorsi or longissimus dorsi.

CLASSIFICATION OF SUGARS.

| I. *Monosaccharides* or *Glucoses*, $C_6H_{12}O_6$. | II. *Disaccharides* or *Saccharoses*, $C_{12}H_{22}O_{11}$. | III. *Polysaccharides* or *Amyloses*. |
|---|---|---|
| Dextrose, Levulose, } Invert sugar. | Cane-sugar. | *a. Crystallizable polysaccharides.* |
| Mannitose. | Milk-sugar. | Raffinose, $C_{36}H_{64}O_{32} + 10H_2O$. |
| Galactose. | Maltose. | Lactosin, $C_{36}H_{64}O_{31}$. |
| Sorbin or Sorbose. | Trehalose. | *b. Uncrystallizable* or *difficultly crystallizable polysaccharides.* |
| | Melezitose. | Starch-derivatives belonging to dextrose group. |
| | | Inulin-derivatives belonging to levulose groups. |
| | | Gums and mucilages, yielding galactose, arabinose, etc. |
| | | Cellulose |
| | | Pectin substances. |

**Sa′cra fis′tula.** Vertebral column. **S. me′dia,** middle sacral artery.

**Sa′crad.** Toward the sacrum.

**Sa′cral.** That which belongs or relates to the sacrum. **S. ar′teries** are distinguished into: 1. The *anterior* or *middle sacral, median artery of the sacrum,* which arises from the posterior part of the abdominal aorta, in front of the fourth lumbar vertebra; descending in a serpentine manner upon the sacrovertebral articulation and on the anterior surface of the sacrum, furnishing many lateral branches which unite with the lateral sacral arteries and enter the anterior sacral foramina, to be distributed to the membranes of the marrow, etc. 2. The *lateral sacral arteries,* which are two in number, one on each side. They arise from the hypogastric, from the iliolumbar, or from the gluteal, and descend before the anterior sacral foramina, anastomosing in an arched manner, toward the coccyx, with the middle sacral. They give off external and posterior branches, which enter the sacral foramina; and internal branches, which are distributed to the pyramidalis, sacrum, etc. **S. as′pect,** aspect toward the region where the sacrum is situated. **S. canal′,** continuation of the spinal canal in the sacrum. **S. extrem′ities,** the lower limbs. **S. grooves,** two longitudinal excavations, slightly marked, at the posterior surface of the sacrum, which appear to terminate the vertebral grooves or gutters. **S. in′dex,** breadth of sacrum multiplied by 100 and divided by its length. **S. nerves** are generally six in number. They arise from the termination of the spinal marrow. The first, united with the great cord which descends from the lumbar plexus, concurs with the three others in forming the sacral or sciatic plexus. The third and fourth, with branches of the great sympathetic, form the hypogastric plexus. The fifth and sixth (*coccygeal nerve*) are distributed to the ischiococcygeus muscle and to the sphincter and levator ani. **S. plex′us,** sciatic plexus—the sacral portion of the crural plexus of Chaussier—constituted as just mentioned, is situated in front of the pyramidalis. It gives off, backward, two branches, called the pudic and the lesser sciatic. It terminates in the great sciatic nerve.

**Sacral′gia** (*algos,* pain). Pain in the sacrum.

**Sacra′to.** The species of mulatto nearest to the pure negro type. See *Mulatto.*

**Sacrec′tomy.** Kraske's operation.

**Sa′cred bark.** Cascara sagrada; dried leaves of Rhamnus purshianus. **S. bean,** nelumbo.

**Sacrifi′cial.** Relating to a sacrifice. **S. opera′tion,** operation in which, for the benefit or advantage of the patient, some part is sacrified.

**Sacro-.** In composition, relating or belonging to the sacrum.

**Sacroante′rior.** Having the sacrum directed forward, as *s. position* of the fœtus, in which the back of the fœtus in utero is directed toward the anterior abdominal wall of the mother.

**Sacrococcyg′eal.** Relating to the sacrum and coccyx. **S. articula′tion** is that of the lower extremity of the sacrum with the superior facette of the coccyx. It is closed by two ligaments—anterior and posterior sacrococcygeal.

**Sacrocosta′lis** (*costa,* rib). Sacrolumbalis.

**Sacrocoxal′gia** (*sacrum* + *coxa,* hip, *algos,* pain). Rheumatic affection of the sacro-iliac symphysis.

**Sacrocoxi′tis.** Sacro-iliac disease.

**Sacrofem′oral.** Glutæus major muscle.

**Sacro-il′iac.** That which relates to the sacrum and ilium. **S.-i. articula′tion, sym′physis,** or **synchondro′sis,** iliosacral articulation, symphysis, or synchondrosis, is the union of two surfaces—two inclined planes, broader above than below, one formed by the sacrum, the other by the ilium. Both surfaces are encrusted by an articular cartilage. The bands strengthening them are the two sacrosciatic ligaments, the sacrospinal, a sacro-iliac ligament, and some irregular fibres. **S.-i. lig′ament,** a very thick assemblage of short, dense, irregular fibres, occupying the space which the sacrum and ilium leave between them behind their articular surface. Some authors have termed some irregular fibres situated in front of the sacro-iliac articulation anterior sacro-iliac ligaments, in opposition to that just described, which they call posterior sacro-iliac. **S.-i. disease′,** a painful acute or chronic inflammatory condition of the sacro-iliac articulation, dependent on local injury, accidents of pregnancy or parturition, or tuberculosis. **S.-i. sym′physis** or **synchondro′sis,** s.-i. articulation.

**Sacro-ischiat′ic.** Sacrosciatic.

**Sacrolumba′lis.** Sacrolumbar.

**Sacrolum′bar.** That which belongs to the sacrum and loins. **S. mus′cle,** dorsotrachelian portion of the sacrospinal of Chaussier, seated at the posterior part of the trunk, is thick and triangular below, flat and thin above, and terminates in a point at the upper extremity. It is attached to the posterior surface of the sacrum, to the corresponding portion of the crista ilii, to the extremities of the transverse processes of the lumbar vertebræ, to the angles of the eleven inferior ribs, to the tuberosity of the first and the posterior tubercle of the transverse processes of the last five cervical vertebræ. The sacrolumbalis straightens the vertebral column when bent forward, and maintains it straight. By means of its insertion into the ribs it can elevate or depress these bones according as its fixed extremity is above or below. It acts, consequently, sometimes as an inspiratory, at others as an expiratory muscle. From six or eight of the lower ribs arise an equal number of fleshy portions which terminate at the inner side of this muscle. From the upper part of the sacrolumbalis a fleshy slip runs up, to be fixed to the transverse processes of the fourth, fifth, and sixth cervical vertebræ by three distinct tendons. These last parts, though regarded as independent by some anatomists, belong to the sacrolumbalis.

**Sacrome′dian ar′tery.** Middle sacral artery.

**Sacropectin′eal diam′eter.** Anteroposterior diameter of the pelvis.

**Sacroposte′rior.** Having the sacrum directed backward, as *s. position* of the fœtus, in which the back of the fœtus in utero is directed toward the spine of the mother.

**Sacrosciat′ic.** That which belongs to the sacrum and ischium. **S. lig′aments** are two ligaments which assist in securing the sacro-iliac articulation. The great or posterior sacrosciatic ligament extends from the crista ilii and the sides of the sacrum and coccyx to the tuberosity of the ischium. The less or anterior sacrosciatic ligament arises from the same point and terminates in the spine of the ischium.

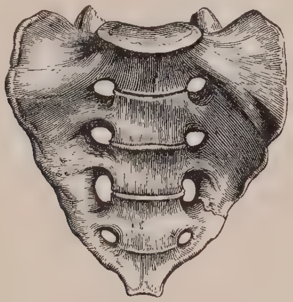
**Sacrospi′nal.** Relating to the sacrum and spine.

**Sacrospina′lis.** Dorsotrachelian portion of the sacrolumbalis muscle. It includes the sacrolumbalis, longissimus dorsi, transversalis, transversospinalis, and intertransversalis muscles, and is divided into three portions, the erector spinæ, extensor dorsi communis, lumbocostalis.

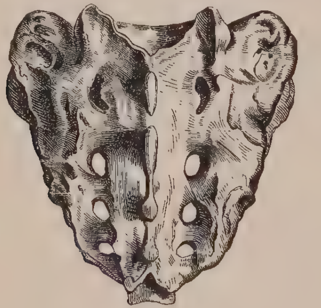
**Sacro-u′terine.** Relating to sacrum and uterus.

**Sacrover′tebral.** That which relates to the sacrum and vertebræ. **S. an′gle,** the angle formed by the articulation of the sacrum with the last lumbar vertebra. **S. articula′tion** is the junction of the last lumber vertebra with the sacrum. The angle which these two bones form at the anterior part has been called the promontory of the sacrum or the sacrovertebral angle. **S. lig′ament** is a strong ligament which passes from the anterior part of each of the transverse processes of the last lumbar vertebra to be attached to the base of the sacrum. Its use is to maintain the articulation of those two bones in situ.

**Sa′crum** (neuter of *sacer,* sacred). Crossbone. The bone forming the posterior part of the pelvis and a continuation of the vertebral column. The sacrum is symmetrical and triangular, situated at the posterior part of the pelvis, and concave anteriorly. It has: 1. A pelvic or anterior surface, which corresponds to the pelvic cavity, and has four transverse furrows pointing out the parts where the primitive portions of the bone were separated from each other. On each side there are four foramina, called anterior sacral; these are oblique, decreasing in size from above downward. Through them pass the anterior branches of the sacral nerves. 2. A spinal or posterior surface, convex, rough, and covered by muscles. Upon the median line are four horizontal tubercular eminences, forming a continuation of the spinous processes of the vertebræ; and, below, a triangular notch, where the sacral canal terminates. On each side of the surface are four foramina, called posterior sacral, which are smaller than the anterior, and give passage to the posterior branches of the sacral nerves. 3. The vertebral surface or base. Its greatest extent is transverse. It is articulated with the last lumbar vertebra. On it is seen the orifice of the sacral canal, of a triangular shape, and decreasing in width from above downward, terminating the vertebral canal, being lined by a prolongation of the cerebral membrane; containing the fasciculi of the sacral nerves; communicating externally by the sacral foramina; and terminating at the triangular notch on the posterior surface of the bone. At the sides of the upper orifice of the sacral canal are two articular processes which receive the articular processes of the last lumbar vertebra. The projection formed by the union of the base of the sacrum with the last lumbar vertebra is called the promontory, great angle of the sacrum, or sacrovertebral angle. 4. A coccygeal face or apex, which is very narrow, being articulated with the coccyx. 5. Two lateral margins, having above a broad, oblique surface, articulated with the ilium.



Anterior view of sacrum.



Posterior view of sacrum.

**Sactosal′pinx** (*saktos*, stuffed, *salpinx*, tube). Condition in which both ends of the Fallopian tube are closed by swelling or adhesive inflammation, and the lumen is distended with accumulated secretions. **S. hæmorrhag′ica**, hæmatosalpinx. **S. purulen′ta**, pyosalpinx. **S. sero′sa**, hydrosalpinx.

**Sad′dle, Turk′ish.** Sella turcica.

**Sad′dle-back.** Lordosis.

**Sad′dle-head.** Clinecephalus.

**Sad′dle-joint.** Articulation composed of two surfaces, one concave, the other convex, as the carpometacarpal joint of the thumb.

**Sad′dle-nose.** A nose with bridge depressed, due to necrosis or deviation of the nasal septum.

**Sad′ism** (after Marquis de Sade, a French writer, who wrote novels filled with tales of obscenity, cruelty, etc.). Sexual perversion in which a member of one sex has sensual gratification in domineering, even by force or cruelty, the other sex. Opposite condition to masochism. See *Masochism*.

**Sad′ist.** One who practises sadism.

**Sadis′tic.** Related to sadism, as a sadistic act.

**Sae′misch's ul′cer.** Ulcus serpens of cornea.

**Saen′ger's mac′ula.** Macula gonorrhoica (gonorrhœal spot) in gonorrhœal vulvitis, indicating orifice of duct of Bartholin. **S.'s opera′tion**, gastrohysterotomy; the uterus is raised from the cavity, sutures are applied at the upper angle of the wound in the abdomen to close it about the uterus, and compression is exerted at the cervix; the uterus is then opened and the child extracted; the peritoneum is now dissected from the muscular margin of the wound, and a wedge-shaped piece of the muscular coat removed; the peritoneum is turned down over the muscular layer and sutures are introduced, and the peritoneal surfaces are also united by sutures. **S.'s pu′pil reac′tion**, pupil reflex is not preserved or increased after a long period in the dark in tabes dorsalis, as it is in cerebral syphilis, amaurosis, etc.

**Sæ′pes.** Sepes.

**Safe′ty-tube.** The pervious portion of the Eustachian tube.

**Saf′flow.** Carthamus tinctorius.

**Saf′flower.** Carthamus tinctorius.

**Saf′fron.** Crocus. **Bas′tard s.**, Carthamus tinctorius. **Dy′er's s.**, Carthamus tinctorius. **S. flow′er**, Carthamus tinctorius. **Mead′ow s.** Colchicum autumnale.

**Safranin′.** $C_{18}H_{18}N_4$. Anilin pink, employed in microscopy. It is toxic to the heart and respiratory organs.

**Saf′ranophile** (*phileo*, to love). Easily stained by safranin, referring to bacteria and histological elements.

**Saf′ranum.** Carthamus tinctorius.

**Saf′rene.** $C_{10}H_{16}$. Substance contained in volatile oil of sassafras.

**Saf′rol.** $C_{10}H_{10}O_2$. Chief constituent of sassafras oil.

**Sag′aban.** Apios tuberosa.

**Sagape′num.** A gum-resin, supposed to be obtained from the Ferula persica, ord. *Umbelliferæ*. Odor fetid and alliaceous, taste pungent, bitterish, nauseous. It is reputed antispasmodic and emmenagogue.

**Sagapin′.** Sagapenum.

**Sage.** Salvia. **S. brush**, name given to various species of artemisia, employed similarly to abrotanum. **In′dian s.**, Eupatorium perfoliatum. **Jeru′salem s.**, pulmonaria. **S. tea**, infusum salviæ. **S. tree**, lantana. **Wild s.**, Salvia africana; S. lyrata.

**Sage′na** (*sagene*, seine). Epiploon.

**Sagit′tal** (*sagitta*, arrow). Arrow-shaped. **S. circum′ference of skull**, taken from nasion to opisthion on the surface; from opisthion to basion; from basion to nasion. **S. fur′row** or **groove** is a channel on the median line of the inner surface of the skull-cap. It is excavated in the os frontis and in the two parietal and occipital bones, extending from the crista galli to the internal occipital protuberance. It lodges the longitudinal sinus, which has been called the sagittal sinus. **S. nu′cleus**, nucleus of oculomotor nerve. **S. plane**, median plane of the body. **S. sec′tion**, vertical section in an anteroposterior direction. **S. semicir′cular canal′**, posterior semicircular canal. **S. si′nus**, see *Sagittal furrow*. **S. su′ture**, biparietal suture; suture uniting the parietal bones, and extending from before backward on the median line from the coronal suture to the lambdoidal. It is so called from *sagitta*, an arrow, because seeming to meet the coronal suture as an arrow meets the string of a bow.

**Sagitta′ria variab′ilis.** Arrowhead, arrowleaf, arrow-weed, wapata of Oregon, ord. *Alismaceæ*. Esculent, yielding arrowroot. The roots are cooling and subastringent, and are at times applied to the feet in cases of yaws and dropsical swellings of the legs. The leaves are applied to the breasts to dispel milk.

**Sagitta′rium alexiphar′macum.** A root cultivated in the West Indies; supposedly a remedy for wounds by poisoned arrows.

**Sagitta′tus.** Sagittal.

**Sa′go** (*sago* is the Malay name for various plants). A starch obtained from the pith of the Sagus rumphii, Cycas circinalis, C. revoluta, etc., growing in the Moluccas, Philippine Islands, etc., being imported in small grains. The same substance is also obtained from the West Indies, but is inferior to that from the East. **French s.**, see *Solanum tuberosum* and *Arrowroot, common.* **Port′land Isl′and s.**, see *Arum maculatum.* **S. spleen**, amyloid degeneration of the Malpighian corpuscles of the spleen, resembling boiled sago.

**Sagra′da.** Cascara sagrada.

**Sa′gus.** A genus of palms, a source of sago starch.

**Sai′gon cin′namon.** See *Cinnamon.*

**Saint Ag′atha's disease′.** Mammitis.

**Saint Aignon's′ disease′.** Tinea.

**Saint An′drew's cross.** Ascyrum crux andreæ. An indigenous herb, used as a local discutient application.

**Saint An′thony's fire.** Erysipelas.

**Saint Appolo′nia's disease′.** Pains in the teeth and jaws.

**Saint Avertin's′ disease′.** Epilepsy.

**Saint Barthol′omew's tea.** Paraguay tea.

**Saint Blase's disease′.** Quinsy or sore throat.

**Saint Charles's root.** Carlo sancto (radix).

**Saint Clair's disease′.** Ophthalmia.

**Saint Dymph′na's disease′.** Insanity.

**Saint Eras′mus's disease′.** Colic.

**Saint Fia′cre's disease′.** Hemorrhoids or painful vegetations around the anus.

**Saint Giles's disease′.** Cancer.

**Saint Go′thard disease′.** Tunnel anæmia.

**Saint Guy's dance.** Chorea.

**Saint Hu′bert's disease′.** Hydrophobia.

**Saint Igna′tius's bean.** Ignatia.

**Saint James's wort.** Senecio jacobæa; Thlaspi bursa.

**Saint Job's disease′.** Syphilis.

**Saint John Long's lin′iment.** Stokes's liniment.

**Saint John's dance.** See *Mania, dancing.* **S. J.'s evil**, epilepsy. **S. J.'s bread**, fruit of Ceratonia siliqua; used as demulcent and expectorant. **S. J.'s wort**, flowering tops of Hypericum perforatum; used as a remedy for chronic catarrh and intermittent fever, and as a discutient.

**Saint Laz′arus's disease′.** Leprosy; measles of the hog or tinea.

**Saint Main's disease′.** Scabies.

**Saint Mar′tin's evil.** Alcoholism.

**Saint Ma′ry's this′le.** Carduus marianus. An old popular remedy in hæmoptysis.

**Saint Math′urin's disease′.** Insanity; epilepsy.

**Saint Roch's disease′.** Bubo.

**Saint Se′ment's disease′.** Syphilis.

**Saint Vi′tus's dance.** Chorea. See *Mania, dancing.* **S. V.'s d. of the voice**, balbuties; stuttering or stammering.

**Saint Zach′ary's disease′.** Dumbness.

**Sal.** Salt. **S. absin′thii**, potassii subcarbonas; see *Potash.* **S. acetosel′læ**, potassium oxalate. **S. aceto′sus ammoniaca′lis**, liquor ammonii acetatis. **S. ac′idum ben′zoës**, benjamin. **S. aëra′tus**, potassium bicarbonate. **S. al′bus**, sodium muriate. **S. alem′broth**, a mixture of bichloride of mercury and chloride of ammonium; employed as an antiseptic. **S. al′kali**, sodium subcarbonate. **S. alkali′nus fix′us fos′silis**, soda. **S. ama′rum**, magnesii sulphas. **S. ammo′niac volat′ile**, ammonii carbonas. **S. ammoni′acum**, ammonii chloridum. **S. ammoni′acum martia′le**, ferrum ammoniatum. **S. ammoni′acum secre′tum Glau′beri**, ammonii sulphas. **S. ammoni′acum tartar′eum**, ammonii tartras. **S. ammoni′acum vegetab′ile**, liquor ammonii acetatis. **S. ammoni′acus**, ammonii chloridum. **S. ammoni′acus nitro′sus**, ammonii nitras. **S. ammo′niæ**, ammonii chloridum. **S. anglica′num**, magnesii sulphas. **S. an′glicum**, magnesii sulphas. **S. antiepilep′ticus of Weiss′man**, cuprum ammoniatum. **S. antimo′nii**, antimonium tartarizatum. **S. aperiti′vum**, sodium sulphate. **S. armeni′acum**, ammonii chloridum. **S. ar′tis**, alembroth salt. **S. brom′alid**, mixture of acetanilid, salicylic acid, and bromine; antiseptic, antipyretic, hypnotic. **S. caroli′num**, Carlsbad salts. **S. c. facti′tium**, artificial Carlsbad salts. **S. cathar′ticus ama′rus**, magnesii sulphas. **S. cathar′ticus Glau′beri**, sodium sulphate. **S. commu′nis**, ordinary salt, sodium chloride. **S. cor′nu cer′vi volat′ile**, ammonii carbonas. **S. culina′ris**, sodium chloride. **S. digesti′vus Syl′vii**, potassii chloridum. **S. diuret′icus**, potassii acetas. **S. de duo′bus**, potassii sulphas. **S. ebsdamen′se**, magnesii sulphas. **S. enix′um**, potassii supersulphas. **S. epsomen′sis**, magnesii sulphas. **S. essentia′le ben′zoës**, benjamin. **S. essentia′le cort′icis peruvia′ni**, quinine. **S. febrif′ugus of Lem′ery**, potassii supersulphas. **S. febrif′ugus Syl′vii**, potassii murias. **S. fon′tium**, sodium chloride. **S. fos′silis**, sodium chloride. **S. fulig′inis**, ammonii carbonas. **S. gem′mæ**, sodium chloride. **S. herba′rum**, potassii subcarbonas. **S. in′dus**, saccharum album. **S. lixivio′sum**, see *Lixivium.* **S. lu′cidum**, sodium chloride. **S. mari′nus**, sodium chloride. **S. mar′tis**, ferri sulphas. **S. mar′tis muriat′icum sublima′tum**, ferrum ammoniatum. **S. mirab′ile perla′tum**, sodium phosphate. **S. mirab′ile Glau′beri**, sodium sulphate. **S. ni′trum**, potassii nitras. **S. os′sium**, ammonii carbonas. **S. panchres′tum**, potassii tartras. **S. pe′træ**, potassii nitras. **S. plum′bi**, plumbi superacetas. **S. polychres′tum Seignet′ti**, sodium tartrate. **S. polychres′tus**, potassii sulphas. **S. polychres′tus Glace′ri**, potassii sulphas cum sulphure. **S. prunel′læ**, potassii nitras fusus sulphatis paucillo mixtus. **S. rupellen′sis**, sodium tartrate. **S. sapien′tiæ**, alembroth salt, potassii sulphas. **S. satur′ni**, plumbi superacetas. **S. scien′tiæ**, alembroth salt. **S. secre′tus Glau′beri**, ammonii sulphas. **S. sedati′vus Homber′gi**, boracic acid. **S. sedlisen′sis**, magnesii sulphas. **S. Seignet′ti**, sodium tartrate. **S. senner′ti**, potassii acetas. **S. seydschützen′se**, magnesii sulphas. **S. so′dæ**, sodium subcarbonate. **S. suc′cini**, succinic acid. **S. tar′tari**, potassii subcarbonas; see *Potash.* **S. tar′tari essentia′le**, tartaric acid. **S. tar′tari sulphura′tum**, potassii sulphas. **S. uri′næ**, microcosmicum sal. **S. urino′sum**, urea. **S. vegetab′ilis**, potassii tartras. **S. vi′tæ**, alembroth salt. **S. vitri′oli**, zinci sulphas. **S. vitri′oli narcot′icum**, boracic acid. **S. volat′ile**, ammonii carbonas; spiritus ammoniæ aromaticus. **S. v. ben′zoës**, benjamin. **S. v. bora′cis**, boracic acid. **S. v. oleo′sum Syl′vii**, spiritus ammonii aromaticus. **S. v. suc′cini**, succinic acid. **S. vomito′rium vitri′oli**, zinci sulphas.

**Salaam′** or **Salam′ convul′sion** or **tic.** Spasmodic or convulsive nodding, spasmus nutans.

**Salacet′ol.** $C_{10}H_{10}O_4$. Salicylacetol. A synthetic compound of salicylic acid with acetol or acetone alcohol; a glucoside, similar in structure to salicin and natural glucosides. Employed in cases of intestinal infection and for disinfection of the urinary passages, as well as in subacute or chronic rheumatism.

**Sala′cious** (*saiax*, lustful). Lustful; lecherous.

**Salacity**, sal-as′it-e (*salax*, lustful). Lecherousness; strong desire for venery.

**Salac′tol.** Sodium salicyl-lactate. A compound of sodium lactate and sodium salicylate, a solution of which, in hydrogen peroxide, is applied to the throat as an antidiphtheritic.

**Sal′ad** (*sal*, salt). Fresh herbs—as lettuce—dressed with salt, oil, vinegar, etc. **S. corn**, Valeriana dentata. **S. oil**, olive oil.

**Salamandarin′.** $C_{34}H_{60}N_2O_5$. Poisonous leucomain.

**Salaz′alon.** Salipyrin.

**Salbroman′ilid.** Salicylbromanilid.

**Saldanine′.** Alkaloid from Datura arborea; a local anæsthetic.

**Salep′** (usually pronounced saloop′). Salab, salap. The prepared bulb of the Orchis mascula and other species of orchis. The salep of Cashmere is from a species of eulophia. Salep is in small, irregular, hard masses, in composition, etc., closely analogous to tragacanth. An indigenous salep has been made in France from Orchis maculata, O. bifolia, O. mascula, O. militaris, and O. latifolia. **Otahei′te s.,** arrowroot of Tahiti.

**Salera′tus** (*sal*, salt, *aer*, air). Common potassium carbonate, used for cooking purposes.

**Saler′num, School of.** An ancient school of medicine at Salerno, in Italy. It was established by Charlemagne in 802, and was the first Christian university at which medicine was taught. It was much celebrated, especially in the twelfth century, and, on its account, Salerno was self-styled *Civitas Hippocratica*. The work on hygiene, *De Conservanda Valetudine*, which bears its name, is supposed to have been written by John of Milan in 1100, and is in Leonine verses. (See author's *History of Medicine*, Philadelphia, 1872, p. 207.)

**Salica′ria** (*salix*). Lythrum salicaria.

**Salicin′.** Salicinum.

**Salici′num.** (Ph. U. S. and Br.) Salicin. Neutral principle from bark of Salix helix and other species of salix and populus. Antipyretic, antirheumatic, and tonic; dose, gr. x–ʒj (0.65–4.0). See *Salix*.

**Salicylacet′ol.** Salacetol.

**Sal′icylage.** Preservation of dietetic articles under the antiseptic influence of salicylic acid.

**Salicylal′dehyde.** Salicylous acid.

**Salicylal′dehydeparaphenetidin′.** Malakin.

**Salicylam′ide.** Product of the action of concentrated ammonia on crude methyl salicylate, as oil of wintergreen; or of heat on ammonium salicylate; antiseptic, and having other properties like salicylic acid.

**Salicylan′ilid.** Salifebrin. **S. bromacetan′ilid,** salbromanilid.

**Sal′icylate.** Any salt of salicylic acid.

**Sal′icylated.** Having salicylic acid in its composition or manufacture. **S. cam′phor,** made by heating together 65 parts of salicylic acid with 84 parts of camphor. It is an oily liquid which solidifies to crystalline form, and is used as an antiseptic. **S. cot′ton,** a surgical dressing made by impregnating pure cotton with salicylic acid.

**Salicylbroman′ilid** or **Salbroman′ilid.** Combination of bromacetanilid and salicylanilid; antipyretic, antineuralgic, and antinervine. Useful in asthenic inflammatory conditions.

**Salicyl′ic acid.** (Ph. U. S. and Br.) Acidum salicylicum. $HC_7H_5O_3$. White, crystalline organic acid. Occurs in nature in certain plants. Commercially it is obtained from carbolic acid; also from natural salicylates, as oil of wintergreen and sweet birch. It is in white crystals, with slightly aromatic odor; commonly used in rheumatism and as an antiseptic. It is usually administered in the form of a salicylate, as that of sodium, of ammonium, or of quinine. The depressing effects of the drug must be carefully watched. **S. al′cohol,** saligenin. **S. al′dehyde,** salicylous acid. **S. am′ide,** salicylamide. **S. naphtyl′ic es′ter,** see *Betol*. **S. phe′nyl es′ter,** salol. **S. thy′mol es′ter,** salithymol.

**Sal′icylide.** Anhydride of salicylic acid.

**Salicylidin′ paraphenetidin′** or **S. phenetidin′.** Malakin.

**Salicylo-ace′tic acid.** Antiseptic.

**Salicyl′ous acid.** $C_7H_6O_2$. Fragrant, oily liquid; salicyl aldehyde; made by the distillation of salicylin with bichromate of potassium and sulphuric acid.

**Salicylphenetidin′.** See *Malakin* and *Salophen*.

**Salicylresorcin′ ke′tone.** Trioxybenzaphenone; employed in typhoid fever and in skin diseases.

**Salicylsulphon′ic acid.** Sulphosalicylic acid.

**Salicylsulphu′ric acid.** See *Sulphosalicylic acid*.

**Sal′icyl-talc.** A powder of salicylic acid and talcum, there being 3 per cent. of the acid in the preparation of the German Ph. *pulvis salicylicus cum talco*.

**Salicylu′ric acid.** A form in which salicylic acid, when taken internally, appears in the urine.

**Salifebrin′.** $C_{13}H_{11}NO_2$. Salicylanilid. Antifebrin salicylate. A combination of salicylic acid and acetanilid; produced also by condensing carbolic acid with formaldehyde. Antipyretic and anodyne. Used as a substitute for salicin in malaria, rheumatism, etc.

**Salifi′able.** Capable of forming salts.

**Saliformin′.** Formin salicylate. Hexamethylenetetramine-salicylate. White, soluble powder; antiseptic; dissolves uric acid deposits. Dose, gr. xv–xxx (1.0–2.0).

**Saligal′lol.** Disalicylate of pyrogallic acid. Pyrogallol disalicylate. Applied externally in skin diseases, particularly in solution in acetone.

**Saligenin′.** $C_7H_8O_2$. Salicylic alcohol. Obtained by the action of acids or ferments on salicin, for which last it is used as a substitute in malarial affections, rheumatism, etc. May also be obtained by the action of carbolic acid on formaldehyde.

**Salim′eter.** Hydrometer for estimating the strength of saline solutions.

**Salinaph′thol.** Naphthalol; naphtholsalol; beta-naphthol salicylate; betol. Internal antiseptic, antizymotic, etc., in certain affections of the intestines.

**Sa′line.** That which contains a salt or has the properties of a salt.

**Sali′nous.** Saline.

**Sal′iphen** or **Saliphenin′.** Salicylphenetidin. A colorless substance, moderately antipyretic.

**Salipyraz′olon.** $C_{18}H_{18}N_2O_4$. Salipyrin.

**Salipyrin′.** Antipyrin salicylate; a combination of salicylic acid and antipyrin; white, crystalline powder; used in arthritic affections, neuralgia, influenza, etc.

**Saliretin′** or **Salirrhetin′.** $C_{14}H_{14}O_3$. Resinous substance derived from saligenin by the action of acids.

**Sal′isbury treat′ment.** Treatment of obesity by meat and hot water.

**Sal′iswitch frac′ture.** Longitudinal fracture of the humerus.

**Salitan′nol.** $C_{14}H_{10}O_4$. Formed by the action of salicylic and tannic acids. White, insoluble powder; employed in surgery as an antiseptic.

**Salithy′mol.** Salicylate of thymol. A white, crystalline powder; antiseptic.

**Sali′tio** (*salio*, to leap). Leap.

**Sal′ium.** Saliva.

**Saliun′ca.** Valeriana celtica.

**Sali′va.** An inodorous, insipid, transparent, slightly viscid fluid secreted by the parotid, submaxillary, and sublingual glands, and poured into the mouth by the ducts of Stenson, Wharton, and Rivinus, the use of which is to mix with the alimentary bolus and to serve in the process of digestion. The chemical composition of the saliva secreted from different salivary glands varies. Its active constituent, ptyalin, acts as a ferment, converting starchy matters first into dextrin and then into sugar. See *Ferment* and *Enzymes*. Some interesting facts in regard to the saliva may be thus stated (Vierordt):

The quantity of mixed saliva (and fluid of the mouth)—
- In 24 hours is 300–1500 g. (F. Bidder and C. Schmidt); 500–700 during the process of chewing in 30–58 minutes (Tucgek);
- In one hour from the parotid, over 2;
- In one hour from the submaxillary gland, about 7 (Oehl).
- The amount for both pairs of glands in 24 hours is over 400 g. Specific weight, 1.003–1.004 (1.002–1.009), varies according to amount of mucus it contains. Reaction is alkaline.

Saliva from the parotid gland:
- Quantity, 80–100 g. in 24 hours (Oehl).
- Specific gravity, 1.0031–1.0043.
- Analysis in 1000 parts:

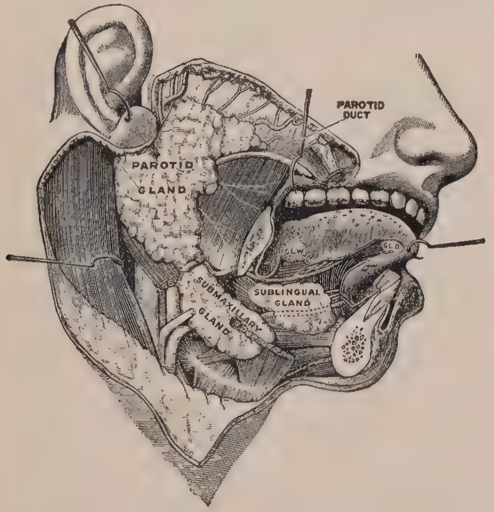
**Chor'da sali'va**, secretion of saliva excited by stimulation of the chorda tympani nerve. **S.-eject'or**, instrument for removal of the saliva from the mouth, employed in dentistry. **Parot'id s.**, secretion of the parotid gland; see *Parotid*. **S.-pump**, s.-ejector. **Sublin'gual s.**, viscid secretion from the sublingual gland. **Submax'illary s.**, secretion from the submaxillary gland. **Sympathet'ic s.**, variety of saliva produced by stimulation of the sympathetic nerve.

**Sal'ival.** Salivary.

**Sal'ivant.** Exciting the flow of saliva; sialagogue.

**Sal'ivary.** Belonging to the saliva. **S. albu'min**, ptyalin. **S. cal'culi**, see *Calculi, salivary*. **S. duct**, duct of a salivary gland. **S. fis'tulæ** are such as depend upon an accidental opening into the excretory ducts of the salivary glands; they are most commonly met with in the duct of Stenson. **S. glands**, secreting organs of the saliva, salival glands, are situated symmetrically, to the number of four, on each side of the face. Their form is very irregular, and their extent varies according to individuals. Their excretory ducts carry the saliva directly into the mouth without pouring it into any intermediate reservoir, as happens in the case of some other glands. The salivary glands have been distinguished into the parotid, the submaxillary, the sublingual, and the intralingual or lingual, seated at the inferior surface of the tongue, where the mucous membrane forms a fringed fold. See *Lingual glands*.



The salivary glands. The right half of the body of the mandible has been removed. G. L. W., gland of Weber; G. L. B., gland of Blandin. (Gerrish.)

**Sal'ivated.** Ptyalized. Affected with salivation.

**Saliva'tion.** Ptyalism, sialorrhœa. Superabundant secretion of saliva, occasioned either locally by use of irritating masticatories, or under the influence of some cause which acts on the whole economy, and especially of mercurial preparations. In this last case it is accompanied by a coppery taste in the mouth, by swelling of the gums, and sometimes by looseness of the teeth. Salivation may usually be diminished by the use of astringents, laxatives, etc. *Mouth-watering*, the increased flow of saliva produced by the sight, smell, or thought of agreeable food, is a species of ptyalism, as well as the **Mercu'rial s.**, salivation produced by mercury. The stomatitis that accompanies it is termed mercurial stomatitis.

**Sal'ivator.** An agent producing salivation or increasing the secretion of saliva.

**Sal'ivatory.** Salivant.

**Salivin'.** Ptyalin.

**Sali'vous.** Salivary.

**Sa'lix.** Willow. A genus of trees and shrubs, ord. *Salicineæ*. **S. ægypti'aca**, see *Calaf*. **S. al'ba**, white willow. **S. cap'rea**, great round-leaved willow. **S. erioceph'ala**, **S. frag'ilis**, crack or Bedford willow. **S. hum'ilis**, low-bush willow, speckled willow. **S. latifo'lia**, broad-leaved willow. **S. ni'gra**, black willow, pussy willow; the bark is used as a sexual sedative; the fluid extract is given in doses of ʒss–j (2.0–4.0). **S. petan'dria** or **hermaphrodit'ica**, bark of these and other willows has a slightly aromatic odor and a bitter, astringent taste, which is nearly the same in all the species. It is tonic and astringent, being used in intermittents and in cases of dyspepsia, worms, etc. An active neutral principle has been separated and called *salicin* or *salicinum* (Ph. U. S. and Br.). It has been found in a large number of species of salix and of populus; is like quinine in medical efficacy; is antiperiodic, and used as a substitute for salicylic acid in rheumatism.

**Salle's (de) line.** Line from upper margin of ala of nose, surrounding the angle of the mouth, and terminating at the border of the orbicularis oris.

**Sal'lenders.** Malandria.

**Sal'lis.** Adeps.

**Sal'low.** Lurid.

**Sal'ly.** Salix.

**Sal'ly-switch frac'ture.** Green-stick fracture.

**Sal'miac** (contraction of sal ammoniac). Ammonium chloride.

**Salmin'.** Ptomain obtained from salmon.

**Sal'mon patch.** Salmon-colored patch of cornea in syphilitic keratitis; sometimes called *Hutchinson's patch*.

**Sal'mon's back-cut.** Incision in the direct course of an anal fistula.

**Sal'ocoll.** Phenocoll salicylate. Employed as a mild antipyretic, anodyne, antineuralgic, and antirheumatic, and especially in influenza, in doses of gr. xv–xxx (1.0–2.0). See *Phenocoll hydrochloride*.

**Sal'ol.** Salicylic acid in which one atom of hydrogen has been replaced by the group phenol; phenyl salicyl; phenol salicylate; phenylic ether of salicylic acid. Physically it is a white, tasteless powder with an agreeable odor, insoluble in water and soluble in alcohol; used in medicine for its antiseptic and antipyretic properties, in rheumatism, skin diseases, intestinal affections, etc., and locally in ozæna, otorrhœa, gonorrhœa, etc., applied in gauze, collodium, powders, ointment, etc. **Acet'yl-tribrom-s.**, white crystals; hypnotic, antispasmodic, analgesic. **S. cam'phor**, compound of three parts of salol and two of camphor; colorless, oily liquid, used in treatment of abscess of the middle ear or suppurative otitis. **Cam'phorated s.**, s. camphor. **Dii'odo-s.**, phenyl ester of diiodo-salicylic acid; crystalline powder; antiseptic; employed in skin diseases. **Meth'yl tribrom-s.**, white crystals; hypnotic. **Ni'tro-s.**, from action of salicylic acid on p. nitrophenol; yellowish powder; intestinal antiseptic. **Tri'brom-s.**, white crystals; intestinal antiseptic, hypnotic, antispasmodic, analgesic; dose, gr. x–xxx (0.65–2.0).

**Sal'ophen.** Derivative of salol containing nearly 51 per cent of salicylic acid; in white, odorless, and tasteless scales; antipyretic and antirheumatic; used in acute rheumatic arthritis. Chemically, acetylparamidosalol.

**Salpe'tra** (*sal*, salt, *petra*, rock). Saltpetre.

**Salpingec'tomy** (*ektome*, excision). Excision of the Fallopian tube.

**Salpingemphrax'is** (*emphraxis*, obstruction). Obstruction of the Eustachian tube.

**Salpin'gian dropsy.** Hydrosalpinx.

**Salpin'gion.** Point at the lower surface of the apex of the temporal portion of the temporal bone.

**Salpingi'tis.** Inflammation of the Eustachian or Fallopian tube. **Chron'ic veg'etating s.**, great hypertrophy of the mucous membrane of the Fallopian tube. **S. diffu'sa**, s. in which the whole wall of the Fallopian tube becomes thickened from diffuse inflammation; the tube is enlarged, hard, and swollen. **S. follicula'ris**, occurs in catarrhal inflammation of the Fallopian tube; the folds of the swollen mucous membrane are pressed closely together, and then grow together, small cysts being formed. **Hemorrhag′ic s.**, s. characterized by bleeding from a ruptured vessel. **Intersti′tial s.**, s. with formation of increased amount of connective tissue. **S. isth′mica nodo′sa**, follicular inflammation of the isthmus—or small, constricted portion—of the Fallopian tube, associated with new formation of muscular and connective tissues, in small knots and lumps. **Nod′ular s.**, s. with formation of nodules. **S. pro′fluens**, there is at first closure of the Fallopian tube by swelling, and when the latter subsides the confined fluid escapes. **Pseudofollic′ular s.**, s. follicularis. **Pu′rulent s.**, s. with formation of pus. **Tuber′culous s.**, a form of s. generally secondary to tuberculosis in other organs. **S. veg′etans**, condition in which the walls of the sac, in hydrosalpinx, become attenuated, and floating in liquid present the appearance indicated by its name.

**Salpingo-** (*salpinx*, tube). In composition, the Eustachian or the Fallopian tube.

**Salpingocath′eterism.** Catheterism of the Eustachian tube.

**Sal′pingocele** (*kele*, hernia). Hernia of the oviduct.

**Salpingocye′sis** (*kyesis*, pregnancy). Tubal pregnancy.

**Salpingomal′leus.** Tensor tympani muscle.

**Salpingona′sal fold.** Fold of mucous membrane from the opening of the Eustachian tube to the posterior nares.

**Salpingo-oöphorec′tomy.** Operation for excision of Fallopian tube and ovary.

**Salpingo-oöphori′tis** (*salpinx*, tube, *oophoron*, ovary). Inflammation of ovary and Fallopian tube conjointly.

**Salpingoövariot′omy.** Salpingo-oöphorectomy.

**Salpingoövari′tis.** Salpingo-oöphoritis.

**Salpingopal′atal fold.** Fold of mucous membrane covering the levator palati muscle.

**Salpingopharyn′geal.** Relating to the Eustachian tube and pharynx.

**Salpingopharynge′us.** Bundle of muscular fibres passing from the Eustachian tube to the pharynx; levator veli.

**Salpingopter′ygoid lig′ament.** The slip of fascia extending between the spine of the sphenoid and the hamular process.

**Salpingor′rhaphy** (*rhaphe*, suture). Suture of the Fallopian tube.

**Salpingostaphyli′nus.** Circumflex muscle; tensor veli. **S. inter′nus**, levator palati.

**Salpingostenocho′ria** (*stenos*, narrow, *chora*, space). Narrowness or stricture of the Eustachian tube.

**Salpingostomot′omy** (*salpinx*, tube, *stoma*, mouth, *tome*, incision). A. Martin's operation to save and restore the uterine appendages, instead of removing them; at the close of the operation he unites the borders of the tubal mucous membrane at the end of the tube and the peritoneum by catgut sutures, the mucosa remaining everted.

**Salpingos′tomy** (*stoma*, mouth). Operation for establishing, for purposes of drainage, an artificial fistula, so that the Fallopian tube may have communication with the exterior of the body. Also a similar operation, with similar purposes, on the Eustachian tube.

**Salpingot′omy** (*salpinx*, tube, *tome*, incision). Any operation upon the Fallopian tube.

**Sal′pinx** (*salpinx*, tube). Eustachian tube; Fallopian tube.

**Sal′safy.** Tragopogon porrifolium.

**Salsaparil′la.** Sarsaparilla.

**Salse′do** (*salsus*, salt). Brine. **S. mu′crum**, potassii nitras.

**Sal′sify.** Tragopogon porrifolium.

**Salsila′go** or **Salsitu′do** (*salsus*, salt). Brine.

**Salso′la decum′bens** or **S. ka′li.** Prickly saltwort, ord. *Chenopodiaceæ*. This plant, as well as *S. sativa* and *S. soda* or *longifolia*, produces the alkaline salt commonly called barilla, soda, or kelp.

**Salsu′ginous.** Briny. Term formerly applied to a fever in which the heat of the skin imparted a pungent sensation to the hand of the physician.

**Salt.** Name formerly given to many substances of very different nature. At present chemists apply the term generally to the combination of an acid with one or more bases; that is to say, to an acid in which hydrogen has been replaced by a base or a basic radical. Neutral or normal salts are those in which the acid and base reciprocally saturate each other. Acid salts or supersalts are those in which the acid predominates over the base, some of the replaceable hydrogen atoms remaining. Alkaline or basic salts or subsalts are those in which the base is predominant. The different denominations of the salts are compounded: 1. Of the name of the acid, the termination of which is changed into *ite* when the name of the acid is in *ous; ate* when it is in *ic*. Thus the salts formed by *sulphurous* acid are *sulphites;* those by *sulphuric, sulphates*. 2. This name is followed up by that of the oxide which enters into the composition of the salt. Thus the sulphate of protoxide of iron is a combination of sulphuric acid with the protoxide of that metal. Frequently, to shorten the name, the word *oxide* is suppressed, and *proto, deuto, trito,* etc., put before the acid; as *protosulphate of iron*. *Simple salts* are those resulting from the combination of an acid with a single base; *double salts*, with two different bases; *triple*, with three, etc. A *haloid salt* is a combination of a basic radical and one of the four elements, chlorine, fluorine, bromine, and iodine; a familiar example is common salt, sodium chloride. An *oxysalt* is formed from the combination of an acid with an oxide. When salt is used in an abstract sense it means chloride of sodium. **Ape′rient salt of Fred′erick**, sodium sulphate. **Ba′ker's s.**, ammonii carbonas. **S. of baril′la**, sodium carbonate. **Bay s.**, sodium chloride. **Bit′ter pur′ging s.**, magnesii sulphas. **S. of bones**, ammonii carbonas. **Com′mon s.**, sodium chloride. **Ep′som s.**, magnesii sulphas. **Ev′eritt's s.**, cyanide of iron and potassium. **S.-frog**, see *Cohnheim's frog*. **Glau′ber's s.**, sodium sulphate. **Glau′ber's Ly′mington s.**, see *Sodium sulphate*. **S. of lem′ons**, potassii oxalas. **Monsel's′ s.**, ferri sulphas. **Pres′ton s.**, see *Ammonii carbonas*. **S. rheum**, a commonly used term for several skin diseases, particularly chronic eczema. **Rochelle′ s.**, sodium tartrate. **Rock s.**, sodium chloride. **Sea s.**, sodium chloride. **Sec′ondary s.**, neutral salt. **Seignette's′ s.**, sodium tartrate. **Smell′ing s.**, ammonii carbonas. **S. of so′da**, sodium carbonate. **S. solu′tion**, made by adding 0.6 per cent. of sodium chloride to distilled water. **Sore throat s.**, potassium nitrate. **S. of tar′tar**, see *Potassii carbonas* and *Potash*. **Taste′less pur′ging s.**, sodium phosphate. **S. of u′rine**, ammonii carbonas; urea. **White s.**, sodium chloride. **S. of wood′soot**, ammonii carbonas. **S. of worm′wood**, see *Potash*.

**Sal′tan's ro′sa.** Urticaria.

**Salta′tion.** Dancing; leaping; choreic movement.

**Sal′tatory** (*saltator*, dancer). Jumping or dancing. **S. chore′a**, a form of hysterical chorea accompanied with jumping or dancing. **S. spasm**, nervous disease marked by clonic spasms of the leg muscles when the patient attempts to stand, causing jumping movements.

**Sal′ter's incremen′tal lines.** Lines in the dentine exhibiting its concentric depositions. **S.'s swing**, a surgical apparatus for suspension of a fractured limb.

**Saltpe′tre** (*sal*, salt, *petra*, a rock). Potassium nitrate. **Chil′e s.**, sodium nitrate.

**Salts.** Common name for Epsom salt or magnesium sulphate; also for aromatic ammonium carbonate.

**Sal′tus** (*salio*, to leap). Leap. Vulva. **S. ten′dinum**, subsultus tendinum.

**Salt′wort, prick′ly.** Salsola kali.

**Salu′brious** (*salubris*, healthy). Salutary, healthful.

**Salu′briousness.** Salubrity.

**Salu′brity** (*salubris*). Salubriousness. Anything which contributes to the health of individuals or of communities.

**Sal′ubrol.** Tetrabromomethylenediantipyrin. Antiseptic and hæmostatic powder, produced by the action of bromine on methyl antipyrin.

**Sal′ufer.** Neutral sodium silicofluoride; white, inodorous substance; deodorant and disinfectant.

**Salumin′.** $Al(C_7H_5O_3)_3$. Aluminum salicylate. Used as an astringent disinfectant, especially by insufflation of ammoniated solutions, in the local treatment of ozæna and pharyngitis. **Insol′uble s.,** aluminum salicylate. **Sol′uble s.,** aluminum-ammonium salicylate; astringent disinfectant.

**Sa′lus.** Health.

**Sal′utary** (*salus*). Salubrious; healthy; healthful.

**Salutif′erous** (*salus*, health, *fero*, to bear). Bringing health; health-bearing.

**Salvatel′la.** Vena salvatella. A vein situated on the back of the hand, near its inner margin. It begins on the posterior surface of the fingers and the dorsal surface of the hand by a plexus formed by a number of radicles, frequently anastomosing with each other; it then ascends to the inner part of the forearm, where it takes the name posterior cubital. The ancients attributed to abstraction of blood from this vein considerable efficacy in curing disease; hence its name, *salveo*, to be well.

**Salve.** Unguentum. **Blis′tering s.,** unguentum lyttæ. **Desh′ler's s.,** ceratum resinæ compositum. **Eye s.,** unguentum oxidi zinci; unguentum hydrargyri nitrico-oxidi.

**Sal′via.** Sage, ord. *Labiatæ*. The official (Ph. U. S.) name of the leaves of Salvia officinalis; tonic, stimulant, and carminative. In the form of a weak infusion sage is used as a diluent and as a wash for sore mouth and a gargle; dose, ℥ss–j (16.0–32.0) in infusion. **S. africa′na,** wild sage, a South African species, has the same medical properties as salvia. **S. colora′ta,** Salvia horminum. **S. hormi′num,** of the pharmacopœias, is used for the same purposes as salvia. **S. horten′sis,** salvia. **S. lyra′ta,** wild sage, cancer-weed; indigenous; the fresh leaves, bruised, are used to destroy warts, and have been employed in cancer. **S. mi′nor,** salvia. **S. officina′lis,** salvia. **S. scla′rea,** common clary; the leaves have been recommended as corroborants and antispasmodics. **S. vi′tæ,** Asplenium ruta muraria. **S. vulga′ris,** salvia.

**Sal′viol.** Volatile oil in sage, wild sage especially.

**Samade′ra in′dica.** Furnishes the niepa bark, which is antiperiodic.

**Sambaï′ba.** Curatella sambaiba.

**Sambaïbin′ha.** Davila rugosa.

**Sam′bo.** The offspring of the Indian and negro.

**Sambucin′.** Alcoholic extract of Sambucus canadensis. Diuretic.

**Sambu′cus.** Elder, ord. *Caprifoliaceæ*. The flower and bark were formerly called *canopum*. The flowers, *sambucus* (Ph. U. S.), berries, and bark of the elder have been used in medicine, the flowers being reputed diaphoretic and discutient; the berries aperient and sudorific; the bark purgative and, in small doses, deobstruent. The flowers are sometimes used in fomentations and to form a cooling ointment; dose, internally, ʒss–j (2.0–4.0) in infusion. **S. arbo′rea,** sambucus. **S. canaden′sis,** sambucus. **S. chamæac′te,** S. ebulus. **S. eb′ulus,** dwarf elder, danewort; the root, interior bark, leaves, flowers, berries, and seeds have all been given in moderate doses as resolvents and deobstruents; in large doses as hydragogues. **S. he′lion,** Sambucus ebulus. **S. herba′cea,** S. ebulus. **S. hu′milis,** S. ebulus. **S. ni′gra,** sambucus. **S. pu′bens** or **pubes′cens** or **racemo′sa,** red-berried elder; indigenous; the bark in decoction is said to be a valuable hydragogue cathartic. **S. racemo′sa,** S. pubens. **S. vulga′ris,** sambucus.

**Sam′phire.** Crithmum maritimum.

**Samp′son, black.** Echinacea purpurea.

**Sampsuchon,** samp′su-kon. Origanum majorana.

**Sampsu′cus.** Sweet marjoram.

**Samp′sychum.** Origanum majorana.

**Samshu′.** A Chinese spirit distilled from the yeasty liquor in which boiled rice has fermented.

**Sam′son's snake′root.** Psoralea melilotoides.

**San′able.** Curable.

**Sanamun′da.** Geum urbanum.

**Sana′tion** (*sano*, to cure). Curation; cure.

**San′ative.** Curative; sanitary.

**San′atogen.** Glycerinophosphate of sodium-casein; tonic.

**San′atol.** Creolin; a thick brown liquid, prepared from carbolic acid and concentrated sulphuric acid; a powerful disinfectant and surgical antiseptic.

**Sanato′rium** (*sano*, to cure). An establishment for the treatment of the sick, especially for those suffering from chronic diseases and not entirely bedridden, and usually for selected cases and patients able to pay for treatment. Sometimes incorrectly called sanitarium.

**San′atory.** Curative.

**Sand.** See *Gravel*. **S. bath,** see *Arenatio* and *Bath*. **Brain s.,** see *Pineal gland*. **Pin′eal s.,** see *Pineal gland*. **S. tu′mor,** psammoma.

**San′dalum cæru′leum.** Ben nut. See *Guilandina morigna*. **S. ru′brum,** Pterocarpus santalinus.

**San′dalwood.** Santalum. Wood of Pterocarpus santalinus; red saunders. Also the wood of Santalum album; yellow or white sandalwood. The volatile oil, *oleum santali* (Ph. U. S. and Br.), is employed in gonorrhœa, diarrhœa, and chronic bronchitis; dose, ♏x–xx (0.65–1.3).

**San′darac.** Gum juniper, pounce. Odorous resin which flows from the Callitris quadrivalvis of Africa; stimulant like all the resins. **Greek s.,** realgar.

**Sand′blind.** Defect of vision in which small particles seem to fly before the eyes. See *Metamorphopsia*.

**San′der's paranoi′a.** Paranoia originaria, a form of the disease appearing in youth. **S.'s sign,** wavy form of impulse of the heart, chiefly noticeable in the epigastric region, in adhesion of the pericardium.

**Sand′flea.** Pulex penetrans.

**San′diver.** See *Vitrum*.

**San′dix** or **San′dyx.** Plumbi oxidum rubrum.

**Sand′sedge.** Carex arenaria.

**Sand′stroem's glands.** Parathyroid glands.

**Sane.** Healthy, mentally or physically, especially the former.

**Sang.** A malignant vesicle fatal to cattle.

**Sangaree,** san-gar-e′. Wine and water or porter and water, sweetened and spiced.

**Säng′er's mac′ula, opera′tion,** etc. See *Saenger*.

**Sang′er Brown's disease.** Hereditary cerebellar ataxia.

**Sanguic′olous** (*colo*, to inhabit). Living in the blood.

**Sanguiduc′tus du′ræ ma′tris** (*sanguis*, blood, *duco*, to lead). Sinus of the dura mater.

**Sanguif′erous** (*sanguis*, blood, *ferro*, to carry). Conveying blood.

**Sanguifica′tion** (*sanguis*, blood, *facio*, to make). The formation of blood. Hæmatosis.

**Sanguiflux′us** (*sanguis*, blood, *fluo*, to flow). Hemorrhage. **S. uteri′nus,** metrorrhagia.

**Sanguimo′tion** (*sanguis*, blood, *moveo*, to move). Circulation of the blood.

**Sanguimo′tory.** Circulatory.

**San′guinal.** Fresh blood defibrinated and evaporated; employed in anæmia.

**Sanguina′lis corrigi′ola.** Polygonum aviculare.

**Sanguina′ria.** (Ph. U. S.) The rhizome of S. canadensis, bloodroot, bloodwort, red puccoon, red root, Indian paint, turmeric; ord. *Papaveraceæ*. The seeds are also used in medicine; emetic. Sanguinaria is said to reduce the velocity of the pulse; it is cholagogue and expectorant. The official preparations are: *Extrac′tum sanguina′riæ flu′idum;* dose, ♏j–v (0.065–0.32). *Tinctu′ra s.;* dose, ♏v–xxx (0.32–2.0).

**Sanguinari′na** or **Sanguinarine′.** The active principle of sanguinaria. **S. ni′trate,** employed as an expectorant, nauseant, etc., in doses of gr. $\frac{1}{10}$–$\frac{1}{4}$

(0.0065–0.016). **S. sul'phate,** employed as an emetic in doses of gr. j (0.065).

**San'guine** (*sanguis,* blood). Hæmatic; bloody; blood-like; having the color of blood, as a sanguine countenance; plethoric. Hopeful. **S. tem'perament,** constitution possessed by those of florid complexion, well-developed frame, good digestion, and high blood pressure; such persons are prone to arteriosclerosis, with its consequent cardiac and renal affections, apoplexy, etc.; the rheumatic temperament is practically the same.

**Sanguin'ea.** Potassii nitras.

**San'guineness.** Plethora.

**Sanguin'eous.** Plethoric; bloody. **S. cysts,** cysts containing blood, either primarily or from accidental hemorrhage into their cavities.

**Sanguinifica'tion.** Sanguification.

**Sanguin'olent.** Tinged with blood. An epithet applied particularly to the sputa when so tinged; bloody.

**Sanguipur'gium** (*sanguis,* blood, *purgo,* to cleanse). Purgation of the blood. A name formerly given to mild fevers, from an idea that they purged the blood of noxious matters.

**San'guis.** Blood. **S. bovi'nus,** dried bullock's blood; employed as a nutrient. **S. concre'tus,** coagulum. **S. draco'nis,** see *Calamus rotang.* **S. hir'ci sicca'tus,** see *Blood.*

**Sanguisor'ba canaden'sis.** Indigenous plant, ord. *Rosaceæ,* with white, sometimes purple, flowers, which has the same virtues as **S. officina'lis,** Italian pimpernel; this was formerly used as an astringent and tonic in hemorrhages, dysentery, etc.

**Sanguisu'ga** (*sanguis,* blood, *sugo,* to suck). Leech.

**San'icle.** Sanicula; S. marilandica. **Amer'ican s.,** Heuchera cortusa. **York'shire s.,** Pinguicola vulgaris.

**Sanic'ula** (*sano,* to heal). Saxifraga granulata. **S. eboracen'sis,** Pinguicola vulgaris. **S. europæ'a** or **mas** or **officina'rum,** woodmarch; an herb formerly used as a mild astringent. **S. marilan'dica,** sanicle, black snakeroot; indigenous plant; tonic. The powdered root is employed in popular practice as a remedy in intermittent fever; also in chorea. **S. mas,** S. europæa. **S. monta'na,** Pinguicola vulgaris. **S. officina'rum,** S. europæa.

**San'ies.** Thin, serous fluid, presenting some of the qualities of pus and blood, and commonly exhaled at the surface of ulcers. **S. gangræno'sa,** fluid resulting from destruction of tissue, differing according to the structures involved.

**Sa'nious.** Ichorous.

**Sanita'rium** (*sanitas,* health). Retreat selected for valetudinarians in consequence of its salubrity; a health resort. Incorrectly used as a synonym of sanatorium.

**San'itary.** Relating to health, especially to the public health.

**San'itas** (*sanus,* healthy). Health. A state in which all the functions are exerted with regularity and harmony. A person may, however, be in health although certain functions are not performed—a blind man, for example. Proprietary name of a turpentine preparation employed as a disinfectant.

**Sanita'tion** (*sanitas,* health). Application of the rules of hygienic living. Making healthful.

**San'ity.** Sanitas. Mental soundness.

**Sanki'ra.** Smilax china.

**Sanmet'to.** Compound of santalum and saw-palmetto; employed in genito-urinary diseases.

**San'oform.** White crystals, obtained by action of iodine on oil of wintergreen. Used as a substitute for iodoform, in powder or ointment, for ulcers, etc. Diiodomethyl salicylate or methyldiiodosalicylate.

**San'ose.** An albuminous dietetic preparation, containing casein 80 per cent., albumose 20 per cent.

**Sanosin'.** A mixture of eucalyptus leaves, sulphur, and charcoal, the fumes of which, when ignited, are inhaled in the treatment of pulmonary tuberculosis.

**San'som's sign.** Dulness on percussion in the second and third intercostal spaces in the effusion of pericarditis. Also murmur heard through the mouth when the patient places his lips to the stethoscope, in aneurysm of the aorta.

**San'son's exper'iment.** A method formerly employed in diagnosing cataract, consisting of reflections of a candle-flame from the surfaces of the cornea and lens, the reflections from the surface of the cornea and anterior surface of the lens being large, while the reflection from the posterior surface of the lens is small and inverted. **S.'s im'ages,** Sanson-Purkinje images.

**San'son-Purkin'je im'ages.** Three pairs of reflected images of one object, seen in the pupil of the eye. The first two are perpendicular, respectively from the anterior surface of the cornea and anterior surface of the lens, the third, inverted, pair being from the posterior capsule of the lens.

**San'ta An'a bark.** Cusco bark.

**Santalin'.** $C_{15}H_{14}O_5$. Coloring-matter of red saunders.

**San'talum al'bum.** Yellow and white saunders or sandalwood; the wood of S. yasi and other species, ord. *Santalaceæ.* White sandalwood is the young timber, yellow sandalwood the old; the virtues of the wood of the white saunders reside in the volatile oil and resinous principle; the odor is fragrant and resembles a mixture of ambergris and roses. It has been used as a stimulant and sudorific; the oil is official in the Ph. U. S. and Br.; see *Sandalwood.* **S. myrtifo'lium,** S. album. **S. ru'brum** (Ph. U. S.), the wood of Pterocarpus santalinus, red saunders; used as a coloring agent.

**Santan'.** Bismutan; a mixture of bismuth, resorcin, and tannic acid, used in diarrhœa.

**Santoli'na chamæcyparis'sus.** An indigenous plant of the mountains of Europe; ord. *Compositæ.*

**San'tonate.** A salt formed by the combination of santonic acid with a base. **S. of atropine',** a mydriatic whose action is similar to that of atropine sulphate. **S. of cal'cium,** anthelmintic; dose, gr. ss–iss (0.032–0.1).

**Santon'ic acid.** Acid formed by boiling santonin in strong baryta-water; isomeric with santoninic acid.

**Santon'ica.** (Ph. U. S. and Br.) The unexpanded flower-heads of Artemisia pauciflora; Levant wormseed. Employed as a vermifuge, especially for round and pin worms; dose, gr. x–ʒj (0.65–4.0). The glucoside is usually preferred; see *Santonin.*

**Santon'icum** (Santonia, its native place). Artemisia santonica.

**Santonin'.** Santoninum (Ph. U. S. and Br.). $C_{15}H_{18}O_3$. A crystalline glucoside obtained from santonica. Anthelmintic in doses of gr. ss–ij (0.032–0.13). The troches, *trochis'ci santoni'ni,* are official; dose, 1 or 2 night and morning.

**Santonin'ic acid.** $C_{15}H_{20}O_4$. Made by the action of alkalies upon santonin.

**Santoninox'im.** Derivative obtained by heating santonin with hydrochlorate of hydroxylamine; anthelmintic.

**Santoni'num.** (Ph. U. S. and Br.) Santonin.

**Santori'ni's canal'.** Supplementary duct of the pancreas. **S.'s car'tilages,** corniculum laryngis. **S.'s cir'cular mus'cle,** involuntary muscular fibres surrounding the urethra. **S.'s con'cha,** supernumerary bone occasionally found above the superior turbinated bone of the ethmoid. **S.'s duct,** accessory pancreatic duct, having an opening apart from that of the duct of Wirsung. **S.'s fis'sures,** clefts at the upper and back part of the fibrocartilaginous portion of the external ear. **S.'s mus'cle,** risorius Santorini. **S.'s plex'us,** vesicoprostatic venous plexus; in the female, the venous plexus surrounding the urethra; also a nervous plexus at the foramen ovale made up of filaments of the roots of the inferior maxillary nerve. **S.'s tu'bercles,** small, cartilaginous projections at the top of the arytenoid cartilages, which support the ligaments of the glottis; see *Corniculum* *laryngis*. **S.'s veins,** emissary veins, those forming communications between the sinuses of the dura mater and veins exterior to the skull.

**Sao'ria** (Guiana name). The ripe and dried fruit of Maesa or Bœobotrys picta, an Abyssinian tree; used in powder as a tæniafuge.

**Sap.** The circulating fluid of plants, corresponding to the blood of animals.

**Sapha'da.** Reddish scales adherent to the hair in some eruptions of the hairy scalp.

**Saphe'na** (*saphes*, manifest). A saphenous nerve or a saphenous vein.

**Saphe'nous.** Of or belonging to the saphena. **S. ar'teries,** arteries occasionally seen in man; the *great saphenous artery* is an occasional branch of the femoral; the *small saphenous artery* is an anomalous enlargement of the median superficial sural. **S. nerves** are two in number, and are branches of the crural or femoral nerve They are the *short saphenous* (nervus cutaneus externus), a branch of the internal popliteal, and the *long saphenous* (nervus cutaneus internus longus); the latter passes down the leg by the side of the internal saphenous vein to the foot. **S. o'pening,** oval and somewhat oblique opening in the fascia lata, a little below Poupart's ligament, for the transmission of the principal superficial vessels; here likewise femoral hernia descends. **S. veins,** two subcutaneous veins of the lower limb: 1. The *great, internal*, or *long saphena vein*. Its radicles occupy the inner part of the great toe, forming a transverse arch on the back of the foot, which unites with the saphena externa, receiving at its convex part, which is turned forward, a number of branches from the toes. These radicles, when united, ascend before the inner ankle and form a trunk, the size of which is further increased by several branches proceeding from the region of the tarsus and that of the metatarsus. This trunk ascends vertically at the inner part of the leg, passes behind the inner condyle of the femur, proceeds along the inner part of the thigh, receives other subcutaneous veins, and passes through the inferior opening of the crural canal to empty itself into the femoral vein. 2. The *lesser, external*, or *short saphena vein* commences by several roots, spreading over the dorsum and outer side of the foot, and embracing the outer ankle. Behind this the two saphenous veins unite into a single trunk, which ascends obliquely, approaching the tendo Achillis, and proceeding vertically toward the ham to open into the popliteal vein.

**Sap'id** (*sapio*, to taste). Possessed of sapidity; having the power of affecting the organs of taste.

**Sapid'ity.** The quality of bodies giving them taste.

**Sapin'.** $C_5H_{14}N_2$. A ptomain isomeric with cadaverin, but not poisonous.

**Sapin'dus.** Soap tree; ord. *Sapindaceæ*. The name of the plant that affords the soap-nut or soapberry, a spherical fruit about the size of a cherry; the cortical part is yellow, glossy, and so transparent as to show the spherical black nut that rattles within, and includes a white kernel. The cortical part of this fruit, which lathers with water, like soap, has been recommended in chlorosis and as a stomachic and deobstruent.

**Sa'pium.** Stillingia.

**Sa'po.** (Ph. U. S.) Soap. A product obtained by treating fatty bodies with caustic alkalies dissolved in water. Yellow soap is formed of turpentine, oil, and an alkali. Castile soap, being made of fine olive oil and soda, is the kind generally selected for internal use. The yellow and soft soaps are the most stimulating, and are consequently best adapted for use in dermatological practice. Internally, soap is purgative and diuretic; externally, it is detergent and stimulant. Soapy water is used with the greatest success in cases of poisoning by acids. Soap is applied externally to bruises and sprains. In pharmacy it is used to favor the solution of resins. The two official preparations are *emplas'trum sapo'nis* and *linimen'tum s.*, used externally. **S. ac'idus,** acid soap, a combination of a fixed oil with an acid. **S. al'ba,** castile soap; the official soap of the Ph. U. S. **S. anima'lis,** curd soap; soap made with soda and a purified animal fat consisting principally of stearin. **S. aromat'icus sol'idus,** opodeldoc. **S. butyri'nus,** butter soap. **S. calca'rius,** linimentum aquæ calcis. **S. car'bol,** a solution of crude cresol in potassium soap; used as a surgical antiseptic. **S. castilien'sis,** Castile soap. **S. cine'reus,** gray soap, being soap to which mercury and benzoinated fat are added. **S. coco'neus,** soap of cocoanut oil, has been much used in Germany in herpetic affections. **S. domes'ticus,** curd soap. **S. du'rus,** s. medicinalis. **S. guaiaci'nus,** soap of guaiac, made from guaiacum and liquor potassæ. **S. hispan'icus,** Castile soap. **S. kal'icus,** s. mollis. **S. liq'uidus,** liquid soap, cosmetic composed of olive oil, ol. tartari per deliquium, and aqua rosæ. **S. medicina'lis** or **medica'tus,** medicinal or medicated soap; a large number of medicinal soaps are now employed in dermatology, superfatted with lanolin and olive oil, and containing a certain percentage of resorcin, sulphur, salicylic acid, iodoform, creolin, ergotin, iodine, menthol, salol, aristol, thiol, or other ingredient of value in dermatological practice. **S. mol'lis** (Ph. U. S.), formerly s. viridis, green soap; soap prepared from potassa and linseed oil with alcohol and water; used extensively in the treatment of skin diseases, especially of eczema rubrum; the linimentum, formerly called tincture of green soap, is official. Soft soap is made of potassa and olive oil. **S. ni'ger,** black soap, a combination of train-oil and an alkali. **S. plum'bi ox'idi,** lead soap; see *Lead plaster*. **S. terebin'thinæ,** yellow soap. **S. vegetab'ilis,** pulvis gummosus alkalinus. **S. vir'idis,** s. mollis. **S. vulga'ris,** s. mollis.

**Sapodermin'.** Soap of which mercury albuminate is an important ingredient.

**Sapodil'la.** Fruit of Achras sapota, seeds of which are diuretic and cathartic.

**Sapogenin'.** $C_{34}H_{54}O_9$. Derivative of sapotin, the latter a glucoside from Achras sapota.

**Sapona'ceous** (*sapo*, soap). Soapy; containing or resembling soap.

**Sapona'ria.** Soapwort, bruisewort, bouncing bet; a decoction of the leaves of this plant has been used in scrofula, cancer, syphilis, cutaneous eruptions, jaundice, visceral obstructions, etc. See *Sapindus saponaria*. **S. vacca'ria,** Vaccaria vulgaris.

**Saponetin'.** $C_{40}H_{66}O_{15}$. A derivative of saponin.

**Saponifica'tion** (*sapo*, soap, *facio*, to make). Formation of soap. When a putrefying corpse is exposed to water or is placed in very damp soil it may undergo a process of saponification, the fatty acids combining with the ammonia, forming adipocere.

**Sapon'ify.** To change into soap.

**Saponin'.** Glucoside occurring in soapwort, in the root of Polygala senega, in caulophyllum, quillaya, and other plants, a solution of which, in water, froths like soap. It is a local irritant, an anæsthetic, and paralyzant.

**Sap'onules.** Imperfect soaps formed by combinations of volatile or essential oils with different bases. See *Opodeldoch*. Acid saponules are combinations of such oils with acids.

**Sa'por.** Sapidity; savor.

**Saporos'ity.** Sapidity.

**Sa'porous.** Sapid.

**Sapo'ta.** Sapodilla plum tree; oval-fruited sapota. A tree growing in the Antilles, the fruit of which is much esteemed. Emulsion of the seeds has been given in nephritic affections. The bark is febrifuge. **S. a'chras,** sapota. **S. mull'eri,** bullet tree of Dutch Guiana, producing a substance, analogous to gutta percha, called bulata.

**Sapotil'la.** Sapota.

**Sapotin'.** $C_{29}H_{52}O_{20}$. Glucoside from Achras sapota.

**Sapotiretin'.** $C_{17}H_{32}O_{10}$. Derivative of sapotin.

**Sapotoxin'.** Poisonous glucoside found in numerous plants, as soapbark, soapwort, etc., and forming frothy, soap-like solutions in water. See *Saponin*.

**Sap′pan-wood.** Wood of Cæsalpinia sappan; used as a dye and to substitute hæmatoxylon.

**Sap′pey's acces′sory por′tal veins.** Aggregations of subdividing small veins in the liver, through some of the branches of which the portal vein and the venæ cavæ are brought in communication.

**Sapphism,** saf′fism (*Sappho*). Lesbian love; sexual love of women for members of their own sex.

**Sapræ′mia** (*sapros*, putrid, *haima*, blood). Toxæmia due to products of septic microorganisms.

**Saprin′** (*sapros*, putrid). $C_5H_{14}N_2$. Non-poisonous ptomain, isomeric with cadaverin, occurring in putrefying human livers and spleens, with cadaverin, putrescin, etc.

**Saprodon′tia** (*sapros*, putrid, *odous*, tooth). Caries of the teeth.

**Saprogen′ic** or **Saprogenous,** sap-roj′en-us. Inducing putrefaction.

**Sap′rol.** Oleaginous mixture of crude cresols in excess of hydrocarbons obtained during the process of refining petroleum. Used as a surgical antiseptic.

**Saproleg′nia.** A genus of plants, midway between the fungi and algæ, existing upon the surface of marine animals.

**Saproph′ilous** (*sapros*, putrid, *phileo*, to love). Name applied to microorganisms living or developing in putrid material.

**Sap′rophytes** (*sapros*, putrid, *phyton*, plant). Vegetable organisms living upon dead organic material.

**Saprophyt′ic.** Pertaining to saprophytes.

**Saprop′yra** (*sapros*, putrid, *pyr*, fever). Typhus gravior; putrid fever.

**Sa′pros** (*sapros*). Putrid; rancid.

**Sapros′tomous** (*sapros*, putrid, *stoma*, mouth). Having an offensive breath.

**Saproty′phus.** Sapropyra.

**Sara′ca in′dica.** Jasundi; asak. Bark used as an astringent and sedative in menorrhagia.

**Sar′apus** (*saro*, to grin, *pous*, the foot). One who has a large foot, whose toes are largely separated, or whose feet are much asunder in walking.

**Sarato′ga, min′eral wa′ters of.** These waters are, as a class, applicable to cases of dyspepsia associated with visceral engorgement, chronic congestion of the liver, biliary catarrh, jaundice, etc.; but, as they differ in composition, it is impossible to designate any special affections to which they are universally applicable.

**Sar′bo's sign.** Insensibility to pain in the peroneal nerve in tabes dorsalis.

**Sarcepip′locele.** Sarcoepiplocele.

**Sarcid′ium** (*sarkidion*, small piece of flesh). Caruncle.

**Sarcin′.** Sarcosin; hypoxanthin.

**Sar′cina** (a pack). Genus of microorganisms, fam. *Coccaceæ;* packet cocci, dividing in three directions, forming colonies in cubes. **S. al′ba** (Eisenberg), found in air and water; causes fermentation. **S. auranti′aca** (Lindner and Koch), found in air and water; causes fermentation; also yellow pigment. **S. au′rea** (Macé), found in exudation of pneumonia; causes fermentation and yellow pigment. **S. botuli′na** (van den Corput), in sausage poisoning. **S. can′dida** (Reincke), found in water and air; causes fermentation. **S. cerevis′iæ** (Lindner), in malt liquors and in the atmosphere of breweries. **S. fla′va** (De Bary), found in beer and cheese; causes fermentation; also yellow pigment. **S. fusces′cens** (Falkenheim), found in the human stomach; causes fermentation. **S. hyali′na** (Kützing), found in marsh water; causes fermentation. **S. intestina′lis** (Zopf), found in the intestines of fowls; causes fermentation. **S. litora′lis** (Oersted), found in marine water; causes fermentation; also red pigment. **S. of lungs,** S. pulmonum. **S. lu′tea** (Schroeter), found in water, potatoes, conjunctiva, etc.; causes fermentation; forms yellow pigment. **S. max′ima** (Lindner), found in brewings of malt; causes fermentation. **S. minu′ta** (De Bary), found in sour milk; causes fermentation. **S. mob′ilis** (Maurea), in dropsical effusions. **S. mor′rhuæ,** found in codfish; causes fermentation. **S. of mouth and lungs** (Fischer), found in the mouth and lungs; causes fermentation. **S. nob′ilis** (Maurea), found in fluid of chronic ascites. **S. paludo′sa** (Schroeter), found in marsh water; causes fermentation. **S. pulmo′num** (Hauser), found in sputa from the lungs; forms small white colonies on gelatin, brown on potato; causes fermentation. **S. reitenbach′ii** (Caspary), found in decaying water-vegetation; lives on dead organic matter. **S. re′nis** (Hepworth), found in the lungs of dead tuberculous patients; causes fermentation. **S. ro′sea** (Menge and Schroeter), found in air, beer, and milk; causes red pigment. **S. uri′næ** (Welcker), very minute cocci, occurring in packets of from eight to sixty-four; has been found in the bladder. **S. van den cor′put,** found in spoiled sausage; pathogenic. **S. ventric′uli** (Goodsir), found in morbid conditions of the stomach; causes fermentation; forms yellow pigment. **S. viola′cea** (Kützing), found in water; causes violet pigment. **S. virchow′ii,** S. pulmonum. **S. welck′eri** (Rossmann), found in urine; causes fermentation.

**Sar′cion** (*sarkion*). Caruncle.

**Sarci′tes** (*sarx*, flesh). Anasarca. **S. flatuo′sus.** emphysema.

**Sarci′tis** (*sarx*, flesh). Inflammation of muscular structures; myositis.

**Sarco-** (*sarx*, flesh). In composition, flesh.

**Sarcoadeno′ma.** Tumor combining the characteristics of adenoma and sarcoma.

**Sarcocarcino′ma.** Tumor combining the characteristics of carcinoma and sarcoma.

**Sar′cocele** (*kele*, a tumor). Any fleshy tumor of the testicle, especially sarcoma or cancer. This has also been distinguished as malignant sarcocele, as cystic disease of the testicle, morbus testiculi cysticus, has been termed cystic sarcocele. The disease affects adults particularly, most commonly after inflammatory swelling of the testicle, sometimes depending upon a blow, at others appearing without appreciable cause. There is a hard, heavy, ovoid or spherical swelling of the testicle, being at first slightly or not at all painful, and causing an unpleasant traction on the spermatic cord, which is swollen and participates in the affection. Very painful shootings occur later; the lymphatic glands of the abdomen become swollen, forming a tumor which may at times be felt through the abdomen, and the patient at length dies with every sign of the cancerous diathesis. The prognosis is very unfavorable. Extirpation of the testicle will sometimes save life. When of syphilitic origin sarcocele is called syphilitic sarcocele, morbus syphiliticus testiculi. Tuberculous disease of the testicle has received the name tuberculous sarcocele, morbus testiculi tuberculosus. **S. ægypti′aca,** elephantiasis scroti. **Cys′tic s.,** see *Sarcocele.* **Malig′nant s.,** see *Sarcocele.* **S. syphilit′ica,** see *Sarcocele.* **Tuber′culous s.,** see *Sarcocele.*

**Sarcoceph′alus esculen′tus.** Shrub of tropical Africa; ord. *Rosaceæ.* African peach root. The root is used as a bitter tonic in indigestion.

**Sarcocol′la.** Resinous matter from Penæa sarcocolla, P. mucronata, and other species of penæa, an African shrub, being so called from a belief that it facilitates the consolidation of flesh. It was once employed as an astringent and detergent.

**Sarcocop′tes** (*sarx*, flesh, *kopto*, to wound). See *Psora.*

**Sarcocys′tis Mie′scheri** (*sarx*, flesh, *kystis*, bladder). Microorganism found in muscular fibre of hogs and a number of other animals, forming Miescher's or Ranney's tubes.

**Sar′code** (*sarx*, flesh). A secondary form of the primordial blastema. In some of the inferior animals this amorphous, homogeneous substance, devoid of apparent structure, constitutes the greater portion, and even the whole, of the animal, as in the hydra. The term has been applied to the contents of cells, as of the cells of nutrition, epithelial cells, etc. See *Cytoblastema* and *Protoplasm.*

**Sarco′dic.** Relating or appertaining to sarcode, as sarcodic movement. **S. sub′stance,** sarcode.

**Sar′coenchondro′ma.** Combination of sarcoma and enchondroma.

**Sarcoepip′locele** (*sarx*, flesh, *epiploon*, omentum, *kele*, tumor). Epiplocele complicated with sarcoma.

**Sarcog′lia** (*sarx*, flesh, *glia*, glue). Protoplasmic material forming the eminence of Doyère, where a motor nerve enters a muscular fibre; contains granules and nuclei.

**Sarcohy′drocele.** Hydrosarcocele.

**Sar′coid** (*sarx*, flesh, *eidos*, resemblance). Resembling flesh.

**Sarcolac′tic acid.** $C_3H_6O_3$. An acid isomeric with lactic acid; occurs in muscles and urine.

**Sarcolem′ma** (*sarx*, flesh, *lemma*, coat). Sheath surrounding the fibrils of muscle forming a fibre. It is quite distinct from the areolar membrane binding the fibres into fasciculi.

**Sarcol′ogy** (*logos*, treatise). The part of anatomy treating of the soft parts, comprising myology, angiology, neurology, and splanchnology.

**Sar′colytes** (*sarx*, flesh, *lytos*, loosened). Round or cylindrical bodies observed in muscles of the frog; supposed to be products of retrograde metamorphosis of the muscle fibres, or by some to be a developmental stage of the muscle-fibre.

**Sarco′ma** (*sarx*, flesh). Literally, any species of excrescence having a fleshy consistence. The term is now used to embrace a group of tumors, the tissues forming which belong to the series of connective-tissue substances, but marked by a preponderating development of the cell-elements, resembling embryonic connective tissue. Granulation tissue formed during the inflammatory irritation of the connective tissue is regarded by Paget as the normal prototype of these tumors. Sarcomata are classed among the malignant growths. The following table exhibits the principal histological differences between glandular carcinoma and sarcoma (Gibbes):

| *Carcinoma.* | *Sarcoma.* |
|---|---|
| Derived from epiblastic and hypoblastic structures. | Derived from mesoblastic structures. |
| Possess a fibrous stroma. | No stroma. |
| Blood-vessels run in fibrous trabeculæ of stroma. | Vessels run directly in contact with cells. |
| Lymphatics in stroma. | No lymphatics. |

**S. of Ab′ernethy,** see *Adipose sarcoma*. **S. alveola′re,** a form of round-celled sarcoma with reticular stroma occurring in the medulla of bone, in the eye, and in the subcutaneous tissues. **Angiolith′ic s.,** psammoma. **Bot′ryoid s.,** a sarcomatous growth, resembling a bunch of grapes, in the cervix uteri. **S. carcinomato′des,** s. alveolare; scirrhus. **S. cerco′sis,** see *Cercosis*. **Cylindro′matous s.,** cylindrosarcoma. **S. epu′lis,** epulis. **S. fibrocellula′re** or **Gelat′inous s.,** a fibrocellular neoplasm. **Gi′ant-celled s.,** s. formed of large, irregular, multinucleated cells. **Glan′dular s.,** Hodgkin's disease. **S. globulocellula′re sim′plex,** granulation-like round-celled variety of sarcoma. **S. lipomato′des** or **lymphadenoi′des,** lymphatic, gland-like, round-celled form of sarcoma. In lipomatous sarcoma, s. lipomatodes, which is one variety of this, a partial transformation into fat-cells takes place by the infiltration of fat; while in mucous sarcoma, s. myxomatodes, another variety, a mucoid metamorphosis of the basis-substance occurs. **Med′ullary s.,** see *Sarcoma alveolare*. **Melanot′ic s.,** a variety of sarcoma in which many of the cells contain granules of dark colored pigment distinct from the pigment of extravasated blood. **S. mol′le,** sarcoma lymphadenoides. **S. mollus′cum,** connective-tissue tumors of the skin; multiple and presenting few spindle cells. **Mu′cous s.,** see *S. lymphadenoides*. **My′eloid s.,** giant-celled s. **S. myxomato′des,** see *S. lymphadenoides*. **Pul′py s.,** hæmatodes fungus. **Round-celled s.,** a form of s. made up of round cells. **Spin′dle-celled s.,** a form of s. made up of spindle cells. **Tu′bular s.,** s. in which the general structure of the tumor and the cells forms tubes. **With′ering s.,** mycosis fungoides.

**Sarcomato′des.** Sarcomatous.

**Sarcomato′sis.** Condition in which sarcoma exists. **Gen′eral s.,** simultaneous development of sarcomata in various portions of the body; mycosis fungoides.

**Sarco′matous.** Belonging to or having the characters of sarcoma.

**Sar′comere** (*sarx*, flesh, *meros*, a part). A segment formed by division of a muscular fibril by Krause's lines.

**Sarcom′phalocele** or **Sarcom′phalus** (*sarx*, flesh, *omphalos*, navel). Scirrhous or fleshy tumor developed at the navel.

**Sarcomy′ces** (*sarx*, flesh, *mykes*, fungus). Sarcospongus.

**Sarcomyce′tes.** Parasitic fungi in animal tissues.

**Sarcoph′agous** (*sarx*, flesh, *phago*, to eat). Carnivorous. Catheretic.

**Sarcoph′agy.** The eating of flesh.

**Sarcophy′ma.** Fleshy tumor; sarcoma.

**Sar′cophyte** (*sarx*, flesh, *phyton*, growth). Term synonymous with bioplast, the former, however, expressing the condition and destination of a white cell, leucocyte; the latter, its vital and formative properties.

**Sar′coplasm** or **Sarcoplas′ma.** Interfibrillar substance of muscles.

**Sar′coplasts.** See *Sarcolytes*.

**Sarcopsyl′la pen′etrans** (*sarx*, flesh, *psylla*, flea). Chique.

**Sarcop′tes scabie′i** (*sarx*, flesh, *kopto*, to wound). Acarus scabiei. See *Scabies* and *Parasites*.

**Sarcosin′.** $C_3H_7NO_2$. Methylglycosin. Crystalline substance resulting from the action of creatin on caffeine.

**Sarco′sis** (*sarx*, flesh). Formation of flesh; also sarcoma; abnormal fleshy growth. **S. bul′bi,** fleshy growth from the globe of the eye. **S. u′teri,** hypertrophy of the uterus.

**Sarcospon′gus** (*sarx*, flesh, *spongos*, fungus). Fleshy fungus.

**Sarcosporid′ia** (*sporidium*, a spore). Order of *Protozoa* parasitic in the muscles of some of the higher animals and occasionally of man.

**Sarcosto′sis** (*sarx*, flesh, *ostosis*, formation of bone). Osteosarcoma; growth of bony tumor in muscular tissue.

**Sar′costyles** (*sarx*, flesh, *stylos*, pillar). Columns or bundles of muscular fibrillæ.

**Sarcoth′lasis** or **Sarcothla′sia** (*thlao*, to bruise). Bruise of the flesh.

**Sarcot′ic.** Promoting growth or regeneration of the flesh.

**Sar′cotome** (*tome*, incision). Knife for cutting soft tissues.

**Sar′cous** (*sarx*, flesh). Of or belonging to flesh or muscle, as sarcous tissue. **S. el′ements,** elementary particles which, by their union, form the mass of muscular fibre. Under high powers of the microscope the muscular fibrils seem to consist of alternate rectangular light and dark particles. These were so named by M. Bowman, and he considered that they resulted from a splitting transversely of the muscular fibre into disks—Bowman's disks—and lengthwise into fibrillæ. The dark particles refract light doubly, hence called disdiaclasts, while the others are only singly refractile. **S. sub′stance,** porous material of which a sarcous element is made up.

**Sardo′nia her′ba.** Ranunculus sceleratus.

**Sardoni′asis.** Canine laugh; risus sardonicus.

**Sardon′ic laugh.** Canine laugh.

**Sa′re.** Essera.

**Sarep′ta.** Russian mustard.

**Sarkin′.** Hypoxanthin; sarcosin.

**Sarotham′nus scopa′rius.** Spartium scoparium.

**Sarracen′ia.** Sidesaddle plant, flytrap. The root of *S. flava* and *S. variolaris* is bitter and astringent, being a domestic remedy in dyspepsia, and the root of *S. purpurea*, pitcher plant, Indian or huntsman's cap, is used, in infusion, by the Indians as a remedy for smallpox, both for prevention and cure.

**Sar'sa** or **Sar'sæ ra'dix.** Sarsaparilla.

**Sarsaparil'la** (Ph. U. S.) is the root of Smilax officinalis, S. medica, and other undetermined species of smilax. Diuretic, alterative, and popular as a purifier of the blood; used in scrofula, syphilis, etc., and as a vehicle for potassium iodide. The official preparations are: *Decoc'tum sarsaparil'læ compos'itum;* dose, ℥iv–vj (120.0–180.0). *Extrac'tum s. flu'idum;* dose, ʒss–j (2.0–4.0). *E. s. f. compos'itum;* dose, ʒss–j (2.0–4.0). *Syr'upus s. compos'itus;* used as a vehicle in no definite dose. **False s.**, Aralia nudicaulis. **S. german'ica,** a plant growing on the sea-coasts of Europe; recommended in some mucous affections of the trachea, in rheumatism, gout, etc. **In'dian s.**, Hemidesmus indicus. **Wild s.**, Aralia nudicaulis.

**Sarsaparillin'.** See *Smilax sarsaparilla.*

**Sar'tian disease'.** Endemic skin disease, commencing as a red spot on the face, proceeding to ulceration; seen especially along the Mediterranean, and probably the same as Biskra button.

**Sarto'rius** (*sartor*, tailor, because used in crossing the legs). Muscle at the anterior part of the thigh; long, small, and flattened, extending obliquely from the anterior superior spine of the ilium to the upper and inner part of the tibia. This muscle can also flex the pelvis on the thigh, and conversely.

**Sarx.** Flesh; pulp.

**Sas'sa gum.** A gum the product of a tree called sassa, and resembling gum tragacanth.

**Sas'safras.** (Ph. U. S. and Br.) Bark of root of the sassafras tree of the eastern part of North America, ord. *Laurineæ;* stimulant, sudorific, diuretic; dose, ʒj–iv (4.0–16.0) in infusion. **S. infu'sion,** "sassafras tea." **S. medul'la** (Ph. U. S.), sassafras pith; used in the form of *mucila'go s. medul'læ;* dose, ʒj–iv (4.0–16.0). See *Laurus sassafras.* **S. nut,** see *Pichurim beans.* **S. officina'le,** the only species of this genus of trees; source of the official sassafras. **S. oil,** volatile oil of sassafras. **S. pith** s. medulla. **S. radi'cis cor'tex,** see *Laurus sassafras.* **S. ra'dix,** see *Laurus sassafras.* **Swamp s.**, Magnolia glauca. **S. tea,** salep.

**Sassafrin'.** A peculiar principle found in sassafras.

**Sas'solin.** A native variety of boracic acid.

**Sas'sy bark.** Poisonous bark of a large African tree, genus *Erythrophlœum*, E. guineense; ord. *Fabaceæ;* red-water tree of Sierra Leone; used in an ordeal to which persons suspected of crimes are subjected to test their innocence or guilt. Hence it is called in Conga ordeal bark, and in Ashantee and Liberia doom bark. An alkaloid, *erythrophleine*, has been separated from it, and given in form of hydrochlorate; said to resemble digitalin in its action on the heart, and cocaine in producing local anæsthesia and relieving local pain.

**Sat'ellite.** An attendant, subordinate companion. **S. le'sion,** the smaller of two similar and adjacent lesions. **S. veins** are those that accompany arteries.

**Sat'ellitism.** Dwelling together of two organisms, for mutual support or assistance.

**Sati'ety** (*satio*, to give enough). Disgust for food; commonly caused by repletion.

**Sat'in.** Lunaria rediviva.

**Satt'ler's vas'cular lay'er.** A layer of vessels in the choroid membrane to the inner side of the tunica vasculosa.

**Sat'urans** (*saturo*, to satiate). Absorbent medicine.

**Satura'tion.** State of a compound in which its elements are combined in such proportion that a fresh quantity of either cannot be added without producing excess.

**Saturei'a capita'ta.** Ciliated savory, thymus. Possesses properties similar to those of thyme. **S. horten'sis,** aromatic plant, cultivated for culinary purposes; used as an excitant in anorexia, anaphrodisia, etc. **S. monta'na,** winter savoy. **S. origanoi'des,** Cunila mariana. **S. sati'va,** S. hortensis.

**Satu'rity** (*saturo*, to satiate). Satiety.

**Sat'urnine** (*saturnus*, lead). Relating to lead. **S. breath,** peculiar odor of the breath in one suffering from plumbism. **S. cerebri'tis** or **encephali'tis,** cerebral inflammation due to lead poisoning. **S. neuri'tis,** a form of inflammation of nerve-fibres consequent upon lead poisoning. **S. pal'sy** or **paral'ysis,** paralysis due to lead poisoning. **S. poi'soning,** poisoning by lead, plumbism.

**Sat'urnism.** Poisoning by lead; lead poisoning; saturnine cachexy; plumbism.

**Satyr'ia.** Elephantiasis.

**Satyri'asis** (*satyros*, a satyr, because the satyrs were greatly addicted to venery). Irresistible desire in man to have frequent connection with the female, accompanied by the power of doing so without exhaustion. The causes are commonly obscure; the principal symptoms are almost constant erection; irresistible and almost insatiable desire for venery; frequent nocturnal pollutions.

**Satyrias'mus.** Satyriasis.

**Satyr'ion.** Orchis mascula. Goodyera pubescens.

**Sat'yrism.** Satyriasis.

**Satyr'ium.** Goodyera pubescens.

**Sauar'ja.** Saoria.

**Sauce alone'.** Alliaria. **Green s.**, Rumex scutatus.

**Sau'cy bark.** Erythrophlœum.

**Saugh,** saw. Salix.

**Saun'ders.** Sandalwood. **Red s.**, red sandalwood. **S. tree,** Pterocarpus santalinus. **Yel'low s.**, white sandalwood.

**Sau'ra.** Lizard.

**Saurider'ma** (*saura*, lizard, *derma*, skin). Ichthyosis with altered state of the sebiparous secretion, giving occasion to the accumulation of sebaceous matter on the skin, suggesting the idea of the coat of a lizard; ichthyosis hystrix.

**Sauri'asis.** Sauriderma.

**Saurio'sis.** Keratosis follicularis.

**Saurop'sida.** Huxley's term including reptiles, birds, and mammals.

**Sauru'rus cer'nuus.** Lizard tail, breastweed, indigenous plant, ord. *Saururaceæ.* It has been used in lumbago. The bruised root is emollient, and is popularly applied to inflamed breasts.

**Saus'age poi'son.** Allantotoxicon.

**Sau'ter's opera'tion.** Kolpohysterectomy.

**Sauvineau's** (so-vin-oze') **ophthalmople'gia.** Paralysis of internal rectus muscle of the eye on one side and spasm of the external rectus of the other side.

**Savakin' gum.** Suakin gum.

**Savanil'la rhat'any.** See *Krameria ixina.*

**Save.** Salvia.

**Sa'vian cor'puscles.** Corpuscles described by Savi in the skin of the torpedo, analogous to the Pacinian corpuscles.

**Sav'ill's disease'.** Dermatitis exfoliativa epidemica. Epidemic eczema.

**Sav'ine.** Juniperus sabina. This plant is commonly employed to induce abortion, and in large doses is a violent irritant poison. It is used in medicine as a local irritant and emmenagogue. **S. ce'rate,** savine ointment, made by gently heating together fluid extract of savine, 25 parts, with resin cerate, 90 parts, until the alcohol has been evaporated.

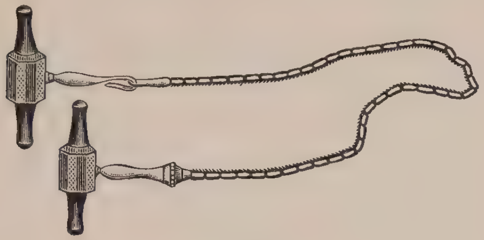
**Saviot'ti's canals'.** Minute slits between the glandular cells of the pancreas, now considered as artificially formed.

**Sa'vor.** Taste. Quality of bodies by which they act upon the sense of taste.

**Sa'vory.** An epithet given to bodies having taste, particularly to those exciting a very agreeable impression on the organ of taste. Also the plant *satureia.* **Cil'iated s.**, Satureia capitata. **Sum'mer s.**, Satureia hortensis.

**Savoy'an.** Galium verum.

**Saw.** Surgical instrument made like a common saw, used for dividing the bones in amputations or for removing exostoses, etc. **Amputa'tion s.**, saw used in amputation. **Butch'er's s.**, has an appliance for fixing the blade at any desired angle. **Chain s.**, a series of short saws, linked together to form a chain.



Chain saw.

**Hemp s.**, a hempen cord drawn back and forth rapidly over a part to be taken away; used in embryotomy and in situations where other saws cannot be employed. **Hey's s.**, an instrument used by Mr Hey, of Leeds, in fractures of the cranium, consisting of a long handle, to which a small saw with a convex or straight edge is attached, and by which a piece of bone of any shape may be removed. (See cut under *Hey*.) **S. palmet'to,** Chamærops serratula; Sabal serrulata.

**Saw'wort.** Liatris.

**Saxif'raga.** Pimpinella saxifraga. **S. an'glica,** Peucedanum silaus; see *Calcifraga*. **S. crassifo'lia** root is said to be antiseptic. **S. granula'ta,** white saxifrage; diuretic and lithontriptic. **S. ligula'ta,** rhizome of this Himalayan plant is employed for ophthalmia and boils, and internally in bronchitis and dysentery. **S. ru'bra,** Spiræa filipendula. **S. sibir'ica** contains, in common with other species of saxifraga, a bitter, crystalline principle, called bergenin, which is reputed to be a good nerve tonic. **S. vulga'ris,** Peucedanum silaus.

**Saxif'ragant** or **Saxif'ragous** (*saxum,* stone, *frango,* to break). Lithontriptic.

**Sax'ifrage.** Saxifraga. **Bur'net s.,** Pimpinella saxifraga. **Mead'ow s.,** Peucedanum silaus. **White s.,** Saxifraga granulata.

**Saxon'icus pul'vis.** A powder of the roots of the wild and the cultivated angelica, the Asclepias vincetoxicum, etc., considered formerly as an antidote.

**Sayre's jack'et.** A plaster-of-Paris jacket applied as a spinal support. **S.'s meth'od,** treatment of spondylitis by Sayre's jacket, consisting of a plaster-of-Paris dressing around the body, fitted with a "jury-mast" if the upper dorsal or cervical vertebræ are affected.

**S-bone.** A bone shaped like the letter S, such as the episternum or manubrium.

**Scab.** An incrustation which forms upon a sore, owing to the concretion of the fluid discharged from it. Also, as a verb, to become covered with this incrustation. Contagious parasitic skin disease of sheep, the most common form of which is caused by the Dermatocoptes communis.

**Scab'by** or **Scabbed.** Covered or diseased with scabs.

**Scab'ies** (*scabo,* to scratch). Psora, itch; a contagious eruption consisting of minute papules, vesicles, and pustules, caused by the presence beneath the epidermis of the itch-mite or acarus (Sarcoptes scabiei). The disease is attended with intense itching, and the scratching to which it impels results in an eczematous affection added to the primary lesions. The affection usually begins in the tender skin between the fingers, and extends thence by direct contact to the genitals, axillæ, and other parts. **S. ag'ria,** lichen. **S. cap'itis,** porrigo lupinosa, porrigo scutulata. **S. cap'itis favo'sa,** porrigo favosa. **S. crusto'sa,** radzyge. **S. fe'ra,** ecthyma. **S. feri'na,** itch of animals, mange; cutaneous disease which affects almost all domestic animals, but especially the horse, sheep, dog, and cow. It is said to have been transmitted to man, but this is questionable. **S. hu'mida,** eczema. **S. milia'ris,** eczema. **S. norve'gica Boeck'ii,** Norwegian itch, radzyge. **S. papulifor'mis,** prurigo. **S. sic'ca,** lichen; psoriasis. **S. vene'rea contagio'sa,** scherlievo.

**Scabi'ola.** Psora.

**Scabiopho'bia** (*phobos,* fear). Morbid dread of the itch.

**Scabio'sa.** A genus of plants, ord. *Dipsaceæ*. **S. arven'sis,** the root is bitter and subastringent, being formerly used in leprosy and affections of the lungs; sometimes used to adulterate valerian. **S. cardui-fo'lia,** echinops. **S. succi'sa,** devil's bit, has properties similar to those of S. arvensis.

**Scab'ious.** A plant of the genus *Scabiosa*. **Field s.,** scabiosa. **Sweet s.,** Erigeron heterophyllum.

**Scab'ish.** Œnothera biennis.

**Scab'rate** or **Scab'rous** (*scaber*). Harsh; rough; covered with scabs.

**Scabri'ties** (*scaber,* rough). A rough and scaly condition of the skin. Lichen. Trachoma. **S. un'-guium,** morbid condition of the nails, in which they are distorted and separated from the matrix.

**Scab'wort.** Elecampane; Inula helenium.

**Scævola,** see'vo-lah. See *Bela-modagam*.

**Sca'la.** An anatomical structure resembling a staircase. One of the spiral canals or tubes of the cochlea. The cavities in the cochlea, separated from each other by the spiral septum. The one—*s. interna* or *posterior* or *inferior cochleæ, s. tympani*—would communicate with the cavity of the tympanum were it not for the membrane that closes it. The other—*scala externa* or *anterior* or *superior cochleæ, s. vestibuli*—opens into the cavity of the vestibule. The scalæ communicate with each other by an opening at the top of the partition.

**Scalar'iform.** Having the form of a ladder.

**Scald.** Burn produced by hot liquid.

**Scald-head.** Porrigo. See *Favus*.

**Scald'ricks.** Sinapis arvensis.

**Scald-weed.** Dodder; Cuscuta americana.

**Scale.** A small, thin plate of any substance, as of the epidermis, of bone, of mica, etc.; a plate. A graded series of colors for comparison in hæmoglobin estimation, urinary color tests, etc. A series of equidistant marks arranged as a standard of measure, etc., as the thermometer scale. **Dry s.,** psoriasis.

**Scalene' tu'bercle.** An eminence on the first rib, giving attachment to the tendon of the scalenus anticus muscle.

**Scale'nus** (*skalenos,* irregular or unequal). Geometers employ this word to designate a triangle whose three sides are unequal. Anatomists have given the name to two muscles. **S. anti'cus,** situated at the internal and inferior part of the neck. It is long and triangular, being inserted, below, at the upper surface of the first rib; above, at the anterior tubercle of the transverse processes of the third, fourth, fifth, and sixth cervical vertebræ. This muscle bends the neck, drawing it to one side. It can also raise the first rib. **S. posti'cus,** situated behind the last. It is also long and triangular, but more bulky than the s. anticus. It is attached below to the outer surface of the first two ribs, terminating above at the summit of the transverse processes of the last six vertebræ. This muscle bends the neck laterally, and can elevate the first two ribs. Some anatomists have described five scaleni muscles on each side, and have called them s. prior, s. minimus, s. lateralis, s. medius, s. posticus. Others describe only one scalenus muscle on each side. Others, again, admit three—s. anticus, s. medius, and s. posticus; or primus, secundus, and tertius.

**Sca'ler.** Instrument used to remove tartar from the teeth.

**Sca'ling.** In dentistry, an operation consisting in removing the tartar from the teeth.

**Scall.** A scaly or scabby condition of the skin. **Asbes'tos s.,** see *Eczema of the hairy scalp*. **Crust'ed**

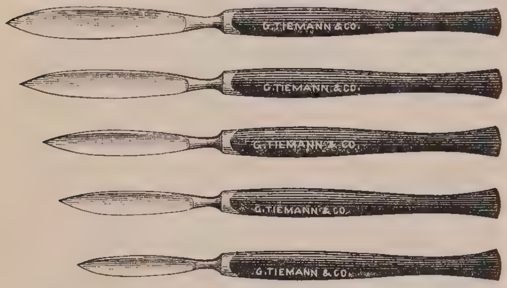
s., impetigo. **Dry s.**, psoriasis. **Hon′eycomb s.**, porrigo favosa. **Hu′mid s.**, eczema. **Milk′y s.**, porrigo larvalis. **Pap′ulous s.**, ecthyma. **Run′ning s.**, eczema; impetigo. **Vesic′ular s.**, eczema capitis. **Wash′erwoman′s s.**, psoriasis.

**Scal′lard.** Porrigo.

**Scal′ma.** Infectious disease of horses, not directly contagious. It attacks the bronchi and nasal chambers.

**Scalp.** The integuments covering the head. **S. tu′mor**, caput succedaneum; cephalæmatoma.

**Scal′pel** (*scalpo*, to cut). A cutting instrument, formed of a blade of well-tempered steel, very sharp, of variable shape and size, and fixed solidly in a slender handle which can be held in the fingers like a pen-holder.



Scalpels.

**Scal′prum.** Raspatorium. **S. chirur′gicum**, lancet. **S. denta′rium**, a tooth file, a dental file, or file used by the dentist. **S. raso′rium**, raspatorium.

**Sca′ly.** Squamous. **S. epithe′lium**, flat or pavement epithelial cells. **S. tet′ter**, psoriasis.

**Scam′ma.** Fossa.

**Scammo′nia.** See *Convolvulus scammonia.*

**Scammo′niæ ra′dix.** Dried root of Convolvulus scammonia. See *Convolvulus scammonia.* **S. resi′na** (Ph. Br.), extractum scammonii.

**Scammonin′.** Glucoside derived from boiling resin of scammony by treating it with dilute sulphuric acid.

**Scammo′nium.** (Ph. U. S. and Br.) Scammony, resinous exudate from the root of *Convolvulus scammonia*, which see. It is given in doses of gr. ij–x (0.13–0.65) as a hydragogue cathartic. The resin is official; dose, gr. j–viij (0.065–0.5). Scammony enters into the composition of the compound extract of colocynth.

**Scam′mony.** See *Scammonium* and *Convolvulus scammonia.* **Bour′bon s.**, concrete juice of Periploca mauritiana. **Ger′man s.**, see *Convolvulus sepium.* **S. of Montpel′lier**, Cynanchum monspeliacum. **Re′sin of s.**, scammonium. **S. root**, dried root of Convolvulus scammonia.

**Scan′dix.** A genus of umbelliferous plants. **S. bulbocas′tanum**, Bunium bulbocastanum. **S. cerefo′lium**, chervil; a culinary herb, slightly aromatic and grateful, and reputed to be gently aperient and diuretic. **S. odora′ta**, sweet cicely, has similar properties; see *Chærophyllum odoratum.*

**Scandula′ria mus′culus.** Transversus pedis muscle.

**Scan′ning speech or ut′terance.** The distinct utterance of each syllable of a word, with an appreciable interval between the syllables.

**Scaph′a** (*skapto*, to make hollow). Scaphus, scaphoid fossa. Excavation or cavity of the external ear, between the helix and anthelix. Meatus auditorius externus. Rima vulvæ.

**Scaph′ion** (*skaphe*, trough). Cranium; papaver (capsule).

**Sca′phium ocula′re.** Eye-glass; a small porcelain, glass, or metallic vessel used to apply lotions to the eye.

**Scaphocarposuperphalange′us pol′licis.** Abductor pollicis brevis.

**Scaphocephal′ic** or **Scaphoceph′alous** (*skaphe*, boat, *kephale*, head). Relating to a scaphoid or boat-shaped skull. Term used to denote a boat-shaped cranium due to infantile ossification of the sagittal suture.

**Scaphoceph′alism** or **Scaphoceph′aly.** The condition of one who is scaphocephalic.

**Scaph′oid** (*skaphe*, boat, *eidos*, form). A name given to several parts. **S. abdo′men**, hollowed-out, sunken belly seen in emaciation, wasting diseases, and certain acute affections. **S. bone of the foot**, bone situated at the forepart of the astragalus and inner part of the foot. The posterior surface forms a cavity somewhat like that of a boat, for receiving the head of the astragalus. There is a prominence at the inner side of the bone for the insertion of tendons, muscles, and strong ligaments. The forepart of the bone is convex and divided into three articular surfaces for articulation with the ossa cuneiformia. Between the os naviculare and astragalus the foot has its principal lateral and rotary motions, although each of the other joints of the tarsus contributes a little. Part of the tibialis posticus is inserted into it. **S. bone of the wrist**, the first bone of the first row of the carpus. The upper surface is convex, articulating with the radius. The under and outer surfaces are also convex, articulating with the trapezium and trapezoides. Between the upper and under cartilaginous surfaces there is a rough fossa for the insertion of the capsular ligament. The anterior and inner surface has an oval cavity articulating with the os magnum, which gives name to the bone. There is a process on the outer end of the bone for the attachment of part of the anterior transverse ligament of the wrist. **S. fos′sa**, a small cavity at the upper part of the internal ala of the pterygoid process in which the peristaphylinus internus is attached; also scapha.

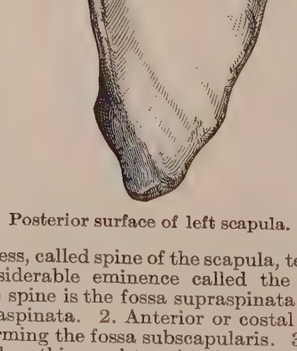
**Scaphoi′doastrag′alan.** Relating to the scaphoid bone and astragalus. The articulation of these bones is so called; and the ligament which strengthens it is termed the scaphoidoastragalan ligament.

**Scaphoidocu′boid.** Relating to the scaphoid and cuboid bones. The articulation of these bones is so called.

**Scaph′ula** (dim. of scapha). Navicular fossa.

**Scaph′us** (*skaphe*, skiff, trough). Scapha.

**Scap′ula.** Blade-bone, shoulder-blade. An irregular, broad, flat bone of triangular shape, situated at the posterior part of the shoulder. It has: 1. A posterior or dorsal surface or dorsum, testudo scapulæ, divided transversely into two parts by a triangular process, called spine of the scapula, terminating by a considerable eminence called the acromion. Above the spine is the fossa supraspinata; below it, the f. infraspinata. 2. Anterior or costal surface or venter, forming the fossa subscapularis. 3. Superior cervical edge, thin, and terminating anteriorly by a



Posterior surface of left scapula.

strong, curved apophysis, called the coracoid process. 4. Posterior or vertebral edge, called the base. 5. Outer or axillary or inferior edge, having a thick, truncated angle, in which is the glenoid cavity. With this is articulated the head of the humerus. The glenoid cavity is separated from the body of the bone by a narrow part called the cervix or neck. The edges or margins are also called costæ. The scapula has three angles—an inferior, superior, and anterior. **S. na′si,** one of the lateral parts of the nose.

**Scapulal′gia** (*algos*, pain). Arthralgia of the scapula. Pain in the shoulder-blade.

**Scap′ular.** Scapulary. Relating to the scapula. **S. aponeuro′sis,** a broad, thin aponeurosis, with decussating fibres, being attached, above, to the spine of the scapula; below, to the crest between the teres major and infraspinatus; within, to the spinal edge of the scapula, uniting at its middle with the thin aponeurosis covering part of the external surface of the deltoid. **S. arch,** hæmal arch of occipital vertebra (Owen), consisting in man of the scapula and coracoid. **S. ar′teries,** these are several: 1. The *superior scapular*, superficial scapular of Sömmering. This arises from the subclavian, and often from the inferior thyroid, or from a trunk common to it and the posterior scapular or transverse scapular or cervical. It passes behind the clavicle, above the superior edge of the scapula, and buries itself between the dorsal surface of that bone and the muscles inserted into it. 2. The *inferior scapular* or common scapular or internal scapular or subscapular artery is of considerable size. It arises from the inferior part of the axillary artery, behind the brachial plexus, gives off several branches to the arm-pit, dividing into two branches: the one, scapularis interna, the smaller of the two, is distributed almost entirely to the serratus major anticus and latissimus dorsi; the other, the larger, distributes its branches to the subscapular, supraspinal, and infraspinal regions. See *Acromial artery*. **S. line,** line drawn vertically through the inferior angle of the scapula when the arms are folded; used in physical examination. **S. notch,** see *Notch, scapular*. **S. re′flex,** contraction of the scapular muscles on sticking or pinching the skin of the outer scapular region. **S. re′gion,** that portion of the back bounded by the scapulæ. **S. veins** follow the same course as the arteries which they accompany.

**Scap′ulary.** A broad linen bandage, divided into two tails for three-quarters of its length, the undivided extremity being attached to the posterior and middle part of a bandage carried round the body, the tails passing over the shoulders and being attached to the anterior part of the body-bandage to prevent it from slipping down.

**Scapulo-.** In composition, the scapula.

**Scapuloclavic′ular.** Relating to both scapula and clavicle. The articulation and its ligaments are so called. **S. mus′cle,** a rare band of muscular fibres attached to the upper border of the scapula and clavicle outside of the insertion of the subclavius.

**Scapulocor′acoid arch.** The scapular arch.

**Scapulocosta′lis mi′nor.** Sternoscapular muscle.

**Scapulodyn′ia** (*odyne*, pain). Pain or rheumatism of the shoulder; scapulalgia.

**Scapulohu′meral.** Relating to the scapula and humerus. An epithet given to the shoulder-joint. It is an orbicular articulation resulting from the reception of the head of the humerus into the glenoid cavity of the scapula. To keep the bones in connection there are: 1. A very strong, conoidal capsular ligament, passing from the circumference of the glenoid cavity around the neck of the humerus; 2, a fibrocartilaginous ring, called the glenoid ligament; 3, a synovial capsule.

**Scapulohumera′lis digas′tricus.** Deltoideus accessorius.

**Scar** (*eschara*). Cicatrix. To mark with a cicatrix.

**Scarabæ′olus hemisphæ′ricus.** Coccus cacti.

**Scardamyg′mus** (*skardamyso*, to wink). Winking.

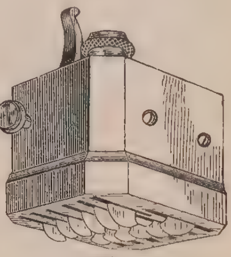
**Scaren′zio's treat′ment.** Administration of calomel hypodermically for syphilis.

**Scarf′-skin.** Epidermis.

**Scarifica′tion** (*scarifico*, to make a light scratch). Act of scarifying. A number of small incisions made into the skin with a lancet, bistoury, or scarificator for therapeutical purposes, as to draw blood or to discharge some effused fluid; sometimes the scarifications are very superficial, and do not go farther than the skin.

**Scar′ificator.** Instrument for making scarifications; it consists of a small brass box of a cubical shape, in which ten or twelve lancet-blades turn upon a common pivot. By means of a spring all these blades can be made to issue at once, making as many scarifications. There are other instruments, much more simple in construction, intended for the scarification of the conjunctiva, the larynx, etc.

**Scar′ify.** To incise with a number of small cuts. To scratch by superficial incisions.



Scarificator.

**Scari′ola.** Cichorium endivia; Lactuca scariola.

**Scarla′ta.** Scarlatina.

**Scarlati′na.** Scarlet fever, rash fever, scarlet rash. One of the acute contagious exanthemata. The characteristic symptoms of scarlatina are a scarlet flush, appearing about the second day of fever, on the face, neck, and fauces, and progressively spreading over the body, terminating about the seventh day. Two great varieties may be reckoned: *S. simplex* or *benigna* or *sine anginâ*, in which the fever is moderate, terminating with efflorescence, prostration of strength being trifling; and *s. anginosa* or *paristhmitica* or *cynanchica*, *Fothergill's sore throat*, in which the fever is severe, the throat ulcerated, the eruption later in its appearance and less extensive, often changing to a livid hue. *Scarlatina maligna* or *gravior* has been reckoned a variety of this in its worst form. Scarlatina belongs to the major exanthemata, being a disease chiefly of children. The eruption differs from that of measles in being an efflorescence not raised above the cuticle. Measles is attended with catarrhal symptoms, while the complication in scarlatina is sore throat. The disease is generally regarded as eminently contagious. Anasarca sometimes supervenes on scarlatina, being symptomatic of the nephritis which is a frequent complication of the disease in its later stages. **S. angino′sa,** see *Scarlatina*. **S. cynan′chia,** see *Scarlatina*. **S. fe′bris,** see *Scarlatina*. **S. gra′vior,** see *Scarlatina*. **S. la′tens,** the occurrence of kidney disease or other sequel of scarlet fever, during the prevalence of an epidemic, in one who has shown none of the ordinary symptoms of the disease. **S. malig′na,** a commonly fatal variety, attended by rapid exhaustion and grave nervous symptoms. **S. milia′ris,** miliary erythema or measles; rubeola. **S. mit′ior,** see *Scarlatina*. **S. morbillo′sa,** rubella. **S. nervo′sa,** type attended by grave nervous symptoms, as coma, subsultus, delirium, convulsions, etc. **S. paristhmit′ica,** see *Scarlatina*. **S. petechia′lis,** s. nervosa. **S. pustulo′sa,** rubeola. **S. pu′trida,** malignant scarlet fever. **S. rheumat′ica,** dengue. **S. sim′plex,** s. of mild form with no complications. **S. si′ne angi′nâ,** see *Scarlatina*. **Sur′gical s.,** an elevation of temperature, accompanied by a scarlatiniform rash, sometimes observed after a surgical operation. **S. traumat′ica,** surgical s. following a wound. **S. urtica′ta,** urticaria.

**Scarlati′nal.** Relating to scarlet fever.

**Scarlatin′iform.** Term applied to any affection resembling scarlet fever or its specific eruption.

**Scarlati′noid** (*eidos*, resemblance). Resembling scarlatina.

**Scarlati′nous.** Scarlatinal.

**Scar′let ber′ry.** Solanum dulcamara. **S. fe′ver,** scarlatina. **S. pim′pernel,** a plant, Anagallis arvensis, stimulant, expectorant, and toxic. **S. rash,** scarlet fever; also diffuse scarlet eruption seen in some cases of septicæmia. **S. straw′berry,** Fragaria virginiana.

**Scar′pa's fas′cia.** Deep layer of superficial fascia of the groin. **S.'s foram′ina,** two of the four smaller foramina into which the anterior palatine foramen of the superior maxillary bone is divided, the others being called the foramina of Stenton. **S.'s gan′glion,** intumescentia ganglioformis; vestibular ganglion, a ganglion at the junction of the facial and vestibular branch of the auditory nerves. **S.'s haben′ula,** see *Haller's habenula*. **S.'s hia′tus,** foramen between scala vestibuli and scala tympani; the foramen of Winslow. **S.'s liq′uor,** endolymph of the labyrinth. **S.'s mem′brane,** membrane that encloses the fenestra rotunda. **S.'s nerve,** nasopalatine nerve. **S.'s shoe,** an apparatus devised by Scarpa for rectifying mechanically the deformity of talipes varus. **S.'s staphylo′ma,** posterior staphyloma. **S.'s tri′angle,** see *Triangle*.

**Scarred.** Cicatrized. Marked by a cicatrix.

**Scat′ol.** Skatol.

**Scatol′ogy.** Skatology.

**Scatopha′gia** (*skatos*, excrement, *phago*, to eat). Excrement-eating.

**Scav′enger cells.** Lymph cells that take part in the removal of effete matter by absorption.

**Scav′enging.** The cleansing of alleys, etc., from filthy material.

**Scelal′gia** (*skelos*, leg, *algos*, pain). Pain in the leg.

**Scelides,** sel′i-deze. The pelvic extremity.

**Scelotyr′be** (*skelos*, leg, *tyrbe*, tumult). Chorea; uncertainty of gait. **S. ag′itans,** dystaxia. **S. febri′lis,** see *Subsultus tendinum*. **S. festi′nans,** paralysis agitans. **S. tarantis′mus,** chorea.

**Schach′er's gan′glion.** Ophthalmic ganglion.

**Schacho′wa's spi′nal tube.** Section of uriniferous tubule.

**Schaef′fer's dumb-bells.** Dumb-bell shaped primitive fibrils of striated muscular tissue.

**Schas′mus.** Scarification.

**Sche′ba ar′abum.** Artemisia santonica.

**Sche′de's meth′od.** Operation for the treatment of necrosis, being the removal of all dead bone and granulation tissue, allowing the cavity to fill with blood, and preserving the clot in a moist condition aseptically.

**Scheele's green.** Arsenite of copper.

**Schei′ner's exper′iment.** An experiment to show refraction of the lens during accommodation. Two pin-holes are made in a card, the distance between them being somewhat less than the diameter of the pupil, and the patient is directed to look through them at two needles placed one behind the other, when it will be observed that the needle not directly in the line of vision appears double.

**Sche′ma.** Plan, scheme, diagram, or arrangement.

**Schemat′ic eye.** One exhibiting typical proportions of the eye.

**Schenk's meth′od.** Induction of artificial hyperæmia of the lungs in the treatment of pulmonary tuberculosis. **S.'s the′ory,** that the sex of the child is determined in part by the amount of sugar in the diet of the mother.

**Scherlievo,** shairl-ya′vo. Venereal itch. A name given to a particular form of syphilis at one time observed in Illyria. Affections known by this name, as well as by those of *male di Breno*, *falcadina*, *boala*, and *frenga*, have prevailed in the frontier countries of the Austrian empire, and were generally regarded as contagious, of syphilitic origin, and as having been introduced from a surrounding country. The terms appear, however, in the course of time to have been applied to a variety of ulcers, eruptions, and other morbid conditions in no way connected with syphilis, so that they lost their former signification.

**Scheur′len's bacil′lus.** Form of bacillus found in cancer, although probably not pathogenic.

**Scheutz′ia laughli′ni.** A microorganism which has been found in the blood in dengue.

**Schief′ferdecker's interme′diate disk.** Substance filling in space at Ranvier's nodes between the sheath of Schwann and the axis-cylinder.

**Schiff's test.** A test for uric acid, based upon the fact that uric acid or a urate, in the presence of an alkaline carbonate, will reduce silver nitrate; the test is performed by saturating bibulous paper with a solution of silver nitrate and dropping it upon the suspected solution prepared according to the above conditions.

**Schindylesis,** skin-di-le′sis (*schindyleo*, to split into small pieces). An articulation of bones by furrowing, as it were—as that of the vomer with the longitudinal plate of the ethmoid, forming, in part, the septum narium. The act of splitting into small pieces.

**Schinus,** ske′nus. Pistacia lentiscus; scilla. **S. arve′ira,** a tree of Brazil; bark is slightly aromatic and resinous, and markedly astringent. **S. mol′le,** the resinous juice of this species is slightly purgative.

**Schisma,** skiz′mah. Fissure; rima.

**Schistocephalus,** skis-to-sef′al-us (*schistos*, cleft, *kephale*, head). Monster having some part of the head cleft or fissured.

**Schistocœlia,** skis-to-se′le-ah (*schistos*, cleft, *koilia*, cavity). Fissure of the abdomen.

**Schistocormus,** skis-to-cor′mus (*schistos*, cleft, *kormos*, trunk). Monster having part or the whole of the trunk cleft or fissured.

**Schistocyte,** skis′to-site (*schistos*, cleft, *kytos*, cell). Blood corpuscle in process of division. The process itself, or the accumulation of such cells, is called *schistocytosis*.

**Schistoglossia,** skis-to-glos′se-ah. Slit or fissure of the tongue.

**Schistomelus,** skis-tom′el-us (*schistos*, cleft, *melos*, limb). Monster whose limbs are fissured.

**Schistoprosopia,** skis-to-pros-o′pe-ah. Fissure of the face from defective development.

**Schistoproso′pus.** Monster with fissure of the face.

**Schistorrhachis,** skis-tor′rak-is (*schistos*, cleft, *rhachis*, spine). Fissure of the spine from defective development. Spina bifida. See *Hydrorrhachis*.

**Schistoso′ma.** Distomum hæmatobium.

**Schistosomus,** skis-to-so′mus (*schistos*, cleft, *soma*, body). Malformation of the abdomen, in which the fissure and eventration extend over the entire length of the abdomen, the lower extremities being absent or very little developed, so that the body appears as if truncated inferiorly.

**Schistoster′nia.** Fissure of the sternum.

**Schistotho′rax** (*schistos*, cleft). Condition in which part or the whole of the thorax is cleft or fissured.

**Schistotrachelus,** skis-to-trak-e′lus (*schistos*, cleft, *trachelos*, neck). Fissure of the neck.

**Schizaxon,** ski-zax′on. A dichotomous axon.

**Schizocœle,** ski′zo-seel. Fissure of the blastoderm from which the pleuroperitoneal cavity develops.

**Schizocyte,** ski′zo-site. Schistocyte.

**Schizogo′nia.** Reproduction of cells by successive division.

**Schizomycetes,** ski-zo-mi-se′teez. Bacteria, fission-fungi. General term including such micro-organisms as micrococci, bacilli, and spirilli: unicellular, reproducing by division and spore-formation.

**Schizomycosis,** ski-zo-mik-o′sis. Term applied to the development of schizomycetes within the body.

**Schizon′te.** Term applied to the malarial parasite when reproduced by fission.

**Schizoph′ytæ** (*schizo*, to split, *phyton*, plant). Schizomycetes.

**Schizothorax,** ski-zo-tho′raks. Schistothorax.

**Schizotrichia,** ski-zo-trik′e-ah. Splitting of the hairs at their extremities.

**Schleich's anæsthet′ic.** Mixture of chloroform, ether, and petroleum ether. **S.'s meth′od,** see *Infiltration anæsthesia.*

**Schlemm's canal′.** A minute circular canal at the line of union of cornea and sclera. **S.'s lig′aments,** two bands of ligament giving additional strength to the shoulder-joint; generally known as the *glenoideo-brachial ligaments.*

**Schles′inger's type of syringomye′lia.** Dorso-lumbar type.

**Schlip′pe's salt.** $Na_2Sb.S_4+9H_2O$. Crystalline salt, sodium thioantimoniate.

**Schmidt's incis′ions.** Schmidt-Lantermann funnels. **S.'s nodes,** Ranvier's nodes.

**Schmidt-Lan′termann fun′nels.** Funnel-shaped interruptions in the medullary sheath observed in a nerve stained with perosmic acid, which colors only the fat-containing portion of the sheath; the apex of the funnnel may point in either direction. **S.-L. lines,** oblique lines in the medullary sheath running to the axis-cylinder, the walls of the S.-L. funnels seen on cross-section. (See cut under *Nerve.*)

**Schmie′del's gan′glion.** Inferior carotid ganglion.

**Schneide′rian mem′brane.** Pituitary membrane.

**Schœnanthus,** ske-nan′thus. Juncus odoratus.

**Schoen′lein's disease′.** Peliosis rheumatica. Erythema multiforme. **S.'s tri′ad,** three associated symptoms in purpura rheumatica—viz., purpuric eruption, rheumatic symptoms, and disorders of stomach and bowels.

**Scholle′ra oxycoc′cos.** Vaccinium oxycoccos.

**School-made chore′a.** Chorea induced by excessive educational strain at school. Other diseases, especially those of the nervous system, may have a similar origin.

**Schott's meth′od.** Plan of treatment of cardiac disease by warm saline baths and regular exercise.

**Schousbœ′a coccin′ea** (after P. K. A. Schousbe, a Danish botanist). Cacoucia coccinea.

**Schreder's** (shrā′der's) **lines.** Apparent or hypothetical lines in dentine, parallel to the pulp-cavity.

**Schre′ger's lines.** Curvilinear markings in dentine of teeth.

**Schrei′ber's manœu′vre.** Friction over the thigh and leg to strengthen the patellar reflex and tendo Achillis reflex.

**Schroe′der's contrac′tion ring.** See *Bandl's ring.*

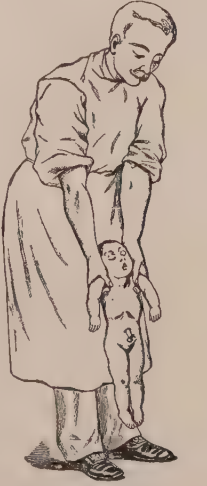
**Schroe′der-Van der Kolk's law.** See *Van der Kolk.*

**Schuber′tia dis′ticha.** Taxodium distichum.

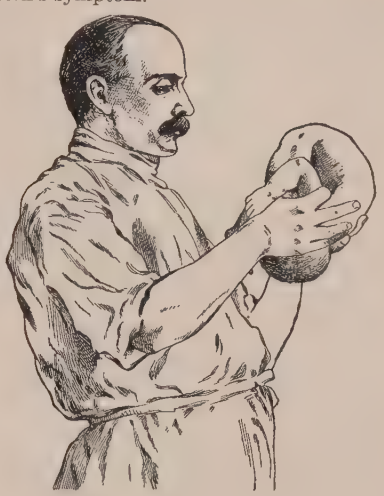
**Schue′le's sign.** Vertical furrows between the eyebrows seen in melancholia; they resemble the Greek letter omega, Ω.

**Schuel′ler's ducts.** Ducts of Skene's glands in the female urethra.

**Schult′ze's cells.** Olfactory cells. **S.'s com′ma-shaped tract,** small tract of descending fibres in postero-external column of the spinal cord. **S.'s fold,** formed by amnion near insertion of umbilical cord. **S.'s gran′ule mass′es,** granular gray-white masses in the blood, consisting of blood-plaques. **S.'s meth′od,** for resuscitation of a stillborn fœtus: the child is held by the fingers of the accoucheur in the axilla; the legs of the child are then thrown upward so as to bend the body and compress the thorax strongly; then the straight pendent position is resumed, the chest being thus expanded, air entering. **S.'s posi′tion of placen′ta,** position it takes when the central part is expelled before the periphery. **S.'s vibra′tions,** Chvostek's symptom.



Schultze's method—inspiration. (Jewett.)



Schultze's method of artificial respiration—expiration. (Jewett.)

**Schult′ze-Chvos′tek sign.** See *Chvostek.*

**Schwa′bach's test.** Perception of vibration of tuning-fork placed on the skull is prolonged in middle-ear disease, but shortened in disease of central origin.

**Schwal′be's convolu′tion.** First occipital convolution. **S.'s fis′sure,** fissure between the temporo-sphenoid and occipital lobes. **S.'s sheath,** sheath covering elastic fibres. **S.'s space,** subvaginal space of optic nerve.

**Schwann's prim′itive bun′dle.** Muscular fibre. **S.'s sheath,** neurilemma. **S.'s white sub′stance,** medullary sheath, see *Nerve.*

**Schwein′furth's green.** Arsenite of copper.

**Schweit′zer's rea′gent.** A solution of hydroxide of copper in ammonia, called also cuprammonia.

**Sciage,** se-azh′ (Fr.). Sawing movement in massage.

**Sciasco′pia.** Skiascopy.

**Sciat′ic** (*ischion,* haunch). Ischiatic. **S. ar′tery,** branch of internal iliac, traversing great sacrosciatic foramen to supply posterior pelvic muscles. **S. foram′ina,** formed by sacrosciatic ligaments and sciatic notches: 1. The great or superior sciatic foramen is formed in front by great sciatic notch, behind by great sacrosciatic ligament, below by lesser sacrosciatic ligament; through it passes the pyriformis muscle with the gluteal, sciatic, and pudic vessels and nerves. 2. The lesser or inferior sciatic foramen is formed in front by lesser sciatic notch, behind by the great sciatic ligament, and above by the lesser sacrosciatic ligament. **S. nerve, great,** great femoropopliteal nerve; ought to be regarded as a continuation of the sacral plexus; issuing from the pelvis, between the pyramidalis and superior gemellus, descending along the posterior part of the thigh, and, after having given branches to the gemini, quadratus, obturator externus, glutæus maximus, semimembranosus, semitendinosus, biceps, and third abductor muscles, dividing about the inferior third of the thigh into two branches, the external and internal popliteal. **S. nerve, les′ser,** inferior gluteal branch of the sacral plexus, lesser femoropopliteal nerve, which seems especially formed by the second and third sacral, is given off from the lower part of the plexus, escaping from the pelvis beneath the pyramidalis muscle. It gives branches, nervi cutanei clunium inferiores, to the glutæus maximus, a sciatic branch or infrapelvic cutaneous or perineal cutaneous, which passes under the tuberosity of the ischium, and furnishes filaments to the glutæus maximus and to the muscles of the perineum, urethra, penis, scrotum, etc., and a posterior femoral cutaneous branch, middle posterior cutaneous nerve, the filaments of which traverse the femoral aponeurosis, to be distributed on the skin of the posterior part of the thigh. The principal branch of the lesser sciatic nerve divides near the ham into two or three filaments, which descend under the integuments almost as far as the inferior part of the leg. **S. notch,** sciatic foramen, is a large notch at the posterior edge of each os innominatum, below the posterior and inferior iliac spine, which is converted into a foramen by the sacrum and sacrosciatic ligaments. The *lesser sciatic notch* is much smaller and is separated from the great notch by the sciatic spine. It gives passage to the tendon of the obturator internus and the internal pudic vessels and nerves. **S. re′gion,** ischiadic region. **S. spine,** spine of the ischium, spinous process of the ischium, is a short, flat, pyramidal eminence on the os innominatum above the foramen, giving insertion to the lesser sacrosciatic ligament. **S. veins** accompany arteries of same name, emptying into the internal iliac vein.

**Sciat′ica.** Neuralgia of the sciatic nerve.

**Sci′ence.** Systematized knowledge.

**Scientif′ic.** Pertaining or relating to science.

**Scieropia,** si-er-o′pe-ah (*skieros,* shady, *ops,* eye). Defect of vision in which all objects have a darker hue than natural.

**Scilla,** sil′lah. (Ph. U. S. and Br.) The sliced bulb of the squill or sea-onion, Urginea maritima, ord. *Liliaceæ,* a native of Southern Europe. It has a bitter, nauseous taste, and is extremely acrid, inflaming the skin when rubbed on it. Its virtues are extracted by vinegar, spirit, and water. In large doses squill is emetic and purgative; in small doses, diuretic and expectorant; employed in bronchitis and dropsy; dose, gr. j–v (0.065–0.32). The official preparations are: *Ace′tum scil′læ,* vinegar of squill; dose, ♏x–xxx (0.65–2.0). *Extrac′tum s. flu′idum;* dose, ♏j–v (0.065–0.32). *Syr′upus s.;* dose, ʒss–j (2.0–4.0). *S. s. compos′itus;* dose, ♏x–ʒj (0.65–4.0). *Tinctu′ra s.;* dose, ♏x–xx (0.65–1.3). **S. esculen′ta,** eastern quamosh, wild hyacinth; an article of diet, being made into bread, and also into poultices for inflamed breasts.

**Scillaïn′.** Yellowish or colorless glucoside from squill; diuretic and poisonous; dose, gr. $\frac{1}{60}$ (0.001).

**Scillin′.** A principle derived from scilla.

**Scillipicrin′.** Yellowish, soluble principle from squill; diuretic; dose, gr. $\frac{1}{60}$ (0.001).

**Scillit′ic.** Containing squill.

**Scillitin′.** An active principle of squill; dose, gr. $\frac{1}{60}$ (0.001).

**Scillitoxin′.** Poisonous, amorphous principle in squill; diuretic; dose, gr. $\frac{1}{60}$ (0.001).

**Scilloceph′alus** (*scilla,* squill, *kephale,* head). One having a large, bulbiform head.

**Scin′de boil.** Rain boil. Form of furunculus met with in the rainy season in India.

**Scintilla′tion.** A bright succession of sparks; in medicine, applied to subjective sensation of sparks before the eyes.

**Scirpus** (skir′pus) **palus′tris.** Eleocharis palustris.

**Scirrhencan′this.** Lacrymal schirrus.

**Scirrhoblepharon′cus** (*blepharon,* eyelid, *onkos,* swelling). Scirrhus of the eyelid.

**Scirrhogas′tria** (*gaster,* stomach). Scirrhus of the stomach.

**Scirrhoid,** skir′roid (*eidos,* resemblance). Resembling scirrhus.

**Scirrho′ma.** Scirrhus. **S. caminario′rum,** chimney-sweepers' cancer; scrotal epithelioma.

**Scirrhophthal′mia.** Cancer of the eye.

**Scirrhosar′ca** (*skirrhos,* hard, *sarx,* flesh). Sclerema.

**Scirrho′sis.** Scirrhus. A livid excrescence caused by inflammation.

**Scir′rhous.** Of or belonging to scirrhus. **S. arco′ma of Ab′ernethy,** hard, rigid, vascular infarction of glandular follicles; indolent, insentient, glabrous; sometimes shrinking and becoming more indurated.

**Scirrhus,** skir′rus (*skirrhos,* hard, indurated). Carcinomatous sarcoma, hard or fibrous cancer, scirrhous cancer. A form of cancer so called from the hardness characterizing it, due to the presence of a great amount of connective tissue. Scirrhus must not be confounded with the induration which succeeds inflammation, although the two states are often complicated, and may stand occasionally in the relation of cause and effect to each other. Scirrhus is ordinarily accompanied by violent shooting pains. It is irregular on its surface, and when cut into has a bluish or grayish-white color. **Cuirass′-like s.,** chronic form of scirrhus, in which a cancerous mass surrounds the chest, giving an appearance like that indicated by its name.

**Scission,** sish′on (*scindo,* to cut). Splitting, fission.

**Scis′sor-leg.** Deformity after hip-joint disease of both legs, the legs being crossed during the act of walking, like scissors.

**Scis′sors** (*scindo,* to cut). A well-known instrument in common use; often employed in surgery; composed of two cutting blades crossing each other and moving upon an axis. They are straight or curved. Scissors bent so that the blades make an obtuse angle with the handles are also much used. Scissors are used for dividing soft, loose, isolated parts which it would be difficult to reach and to cut with a bistoury. They are employed, likewise, in the operation for harelip, and for removing warts, fungous excrescences, etc. **Smel′lie's s.,** used in craniotomy; see *Perforator.*

**Scissu′ra.** Fissure; cleavage. In the plural, *scissuræ,* chaps, rhagades.

**Scitta,** sit′tah. Dysentery.

**Sclar′ea.** Salvia sclarea.

**Scle′ra.** Sclerotica. **S. tes′tis,** tunica albuginea testis.

**Scle′ral.** Relating to the sclera or sclerotic coat of the eye, as *s. processes,* protruding borders of the sclera including the margin of the cornea, or *s. sulcus,* sulcus or groove at the commingling of the sclera and cornea. **S. extrac′tion,** Graefe's method of extracting cataract by means of an almost linear incision, having its base in the sclera, combined with an iridectomy.

**Scleran′gia** (*skleros,* hard, *angeion,* vessel). Hardness of a vessel as felt by the finger.

**Sclerecta′sia** (*skleros,* hard, *ektasis,* dilatation). Staphyloma of the sclerotic.

**Sclerec′tomy** (*ektome,* excision). Excision of the sclerotic.

**Sclere′ma** (*skleros,* hard). Induration of the cellular tissue. **S. adulto′rum,** scleroderma. **S. neonato′rum,** œdema, induration, discoloration, and coldness of the skin, occurring soon after birth, and commencing commonly in the lower extremities.

**Sclere′mia.** Induration of the cellular tissue.

**Sclerencephal′ia** (*skleros,* hard, *enkephalos,* brain). Sclerosis of the brain; cerebral sclerosis. Morbid condition of the brain characterized by induration and atrophy of the cerebral tissue.

**Scleri′asis.** Scleroderma. Scirrhoblepharoncus or other indurated neoplasm of the eyelid. Sclerosis.

**Scleririt′omy** (*tome,* incision). Incision of or operation on the sclerotica and iris conjointly.

**Scleri′tis.** Sclerotitis.

**Sclerocatarac′ta.** See *Cataract.*

**Sclerochorioidi′tis** or **Sclerochoroidi′tis.** Inflammation of the sclerotic and choroid tunics of the eye. **Ante′rior s.,** form affecting the anterior portion of the sclera and causing anterior staphyloma. **Poste′rior s.,** see *Staphyloma, scleral.*

**Sclerocor′nea.** The cornea and sclera, regarded as one.

**Sclerocor′neal.** Relating to the cornea and the sclerotic coat conjointly.

**Sclerodac′tyle** or **Sclerodactyl′ia** (*skleros,* hard, *daktylos,* finger). A condition of dystrophy in which the fingers become deformed, shortened, and atrophied, the skin thickened and discolored. Scleroderma of the fingers or toes.

**Scleroder′ma** or **Scleroder′mia** (*skleros*, hard, *derma*, skin). Hide-bound disease; dermatosclerosis. Induration of the derma proper or corium, which becomes bound down to the subjacent tissues. The disease occurs in patches of varying extent, sometimes involving nearly the entire surface. **S. adulto′rum,** the same as scleroderma. **S. circumscrip′tum,** morphœa; local scleroderma. **S. diffu′sa,** that involving the skin symmetrically. **S. neonato′rum,** sclerema neonatorum.

**Sclerogen′ic.** Causing induration.

**Sclerogenous,** skle-roj′en-us (*skleros*, hard, *gennao*, to beget). Hardening; becoming sclerotic.

**Scle′roid.** Sclerous.

**Scleroïri′tis.** Inflammation of the sclerotic and iris.

**Sclerokerati′tis.** Simultaneous inflammation of sclerotica and cornea.

**Sclerokeratoïri′tis.** Simultaneous inflammation of sclera, cornea, and iris.

**Sclero′ma** (*skleros*, hard). Circumscribed induration of any part. **S. adulto′rum,** scleroderma. **Frisch's s.,** rhinoscleroma. **S. respirato′rium,** rhinoscleroma. **S. neonato′rum,** sclerema neonatorum.

**Scleromen′inx** (*meninx*, membrane). Dura mater.

**Scle′romere.** A skeletal segment.

**Scleromucin′.** A principle derived from ergot.

**Scleronych′ia** (*skleros*, hard, *onyx*, nail). Hardening and thickening of the nails.

**Scleronyx′is.** Scleroticonyxis.

**Scleropath′ia** (*pathos*, suffering). Scleroma.

**Sclerophthal′mia.** Hordeolum; scleriasis.

**Scle′ros.** Hard.

**Sclerosarco′ma.** Hard, fleshy tumor seated on the gums, and resembling a cock's comb.

**Sclerosed′.** Hardened, having already undergone sclerotic degeneration.

**Sclero′sing.** Term applied to process of sclerotic degeneration.

**Sclero′sis** (*skleros*, hard). Thickening with condensation, due to increase in the connective tissue of a part. Induration. **Amyotroph′ic lat′eral s.,** degeneration of the entire pyramidal tract of the spinal cord, with atrophy of various nerve-centres in the medulla, large masses of muscles being atrophied; see *Amyotrophic*. **An′nular s.,** occurring as a ring-like band around the spinal cord in certain cases. **Anterolat′eral s.,** disease due to sclerosis of lateral columns, characterized by loss of power, augmented reflexes, and spasm of muscles. **Arteriocap′illary s.,** narrowing of the calibre of the smaller nerves and vessels by fibrous growths in their interior. **S. of bone,** condensing osteitis, diffuse hypertrophy of bone. A result of osteitis, characterized by the filling of the medullary cavity with a compact osseous structure and the formation of bone on the surface. **Cer′ebral s.,** form of the disease in which patches of sclerosis are scattered through the brain or brain and spinal cord (*cerebrospinal s.*). **S. co′rii** or **der′matos,** induration of the derma proper or corium. **Diffuse′ s.,** s. when large tracts of the brain or cord are involved. **Dissem′inated** or **in′sular s.,** chronic affection of the spinal cord and brain caused by the dissemination of isolated patches of the disease throughout the nervous system. **Lat′eral s.,** anterolateral s. **S. of the liv′er,** see *Hepatitis, chronic*. **Lo′bar s.,** s. involving a single lobe of the brain; hemiplegia of infants. **Mil′iary s.,** s. in which there are grayish-red spots at the junction of the white and gray matters of the spinal cord. **Mul′tiple s.,** disseminated s. **S. os′sium,** sclerosis of bone. **Poste′rior spi′nal s.,** tabes dorsalis. **Posterolat′eral s.,** tabes dorsalis. **Pri′mary lat′eral s.,** primary spastic paraplegia, a form of spinal sclerosis. **Re′nal s.,** chronic interstitial nephritis. **Spi′nal s.,** the occurrence of patches of sclerosis in the spinal cord; two forms of this affection have been referred to: sclerosis of the anterolateral columns of the spinal cord, and sclerosis of the posterior columns, generally described as locomotor ataxia or tabes dorsalis. The former is essentially a hypertrophied condition of the connective tissue, with atrophy of nerve-substance. **Sponta′neous lat′eral s.,** primary degeneration affecting the lateral columns, giving rise to paralysis, spasms, exaggerated muscle reflexes, etc. **S. of the stom′ach,** gastric cirrhosis, fibroid infiltration of the stomach; see *Linitis, plastic*. **Tu′berous s.,** hypertrophic form of s., in which there is enlargement and increased density of the areas of the convolutions involved. **Vas′cular s.,** arteriosclerosis; sclerosis of the walls of blood-vessels.

**Scleroskel′eton.** Term used to denote bones resulting from the ossification of ligaments, tendons, or aponeuroses.

**Sclerosteno′sis.** Induration with contraction of tissue. **S. cuta′nea,** scleroderma.

**Scleros′toma duodena′le.** Ankylostoma duodenale, Dochmius ankylostomus, Uncinaria duodenalis. **S. syn′gamus,** syngamus trachealis.

**Sclero′tal.** Name given by Owen to the material forming the sclerotic coat of the eye. In certain vertebrates it is cartilaginous or osseous.

**Scle′rothrix.** Name applied by Metchnikoff to the tubercle bacillus.

**Sclerot′ic** (*skleros*, hard). A hard, resisting, opaque membrane, of pearly-white color and fibrous nature, covering nearly four-fifths of the globe of the eye; in form of a sphere truncated in front. It is strengthened by the expansion of the ocular muscles, to which expansion many anatomists have given the name tunica albuginea or tendinosa. The subconjunctival sclerotic forms the white of the eye. The sclerotic is penetrated posteriorly by a round opening for the passage of the optic nerve; and, anteriorly, it has a much larger opening into which the transparent cornea is received. There are, besides, many small, oblong apertures in it for the passage of nerves and vessels proceeding to the interior of the eye. Its inner surface is of a light brown color, owing to a delicate, areolar tissue containing brown pigment-cells, and hence called membrana or lamina fusca. In the fœtus the sclerotic may be separated into very distinct laminæ. **S. acid,** sclerotinic acid. **S. zone,** arthritic ring; vessels given off from a ring of anastomosis of deep conjunctival vessels around the circumference of the cornea, perforating the sclerotic, anastomosing with those of the iris and choroid—a condition seen in many cases of iritis.

**Sclerot′ica.** Sclerotic. **S. ceratoi′des,** cornea.

**Sclerot′ical.** Relating or appertaining to the sclerotic.

**Scleroticec′tomy** (*sclerotica*, sclerotic, *ektome*, excision). Operation for forming an artificial pupil by excision of a portion of the sclerotica.

**Sclerotici′tis.** Sclerotitis.

**Sclerot′icochorioidi′tis.** Sclerochorioiditis.

**Scleroticonyx′is** (*sclerotica*, sclerotic, *nysso*, to pierce). Perforation of the sclerotica for cataract by depression.

**Scleroticot′omy** (*sclerotica*, sclerotic, *tome*, incision). Operation for cataract by cutting through the sclerotic.

**Sclerotin′ic acid.** $C_{12}H_{19}NO_9$. Non-crystalline feebly acid principle prepared from ergot.

**Sclero′tis.** Sclerotica. Ergot of rye.

**Sclerotisec′tomy.** Scleroticectomy.

**Scleroti′tis.** Rheumatic ophthalmia. Inflammation of the sclerotic coat of the eye.

**Sclero′tium.** Indurated mass of fungi, as of ergot. **S. cla′vus,** see *Ergot*. **S. gigante′um,** see *Lycoperdon tuber*.

**Scle′rotome** (*skleros*, hard, *tome*, division). A section of the skeleton. Knife used in sclerotomy.

**Sclerot′omy.** Section of the sclerotic used in glaucoma, cataract, etc. **Ante′rior s.,** s. performed through the sclerotic coat into the anterior chamber, as for glaucoma. **Poste′rior s.,** s. performed through the sclerotic coat into the vitreous humor, as for extraction of foreign bodies.

**Sclerotonyx′is.** Scleroticonyxis.

**Scle′rous.** Hard, indurated.

**Scleroxan′thin.** Inert crystalline principle of ergot.

**Scle′rozone.** The area or space on a bone to which is attached a muscle or portion of a muscle.

**Sclerymeni′tis.** Inflammation of the sclerotic coat.

**Sclerys′ma.** Induration, especially of the liver.

**Sclopeta′rius.** Relating to a gun; hence aqua sclopetaria or sclopetica, a lotion formerly used for gunshot wounds.

**Scobs.** A shaving. An alkali. Dross of any metal.

**Scoleci′asis** (*skolex*, worm). Helminthiasis.

**Scoleci′tis.** Appendicitis.

**Sco′lecoid.** Vermiform.

**Scolecoidi′tis.** Appendicitis.

**Scolecol′ogy** (*logos*, discourse). Helminthology.

**Scolec′tomy.** Appendicectomy.

**Sco′lex** (*skolex*, worm). Used generically for some imperfectly developed or embryonic forms of tænia. The head of these being the most characteristic part, it was generally applied to the heads of all forms of cystic parasites and tapeworms. Encysted tænia or worm.

**Scolio′ma.** Scoliosis.

**Scoliorrhachit′ic.** Relating to both scoliosis and rhachitis, as *scoliorrhachitic pelvis*.

**Scoliosiom′etry.** Measurement of spinal curvature.

**Scolio′sis** (*skolios*, crooked). A distortion of the spine to one side; lateral curvature of the spine. **Pel′vic** s., condition of lessened oblique diameter of the pelvis.

**Scoliot′ic.** Relating to scoliosis.

**Sco′liotone.** Machine for elongating the spine and lessening the amount of rotation in lateral curvature.

**Scolopen′dra** or **Scolopen′dria.** Asplenium ceterach and A. scolopendrium.

**Scolopen′drium lin′guæ, S. officina′rum, S. phylli′tis.** Asplenium scolopendrium. **S. ru′ta mura′ria,** Asplenium ruta muraria. **S. vulga′re,** Asplenium scolopendrium.

**Scol′ymus sati′vus.** Cynara scolymus.

**Scoop.** Surgical instrument of the shape of a spoon, used for the extraction of foreign bodies. **S. extrac′tion of cat′aract,** a mode of operation by which the lens is removed by a thin, flat, concave scoop, so constructed as to pass readily behind the posterior surface of the cataract; the operation includes incision, iridectomy, laceration of the capsule, and removal of the lens by the scoop.

**Sco′pa re′gia** (*scopa*, broom). Ruscus.

**Scopa′rii cacu′mina.** Tops of broom.

**Scoparin′.** $C_{27}H_{22}O_{10}$. Bitter principle from Cytisus scoparius or broom. Diuretic.

**Scopa′rius.** (Ph. U. S.) Tops of Cytisus scoparius, or broom. Diuretic, emetic, and purgative; dose, gr. v–xx (0.32–1.3) in infusion. The official preparation is *extrac′tum scopa′rii flu′idum;* dose, ♏v–xx (0.32–1.3). The alkaloid is *sparteine.*

**Scopolamine′.** An alkaloid from Scopolia atropoides; mydriatic, not so lasting, but less irritating than atropine. Given internally in mania and insomnia; dose of the hydrobromate, hydrochlorate, or hydriodate, gr. $\frac{1}{200}$–$\frac{1}{60}$ (0.0003–0.001).

**Scopoleine′.** Scopoline.

**Scopo′lia** (after J. A. Scopoli, of Pavia) **atropoi′des.** Hyoscyamus scopolia, the source of scopolamine. **S. japon′ica,** botanical source of Japanese belladonna; root is employed for the same purposes as belladonna root.

**Scopoline′.** $C_{17}H_{21}NO_4$. Alkaloid from Scopolia japonica and S. carniolica. Mydriatic. Pseudotropine.

**Scopopho′bia** (*skopeo*, to see, *phobos*, fear). Morbid dread of being seen.

**Scop′tula.** Scapula.

**Scop′ula** (dim. of *scopa*, broom). Brush.

**Scor.** Excrement.

**Scoracra′tia** (*scor*, excrement, *akratia*, want of control). Want of power to retain the fæces; involuntary evacuation of the fæces. *Scatacrasia* and *copracrasia*, although used in the same sense as scoracratia, really mean undue admixture of the excrement.

**Scoræ′mia.** Skatæmia.

**Scorbu′tic** (*scorbutus*, scurvy). Relating to scurvy. **S. fe′ver,** scurvy.

**Scorbu′tus.** Scurvy. **S. alpi′nus,** pellagra. **S. infanti′lis,** scurvy of infants, due to improper feeding. **S. nau′ticus,** purpura nautica, sea scurvy. **S. o′ris,** cancer aquaticus.

**Scordine′ma** or **Scordinis′mus.** Carebaria; pandiculation.

**Scor′dium.** Teucrium scordium.

**Scor′don.** Allium.

**Scoretæ′mia.** Skatæmia.

**Sco′rium.** Scrotum.

**Scorodosmin′** (*scorodon*, garlic, *osme*, odor). Cystic oxide.

**Scorpiodex′is** (*dexis*, biting). Sting of the scorpion.

**Scor′pion.** A genus of insects having a sting at the extremity of the tail, with which they make painful wounds.

**Scorpiostig′ma** (*stigme*, puncture). Sting of the scorpion.

**Scor′teum** (leather coat). Scrotum.

**Scorzone′ra.** Viper's grass, goat's grass. The roots have been used as alexipharmics in hypochondriacal disorders and obstructions of the viscera. The root of the Scorzonera hispanica is esculent, but inefficacious as a drug.

**Scotas′ma** (*skotos*, darkness). Obscurity of vision; dark spots seen before the eye.

**Scotch pine.** Pinus sylvestris.

**Scoto′dia.** Scotoma; scotodinia.

**Scotodin′ia** (*skotos*, darkness, *dineo*, to turn around). Giddiness, with impaired sight, often succeeded by headache.

**Sco′togram.** See *Scotography, Skiagraphy,* and *X-rays.*

**Sco′tograph.** See *Scotography, Skiagraphy,* and *X-rays.*

**Scotog′raphy** (*skotos*, shadow, *grapho*, to write). Radiography; Roentgen photography; skiagraphy. The shadow-picture is called a scotogram, scotograph, skiagraph, or radiogram.

**Scoto′ma** (pl. scotomata). A fixed blind spot in the field of vision, dependent on complete loss of sensibility of a portion of the retina. Also temporary patches in the field of vision. **Ab′solute s.,** s. in which objects are not seen. **Ann′ular s.,** s. in which a dark object surrounds the point of fixation like a ring. **S. au′ris,** an anomaly of hearing consisting in the fact that a sound, as the ticking of a watch, is audible when its source is in a definite position in relation to the ear, but becomes inaudible if this source is moved, even though perhaps being brought nearer to the ear. **Cen′tral s.,** s. with dark spot at point of fixation. **Col′or s.,** s. in which objects are seen without their natural color. **Flit′tering s.,** form of s. having notched or saw-like edges; teichopsia. **Neg′ative s.,** condition in which objects disappear when within the field of the scotoma. **Pos′itive s.,** s. which appears as a dark spot or nebula in the visual field. **Rel′ative s.,** s. in which objects are seen imperfectly. **Ring s.,** annular s. **S. scintil′lans** or **scin′tillating s.,** luminous cloud coming suddenly in view before the eyes, after preceding migraine; teichopsia.

**Scoto′matous.** Relating to scotoma.

**Scotom′eter.** Instrument for examining and measuring a scotoma.

**Scotos′copy.** Skiascopy.

**Scoto′sis.** Scotodinia.

**Scour.** Diarrhœa. Fatal infectious disease of calves, a diarrhœa caused by Bacillus dysenteriæ vitulorum.

**Scourge.** Any malignant epidemic disease. Also the scourging mania of the thirteenth century, mastigosis. As a verb, to whip the skin.

**Scour′ging.** Flagellation. **S. ma′nia,** see *Mastigosis.*

**Scour′ing.** Diarrhœa; purgation. **S. rush,** Equisetum hymenale.

**Scoutel′len's meth′od.** Oval amputation.

**Scratch.** Scabies, itch.

**Screa′tus** (*screo,* to hawk). Act of spitting and hawking.

**Screw′bean.** Mesquite, Prosopsis pubescens.

**Screw′driver teeth.** Peculiar teeth seen in young subjects of hereditary syphilis.

**Screw-joint.** Cochlearthrosis.

**Scribe pal′sy.** Writers' cramp.

**Scriv′eners' cramp, pal′sy,** or **paral′ysis.** Writers' cramp.

**Scrobic′ulate** or **Scrobic′ulated.** Furrowed, pitted.

**Scrobic′ulus** (dim. of *scrobs,* ditch). A little pit, depression, or furrow. **S. cor′dis,** the pit of the stomach; the depression at the anterior part of the abdomen, below the xiphoid cartilage. **S. vari′olæ,** pockmark.

**Scrof′ula** (*scrofa,* sow). King's evil, the evil. A morbid state of the system, usually characterized by indolent glandular tumors, chiefly in the neck, which suppurate slowly and imperfectly and heal with difficulty, and often, after suppuration, degenerate into ulcers, which, in process of time, cicatrize, leaving scars. The internal organs, and especially the bones and joints, are also apt to be attacked in those disposed to scrofula, the process being a low grade of inflammation, followed by caseous degeneration. Scrofula is a disease of early life, and was formerly believed to be an hereditary form of tuberculosis. Scrofulous inflammations are frequently followed by acute miliary tuberculosis. **S. abdomina′lis inter′na,** tumid abdomen from scrofulous enlargement of the glands. **S. mesenter′ica,** tabes mesenterica. **S. molucca′na,** frambœsia. **S. plant,** figwort. **S. root,** Erythonium americanum.

**Scrofula′ria.** Scrophularia.

**Scrofulelco′sis** (*helcosis,* ulceration). Scrofulous ulceration.

**Scrof′ulide.** A scrofulous affection of the skin; scrofuloderma.

**Scrof′ulism.** The scrofulous diathesis.

**Scrof′uloderm** or **Scrofuloder′ma** (*scrofula+derma,* skin). Chronic strumous inflammation of the skin, characterized by indolent red, tuberculated formations, tending to unhealthy suppuration, with scabbing and ulceration; healing with distinct scarring. Scrofuloderm usually refers to the single lesion; scrofuloderma to the disease. **Large pus′tular s.,** large oval or round pustules surrounded by deep reddish or purple areola. **Pap′ular s.,** lichen scrofulosorum. **Small pus′tular s.,** small, yellowish pustules, usually occurring on the hands and forearms; drying into grayish crusts, finally healing and leaving a depressed scar. **Tuber′culous s.,** granuloma. **Ul′cerative s.,** mycosis fungoides; a scrofuloderma with indolent ulcers and fistulæ. **S ungua′le,** inflammation of the matrix of the nails in scrofulous subjects. **Ver′rucose** or **ver′rucous s.,** tuberculosis verrucosa cutis.

**Scrofulophy′ma** (*phyma,* growth). Scrofulous growth or tumor of the skin.

**Scrofulo′sis.** Scrofulous dyscrasia or cachexia. Term used to signify the cachectic state of the system which characterizes scrofula.

**Scrof′ulous.** Strumous. Suffering from or relating to scrofula. **S. ab′scess,** cold abscess. **S. bu′bo,** hypertrophied gland which has undergone scrofulous degeneration. **S. ophthal′mia,** phlyctenular conjunctivitis. **S. ring′worm,** lupus erythematosus.

**Scrog′legged.** Cnemoscoliosis.

**Scroph′ula.** Scrofula.

**Scrophula′ria.** A genus of plants, ord. *Scrophularineæ.* **S. aquat′ica,** greater water figwort, water betony; leaves are correctors of the bad flavor of senna; at one time regarded as eminently antiscorbutic, stomachic, and carminative. **S. fœ′tida,** Scrophularia nodosa. **S. lanceola′ta,** S. nodosa. **S. marilan′dica,** S. nodosa. **S. mi′nor,** Ranunculus ficaria. **S. nodo′sa,** figwort, kennelwort, holmesweed, healall; root and leaves of this plant have been popular as an internal and external remedy against inflammations, piles, scrofulous tumors, ulcers, etc. **S. vulga′ris,** Scrophularia nodosa.

**Scro′tal.** Relating to the scrotum. **S. ar′teries** supply the scrotum, and consist of anterior branches from the inferior external pudic, and posterior branches from the transverse perineal arteries. **S. can′cer,** chimney-sweep's cancer. **S. fis′tula,** a urethral fistula having an external opening in the scrotum. **S. her′nia,** scrotocele. **S. lig′ament,** fibrous band or ligament attaching the testis to the lower portion of the scrotum. **S. nerve,** see *Genito-crural nerve.*

**Scro′tocele** (*kele,* tumor). Scrotal hernia; inguinal hernia, descending into the scrotum.

**Scro′tum.** Integuments which cover the testes. These are nothing more than a prolongation of the skin of the inner part of the thighs, perineum, and penis. The skin is remarkable for its brown color, the numerous rugæ, especially when the scrotum is contracted; the great number of sebaceous follicles it contains; and for the long and few hairs which issue from it in the adult. Beneath the skin is a layer made up largely of non-striated muscular tissue, called the dartos. The scrotum is divided into two equal parts by a raphe which extends from the anus to the root of the penis. **S. cor′dis,** pericardium.

**Scru′biegrass.** Cochlearia officinalis.

**Scruff.** Nucha.

**Scru′ple.** A weight of twenty grains troy.

**Scud′amore's mix′ture.** Sulphate of magnesium, vinegar of colchicum, magnesia, and peppermint-water; used in gout and rheumatism.

**Scull.** Cranium. **S. cap,** calvaria.

**Sculte′tus, ban′dage of.** Many-tailed bandage, consisting of strips overlapping each other.

**Scurf.** Small exfoliations of the cuticle.

**Scurf′-skin.** Scarf-skin.

**Scurf′y.** Furfuraceous.

**Scur′vy.** Scorbutus. See *Purpura nautica.* **S. of the Alps,** pellagra. **But′ton s.,** see *Button.* **In′fantile s.,** scurvy affecting young children, due to improper feeding. **Land s.,** purpura hæmorrhagica. **Pete′chial s.,** purpura simplex. **Sea s.,** purpura nautica.

**Scur′vygrass.** Sisyrinchium bermudianum. **Com′mon s.,** Cochlearia officinalis. **Lem′on s.,** Cochlearia officinalis. **Wild s.,** Cochlearia coronopus.

**Scute** (*scutum,* shield). Semilunar plate constituting the external wall of the superior part of the tympanic cavity.

**Scutel′la.** Cup.

**Scutella′ria.** (Ph. U. S.) The herb of S. laterifolia. **S. carolinia′na,** S. integrifolia. **S. galericula′ta,** skullcap; this plant has a bitter taste and a garlicky smell; has been esteemed especially serviceable in tertian ague. **S. hyssopifo′lia,** S. integrifolia. **S. integrifo′lia,** another indigenous variety; an intense bitter. **S. laterifo′lia,** skullcap, mad-dog skullcap, madweed, hoodwort, blue pimpernel; the official (Ph. U. S.) scutellaria, an indigenous plant in the United States, growing in moist places; antispasmodic and nervine, in dose of ʒss–j (2.0–4.0) in infusion. The *extrac′tum scutella′riæ flu′idum* is official; dose, ʒss–j (2.0–4.0).

**Scutellarin′.** $C_{10}H_8O_3$. Principle from the root of Scutellaria laterifolia. Tonic and a sedative to the nervous system.

**Scutic′ula digito′rum.** Phalanges.

**Scu′tiform** (*scutum,* a shield). Having the shape of a shield.

**Scu′tula** (pl. of *scutulum,* little shield). The yellow crusts formed by the drying up of vesicles, as in favus.

**Scu′tular.** Relating to or characterized by scutula, the disk-like crusts of favus.

**Scu′tulum** (dim. of *scutum,* shield). A disk-like crust of favus.

**Scu′tum** (shield). Thyroid cartilage. **S. cor′dis,** scapula; sternum. **S. ge′nu,** patella. **S. pec′toris,** sternum; thorax. **S. stomach′icum,** a large plaster applied to the breast or stomach. **S. thora′cis,** scapula. **S. tympan′icum,** semilunar surface forming the outer boundary of the superior portion of the cavity of the tympanum.

**Scybala,** sib′al-ah (*skybalon,* excrement). Hard fecal matters discharged in round lumps.

**Scyb′alous.** Consisting of scybala.

**Scylla,** sil′lah. Scilla.

**Scyphoid,** si′foid (*skyphos,* a cup). Cup-shaped.

**Scyphus** (si′fus) **audito′rius** (*skyphos,* cup). Infundibulum of the cochlea. **S. cer′ebri,** infundibulum of the brain. **S. Vieussen′ii,** infundibulum of the cochlea.

**Scypoph′orus pyxida′tus.** Lichen pyxidatus.

**Scyros,** sir′os (*skirrhos*). Callosity.

**Scytal′ides digito′rum** (*skytalis,* a small staff). Phalanges.

**Scyth′ian disease′.** An infection marked by atrophy of the penis and testicles, with impotency, occurring in adults, terminating frequently in mental disease—Scythian insanity, or insanity of the Scythians—supposedly common in the Caucasus.

**Scyth′ica ra′dix.** Glycyrrhiza.

**Scythropas′mus** (*skythropazo,* to look gloomy). A gloomy countenance, of bad augury in serious diseases.

**Scyti′tis** (*skytos,* skin). Inflammation of the skin.

**Scytoblaste′ma** (*skytos,* skin, *blastos,* germ). Recently formed skin; primary stage of skin-formation.

**Scytoblaste′sis.** The formation of skin.

**Scytomorpho′sis** (*skytos,* skin, *morphe,* shape). Pathological skin-formation.

**Sea air.** The air in the neighborhood of the sea contains saline particles commingled with it, which render it valuable for scrofulous and debilitated individuals. The sea and seacoast are usually, also, more equable in their temperature than places inland. **S. ash,** prickly ash of the south, Xanthoxylum carolinianum. **S. bur′dock,** Xanthium strumarium; clotbur. **S. gir′dles,** Laminaria digitata. **S. grape,** Salsola kali. **S. hol′ly,** Eryngium maritimum. **S. lav′ender,** Statice limonium. **S. sedge,** Acorus calamus. **S. sick′ness,** nausea marina. **S. tan′gle,** the branching stems of Laminaria digitata; used in medicine as a dilator of the os uteri, etc., by reason of the readiness with which the dried stem absorbs water and swells. **S. ware,** Pila marina. **S. wa′ter,** see *Water, sea.* **S. wrack,** Pila marina.

**Seal, gold′en.** Hydrastis canadensis. **Sol′omon′s s.,** Convallaria polygonatum, canaliculata, or pubescens.

**Seam.** Cicatrix; suture.

**Seam′stresses′ cramp.** A professional neurosis, analogous to writers′ cramp, in which it becomes impossible to use the needle.

**Search′er.** Sound for detecting vesical calculi.

**Search′ing.** Probing. Also the ascertaining, by the introduction of a metallic instrument, whether there is a stone in the bladder; sounding.

**Sear′cloth.** A cloth to cover a sore; a plaster.

**Sea′sickness.** Nausea marina.

**Sea′son.** One of the four great divisions of the year, reckoned by the return of the sun in its annual course—spring, summer, autumn, and winter.

**Seas′oning.** Acclimation. **S. fe′ver,** a mild fever, occurring in certain places among the unacclimated.

**Seat** (*sedeo,* to sit). Anus; nates. **S. bone,** ischion. **S. worm,** Oxyuris vermicularis.

**Sebaceofollic′ular.** See *Sebaceous.*

**Seba′ceous** (*sebum,* suet). Having the nature of suet, as sebaceous or sebaceofollicular tumors. **S cyst,** wen; steatoma. **S. flux,** stearrhœa; seborrhœa. **S. glands,** sebiparous or sebiferous glands; sebaceous follicles or crypts, oil glands, are small, hollow organs of rounded or pyriform shape, seated in the substance of the skin, and opening on its surface by a small excretory duct, furnishing a yellow, unctuous humor, smegma cutaneum, sebum cutaneum, having some analogy with suet, which is destined to lubricate the surface of the body. Follicles of similar nature exist around the corona glandis of the male and under the skin of the labia majora and nymphæ of the female. They secrete sebaceous matter, which emits a peculiar odor; after the name of one who described them, these have been called Tyson′s glands. **S. grub,** comedo. **S. tu′mor,** s. cyst.

**Sebastoma′nia** (*sebastos,* worshipped). Religious insanity; demonomania.

**Sebeste′na.** Smooth-leaved cordia, Assyrian plum; ord. *Cordiaceæ.* The dark, black fruit of the sebestena possesses glutinous and aperient qualities, being exhibited in decoction in various thoracic diseases.

**Sebif′erous** (*sebum,* suet, *fero,* to carry). Sebaceous.

**Sebip′arous** (*sebum,* suet, *pario,* to bring forth). Sebaceous.

**Seb′olite** or **Seb′olith** (*lithos,* stone). Concretion in a sebaceous gland.

**Seborrha′gia** (*rhage,* breaking forth). Stearrhœa.

**Seborrhœ′a** (*sebum,* suet, *rheo,* to flow). Stearrhœa; sebaceous flux; acne sebacea; seborrhagia. **S. adipo′sa,** s. with an oily or greasy surface. **S. amiantha′cea,** see *Stearrhœa.* **S. capillit′ii,** seborrhœa capitis. **S. cap′itis,** seborrhœa of the scalp, of very young children especially; seborrhœa capillitii. **S. congesti′va,** lupus erythematodes. **S. cor′poris,** type marked by oval or round, deep yellow eruptions on the trunk, of the size of a split pea and larger, covered with scales and lasting from two weeks to two months; pruritus is also a feature of the affection; lichen circinatus or circumscriptus. **S. facie′i,** s. limited chiefly to the face. **S. furfura′cea,** pityriasis capitis. **S. genera′lis,** ichthyosis sebacea. **S. genita′lium** occurs behind the corona glandis in the male, and around the clitoris and vestibule in the female. **S. ichthyo′sis,** form marked by large, thin plates. **S. licheno′des,** lichen circumscriptus. **S. na′si,** s. affecting the nose and adjacent skin. **S. ni′gra** or **nig′ricans,** a form of chromidrosis. **S. oleo′sa,** s. marked by a thin, oily secretion. **S. papulo′sa,** lichen circumscriptus. **S. sic′ca,** see *Stearrhœa.* **S. squamo′sa,** s. sicca. **S. tabescen′tium,** form characterized by minute scales, affecting large areas of the body.

**Seborrhœ′al** or **Seborrhœ′ic.** Relating to or affected with seborrhœa.

**Seb′sten.** Sebestina.

**Se′bum.** Pinguedo; sevum. **S. caca′o,** oil of theobroma. **S. cuta′neum,** see *Sebaceous glands.* **S. ovi′le,** mutton suet. **S. palpebra′le,** secretion of the Meibomian glands. **S. præputia′le,** smegma præputii. **S. salicyla′tum,** an ointment of salicylic acid containing 2 per cent. of the acid.

**Seca′le.** The rye plant, ord. *Gramineæ.* Rye is chiefly used as an article of diet, and a spirit is also extracted from it. **S. barba′tum,** secale. **S. cerea′le** rye. **S. cornu′tum** or **clava′tum,** ergot. **S. mater′num tur′gidum** or **temulen′tum,** ergot.

**Secaline′.** A volatile alkaloid in ergot.

**Secalintoxin′.** Obtained from ergot. A combination of sphacelotoxin and secaline.

**Seca′lis ma′ter.** Ergot.

**Sec′alose.** Carbohydrate from green rye.

**Secern′ent** (*secerno,* to separate). Secreting.

**Secern′ing.** Secreting.

**Seces′sus.** Vulva. **S. ni′ger,** melæna.

**Seclu′sion.** A term applied to a condition of the pupil known as annular posterior synechia.

**Secluso′rium** (*secludo,* to shut up). Sac.

**Sec′ond cra′nial nerve** or **pair of nerves.** Optic nerve. **S. inten′tion,** one of the modes of healing of wounds, union by granulation.

**Sec′ondaries.** Term applied to secondary symptoms of syphilis; opposed to primaries.

**Sec′ondary** (*secundus,* second). Something that acts subordinately to another, as the secondary symptoms of a disease, that is, those following the primary. **S. amputa′tion,** amputation performed after the constitutional effects of the injury have mainly passed away. **S. bat′tery,** a storage battery. **S. coil,** coil of wire in which the induced or **sec′ondary cur′rent** is generated. **S. degenera′tion,** fatty degeneration of nerve-fibres which have lost their connection with the trophic centres. **S. fe′ver,** febrile condition recurring in certain affections after having ceased; coming on at the time of the maturation of the variolous pustules, or as the eruption of scarlatina, etc., disappears; symptomatic fever; suppurative fever. **S. sub′stance of Rollet′,** disks of muscle-fibre. **S. syph′ilis,** see *Syphilis.*

**Secre′ta.** Secretions.

**Secre′ting.** Secerning, secernent, secretory, excernent. That which secretes, as a secreting organ. **S. frin′ges,** synovial fringes.

**Secre′tion** (*secerno,* to separate). An organic function, chiefly executed in the glands, consisting in an elaboration or separation of the materials of the blood, differing in each organ according to its particular structure; hence the formation of different fluids—bile, saliva, urine, milk, etc. The term is also applied to the thing secreted. The secretions which are excrementitious in character, such as the urine, are usually called excretions. **Inter′nal s.,** a substance elaborated by a ductless gland, as the thyroid, and taken up again into the blood to exercise some function in metabolism or nutrition.

**Secretodermato′sis.** Morbid condition of the secretory apparatus of the skin.

**Secretomo′tor.** Epithet applied to nerves which stimulate secretion.

**Secre′tory.** Secreting.

**Secre′tum.** A secretion.

**Sec′tile.** Capable of being cut.

**Sec′tio.** Section. Act of cutting; division. **S. abdomina′lis,** abdominal section. **S. agrippi′na,** cæsarean section. **S. al′ta,** see *Lithotomy.* **S. anatom′ica,** dissection. **S. cadav′eris,** post-mortem examination. **S. cæsa′rea,** cæsarean section. **S. franconia′na,** see *Lithotomy.* **S. hypogas′trica,** see *Lithotomy.* **S. latera′lis,** see *Lithotomy.* **S. lega′lis,** examination after death for medicolegal purposes. **S. maria′na,** see *Lithotomy.* **S. nympha′rum,** nymphotomy. **S. perinæa′lis,** perineal section. **S. rectovesica′lis,** see *Lithotomy.* **S. rena′lis,** nephrotomy. **S. ten′dinum,** tenotomy. **S. vaginovesica′lis,** lithotomy through the vagina. **S. vesica′lis,** lithotomy.

**Sec′tion.** See *Sectio.* **Abdom′inal s.,** laparotomy or cœliotomy. **Cæsa′rean s.,** see *Cæsarean.* **S. cut′ter,** microtome. **Fron′tal s.,** vertical section of the brain made through the ascending frontal convolution parallel with the fissure of Sylvius; also one made transversely through any part of the body. **Occip′ital s.,** vertical section through the occipital convolutions. **Pari′etal s.,** vertical section through the ascending parietal convolutions. **Pedunculofron′tal s.,** vertical section of the brain in front of the fissure of Rolando, passing through the bases of the three frontal convolutions. **Pedunculopari′etal s.,** a section of the brain made posterior to the fissure of Rolando. **Perine′al s.,** see *Lithotomy* and *Urethrotomy.* **Pitré's′ s.,** series of transverse vertical incisions of the brain-substance made through the prefrontal lobe (*prefrontal*), anterior to the fissure of Rolando (*pedunculofrontal*), the ascending frontal convolution (*frontal*), the ascending parietal convolution (*parietal*), posterior to the fissure of Rolando (*pedunculoparietal*), and the middle of the occipital lobe (*occipital*). **Præfron′tal s.,** vertical section of the brain at right angles to its longitudinal axis in the præfrontal region. **Sag′ittal s.,** incision made in an anteroposterior direction through the body or an organ. **Sigaul′tian s.,** symphyseotomy. **S. of ten′dons,** see *Tenotomy.*

**Sec′tor for ca′vum nasopharynge′um.** Area in the median plane of the skull bounded by lines connecting hormion, basion, and staphylion. **S. cerebella′ris,** area in the middle plane of the skull between lines projected from the hormion to the opisthion and inion.

**Secundagrav′ida.** A woman pregnant for the second time.

**Secundi′na** (*membrana* understood). A secondary, or accessory, or minor membrane. **S. cer′ebri,** pia mater. **S. oc′uli,** tunica ruyschiana of the choroid. **S. u′teri,** chorion.

**Sec′undines** (*secundus,* second). After-birth. All that remains in the uterus after the birth of the child, viz., the placenta, a portion of the umbilical cord, and the membranes of the ovum. These are commonly not expelled until some time after the birth of the fœtus, hence their name.

**Secundip′ara.** A woman who has borne two children.

**Secun′dum ar′tem.** Properly; according to art.

**Secun′dum par tuberculo′rum.** Optic thalami.

**Secun′dus proprio′rum auric′ulæ.** Retrahens auris.

**Sedatin′.** Antipyrin. Also substance produced by the mutual action of valeric acid and amidophenetol.

**Seda′tion** (*sedo,* to assuage). Effect induced by sedatives.

**Sed′atives.** Calmants, temperants, sedantia. Medicines which directly depress the vital forces, being consequently employed whenever necessary to diminish increased action; as bromides, antimony and its preparations, aconite, potash salts, camphor, lobelia, gelsemium, conium, chloral, nitroglycerin, Calabar bean.

**Se′dem attol′lens** (raising the seat). Levator ani.

**Sedenta′ria os′sa.** The bones upon which the body rests when in the sitting position, viz., the ischial and coccygeal bones.

**Se′des** (*sedeo,* to sit). Anus; excrement. **S. cruen′tæ,** dysentery; passage of blood with the discharges from the bowels. **S. lactescen′tes,** cœliac flux. **S. procid′ua,** proctocele.

**Sed′hee.** Bangue.

**Sedil′ia** (*sedeo,* to sit). Nates.

**Sédillot's′ amputa′tion.** Amputation of the middle or upper third of the leg made with lateral flaps, the outer being much longer than the inner.

**Sed′iment** (*sedeo,* to sink down). Deposit formed by the precipitation of some one or more of the substances held in solution or suspension by a liquid.

**Sedimenta′tion.** Process by which a sediment is deposited by precipitation.

**Sedimenta′tor.** Centrifuge.

**Sedimen′tum.** Sediment. **S. uri′næ lateric′ium,** see *Lateritious.* **S. uri′næ pityroi′des,** bran-like sediment in the urine.

**Se′dum.** Wall pepper, Jack of the buttery, pricket, bird's bread, stonecrop, biting stonecrop, small houseleek; ord. *Crassulaceæ.* In recent state it is very acrid, being emetic and cathartic. Externally, in the form of cataplasm, it produces vesications and erosions. It has been recommended in cancerous and malignant ulcers. **S. a′cre,** small cultivated plant of Europe; local irritant. S. rhodiola and S. album have similar properties. **S. al′bum,** sedum. **S. glacia′le,** sedum. **S. ma′jus,** Sempervivum tectorum. **S. mi′nus,** sedum. **S. rhodi′ola,** sedum. **S. tele′phium,** formerly used as a cataplasm in cuts, hemorrhoids, corns, whitlows, etc **S. telephoi′des,** S. telephium. **S. vermicula′re,** sedum

**See′beck-Holm′gren test.** See *Holmgren's test.*

**Seed.** Semen; sperm.

**See′ligmueller's sign.** Abnormal dilatation of the pupil on the affected side in neuralgia.

**Sees′sel's pock′et.** Pit in the epithelial lining of membrane of pharynx in the embryo.

**Se′glass's type of paranoi′a.** Psychomotor type.

**Seg′ment.** A part separated from another or from the main body by a real or hypothetical dividing line. **Interan′nular s., Rivin′ian s., Lan′termann's s. Ver′tebral s.,** etc., see the qualifying word.

**Segmen′ta cartilagin′ea.** Rings of the trachea.

**Segmen′tal.** Relating to segmentation. **S. ar′teries,** arteries supplying the region in which they have their origin. **S. duct** that into which segmental tubules empty; found only in anamniota. **S. or′gan**, tubule lined with epithelium opening on the surface of the body and communicating with the body-cavity; in vertebrates it empties into a special longitudinal duct. It is thought the segmental organs are the primitive type from which the kidneys have been evolved. **S. spheres**, the mass of cells produced by segmentation of the nucleus of the ovum. **S. tube**, segmental organ. **S. tu′bules**, tubules of the Wolffian body.

**Segmenta′tion** (*segmentum*, segment, itself from *seco*, to cut). The act of being divided into segments or portions. Term applied to the division of the vitellus or yolk into segments, each containing a transparent vesicle, which may be a descendant of the primordial or germ-cell. **S. cav′ity**, space between the ectoderm and entoderm, afterward occupied by the mesoderm. **S. cells**, s. spheres. **S. nu′cleus**, that formed by union of pronuclei in the ovum. **S. spheres**, morula.

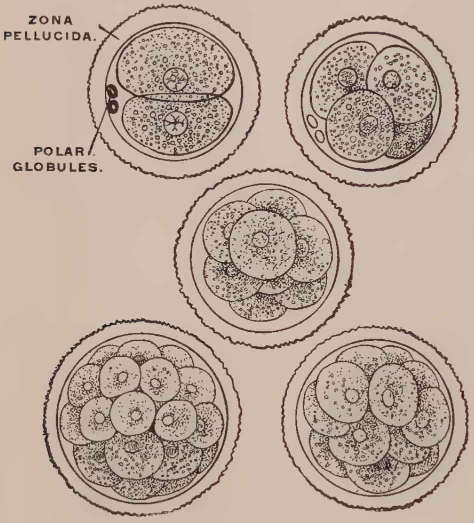


Diagram showing the first stages of segmentation in a mammalian ovum. (Allen Thompson.)

**Segni′tia** or **Segni′ties** (*segnis*, sluggish). Sluggishness or torpor in the exercise of a function, as segnities alva, torpor of the bowels; segnities virium, languor.

**Ségond′, an′gles of.** Angles formed by lines drawn from basion to chief points on the median circumference of the skull.

**Se′gum's sig′nal symp′tom.** Initial symptom of Jacksonian or cortical epilepsy.

**Seid′litz pow′der.** Pulvis effervescens compositus. **S. springs**, natural saline springs near Prague, in Bohemia.

**Seignette's′ salt.** Sodium tartrate.

**Sei′ler's car′tilage.** Small cartilage connected with the vocal process of the arytenoid, in the female particularly.

**Seiri′asis.** Insolation; phrenitis.

**Seismother′apy.** Treatment by mechanical shaking or vibratory action.

**Seis′mus** (*seismos*). Concussion; vibration; shaking.

**Seiz′ure.** Attack.

**Sela′go.** Camphorosma monspeliaca; Lycopodium selago.

**Selec′tion.** The act of making a choice. **Artifi′cial s.**, the choice of types of animals or plants, which by differentiation develop into the desired form. **Nat′ural s.**, the development of the individuals of any species due to their natural environment or conditions.

**Seleni′asis** or **Selenias′mus** (*selene*). Somnambulism.

**Sele′nium.** One of the rare elements having properties resembling those of sulphur; symbol, Se.

**Sele′nodont** (*selene*, the moon, *odous*, tooth). Having molar teeth with crescentic ridges on their crowns.

**Selenoplex′ia.** Moon-stroke.

**Self-abuse′.** Masturbation.

**Self-diges′tion.** Digestion by the gastric juice of the walls of the stomach, rendered less resistant by pathological causes.

**Self-heal′.** Prunella.

**Self-infec′tion.** General infection from any locally acting virus.

**Self-lim′ited.** An epithet applied to diseases which appear to run a definite course but little modified by treatment—smallpox, for example.

**Self-pollu′tion.** Masturbation.

**Seli′num.** Apium petroselinum. **S. angel′icus**, Angelica sylvestris. **S. gal′banum**, Bubon galbanum. **S. imperato′ria**, imperatoria. **S. lates′cens**, Peucedanum palustre. **Marsh s.**, Peucedanum palustre. **S. opop′anax**, Pastinaca opopanax. **S. oreoseli′num**, Athamanta aureoselinum. **S. ostruth′ium**, imperatoria. **S. palus′tre**, Peucedanum palustre. **S. pastina′ca**, Pastinaca sativa. **S. peuced′anum**, peucedanum. **S. pubes′cens**, Angelica sylvestris, Peucedanum palustre. **S. thysseli′num**, Peucedanum palustre.

**Sel′la** (seat). S. turcica. **S. equi′na**, s. turcica. **S. familiar′ica**, lasanum. **S. obstetri′cia**, close-stool. **S. sphenoida′lis**, s. turcica. **S. tur′cica**, pituitary fossa, Turkish saddle; depression at the upper surface of the sphenoid bone, bounded anteriorly and posteriorly by the clinoid processes, lodging the pituitary gland. It is so called from its resemblance to a Turkish saddle.

**Sel′ters** or **Selt′zer wa′ter.** Water from cold, acidulous springs at Seltz, near Strasburg. They chiefly contain carbonates of sodium, chloride of sodium, sulphates of sodium, calcium, magnesium, and iron, and much carbonic acid. They are refrigerant, tonic, diuretic, and aperient.

**Semecar′pus anacar′dium.** Avicennia tomentosa.

**Semeiog′raphy** (*semeion*, symptom, *graphe*, description). A description of symptoms.

**Semeiol′ogy** (*semeion*, symptom, *logos*, discourse). Symptomatology; the branch of pathology whose object is the study of the symptoms of disease.

**Semei′on.** Sign, symptom. **S. boethemat′icum** indication.

**Semeio′sis.** Semeiology; symptomatology.

**Semeiot′ic.** Relating to symptoms.

**Semeiot′ics.** Science of signs or symptoms.

**Semelin′cident** (*semel*, once, *incidens*, happening). Term applied to diseases occurring but once in the same individual—smallpox, for example.

**Se′men** (*semen*, seed). That which is sown. Seed of plants or animals. Sperm. **S. abelmos′chi**, musk seed. **S. a′bri**, jequirity. **S. alexandri′num**, santonica. **S. amo′nii**, pimento. **S. ani′si stella′ti**, star-anise seed. **S. ani′si vulga′ris**, aniseed. **S. are′cæ**, areca nut. **S. ba′dian**, Illicium anisatum. **S. caca′o**, cacao. **S. cal′abar**, physostigma. **S. calcitrip′pæ**, larkspur seed. **S. cardamo′mi mino′ris**, cardamom. **S. catapu′tiæ mino′ris**, seeds of Euphorbia lathyris. **S. ci′næ** or **ci′næ halepen′se**, santonica. **S. co′la**, cola nut. **S. col′chici**, colchicum seed. **S. consol′idæ**, larkspur seed. **S. con′tra ver′mes**, Artemisia santonica. **S. cydo′niæ**, cydonium. **S. eru′cæ**, white mustard seed. **S. genita′le**, s. masculinum. **S. igna′tiæ**, ignatia. **S. lycopo′dii**, lycopodium. **S. masculi′num**, sperm. **S. mulie′bre**, secretion of Bartholin's glands. **S. myris′ticæ**, nutmeg. **S. nu′cis vom′icæ**, nux vomica. **S. papa′veris**, poppy seed. **S. pedicula′ris**, staphisagria. **S. quer′cûs**, seeds from Quercus robur. **S. quer′cûs tos′tum**, acorn coffee. **S. sabadil′læ**, cevadilla. **S. sanc′tum**, see *Artemisia santonica*. **S. santon′ici**, see *Artemisia santonica*. **S. sina′pis**, black mustard. **S.**

**sina'pis al'bæ**, white mustard. **S. sina'pis ni'græ**, black mustard. **S. stramo'nii**, stramonium seeds. **S. strych'niæ**, nux vomica. **S. tig'lii**, croton seeds. **S. viri'le**, s. masculinum. **S. zedoa'riæ**, see *Artemisia santonica*.

**Semi-.** In composition, signifies half.

**Semialbinis'mus** (*semi*, half, *albus*, white). Diminution in the color of the skin, affecting negroes.

**Sem'ibulb.** Bulbus vestibuli.

**Semicanal'.** Semicanalis.

**Semicanalic'ulus** (*canaliculus*, a small channel). Sulcus.

**Semicana'lis** (*canalis*, channel). Sulcus, groove, furrow. **S. hu'meri**, the bicipital groove. **S. ner'vi vidia'ni**, groove on the temporal bone. **S. ten'sor tym'pani**, canal for the tensor tympani muscle. **S. tu'bæ Eusta'chii**, lower portion of canalis musculotubarius containing the Eustachian tube. **S. tympan'icus**, sulcus Jacobsonii.

**Semiceph'alus.** Hemicephalus.

**Semicir'cular.** That representing half of a circle. **S. canals'** are seated in the pars petrosa of the temporal bone, opening into the vestibule behind which they are situated. They are three in number, of which one is superior or vertical—canalis semicircularis verticalis superior; another posterior or oblique—canalis semicircularis verticalis posterior or internus or inferior; and the third exterior or horizontal—canalis semicircularis horizontalis or externus or axterior or medius or minimus or brevissimus. Their wells are formed of a bony, compact, hard plate. At their termination they have the elliptical arrangements called ampullæ, and by both extremities they open into the vestibule in the sac at its superior part, variously called the sacculus ellipticus or oblongus or hemiellipticus or semiovalis or communis; alveus or utriculus or sinus communis or medianus; sinus or alveus utriculosus; sacculus vestibuli; median sinus, utricle. In front of the sacculus ellipticus, nearer the cochlea and opposite the foramen ovale, is the sacculus sphæricus or rotundus or proprius. The membranous semicircular canals—canales semicirculares membranacei, tubuli, or ductus semicirculares—follow the same course as the osseous canals, described above.

**Semicir'culi os'sei.** Semicircular canals.

**Semicir'culus exsculp'tus** (semicircle cut out). Aortic opening of the diaphragm.

**Semidecussa'tion.** Incomplete decussation.

**Semifibulæ'us.** Peronæus brevis.

**Semiho'mo.** Atropa mandragora.

**Semi-interos'seus in'dicis.** Abductor indicis. **S.-i. pol'licis**, opponens pollicis.

**Semilu'nar** (*luna*, moon). Having the shape of a half-moon; crescentic. **S. bone**, the second bone of the upper row of the carpus, lunar bone. **S. car'tilages**, sigmoid cartilages; two fibrocartilages between the condyles of the os femoris and the articular surfaces of the tibia. The innermost, which is longer from before to behind than transversely, is nearly semicircular. The outermost forms almost an entire circle, an arrangement, in both cases, corresponding to the different surfaces of the tibia. They are thicker at their outer circumference, which is convex, than at the inner, which is concave and very thin. Both are inserted, before and behind, into the spine of the tibia by means of fibrous fasciæ. **S. fas'cia**, bicipital fascia. **S. fibrocar'tilages**, s. cartilages. **S. fold of Doug'las**, a lunated edge marking a deficiency in the posterior wall of the sheath of the rectus abdominis muscle. **S. fold of the eye**, small fold of conjunctiva in the inner canthus, representing the *membrana nictitans* of quadrupeds and birds. **S. folds of the peritone'um**, recto-uterine folds. **S. gan'glia** belong to the great sympathetic. These ganglia present considerable variety, being deeply situated in the abdomen above and behind the suprarenal capsules. They correspond posteriorly to the pillars of the diaphragm and the aorta. They have the shape of a crescent reversed, often surrounded by other ganglia of a smaller size. From their periphery numerous filaments proceed which go to form the solar plexus. **S. lobes**, two portions of the posterior lobe of the cerebellum, the superior being above the great horizontal fissure, while the inferior is below the same fissure. **S. notch of il'ium**, notch between the anterior superior and anterior inferior spines of the ilium. **S. notch of the ster'num**, fourchette. **S. sur'face**, smooth, cartilaginous surface surrounding the acetabular fossa. **S. tract**, a tract of fibres situated in the external portions of the cerebellum. **S. valves**, sigmoid valves.

**Semiluna're os.** Lunar or semilunar bone.

**Semilu'nula un'guium.** See *Nail*.

**Sem'imas** (*mas*, male). Eunuch.

**Semimas'culus** (*masculus*, male). Eunuch.

**Semimembrano'sus** (*membrana*, membrane). A muscle situated at the posterior part of the thigh; flat, thin, narrow, and aponeurotic in the upper third; broader and fleshy in the middle; tendinous below. It is attached above to the tuberosity of the ischium; below—by a tendon which has three divisions—to the outer condyle of the femur and to the posterior and inner part of the internal tuberosity of the tibia. This muscle is a rotator inward and flexor of the leg. It can also bend the thigh upon the leg. When one is standing it maintains the pelvis in position, and can even draw it downward.

**Semimem'branous.** Semimembranosus.

**Semimor'tuus** (*mortuus*, dead). Half-living; half-dead.

**Sem'inal** (*semen*). Spermatic. **S. animal'cule**, spermatozoon. **S. cells**, amœboid cells found in the seminal tubules, and supposed to secrete the fluid portion of the semen. **S. cysts**, a variety of retention cyst or tumor, including encysted hydrocele and hydrocele of the spermatic cord or spermatocele; the fluid obtained from these cysts usually contains seminal filaments or spermatozoa. **S. ducts**, ejaculatory ducts. **S. fil'aments**, spermatozoa. **S. flu'id**, sperm. **S. glob'ules** or **gran'ules**, minute granular bodies found in semen. **S. loss'es**, spermatorrhœa. **S. rope**, spermatophore. **S. tu'bules**, seminiferous tubules. **S. ves'icles**, two convoluted tubular sacs for the reception of semen, situated one on either side of the base of the bladder. The duct of each joins with the vas deferens of the same side, forming the ejaculatory duct.

**Semina'tion.** Introduction of spermatic fluid into the uterus.

**Seminervo'sus** (*nervus*, sinew). Semitendinosus.

**Sem'inex** (*nex*, death). Half-living; half-dead.

**Semin'ia morbo'rum** (*seminium*, seed). The seeds of disease. Predisposition.

**Seminif'erous** (*semen*, seed, *fero*, to carry). Spermatophorous. Epithet given to the vessels which secrete and convey the seminal fluid. **S. tu'bules**, finely convoluted tubules composing the glandular part of the testis, discharging their secretion into the straight tubules.

**Seminor'mal solu'tion.** Standard or normal solution containing only half the amount of reagent comprised in normal solution.

**Seminu'ria.** The presence of semen in the urine.

**Semiorbicula'ris.** See *Orbicular muscles*.

**Semios'seus in'dicis.** Abductor indicis.

**Semiot'ic.** Symptomatic.

**Semipes'tis** (*semi*, half, *pestis*, plague). Typhus.

**Semiple'gia** (*plege*, stroke). Hemiplegia.

**Semiprone'.** Lying on the side, halfway between pronation and supination.

**Sem'is.** Half. In prescriptions abbreviated to ss.

**Semisom'nis** (*semi*, half, *somnus*, sleep). Coma.

**Semisopo'rus** (*semi*, half, *sopor*, sleep). Coma.

**Semispec'ulum** (*semi*, half, *speculum*, mirror). Instrument used in dilating the incision made into the neck of the bladder in the operation of lithotomy.

**Semispina'lis cap'itis.** See *Complexus*. **S. col'li**, part of transversospinal: a muscle arising from the transverse processes of the six uppermost dorsal vertebræ, by an equal number of distinct tendons, running obliquely under the complexus, being inserted into the spinous processes of all the cervical vertebræ except the first and last. Its action is to extend the neck obliquely backward and to one side. **S. dor′si,** part of transversospinal; a muscle arising from the transverse processes of the seventh, eighth, ninth, and tenth dorsal vertebræ, by as many distinct tendons, soon growing fleshy, and then again becoming tendinous, being inserted into the spinous processes of the sixth or seventh uppermost dorsal, and two lowest cervical vertebræ, by as many tendons. Its action is to extend the spine obliquely backward. **S. exter′nus,** semispinalis dorsi. **S. inter′nus,** transversalis dorsi. **S. spina′tus,** longissimus dorsi; semispinalis dorsi.

**Semispina′tus col′li.** Semispinalis colli.

**Semisul′cus.** Half a sulcus, requiring its fellow to make a perfect sulcus. **S. longitudina′lis,** groove on the parietal bone forming, with its fellow of the opposite side, the broad groove which lodges the superior longitudinal sinus. **S. petro′sus infe′rior,** groove on sides of the basilar portion of occipital bone lodging the inferior petrosal sinus. **S. sagitta′lis,** semisulcus longitudinalis.

**Semisupine′.** Lying on the side midway between pronation and supination.

**Semitendino′sus.** Muscle situated at the posterior part of the thigh. It extends obliquely, downward and inward, from the tuberosity of the ischium—to which it is attached by a flat tendon common to it and the biceps—as far as the posterior and inner part of the tibia, to which it is attached by means of another round tendon. Its fibres are commonly interrupted by an aponeurosis. Its uses are the same as those of the semimembranosus.

**Semiten′dinous.** Semitendinosus.

**Semiter′tian fe′ver.** Double tertian, a malarial fever having daily paroxysms, of which those occurring every other day are more violent.

**Semiun′cia** (*uncia,* ounce). Half an ounce.

**Sem′ivir** (*semi,* half, *vir,* man). Eunuch.

**Semivi′vus** (*vivus,* alive). Half-alive, half-dead.

**Se′mon's law.** The cricoarytenoidei postici muscles are the first muscles affected in all organic lesions of the motor laryngeal nerves. **S.'s symp′tom,** diminution of the mobility of the vocal cord in carcinoma of the larynx.

**Se′mon-Ro′senbach law.** Semon's law.

**Sempervi′vum a′cre.** Sedum. **S. tecto′rum,** houseleek, sengreen, Jupiter's beard. The leaves have a mild, subacid austerity, and are often applied to bruises and old ulcers.

**Semp′stresses′ cramp** or **pal′sy.** Seamstresses' cramp.

**Se′muda.** Betula.

**Se′na.** Cassia senna.

**Senebie′ra coron′opus** (after J. Sénébier, the naturalist, of Geneva). Cochlearia coronopus.

**Sen′eca oil** (after the Seneca Indians). Petroleum.

**Senecin′.** Oleoresinous derivative of Senecio gracilis and S. vulgaris. Emetic, astringent, emmenagogue.

**Sene′cio.** Groundsel, fireweed; ord. *Compositæ.* A common plant in Europe; frequently applied, bruised, to inflammation and ulcers as a refrigerant and antiscorbutic. **S. aur′eus,** golden ragweed, wild valerian, life root, squaw root; indigenous; is an excitant, diaphoretic, and diuretic. The dried plant is used in decoction—℥ss–Oj of water. **S. hieracifo′lius,** Erecthites hieracifolius. **S. jacobæ′a,** St. James's wort, ragwort. The leaves have a bitter, subacid, and extremely nauseous taste. A decoction has been used in dysentery. A poultice of the leaves has been recommended in rheumatic affections, and a decoction of the root has been employed for wounds and bruises. **S. vulga′ris,** senecio.

**Senec′tus** (*senex,* old person). Old age, senility. The last period of life, commencing, according to some, at 60 years of age—according to M. Flourens, at 70—but varying according to numerous circumstances. It is characterized by progressive diminution of the physical and mental faculties. See *Age.* **S. ul′tima,** decrepitude.

**Sen′ega.** (Ph. U. S.) The root of Polygala senega or Seneca snakeroot. In small doses expectorant and diuretic; in large doses emetic and purgative. See *Polygala senega.* The official preparations are: *Extrac′tum sen′egæ flu′idum;* dose, ♏x–xx (0.65–1.3). *Syr′upus s.;* dose, ʒss–ij (2.0–8.0). Compound syrup of squill contains 8 per cent. fluid extract of senega.

**Sen′egæ ra′dix.** Senega.

**Sen′egal gum.** Exudation from Acacia or Mimosa senegal, ord. *Leguminosæ,* growing in that part of Africa through which the river Senegal runs. It is in loose or single drops, much larger than gum arabic or the gum which exudes from the cherry tree.

**Senegin′.** $C_{32}H_{57}O_{17}$. Polygalic acid, glucoside from senega; expectorant, emetic, and diuretic, in doses of gr. ¼–½ (0.016–0.032).

**Sen′eka.** Polygala senega.

**Senes′cence** (*senex,* old man). Old age.

**Sen′green.** Sempervivum tectorum.

**Se′nile** (*senex,* old person). Relating or belonging to old age, as senile delirium; dotage. **S. chore′a,** paralysis agitans; also a form of true chorea. **S. gan′grene,** dry gangrene of the extremities due to atheromatous vessels, with diminution of the blood supply. **S. trem′bling,** see *Trembling.*

**Seni′lis.** Relating to old age; old. **Ar′cus s.,** see *Arcus senilis.*

**Se′nilism.** Premature old age, resulting from accelerated maturity and involution.

**Senil′ity.** Senectus.

**Senn's disks.** Bones decalcified and made into disks or plates, to maintain the bowel in situ when sutures are passed through it. **S.'s hy′drogen test,** test for detection of intestinal perforation, hydrogen being injected into the rectum and being set fire to as it escapes through the perforation. **S.'s plates,** Senn's disks.

**Sen′na.** (Ph. U. S. and Br.) Leaflets of Cassia acutifolia and C. angustifolia or elongata; a hydragogue cathartic and cholagogue, often causing griping; it is the active ingredient of many cathartic teas and confections. Dose of the powder, ʒss–ij (2.0–8.0). The following are the official preparations: *Confec′tio sen′næ;* dose, ʒij (8.0). *Extrac′tum s. flu′idum;* dose, ʒj–ij (4.0–8.0). *Infu′sum s. compos′itum* (*mistu′ra s. compos′ita,* Ph. Br.), black draught; dose, ℥j–iv (32.0–128.0). *Syr′upus s.;* dose, ʒss–ij (2.0–8.0). Senna also enters into the composition of compound licorice powder. See also *Cassia senna.* **S. acutifo′lia,** Cassia acutifolia. **S. alexandri′na,** Cassia senna. **Amer′ican s.,** Cassia marilandica. **S. angustifo′lia,** Cassia elongata. **Blad′der s.** Colutea arborescens. **S. figs,** see *Cassia senna.* **S. german′ica,** colutea. **S. in′dica,** Tinnevelly senna. **S. ital′ica,** Cassia senna. **S. obova′ta,** Cassia obovata. **S. officina′lis** Cassia elongata. **Prai′rie s.,** Cassia chamæcrista. **Wild s.,** Cassia chamæcrista; Cassia marilandica; Globularia alypum.

**Sennaär′gum.** A variety of gum acacia, so named from the town on the Red Sea whence it is exported.

**Sen′nacrol.** A pungent, acrid principle obtained from senna; soluble in ether.

**Sennapicrin′.** A bitter principle of senna, obtained from the alcoholic extract of the drug.

**Sensa′tion** (*sentio,* to feel). The consciousness or cognizance by the brain of an impression caused by an external body on the organs of the senses. Sensations are divided into external, internal, and morbid. The *external* are communicated by the five organs of the senses. The *internal* are such as occur within the body, and arise from some alteration in the function of the part for the time being. Hunger and thirst are internal sensations. Morbid sensations may be either internal or external. *Objective* sensations are produced by impressions on the peripheral nerves, as in vision, audition, etc. *Subjective* sensations are such as originate centrically or in the encephalon, as tinnitus aurium.

**Sensa′tional.** Sentient.

**Sense.** A faculty possessed by animals of appreciating impressions from external objects. The senses are five in number: sight, hearing, smell, taste, and touch. Of these, the first two and the last administer more to the intellect, and hence have been called by some the intellectual senses; the other two seem more connected with the nutrition of the body, and hence have been termed corporeal or nutritive senses. Other senses have been suggested—as the intense sensation experienced during the venereal act; a sense of heat and cold; a muscular sense. **S. or′gans,** those which when stimulated produce sensation; they are distinguished as *central s. o.*, central collections of cells which receive peripheral impulses and convert them into reflex action, sensation, or both sensation and reflex action; and *peripheral s. o.*, special sensory nerve-endings, including touch and taste corpuscles, organ of Corti, the retina, etc.

**Sensibil′ity** (*sentio*, to feel, *habilis*, able). The faculty of receiving and transmitting impressions and having the consciousness of them. It thus includes impressibility, transmissibility, and perceptibility. Bichat defined it as the property possessed by living bodies of receiving impressions, whether the individual be conscious of them or not. If conscious, the sensibility is called animal; if not, organic. This last is common to vegetables and animals, and presides over nutrition, absorption, exhalation, secretion, etc. The other presumably does not exist in vegetables: it is the origin of the sensations—olfaction, vision, gustation, thirst, hunger, pain, etc. **Organ′ic s.,** unconscious transmission of afferent or efferent impulses. **Range of s.,** see *Weber's law.* **Recur′rent s.,** see *Vertebral nerves.*

**Sen′sible.** Having the faculty of sensation.

**Sensif′erous** (*sensus*+*fero*, to carry). Sentient.

**Sen′sitive.** Having the faculty of feeling. Relating or appertaining to the senses or to sensation.

**Sen′sitized.** Made sensitive.

**Sen′sitizer.** Bordet's term for immune-body.

**Senso′rial.** Sentient; relating to the sensorium. **S. pow′er,** the two functions of sensation and volition, to which some add the power of conscious muscular contraction.

**Sensorimo′tor.** Name applied to certain nerve-fibres which act conjointly in sensation and muscular acts.

**Senso′rium.** The common centre of sensations or any sensory nerve-centre. **S. commu′ne,** sensorium, the common centre of sensations.

**Sensorivoli′tional.** A term applied to nervous fibres passing to and from the cerebrospinal axis, and respectively concerned in sensation and volition.

**Sen′sory.** Relating to sensation; sentient. **S. apha′sia,** a form of a. caused by inability to understand the significance of spoken words. **S. a′rea,** space for coordination and appreciation of sensation. **S. cells,** the nerve cells composing end-organs of nerves, as, for example, the cells of the taste end-organs, situated in the tongue. **S. cen′tres,** s. ganglia. **S. cross′way,** posterior third of internal capsule of the brain, in which there is a crossing of the fibres of special and general sensation. **S. deaf′ness,** word-deafness and disordered speech caused by it. **S. decussa′tion,** decussation occurring anterior to the central canal of the medulla by nerve-fibres from the nucleus gracilis and nucleus cuneatus. **S. ep′ilepsy,** a form of epilepsy in which disordered sensory symptoms and sensory delusions take the place of the convulsive movements. **S. gan′glia,** a series of ganglionic masses at the base of the brain, in direct communication with the nerves of sensation, as the olfactory, optic, auditory, and gustatory. **S. nerves,** nerves of sensation, so called in contradistinction to motor nerves. There are general sensory nerves, as those connected with the posterior part of the spinal marrow and the fifth pair; and special sensory, as those of the senses. **S. or′gans,** organs which receive stimulant impressions and develop sensation. **S. re′gion,** s. area. **S. sphere,** s. area.

**Sen′sus.** Sensation, feeling, sense. **S. ægritu′dinis,** indisposition. **S. osmomet′ricus,** olfaction. **S. perver′sus,** pseudæsthesia.

**Sentient,** sen′she-ent (*sentio*, to feel). Sensory, sensiferous; feeling or causing feeling. **S. extrem′ities of nerves** are their minute terminations in the organs.

**Senti′na.** Pituitary gland.

**Sep′arate sys′tem.** A form of sewage which excludes, in whole or part, the rainfall. See *Sewerage.*

**Sep′arator.** Several varieties of instruments are so called, whether used for separating vascular tissues, the teeth, etc., for tearing apart the pericranium or separating it from the skull, or for filtering solids from liquids.

**Separato′rium** (*separo*, to separate). A surgical instrument for separating the pericranium from the skull. A *separatory* is a pharmaceutical vessel for separating fluids of different densities from each other.

**Sep′aratory.** Separatorium, separator.

**Sepedogen′esis.** Sepedonogenesis.

**Sep′edon.** Putrefaction.

**Sepedonogen′esis** (*sepedon*, putrefaction, *genesis*, generation). A septic disposition or tendency, such as is met with in typhus fever. Putrescence.

**Se′pes** (a hedge, a row) **den′tium.** A row of teeth.

**Se′pia.** Cuttlefish; class *Cephalopoda.* The osseous part of the cuttlefish has been used as an absorbent, and is often added to tooth-powders.

**Sepsin′** (*sepsis*, putrefaction). A substance extracted from putrid animal material, and supposed to be the active cause of certain cases of septicæmia.

**Sep′sis.** Putrefaction. Infection with pathogenic microorganisms.

**Septæ′mia** (*septos*, putrid, *haima*, blood). Septicæmia.

**Sep′tal** (*septum*). Relating or appertaining to a septum; as septal walls of the heart, those that separate the cavities from each other.

**Sep′tan fe′ver** (*septem*, seven). Intermittent whose paroxysms recur every six days.

**Sep′tate.** Provided with one or more partitions. **S. u′terus,** uterus divided by a septum into two cavities.

**Sep′tenary** (*septem*, seven). Consisting of seven. **S. year,** septennial.

**Septen′niad** (*septem*, seven). See *Climacteric years.*

**Septentrionaline′.** Alkaloid from Aconitum septentrionale; used in tetanus and hydrophobia, and as an antidote to poisoning by strychnine.

**Sept′foil, up′right.** Tormentilla.

**Septhæ′mia.** Septicæmia.

**Sep′tic** (*septos*, putrid). That which produces or results from putrefaction. A substance corroding and disorganizing the soft parts without causing much pain. See *Antiseptic.* **S. fe′ver,** septicæmia. **S. infec′tion,** effect of absorption of septic matters. **S. poi′soning,** septicæmia.

**Septicæ′mia.** Septæmia, blood poisoning, putrid infection. Morbid condition of the blood produced by septic or putrid matters—animal poisons especially—or certain microorganisms with their toxins. It resembles pyæmia in its symptoms. The latter may be regarded, however, as a purulent infection; septicæmia, as a putrid infection. **Hemorrhag′ic s.,** s. attacking animals; it is marked by hemorrhages, local œdema, bacterial lesions of the bowels, etc.; and caused by Bacillus cuniculicidus and its varieties. **Mouse s.,** apathetic form of s. occurring in mice from inoculation with Bacillus murisepticus. **Puer′peral s.,** s. due to conditions coincident with childbirth by which microorganisms enter the circulation. **Rab′bit s.,** infectious disease of rabbits like chicken cholera, caused by Bacillus cuniculicidus and its toxin, methylguanidin. **Spu′tum s.,** s. caused by inoculation with a microorganism isolated from sputum. **Vib′rio s.,** fatal form of s. attended with diarrhœa, and caused by the vibrio of Metchnikoff.

**Septicæ′mic.** Relating to septicæmia.

**Septicin′.** Ptomain from putrid meat. A mixture of hexylamin and amylamin obtained from putrid matter.

**Septicoæ′mia.** Septicæmia.

**Septicopyæ′mia.** A combination of septicæmia and pyæmia; combined septic and purulent toxæmia.

**Septimes′tris fœ′tus** (*septum*, seven, *mensis*, month). A seven months' fœtus.

**Septiner′via.** Plantago.

**Septiv′alent** (*septum*, seven, *valeo*, to be worth). Capable of combining with or of being substituted for seven atoms of hydrogen.

**Septom′eter.** Instrument for measuring thickness of the nasal septum. Also (*septos*, rotten) an instrument for estimating amount of septic material forming or existing in the atmosphere.

**Sep′ton** (*septos*, putrid). Azote.

**Septopyæ′mia.** Septicopyæmia.

**Sept′ula** (pl. of septulum) **fibro′sa.** Fine trabeculæ of fibrous tissue running from the deep fascia of the penis into the corpus cavernosum. **S. interalveola′ria**, septum between the pulmonary alveoli. **S. medul′læ spina′lis**, the connective-tissue septa of the spinal cord. **S. re′num**, columns of Bertin. **S. tes′tis**, fibrous cords given off by the mediastinum testis to be inserted into the inner surface of the tunica albuginea.

**Sept′ulum** (dim. of septum). A division between small spaces or cavities.

**Sep′tum** (*sepio*, to fence in). A part destined to separate two cavities from each other or to divide a principal cavity into secondary cavities. These septa are numerous in the human body. The chief are the following: **S. an′nuli crura′lis**, crural canal. **S. aor′ticum**, aortic segments. **S. atrio′rum cor′dis**, septum or partition between the auricles of the heart. **S. at′rium**, auricular septum of heart. **S. auricula′rum**, s. atriorum. **S. bronchia′le**, bronchial septum. **S. bul′bi ure′thræ**, median septum of the bulb of the urethra. **S. bursa′rium omenta′le**, ligament running from stomach to pancreas; gastropancreatic ligament. **S. cartilagin′eum**, cartilage of nasal septum. **S. cerebel′li**, falx cerebelli. **S. cer′ebri**, falx cerebri. **S. cervica′le**, arachnoid septum. **S. coch′leæ audito′riæ**, lamina spiralis. **S. cor′dis**, the partition which separates the two ventricles of the heart. **S. crura′le**, see *Crural canal*. **S. enceph′ali**, tentorium. **S. fem′oris**, lamina of compact tissue inside the femur at junction of the neck and shaft, serving to strengthen the bone. **S. glan′dis**, median connective-tissue septum of the glans penis. **S. inguina′le exter′num**, part of superficial abdominal fascia which is attached to the internal pillar of the external ring of the inguinal canal. **Interventric′ular s.**, see *Interventricular*. **Lin′gual s.**, median fibrous septum of the tongue. **S. longitudina′le**, longitudinal septum of the spinal cord. **S. longitudina′le poste′rius**, posterior median fissure of spinal cord. **S. lu′cidum**, the soft portion or medullary substance which separates the two lateral ventricles of the brain from each other. This septum is composed of two laminæ, between which a small cavity exists, ventriculus septi pellucidi, filled by a serous fluid; see *Ventricles of the brain*. **S. mea′tûs acus′tici**, lamina cribrosa. **S. media′num dorsa′le**, posterior median fissure of cord. **S. me′dium cer′ebri**, s. lucidum. **S. me′dium cor′dis**, interventricular septum. **S. medulla′re triangula′re**, s. lucidum. **S. membrana′ceum**, columna nasi. **S. membrana′ceum au′ris**, tympanic membrane. **S. mo′bile**, columna nasi. **S. na′rium**, the partition between the nares. It is formed by the vomer, the perpendicular plate of the ethmoid bone, and a cartilage of triangular shape, septum narium cartilagineum; see *Nasal cartilage*. These parts are lined by the pituitary membrane, which receives a considerable number of nerves and vessels. **S. na′si**, see *Nares* and *Septum narium*. **S. ner′veum**, crista acustica. **S. of the nose**, septum narium. **S. orbita′le**, strong fibrous protection to the eye anteriorly, made up of eyelids, ligaments, and fascia. **S. os′sis ethmoide′i**, lamina of bone dividing ethmoidal cells. **S. paramedia′num dorsa′le**, posterior paramedian fissure. **S. parieta′le**, posterior leaflet of the mitral valve. **S. par′vum occipita′le**, falx cerebelli. **S. pectinifor′me**, see *Cavernous bodies*. **S. pellu′cidum**, s. lucidum. **S. of pons Varo′lii**, median raphe due to decussating fibres. **S. posti′cum**, arachnoid septum. **S. rectovagina′le**, wall between the rectum and vagina. **S. sca′læ**, lamina spiralis. **S. scro′ti**, see *Scrotum*. **S. sin′uum sphenoida′lium**, septum of the sphenoid bone. **S. sphenoida′le**. laminæ dividing the sphenoidal cells. **S. staphyli′num**, venum pendulum palati. **S. subarachnoide′um**, imperfect membranous septum passing from arachnoid to pia along posterior median fissure of the spinal cord. **S. ten′ue et pellu′cidum**, s. lucidum. **S. thora′cis**, mediastinum. **S. transver′sum**, crista acustica; tentorium; diaphragm. **S. tu′bæ**, thin lamina of bone separating tensor tympani muscle from Eustachian tube in canalis musculotubarius. **S. ure′thræ vagina′le**, anterior vaginal wall. **S. vagi′næ vaso′rum crura′lium**, septum between femoral vein and artery. **S. ventriculo′rum**, interventricular septum. **S. vestib′uli nervoso membrana′ceum**, see *Labyrinth*.

**Sep′tuplet.** One of seven children born in one accouchement of the same mother.

**Se′pum.** Sevum.

**Séquardin′.** Sterilized testicular extract (after Dr. Brown-Séquard, of Paris).

**Seque′la** (*sequor*, to follow). Morbid phenomenon left as the result of a disease.

**Seques′ter.** Sequestrum.

**Seques′tral.** Relating to a sequestrum.

**Sequestra′tion.** Process of forming a sequestrum. See *Sequestrum*. Also the separation of the patient from others in cases of mania, contagious diseases, etc.

**Sequestrec′tomy** (*ektome*, excision). Excision of a sequestrum.

**Sequestrot′omy** (*tome*, section). Operation for the removal of necrosed bone.

**Seques′trum** (*sequestro*, to separate from). That portion of bone, in necrosis, which is dead and separated from the living bone; acting, while retained, as an extraneous body. When the sequestrum is superficial and small it is called *exfoliation*. The portion of bone surrounding it is the capsula sequestralis. Sequestra are termed primary, secondary, and tertiary, according to the degree of attachment and the necessity for operative interference.

**Seralbu′min.** The albumin of the blood serum.

**Se′rial sec′tions.** Consecutive or successive sections cut from a specimen.

**Se′riceps.** Bag-like device for delivering the fetal head. It is made of a piece of cloth, formerly silk (*sericum*), whence the name, nine inches long, furnished with ribbons, so as to make loops for traction.

**Sericin′.** Albuminoid substance found in silk.

**Sericocar′pus tortifo′lius.** Indigenous plant, ord. *Compositæ;* said to be diuretic.

**Ser′icum.** Silk. The thread spun by the silkworm. Used by surgeons for ligatures, etc.

**Serid′ion.** Cichorium intybus.

**Se′ries den′tium.** A row of teeth.

**Se′riflux.** Discharge or flow of serum.

**Se′rin.** Seralbumin.

**Seri′ola.** Cichorium intybus.

**Se′rious.** Grave. A term applied to a disease or to ~~a~~ symptom that is attended with danger.

**Se′ris.** Cichorium intybus.

**Seriscis′sion.** The use of a silk thread as an écraseur.

**Sermoun′tain.** Lacerpitium album.

**Sero-.** In composition, serous or serum.

**Serocoli′tis.** See *Colitis*.

**Se′rocyst.** See *Serocystic*.

**Serocys′tic.** Epithet for tumors of the female breast, *serocysts*, which consist in the first stage of one or more membranous cysts, produced perhaps by dilatation of portions of the lactiferous tubes.

**Serodiagno′sis.** Orrhodiagnosis, serum diagnosis.

**Seroenteri′tis.** See *Enteritis*.

**Serofi′brinous.** Relating to serum which contains fibrin.

**Serofi′brous.** Relating to serous and fibrous structures conjointly.

**Seroformalin′.** A mixture of dried blood serum and formalin; antiseptic dusting-powder.

**Serohepati′tis.** Inflammation of serous coat of liver. See *Hepatitis*.

**Se′roid** (*eidos*, resemblance). Resembling a serous membrane.

**Serolem′ma.** External layer of the amnion.

**Serolin′.** Peculiar fatty matter found in the blood. Normal fæces contain serolin or stercorin, produced by transformation of the cholesterin of the bile during the digestive act.

**Seromu′cous.** Composed of serum and mucus.

**Seropneumotho′rax.** Pleurisy with effusion of serum and pneumothorax.

**Seropu′rulent.** Composed of both serum and pus.

**Seropus′.** A mixture of pus and a serous fluid.

**Sero′sa.** Membrane of embryo of birds analogous to the chorion of mammals. Also a serous membrane.

**Serosanguin′eous.** Consisting of or resembling blood and serum.

**Serose′rous.** Relating to or connecting two serous membranes, as *s. sutures*.

**Serosi′tis.** Inflammation of serous membrane.

**Seros′ity.** The characteristics and quality of serous fluids. Serum.

**Serosub′limate gauze.** Gauze impregnated with a solution of corrosive sublimate in blood serum.

**Serosynovi′tis.** Synovitis with effusion of serum.

**Serother′apy.** Orrhotherapy, serum therapy.

**Seroti′na.** See *Decidua serotina*.

**Se′rous** (*serum*). Thin, watery. Relating to the most watery portion of animal fluids or to membranes that secrete them. Resembling, containing, or relating to serum. **S. ap′oplexy,** effusion of serum into the ventricles of the brain, with clinical symptoms of true apoplexy. **S. cav′ities,** large lymph spaces lined by serous membrane. **S. cells,** s. glands. **S. cysts,** cysts with thin, liquid contents, usually seated in or near secreting glands or membranes or vascular glands. **S. flu′id,** a variety of lymph contained in the serous cavities; the normal serum of the blood. **S. glands,** racemose glands secreting a clear, watery secretion; for example, the parotid. **S. inflamma′tion,** inflammation of such membranes as the pleura or the meninges of the brain and spinal cord, attended with exudation of serum. **S. lay′er,** embryonic area. **S. lu′tein,** yellow pigment of serum. **S. mem′branes,** see *Membrane*.

**Serpe′do** (*serpo*, to creep). Psoriasis.

**Ser′pent** (*serpo*, to creep). A snake. **S. teeth,** a term used with reference to the torsion of one or more of the incisors, resembling those of the ophidian reptiles. **S. ul′cer,** sinuous ulcer of the cornea. **S. ven′om,** see *Venom*.

**Serpenta′ria.** (Ph. U. S.) Virginia snakeroot. Rhizome and rootlets of Aristolochia serpentaria and A. reticulata. Tonic, stimulant, diaphoretic, and diuretic; employed in debility, typhoid fever, malaria, etc. The official preparations are: *Extrac′tum serpenta′riæ flu′idum;* dose, ♏x–xxx (0.65–2.0). *Tinctu′ra s.;* dose, ʒj–ij (4.0–8.0). **S. gallo′rum,** Arum dracunculus. **S. hispan′ica,** scorzonera. **S. mi′nor,** Arum maculatum. **S. ni′gra,** Actæa racemosa. **S. virginia′na,** the official serpentaria.

**Serpentarin′.** Supposed active principle of serpentaria.

**Serpiginous,** ser-pij′in-us (*serpo*, to creep). Epithet given to certain affections which creep, as it were, from one part to another, as serpiginous erysipelas. **S. ul′cer,** sinuous ulcer which invades successively new portions of the surface, seeming to creep or crawl from one part to another.

**Serpi′go** (*serpo*, to creep). Herpes, tinea, or any creeping dermatosis. **S. facie′i,** herpes facialis.

**Serpyl′lum** (*serpo*, to creep). Thymus serpyllum.

**Ser′ra.** Saw. **S. sal′via,** wild sage; Artemisia frigida; antiperiodic. **S. versat′ilis,** trepan.

**Ser′rate su′ture.** Suture between bones having saw-like edges which fit accurately together, as those of the cranial bones.

**Ser′rated** (*serra*, saw). Dentate; saw-shaped.

**Serrat′iform.** Serrated.

**Serra′ti inter′ni.** The infracostal muscles.

**Serra′tion.** A formation with sharp prominences like the teeth of a saw. The condition of being serrated.

**Serrat′ula ama′ra.** A species of sawwort, recommended in ague. **S. be′hen,** Centaurea behen.

**Serra′tus** (*serra*, saw). Dentate. **S. anti′cus,** serratus magnus. **S. anti′cus ma′jor,** serratus magnus. **S. anti′cus mi′nor,** pectoralis minor. **S. inter′nus,** the subcostal muscles, collectively. **S. mag′nus** (so called from its serrated appearance), a very broad (especially anteriorly), thin, flat, irregularly quadrilateral muscle situated at the sides of the thorax. It is attached before to the external surface of the first eight or nine ribs by as many distinct digitations, and behind to the spinal edge of the scapula. The superior fibres are almost horizontal; the lower become gradually more and more oblique upward and backward. This muscle carries the scapula forward, and causes it to execute a movement of rotation, which directs its inferior angle forward and the anterior upward. When the shoulder is fixed it raises the ribs. **S. ma′jor,** serratus magnus. **S. ma′jor anti′cus,** serratus magnus. **S. pal′sy** or **paral′ysis,** palsy from lesion of the long thoracic nerve. **S. posti′cus infe′rior,** a broader and thinner muscle than the superior serratus, but nearly of the same shape. It is situated obliquely at the lower part of the back, extending from the spinous processes of the last two or three dorsal vertebræ and the first two or three lumbar to the inferior margin of the last four false ribs. This muscle depresses the ribs, and thus assists in expiration. It is an antagonist to the s. p. superior. **S. posti′cus supe′rior,** a flat, thin, quadrilateral muscle situated obliquely at the posterior inferior part of the neck and the superior part of the back. It passes from the posterior cervical ligament, from the spinous process of the last cervical vertebra, and from the spinous processes of the first two or three dorsal vertebræ to the second, third, fourth, and fifth ribs, into which it is inserted by as many digitations. It raises the ribs, and is consequently an inspiratory muscle.

**Serre-fine′.** A small spring forceps. It is formed of a wire of metal turned in the middle into two spirals, one in front of the other. This constitutes the spring. Each branch describes nearly the letter S, and one extremity forms the spiral, the other lays hold of the parts to be united.

**Serre-nœud,** sair-ne(r)′. One of various instruments employed by the surgeon for tightening a ligature around a pedunculated tumor or any part which has to be destroyed by ligature slowly and gradually.

**Serres's an′gle.** The metafacial angle, made by the pterygoid processes with the base of the cranium. **S.'s gland,** gingival gland.

**Ser′rulate** (*serrula*, small saw). Having a notched edge like a saw.

**Serto′li's cells** or **col′umns.** Rod-shaped nucleated masses bearing spermatoblasts in the testis.

**Ser′tula campa′na.** Trifolium melilotus.

**Se′rum.** The most watery portion of animal fluids, exhaled by serous membranes. It is a constituent part of blood, milk, etc. Also animal blood serum containing antitoxin, employed in the specific treatment of disease. **S. albu′min,** albumin of blood serum; **Antidiphtherit′ic s., antistreptococ′cus s., antitetan′ic s.,** etc., antitoxin for the treatment of diphtheria, streptococcal infection, tetanus, etc. **Artifi′cial s.,** decinormal salt solution with the addition of other salts and albumin to make it as near as possible of the composition of the blood plasma. **S. of the blood** is the liquid which separates from the blood when coagulated at rest; it is of a greenish-yellow color, viscid, slightly coagulable by heat, acids, and alcohol; it is composed of water, of sodium chloride, certain phosphates, and albumin, constantly united to soda, almost in a saponaceous combination; the fluid which exudes from the albumin of the serum of the blood when coagulated by heat is by some called *serosity*. **S. ca′sein,** serum globulin. **S. cerebrospina′le,** cerebrospinal fluid. **S. diagno′sis,** orrhodiagnosis. **S. fibrin′ogen,** proteid existing in blood serum in small amount; supposed to assist in the coagulation of the blood. **S. glob′ulin,** paraglobulin. **Inorgan′ic s.,** see *Trunecek*. **S. lac′tis** or **lac′teum,** serum of milk, whey; that part of milk from which the butter and caseous matter have been separated; it is a transparent, citrine-colored liquid containing sugar of milk, mucilage, acetic acid, phosphate of calcium, and some other saline substances; it is used as a slightly nutritious diluent and refrigerant. **S. lac′tis alumina′tum,** alum whey. **S. lac′tis dul′ce,** whey after neutralization of its free acid by an alkaline carbonate. **S. paste,** serum from ox-blood mixed with zinc oxide and sterilized at 70° C.; applied as a local paint. **S. pow′der,** serum from ox-blood mixed with zinc oxide and sterilized at 100° C.; used as a dusting-powder. **S. san′guinis,** serum of the blood. **S. of se′rous mem′branes,** water of dropsy, resembles the serum of the blood, especially in cases of hydrocele. The water of hydrothorax and ascites contains much less albumin—sometimes enough to coagulate on the application of heat; at others, not. **S. ther′apy,** whey cure; also the therapeutic treatment of disease, such as diphtheria and tetanus, by hypodermic injection of antitoxic serum from animals; orrhotherapy. **Trunec′ek's s.,** see *Trunecek*.

**Seru′mal.** Relating to or formed from serum. **S. cal′culus,** tartar deposited on the teeth from serum proceeding from disease of the gums.

**Serumu′ria.** Albuminuria.

**Ser′vice be′ing.** Amelanchia canadensis. **Moun′tain s.,** Sorbus aucuparia. **S. tree,** Sorbus domestica.

**Serviette′.** Napkin.

**Ses′ame.** Sesamum indicum; the oil is official in the Ph. U. S. and Br.; see *Oleum sesami*.

**Ses′amoid** (*sesamum* + *eidos*, resemblance). Resembling a grain of sesame. **S. bod′ies,** small fibrocartilages, developing in the tendons of the digits. **S. bones,** small bones situated in the substance of tendons near certain joints. Their number is various. Two are constantly met with beneath the metatarsophalangeal articulations of the great toe. Sometimes the articulations of other bones of the metatarsus with the phalanges of the toes have them likewise. In the hand there are two before the metacarpophalangeal joint of the thumb. At times they are met with in the other metacarpophalangeal articulations. Occasionally two exist behind the condyles of the femur, in the tendons of the gastrocnemii muscles. A considerable os sesamoideum is also met with in the tendon of the peronæus longus. These bones are commonly round, and flattened only on one surface, which is encrusted with cartilage. Their size is very variable, according to the joints in which they exist. Sesamoid bones in infants are replaced by small, cartilaginous concretions. Sesamoid bones are, like the patella (which is a true sesamoid bone), composed of much cellular substance, covered by a thin layer of compact tissue. The use of these bones is to allow the tendon to be inserted into the lever at a greater angle, and thus enable the power to act more advantageously. Two bony points sometimes met with—the one at the outer side of the carotid canal of the temporal bone, and the other at the edge of the cavernous sinus, at the side of the internal carotid artery—have also been called sesamoid bones. **S. car′tilages,** cartilages occurring in tendons under the same conditions as sesamoid bones. **S. car′tilages of the lar′ynx,** small nodules found in connection with the vocal cords. **S. car′tilages of the nose,** two small, cartilaginous plates situated between the alar and triangular cartilages.

**Ses′amum.** A genus of plants of the order *Pedalineæ*. **S. in′dicum,** native of East Indies; this herb is cultivated for its seeds, from which oil is obtained. **S. orienta′le,** benne, oily grain; seeds of this African plant, cultivated in the Southern United States, have been used by the negroes as an article of food; they yield a larger proportion of oil than any other vegetable; benne oil, the oil of the seed, is used in the Southern States as a laxative; the leaves, benne leaves, which are referred to Sesamum orientale and S. indicum, afford, by infusion, an excellent mucilage.

**Sesba′nia grandiflo′ra.** An Indian tree having a bark of astringent properties.

**Ses′eli.** Laserpitium siler. **S. ægopo′dium,** Ligusticum podagraria. **S. an′nuum,** S. tortuosum. **S. ca′rum,** carum. **S. car′vi,** carum. **S. cre′ticum,** Tordylium officinale. **S. fœniculifo′lium,** Sison ammi. **S. grave′olens,** Apium graveolens. **S. me′um,** Æthusa meum. **S. pa′tens,** S. tortuosum. **S. praten′se,** Peucedanum silaus. **S. tortuo′sum,** hartwort of Marseilles; seeds have a warm taste, and a greater degree of pungency than those of Laserpitium siler, which is the seseli of some of the pharmacopœias.

**Ses′elis.** Laserpitium siler.

**Sesqui-.** As a prefix, one and a half.

**Sesquiba′sic.** Referring to a salt containing three atoms of the base to two of the acid.

**Sesquiox′ide.** An oxide containing three atoms of oxygen to two of the base.

**Ses′sile** (*sedo*, to sit). Term applied to tumors having no pedicle.

**Se′ta equi′na** (*seta*, bristle, *equinus*, horse). Horsehair. Hairworm. Pale brown worm from 4 to 6 inches long, found in stagnant water and twisted into knots and contortions. It is common in the intestines of the Laplanders, causing the colica lapponica, in which the gripings are, at times, exceedingly severe.

**Seta′ceum** (*seta*, bristle). Seton.

**Seta′ria roccel′la.** Lichen roccella.

**Setch′enoff's cen′tres.** Nervous centres in the corpora quadrigemina and medulla oblongata which exert an inhibitory effect on the reflex powers of the cord.

**Set′fast.** A boil. See *Furunculus*.

**Seth′ia acumina′ta.** An Indian tree belonging to the *Lineæ*, the leaves of which have been used as a vermifuge.

**Se′ton.** A long strip of fine linen or cotton twist, passed through the skin and areolar tissues to keep up an issue, or through suppurating cavities, between the fragments of fractured bones, etc., to fulfil certain indications. The term is also applied to the issue so established. Setons are employed for the relief of obstinate ophthalmia, cephalalgia, epilepsy, thoracic and abdominal affections, etc., but are not as much used as formerly.

**Set′terwort.** Helleborus fœtidus.

**Set′ting.** Hardening of a pasty compound into a solid mass, as the setting of amalgams, cements, and plaster-of-Paris, in dentistry.

**Seutin's′ band′age.** Starch bandage.

**Sevadil′la.** Veratrum sabadilla.

**Seva′tio** (*sevum*). Steatoma.

**Sev′en barks.** Hydrangea arborescens.

**Sev′en-day disease′.** See *Trismus*. **S.-d. fe′ver,** relapsing or spirillum fever.

**Seventeen′-day fe′ver.** Relapsing or spirillum fever.

**Sev′enth nerve** or **pair.** The facial nerve; or the facial and auditory regarded as one nerve, with two parts—*portio dura*, facial, and *portio mollis*, auditory.

**Seville′ or′ange.** Bitter species of orange.

**Se′vum.** Suet, mutton suet, the prepared suet of ovis aries. Pinguedo. **S. bovi′num,** tallow made from the ox. **S. ce′ti,** cetaceum. **S. ovi′le,** tallow made from the sheep. **S. præpara′tum,** prepared suet; formed by cutting suet in pieces, melting over a slow fire, and straining through linen; its principal employment is in plasters. **S. verveci′num,** sevum.

**Sew′age.** Waste matters, human excrement, etc., such as is ordinarily removed by means of sewers.

**Sew′er.** Underground canal or pipe for conveying away foul water, etc., from houses. **S.-gas,** a combination of gases found in sewers; its composition varies according to the contents of the sewers and other conditions; sometimes it is highly toxic.

**Sew′erage.** Term applied to a system of sewers designed to carry away the filth of a community, or of pipes for carrying away the waste matters from the separate buildings.

**Sew′ing spasm.** Seamstresses' cramp.

**Sex.** The physical distinction between male and female in animals and vegetables.

**Sexdig′ital.** Possessing six fingers or toes.

**Sexiv′alent.** Sexvalent.

**Sex′tan fe′ver.** Malarial fever in which the paroxysm occurs every sixth day.

**Sextip′ara.** Pregnant for the sixth time.

**Sex′ual.** That which relates to the sex or which characterizes the sex. **S. act,** coition. **S. diseas′es,** diseases, such as syphilis and gonorrhœa, commonly acquired during the sexual act. **S. func′tions,** genital functions. **S. in′stinct, inver′sion of,** sexual desire for one of the same sex. **S. in′tercourse,** coition. **S. or′gans,** genital organs. **S. re′flex,** reflex action causing erection and ejaculation, produced by excitation of the genital organs.

**Sexual′ity.** The characteristic marks of either sex.

**Sex′us.** Sex.

**Sex′valent.** Capable of combining with or replacing six atoms of hydrogen.

**Shack′le.** Carpus.

**Shad′bush.** June-berry; Amelanchier canadensis.

**Shad′dock.** Fruit of Citrus decumana, called after the captain of a vessel who first took it to the West Indies from China.

**Shad′ow cor′puscle.** Wholly decolorized red corpuscle. **S. test,** see *Skiascopy* and *Retinoscopy*.

**Shaft of hair.** Portion of hair exterior to the skin.

**Shag′bark.** See *Hickory*.

**Shag′gy cho′rion.** Villous chorion.

**Shakes.** Chills and fever.

**Sha′king.** Vibrating; having a to-and-fro movement. **S. pal′sy,** paralysis agitans. **S. resuscita′tion,** see *Ogata*.

**Sham A′braham.** See Abraham man.

**Shampoo′ing.** Washing the scalp. Also massage of the body.

**Sham′rock.** Trefoil. **In′dian s.,** Trillium latifolium. **Wa′ter s.,** Menyanthes verna.

**Shank.** Part of leg between ankle and knee.

**Shan′ker.** Chancre.

**Shape.** Vulva.

**Share′bone.** Pubes.

**Shark oil.** Fixed oil obtained from the liver of several species of shark; has been employed in place of cod-liver oil.

**Sharp′ey's fi′bres.** Penetrating connective-tissue fibres which run from the periosteum into the substance of bones. **S.'s per′forating fi′bres,** calcified fibres penetrating the cortex of the cementum at right angles to its length.

**Shave-grass.** Equisetum hymenale.

**Shea-but′ter.** Galam butter.

**Shealkan′ta oil.** See *Argemone mexicana*.

**Sheath.** A membrane of tubular form enclosing or covering some other structure. **Arach′noid s.,** partition between sheath of pia mater and dorsal sheath of the optic nerve. **Cap′illary s.,** lymph channel around the capillaries. **Dent′inal s.,** see *Dentinal*. **Du′ral s.,** external covering of the optic nerve. **S. of Hen′le,** see *Huxley's layer*. **Hux′ley's s.,** see *Huxley*. **S. of op′tic nerve,** a continuation of the cerebral membranes upon the optic nerve; the dural and arachnoid coverings pass into the sclerotic, but the pia passes on into the choroid coat. **Lamel′lar s.,** see *Perineurium*. **Med′ullary s.,** myelin s. **My′elin s.,** semifluid matter around the axis-cylinder of medullated nerve-fibre. **Nerve s.,** perineurium. **Neu′mann's s.,** see *Dentinal*. **Neu′ral s.,** myelin s. **Perivas′cular s.,** capillary s. **Pi′al s.,** pia mater covering the optic nerve. **Prim′itive s.,** s. of Schwann. **S. of Schwann,** neurilemma. **Syno′vial s.,** bursa-like fold between tendons and neighboring bony points.

**Sheath-root of Hert′wig.** Epithelial covering of embryonic tooth-root.

**Shed′ding of the teeth.** See *Dentition*.

**Sheep ber′ry.** Viburnum lentigo. **S. lau′rel,** Kalmia angustifolia. **S. poi′son,** Kalmia latifolia. **S. pox,** a disease of sheep, analogous to cowpox. **S. sor′rel,** Rumex acetosella. **S. weed,** soap-root; saponaria officinalis.

**Shell flow′er.** Trillium latifolium.

**Shell′bark.** See *Hickory*.

**Shep′herd's club.** Ordinary mullein; Verbascum thapsus. **S.'s frac′ture,** fracture of external part of astragalus. **S.'s purse,** Thlaspi bursa. **S.'s sun′dial,** Anagallis arvensis.

**Sher′rington's law.** Peripheral branches of the spinal nerve-roots form anastomoses in such a way as to supply any given part of the integument with branches of three roots.

**Sher′ry.** A variety of wine from Xeres in Spain.

**Shield.** Anything protecting a part from injury. **Antither′mic s.,** device for preventing the cautery from destroying the tissues around the field of operation. **S. fern,** small plant of ord. *Filices*. **Wa′ter s.,** Nelumbium luteum.

**Shield′bone.** Scapula.

**Shiki′mi** or **Shiki′min.** Poisonous, crystalline substance in Illicium religiosum, a Japanese variety of star anise.

**Shi′ma-mu′shi.** A Japanese disease supposed to arise from the sting of an insect. The symptoms have some resemblance to those of syphilis, and the affection is marked by high fever.

**Shin.** The spine or anterior part of the tibia or leg.

**Shin′bone.** Tibia.

**Shin′gles** (*cingulum*, girdle). Herpes zoster.

**Shin′leaf.** Pyrola.

**Shin′lock.** Brassica eruca.

**Ship fe′ver.** Typhus fever.

**Shirt-stud ab′scess.** Form of abscess having a superficial cavity connected with a deeper one by a sinus.

**Shiv′ering.** Shaking, as from cold.

**Shock.** Sudden or instantaneous depression of organic, nervous, or vital power, often with more or less perturbation of body and mind, occasioned by a severe injury or profound emotion. When shock does not kill, recovery is usually accompanied by an exaltation of the vital processes above the normal, this condition being denominated the *reaction*. **Deferred′ s.,** s. supervening some time after the injury. **Erethis′mic s.,** s. attended with excitement, restlessness, and irritability. **Farad′ic** or **Farada′ic s.,** s. produced by galvanic electricity. **Sec′ondary s.,** that occurring after the primary shock has passed away. **Stat′ic s.,** s. produced by static electricity. **Tor′pid s.,** s. attended with prostration and inability to move.

**Shod′dy disease′** or **fe′ver.** A disease of shoddy workers, attended by fever, dyspnœa, dry throat, and violent headache.

**Shoe, Scar′pa's.** Shoe devised by Scarpa for rectifying the deviation in talipes varus.

**Shoe′makers' cramp.** A professional neurosis affecting shoemakers, analogous in its nature and causation to writers' cramp.

**Shore′weed.** Aralia spinosa.

**Short.** A word used by anatomists, in opposition to long, to distinguish parts from each other that have otherwise the same name. Short bones, for example, are those in which the three dimensions—length, breadth, and thickness—are nearly alike; such are the vertebræ, bones of the carpus, tarsus, etc. **S. car′damom,** short, nearly round variety of cardamom seed. **S. cir′cuit,** see *Circuit.* **S. com′missure,** commissura brevis. **S. pro′cess of in′cus,** roundish process of incus attached to the wall of the tympanum. **S. of puff,** short-winded. **S. ribs,** see *Costa.* **S. of wind,** out of breath; easily put out of breath; the cause may be cardiac or pulmonary disease, obesity, etc.

**Short-sight.** Myopia.

**Short-sight′ed.** Myopic.

**Short-sight′edness.** Myopia.

**Shot′bush.** Aralia spinosa.

**Shot′gun prescrip′tion.** A prescription containing many drugs of divers properties. **S. quar′antine,** prevention by mob force of traffic to or from districts in which an epidemic prevails.

**Shot′ted su′ture.** See *Suture.*

**Shoul′der.** Humerus. **S. blade,** scapula. **S. bone,** humerus. **S. gir′dle,** the bony ring formed by the two clavicles and the scapulæ. **S. joint,** scapulohumeral articulation.

**Show.** A slight discharge of blood, the beginning of a menstrual period or indicating commencing labor.

**Shrap′nel's mem′brane.** Membrana flaccida of the tympanic membrane.

**Shriv′el.** To shrink to the degree of wrinkling of the surface.

**Shrub.** A compound of spirits, lemon-juice, and sugar. **Sweet s.** or **Sweet-scent′ed s.,** calycanthus.

**Shrub′by tre′foil.** Ptelea trifoliata.

**Shrump′-shouldered.** Kyphotic.

**Shud′dering.** A peculiar sensation, felt either externally or internally, seeming to be the result of a spasmodic movement of the parts in which it occurs. A slight feeling of cold sometimes accompanies it.

**Shu′mac.** Rhus coriaria.

**Shut′tle-bone.** See *Scaphoid bone.*

**Siagantri′tis** (*siagon,* maxilla, *antron,* cavity). Inflammation of the lining membrane of the antrum of Highmore.

**Si′agon.** Maxillary bone.

**Siagonag′ra** (*siagon,* jaw, *agra,* seizure). Gouty or rheumatic affection of the joint of the lower jaw.

**Sial′achus** (*sialon,* saliva). Salivation.

**Sial′aden** (*sialon,* saliva, *aden,* gland). Salivary gland.

**Sialadeni′tis.** Inflammation of a salivary gland.

**Sialadenon′cus** (*onkos,* tumor). Tumor of a salivary gland.

**Sial′agogue** (*sialon,* saliva, *ago,* to drive). That which provokes the secretion of saliva. Sialagogues may be of two kinds—those acting through the circulation, and those acting immediately on the salivary organs.

**Sial′ic** or **Si′aline.** Relating to the saliva.

**Sialis′mus.** Salivation.

**Sialocinet′ic** or **Sialokinet′ic** (*sialon,* saliva, *kineo,* to move). Sialagogue.

**Sialodochi′tis** (*sialon,* saliva, *dochos,* containing). Inflammation of a salivary duct.

**Sial′ogogue.** Sialagogue.

**Si′aloid.** Of the nature of or resembling saliva.

**Si′alolith** (*lithos,* stone). Salivary calculus.

**Sialolithi′asis** (*sialon,* saliva, *lithos,* stone). The production of salivary calculi.

**Sialol′ogy** (*logos,* discourse). Treatise on saliva.

**Si′alon.** Saliva.

**Sialon′cus** (*onkos,* tumor). Tumor from obstruction of the salivary ducts, as by a calculus.

**Sialorrhœ′a** (*rheo,* to flow). Salivation, ptyalism.

**Sialoschesis,** si-al-os′kes-is (*schesis,* retention). Retention or suppression of the saliva.

**Sialosemeiol′ogy** (*sialon,* saliva, *semeion,* sign). Indication of disease furnished by changes in the salivary secretion.

**Sialosyr′inx** (*syrinx,* pipe). Salivary fistula.

**Sialoze′mia** (*zemia,* loss). Salivation.

**Sib′bens.** Name applied to a violent type of syphilis, especially marked by skin eruptions of great severity, which occurred in epidemic form in Scotland during the seventeenth and eighteenth centuries. Siwin is the Celtic name for raspberry, and the name sibbens is said to have been derived from it because of the fungoid eruption on the skin which resembled a raspberry.

**Sibe′rian plague.** Anthrax.

**Si′bi.** A Fiji name for elephantiasis or other extensive tumor of the leg.

**Sib′ilant** (*sibilo,* to hiss). Making a hissing or whistling sound. **S. râle,** see *Râle.*

**Sibilis′mus au′rium.** Tinnitus aurium.

**Sib′ilus.** Sibilant râle. **S. au′rium,** tinnitus aurium.

**Sib′son's aor′tic ves′tibule.** Space below aortic orifice in left ventricle for reception of semilunar valves during dilatation. **S.'s groove,** furrow caused by prominence of the inferior edge of the pectoralis major muscle. **S.'s notch,** curvation inward of the upper left border of dulness in the precordial region in effusion from acute pericarditis.

**Sic′cant.** Drying.

**Sicca′tion.** The act of drying.

**Sic′cative.** Drying.

**Siccha′sia** (Gr., loathing). Nausea or disgust for food, such as is experienced by pregnant women.

**Sick.** Diseased, ill, ailing, laboring under disease, not well; nauseated. **S. gid′diness,** a condition resembling both sick headache and epilepsy. **S. head′ache,** migraine; headache accompanied with nausea. **S. stom′ach,** nausea.

**Sick′le-weed.** Smartweed.

**Sick′lewort.** Brunella vulgaris; astringent shrub.

**Sick′ly.** In feeble health; ailing.

**Sick′ness.** Disease, illness, nausea. See *Sick.* **Af′rican s.,** sleeping s. **Bad s. of Cey′lon,** beriberi. **Car s.,** nausea, headache, and vertigo in varying degrees, caused by railway travel; analogous to seasickness. **Fall′ing s.,** epilepsy. **Green s.,** chlorosis. **Milk s.,** see *Milk.* **Month′ly s.,** menstruation. **Morn′ing s.,** nausea of pregnancy. **Moun′tain s.,** puna. **S. rate,** ratio of sickness to the population in any locality. **Riv′er s.,** milk sickness. **Sea s.,** nausea marina. **Sleep′ing s.,** see *African lethargy.* **S. of the stom′ach,** nausea, vomiting. **Swamp s.,** milk sickness. **Sweat′ing s.,** miliary fever.

**Sic′ua.** Cupping-glass.

**Sicye′don.** Cauledon.

**Sicyos,** sis′i-os. Cucumis sativus.

**Si′da.** Genus of plants belonging to ord. *Malvaceæ.* **S. abu′tilon,** Abutilon avicennæ. **S. retu′sa,** East Indian plant, used in rheumatism and consumption and as a sudorific. The leaves are used externally as poultices for snake-bites and the stings of venomous insects. **S. spino′sa,** indigenous to the tropics, but growing in the United States. Possesses demulcent properties.

**Sid′dons fe′ver.** A low fever which prevailed in Edinburgh in the latter part of the eighteenth century, supposed to be due to the crowding together of persons to see the great actress Mrs. Siddons; a similar fever occurring during the performances of Garrick was called Garrick fever.

**Side.** In medicine, a lateral half of the body; the part of the surface of any body between the front and the back. **S. bone,** ilium; one of the lateral cartilages of the horse, after completion of ossification. **S. chain,** see *Chain.*

**Sidera′tion** (*sidus,* star). The state of one struck suddenly and without apparent cause, and as if by the influence of the stars or planets—planet-struck. The ancients comprised under this name different morbid conditions, as paralysis, apoplexy, gangrene, asphyxia, and phrenitis.

**Sideri′tes** (*sideros*). Magnet; Teucrium chamæpitys.

**Siderodromopho′bia** (*sideros*, iron, *dromos*, course, *phobos*, fear). A morbid dread of railways or of travelling on them.

**Sid′erophone** (*sideros*, iron, *phone*, sound). An instrument, constructed of magnets with a telephonic attachment, in which a current of electricity is excited, producing a sound, when in proximity to iron; used to detect metallic foreign bodies in the eye or other tissues.

**Sid′eroscope** (*sideros*, iron, *skopeo*, to see). A sensitive magnet suspended by a silk thread, which is deflected when brought near the eye in which a piece of steel or iron is embedded.

**Sidero′sis** (*sideros*, iron). A pulmonary disease resulting from the inhalation of iron-dust, analogous to anthracosis resulting from inhalation of coal-dust. Discoloration of various internal organs from the influence of iron in the pigmentary deposit. Excess of iron in the blood.

**Sid′erous.** Containing iron.

**Siderox′ylon.** Chrysophyllum cainito.

**Side′saddle plant.** Sarracenia.

**Siegesbeck′ia orienta′lis.** A small composite plant growing in hot climates. It has been used as an alterative, and also as a sudorific, and as an external application to various forms of ulceration.

**Sie′gle's o′toscope** or **spec′ulum.** See *Otoscope*.

**Siem′erling's nu′cleus.** A nucleus of anterior group of oculomotor nuclei in gray nervous matter below the aqueduct of Sylvius.

**Sier′ra Leone′ fe′ver.** Pernicious malarial fever prevalent in that country. **S. sal′via,** Artemisia frigida.

**Sieur's sign.** Clear sound heard on posterior auscultation when the chest is percussed in front, in cases of pleuritic effusion.

**Sieve.** An instrument for separating the finer from the coarser particles of a loose mass by shaking the former through holes in a diaphragm or through a network of horse-hair, thread, or wire.

**Sigaultian** (se-go′shyan) **opera′tion** or **sec′tion** (after Dr. J. R. Sigault, a French physician). Symphyseotomy.

**Sigh.** Suspirium.

**Sight.** Vision. **S. askew′,** vision accurate only when the object is placed obliquely. **Day s.,** nyctalopia; night-blindness. **False s.,** metamorphopsia; pseudoblepsia. **Far s.,** hypermetropia. **Fee′bleness of s.,** amblyopia. **Long s.,** hypermetropia. **Near s.,** myopia. **Night s.,** hemeralopia; day-blindness. **Old s.,** presbyopia. **Short s.,** myopia.

**Sight′less.** Blind.

**Sigilla′tion** (*sigillum*, seal). Mark of a cicatrix.

**Sigil′lum salamo′nis.** Convallaria polygonatum. **S. virginita′tis,** hymen.

**Sig′matism.** Condition of speech in which the pronunciation of the letter *s* is defective or deficient.

**Sig′matoid.** Sigmoid.

**Sig′moid** (*eidos*, resemblance). Having the form of the Greek sigma, Σ, or of C, an old form of sigma. **S. ar′tery,** branch of inferior mesenteric, supplying the sigmoid flexure of the colon. **S. car′tilages,** semilunar cartilages. **S. cath′eter,** an S-shaped female catheter. **S. cav′ities of the fos′sæ of the ul′na,** sinus lunati; two notches at the upper part of that bone—one for the reception of the humerus, the other for that of the radius. The articular surface on the inner side of the lower end of the radius is also termed *sigmoid cavity*. **S. flex′ure of the co′lon** is a turn the colon takes immediately before terminating in the rectum; see *Colon*. **S. folds,** those caused by circular muscular fibres of the colon. **S. fos′sa** (of the temporal bone), fossa sigmóidea. **S. mesoco′lon,** see *Mesocolon*. **S. semilu′nar valves** are three valvular folds at the commencement of the pulmonary artery and aorta. These valves have the form of a crescent when applied against the parietes of the vessel. When the blood is sent from the ventricles by their contraction the valves are applied against the sides of the vessel, but during the diastole of the ventricle they are depressed and prevent the blood from returning to the heart. At the middle of the convexity of each valve is a small, hard, triangular granulum, called corpusculum or globulus Arantii, which completely closes up the passage. It is also called corpusculum Morgagnii and c. sesamoideum. **S. si′nus,** portion of lateral sinus between tentorium and jugular vein. **S. val′ves,** semilunar valves of the heart.

**Sigmoidi′tis.** Inflammation of the sigmoid flexure.

**Sigmoi′doproctos′tomy.** Operation of connecting the sigmoid flexure with another part of the rectum.

**Sigmoidos′copy** (*skopeo*, to see). Examination of the interior of the sigmoid flexure by means of an instrument called the *sigmoidoscope*.

**Sigmoidos′tomy** (*stoma*, mouth). Left inguinal colostomy.

**Sign.** Any present or past circumstance afforded by the examination of a patient, or of matters concerning him, whence a conclusion may be drawn regarding the nature and seat of his disease. The phenomena preceding the disease are called anamnestic or commemorative signs; those which accompany it are termed diagnostic if they reveal the nature or seat of the disease; prognostic when they indicate its probable duration and termination. **Abadie's′ s., Baccel′li's s., Drum′mond's s.,** etc., see the proper names. See also *Symptom*. **Palmo-plan′tar s.,** yellowish pigmentation of parts of the palms and soles in typhoid fever. **Stairs s.,** difficulty in going down stairs, early symptom of locomotor ataxia.

**Sig′na.** In prescriptions signa or S., its symbol, means mark, being the directions to the patient to be placed on the label. **S. assiden′tia,** accompanying, concomitant, or accessory symptoms.

**Sig′nal symp′tom.** A symptom, such as pain, tingling, or unusual motion, that gives warning of some commencing lesion, as of the great nervous centres.

**Sig′nature** (*signum*, sign). Term applied in the Eastern countries, in the Middle Ages, to mystic characters of good or bad augury, with which it was pretended that every one was marked by the star under which he was born. Signatures of plants meant certain peculiarities in their external formation or color, showing that they were adapted for particular diseases; for example, the shape of the leaf in liverwort indicating the use of the plant in hepatic disorders. The part of a prescription containing the directions as to dose and manner of use of the mixture.

**Sig′num.** Sign.

**Sikeranine′.** Hyoscine.

**Sikimine′.** Poisonous principle contained in fruit of Illicium religiosum.

**Sile′ne crassifo′lia.** Cucubalus behen. **S. infla′ta,** Cucubalus behen. **S. pennsylva′nica,** see *Silene virginica*. **S. tho′rei,** Cucubalus behen. **S. virgin′ica,** ground pink, wild pink, catchfly; ord. *Caryophyllaceæ*. The root has been employed in decoction as an efficacious anthelmintic. *Silene pennsylvanica* probably has the same properties.

**Si′ler lancifo′lium.** Laserpitium siler. **S. monta′num,** Laserpitium siler.

**Si′lex.** Quartz. Oxide of silicon, $SiO_2$. **Liq′uid s.,** liquid glass; sodium silicate, $Na_2SiO_3$.

**Si′lex's sign** or **symp′tom.** Furrows about the mouth and face in congenital syphilis.

**Sil′ica.** $SiO_2$. Dioxide of silicon, occurring in nature in nearly all kinds of rock and minerals. It has been improperly used as a dentifrice.

**Sil′icate.** Any salt formed by silicic acid.

**Silicic** (sil-is′ik) **acid.** $H_2SiO_3$. This acid is known only in its combinations and has not been obtained pure.

**Silicious,** sil-ish′us. Resembling or containing silica.

**Silicoflu′oride.** Combination of silicon and another base with fluorine.

**Sil′icon.** Symbol, Si. An element existing in nature in the form of silica and the silicates. It does not exist in the free state.

**Silico′sis.** A pulmonary affection of stonecutters and grinders, analogous to siderosis and anthracosis.

**Sil′iqua.** The carat; a weight of about four grains. A pod; any anatomical formation enclosing another like a pea-pod. **S. arab′ica,** tamarindus. **S. ar′aci aromat′ica,** see *Vanilla*. **S. dul′cis,** Ceratonium siliqua. **S. oli′væ,** the nerve-fibres covering the olivary body on either side; see *Funiculus siliquæ*.

**Siliquas′trum plin′ii.** Capsicum annuum.

**Silk.** Sericum. **S. grass,** Yucca filamentosa. **S. weed,** Asclepias sullivantii, Asclepias tuberosa. **Com′mon s. w.,** Asclepias syriaca. **Flesh-colored s. w.,** Asclepias incarnata. **Swamp s. w.,** Asclepias incarnata. **S. worm,** see *Sericum*.

**Silk′worm gut.** Fibre drawn out from the body of the silkworm killed just as it is ready to spin its cocoon; sometimes used as a substitute for catgut.

**Sil′lus** or **Si′lo** (*sillos*). One who has a short, stumpy nose.

**Sil′phium.** Laserpitium. **S. lacinia′tum,** rosinweed, compass plant, polar plant, **S. perfolia′tum,** cup plant, turpentine sunflower, and **S. terebinthina′ceum,** prairie burdock, ord. *Compositæ*, indigenous in Ohio and Michigan, yield a fragrant gum which is esteemed stimulant and antispasmodic.

**Silphologic,** sil-fo-loj′ic. Term applied to diseases the symptoms of which are masked by other symptoms. Larval.

**Silu′rus glan′is.** See *Ichthyocolla*.

**Sil′ver.** Argentum. **S. albu′minate,** see *Protargol*. **S. ca′seate,** see *Argonin*. **S. cit′rate,** antiseptic externally for wounds in ointment or solution. **S. fir,** Abies pectinata. **S. flu′oride,** tachiol, antiseptic and caustic. **S. i′odate,** used externally as an application to mucous surfaces; internally, as an astringent to the intestine; dose, gr. $\frac{1}{6}$–$\frac{1}{2}$ (0.01–0.032). **S. lac′tate,** actol; white, soluble powder; surgical antiseptic and bactericide. **S. leaf,** Magnolia macrophylla. **S. ni′trate,** argenti nitras. **Sol′uble s.,** collargolum; allotropic form of silver; germicide; used by inunction, hypodermically, and internally; dose, gr. $\frac{1}{6}$ (0.01). **S. stain,** argyria. **S. sulphocar′bolate,** antiseptic; used in ophthalmic practice and also in general surgery; said to be non-corrosive. **S. trinitrophe′nolate,** antiseptic salt, picratol. **S. vitelline′,** argyrol, a very soluble proteid salt of silver, employed as an antiseptic in diseases of mucous membranes. **S. wat′tle,** Acacia dealbata, native of Australia; it is one of the species furnishing Australian gum. **S. weed,** a small herb, Potentilla anserina.

**Sil′ver-fork deform′ity.** A peculiar deformity of the wrist, resembling a fork, characteristic of Colles's fracture of the lower extremity of the radius, called also *s.-f. frac′ture*.

**Silves′ter's meth′od of restor′ing suspend′ed anima′tion.** This consists in placing the patient on the back, pulling the tongue forward; then drawing the arms slowly over the head, by which means the ribs are elevated by the pectoral muscles and the chest is enlarged. The arms are now brought down to the side of the chest, which must be compressed slightly. These movements must be repeated so as to stimulate respiration. See *Drowning, resuscitation from*.

**Sil′ybum.** Carduus marianus.

**Sima′ba.** A plant of the genus *Simarubæ*. **S. ce′dron,** a South American tree, the seeds of which—cedron seeds—have been used as an antidote for snake-bites, in mental diseases, and in epilepsy. The scrapings of the wood have been used as a substitute for sulphate of quinine. **S. ferrugin′ea,** similar in properties to S. cedron; native of Brazil. **S. quassioi′des,** Nima quassioides.

**Simarou′ba** or **Simaru′ba.** Quassia simarouba. **S. ama′ra,** S. officinalis. **S. excel′sa,** see *Quassia*. **S. glau′ca,** S. medicinalis. **S. guianen′sis,** S. officinalis. **S. medicina′lis,** native of Florida, Central America, and West India Islands. **S. officina′lis,** a tropical tree, Quassia simarouba.

**Simila′tio** (*similis*, like). Assimilation.

**Simil′ia simil′ibus curan′tur** (like are cured by like). See *Homœopathy*.

**Simil′imum** (Lat., most like). A homœopathic term indicating the best remedy for any given disease; that is, the remedy which in the "proving" causes symptoms most nearly resembling those of the disease in question.

**Si′mo** (*simos*, snub-nosed). One who has a short, stumpy nose.

**Si′mon's opera′tion.** An operation for repair of complete rupture of the perineum by means of sutures, the mucous membrane of the rectum being first approximated by a line of sutures tied in the rectum, following which the external sutures are inserted and the parts brought together. **S.'s pos′ture,** position in which the patient lies on the back, with the legs and thighs flexed, the hips raised, and the thighs drawn apart. **S.'s sign** or **symp′tom,** in tuberculous meningitis, the umbilicus is fixed or retracted during inspiration. **S.'s tri′angles**: 1. Abdominocrural or femoral triangle. 2. Brachial triangle; the former is made up of the lower portion of the abdomen, inner part of thigh, and the inguinal region; the latter is made up of axillary and pectoral regions and the inner surface of the arm.

**Simonart's′ bands** or **threads.** Amniotic bands made by adhesions between fœtus and amnion.

**Simo′nea folliculo′rum.** Acarus folliculorum.

**Simotrache′lus** (*simos*, snub-nosed, *trachelos*, neck). Morbid shortness or stiffness of the neck.

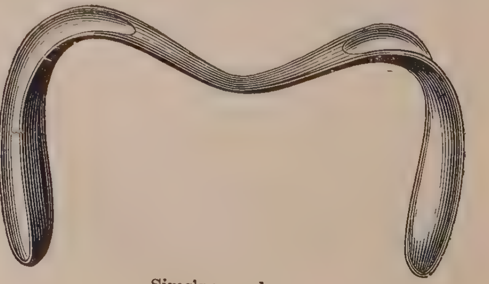
**Sim′ple.** Uncompounded, plain, not complex. A medicinal herb. **S. ce′rate,** ceratum (Ph. U. S.). **S. chol′era,** sporadic cases of the disease. **S. contin′ued fe′ver,** a continuous fever, presenting no obvious lesion nor the characteristic temperature curve of any other disease. **S. elix′ir,** elixir aurantii. **S. oint′ment,** unguentum (Ph. U. S.). **S. syr′up,** syrupus (Ph. U. S.). **S. tis′sues,** term applied to tissues all the cells of which are alike in morphological structure.

**Sim′pler** or **Sim′plist.** One who culls simples; an herb doctor.

**Sim′pler's joy.** Verbena hastata.

**Simp′son's opera′tion.** Division of cervix uteri on both sides. **S.'s trac′tor,** device furnished with india-rubber cup with attached pump; this is applied to the fetal head, the air is exhausted, and then delivery is assisted by traction.

**Sims's depress′or.** Coarse wire loop for depressing the anterior wall of the vagina during examinations. **S.'s feed′er,** instrument devised by Sims to aid in passing sutures obliquely through tissues; especially useful in operations about the mucus-lined cavities of the body. **S.'s posi′tion** or **pos′ture,** the patient lies upon the side and chest, with the arm next to the table drawn behind the patient, and the knees drawn up, thus facilitating examination of the vagina or rectum. **S.'s shield,** instrument having a semicircular piece at its extremity; used to facilitate introduction and fastening of wire sutures. **S.'s spec′ulum,** a form of vaginal speculum, also called



Sims's speculum.

duck-bill speculum from the shape of the blades; it consists of two blades at right angles to either end of a fixed piece, thus enabling one to be used as a handle while the other exposes the vaginal wall.

**Sim′ulated diseas′es.** Feigned diseases.

**Simula′tion** (*simulo*, to feign). Feigning of disease; malingering.

**Sim′ulo.** Capparis coriacea, a species of hyssop.

**Si′mus** (*simos*). Snub-nosed

**Si′na levan′tica.** Artemisia santonica.

**Sinalbin′.** Crystalline principle obtained from seeds of Sinapis alba: $C_{30}H_{44}N_2S_2O_{16}$.

**Sinapelæ′on** (*sinapis*, mustard, *elaion*, oil). Oil impregnated with mustard.

**Sinapine′.** An alkaloid from Sinapis alba; obtained by the decomposition of sinalbin; decomposable into sinkalin and sinapic acid.

**Sina′pis.** Mustard, ord. *Cruciferæ*. **S. al′ba** (Ph. U. S. and Br), white mustard, the seeds of Brassica alba; they are somewhat less pungent than those of black; the distilled oil, *oleum sinapis*, is a powerful stimulant and rubefacient. The condiment known as mustard is the powder obtained from the seeds of black and white mustard. **S. arven′sis,** charlock, wild mustard, garlock, chadlock, runsh; the seeds are sometimes substituted for black mustard. **S. cer′nua,** sinapis. **S. eru′ca,** Brassica eruca. **S. folio′sa,** S. alba. **S. in′dica,** Indian mustard. **S. jun′cea,** species growing in India and the southern part of Russia; Russian mustard or sarepta. **S. ni′gra** (Ph. U. S. and Br.), black mustard, the seeds of Brassica nigra; they are inodorous when entire; when bruised the odor is very pungent; taste bitterish and acrid; they yield their virtues to water, and afford a bland oil by expression; the seeds are stimulant, diuretic, emetic, and rubefacient; they are sometimes recommended to be swallowed whole in dyspepsia, torpor of the bowels, etc.; externally, they are applied in the form of cataplasm. **S. oliveria′na,** sinapis. **S. tamoria′na,** S. arvensis. **S. tubero′sa,** Brassica rapa.

**Sin′apism** (*sinapis*, mustard). A cataplasm of which mustard forms the basis, being used for exciting redness and as a counterirritant. It is prepared by moistening flour of mustard with vinegar or water to the due consistence. Sinapized paper, *char′ta sina′pis* (Ph. U. S. and Br.), is an efficient and cleanly substitute for the extemporaneous mustard plaster.

**Sin′apized.** Containing or impregnated with mustard. **S. pa′per,** charta sinapis.

**Sincip′ital.** Relating to the sinciput. **S. an′gle,** angle made by the facial line at its intersection with a line drawn from the root of the nose to the middle point of the spheno-occipital suture of the skull. **S. bone,** parietal bone.

**Sin′ciput** (*semi*, half, *caput*, head). Some use this word synonymously with vertex; by others it is applied to the frontal region or forepart or forehalf of the cranium, as opposed to occiput.

**Sin′de boil.** An endemic form of ulcer occurring chiefly in hot countries. It is probably the same as Delhi boil or Aleppo evil.

**Sinew,** sin′yu. Tendon or ligament.

**Sing′ers′ node** or **nod′ule.** Localized tumefaction between the arytenoid cartilages, met with in singers.

**Singulta′tion.** The act of hiccuping.

**Singul′tous.** Relating to or affected with hiccup.

**Singul′tus.** Hiccough or hiccup. A noise made by the sudden and involuntary contraction of the diaphragm, and the simultaneous contraction of the glottis arresting the air in the trachea; it is a symptom of many morbid conditions, but occurs frequently in persons otherwise in good health. Also a sob.

**Sinigrin′.** Substance allied to sinalbin found in seeds of Sinapis nigra; chemically it is a myronate of potassium, $C_{10}H_{18}NS_2KO_{10}$.

**Sinis′trad** (*sinister*, left). Toward the left

**Sinis′tral as′pect.** See *Mesial.*

**Sinistrin′.** Gummy substance derived from squill.

**Sinkalin′.** Base from mustard, having the same chemical composition as cholin.

**Sink′ing.** Depression of the vital forces.

**Sinui′tis.** Sinusitis.

**Sinuos′ity.** Tortuousness. Also a sinus.

**Sin′uous.** Tortuous, winding, serpentine.

**Si′nus.** Any cavity the interior of which is more expanded than the entrance. In this sense anatomists have applied the term to cavities in certain bones of the head and face. It has been applied to certain venous canals into which a number of vessels empty themselves, such as the sinuses of the dura mater and of the spine, the sinus of the vena porta, uterine sinuses, etc.; also to the bosom and the vulva. In surgery it means a long, narrow, hollow tract leading from an abscess, diseased bone, etc. **Acces′sory s.,** one of the cavities in the bones of the face opening into the nasal cavities; they are the frontal, sphenoidal, maxillary, and ethmoid. **S. acus′ticus,** internal auditory canal. **Air s.,** a bone cavity communicating with the external air, such as the frontal sinuses. **S. a′læ par′væ,** s. sphenoparietalis. **S. ampulla′ceus,** dilatation at one end of the semicircular canals of the ear. **S. anterio′ris,** lateral ventricle of the brain. **S. aor′ticus,** sinus of Valsalva. **S. arachnoida′lis,** expansions of subarachnoid spaces. **S. arterio′sus,** s. pulmonalis. **S. art′lii,** recessus sacci lacrymalis. **S. atlan′tis,** notch upon upper surface of atlas. **Bas′ilar s.,** sinus transversus. **S. basila′ris poste′rior,** s. occipitalis. **S. of the bulb,** enlarged portion of the urethra at the position of the bulb. **S. cana′lis vertebra′lis,** one of the veins of the spinal canal. **S. carot′icus veno′sus,** prolongation of cavernous sinus within carotid canal. **S. caverno′sus,** cavernous sinus. **S. caverno′sus u′teri,** sinus uterinus. **S. ca′vi cra′nii,** sinus duræ matris. **S. cer′ebri,** one of the ventricles of the brain. **S. cervica′lis,** sulcus of embryo appearing about the fourth week, and caused by the difference in development of the branchial arches. **Cir′cular s. of Rid′ley,** sinus coronarius. **S. circula′ris,** s. coronarius. **S. circula′ris foram′inis mag′ni,** sinus partially surrounding foramen magnum, formed by confluence of the two marginal sinuses. **S. circula′ris foram′inis occipita′lis,** s. circularis foraminis magni. **S. circula′ris infe′rior,** inferior intercavernous sinus. **S. circula′ris i′ridis,** canal of Schlemm; a minute canal between the sclerotic coat of the eye and the ciliary ligament. **S. coch′leæ,** vein passing through aquæductus cochleæ from cochlea, emptying into internal jugular vein. **S. colum′næ vertebra′lis,** anterior spinal vein. **S. commu′nis,** see *Semicircular canals.* **S. commu′nis vena′rum cardi′acum,** coronary venous s. **S. condylo′rum ante′rior,** fossa of the patella. **S. corona′rius,** circular sinus of Ridley, coronary sinus; a venous canal surrounding, in a more or less regular manner, the pituitary fossa and gland, emptying itself into the corresponding cavernous sinus by each of its extremities. **Cor′onary s.,** sinus coronarius. **C. ve′nous s.,** coronary sinus of the heart; a name given, on account of its great size, to that portion of the great coronary vein embracing the left auriculoventricular furrow. **S. coronoide′us,** s. circularis. **S. costa′lis,** a facet for reception of the costal cartilage upon the side of the sternum. **S. cox′æ,** see *Cotyloid.* **S. dex′ter cor′dis,** right auricle of the heart; see *Auricula.* **S. duc′tum lactifero′rum,** ampulla of a duct of the mammary gland. **S. du′ræ ma′tris,** sinus formed by a separation of the layers of the dura mater acting as a substitute for the outer coat of the vein; there are four great sinuses, of which all the others seem to be dependencies—the two lateral sinuses, the straight sinus, and the longitudinal sinus; belonging to the lateral sinuses are the petrous sinuses, superior and inferior; transverse sinus, cavernous sinus, coronary sinus, and occipital sinuses; to the straight sinus belongs the inferior longitudinal sinus; the longitudinal sinus, properly so called, has no sinus under its dependence. **S. ellip′ticus,** s. circularis. **S. epididym′idis,** furrow between the testis and epididymis. **S. falcifor′mis infe′rior,** see *Sinus, longitudinal.* **S. falcifor′mis supe′rior,** see *Sinus, longitudinal.* **S. fos′sæ basila′ris,** transverse sinus. **Fourth s.,** torcular Herophili. **S. fronta′lis,** frontal sinus. **S. ge′næ pituita′rius,** antrum of Highmore. **S. genita′lis,** an embryonic cavity, formed by the union of the Wolffian and Müllerian ducts, which develops in females into the vagina and uterus, while in males it becomes the prostatic vesicle. **Infe′rior longitu′dinal s.,** venous sinus along posterior half of lower border of falx cerebri. **S. intercaverno′sus,** s. circularis. **S. of the ju′gular vein,** see *Jugular veins.* **S. of kid′ney,** prolongation of hilum of kidney inward. **S. lacryma′lis,** lacrymal sac. **S. lactif′erus,** see *Lactiferous vessels.* **S. lactif′erus secunda′rius,** ampulla of mammary duct without the areola. **S. laryn′gis,** ventricle of the larynx. **S. latera′lis,** lateral sinus of the dura mater, beginning at the torcular Herophili and terminating at the sinus of the jugular vein on either side. **S. l. pharyn′gis,** pyramidal s. **S. latera′lis si′nus superio′ris,** lacuna surrounding a Pacchionian body. **Longitu′dinal s.,** two in number: 1. *Superior longitudinal sinus,* long, triangular canal occupying the whole of the upper edge of the falx cerebri; broad behind, and much narrower before, where it commences by a *cul-de-sac* at the crista galli of the ethmoid bone; it passes along the front or coronal crest, sagittal suture, and the vertical groove of the occipital bone; receives several veins from the dura mater, and those spreading over the surfaces of the two hemispheres of the brain; and empties into the upper part of the torcular Herophili. 2. *Inferior longitudinal sinus* is much narrower than the last; it occupies the inferior edge of the falx cerebri from its anterior third to the tentorium cerebelli, where it ends commonly by two branches in the straight sinus. **S. luna′tus,** lesser sigmoid cavity of ulna, articulating with head of radius. **S. luna′tus ra′dii,** sigmoid cavity of radius articulating with lower extremity of ulna. **Lymph s.,** see *Lymph.* **S. mag′nus,** lateral sinus. **S. Mai′eri** or **of Mai′er,** diverticulum of the lacrymal sac. **S. margina′lis,** marginal sinus. **Mas′toid s.,** the mastoid cells collectively. **Max′illary s.,** antrum of Highmore. **S. max′imus,** olecranon fossa. **S. max′imus aor′tæ,** sinus of aorta. **Me′dian s.,** see *Semicircular canals.* **S. mediastinocosta′lis,** union of mediastinal and costal portions of pleural sac. **S. Morgag′nii,** ventricle of the larynx. **S. muco′sus,** see *Urethra.* **S. mulie′bris,** vagina. **S. obli′quus,** s. rectus. **Occip′ital s.,** these sinuses commence at the sides of the foramen magnum of the occipital bone, and ascend—becoming broader and nearer each other—into the substance of the falx cerebelli, where they frequently unite. Each opens into the inferior part of the torcular Herophili. They receive the veins of the falx cerebelli, of the dura mater lining the fossæ cerebelli, and of the posterior part of the cerebellum. Haller and Sömmering have named them *posterior occipital sinuses,* to distinguish them from the transverse sinus, which they have called *anterior occipital sinus.* **S. occipita′lis ante′rior,** sinus transversus. **Ophthal′mic s.,** see *Cavernous sinus.* **S. ophthalmopetro′sus,** occasional communication between ophthalmic vein and superior petrosal sinus. **S. ova′tus,** see *Crista vestibuli.* **S. pericardiacocosta′lis,** left s. mediastinocostalis. **S. perpendicula′ris,** s. quartus. **S. pe′tro-occipita′lis infe′rior,** name suggested for veins occupying petro-occipital suture outside the cranium; it connects the inferior petrosal with the cavernous sinus. **Petro′sal s.,** see *Petrous.* **S. petrososquamo′sus,** groove at times observed along the petrosquamous suture within the skull. **S. petro′sus infe′rior,** inferior petrosal sinus. **S. petro′sus me′dius,** an occasional communication between the superior and inferior petrosal sinuses. **S. petro′sus profun′dis,** inferior petrosal sinus. **S. petro′sus supe′rior,** superior petrosal sinus. **S. phlebi′tis,** inflammation of a cranial sinus. **S. phrenicocosta′lis,** the furrow of the pleural sac formed by junction of its costal and diaphragmatic portions. **S. phrenicomediastina′lis,** furrow formed by junction of diaphragmatic and mediastinal portions of the pleural sac. **Piloni′dal s.,** see *Pilonidal.* **S. pituita′rius fron′tis,** frontal sinus. **Placen′tal s.,** see *Placenta.* **S. pleu′ræ,** s. pericardiacocostalis, s. mediastinocostalis, s. phrenicocostalis, s. phrenicomediastinalis. **S. pocula′ris,** see *Ejaculatory ducts.* **S. polymor′phus,** cavernous sinus. **S. porta′rum,** see *Liver* and *Porta vena.* **S. præcervica′lis,** sac of embryo, due to invagination of posterior branchial arches; also s. cervicalis. **S. prostat′icus,** see *Ejaculatory ducts.* **S. puden′di,** vagina. **S. pudo′ris,** vagina; vulva. **S. pulmona′lis,** sinus of Valsalva; also left auricle of the heart; see *Auricula.* **S. of the pul′monary veins,** left auricle. **Pyram′idal** or **pyr′iform s.,** a pyramidal space—the laryngopharyngeal or lateral pharyngeal sulcus, sinus, or fossa—continuous with the pharynx and sloping down to the entrance of the œsophagus. **S. pyrifor′mis,** pyramidal s. **S. quar′tus,** straight sinus; this sinus—triangular throughout, wide posteriorly, narrower anteriorly, slightly oblique downward and backward—passes along the base of the falx cerebri from the termination of the inferior longitudinal sinus to the torcular Herophili; it receives the inferior longitudinal sinus, the veins of the lateral ventricles or vena Galeni, the superior cerebellar veins, etc. **S. quar′tus aor′tæ,** sinus of aorta. **S. rec′tus,** straight sinus. **S. re′num,** pelvis of the kidney. **S. reu′niens,** large venous cavity of embryo formed by union of veins just before they pass into the heart. **S. rhomboide′us,** see *Ventricles of the brain.* **S. Rid′leyi,** s. circularis. **S. rotun′dus,** see *Crista vestibuli.* **S. sagitta′lis,** s. longitudinalis. **S. of Santori′ni,** bulbus vestibuli and cavernous body of the vagina. **S. Schlem′mii,** ciliary canal. **S. semiova′lis,** see *Crista vestibuli.* **S. of the sep′tum lu′cidum,** fifth ventricle. **S. sigmoide′us,** s. lateralis. **S. sin′ister cor′dis,** s. pulmonalis. **S. sphenoida′lis,** cavernous sinus; see *Sphenoid bone.* **S. sphenoparieta′lis,** sphenoparietal sinus. **S. squamosopetro′sus,** s. petrososquamosus. **Straight s.,** s. quartus. **S. subarachnoidea′lis,** one of the subarachnoid venous pathways. **S. sulcifor′mis,** see *Crista vestibuli.* **S. sulcifor′mis Morgag′nii,** internal opening of the aquæductus vestibuli. **S. supercilia′ris,** frontal sinus. **Supe′rior s.,** crus commune. **S. tar′si,** open groove between astragalus and calcaneum at entrance to tarsal canal. **S. tento′rii,** s. rectus. **S. tento′rii me′dius,** s. rectus. **S. tento′rii poste′rior,** s. sigmoideus. **S. termina′lis,** circulus venosus. **S. thrombo′sis,** thrombosis of a cranial sinus; a sequel or coincident symptom of chronic otitis media, with fever, pain, and other severe constitutional local symptoms, such as ptosis, strabismus, optic neuritis, abscess of the lung or other organs, etc. **Maran′tic s. t.,** primary s. t. **Pri′mary s. t.,** generally limited to the longitudinal sinus, and caused by cardiac debility. **Sec′ondary s. t.,** generally a septic form of sinus thrombosis, usually due to inflammation of the middle ear, caries, injury, etc. **S. transver′sus,** basilar sinus; this sinus lies transversely at the anterior part of the basilary process of the occipital bone, forming a communication between the two petrous sinuses and the cavernous sinus of one side and those of the other. Its breadth is commonly very great; it is situated between two layers of the dura mater, and presents internally a kind of cavernous tissue. **S. transver′sus ma′jor,** lateral sinus receiving blood from the superior longitudinal sinus. **S. transver′sus mi′nor,** lateral sinus not receiving blood of superior longitudinal sinus. **S. transver′sus pericar′dii,** sinus within the pericardium between two layers of its tubular sheath. **S. triangula′ris,** superior longitudinal s. **S. tym'pani,** a hollow on wall of tympanum between the promontory and the pyramid. **S. un'guis,** furrow about the nails. **S. ure'thræ,** s. of the bulb. **S. urogenita'lis,** see *Urogenital.* **S. uteri'nus,** one of the uterine sinuses, cavities formed by the uterine veins in the substance of the uterine parietes; they are very large during pregnancy. **S. utriculo'sus,** see *Semicircular canals.* **S. of Valsal'va,** one of three depressions in the aorta and pulmonary artery immediately opposite the semilunar valve; they leave the edges of the valves free, so that they can be caught by the refluent blood; where the aorta is about to send off the first of its long branches at the top of the thorax it is of great size, and has been called the large sinus of Valsalva. **S. of the ve'na ca'va,** right auricle. **S. of the ve'na por'ta,** see *Vena porta* and *Liver.* **S. vena'rum pulmona'lium,** s. pulmonalis. **S. veno'sus,** s. dexter cordis. **S. v. scle'ræ,** Schlemm's canal. **Ver'tebral s.,** one of two great sinuses, different from those of the dura mater, extending the length of the vertebral canal, from the occipital foramen to the end of the sacrum, behind the bodies of the vertebræ, before the dura mater, and at the sides of the posterior vertebral ligament; at the inner side they communicate by branches, which form true *transverse sinuses;* they are situated at the middle of the body of each vertebra, passing under the posterior vertebral ligament; they receive at the middle part of the veins the spongy tissue of the vertebræ; sinuses arising on the external side communicate with the posterior branches of the vertebral, intercostal, and lumbar veins; at their posterior side they receive the veins creeping on the prolongation of the dura mater that envelops the marrow. **S. vul'væ,** rima vulvæ.

**Si'nuses.** Plural of sinus, which see.

**Sinusi'tis.** Inflammation of a sinus, whether cerebral or air.

**Si'nus-like degenera'tion.** Formation of new channels due to dilatation of vessels of a thrombus; an example of which is seen in white leg, at the junction of the common iliac veins (Rokitansky).

**Sinusoid'al cur'rent.** Alternating faradic current, which in its rise and fall resembles a sinusoidal curve.

**Sipee'ri.** Bebeeru.

**Siperine'.** An alkaloid of the bark of bebeeru.

**Siph'ita.** Somnambulism. **S. pra'va,** chorea.

**Si'phon** (tube). A bent tube with limbs of unequal length, used for transferring liquids from one vessel to another. With this view the shorter limb is plunged into the liquid, and air is sucked from the extremity of the longer limb; the pressure of the atmosphere forces the fluid through the tube; the liquid will flow as long as the extremity of the lower limb is below the level of the fluid in which the shorter limb is immersed. A syringe may be attached to the longer extremity of the siphon, by which the air can be drawn from it. **S. drain'age,** drainage, through a siphon, of the contents of a suppurating sac or cavity.

**Si'phonage.** The use of a siphon for evacuation of a pus cavity.

**Siphonif'erous** (*fero,* to bear). Siphon-bearing; term applied to molluscs, as nautilus, etc.

**Siphono'ma** (*siphon,* tube). A cylindroma, sometimes called Henle's tubular tumor.

**Si'ra.** Orpiment.

**Si'ren.** An amphibian reptile resembling an eel. A monster destitute of lower extremities and pelvis.

**Sirenom'elus** (*siren+melos,* a limb). A monster in which the lower extremities taper to a point and are united, with entire absence of feet. Symmelus.

**Siri'asis** (*siriao,* to be hot). Sunstroke, heatstroke.

**Sir'ium myrtifo'lium.** Santalum album.

**Si'son am'mi.** Plant, ord. *Umbelliferæ,* that affords the ammi verum of the shops. The seeds—Semen ammios cretici or veri—were used as a carminative. **S. amo'mum,** excitant and diuretic; it is the field honeywort. **S. ani'sum,** Pimpinella anisum. **S. podagra'ria,** Ligusticum podagraria.

**Sis'tens** (*sisto,* to keep back). An agent that diminishes—secretion, for example.

**Sisym'brium.** A genus of cruciferous plants. **S. allia'ria,** alliaria. **S. barba'rea,** Erysimum barbarea. **S. erucas'trum,** Brassica eruca. **S. menthas'trum,** Mentha aquatica. **S. nastur'tium,** watercress; ord. *Cruciferæ;* antiscorbutic. **S. officina'le,** erysimum, hedge mustard. **S. parviflo'rum,** s. sophia. **S. so'phia,** flix-weed, flux-weed; once reputed to be anthelmintic, and valuable in hysterical affections.

**Sisyrin'chium bermudia'num.** Blue-eyed lily, physic or scurvy grass. Indigenous; ord. *Iridaceæ.* A decoction of the root is acrid and cathartic.

**Site.** Seat, location, focus of disease.

**Siteir'gia** (*sitos,* food). Absence of appetite.

**Sit'fast.** A boil. Fibroid tumor of skin of horse; it frequently appears under the saddle or collar.

**Sitio'logy** (*sition,* food, *logos,* discourse). Sitology.

**Sitioma'nia.** Sitomania.

**Sitiopho'bia** (*sition,* food, *phobos,* fear). Sitophobia.

**Si'tis.** Thirst. **S. inten'sa,** polydipsia. **S. morbo'sa,** polydipsia.

**Sitod'repa panice'a.** The drug-store beetle; the larva is known as the book-worm.

**Sitol'ogy** (*sitos,* food). Science of dietetics.

**Sitoma'nia** (*sitos,* food). Intense, uncontrollable desire for food.

**Sitopho'bia** (*sitos,* food, *phobos,* dread). Abhorrence of food, or insane dread of eating.

**Sit'os.** Aliment.

**Si'tus.** Site, position. **S. alie'nus,** unnatural position; ectopia. **S. anom'alus** or **perver'sus intestino'rum,** misplacement or ectopia of the intestines. **S. inver'tus vis'cerum,** change of position of the viscera to the opposite side of the body. **S. muta'tus,** ectopia; inversion of the viscera. **S. perver'sus,** ectopia. **S. transver'sus,** change in position, actual or relative, of the organs of the body.

**Sitz-bath.** Seat-bath. Hip-bath.

**Si'um.** Creeping water parsnep, ord. *Umbelliferæ.* Stimulant and supposed to be diuretic and lithontriptic. Sometimes employed in cutaneous eruptions. **S. angustifo'lium,** S. nodiflorum. **S. a'pium,** Apium graveolens. **S. ber'ula,** S. nodiflorum. **S. bulbocas'tanum,** Bunium bulbocastanum. **S. car'vi,** carum. **S. erec'tum,** S. nodiflorum. **S. grave'olens,** Apium graveolens. **S. inci'sum,** S. nodiflorum. **S. latifo'lium,** or common water parsnep, of this country; said to be poisonous. **S. luna're,** the root is eaten; has an agreeable, nutty flavor; Canadians called it the *queue de rat* (rat's tail); the poisonous roots of Cicuta virosa, C. maculata, and C. bulbifera are mistaken for it. **S. nin'si,** plant whose root is called radix ninsi, ninzin, nindsin; root long supposed to be the same as ginseng; it possesses similar though weaker properties; see *Panax schinseng.* **S. nodiflo'rum,** sium. **S. si'laus,** Peucedanum silaus. **S. sis'arum,** skirret; used as a salad in Europe and an article of diet in chest affections. **S. vulga're,** Ligusticum podagraria.

**Sixth cra'nial nerve.** Abducens nerve, supplying the external rectus muscle of the eye.

**Sixth year mo'lar.** First permanent molar tooth.

**Size.** Term given to the buffy coat appearing on the surface of a blood coagulum in inflammation.

**Si'zy** (*siza,* glue). Like size; glutinous; having the adhesiveness of glue, as applied to blood when it exhibits the buffy coat.

**Skate oil.** Fixed oil obtained from skate's liver, and supposed to contain a larger proportion of iodine than cod-liver oil, for which it may be substituted.

**Skat'ol** (*skor,* gen. *skatos,* fæces). Decomposition product in human fæces, due to the action of trypsin on peptone, giving to the evacuations of the bowels their strong odor.

**Skatol'ogy.** Science in relation to the fæces.

**Skatox'yl.** Skatol in which hydrogen is replaced by hydroxyl. **S. sulphon'ic** or **sulphu'ric acid,** acid which unites with potassium, forming a salt, in which combination skatol passes out in the urine.

**Skeer's sign.** An early stage of tuberculous meningitis, brownish ring occasionally observed near the pupillary margin of the iris.

**Skeins.** Convoluted thread-like figures seen in karyokinesis; daughter glomeruli.

**Skel′etal** (*skeleton*). Pertaining to the skeleton. **S. mus′cles,** those muscles which have attachment to the bones as distinguished from the skin muscles, certain sphincters, the heart, etc. **S. tis′sue,** a term used to include the tissues generally of which the skeleton is made up, as the osseous, cartilaginous, and fibrous.

**Skeleteu′ma.** Sceleteuma.

**Skeleteu′sis.** Mummification; sceleteusis.

**Skeleti′a.** Emaciation.

**Skeletins′.** A number of albuminoid substances with similar characteristics obtained from the skeletal tissues of some animals, as the intervebrates; chitin and fibroin, for example.

**Skeletiza′tion.** Assuming almost the appearance of a skeleton, as in emaciation from wasting diseases.

**Skeletogen′ic** or **Skeletogenous,** skel-et-oj′en-us. Forming or creating a skeleton or structures associated with it.

**Skeletog′raphy** (*skeleton* + *graphe*, description). Description of the skeleton.

**Skeletol′ogy** (*skeleton* + *logos*, discourse). Science dealing with the framework of the body. It includes osteology and syndesmology.

**Skel′eton** (*skeletos*, dried up). The aggregate of the hard parts which give support to the body. A skeleton exists in almost all animals, although not always formed in the same manner. In some, as the crustacea and testacea, it is wholly or partly external—exoskeleton or dermoskeleton. In others, as birds, mammalia, etc., it is internal—endoskeleton or neuroskeleton. It serves as a support for other organs. On it the general shape of the body and of its various parts depends. When the dried bones are united by their natural ligaments, the skeleton is said to be natural; when articulated by wires, artificial or articulated. In chemistry, a chain or ring, or series of multivalent atoms, usually of carbon, so held together that all their affinities are not saturated; hence the series serves as the framework about which the other elements of an organic compound group themselves; see *Benzol ring.*

**Skel′etonize.** To convert or reduce to a skeleton.

**Skeletopœ′ia** (*skeleton*+*poieo*, to make). The part of practical anatomy treating of the preparation of bones and the construction of skeletons.

**Skeletotroph′ic** (*skeleton* + *trophe*, nourishment). Term applied to connective tissue.

**Skelodid′ymus** (*skelos*, leg, *didymos*, twin). Ischiopagus.

**Skelon′cus** (*skelos*, limb, *onkos*, swelling). Phlegmasia dolens.

**Skelorrheu′ma.** Rheumatism of the legs.

**Skelotyr′be** (*skelos*, leg, *tyrbe*, tumult). Uncertainty of gait.

**Skene's ducts.** S.'s tubes. **S.'s glands,** glands which have their outlet in the female urethra, on either side, through Skene's ducts, tubes, or tubules. **S.'s tubes** or **tu′bules,** tubules lying along the female urethra and opening near the meatus; they are probably rudiments of the Wolffian ducts, and correspond to the vesiculæ seminales of the male.

**Skerljevo,** skairl-ya′vo. Scherlievo.

**Skew bald.** Piebald. **S. mus′cles,** angular muscles in which the plane of origin intersects that of insertion. **S. sight,** oblique sight. See *Sight, skew.*

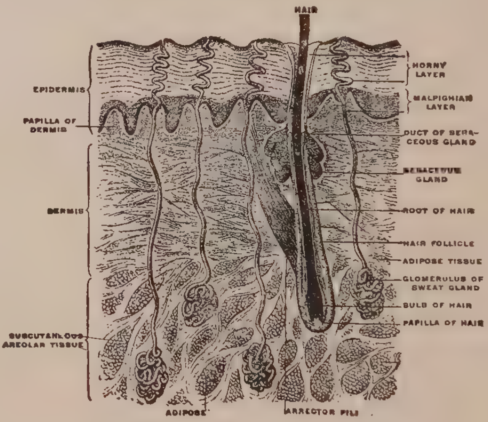
**Ski′agram** or **Ski′agraph** (*skia*, shadow, *grapho*, to write). A photograph taken by means of some form of penetrating rays—Rœntgen, Becquerel, or Niewenglowski; see *Ray.*

**Skiag′raphy.** Photography of opaque bodies by means of radioactivity. See *Radioactivity* and *Ray.*

**Ski′ascope** (*skia*, shadow, *skopeo*, to see). Apparatus or instrument employed in skiascopy, or the study of refractive condition of the eye by light and shadow thrown on it by rotation of a mirror.

**Skias′copy.** Shadow test. A method of estimating refraction of the eye by observation of the movement (when the reflecting mirror is rotated) of the shadowy edges of an image, as of a flame, which is formed upon the retina. Also fluoroscopy.

**Skin.** Cutis, integument; the general investing membrane of the surface of the body; see *Cutis.* **S. bound,** affected with scleroderma. **Bronzed s.,** see *Addison's disease.* **Glos′sy s.,** see *Glossy.* **Gold′ beaters' s.,** see *Goldbeaters'.* **S.-graft′ing,** a method of treating large, ulcerated surfaces by transplanting small pieces of skin from another part of the body, cicatrization frequently resulting without contraction or deformity, as in extensive burns. The method of skin-grafting is as follows: The area from which grafts are taken should be well washed with soap, water, and bichloride of mercury, 1 : 1000, followed by sterilized salt solution (5 parts to 95 parts water, boiled for one hour). Small or large pieces of cuticle, including rete mucosum, but not corium, are removed by scalpel or scissors and placed, fresh surface down, on top of the place to be grafted. When the operation is completed apply protective, wet in salt solution, and an antiseptic dressing, which retain in place with a roller bandage firmly applied. Grafts used should be from young, healthy subjects. See *Graft.* **Pie′bald s.,** see *Achroma.* **S. re′flexes,** see *Reflexes.* **Scarf s.,** epidermis. **S. tight,** induration of the cellular tissue. **S.-transplanta′tion,** skin-grafting.



Vertical section of the skin. (Gerrish.)

**Skin′ny.** Emaciated; wanting flesh.

**Skir′ret.** Sium sisarum.

**Skirt.** Diaphragm.

**Skleri′asis** (*skleros*, hard). Scleriasis; scleroderma.

**Skleroder′ma.** Scleroderma.

**Sko′da's râles.** Bronchial râles heard on auscultation in pneumonia through consolidated lung structure. **S.'s sign** or **S.'s tym′pany,** peculiar tympanitic resonance elicited in extensive effusion of the pleural sac.

**Skoda′ic res′onance.** Skoda's sign.

**Skoke.** Phytolacca decandra.

**Skolemo′ra fernambucen′sis.** Geoffræa vermifuga.

**Skolio′sis.** Scoliosis.

**Skopolamine′.** Scopolamine.

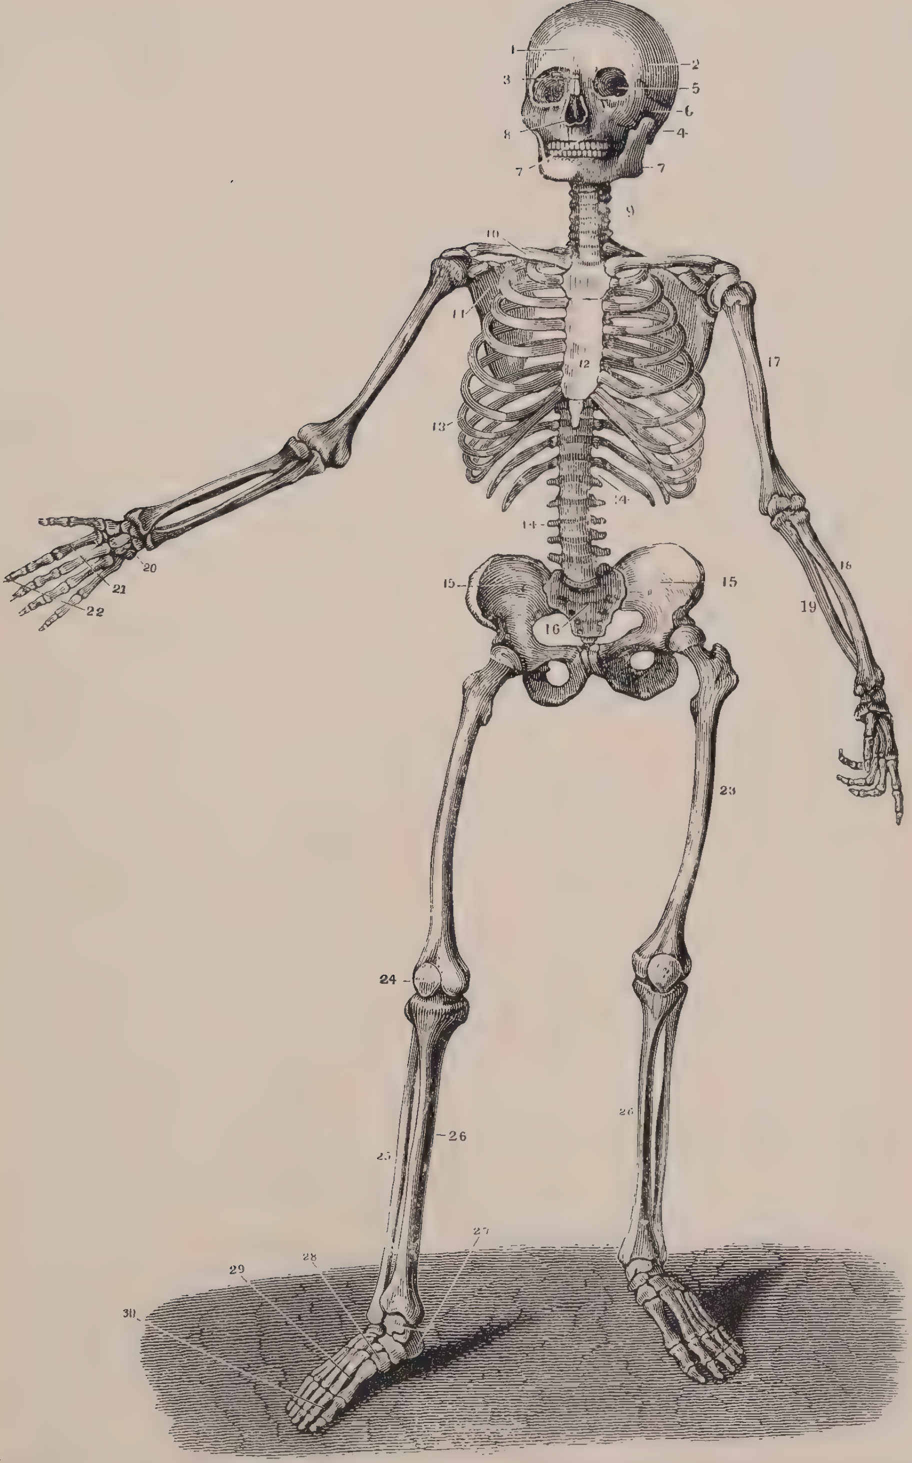
**Sko′togram** (*skotos*, darkness). Skiagram.

**Skotog′raphy.** Skiagraphy.

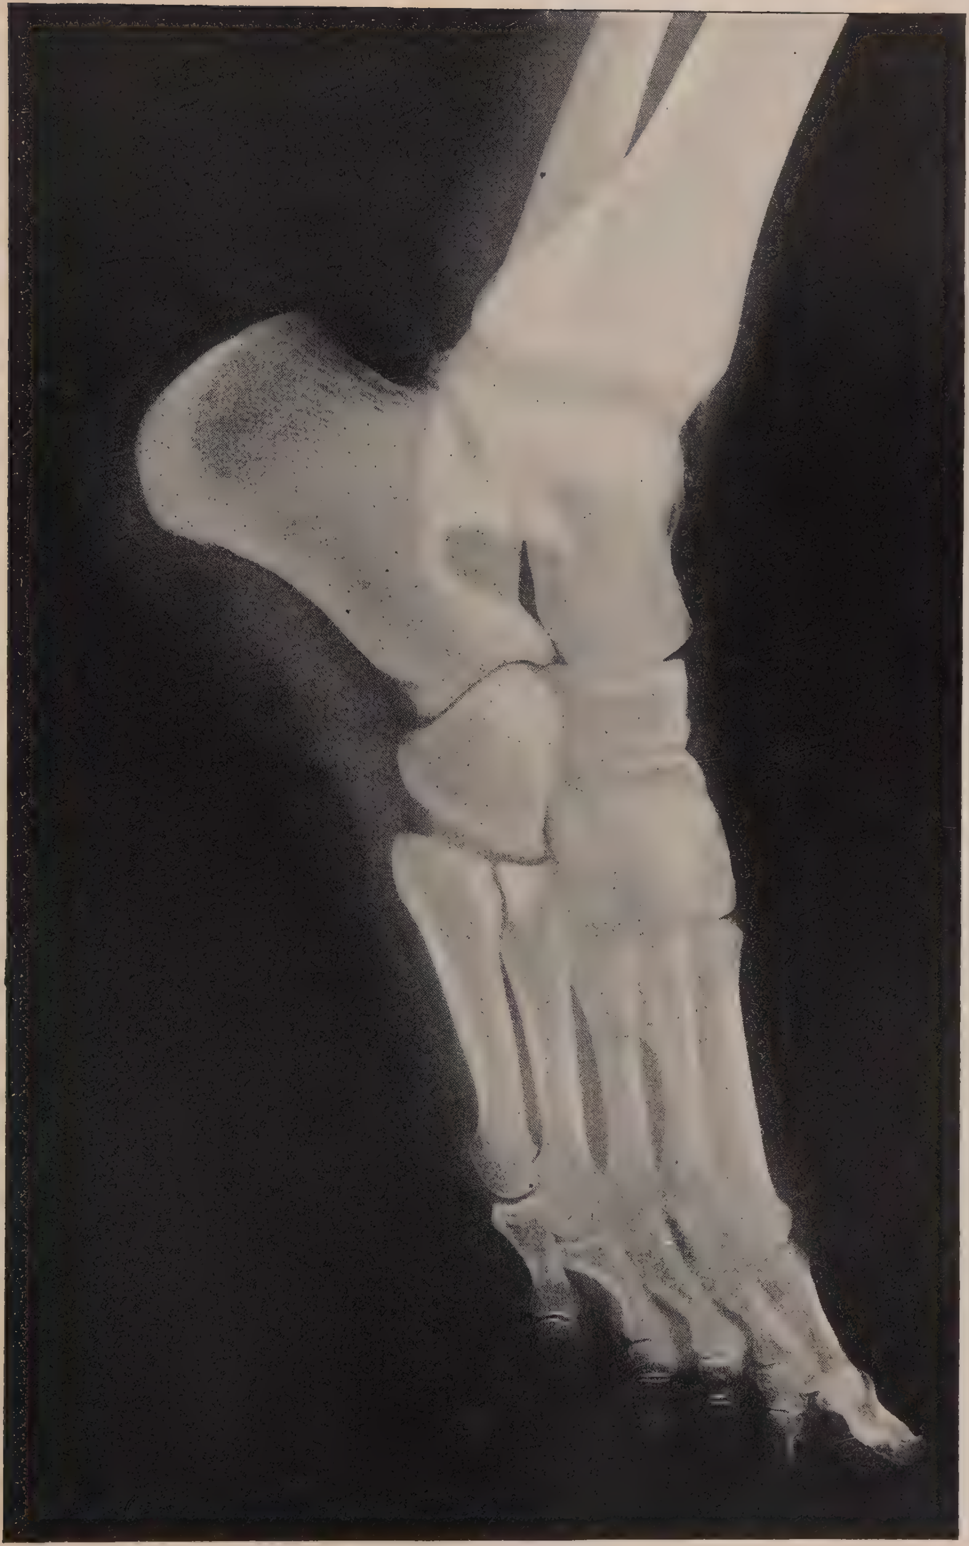
**Skue′sight.** Skewsight; oblique sight; dysopia lateralis.

**Skulein′.** Bitter, poisonous property of squill.

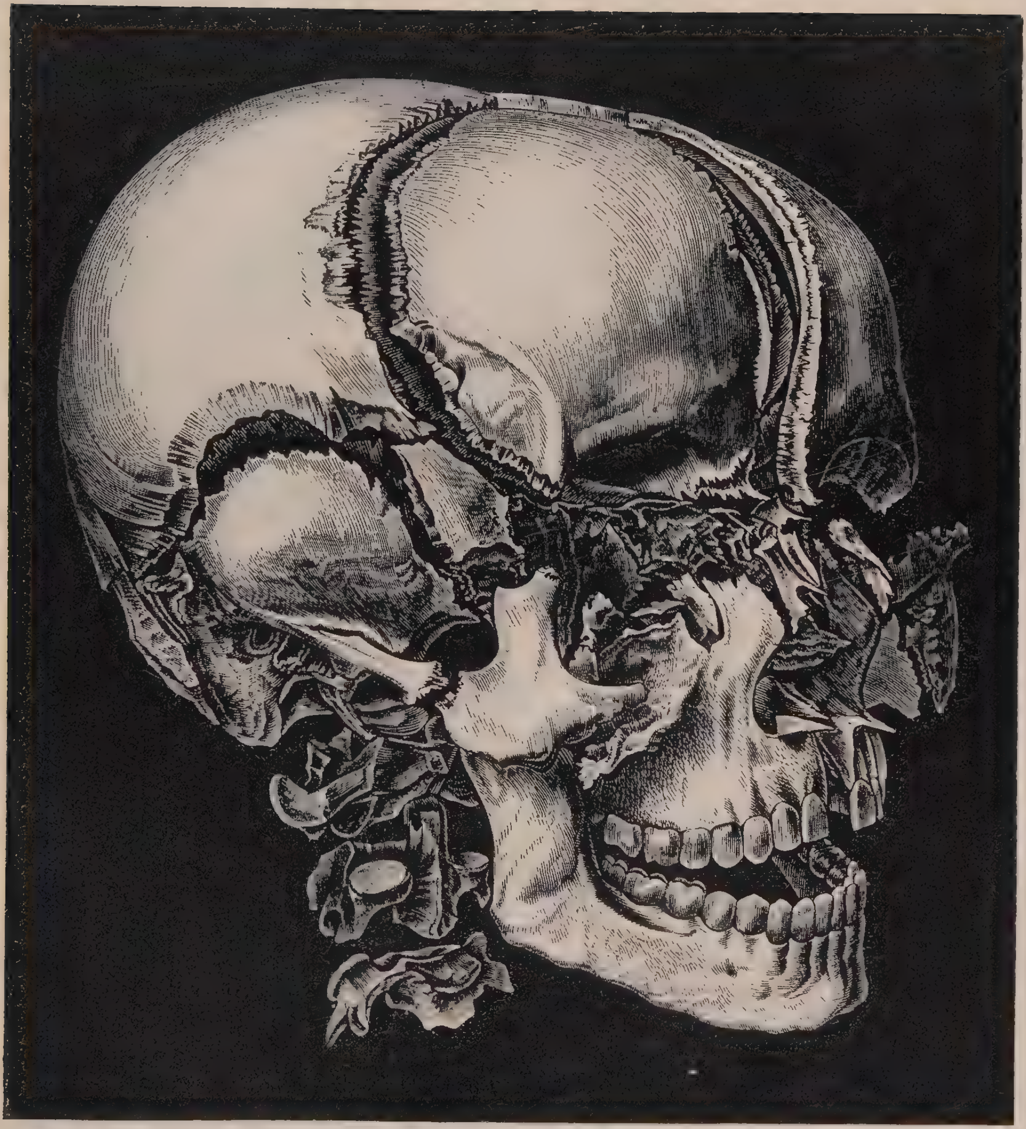
## SKELETON



Front view of the adult skeleton: 1, frontal bone; 2, parietal bone; 3, nasal bones; 4, occipital bone; 5, orbit; 6, malar bone; 7. 7, upper and lower maxillæ; 8, nasal cavity; 9, cervical vertebræ; 10, clavicle; 11, scapula; 12, sternum, 13 ribs; 14, 14, dorsal and lumbar vertebræ; 15, 15, innominate bones; 16, sacrum; 17, humerus; 18, radius; 19, ulna; 20, carpus; 21, metacarpus; 22, phalanges of hand; 23, femur; 24, patella; 25, fibula. 26, tibia; 27, os calcis and astragalus; 28, cuneiform and cuboid bones; 29, metatarsus; 30, phalanges of toes.

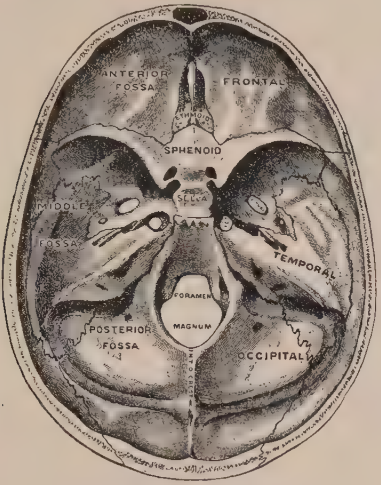


Skiagram of the foot in extension.

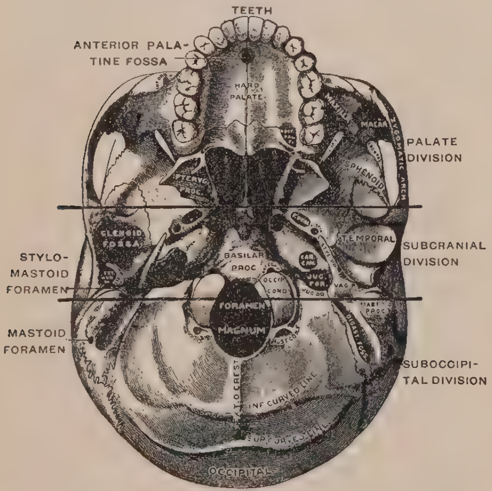


The skull, disarticulated: showing the individual bones and sutures.

**Skull.** Cranium; the bony case forming the upper part of the head, affording protection to the brain; see *Cranium.*



Base of the skull, inner surface. (Gerrish.)



Base of the skull, viewed from below, the mandible having been removed. (Gerrish.)

**Skull′cap.** Scutellaria galericulata. **Mad-dog s.,** Scutellaria laterifolia.

**Skunk-cab′bage** or **Skunk′weed.** Dracontium fœtidum.

**Slab′bering.** Slavering.

**Slag.** Term applied to dross or recrement of a metal; also vitrified masses of glossy compounds, silicates, etc.

**Slaked lime.** White powder made by adding water (one-half weight of the lime) upon quicklime; used for preparation of lime-water.

**Slant.** Oblique plane or slope. **S. cul′ture,** a cultivation of bacteria in agar which has been allowed to solidify while the tube was held obliquely so that the surface is sloping; see *Culture.*

**Slashed.** Divided into narrow parts or segments by sharp incisions; lancinated.

**Slate.** Term applied to varieties of an argillaceous stone having the property of being split into slates or thin laminæ.

**Sla′ters.** Onisci aselli.

**Sla′ty.** Having the nature or properties of slate; applied to a form of induration of the lung in which pigmentation of the tissue occurs, resembling the color of slate.

**Slav′ering.** Slabbering, slobbering, drooling, drivelling. Involuntary flow of saliva from the mouth, owing to sluggish deglutition, without increased secretion. It is seen in the infant, the aged, and the idiot.

**Sleep.** Temporary interruption of one's relations with external objects. Repose of the organs of sense, intellectual faculties, and voluntary motion. The act of quitting this condition is called awaking. **S. disease′,** a fatal malady peculiar to negroes and met with chiefly in Congo; the prominent symptom is a tendency to sleep, which may become continuous and terminate in death; called also African lethargy. **S. drunk′enness,** temporary excitement and want of coordination of movement in one just roused from sleep. **S. ep′ilepsy,** narcolepsy. **Hypnot′ic s.,** see *Hypnotism.* **Mesmer′ic s.,** see *Hypnotism.* **S. of plants,** term applied by Linnæus to the state of certain plants, the leaves of which droop and fold at night. **Win′ter s.,** hibernation.

**Sleep′ing drop′sy** or **sick′ness.** African lethargy; a generally fatal disease characterized by great drowsiness; it prevails among the natives of West Africa. A species of Trypanosoma has been found in the cerebrospinal fluid, and the arachnoid is found post mortem to be hyperæmic.

**Sleep′lessness.** Insomnia.

**Sleep′walking.** Somnambulism.

**Sleep′wort.** Garden lettuce.

**Sleep′y.** Drowsy; inclined to sleep.

**Slen′der col′umn** or **fascic′ulus.** Funiculus gracilis. **S. lobe,** narrow part of the posterior lobe of the cerebellum, which sometimes appears as a distinct lobe.

**Slide.** Glass plate used for mounting, or on which specimens are placed for microscopic examination. **S. cul′ture,** see *Culture.*

**Slieve′fish.** Sepia.

**Sli′my.** Resembling slime; viscous; glutinous.

**Sling.** Bandage employed to keep the forearm bent on the arm in case of injury to those parts, in fracture of the clavicle, injury of the hands, etc. A handkerchief is often used for the purpose, folded diagonally and tied by the extremities around the neck.

**Slink′ing.** Miscarrying; said of a beast.

**Slip′pers.** Impatiens.

**Slipper′wort.** Calceolaria.

**Slip′pery elm.** Inner bark of Ulmus fulva.

**Slit-and-tail ban′dage.** Invaginated bandage.

**Slob′bering.** Slavering.

**Sloe.** Viburnum prunifolium. **S. tree,** Prunus spinosa.

**Sloke, green.** Ulva latissima.

**Slops.** Slop diet. Liquid food, largely watery and containing little nutritive material.

**Slough,** sluf. Eschar.

**Slough′ing.** Breaking down and casting off of dead tissue.

**Slo′ven wood.** Artemisia abrotanum.

**Slows.** Milk sickness.

**Sludge.** Mud; mire; slush; semiliquid deposit of sewage as treated by any of the precipitation methods.

**Slug′gish lay′er.** In the passage of blood corpuscles through the capillaries a few adhere, and tear themselves away to again move slowly, constituting the sluggish layer.

**Slum′ber.** Somnolency.

**Slurred speech.** Slurring or clipping of the words, observed especially in cases of general paralysis of the insane.

**Small az′ygos vein.** Left lower azygos vein. **S. deep petro′sal nerve,** see *Nerves, petrosal.* **S. intes′tine,** the duodenum, jejunum, and ileum, constituting the part of the digestive tract between the stomach and the cæcum. **S. menin′geal ar′tery,** branch of internal maxillary which passes through the foramen ovale; it supplies the dura mater in the middle fossa. **S. occip′ital nerves**, see *Nerves, occipital*. **S. spike′wood**, false sarsaparilla; Aralia nudicaulis. **S. superfic′ial petro′sal nerve**, see *Nerves, petrosal*.

**Small′age.** Apium graveolens.

**Small′er Sol′omon's seal.** Polygonatum biflorum. Indigenous.

**Small′pox.** Variola. **Abor′tive s.**, varioloid. **Black s.**, hemorrhagic s. **Con′fluent s.**, see *Variola*. **Cor′ymbose s.**, see *Variola*. **Discrete′ s.**, see *Variola*. **Hemorrhag′ic s.**, see *Variola*. **Mod′ified s.**, varioloid. **Pete′chial s.**, see *Variola*. **S.-plant**, side-saddle plant; Sarracenia variolaris. **Varicel′loid s.**, see *Variola*.

**Smalt** or **Smaltz.** Protoxide of cobalt, blue starch. This has been given in rheumatism in doses of gr. x–xx (0.65–1.3). A larger quantity causes emesis.

**Smart′weed.** Polygonum hydropiper; P. punctatum.

**Smear cul′ture.** A cultivation of bacteria made by smearing the surface of the agar or other medium with the suspected material; see *Culture*.

**Smeg′ma** (*smegma*, unguent). Secretion from the sebaceous follicles of the skin. Also s. preputii. **S. articula′re**, synovia. **S. bacil′lus**, a non-pathogenic bacillus resembling B. tuberculosis, found in the s. preputii. **S. cuta′neum**, see *Sebaceous glands*. **S. embryo′num**, sebaceous covering of fœtus; vernix caseosa. **S. præpu′tii**, cheesy secretion under the prepuce and in the folds of the labia.

**Smegmatorrhœ′a** or **Smegmorrhœ′a** (*rheo*, to flow). Stearrhœa.

**Smell.** Olfaction. **Mor′bid s.**, parosmia.

**Smell′ing.** Olfaction. **S. salt**, a popular term applied to various flavored preparations of ammonium carbonate, used to stimulate the olfactory nerves.

**Smilacin′.** See *Smilax sarsaparilla*.

**Smilaci′na racemo′sa.** False spikenard; indigenous; ord. *Liliaceæ*. Alterative, diuretic, and diaphoretic.

**Smi′lax.** Taxus baccata. **S. as′pera**, in Southern Europe, where it grows, is used instead of sarsaparilla; supposed to be the source of Italian sarsaparilla. **S. a. chinen′sis**, Smilax china. **S. as′pera peruvia′na**, Smilax sarsaparilla. **S. canellæfo′lia**, S. pseudochina. **S. chi′na**, the root was formerly employed in cutaneous and venereal affections. **S. glau′ca**, indigenous; has similar virtues to sarsaparilla. **S. hederæfo′lia**, S. pseudochina. **S. in′dica spino′sa**, Smilax pseudochina. **S. med′ica**, Mexican sarsaparilla. **S. officina′lis**, indigenous; a source of Jamaica sarsaparilla; Smilax sarsaparilla. **S. papyra′cea**, probable source of Para sarsaparilla. **S. pseudochi′na**, in scrofulous disorders the root has been preferred to the oriental kind; in other cases it possesses similar virtues. **S. sarsaparil′la**, Jamaica sarsaparilla; the root of this and other species of smilax, *sarsaparilla* (Ph. U. S.), is diuretic and demulcent, and has been employed in the sequelæ of syphilis, when, after a mercurial course, nocturnal pains, ulcerations, etc., continue; it has been used also in scrofula, chronic rheumatism, etc. It is obtained from Honduras, Brazil, and Peru. A principle called *smilacin*, *sarsaparillin*, or *pariglin* has been obtained from it. **S. tamnoi′des**, indigenous, has the properties of sarsaparilla.

**Smith's amputa′tion.** See *Amputation, Stephen Smith's*. **S.'s ante′rior splint**, consists of a stout wire frame, about 3½ inches wide above and 2¾ inches wide below, used for suspension of the lower limb. It is applied on the anterior surface of the limb, and extends from the anterior spine of the ilium to a little beyond the toes. It is bent at the ankle, knee, and hip, to conform to individual cases. **S.'s cramp** or **spasm**, a neurotic affection due to the occupation of blacksmithing; hephæstic hemiplegia. **S.'s disloca′tion**, dislocation, in an upward and backward direction, of the metatarsal and internal cuneiform bones. **S.'s frac′ture**, transverse fracture of radius a short distance above its inferior extremity.

**Smith′sonite.** Calamine. Native zinc carbonate, containing over 50 per cent. of pure metal.

**Smo′kers' patch′es.** An affection of the mucous membrane in which white patches occur on the lips, tongue, and mouth of excessive tobacco-smokers.

**Smo′ky.** Having the appearance or nature of smoke.

**Smoth′er.** Suffocate, stifle; to deprive of air by covering the mouth and nostrils.

**Smyr′na.** Myrrh. **S. galls**, an inferior variety of commercial galls from Turkey. **S. o′pium**, so named from place of export; it furnishes the most abundant supply of this drug in the market. **S. scam′mony**, once a commercial name for an inferior quality of this drug.

**Smyr′nium olusat′rum.** The seeds are bitter and aromatic, and the roots very bitter; were recommended as resolvent, diuretic, emmenagogue, etc.

**Snag.** A tooth standing alone or projecting beyond the others.

**Snag′gle teeth.** Irregularity and obliquity of the teeth.

**Snag′rel.** Aristolochia serpentaria.

**Snail.** Limax. **S. shell**, cochlea. **S. track**, an aphthous ulceration of the throat met with in the second stage of syphilis.

**Snake′head.** Chelone glabra.

**Snake′root.** Garuleum bipinnatum. **Birth′wort s.**, Aristolochia serpentaria. **Black s.**, Actæa racemosa, Sanicula marilandica. **But′ton s.**, Eryngium aquaticum, Liatris spicata. **Can′ada s.**, Asarum canadense. **Dewitt′ s.**, prenanthes. **Ev′ergreen s.**, Polygala paucifolia. **Heart s.**, Asarum canadense. **Virgin′ia s.**, Aristolochia serpentaria. **White s.**, Eupatorium ageratoides.

**Snake's milk** or **milk-weed.** Euphorbia corollata.

**Snake′weed.** Aristolochia serpentaria; Helenium autumnale; Polygonum bistorta. **Amer′ican s.**, Cicuta maculata.

**Snap′dragon.** Linaria vulgaris.

**Snap-finger.** Trigger-finger.

**Snaps.** Phaseolus.

**Snare.** Instrument for removal of soft growths, as nasal polypi. It consists of a wire loop, the free ends of which pass through a tube and are attached to a screw, by the turning of which the loop is gradually tightened.

**Sneeze′weed.** Helenium autumnale.

**Sneeze′wort.** Achillea ptarmica; Helenium autumnale.

**Sneez′ing.** Convulsive motion of the expiratory muscles by which air rushes sonorously through the nasal fossæ, carrying with it the mucus and foreign bodies adhering to the pituitary membrane which have occasioned the movement.

**Snel′len's for′ceps.** Form of forceps for surrounding the minor growths of the eyelids during enucleation. **S.'s types**, see *Test*.

**Snif′fles.** Snuffles.

**Snor′ing.** Noise made in the posterior part of the mouth and nasal fossæ during the movements of inspiration, particularly in sleep, both when the person is in health, and in apoplexy and other comatose conditions. In certain affections of the chest—some cases of pulmonary catarrh—a kind of snoring may be distinctly heard by applying the ear to the chest.

**Snout′.** Expanded nose of some of the lower animals.

**Snow′ball.** Cephalanthus occidentalis.

**Snow′berry.** Symphoricarpus racemosus.

**Snow-blind′ness.** Blindness produced by the reflection of the solar light from snow. As a preventive *snow-eyes* are used by the Esquimaux; these are round or oval disks of light wood, with a bridge, resting on the nose like spectacles, and a narrow slit for the passage of the light.

**Snow′drop tree.** Chionanthus virginica.

**Snow-eyes.** See *Snow-blindness*.

**Snow′plant.** Sarcodes sanguinea.

**Snow-rose.** Rhododendron chrysanthemum.

**Snow′shoe disease′.** Painful affection of the feet occurring in the Arctic regions among those wearing snow-shoes on long journeys.

**Snuff.** To draw up into the nostrils by a forcible inspiration. Also a powder inhaled into the nostrils. **Cephal′ic s.**, a sternutatory composed of asarum, marjoram, origanum, and lavender.

**Snuf′fles.** Inhaling forcibly through the nose, often owing to accumulation of the mucous secretions. A nasal discharge to which infants are liable, frequently a symptom of hereditary syphilis.

**Soap.** Sapo. **S. bark,** quillaia bark. **S. ber′ries,** Sapindus saponaria; contain saponin. **Castile′ s.,** the official *sapo.* **S. ce′rate,** ceratum saponis. **Green s.,** the official *sapo mollis,* formerly called sapo viridis. **Medic′inal s.,** see *Sapo.* **S. nut,** fruit of Sapindus trifoliatus. **S. plant,** Chlorogallum pomeridium, California soapwort. **S. plas′ter,** emplastrum saponis. **S. root,** root of Saponaria officinalis. **Soft s.,** a soap made with potash; the official *sapo mollis.* **S. wort,** saponaria.

**Sob.** Spasmodic momentary contraction of the diaphragm, at once followed by relaxation, by which the little air that the contraction has caused to enter the chest is driven out with noise.

**Sob′oles.** Progeny; superfœtation.

**Sobolif′erous** (*soboles,* shoot, *fero,* to bear). Producing shoots from near the ground; bearing shoots.

**Sobri′ety.** Temperance.

**Socaloïn′.** Active principle of Socotrine aloes.

**So′cia parot′idis** (companion of the parotid). See *Parotid.*

**So′cial e′vil.** Prostitution.

**Soci′ety** (*socius,* a companion). Association promoting some common object.

**Sociol′ogy** (*socius,* fellow-being, *logos,* discourse). The science treating of social organization; of the mutual relations of mankind.

**Sock′et.** A cavity or depression into which some projecting part fits. **Eye s.,** orbit. **Gle′noid s.** glenoid fossa. **Hip s.,** acetabulum. **Tooth s.,** see *Alveolus.*

**Soc′otrine al′oes.** See *Aloe socotrina.*

**So′da.** (Ph. U. S.) Sodium hydrate or hydroxide, caustic soda; occurs in the shops in the form of masses or of translucent pencils. It is powerfully escharotic like potassa. Solution of soda, *li′quor so′dæ* (Ph. U. S.), contains about 5 per cent. of caustic soda; dose, ♏v–xxx (0.32–2.0). The term is also applied popularly to washing soda, *sal sodæ,* sodium carbonate, obtained by crystallization from crude sodium carbonate. **S. ash,** crude sodium carbonate. **Ba′king s.,** sodii bicarbonas. **Caus′tic s.,** see *Soda.* **S. chlora′ta** or **Chlo′rinated s.,** employed as a disinfectant and deodorizer in the form of the official *li′quor so′dæ chlora′tæ* (U. S.), or *l. s. chlorina′tæ* (Br.), made by decomposing chlorinated lime with a solution of sodium carbonate; called also Labarraque's solution or Javelle water; it contains 2.6 per cent. by weight of available chlorine. **S. soap,** hard soap; see *Sapo.* **Wash′ing s.,** sodii carbonas. **S.-wa′ter,** water impregnated with carbonic-acid gas.

**So′dic.** Relating to or containing sodium.

**So′dii.** Gen. of sodium. **S. ace′tas** (Ph U S.), sodium acetate, occurs in the form of a white, crystalline, granular powder; diuretic in doses of gr. x–xxx (0.65–2.0). **S. arse′nas** (Ph. U. S. and Br.), sodium arsenate, occurs in the form of colorless, prismatic crystals or of a white, crystalline powder; action the same as that of other salts of arsenic; dose, gr. $\frac{1}{30}$–$\frac{1}{10}$ (0.0022–0.0065). **Li′quor s. arsena′tis** (Ph. U. S. and Br.), solution of sodium arsenate, contains 1 per cent. of the salt; dose, ♏j–v (0.065–0.32); this is ten times the strength of Pearson's solution. **S. ben′zoas** (Ph. U. S. and Br.), sodium benzoate; white, amorphous or semicrystalline powder; odorless; effervescent on exposure to air; taste sweet, astringent; prepared by adding benzoic acid to a hot solution of sodium carbonate; action is antilithic, antiseptic; useful in gout, rheumatism, scarlet fever, etc., in doses of gr. x–xxx (0.65–2.0). **S. bicarbo′nas** (Ph. U. S. and Br.), sodium bicarbonate; white, odorless, opaque powder, saline and cooling taste; used as an antacid in dyspepsia, rheumatism, etc., in doses of gr. v–xxx (0.32–2.0). **Trochis′ci s. bicarbona′tis** (Ph. U. S. and Br.), troches of sodium bicarbonate, each gr. iij (0.2). **S. bisul′phis** (Ph. U. S.), sodium bisulphite; prepared by saturating a concentrated solution of carbonate of sodium with sulphurous acid gas; a white, granular powder; used to arrest fermentation and as an internal antiseptic, in doses of gr. v–xx (0.32–1.3). **S. bo′ras** (Ph. U. S.), sodium borate, borax (Ph. Br.); colorless, transparent prisms, odorless, efflorescent in dry air; exists native in Europe, Peru, abundant in certain lakes of Thibet and Persia, in California, and the deserts of Nevada; action alterative; mild stimulant to mucous surfaces; parasiticide, antiseptic; used in dysmenorrhœa, in nephritic troubles due to excess of uric acid, aphthæ, and as an injection in infantile diarrhœa; locally in recent wounds and surgical operations; dose, gr. v–xv (0.32–1.0). **S. bro′midum** (Ph. U. S. and Br.), salt resembling in dose and properties the bromide of potassium, but containing more bromine, and considered less irritating; dose, gr. v–ʒj (0.32–4.0). **S. cacod′ylas,** sodium cacodylate, $As(CH_3)_2ONa$, an organic arsenical salt, occurring as a soluble, white, amorphous powder; employed in the treatment of tuberculosis, anæmia, and certain skin diseases in doses of gr. $\frac{1}{3}$–1$\frac{1}{3}$ (0.02–0.08). **S. carbo′nas** (Ph. U. S. and Br.), sodium carbonate, occurring as large, efflorescent crystals; employed for the same purposes as the bicarbonate; dose, gr. v–x (0.32–0.65). **S. c. exsicca′tus** (Ph. U. S. and Br.), dried sodium carbonate, occurring as a white powder; uses the same as those of the carbonate; dose, gr. ij–v (0.13–0.32). **S. chlo′ras** (Ph. U. S.), sodium chlorate; transparent crystals, permanent in air, saline taste, and cooling, odorless; it should never be triturated with organic matters, as it is then explosive; used for the same indications as potassium chlorate in doses of gr. ij–x (0.13–0.65). **S. chlo′ridum** (Ph. U. S. and Br.), common salt; native in many countries; purified by dissolving in water and recrystallizing. Active stimulant; resolvent; increases the salivary secretion; antidote to silver nitrate; emetic in doses of ℥ss–j (16.0–32.0). **S. citrotar′tras efferves′cens** (Ph. Br.), effervescent citrotartrate of sodium; laxative and refrigerant; dose, ℥j–ij (32.0–64.0). **S eth′ylas,** sodium ethylate, used as a depilatory. **S. hy′dras** or **hydrox′idum,** soda. **S. hypophos′phis** (Ph. U. S. and Br.), sodium hypophosphite, occurs in white, granular rods or small, colorless plates, sweetish taste; nerve tonic, alterative, and used in phthisis and skin diseases; dose, gr. v–x (0.32–0.64). **S. hyposul′phis** (Ph. U. S. and Br.), sodium hyposulphite, occurs in large, colorless crystals; used in skin diseases and for the same purposes as the sulphite and bisulphite; dose, gr. xv–xxx (1.0–2.0). **S. io′didum** (Ph. U. S. and Br.), sodium iodide; occurs as a white, crystalline powder or crystals; it is prescribed in the same cases as the iodide of potassium, especially in syphilis; dose, gr. x–xxx (0.65–2.0). **S. ni′tras** (Ph. U. S.), sodium nitrate, cubic nitre, Chile saltpetre; large, colorless crystals; similar to potassium nitrate in action; dose, gr. xv–xxx (1.0–2.0). **S. ni′tris** (Ph. U. S. and Br.), sodium nitrite; occurs in white masses or sticks; used like the other nitrites in angina pectoris and various spasmodic affections; dose, gr. j–ij (0.065–0.13). **S. phen′ol-parasulpho′nas,** s. sulphocarbolas. **S. phos′phas** (Ph. U. S. and Br), sodium phosphate; prepared by adding a solution of acid phosphate of calcium (prepared from a mixture of bone-ash and sulphuric acid) to a solution of sodium; it is found in the urine and other animal secretions; used in cases of supposed deficiency of phosphorus, and in infantile diarrhœa with green stools; dose, ʒss–ij (2.0–8.0). **S. pyrophos′phas** (Ph. U. S.), sodium pyrophosphate; prepared by heating phosphate of sodium in a suitable dish to redness, dissolving in water, filtering, and crystallizing; uses and action same as those of phosphate of sodium; dose, gr. xv–ʒj (1.0–4.0). **S. sal′icylas** (Ph. U. S. and Br.), sodium salicylate, a white, amorphous powder; the therapeutic action is that of salicylic acid, but it is less irritating, and is more rapidly absorbed; dose, gr. x–xxx (0.65–2.0). **S. sil′icas**, sodium silicate, soluble glass; useful for splints for fractures, jackets for spinal curvature, etc. **S. sul′phas** (Ph. U. S. and Br.), Glauber's salt, sodium sulphate; usually obtained as a secondary product in the manufacture of common salt or carbonate of magnesium; purified by dissolving in water and recrystallizing; cathartic, diuretic, and sedative; should always be given diluted with water; dose, ʒj–℥j (4.0–32.0). **S. sul′phis** (Ph. U. S. and Br.), sodium sulphite; made by passing sulphurous acid gas into a solution of carbonate of sodium; antizymotic, parasiticide; like sulphurous acid, it has been used to arrest fermentation; dose, gr. x–ʒj (0.65–4.0). **S. sulphocar′bolas** (Ph. U. S. and Br.), sodium sulphocarbolate; occurs in colorless, transparent crystals; employed to restrict fermentation and as an intestinal antiseptic; dose, gr. ij–x (0.13–0.65). **S. tellu′ras**, sodium tellurate; used in the night-sweats of phthisis in doses of gr. $\frac{1}{6}$–$\frac{1}{3}$ (0.01–0.02) two or three times a day. **S. thiosul′phas**, s. hyposulphis. **S. valeria′nas**, sodium valerianate; uses same as ammonium valerianate; dose, gr. j–v (0.065–0.32).

**Sodioben′zoate of caffeine′.** Benzoate of sodium added to citrate of caffeine, the solubility of caffeine being greatly increased by the addition. The addition of salicylate of sodium to caffeine has a similar effect, producing *sodiosalicylate of caffeine.*

**Sodiosal′icylate of caffeine′.** See *Sodiobenzoate of caffeine.*

**Sodiotheobromine′ sal′icylate.** Diuretin.

**So′dium.** Symbol, Na (*natrium*). A soft, alkaline metallic element, the basis of soda. **S. ar′senate, ben′zoate, bicar′bonate,** etc., see *Sodii arsenas, benzoas, bicarbonas,* etc. **S. hy′drate** or **hydrox′ide,** soda.

**Sod′omist.** One given to the practice of sodomy.

**Sod′omy.** Sexual intercourse by the rectum.

**Soem′isch's ul′cer.** Infectious ulcer of the cornea.

**Soem′mering's bone.** Marginal process of malar bone. **S.'s crys′talline swel′ling,** ring-like tumefaction of the capsule of the eye, back of the iris, after the operation of extraction of the crystalline. **S.'s fora′men,** foramen centrale of the retina. **S.'s gan′glion,** substantia nigra. **S.'s gray sub′stance,** S.'s ganglion. **S.'s lig′ament,** suspensory ligament of the lacrymal gland. **S.'s nerve,** long pudendal nerve. **S.'s yel′low spot,** yellow spot surrounding the foramen centrale.

**Soft′ening.** Mollities. **S. of the brain,** mollities cerebri. **Gray s.,** appearance in mollities after partial absorption of the fat. **Green s.,** s. with a purulent focus. **S. of the heart,** softening of the muscular structure of the heart from anæmic condition of the coronary arteries. **Inflam′matory s.,** a form of red softening due to inflammation. **Mu′coid** or **mu′cous s.,** see *Mucoid.* **Red s.,** usually an inflammatory form. **S. of the stom′ach,** gastromalacia, occurring sometimes after death. **White s.,** s. due to fatty local degeneration. **Yel′low s.** generally results from degeneration of a patch of red softening.

**Soil disease′.** Any disease believed to be caused by poisonous exhalations from the soil. **S. pipe,** pipe conducting waste material from houses to the common sewer.

**Sol.** The sun. Abbr. for solution.

**Solæ′us.** Soleus.

**Sola′men intestino′rum.** Pimpinella anisum. **S. scabioso′rum,** fumaria.

**Solanicin′.** Compound produced by action of strong hydrochloric acid upon solanidin.

**Solanidin′.** A product resulting from the action of dilute acids upon solanine

**Solanine′.** Bitter alkaloid from Solanum dulcamara.

**So′lanoid** (*solanum,* potato, *eidos,* resemblance). Resembling a potato. Epithet applied to a form of cancer, *solanoma,* which appears to be intermediate between scirrhus and encephaloid, increasing more rapidly than the former, yet approaching it in firmness.

**Solano′ma.** See *Solanoid.*

**Sola′num** (*solor,* to soothe). Common or garden nightshade. Family *Solanaceæ.* Narcotic poison; the oil is anodyne and discutient. **S. carolinen′se,** horse nettle; indigenous; the juice of the berries is said to have been employed successfully in idiopathic tetanus. **Sola′num carthinen′se,** a depressant of respiration and of the cerebrum, and a stimulant of the spinal cord. **S. dulcama′ra,** bittersweet, woody nightshade, bittersweet nightshade, bittersweet vine, nightshade vine, violet bloom; the taste of the young branches—dulcamara (Ph. U. S.)—is bitter, followed by sweetness; hence its name; it has been used as a diuretic and sudorific, especially in chronic rheumatism, humoral asthma, dropsy, skin diseases, scrofula, and jaundice; its active principle is called solanine, $C_{42}H_{87}NO_{15}$, used as a substitute for morphine in neuralgia, bronchitis, asthma, vomiting of pregnancy, etc. **S. esculen′tum,** S. tuberosum. **S. fœ′tidum,** fetid solanum; another name for Datura stramonium. **S. furio′sum,** Atropa belladonna. **S. horten′se ni′grum,** Atropa belladonna. **S. humboldt′ii,** S. lycopersicum. **S. letha′le,** deadly solanum; name for Atropa belladonna. **S. ligno′sum,** another name for Solanum dulcamara. **S. lycoper′sicum,** the fruit is the tomato or loveapple. **S. mag′num virginia′num ru′brum,** Phytolacca decandra. **S. mani′acum,** Atropa belladonna, Datura stramonium. **S. melanocer′asus,** Atropa belladonna. **S. melon′gena,** egg-plant, mad-apple plant; native of Asia, Africa, and America; its oblong, egg-shaped fruit, pomum melongenæ, malum insanum, is edible. **S. ni′grum,** solanum. **S. ni′veum,** S. African plant; the leaves, applied to foul ulcers, cleanse them; the fresh juice of the berries and leaves, as an ointment, is used by the Boers for the same purpose. **S. panicula′tum,** a shrub of Brazil, where the juice of the bruised leaves, unripe fruit, the plant itself, and its root are used as a tonic. **S. parmente′rii,** S. tuberosum. **S. pseudocap′sicum,** Jerusalem cherry. **S. pseudolycoper′sicum,** S. lycopersicum. **S. quadrifo′lium,** paris. **S. racemo′sum america′num,** Phytolacca decandra. **S. sanc′tum,** Palestine nightshade; the fruit is globular, and eaten in the countries where it is native. **S. scan′dens,** S. dulcamara. **S. tubero′sum,** potato; native of Peru; a nutritious and wholesome vegetable. **S. u′rens,** Capsicum annuum. **S. vesica′rium,** physalis. **S. virginia′num,** indigenous; said to resemble Solanum nigrum in its properties. **S. vulga′re,** solanum.

**So′lar** (*sol,* the sun). Relating to the sun, having rays like the sun. **S. asphyx′ia,** sunstroke. **S. exhaus′tion,** sunstroke. **S. plex′us,** epigastric plexus; collection of ganglions and filaments interweaving and anastomosing repeatedly, and belonging to the system of the great sympathetic; this vast plexus, lying on the vertebral column, the aorta, and the pillars of the diaphragm, has a very irregular shape; the ganglia and filaments composing it are soft, reddish, and almost all issue from the semilunar ganglions; it receives the branches from the pneumogastrics; it seems to be chiefly intended for the aorta, and accompanies all its branches, furnishing secondary plexuses which are called the infradiaphragmatic, cœliac, superior mesenteric, inferior mesenteric, renal or emulgent, spermatic, etc. **S. spec′trum,** see *Spectrum.*

**Sola′rium** (*sol,* sun). Sun-dial; sun-bath.

**Solariza′tion.** Exposure to direct rays of the sun; in photography, injury of negative due to its over-exposure to the sun's light while it is in the camera.

**Solayre's** (so-lairs′) **obliq′uity.** Descent of the child's head by its long diameter into the oblique diameter of the pelvis.

**Soldanel′la.** Convolvulus soldanella.

**Sol'dier's spots.** Maculæ albæ. **S. wood,** matico.

**Sole** (*solum,* the ground). Sole of the foot; the under surface of the foot. **S. plate,** the end organ of a motor nerve. **S. re'flex,** plantar reflex.

**So'lea.** Sole. **S. ipecacuan'ha,** see *Ipecacuanha.* **S. verticillat'a,** Ionidium polygalæfolium

**Solenochalasis,** so-len-o-kal'as-is (*solen,* canal, *chalasis,* relaxation). Enlargement of a canal.

**Solenostegno'sis** (*solen,* canal, *stegnosis,* constriction). Narrowing of a canal.

**Solenostem'ma ar'gel.** Cynanchum oleæfolium.

**Sole'us** (*solea,* sole of the foot). Gastrocnemius internus. Muscle situated at the posterior part of the leg; broad, flat, and almost oval; attached above to the posterior edge of the fibula, to the oblique line on the posterior surface, and to the inner edge of the tibia. It terminates below by a large tendon, which unites with that of the gastrocnemius externus to form the tendo Achillis. This muscle extends the foot on the leg, and conversely.

**Solferi'no.** Fuchsin or anilin red.

**Sol'id.** Body whose integrant molecules are so united by the force of cohesion that they will not separate by their own weight, One which is not hollow. **S. par'affin,** one of the products of petroleum. See *Paraffin.*

**Solida'go.** A genus of composite plants; the golden rod. **S. odo'ra,** golden rod; indigenous; popular diaphoretic and emmenagogue. **S. rig'ida,** rigid golden rod; indigenous; is astringent and tonic. **S. saracen'ica,** S. virgaurea. **S. virgaur'ea,** golden rod; the leaves and the flowers of fragrant or sweet-scented golden rod have been recommended as aperients and tonics in urinary diseases and internal hemorrhage. **S. vulga'ris,** S. virgaurea.

**Solidifica'tion** (*solidus,* solid, *facio,* to make). Act of making or becoming solid.

**Sol'idism** (*solidus,* solid). The obsolete doctrine of the *Solidists,* who referred all diseases to alterations of the solid parts of the body. They thought the solids alone were endowed with vital properties; that they alone could receive the impression of morbific agents and be the seat of pathological phenomena.

**Solid'ity.** State of being solid. Opposed to fluidity.

**Sol'ids** (*solidus,* solid). Term applied to the bones, ligaments, muscles, nerves, and vessels of the body.

**Solidungula'ta** or **Solidun'gulates** (*solidus,* solid, *ungula,* hoof). Animals with solid hoofs, such as the horse.

**So'liped** (*solidus,* solid, *pes,* foot). An animal whose hoof is not cloven. Solidungulus.

**Solita'rius pharyn'gis.** Azygos pharyngis.

**Sol'itary bun'dle** or **fascic'ulus.** Bunch of nerve-fibres in upper portion of the spinal cord and in the medulla oblongata. **S. fol'licles** or **glands of intes'tine,** small, granular bodies found in the mucous membrane of the small intestines. **S. tu'bercle,** a tubercular nodule composed of miliary tubercles enclosed in fibrous tissue, frequently found in the central nervous system.

**So'lium.** Tænia solium.

**Sollu'nar** (*sol,* sun, *luna,* moon). Applied to a fancied influence exerted by the sun and moon on man in a state of health and disease.

**Sol'omon's seal.** Polygonatum multiflorum. The false Solomon's seal is a perennial plant; genus *Smilacina.*

**Solubil'ity** (*solveo,* to set free, *habilis,* able). That property of a body by virtue of which it can be dissolved.

**Sol'uble.** Capable of being dissolved. Relaxing; term applied to the bowels when gently relaxed. **S. glass,** silicate of potassium or sodium.

**So'lum.** Sole. **S. pe'dis,** metatarsus, sole.

**Solu'tio.** Solution. **S. ammo'niæ subcarbona'tis,** liquor ammonii subcarbonatis. **S. arsenica'lis,** liquor arsenicalis. **S. arsenica'ta,** liquor arsenicalis. **S. arseni'tis kal'icæ,** liquor arsenicalis. **S. cal'cis,** liquor calcis. **S. cam'phoræ æthe'rea,** tinctura ætherea camphorata. **S. cam'phoræ oleo'sa,** linimentum camphoræ. **S. contin'ui,** solution of continuity. **S. cu'pri ammonia'ti,** liquor cupri ammoniati. **S. fer'ri nitra'tis,** liquor ferri nitratis. **S. guai'aci gummo'sa,** mistura guaiaci. **S. muria'tis bary'tæ,** muriate of baryta. **S. muria'tis cal'cis,** see *Calcis murias.* **S. potas'sii io'didi ioduret'a** liquor iodinii compositus. **S. resi'næ guai'aci aquo'sa,** mistura guaiaci. **S. solven'tis minera'lis,** liquor arsenici chloridi. **S. subcarbona'tis ammoni'aci spirituo'sa,** spiritus ammoniæ. **S. sulpha'tis cu'pri compos'ita** Sydenham's styptic water; made of copper sulphate, alum, sulphuric acid, and water; styptic and, largely diluted, an astringent collyrium.

**Solu'tion.** Operation of dissolving. Likewise, the product of such operation, solutum. For the official solutions, see *Liquor.* Termination of a disease or the crisis of a disease. Separation. **Boul'ton's s.,** etc., see the proper names. **Alcohol'ic s.,** solution of any substance in alcohol as a menstruum. **A'queous s.** solution of any substance in water. **Centinor'mal s.,** a solution one one-hundredth the strength of a normal solution. **S. of contigu'ity,** dislocation, luxation. **S. of continu'ity,** division of structures by injury, ulceration, etc. **Decinor'mal s.,** a solution one-tenth the strength of a normal solution. **Empir'ical s.,** see *Standard s.* **Ethe'real s.,** solution of any substance in ether as a menstruum. **Nor'mal s.,** a solution containing in one litre enough of the dissolved substance to saturate or replace one gramme of hydrogen; this term is often incorrectly used for the physiological salt solution, which is approximately a *decinormal s.* **Physiolog'ical salt s.,** a solution of sodium chloride in water, of 0.6 to 0.75 per cent. strength; approximately a decinormal solution. **Salt s.,** a solution of sodium chloride; a *normal s. s.* contains 58.37 grammes to the litre, a *decinormal s. s.* 5.837 grammes to the litre, or 0.58 per cent.; see *Normal s.* and *Physiological salt s.* **Sat'urated s.,** one containing all of any substance that it is possible to dissolve in the menstruum employed. **Seminor'mal s.,** a solution one-half the strength of the normal s. **Stan'dard s.,** a s. containing a known and definite quantity of any substance; it may be a *normal s.* or an *empirical s.,* in the latter case the amount of the substance being arbitrarily determined, but constant; such solutions when employed in volumetric analysis are called also volumetric solutions. **Supersat'urated s.,** one in which by heating the menstruum a greater quantity of the substance is dissolved than would be possible were the process conducted in the cold. **Volumet'ric s.,** see *Standard s.*

**Sol'utol.** Solution of cresol in creosotate of sodium. Its applications are similar to those of solveol.

**Solu'tum.** Solution.

**Sol've** (Lat.). Dissolve. Term employed in a prescription when such action is to be indicated.

**Sol'vent** (*solveo,* to set free). Medicine supposed to possess the property of dissolving or removing obstructions and extraneous substances, such as a stone in the bladder, etc. **S. treat'ment,** continuous treatment of uric-acid calculi, of gallstones, etc., by the administration of agents supposed to be capable of effecting their solution.

**Sol'veol.** Solution of sodium-cresol in excess of cresol. Applied in surgery in solution of 0.5 per cent. as an antiseptic application to wounds and abscesses, and in bacteriological researches.

**Sol'vin.** Sodium sulphoricinate.

**So'macule** (*soma,* body). Minutest division of protoplasm possible for retention of physiological properties.

**Somæsthet'ic** (*soma,* body, *aisthesis,* sensation). Relating to sensation, as affecting the whole body; as *s. area* of cortex of the brain.

**Somat'ic** (*soma,* body). Relating to the body, as somatic death, or death of the body, in contradistinction to molecular death, or the death of a part. Also relating to the walls of a body-cavity as distinguished from its contents.

**So′matoblast.** Primitive organic cell matter concerned in development of cell material.

**So′matocatagonio′des.** Double monster with separate trunks, the axes of which are divergent.

**So′matochrome.** Neuron with well-developed, easily stainable cell-body.

**Somatodid′ymus** (*soma*, body, *didymos*, twin). A double monster united by the trunk. See *Somatodymia.*

**Somatodym′ia** (*soma*, body, *dyo*, to enter). Double monstrosity in which the trunks are united. There are several varieties: in *vertebrodymia* the union is by the vertebræ; *ischiodymia*, by the ossa ischii; *sternodymia*, by the sternum; *supra-omphalodymia* and *infra-omphalodymia*, by the superior and inferior umbilical regions; and *sterno-omphalodymia*, when the union is by both the sternal and the umbilical regions.

**Somatol′ogy** (*soma*, body, *logos*, discourse). Treatise on the human body. Anatomy.

**So′matome** (*soma*, body, *tome*, division). Vertebral segment of embryo; protovertebra. Instrument for cutting the fœtus in case of impaction; embryotome.

**Somatop′agus.** Double monstrosity with separate trunks.

**Somatoparalle′lus.** Double monster with separate trunks, the axes of which are parallel.

**So′matopleure** (*soma*, body, *pleura*, side). Upper layer of mesoblast together with the epiblast.

**So′matose.** A yellow, soluble powder containing the nutritive qualities of meat minus the glutinous material, fat, creatin, xanthin, etc.

**Somatot′omy** (*soma*, body, *tome*, incision). Anatomy.

**Somatotrid′ymus.** Monster with three bodies.

**So′mite** (*soma*, body). Myotome, metamere, protovertebra.

**Som′nal.** Ethylated chloral urethane. Made by combining, in a vacuum apparatus, urethane alcoholate and chloral. Hypnotic, resembling chloral.

**Somnambula′tion** or **Somnam′bulism** (*somnus*, sleep, *ambulo*, to walk). Sleep-walking. Performance, during sleep, of walking and other actions that are ordinarily confined to the waking state. Also the hypnotic state in which the senses are normally acute, but are under the influence of suggestion

**Somnam′bulist.** Sleep-walker.

**Somnambulis′tic.** Relating to somnambulism.

**Somnam′bulous.** Somnambulistic.

**Somnia′tio** (*somnium*, dream). Dreaming. **S. morbo′sa,** hallucination; morbid, uneasy dreaming.

**Somnifa′cient** (*somnus*, sleep, *facio*, to make). Hypnotic; a drug inducing sleep.

**Somniferin′** (*somnus*, sleep, *fero*, to bear). A morphine-ether compound, thought to be stronger than morphine and without action upon the heart.

**Somnif′erous.** Causing sleep.

**Somnil′oquism.** Talking in sleep.

**Somnil′oquist** (*somnus*, sleep, *loquor*, to speak). One who talks in his sleep.

**Somnil′oquous.** Having a tendency to somniloquy.

**Somnil′oquy.** Talking in sleep.

**Som′nium** (*somnus*, sleep). A confused assemblage or accidental and involuntary combination of ideas and images presenting themselves to the mind during sleep. The state between sleeping and waking in which persons perform acts of which they are unconscious. Waking dreams. See *Hallucination.*

**Som′nolence** or **Som′nolency.** Sleepiness; a state intermediate between sleeping and waking.

**Som′nolent** (*somnus*, sleep). Sleepy; drowsy.

**Som′nolism.** Somnolency induced by hypnotism.

**Somnop′athy** (*somnus*, sleep, *pathos*, affection). Hypnotic somnambulism.

**Somnovigil,** som-no-vij′il (*somnus*, sleep, *vigil*, awake). Somnambulism.

**Som′nus.** Sleep.

**Sonchus,** son′kus. Sow thistle, swine thistle; ord. *Cichoraceæ.* Most species of it abound with a milky juice, which is bitter and said to possess diuretic virtues. **S. arven′sis,** plant of Europe, grown in this country; field sow thistle; decoction of the leaves has been used as a galactagogue. **S. florida′nus,** Mulgedium floridanum. **S. olera′ceus,** a European plant grown in the United States; common sow thistle.

**Sonde** (Fr.). Sound.

**Son′itus aur′ium** (sound of the ears). Tinnitus aurium. **S. cardi′acus** or **S. cor′dis,** a heart sound. **S. flu′idi,** sound of fluid, heard by auscultation or otherwise. **S. hepat′icus,** sound rendered by the liver on percussion. **S. intestina′lis,** sound of the movement of the intestines, heard by the stethoscope. **S. stomach′icus,** sound heard on auscultating or percussing the region of the stomach.

**Sonom′eter** (*sonus*, sound, *metron*, measure). An instrument consisting of a small bell fixed upon a table, for testing the efficiency of treatment for deafness. More correctly a phonometer.

**Sono′rous.** Producing a clear ringing or musical sound. **S. râle** or **rhon′chus,** see *Râle.*

**So′nus.** Sound. **S. vo′cis,** accent.

**Soor.** Sore. Aphthæ; parasitic stomatitis; thrush.

**Soot.** Fuligo. **S. can′cer,** chimney-sweep's cancer of the scrotum. **S. drops,** mixture used in hysteria, consisting of wood-soot, asafœtida, and alcohol. **S. tea,** see *Fuligokali.* **S. wart,** chimney-sweep's cancer.

**Sophi′a.** Sisymbrium sophia.

**Sophistica′tion** (*sophistikos*, deceitful). Falsification or adulteration of drugs or food.

**Sophoma′nia** (*sophos*, wise + *mania*). A form of mania of grandeur, in which the patient believes in his own superior wisdom.

**Sopho′ra heptaphyl′la.** A shrub, of the order *Leguminosæ*, the root and seeds of which are intensely bitter. Said to be useful in cholera, colic, dysentery, etc. **S. japon′ica,** tree of Asia, grown in the United States, flowers of which are used in China to dye a yellow color. **S. seric′ea,** herb growing in the Western United States; contains an alkaloid thought to be the same as sophorine. **S. specio′sa,** tree growing in Texas, the seeds of which are poisonous and yield a volatile liquid alkaloid, sophorine. **S. tincto′ria,** wild indigo, indigo weed, broom, indigo broom, horsefly weed, yellow broom, clover broom, rattlebush, yellow indigo; the taste of the root is unpleasant, subacrid, and nauseous—similar to that of ipecacuanha; in a large dose the bark of the root acts as an emetic and cathartic; it has been considered antiseptic and febrifuge, and has been used, in the form of fomentation or cataplasm, in phagedenic and gangrenous ulcers; a liniment prepared by simmering the cortical part of the root in cream has been found efficacious when applied to sore nipples and ulcerated breasts.

**Sophorine′.** Alkaloid of Sophora speciosa.

**Sophronet′icus.** Wisdom tooth

**Sophronis′tadens** (*sophroneo*, to act wisely). Wisdom tooth. See *Dentition.*

**So′piens** (*sopio*, to put to sleep). Paregoric.

**Sopient,** so′pe-ent. Putting to sleep.

**So′por.** Sleep, and especially a profound sleep, from which the person can be roused with difficulty; a symptom in many of the neuroses. **S. carot′icus,** the last and totally insensible stage of coma.

**Sopora′riæ arte′riæ.** Carotids.

**So′porative** (*sopor*). Somniferous.

**Soporif′erous** (*sopor*, sleep, *ferre*, to carry). Somniferous.

**Soporif′ic** (*sopor*, sleep, *facio*, to make). Somniferous.

**So′porose** (*sopor*, sleep). Sleepy.

**So′porous** (*sopor*, sleep). Sleepy; causing sleep.

**So′ra.** Essera.

**Sorb tree.** Sorbus domestica.

**Sorbastrel′la.** Pimpinella saxifraga.

**Sorbefa′cient** (*sorbeo*, to suck in, *facio*, to make). Agent promoting absorption.

**Sor′bic acid.** Acid of mountain-ash berry.

**Sorbin′.** Sugar obtained from mountain-ash berry.

**Sor′bit.** Crystalline, saccharine principle of mountain-ash berry; isomeric with mannit.

**Sor′bus.** Cratægus aria, Sorbus domestica. **S. alpi′na,** Cratægus aria. **S. america′na,** American mountain-ash; the bark resembles wild cherry, and is useful in the same cases. **S. a′pia,** Cratægus aria. **S. aucupa′ria,** mountain service, sorbus of the bird-catchers, mountain-ash, quicken tree, roan tree, witch-hazel, witchwood, ord. *Rosaceæ;* berries of the tree are employed for same purposes as those of Sorbus domestica. **S. of the bird′catchers,** S. aucuparia. **S. cydo′nia,** Pyrus cydonia. **S. domes′tica,** service or sorb tree; the fruit of the tree, sorbum, is astringent, and has been recommended in diarrhœa and dysentery. Saccharine matter extracted from the fruit has been callled *sorbin.* **S. ma′lus,** Pyrus malus.

**Sor′des** (filth). Dirty looking sanies discharged from ulcers. Also accumulation of the secretions of the mouth on the teeth, in adynamic fevers especially, and of foul matters in the stomach—sordes primarum viarum. Dirt of any kind. **S. acathar′sia,** ichor, saburra. **S. ac′idæ,** acidities. **S. aur′ium,** cerumen. **S. gas′tricæ** or **prima′rum via′rum,** undigested food mixed with mucus in the stomach. **S. ven′tris,** excrement.

**Sordic′ulæ aur′ium.** Cerumen.

**Sor′did** (*sordidus,* to be filthy). Filthy; foul.

**Sore.** Ulcer. **Bay s.,** disease considered as true cancer, endemic in the Bay of Honduras. **Hard s.,** chancre. **S. mouth,** stomatitis. **Gan′grenous s. m.,** cancer aquaticus. **Swan Al′ley s. m.,** see *Phagedenic chancre.* **Orien′tal s.,** Aleppo evil, Penjdeh ulcer. **Soft s.,** chancroid. **S. throat,** cynanche. **Cler′gyman's s. t.,** follicular pharyngitis. **Foth′ergill's s. t.,** see *Scarlatina.* **Inflam′matory s. t.,** cynanche tonsillaris. **Pu′trid s. t.,** cynanche maligna. **Ul′cerous s. t.,** cynanche maligna. **Wa′ter s.,** water itch.

**Sore′ness.** Painful uneasiness or tenderness, local or general, on being touched with pressure that does not usually excite distressing feeling; often a febrile symptom. Also the tenderness of a wound, ulcer, etc.

**Soret's** (sor-aze′) **band.** A band in the extreme violet end of the spectrum of hæmoglobin.

**Sor′ghum.** Panicum italicum. **S. sacchara′tum,** see *Saccharum.*

**Soro′che.** Mountain sickness.

**Soro′sis** (*soros,* a collection). Multiple fruit, such as a mulberry or a pine-apple.

**Sor′rel.** A plant of the genus *Rumex.* **Com′mon s.,** Rumex acetosus. **Field s.,** Rumex acetosella. **French s.,** Rumex scutatus. **Gar′den s.,** Rumex scutatus. **Moun′tain s.,** Oxalis acetosella, Oxyria reniformis. **Ro′man s.,** Rumex scutatus. **Salt of s.,** potassium oxalate. **Sheep s.,** Rumex acetosella. **S. tree,** andromeda. **Welsh s.,** Oxyria reniformis. **White s.,** Oxalis acetosella.

**Soteriol′ogy** (*soterios,* preserving, *logos,* discourse). Treatise on hygiene

**Souf′fle.** Murmur. **Amphor′ic s.,** see *Cavernous respiration.* **Bron′chic s.,** see *Murmur, respiratory.* **Car′diac s.,** murmur of the heart. **Elec′tric s.,** electric aura; electrified current of air from moving static machine. **Fe′tal s.,** sound of fetal heart, heard upon auscultation. **Fu′nic** or **funic′ular s.,** umbilical s. **Metal′lic s.,** see *Cavernous respiration.* **Placen′tal s.,** a blowing sound heard over the site of the placenta on auscultating the abdomen of the pregnant woman. **Tra′cheal s.,** see *Murmur, respiratory.* **Splen′ic s.,** sound heard over the region of the spleen in cachectic conditions implicating this organ. **Umbil′ical s.,** sibilant sound, synchronous with the fetal souffle, and believed to have its origin in the umbilical cord. **U′terine s.,** placental s. **Whis′pering s.,** bellows sound heard over a solidified lung and excavations when the patient whispers.

**Soulame′a ama′ra.** Shrub of the Moluccas; very bitter; employed by the Malays in cholera and pleurisy and as a febrifuge.

**Soul′-blindness.** Mind-blindness.

**Sound.** Instrument used by surgeons to discover the existence of stone in the bladder; usually made of highly polished steel and shaped like the catheter. The operation is termed sounding. Also any instrument introduced into cavities or into wounds and fistulas to probe their condition or to fulfil some therapeutical indication. Also noise, or the sensation produced on the auditory nerve by the vibrations of a sonorous body. Sound also means healthy. As a verb, to pass a sound or catheterize, or to examine a part by auscultation and percussion. For the sounds heard on physical examination, see *Bruit, Râle, Rhonchus, Souffle.* **Nélaton's′ s.,** a probe having a bulbous extremity of porcelain for probing deep gunshot wounds with the view of detecting the presence of a ball, which makes a leaden mark on the bulb; said to have been first used by Nélaton, of Paris, in Garibaldi's case. **U′terine s.,** instrument somewhat like a small male catheter, to be introduced into the cavity of the uterus in the diagnosis of diseases of that viscus; when notched on the stem it enables the size of the uterine cavity to be appreciated, and becomes a good hysterometer.

**Sound-collect′ing appara′tus.** Pinna.

**Sound-conduct′ing appara′tus.** Those parts of the auditory apparatus external to the labyrinth.

**Sound′ing.** Searching. See *Sound.* **S. the chest,** see *Auscultation.*

**Sound′ness.** Health. **S. of mind,** sanity.

**Sound-perceiv′ing appara′tus.** Cochlea and special nerve of hearing, with the auditory nucleus, auditory centre, etc.

**Soupart's′ amputa′tion.** See *Amputation.*

**Sour ber′ry.** See *Oxyacantha galeni, Vaccinium oxycoccos.* **S. dock,** Oxyria reniformis, Rumex crispus. **S. gum,** Nyssa capitata. **S. gum tree,** Nyssa multiflora. **S. leaf,** Andromeda arborea. **S. milk,** buttermilk. **S. sop,** Bromelia ananas; fruit of Anona muricata. **S. tree,** Andromeda arborea. **S. wood,** Andromeda arborea, Andromeda mariana, Oxydendron arboreum.

**South Amer′ican ki′no.** Caracas kino, resembles West Indian kino in property and Jamaica kino in solubility.

**South′ern cat′tle fe′ver.** Texas fever. **S. prick′ly ash,** Xanthoxylum carolinianum.

**South′ernwood.** Artemisia abrotanum. **Field s.,** Artemisia campestris. **Mar′itime s.,** Artemisia maritima. **Tartar′ian s.,** Artemisia santonica.

**Sow bread.** Arthanita; cyclamen. **S. this′tle,** Sonchus oleraceus.

**Soymi′da febrif′uga.** Swietenia febrifuga.

**Soy's disease′.** Horsepox.

**So′zal.** Aluminum-paraphenolsulphonate. Soluble, crystalline powder formed by dissolving aluminum hydroxide in paraphenolsulphonic acid; used externally in solution as an antiseptic application to ulcers, etc.

**Sozal′bumose.** Antiphthisin.

**Sozin′** (*sozo,* to save). One of a class of defensive proteids, so called, normally present in a healthy animal. They include *mycosozins,* which are microbicide to pathogenic microorganisms, and *toxosozins,* which destroy the deleterious products or toxins of microbes.

**Sozi′odol.** Sozoiodol.

**Sozoi′odol.** Di-iodophenol-sulphuric acid. Monobasic acid, containing nearly 53 per cent. of iodine and 7 per cent. of sulphur; in soluble, needle-shaped prisms; odorless; antiseptic, and employed wherever iodoform may be prescribed, in skin diseases, in gynecological practice, venereal disases, general surgery, etc. **Mer′cury s.** has been employed in syphilis, applied locally or subcutaneously. **Potas′sium s.** and **So′dium s.** are used, especially the latter, in ulcers, affections of the bladder by irrigation, and in nasal catarrh. **Zinc s.** is similarly employed, and is also used in mucous genito-urinary discharges.

**Sozoio′dolate.** A compound of *sozoiodol*, which see.

**Sozoiodol′ic acid.** Obtained by decomposition of sozoiodol.

**Sozol′ic acid.** Sulphocarbolic acid, aseptol; liquid with odor of carbolic acid. Disinfectant and antiseptic.

**Space.** An indefinite term applied to a part of the body limited by certain boundaries; it may be an area on the surface of the body or an organ, or a cavity in the interior. **Ax′illary s.**, see *Axillæ.* **Bregmat′ic s.**, anterior fontanelle. **Doug′las's s.**, see *Uterus.* **Epidu′ral s.**, that around the dura mater of the brain and spinal cord. **S. of Fonta′na**, see *Fontana.* **Haver′sian s.**, space in cancellous tissue of bone. **Intercos′tal s.**, that between two ribs. **Interglob′ular s.**, one of the irregular spaces near the outer part of the dentinal surface. **Interpedun′cular s.**, see *Interpeduncular.* **Lymph s.**, see *Lymph space.* **S.-nerves**, filaments of the auditory nerve in semicircular canals. **Per′forated ante′rior s.**, locus perforatus anticus. **Per′forated poste′rior s.**, see *Tarini pons.* **Perichoroid′al s.**, lymph space between the sclerotic coat and the choroid. **Poplite′al s.**, that at the back part of the knee and thigh. **S. of Poiseuille′**, see *Still layer.* **Retroperitone′al s.**, space back of the peritoneum and anterior to the spinal column and muscles of the loin. **S. of Ret′zius**, see *Retzius.* **Semilu′nar s.**, Traube's s. **S. sense**, sense which instructs one as to position, location, and relations of an object in space; sight and touch are active component parts of this sense. **Subarach′noid s.**, space between the arachnoid membrane and the pia mater. **Subdu′ral s.**, space between the dura mater and arachnoid membrane. **Subumbil′ical s.**, space, triangular in shape, in the body-cavity of the fœtus. **Tén′on's s.**, see *Fascia of Ténon.* **Trau′be's s.**, see *Traube.* **Vir′chow-Ro′bin's s.**, see *Virchow-Robin.* **Zang's s.**, see *Zang.*

**Spade′bone.** Scapula.

**Spa′do** (*spadon*). Eunuch; gelding.

**Spagirists**, spaj′ir-ists (*spao*, to separate, *ageiro*, to assemble). Paracelsians.

**Span.** Space from the end of the thumb to the end of the little finger when extended; nine inches; one-eighth of a fathom.

**Spanæ′mia** (*spanos*, poor, *haima*, blood). Poverty of the blood. Diminished quantity of red corpuscles.

**Spanæ′mic.** Relating to spanæmia. Medicine whose continued use is said to impoverish the blood.

**Spanapo′gon** (*spanos*, rare, *pogon*, beard). One who has lost his beard or has a thin beard.

**Spa′ning.** Weaning. **S. brash**, weaning brash.

**Span′ish baril′la.** Plant called saltwort; barilla. **S. bay′onet**, plant of genus *Yucca*, found in some parts of the Southern United States, in New Mexico, and Arizona, having stiff, sharp-pointed leaves. **S. broom**, shrub of genus *Spartium*, thickly set with verdant, flexible, rush-like twigs. **S. fe′ver**, Texas cattle fever. **S. fly**, cantharis. **S. juice**, extractum glycyrrhizæ. **S. lic′orice-root**, glycyrrhiza. **S. moss**, Tillandsia usneoides. **S. nee′dle**, Bidens bipinnata. **S. oak**, Quercus falcata. **S. pel′litory**, Anacyclus pyrethrum. **S. saf′fron**, variety of commercial saffron. **S. soap**, Castile soap. **S. wal′nut oil**, candlenut oil. **S. white**, impalpable powder of prepared chalk; nitrate of bismuth. **S. wind′lass**, old-fashioned tourniquet, made by tying a cord or handkerchief around the limb, inserting beneath it a stick of wood, and then turning the stick so as to tighten the cord.

**Spanopnœ′a** (*spanos*, rare, *pnoe*, breathing). Unnaturally slow and profound breathing.

**Span′ton's opera′tion.** Method for radical cure of hernia by an instrument resembling a corkscrew, which is twisted through the canal.

**Spar.** A term applied to crystallized earthy mineral of shining lustre. **Flu′or s.**, fluoride of calcium, fluorite; Derbyshire spar. **Heav′y s.**, native sulphate of baryta.

**Sparadrap′** (Fr.). Adhesive plaster spread on linen or paper.

**Sparag′ma** (*sparasso*, to tear). Laceration.

**Sparag′mus** (*sparagmos*, tearing). Spasm, especially epileptic.

**Sparagno′sis** (*spargao*, to swell). Elephantiasis arabum.

**Sparal′lium.** Injection into the vagina.

**Spare′dia.** Bandage covered with the white of egg.

**Sparga′nium ramo′sum.** Great burreed. Indigenous plant, ord. *Typhaceæ.* Roots are subastringent, but esculent, yielding a fine fecula similar to salep; sometimes made into a poultice for inflamed mammæ.

**Spargano′sis** (to be full to bursting). Extreme distention of secretory organs, especially of the breasts with milk. **S. puerpera′rum**, phlegmasia dolens.

**Spargo′sis** (*spargao*, to swell). Sparganosis.

**Spark.** Noisy flash of light from discharge of an electrical machine.

**Sparse** (*spargo*, to strew about). Term applied to anatomical or pathological elements which are few in number, scattered, or preserve no regular order.

**Sparsiflo′rous** (*sparsus*, scattered, *flos*, flower). Having scattered flowers.

**Sparsifo′liate** (*sparsus*, scattered, *folium*, leaf). Having scattered leaves.

**Spar′sus** (*spargo*, *sparsum*, to throw here and there). Sporadic.

**Sparteï′næ sul′phas.** (Ph. U. S.) Sulphate of sparteïne. It acts upon the heart like digitalis; dose, gr. $\frac{1}{20}$–$\frac{1}{2}$ (0.0032–0.032). See *Spartium scoparium.*

**Sparteïne′.** Liquid alkaloid from spartium scoparium or Cytisus scoparius. Cardiac tonic.

**Spar′tium jun′ceum.** Spanish broom; ord. *Leguminosæ;* small European shrub cultivated in the United States; the seeds are diuretic and tonic in small doses, emetic and cathartic in large; used in dropsy. **S. scopa′rium**, broom; broom tops, *scoparius* (Ph. U. S.); tops of Cytisus scoparius; has a bitter taste and possesses diuretic properties and has been used in dropsies. It yields an alkaloid, *sparteïne*, $C_{15}H_{26}N_2$, a volatile, oily liquid, used in the form of sulphate in cardiac affections and as a diuretic; also a yellow, crystallized, non-poisonous substance, *scoparin*, which is diuretic. **S. tincto′rium**, Genista tinctoria.

**Spasm** (*spao*, to draw). The word was formerly and is still occasionally used in the general sense of convulsion. It is now usually applied to involuntary muscular contractions; these have been divided into tonic spasm—paratonia—consisting in permanent rigidity and immobility of the muscles that are the seat of it (see *Tetanus*), and clonic spasm, consisting in alternate contractions and relaxations. **Accommoda′tion s.**, s. of the ciliary muscle. **Clon′ic s.**, see *Spasm* and *Convulsion.* **Cyn′ic s.**, see *Canine laugh.* **Fixed s.**, continuously rigid, tetanic condition of a muscle or muscles. **Func′tional s.**, writers' cramp or any affection of that class. **S. of the glot′tis**, asthma thymicum. **Hab′it s.**, spasmodic actions resulting from habit; one form of chorea, for example. **Hand′icraft s.**, occupation neurosis. **Histrion′ic s. of the face**, see *Tic.* **S. of the lar′ynx**, asthma thymicum. **Lock s.**, a form of writers' cramp in which the fingers become so rigidly contracted upon the pen that it cannot be removed. **Mas′ticatory s. of the face**, trismus. **Mim′ic s. of the face**, see *Neuralgia, facial.* **Mus′cular idiopath′ic s.**, tetanilla. **Myopath′ic s.**, spasm in connection with disease of the muscles. **Nic′titating s.**, involuntary winking or twitching of fibres of the orbicularis muscle. **Nod′ding s.**, nodding movement of the head from convulsive action of the sternocleidomastoid muscle. **Re′flex s.**, see *Reflex.* **S. with rigid′ity**, tetanus. **Rom′berg's s.**, see *Romberg.* **Salaam′ s.**, nodding s. **Sal′tatory s.**, see *Saltatory.* **Smith's s.**, see *Smith.* **Stat′ic re′flex s.**, saltatory s.

**S. of the stom'ach,** cardialgia. **Synclon'ic s.,** tremulousness of muscular action. **Tetan'ic s.,** tonic s. **Ton'ic s.,** spasm in which the affected muscles remain persistently and equally contracted. **Tox'ic s.,** s. caused by the action of a poison, as strychnine. **Wink'ing s.,** nictitating s. **Wri'ters' s.,** writers' cramp.

**Spasmat'ic.** Spasmodic.

**Spasmod'ic.** Relating to spasm. **S. spi'nal paral'ysis,** spastic paraplegia.

**Spas'modism.** Spasmodic nervous condition dependent on stimulation of the spinal cord.

**Spasmodyspnœ'a.** Spasmodic or convulsive breathing.

**Spasmol'ogy** (*logos,* treatise). Treatise on spasm.

**Spasmophil'ia** (*spasmos,* convulsion, *phileo,* to love). Convulsibility. Tendency to convulsions from unusual excitability of the motor nervous system.

**Spasmorthopnœ'a.** Spasmodic breathing.

**Spasmotine'.** Sphacelotoxin, $C_{20}H_{21}O_9$. Alkaloid from ergot; has oxytocic properties.

**Spasmotoxin'.** Ptomain from cultures of Bacillus tetani, producing in animals violent clonic and tonic spasms.

**Spas'mous.** Having the character of spasm.

**Spas'mus** (*spasmos*). Convulsion; spasm. **S. au'rium,** otalgia. **S. bronchia'lis,** asthma. **S. cani'nus,** see *Canine laugh.* **S. clon'icus,** convulsion. **S. cyn'icus,** see *Canine laugh* and *Risus sardonicus.* **S. glot'tidis,** asthma thymicum. **S. lin'guæ,** glossospasmus. **S. maxil'læ inferio'ris,** trismus. **S. muscula'ris,** cramp. **S. nic'titans,** spasmodic or convulsive winking. **S. nu'tans,** salaam convulsion. **S. peripher'icus,** horrida cutis. **S. universa'lis,** synclonus. **S. ventric'uli,** see *Cardialgia.*

**Spas'nia.** Lancinating pain produced at times in the chest by violent fits of coughing.

**Spas'tic** (*spastikos*). Spasmodic; in a state of tonic spasm; tetanic. **S. anæ'mia,** anæmia accompanying spasmodic contraction of the arteries. **S. diple'gia,** see *Birth palsy.* **S. gait,** peculiar stiff gait of spastic paraplegia, based on approximation of the knees and dragging of the leg. **S. hemiple'gia,** see *Hemiplegia.* **S. paral'ysis,** paralysis attended with contraction or spasm of muscles, as in the occupation neuroses, writers' cramp, etc. **S. paraple'gia,** p. with augmentation of reflex irritability and tonic spasmodic action of the paralyzed muscles; spasmodic spinal paralysis.

**Spasticity,** spas-tis'it-e. The spastic state.

**Spath'a.** Spatula for spreading ointments.

**Spathes'ter** (*spao,* to draw). Instrument for drawing the prepuce over the glans when too short.

**Spath'ula.** Scapula; spatula. **S. fœ'tida,** Iris fœtissima.

**Spath'ulate.** Like a spatula.

**Spath'um pondero'sum.** Barium sulphate.

**Spathye'ma fœ'tida.** Dracontium fœtidum.

**Spa'tial.** Relating to a space or space in general.

**Spat'ile.** Liquid fecal evacuation. Excrement.

**Spa'tium.** Space. **S. cerebellomedulla're,** fissure between the inferior vermiform process of the cerebellum and the choroidal plexus of the fourth ventricle. **S. inter-aponeurot'icum suprasterna'le,** the space between the superficial and deep layers of the deep cervical fascia above the manubrium. **S. interpeduncula're,** interpeduncular fissure. **S. intervalvula're,** space between sinuses of Valsalva on the outer surface of the aorta. **S. o'ris,** the mouth. **S. suprachoroide'um,** fissure between velum interpositum and lyra fornicis. **S. trigo'num,** lyra fornicis.

**Spat'terdock.** Nuphar advena.

**Spat'ula.** Flat instrument used for spreading plasters, stirring ointments, holding down the tongue, etc. Also the scapula. **S. mal'lei,** flattened end of the handle of the malleus.

**Spat'ulate.** Like a spatula.

**Spav'in.** A swelling in or near the hock-joint of a horse, which produces lameness. **Bag s.,** swelling of the capsular ligament of the tibiotarsal articulation. **Bone s.,** lameness in the horse, caused by exostoal growth on the inside of the tarsus.

**Spay'ing** (*spao,* to draw, *spadon,* a castrated person). Removal of the ovaries. See *Castration.*

**Spear'mint.** Mentha viridis.

**Spear'wort.** Ranunculus flammula.

**Special,** spesh'al. See *Specific.*

**Specialism,** spesh'al-ism. Special study of or limitation of practice to one branch of medicine or surgery.

**Specialist,** spesh'al-ist (*species,* peculiar sort). One devoting himself to the study and treatment of diseases of particular parts, the eye, ear, chest, etc.

**Specialty,** spesh'al-te. A department of medicine to which one devotes particular or exclusive attention.

**Spe'cies.** Official mixtures of substances cut or bruised. Formerly always used for compound powders. In biology, the collection of individuals below the genus. **S. anthelmin'ticæ,** equal parts of absinth, tansy, chamomile, and santonica; the first three cut fine and mixed with the last. **S. aromat'icæ,** pulvis cinnamomi compositus. **S. diacinnamo'mi,** pulvis cinnamomi compositus. **S. diacre'tæ,** pulvis cretæ compositus. **S. diajala'pæ,** pulvis jalapæ compositus. **S. diatragacan'thæ frig'idæ,** pulvis tragacanthæ compositus. **S. diuret'icæ,** roots of lovage, asparagus, fennel, parsley, and butcher's broom, equal parts. **S. emollien'tes,** emollient species. **S. hi'eræ pic'ræ,** pulvis aloës cum canellâ. **S. laxan'tes,** Saint Germain tea; elder flower, fennel, anise, senna, and cream of tartar. **S. ligno'rum,** wood tea. **S. pectora'lis,** pectoral tea. **S. purgati'væ,** s. laxantes. **S. e scor'dio cum o'pio,** pulvis cretæ compositus cum opio. **S. e scor'dio si'ne o'pio,** pulvis cretæ compositus. **S. sudorif'icæ,** wood tea. **S. vulnera'riæ,** mixture of aromatic and slightly astringent plants, reputed to be vulnerary.

**Specif'ic** (*species,* peculiar sort, *facio,* to make). Remedial agent to which is attributed the special property of removing some particular disease; examples are mercury in syphilis and quinine in malaria. Also used adjectively in the sense of special, as specific or special action of a drug. Specific is a term also applied to diseases like syphilis, which have a specific or undoubted origin; that is to say, those which have a distinct course and are due to the presence and development of a distinct microbe. **S. grav'ity,** relation between the weight of a body and its bulk. Specific gravities of different bodies are, as the weights, bulk for bulk. For solids and liquids water is taken as the unit; atmospheric air for gases. Thus, water is 1.000; mercury, at common temperature, 13.580; mercury is therefore more than thirteen times heavier than water. When the specific gravity of a substance is given the temperature is assumed to be at 60° F. **S. heat,** quantity of heat required to raise the temperature of a body one degree, taking as the unit of measure the quantity required to raise the same weight of water one degree. **S. inten'sity,** vital statistical term used to express the number living at a certain age divided by the number dying at that age. **S. rota'tion,** see *Rotation.* **S. medica'tion** or **treat'ment,** the employment of specific remedies in the treatment of a disease; see *Specific,* first definition.

**Specificity,** spes-if-is'it-e. The condition of being specific.

**Specif'icize.** To confer a specific character.

**Specif'icness.** Specificity.

**Specif'icum Paracel'si.** Potassii sulphas.

**Specil'lum** (*specio,* to examine). Stylet. A slender probe, usually made of silver, and terminating at one end by an olive-shaped button. The eyed probe has an aperture at the other extremity. The perforator of the trocar is called a specillum or stylet; also the wire or metallic rod of the flexible catheter, which gives it firmness.

**Speck'led leech.** Hirudo medicinalis.

**Specks of cor'nea.** See *Caligo.*

**Spec'tacled snake.** Naja vulgaris or cobra di capello; so named from resemblance of certain lines on its head to spectacles.

**Spec'tacles** (*specto*, to behold). Glasses to assist the sight; arranged so as to be adapted to both eyes, and more or less concave or convex according as the sight is short (myopic) or long (presbyopic). *Periscopic* spectacles consist of concavo-convex and convexo-concave lenses, and therefore have but little spherical aberration. *Pantoscopic* or *bifocal* or *divided* spectacles have a different focus in the upper and lower part. *Prismatic* glasses have been employed in muscular asthenopia. *Protected* or *protective* lenses include tinted glasses and lenses arranged to protect the eyes from heat, dust, etc., sometimes made of wire, mica, etc. See *Lens*.

**Spec'tral.** Relating to or occurring through the spectrum.

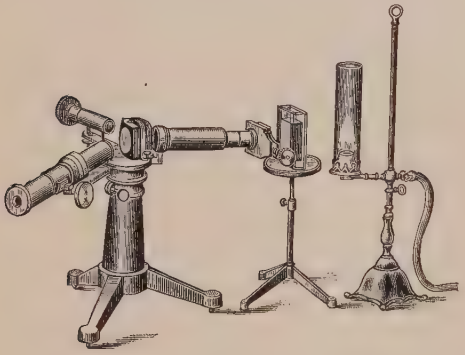
**Spectrom'etry** (*metron*, measure). Determination of position of lines in a spectrum.

**Spectrophotom'eter** (*spectrum*+*phos*, light, *metron*, measure). Instrument for determining amount of coloring-matter in a solution by the amount of light absorbed in passing through it.

**Spectrophotomet'ric.** Relating to the instrument or process referred to.

**Spectrophotom'etry.** Measurement with the spectrophotometer.

**Spec'troscope** (*spectrum*+ *skopeo*, to view). An instrument containing a prism for the development of a spectrum, and a telescopic arrangement for the study of the image so formed.



Spectroscope. (Neubauer.)

**Spectroscop'ic.** Relating to or affected by the spectroscope.

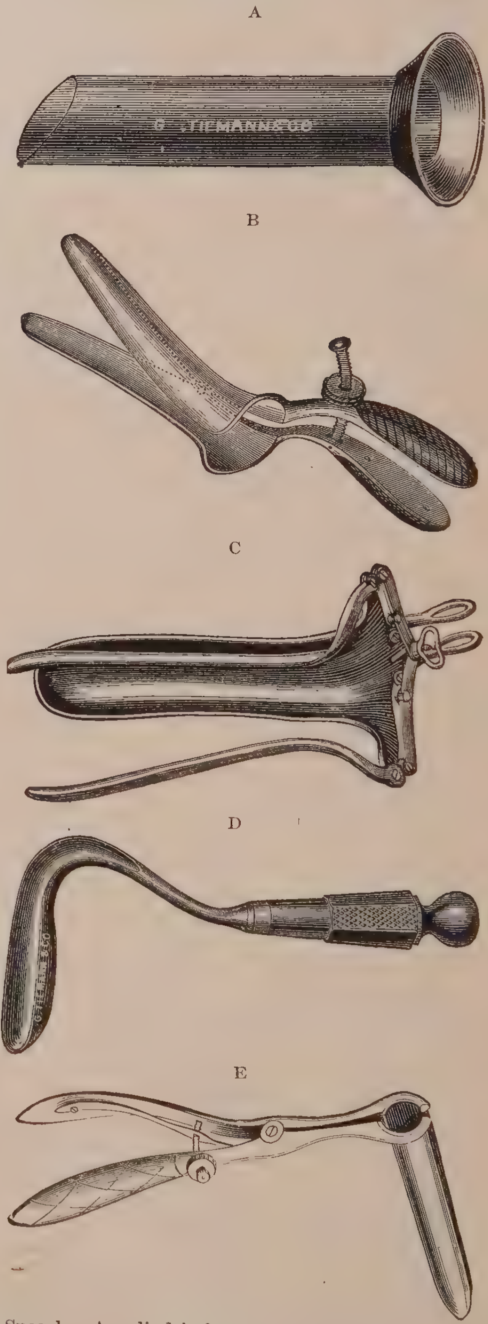
**Spectros'copy.** Use of the spectroscope; investigation with the spectroscope.

**Spec'trum.** An appearance, real or imaginary. An after-image (ocular s.). A multicolored band caused by the refraction of a beam of light, by means of which the rays of different wave lengths are separated (solar s.). **S. anal'ysis**, method of analysis, consisting in decomposing by means of a prism the colored light given by the salts of metals to the colorless flames of alcohol or coal gas. It is a useful aid to quantitative analysis, as the colored flame of each metal, even in the minutest quantity, is found to give a well-marked and characteristic spectrum. Bunsen estimated that the amount of sodium which admitted of detection by prismatic analysis was the 195,000,000th part of a grain, of lithium the 70,000,000th, of calcium the 100,000,000th of a grain, and so on with other substances. **Oc'ular s.,** disturbance of vision, consisting in the appearance of objects after the objects themselves have been withdrawn; see *Colors, accidental*. **So'lar s.,** the colored image produced by white light which has been decomposed by passing through a prism. It consists of seven different colored fringes, arranged as follows: red, orange, yellow, green, blue, indigo, and violet. (The word *vibgyor*, including the initial letter of each, is a convenient means of memorizing them.) Three of these—blue, red, and yellow—are simple, the others being mixtures of them.

**Spec'ula.** Plural of speculum.

**Spec'ular** (*specularis*). Belonging to a speculum. **S. iron**, a species of iron ore; hæmatite.

**Spec'ulum** (Lat., mirror). Surgically, an instrument for bringing parts into view, either by reflecting them in a mirror, as in the laryngeal speculum, or by separating the walls of the tracts leading



Specula: A, cylindrical speculum; B, bivalve vaginal speculum; C, trivalve vaginal speculum; D, rectal speculum; E, bivalve rectal speculum.

to them, as in the vaginal speculum. Specula are of various shapes and construction, according to the parts to be viewed. Anatomically, the septum lucidum of the brain. **S. cit′rinum,** orpiment. **S. Helmon′tii,** central tendon of diaphragm. **S. in′dicum,** iron filings. **In′tra-u′terine s.,** form of speculum devised for the introduction into the cavity of the uterus of powerful remedies, such as nitric acid. **S. laryn′gis,** laryngoscope. **S. lu′cidum,** septum lucidum of the brain. **S. oc′uli,** a wire instrument for keeping the eyelids separated during inspection or operation on the eye. **S. o′ris,** tongue-depressor. **Pneumat′ic s.,** form of aural speculum having a tube attached in such a way that the surgeon can by suction produce motion in the membrana tympani. **S. rhomboide′um,** rhomboid space formed by tendon of trapezius muscles at lower cervical and upper dorsal spines. **Sims's s.,** see *Sims.* **S. ven′eris,** Achillea millefolium.

**Spe′cus.** Vulva. **S. cor′dis,** ventricle of the heart.

**Spedalsk′hed.** See *Radzyge.*

**Speech.** The articulated voice. **Affec′tions of s.,** see *Aphasia, Apraxia, Stammering,* etc. **S. cen′tre,** see *Centre.* **Clipped s., Ech′o s., Mir′ror s., Scan′ning s., Slurred s.,** see these words. **S. tract,** nerve-fibres connecting the speech centre with the motor centres of phonation.

**Speech′lessness.** Dumbness; aphasia.

**Speed′well.** A plant of the genus *Veronica.* **Brook′lime s.,** Veronica beccabunga. **Fe′male s.,** Antirrhinum elatine. **Offic′inal s.,** veronica. **Pur′slain s.,** Veronica peregrina. **Wa′ter s.,** Veronica beccabunga.

**Speed′y cut.** Injury of front leg of horse inflicted by the opposite forepart.

**Spell′bone.** Fibula.

**Spel′trum.** Zinc.

**Spence's amputa′tion.** See *Amputation.*

**Spen′cer's a′rea.** Area in cortical part of brain in frontal lobe external to the olfactory tract; which when stimulated by induced electricity affects respiration, even to an inhibitory degree, if carried so far.

**Spend′ing.** Ejaculation of semen.

**Sperm** (*sperma,* seed). Spermatic fluid, seminal fluid, semen. Whitish, viscid fluid of a peculiar smell secreted by the testicles, whence it is carried by the vasa deferentia to the vesiculæ seminales, to be thrown into the vagina, during coition, through the ejaculatory ducts and the urethra. It is the fecundating fluid, and must come into contact with the ovum of the female. Semen, at the time of emission, is composed of two different fluids: the one liquid and transparent, considered to be the secretion of the prostate; the other white, and as thick as mucilage, the product of the testicular secretion. Sperm contains, according to Vauquelin, 900 parts of water, 50 of animal mucilage, 10 of soda, and 30 of calcareous phosphate. Microscopic observations show that it contains spermatozoa, or spermatozoids, produced in cells—sperm-cells. By careful examination other minute, round, granulated bodies may be detected, less numerous than the spermatozoa, and called seminal granules, granula seminis, spermatophori. Pure sperm consists principally of spermatozoids and seminal granules enveloped in a small quantity of fluid, liquor seminis, spermatic liquor. It has been erroneously imagined that during coition there is a secretion of female sperm—semen muliebre; the increased secretion that takes place is chiefly from Duverney's glands. Sperm also means spermaceti. **S. cells,** spermatids. **S. fil′aments,** spermatozoa. **S. mor′ula,** spermosphere. **S. nu′cleus,** the nucleus of a spermatozoon. **S. whale,** Physeter macrocephalus.

**Spermace′ti** (*ketos,* a whale). Cetaceum.

**Spermacra′sia** (*akrasia,* incontinence). Spermatorrhœa.

**Spermagon′ia.** Spermatogonia.

**Spermatacra′sia.** Spermacrasia. Spermatorrhœa.

**Spermatemphrax′is** (*emphraxis,* obstruction). Obstruction to discharge of semen.

**Spermat′ic.** Seminal. Relating to the sperm. A name given to different parts connected with the organs of generation. **S. ar′teries** are two in number—one on each side—arising from the sides of the aorta, sometimes from the renal arteries. They descend almost vertically at the sides of the vertebral column, and are distributed differently in the two sexes. In man the spermatic artery, situated at the side of the vas deferens, issues by the abdominal ring, gives numerous ramifications to the spermatic cord, and divides into two fasciculi of branches, one going to the testicle, the other to the epididymis. In the female the spermatic artery, *ovarian* or *utero-ovarian artery,* dips into the pelvis and passes to the ovarium, Fallopian tube, and round ligament. **S. canal′,** inguinal canal. **S. car′tridge,** spermatophore. **S. cord,** testicular cord, the vascular and nervous cord by which the testicle is suspended. It is composed of the spermatic artery and veins, of other small vessels, of lymphatics, of nervous filaments from the spermatic plexus and from the genitocrural branch of the lumboabdominal plexus, of the vas deferens, and often of a fibrocellular cord uniting the peritoneum to the upper part of the tunica vaginalis, and in which encysted hydrocele of the spermatic cord occurs. All these parts are united together by coats which, from without, are: 1. The skin and areolar membrane. 2. A fibrocellular membrane, formed by the fascia superficialis. 3. A thin layer, formed by fibres of the cremaster muscle, united archwise before and often also behind the cord. 4. The sheath proper of the spermatic vessels, or the tubular prolongation furnished by the fascia transversalis to the cord, on a level with the superior orifice of the inguinal canal. The spermatic cord is commonly shorter on the right side than on the left, and of a different size in different individuals. It ascends almost vertically from the superior margin of the testicle as far as the lower orifice of the inguinal canal, passes through this canal, and enters the abdomen, crossing the epigastric artery. Here it forms an evident elbow, directing its course backward. Here, also, the organs composing it separate, the vas deferens descending into the pelvis to pass behind the bladder—the bloodvessels and lymphatics ascending toward the lumbar region. **S. duct,** vas deferens. **S. fas′cia,** *external s. f.,* intercolumnar fascia; *internal s. f.,* fascia propria. **S. fil′aments,** spermatozoa. **S. flu′id,** sperm. **S. gan′glion,** a large ganglion formed by branches from the hypogastric ganglion and spermatic plexus. It supplies the fundus uteri. Besides these, other ganglia have been described, such as the vesical and vaginal ganglia, and anterior and posterior subperitoneal ganglia and plexuses, which communicate with the preceding and constitute an extensive nervous rete over the entire uterus. **S. liq′uor,** liquor seminis; see *Sperm.* **S. pas′sages** or **ways,** canals concerned in the excretion of semen; see *Testicle.* **S. plex′uses of nerves** are two in number, furnished by the renal plexuses. Their filaments, called spermatic nerves, follow the arteries of the same name to the testicle in man, and to the ovary and Fallopian tube in woman—ovarian nerves. **S. veins** are two or three in number on each side. They accompany the spermatic artery, and open—those of the right, into the vena cava inferior; those of the left, into the corresponding renal vein. These veins form, above the testicle, a kind of venous network, the spermatic plexus and corpus varicosum; and another plexus before the psoas muscles, called the corpus pampiniforme.

**Sper′matid.** Immature spermatozoon.

**Spermatin′.** Albuminoid substance found in the sperm, and resembling alkali albumin and mucin.

**Sperm′atis.** Spermatic vein.

**Sperm′atism.** Emission of sperm. Also the old doctrine of animalculism, namely, that the embryo was produced from the spermatozoon alone, the ovum acting only as a receptacle.

**Sperm′atist.** A believer in the theory of spermatism.

**Spermati′tis.** Inflammation of the spermatic cord or vas deferens.

**Sper′matoblast.** Round or oval epithelial cell in a seminal tubule from which spermatozoa develop.

**Sper′matocele** (*kele*, tumor). Swelling of the testicle, formerly regarded as produced by an accumulation of sperm in the organ. Encysted hydrocele of the testicle. Varicocele.

**Spermatochor′da.** Spermatic cord.

**Spermatoclem′ma** (*klemma*, theft). Involuntary ejaculation of semen. See *Pollution*.

**Spermatoclep′sis** (*klepto*, to steal). Spermatoclemma.

**Spermatocyd′ia.** Seminal ducts.

**Sper′matocyst.** Seminal vesicle. Spermatic cyst.

**Spermatocystidorrha′gia** (*rhage*, breaking forth). Discharge of blood from the urethra in the act of ejaculation of sperm.

**Spermatocysti′tis.** Inflammation of the vesiculæ seminales.

**Sper′matocyte** (*kytos*, a cell). Epithelial cell from which is developed the spermatozoon; spermatoblast.

**Spermatogem′ma** (*gemma*, a bud). A collection of germinal cells of a spermatozoon.

**Spermatogen′esis** or **Spermatog′eny.** Formation of sperm.

**Sper′matogone** or **Spermatogo′nium** (*gone*, offspring). Seminal or germinal cell.

**Sperm′atoid** (*eidos*, resemblance). Like sperm.

**Spermatolep′sis** (*lepsis*, taking away). See *Pollution.*

**Spermatol′ogy** (*logos*, discourse). Science relating to the composition, secretion, function, etc., of semen.

**Sper′matomere.** One of the particles into which the sperm nucleus divides.

**Spermatopath′ia** or **Spermatop′athy** (*pathos*, disease). Morbid condition of the sperm.

**Spermatopho′bia** (*phobos*, fear). Hypochondriasis, in which spermatorrhœa is imagined to exist.

**Sper′matophore** (*sperma* + *phoreo*, to carry). An elongated sac or sheath containing spermatozoa. On contact with fluid this sac bursts and the spermatozoa are discharged into the semen.

**Spermatoph′orous.** Sperm-bearing.

**Spermatopoie′sis** (*sperma* + *poieo*, to make). The secretion of semen.

**Spermatopoiet′ic.** Relating to spermatopoiesis.

**Spermatorrhœ′a** (*sperma* + *rheo*, to flow). An involuntary emission of sperm without copulation. **S. aton′ica,** discharge occurring when one is awake, without erection. **S. dormien′tium,** nocturnal emission of semen. **False s.,** prostatorrhœa; emission of fluid devoid of spermatozoa.

**Spermatos′chesis** (*schesis*, retention). Retention or suppression of the spermatic secretion.

**Spermato′sis.** Production of semen.

**Spermatoso′mata** (*soma*, body). Spermatozoa.

**Sper′matospores.** Large cells of seminal tubules which produce spermatoblasts.

**Spermato′vum.** Impregnated ovum.

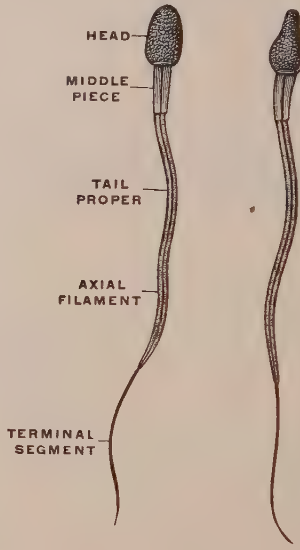
**Spermatoze′mia** (*zemia*, loss). Spermatorrhœa.

**Spermatozo′a.** Plural of spermatozoon.

**Spermatozo′al** or **Spermatozo′an.** Relating to spermatozoa.

**Spermatozo′id** or **Spermatozo′oid** (*eidos*, resemblance). Spermatozoon.

**Spermatozo′ön** (*sperma* + *zoon*, animal). Seminal or spermatic cell filament. One of the male cells of generation, contained in the semen, the union of which with an ovum impregnates the latter and causes it to develop into the embryo. It is described as consisting of three parts, the head, which is the cell proper and contains the nucleus, a middle, rod-like prolongation of protoplasm, and the tail, which by its spontaneous, vibratile movement propels the body through the spermatic fluid. Spermatozoa were discovered by Leeuwenhock in 1677, and were long regarded as animalcules or parasites, being accordingly denominated "sperm animals." The following facts of interest as to spermatozoa have been collected (Vierordt): The rapidity of motion of spermatozoa is 1.2–2.7 mm. per minute (Henle, Kramer, Hensen), 3.6 mm. per minute (Lott). In three hours they can reach the neck of the uterus, starting from the external orifice of the hymen (Sims). The most favorable temperature for their mobility is 35° C. (Engelmann). A temperature of 17° C. deprives the spermatozoa of motion (Mantegazza), but they may exhibit motion at 47° C. See *Sperm*



Human spermatozoa. The right one is seen in profile. (Gerrish.)

**Spermatu′ria.** Presence of sperm in the urine.

**Sperm′iduct** (*sperma* + *ductus*, duct). Vas deferens.

**Spermin′.** $C_2H_5N$. Leucomain procured from semen and other sources, such as liver, heart, testicles, etc. Also a preparation from the testicles of animals; used in nervous depression and debility. **S. hydrochlo′ride,** form in which spermin is generally employed internally. **S. phos′phate,** chief constituent of the Charcot-Neumann or Charcot-Leyden crystals.

**Sperm′ic.** Spermatic.

**Sperm′ism.** Spermatism.

**Sper′moblast.** Spermatoblast.

**Spermoëd′ia cla′vius.** Ergot.

**Sper′molith** (*lithos*, a stone). A calculus in the spermatic duct or vesicula seminalis.

**Spermoneural′gia.** Neuralgia of the spermatic cord.

**Spermophlebecta′sia** (*phleps*, vein, *ektasis*, dilatation). A varicose condition of the spermatic veins.

**Sper′mophleps** (*phleps*, vein). Spermatic vein.

**Sper′moplasm** (*plasso*, to form). Protoplasm of spermatoblast, especially that part which forms the tail of the spermatozoon.

**Spermoph′orum.** Vesicula seminalis.

**Spermorrhœ′a.** Spermatorrhœa.

**Sper′mosphere.** Sphere or mass of spermatoblasts produced by repeated division of a spermatospore.

**Sper′mospore.** Spermatospore.

**Spermoste′mon** (*stemon*, the warp). Spermatozoon.

**Spermothe′ca** (*theca*, sheath). A reservoir or sac in the interior of the body of some insects, as the bee, becoming filled with the fertilizing fluid of the male.

**Spermotoxin′.** A cytotoxin acting specifically on spermatozoa.

**Spermozo′on.** Spermatozoon.

**Spes phthis′ica.** Hopeful temperament of the consumptive.

**Spew.** To vomit.

**Sphacelate,** sfas′e-lāte (*sphacelus*, gangrene). To become gangrenous. Also gangrenous; necrosed.

**Sphacelated,** sfas′e-la-ted. Affected with sphacelus.

**Sphacela′tion.** Formation of a sphacelus or slough. Gangrene.

**Sphace′lia seg′etum** (*sphacelus*). Ergot.

**Sphacelin′ic acid.** Acid contained in ergot.

**Sphacelism,** sfas′el-izm. State of being affected with sphacelus. **S. of the brain,** phrenitis.

**Sphacel′ium.** Claviceps purpurea.

**Sphaceloder′ma** (*sphakelos*, gangrene, *derma*, skin). Skin gangrene, Raynaud's disease.

**Sphaceloid,** sfas′el-oid. Resembling sphacelus.

**Sphacelotoxin′.** $C_{20}H_{21}O_9$. A very poisonous resinous body giving to sphacelinic acid (in ergot) its toxic action.

**Sphacelous,** sfas′el-us. Pertaining to sphacelus.

**Sphacelus,** sfas′el-us (*sphakelos*, gangrene). Mortification, necrosis. Word used by some synonymously with gangrene; by others with gangrene when it occupies the whole substance of a limb. It also means the disorganized portion in cases of gangrene which must be thrown off, or is, in other words, totally dead; the foul, disorganized portion of an ulcer, called also the slough. Sphacelus was formerly used to denote excessive pain, and also agitation from excessive pain or violent emotion. **S. cerea′lis,** ergotism. **S. nosocomia′lis,** hospital gangrene.

**Sphæ′ra.** A ball. **S. mari′na,** Pila marina.

**Sphæræsthe′sia** (*sphaira*, a ball, *aisthesis*, sensation). Sensation of the presence of a globular body, as in globus hystericus.

**Sphæran′thus in′dicus.** A Malabar plant, acrid and aromatic.

**Sphæ′ria sinen′sis.** Fungus projecting from the neck of a lepidopterous insect, esteemed by the Chinese as a tonic.

**Sphærobacte′ria.** Micrococci.

**Sphæroceph′ala ela′tior.** Echinops.

**Sphærococ′cus.** A genus of algæ. Also a micrococcus. **S. ac′idi lac′tici** (Markmann), Micrococcus lacticus. **S. cris′pus,** Fucus crispus. **S. edu′lis,** Halymenia edulis. **S. helminthochor′tus,** Corallina corsicana; variety of Mediterranean algæ known as Corsican moss. **S. lichenoi′des,** Fucus amylaceus; Ceylon moss which is edible. **S. mamillo′sus,** Chondrus mamillosus.

**Sphæro′ma.** Spherical prominence, swelling, or tumor.

**Sphærom′eter.** Spherometer.

**Sphærot′ilus.** A genus of microorganisms of the family *Chlamydobacteriaceæ*, encapsulated cells growing as branched threads. **S. na′tans** (Kützing and Saccardo), a form of sphærotilus found in water.

**Sphæ′rulæ san′guinis.** Blood-globules

**Spha′ge.** Throat.

**Sphagias′mus.** Spasm of the neck muscles.

**Sphagi′tis** (*sphage*, throat). Sore throat.

**Sphaleroto′cia** (*sphaleros*, false, *tokos*, parturition). Counterfeit labor-pains.

**Sphen′done.** A sling or sling-bandage.

**Sphenenceph′alus.** See *Sphenocephale*.

**Sphe′nion.** Apex of sphenoidal angle of parietal bone on the surface of the skull.

**Spheno-.** In composition, the sphenoid bone.

**Sphenobas′ilar.** Relating to the sphenoid bone and the basilar process of the occipital.

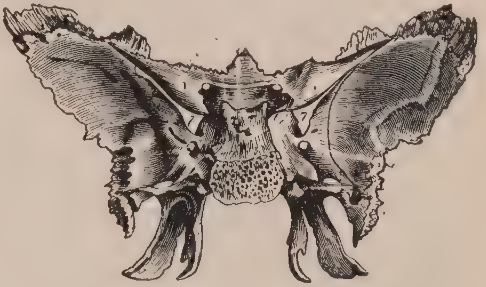
**Sphenoccip′ital.** Spheno-occipital.

**Sphenocepha′lia** (*sphen*, a wedge, *kephale*, head). Monstrosity in which the head is wedge-shaped, owing to the projection of the region of the anterior fontanelle, giving a bird-like appearance to the face. The monster is called a *sphenocephalus*.

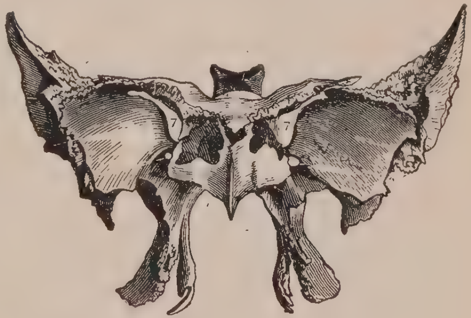
**Sphenoceph′alus.** See *Sphenocephalia*.

**Sphe′noethmoid′al recess′.** Recess in the angle formed by the cribriform and body of the sphenoid.

**Sphe′noid** (*sphen*, a wedge, *eidos*, resemblance). Wedge-shaped. **S. bone,** pterygoid bone; an azygous bone, situated on the median line and at the base of the cranium. It articulates with all the bones of that cavity, supports them, and strengthens their union. Its form is singular, and resembles a bat with the wings extended. It has: 1. An inferior or guttural surface, on which is situated the crista that joins the vomer, a channel which assists in forming the pterygopalatine foramen, the pterygoid process, the pterygoid fossa, the scaphoid depression, the Vidian or pterygoid canal, the foramina (f. ovale, f. spinale). 2. A superior or cerebral surface, on which are the clinoid processes, the pituitary fossa, the foramina (f. ovale, f. rotundum, and f. spinale), the apophysis of Ingrassias or lesser wing, the foramen opticum, etc. 3. An occipital or posterior surface articulating with the basilary process of the occipital bone. 4. An anterior or orbital nasal surface, having anteriorly a crista to unite with the ethmoid bone, and on each side a round aperture leading into two cavities in the substance of the bone, separated by a middle septum, and called the sphenoidal sinuses or cells. 5. Two zygomaticotemporal or external surfaces corresponding to the temporal and zygomatic fossæ. Some divide the sphenoid into body or middle portion, and alæ, four in number, subdivided into great (temporal plates or wings, alæ magnæ) and little (apophyses of Ingrassias, alæ minores, processus ensiformes). The sphenoid suture surrounds the bone.



Internal or cerebral surface of sphenoid bone.



Anterior and inferior surface of sphenoid bone.

**Sphenoid′al.** Belonging or relating to the sphenoid bone. **S. an′gle,** angle formed by lines drawn from the saddle-shaped depression of the sphenoid bone to the middle of the anterior wall of the foramen magnum, and to a point of junction of the nasal and frontal bones. **S. ar′tery,** branch of middle cerebral artery supplying the sphenoidal lobe. **S. cells, S. si′nuses, S. cor′nua,** cornua of Bertin, pyramids of Wistar, bones of Bertin; two small, thin, and curved bones situated between the sphenoid and ethmoid, with which they are confounded in the adult; they have the shape of a hollow pyramid with the base turned backward, and are developed by a single point of ossification; they are articulated with the sphenoid, ethmoid, palate-bone, and vomer. **S. crest,** thin, projecting edge, in middle line of anterior surface of the body, which extends downward from the sphenoidal spine and terminates in the rostrum. **S. diam′eter, min′imum,** smallest transverse diameter of space measured in the temporal fossa. **S. fis′sure,** a fissure between greater and lesser wings of sphenoid bone, by which the orbit and cranial cavity communicate with one another. **S. fontanelle′,** see *Fontanelle*. **S. fora′men,** opening formed in greatest part by a deep notch between the orbital and sphenoidal processes, and completed above by the sphenoidal spongy bone; it leads from the sphenomaxillary fossa into the nasal cavity, and transmits a branch from Meckel's ganglion and the nasal branch of the internal maxillary artery. **S. or′bital fis′sure,** large fissure between the great and little alæ of the sphenoid, seen at the upper and back part of the orbit, between which and the cranium it is a means of communication, and transmits the third, fourth, and sixth pairs of nerves, and the first branch of the fifth pair, to the eye and its appendages. **S. pro′cess,** thin layer of bone curving upward, inward, and backward from posterior part of vertical plate; its superioror external surface is in contact with the sphenoidal spongy bone and base of internal pterygoid plate, and is grooved for completion of pterygopalatine canal; its internal or under surface looks to the posterior nares; at its base a third surface looks forward and outward into the sphenomaxillary fossa; its inner extremity is in contact with the wing of the vomer. **S. si′nuses,** two air-containing cavities, separated by a septum, in the interior of the sphenoid bone. **S. spine:** 1. A projecting crista at the inferior surface of the sphenoid bone for articulation with the vomer. 2. A triangular process met with near the posterior margin of the same bone, behind the foramen spinale. At the point of the spinous process a styloid process is frequently met with. **S. spon′gy bones** or **tur′binate bones** (cornua sphenoidalia) form a considerable part of the anterior wall of the body of the sphenoid, including the foramen of each sinus; they have a triangular form, with the apex directed downward; in the adult they are usually incorporated with the sphenoid, but originally are separately developed.

**Sphenoida′le basila′re ante′rius.** Anterior portion of the body of the sphenoid. **S. basila′re posti′cum,** lower part of sphenoid bone. **S. latera′le poste′rius,** lateral portion of sphenoid bone.

**Sphenoida′lia latera′lia.** Sphenoidal wings.

**Sphenoid′oauric′ular in′dex.** Ratio between least sphenoidal diameter of the skull in the temporal fossa and the least biauricular diameter, the latter taken as one hundred.

**Sphenoidofron′tal in′dex.** Ratio between least sphenoidal diameter of the skull and the least frontal diameter, the latter taken as one hundred.

**Sphenoidopari′etal in′dex.** Ratio between the least sphenoidal diameter of the skull and the greatest frontal diameter, the latter taken as one hundred.

**Sphenoma′lar su′ture.** Articulation between great wing of sphenoid and malar bone.

**Sphenomax′illary.** Relating to the sphenoid and maxillary bones. **S. crest,** highest portion of sphenoid which separates the sphenomaxillary and infratemporal surfaces of bone. **S. fis′sure** is situated at the posterior part of the angle formed by the union of the internal and inferior parietes of the orbit. It is constituted, above, by the sphenoid bone; below, by the superior maxillary and palate bones, and before by the malar bone. It is narrower at the middle than at the extremities, and forms a communication between the orbit and the zygomatic fossa. **S. fos′sa,** depression at the union of the sphenomaxillary and pterygomaxillary fissures. **S. sur′face,** external surface of great wing of the sphenoid which faces the zygomatic fossa.

**Sphenom′eter** (*sphen,* wedge, *metron,* measure). Instrument used to determine the size of the wedge necessary to be removed in correcting a curvature of a long bone.

**Sphe′no-occip′ital bone.** Part formed by union of occipital with sphenoid bone.

**Spheno-or′bital.** Name given to the anterior part of the body of the sphenoid bone.

**Sphenopal′atine.** Relating to the sphenoid and palate bones. **S. ar′tery,** large lateral nasal artery, termination of the internal maxillary; it enters at the posterior part of the superior meatus of the nose through the sphenopalatine foramen, and spreads its numerous branches on the pituitary membrane covering the septum, the cornua, and the meatus. **S. fora′men,** round aperture formed by the vertical portion of the os palati and the sphenoid. It establishes a communication between the nasal fossæ and the zygomatic fossa. **S. gan′glion,** Meckel's or sphenoidal ganglion; small, nervous ganglion, of variable size, situated without the foramen sphænopalatinum in the pterygomaxillary fissure; it seems suspended by several nervous filaments to the trunk of the superior maxillary nerve, and gives off internal or sphenopalatine filaments, inferior or palatine filaments, and a posterior filament, which is the Vidian or pterygoid nerve. **S. nerves,** lateral nasal nerves; these arise from the ganglion just described, at its inner part, and enter the nasal fossæ by the sphenopalatine foramen; they are five or six in number, and distribute their filaments to the outer and inner parietes of the nasal fossæ; one remarkable branch is the nasopalatine. **S. notch,** space existing between the orbital and sphenoidal processes of the palate-bone, which go to form the sphenopalatine foramen. **S. plex′us,** nerve-plexus which communicates with the sphenopalatine ganglion. **S. veins,** tributaries of the pterygoid plexus adjacent to the artery of the same name.

**Sphenopalati′nus.** Levator palati muscle.

**Sphenopari′etal.** Relating to the sphenoid and parietal bones. **S. in′dex,** sphenoidoparietal index. **S. si′nus,** anterior part of cavernous sinus of dura mater where it joins the ophthalmic vein. **S. su′ture,** formed by the articulation of the extremity of the greater ala of the sphenoid with the anterior and inferior angle of the parietal bone.

**Sphenopetro′sal.** Relating to the sphenoid bone and the petrous portion of the temporal. **S. fis′sure,** fissure at base of skull between apex of petrous bone and greater wing of sphenoid. **S. lam′ina,** thin, horizontal plate projecting backward from the foramen spinosum of the sphenoid bone. **S. su′ture,** line of union between petrous portion of temporal bone and greater wing of sphenoid.

**Sphenopharynge′us.** Portion of superior constrictor of pharynx arising from spine of sphenoid.

**Sphenop′terus** (*sphen,* wedge, *pteron,* wing). Possessing wings like a wedge.

**Sphenopterygopalati′nus.** Circumflexus.

**Sphenor′bital.** Spheno-orbital.

**Sphenosalpingostaphyli′nus.** Tensor palati.

**Spheno′sis** (*sphenoo,* to wedge). Impaction of the fœtus in the parturient canal.

**Sphenospi′nous ar′tery.** Middle meningeal artery.

**Sphenosquam′ous su′ture.** Line of union between greater wing of sphenoid and squamous portion of temporal bone.

**Sphenostaphyli′nus.** Circumflexus palati muscle.

**Sphenotem′poral.** Belonging to the sphenoid and temporal bones. **S. su′ture,** suture at the articulation of the great ala of the sphenoid bone with the squamous portion of the temporal. Béclard named *sphenotemporal* the posterior part of the body of the sphenoid, which is developed from distinct points of ossification.

**Sphenot′ic.** A bone of fetal life, forming the carotid groove and contiguous portions of the sphenoid bone.

**Sphenotre′sia** (*sphen,* wedge, *tresis,* boring). Destruction of base of skull in operation of craniotomy.

**Sphe′notribe** (*tribo*, to rub). A form of cephalotribe for crushing the base of the skull of the fœtus.

**Sphenotur′binal.** Relating to the sphenoidal turbinate bones; spongy bones connected with the sphenoid.

**Sphere.** Ball, globe, a rounded body every part of the surface of which is equidistant from its centre. **Attrac′tion s.**, see *Attraction*. **Embryon′ic s.**, morula. **Segmenta′tion s.**, blastomere; morula. **Vitel′line s.**, segmentation s. **Yolk s.**, segmentation s.

**Spher′ical.** Possessing the shape of a sphere. **S. aberra′tion**, excess of refraction of the peripheral part of a convex lens over the central area, producing an imperfect focus and an indistinct image. **S. nu′cleus**, nucleus of gray matter in the cerebellum near the corpus dentatum.

**Spherobacte′rium.** Sphærobacterium.

**Spherocerebrin′.** Nitrogenized substance found in cerebral structure.

**Sphe′roid, Spheroid′al**, or **Spheroid′ic.** Having nearly the form of a sphere; applied to crystals having several convex surfaces.

**Spherom′eter** (*sphaira*, sphere, *metron*, measure). Instrument chiefly used for measuring the curvation of surface of lenses.

**Spher′ule.** Little sphere or spheroidal body.

**Sphinc′ter** (*sphingo*, to constrict). Constrictor. Name given to several annular muscles constricting or closing certain natural openings. **S. a′ni**, anatomists describe two sphincter muscles of the anus: 1. *S. externus* or *cutaneus*, situated around the anus, is elliptical from before to behind, flattened, and pierced at the middle. Its fibres describe concentric arcs, which are attached behind to the extremity of the coccyx by a dense areolar substance, and are confounded anteriorly with the bulbocavernosi and transversi perinei muscles; this muscle contracts and closes the anus. 2. *Inner* or *internal sphincter ani*, *s. intestinalis*, is by many anatomists considered the termination of the circular fibres of the rectum. It is annular, and situated above the inferior extremity of the rectum to the extent of about a finger's breadth; it has the same uses as the other. **S. a. ter′tius**, rectal folds. **S. an′tri pylor′ici**, band of strong, circular muscles at a point two-thirds of the distance from cardia to pylorus. **S. col′li**, deeper of two primitive layers from which the facial muscles are derived; buccinator, orbicularis oris, and other deep muscles are formed from it. **S. gu′læ**, constrictor pharyngis. **S. of Hen′le**, s. urethræ prostaticus. **S. il′ei**, valve of Bauhin; ileocæcal valve. **S. intestina′lis**, sphincter ani internus. **S. ir′idis**, circular muscle at inner edge of iris, contraction of which lessens the diameter of the pupil. **S. labio′rum**, orbicularis oris. **S. laryn′gis**, arytenoepiglottic muscles of two sides encircling superior orifice of larynx. **S. of lar′ynx**, sphincter laryngis. **S. oc′uli**, orbicularis palpebrarum. **S. œsophage′us**, hiatus œsophageus. **S. o′ris**, orbicularis oris; some give the name *s. o. externus* to the superficial fibres of the orbicularis oris not derived from the buccinator, and *s. o. internus* to deep fibres of the orbicularis oris derived from the buccinator. **S. palpebra′rum**, orbicularis palpebrarum. **S. pharyngolarynge′us** includes the following three sets of muscles considered as one: inferior constrictor, cricothyroideus anticus, and thyroideus. **S. pros′tatæ**, sphincter urethræ prostaticus. **S. pupil′læ**, sphincter iridis; see *Iris*. **S. pylo′ri**, pylorus; see *Pylorus*. **S. ure′thræ prostat′icus**, prostatic muscular fibres surrounding the urethra below the sphincter vesicæ internus. **S. vagi′næ**, perineal muscle arising from central tendon of the perineum, surrounding the vaginal orifice and embracing the bulb of the vestibule; inserted upon corpora cavernosa of clitoris; constrictor cunni. **S. vagi′næ profun′dus**, constrictor vaginæ profundus. **S. ventric′uli**, pylorus. **S. vesi′cæ**, s. of the bladder; some anatomists have given this name to whitish, elastic, and circular fibres surrounding the neck of the bladder, but not constituting a particular muscle. The name *pseudosphincter* is sometimes applied to the anterior fibres of the levator ani which pass beneath the neck of the bladder and by their contraction close that opening. **S. v. externus**, s. urethræ prostaticus.

**Sphincteral′gia** (*algos*, pain). Pain in the anal sphincter or immediate vicinity.

**Sphincter′ic.** Relating to, belonging to, or having properties of a sphincter.

**Sphinc′teroplasty** (*plasso*, to form). Operation to repair or restore an injured sphincter or one absent or deficient.

**Sphinc′teroscope.** Instrument for examination of a sphincter, as the sphincter ani.

**Sphincterot′omy.** Surgical division of a sphincter.

**Sphingoin′.** $C_{17}H_{35}NO_2$. A leucomain found in brain substance.

**Sphingosin′.** Leucomain found in brain substance.

**Sphinx′is** (*sphingo*, to bind). Constriction.

**Sphyg′ma** (*sphygmos*, pulse). Pulse.

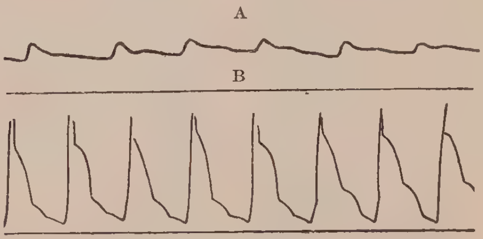
**Sphyg′mic** or **Sphyg′mical.** Relating to the pulse.

**Sphygmoceph′alus** (*sphygmos*, pulse, *kephale*, head). A pulsatory pain in the temples.

**Sphygmochron′ograph** (*sphygmos*, pulse, *chronos*, time, *grapho*, to write). A form of sphygmograph.

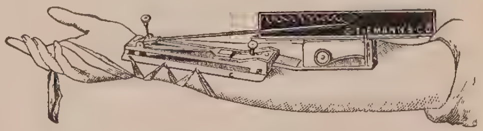
**Sphygmogenin′.** Substance from suprarenal capsule, so named because of its influence on arterial pressure.

**Sphyg′mogram** (*sphygmos*, pulse, *gramma*, a tracing). Tracing produced by the sphygmograph.



Sphygmograms. A, the small pulse of mitral stenosis; B, Corrigan's pulse, in a case of aortic regurgitation.

**Sphyg′mograph** (*sphygmos*, pulse, *grapho*, to write). An instrument applied over the heart or an artery, indicating graphically the character of the pulse as to force and extent of undulations.



Sphygmograph.

**Sphygmograph′ic.** Relating to a sphygmograph. **S. tra′cing**, sphygmogram.

**Sphygmog′raphy.** The use of the sphygmograph.

**Sphyg′moid** (*sphygmos*, pulse, *eidos*, resemblance). Similar to a pulse or to a pulsation.

**Sphygmole′gium** (*sphygmos*, pulse, *lego*, to read). A form of sphygmograph.

**Sphygmol′ogy.** Science relating to the pulse, especially its diagnostic significance.

**Sphygmomanom′eter** (*sphygmos*, pulse, *manos*, in small quantity, *metron*, measure). Instrument by which blood pressure in the arteries is measured.

**Sphygmom′eter.** Instrument for measuring the quickness or force of the pulse.

**Sphyg′mophone** (*sphygmos*, pulse, *phone*, sound). An instrument devised to render the rhythm, etc., of the pulse appreciable to the ear.

**Sphyg′moscope** (*sphygmos*, pulse, *skopeo*, to examine). Instrument to render visible the pulsations of the heart or of the blood-vessels.

**Sphygmos′copy** (*sphygmos*, pulse, *skopeo*, to see). Employment of the sphygmoscope.

**Sphygmosys′tole** (*sphygmos*, pulse, *systole*, contraction). The time during which the systole at the heart influences the pulse-beat, as demonstrated by the sphygmograph.

**Sphyg′motechny** (*sphygmos*, pulse, *tekne*, art). Art of examining the pulse.

**Sphygmotonom′eter** (*tonos*, tension). Apparatus for study of elasticity of the walls of an artery.

**Sphyg′mous.** Relating to the pulse.

**Sphy′ra** (hammer). The malleus.

**Sphyrec′tomy.** Removal of the malleus.

**Sphy′ron** (*sphyron*, the ankle). Malleolus.

**Sphyrot′omy** (*sphyra*, hammer, *tome*, section). The operation of excising the handle of the malleus.

**Sphyx′is.** Pulsation.

**Spi′ca.** Spica bandage. A bandage so called in consequence of its somewhat resembling a spike of barley. The turns of the bandage cross, making a figure like the letter V, each leaving a third of the roller uncovered. It is distinguished into ascending and descending. It may be applied over various parts of the body, and in a different manner in each case: thus, there is the spica or fascia inguinalis, spica inguinalis duplex, the spica for the shoulder, and another for the thumb. Ribbail's bandage is a form of spica for the instep, the use of which is indicated when pressure is needed. Lavandula spica. **S. alpi′na,** Valeriana celtica. **S. cel′tica,** Valeriana celtica. **S. in′dica,** Nardus indica. **S. nar′di,** Nardus indica.

**Spi′cate** (*spica*, spike). Resembling a spike; term applied to flowers.

**Spice.** See *Species.* **S. ber′ry,** gaultheria; Laurus benzoin. **S. bush,** Laurus benzoin. **S. plas′ter,** made by mixing equal parts of allspice, cloves, cinnamon, and nutmegs, and adding thereto one-half part of black pepper. These are made into a mass by stirring, and are then sewed up in a bag, which is quilted to prevent sagging of the contents. One side of the plaster is now wet with warm brandy, whiskey, or vinegar, and is then ready for use. **S. wood,** Laurus benzoin.

**Spices, four.** See *Myrtus pimenta.*

**Spic′ule** or **Spic′ulum** (pl. spicula). A small, spike-like fragment of bone.

**Spi′der.** An arthropod of the order *Araneæ.* **S. can′cer,** telangiectasis. **S. cells,** Deiters's cells. **S. web,** Araneæ tela.

**Spi′derwort.** Liliago; Tradescantia virginica.

**Spieg′elberg's sign.** Symptom of carcinoma of the uterus; when the finger is pressed over the affected part a sensation is experienced as if the region were made up of india-rubber.

**Spige′lia** (after Adrian Spigelius, the anatomist). A genus of plants of the order *Loganiaceæ.* Official (Ph. U. S.) name for the rhizome and roots of S. marilandica or pinkroot. **S. anthel′mia,** Demarara pinkroot, native of South America and the West India Islands. **S. gentianoi′des,** native perennial plant of Florida having white or purple flowers. S. anthelmia has properties like the **S. marilan′dica,** perennial wormgrass or Indian pink, Carolina pink, starbloom, wormroot. The rhizome and root —spigelia (Ph. U. S.), pinkroot—afford a useful anthelmintic, particularly in cases of lumbrici; dose, ʒj–ij (4.0–8.0) in infusion. The official preparation is *extrac′tum spige′liæ flu′idum;* dose, ʒj–ij (4.0–8.0).

**Spige′lian lobe** or **lob′ule.** Small lobe of the liver which extends from the rear of the under surface of the right lobe.

**Spigeline′.** A volatile alkaloid obtained from the root of Spigelia marilandica and S. anthelmia.

**Spige′lius, line of.** Crescentic line indicating the point of insertion of the fibres of the transversalis abdominis into the tendon of that muscle.

**Spig′nel.** Æthusa meum.

**Spig′net.** Aralia racemosa.

**Spike lav′ender.** Lavandula spica.

**Spike′nard.** Nardus indica. **Ameri′can s.,** Aralia racemosa. **False s.,** Smilacina racemosa. **Plow′man's s.,** Conyza squarrosa. **Small s.,** Aralia nudicaulis. **S. tree,** Aralia spinosa.

**Spilan′thes** or **Spilan′thus.** A genus of plants, ord. *Compositæ.* **S. acmel′la,** balmleaved spilanthus; the herb and seed are diuretic and emmenagogue. They have been given in infusion in dropsies, jaundice, fluor albus, and calculous complaints **S. cilia′ta,** S. acmella. **S. fimbria′ta,** S. acmella. **S. olera′ceus,** spear-leaved spilanthus; a tincture of the plant has been recommended in toothache.

**Spilo′ma.** Nævus vascularis.

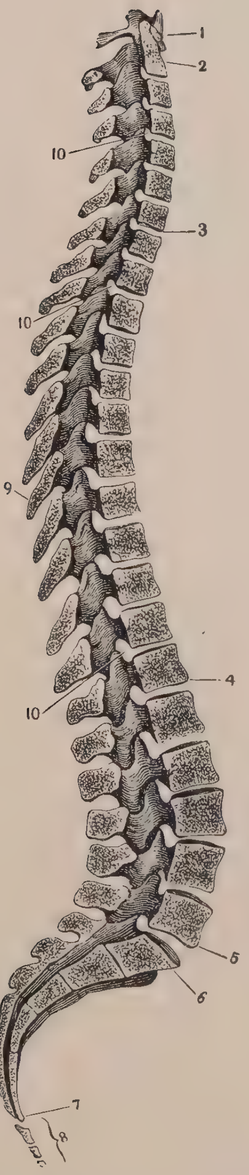
**Spiloplan′ia** (*spilos*, spot, *planos*, wandering). Small red spots on the skin, which are not permanent.

**Spiloplax′ia.** Red spots occurring in leprosy.

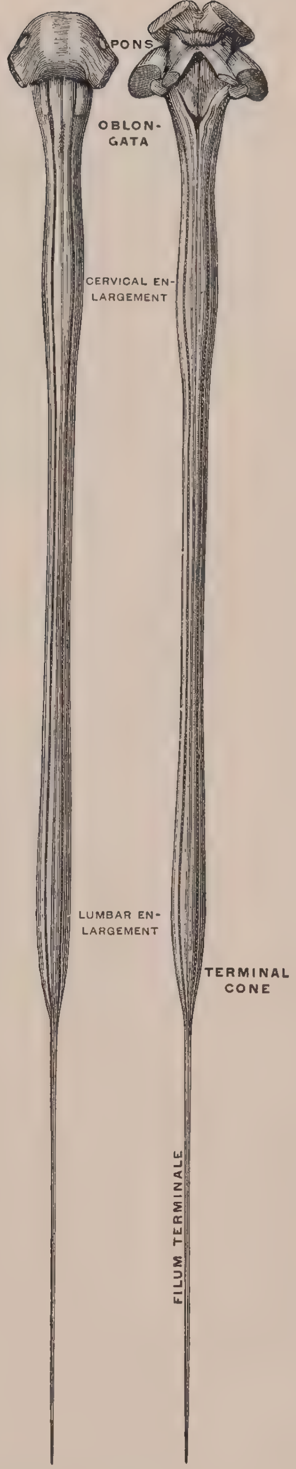
**Spilo′sis** (*spilos*, spot). Simple discoloration of the surface. **S. ephe′lis,** ephelides. **S. polio′sis,** poliosis.

**Spi′lus** (pl. spili). Nævus. A discolored spot on the skin.

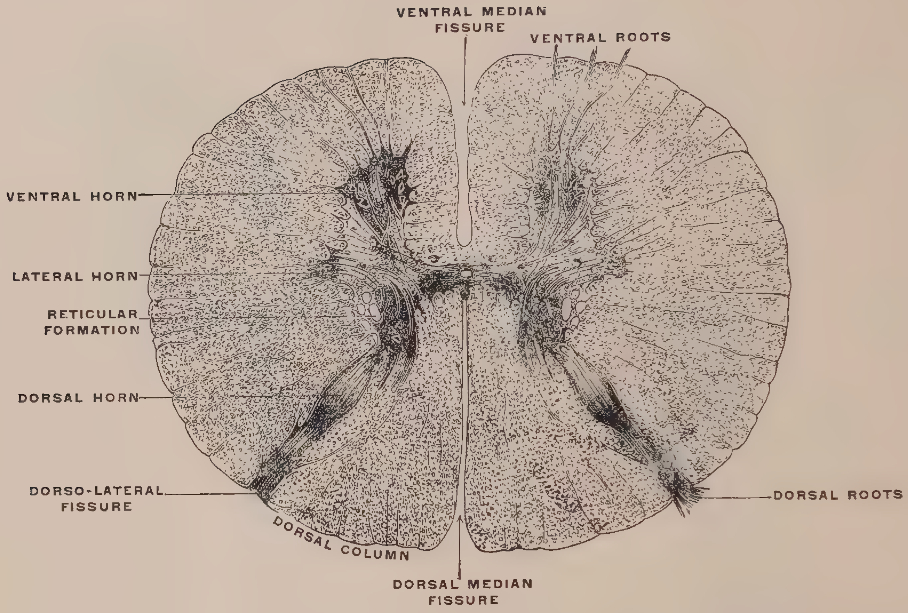
**Spi′na** (thorn). Process on the surface of a bone which has been compared to the spines or thorns on certain vegetables. The chief processes of this name are the nasal spine, the spine of the scapula, the spine of the ischium, the four iliac spines, the palatine spine, the maxillary, the sphenoid, etc. The spine of the back is the collection of vertebræ constituting the vertebral column. **S. accesso′ria is′chii,** little eminence occasionally occurring in the great sciatic notch, at the junction of the ilium and ischium. **S. ac′ida,** Oxyacantha galeni. **S. ægypti′aca,** see *Acacia.* **S. al′ba,** Carduus marianus, Mespilus oxyacantha, Onopordon acanthium. **S. angula′ris,** sphenoid spine. **S. bicipita′lis exter′na,** pectoral ridge. **S. b. inter′na,** inner lip of bicipital groove. **S. bi′fida,** name given to a congenital defect in the posterior wall of the vertebral canal, with protrusion of some of its contents in the form of a fluid tumor. The usual site of the lesion is in the lumbosacral region, but it may be found in the upper cervical and other parts of the column; see *Hydrorrhachis.* **S. cervi′na,** rhamnus. **S. con′dyli exter′na fem′oris,** outer lip of linea aspera. **S. c. inter′na fem′oris,** inner lip of linea aspera. **S. condyloide′a exter′na,** outer supracondylar ridge. **S. c. inter′na,** inner supracondylar ridge. **S. Darwin′ii,** Darwinian tubercle. **S. domes′tica,** rhamnus. **S. dor′si,** vertebral column. **S. dor′si intror′sum flex′a,** lordosis. **S. ethmoida′lis,** ethmoidal spine. **S. fer′rea,** pin. **S. fronta′lis,** nasal spine (frontal bone). **S. hel′icis,** process of helix. **S. Helmon′tii,** proximate cause of inflammation, as if the part or organ was pricked with a thorn. **S. hir′ci,** astragalus verus. **S. iliopectine′a,** spine of pubis. **S. infecto′ria,** rhamnus. **S. infe′rior muscula′ris,** crista arcuata cartilaginis arytenoideæ. **S. intercondyloide′a** or **S. interme′dia,** spine of tibia. **S. ischiad′ica, ischiat′ica,** or **is′chii,** spine of ischium. **S. jugula′ris,** jugular spine. **S. mea′tus,** spine or pointed process from temporal bone above and posterior to the auditory meatus. **S. menta′lis** or **menta′lis inter′na,** genial tubercle. **S. mus′culi ter′eti majo′ris,** process for insertion of teres major, found on lower part of axillary border of the scapula. **S. nasa′lis** or **nasa′lis ante′rior,** nasal spine. **S. nasa′lis os′sis fron′tis,** nasal spine (frontal bone). **S. nasa′lis os′sis maxilla′ris superio′ris,** anterior nasal spine. **S. nasa′lis poste′rior os′sis palati′ni,** posterior nasal spine. **S. nasa′lis supe′rior,** nasal spine (frontal bone). **S. na′si,** prominent line on the lateral surface of the nose. **S. navicula′ris,** pointed process found at inner edge of scaphoid bone of tarsus. **S. neura′lis,** neural spine. **S. nodo′sa,** rachitis. **S. occipita′lis,** occipital protuberance. **S. orbita′lis infe′rior,** small spine frequently found on orbital surface of greater wing of sphenoid, affording attachment to orbital muscle of Müller. **S. orbita′lis supe′rior,** spina recti lateralis. **S. os′sis il′ii,** spine of ilium. **S. os′sis is′chii,** spine of ischium. **S. os′sis pu′bis,** spine of pubis. **S. palati′na,** posterior nasal spine. **S. pe′dum,** corn. **S. pu′bis,** spine of pubis. **S. rec′ti latera′lis,** small



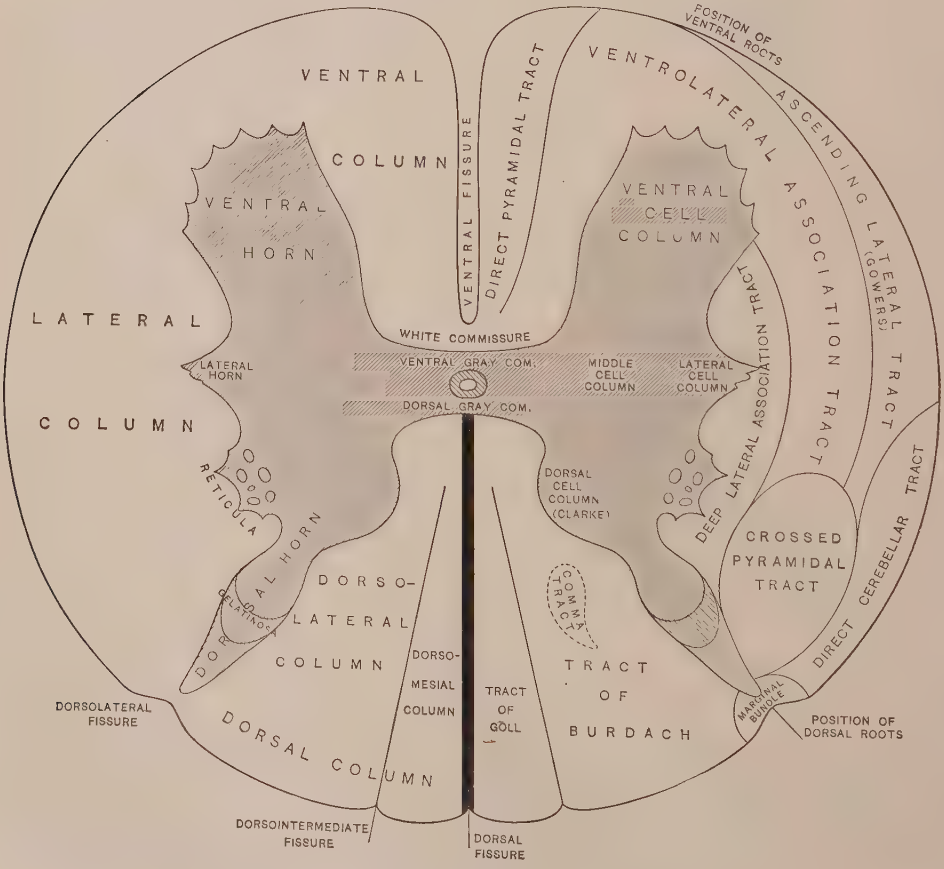
Lateral view of spinal column, showing its curvatures and internal structure: 1, atlas; 2, axis; 3, seventh cervical vertebra; 4, twelfth dorsal vertebra; 5, fifth lumbar vertebra; 6, first piece of sacrum: 7, last piece of sacrum; 8, coccyx; 9, a spinous process; 10, 10, 10, intervertebral foramina.



Spinal cord, oblongata, and pons. Left-hand figure is ventral view, right-hand is dorsal. (Testut.)



Transverse section of spinal cord at the middle of the thoracic region. The neuroglia septum has been removed from between the dorsal columns. (Testut, after Pierret.)



Diagrammatic ideal transverse section of spinal cord. On the left side are shown the gross divisions; on the right side, the conduction paths. (Gerrish.)

projection on border of greater wing of sphenoid, bounding the sphenoidal fissure, for attachment of external rectus muscle of the eye. **S. scap′ulæ,** spine of scapula. **S. sphenoida′lis,** sphenoidal spine; spine of sphenoid. **S. supe′rior muscula′ris,** prominence of the arytenoid cartilage. **S. teg′minis,** process of bone in the middle ear above the entrance to the mastoid antrum. **S. tib′iæ,** spine of tibia. **S. transver′sa,** crista arcuata cartilaginis arytenoideæ. **S. trochanter′ica ma′jor,** outer lip of linea aspera. **S. t. mi′nor,** inner lip of linea aspera. **S. trochlea′ris,** trochlear spine. **S. tuber′culi majo′ris,** pectoral ridge. **S. t. mino′ris,** inner lip of bicipital groove. **S. tympan′ica,** small projection from tympanic ring of middle ear. **S. t. ante′rior,** small projection not seen when ring unites with tegmen tympani. **S. t. ma′jor,** spina tympanica anterior. **S. t. mi′nor,** small process or projecting end of tympanic ring. **S. t. poste′rior** serves as point of attachment of anterior ligament of malleus. **S. vento′sa,** exostosis, osteoid cancer, cystic or osseous formation situated beneath the periosteum. Term of no definite meaning, as is obvious from these various words being considered its synonyms. By some it is defined to be a disease of the osseous system, in which the texture of the bone dilates, seeming to be distended with air and constituting a variety of osteosarcoma. By others it is considered to be a tumor arising from an internal caries of a bone, occurring most frequently in the carpus or tarsus. The term itself is a translation from the Arabic of Rhazes. **S. vertebra′lis,** vertebral column. **S. vestib′uli,** crista vestibuli. **S. zygomat′ica,** portion of zygomatic process of superior maxillary bone contributing to margin of sphenomaxillary fissure.

**Spin′ach.** Spinacia.

**Spina′cia** (*spina*, thorn or prickle). Spinach, ord. *Chenopodiaceæ.* Plant resembling the cabbage in its dietetic powers. The leaves boiled, with the addition of oil, form a good emollient cataplasm. Used in phthisical complaints. **S. olera′cea,** spinacia.

**Spi′næ** (pl. of spina). Spinous processes. **S. menta′les,** genian apophyses or processes. **S. ventos′itas,** spina ventosa.

**Spi′nal** (*spina*, spine). Relating to the vertebral column. **S. acces′sory,** spinal nerve. **S. acces′sory nu′cleus,** compact group of cells lying dorsolaterally from central group of cells in anterior column of the cord, which is the origin of the spinal accessory nerve. **S. ar′teries,** two in number: 1. The *posterior spinal artery* arises from the vertebral, near the corpora pyramidalia, and descends on the posterior surface of the spinal cord, distributing its ramifications to it. 2. The *anterior spinal artery* is larger than the posterior, and arises, also, from the vertebral. It descends in a serpentine manner upon the anterior surface of the cord, furnishes ramusculi to it, and unites with that of the opposite side opposite the foramen magnum occipitis. A very tortuous branch arises from this union, which descends as far as the inferior extremity of the spinal cord, to which it sends numerous divisions. The term *spinal arteries* or *rachidian arteries* is also given in the abstract to all arteries of the spinal marrow and vertebral canal. The same may be said of the veins and nerves. **S. bul′la,** a bleb of trophic origin occurring in diseases of the spinal cord. **S. canal′,** vertebral canal surrounding and protecting the spinal cord and its investments. **S. cen′tre,** spinal cord. **S. cen′tres,** motor centres in the spinal cord; see *Centre.* **S. col′umn,** vertebral column, composed of thirty-three vertebræ. **S. com′missure,** transverse portion connecting the two halves of the cord; it measures $\frac{1}{25}$ or $\frac{1}{30}$ of an inch in average thickness, and consists of two portions, anterior white and posterior gray commissures. The anterior is proportional in size to the size of the nerve-roots. The posterior is largest in the upper part of the cornu medullaris. **S. cord,** the portion of the central nervous system contained in the spinal canal; its function is to convey nerve impulses to and from the brain, and it is also a centre for reflex action; see *Medulla spinalis.* **S. debil′ity,** spinal weakness. **S. ep′ilepsy,** a condition occurring in spastic paraplegia, in which clonic spasms follow the tonic. **S. foram′ina,** in the abstract, are the foramina formed by every two contiguous vertebræ through which the spinal nerves issue; see *Vertebral.* The term *foramen spinale* or *spinosum* is especially applied to a small foramen in front of the spinous process of the sphenoid bone, through which the middle artery of the dura mater enters the cranium; it is likewise called *foramen sphenospinosum.* **S. fur′row,** vertebral groove. **S. gan′glion,** see *Encephalon.* **S. gray,** gray matter of spinal cord. **S. ice-bag,** india-rubber bag filled with cracked ice; a convenient method of making application of cold to the spinal cord. **S. irrita′tion,** a supposed erethistic state of the spinal cord, indicated by tenderness on pressure over the spinous process of one or more vertebræ, or over the nerves proceeding from the cord and distributed to the parts at the sides of the spine. **S. localiza′tion,** the designation of a particular part of the spinal cord as the centre of certain physiological functions or of muscular movements or reflexes. **S. mar′row,** medulla spinalis. **S. meningi′tis,** inflammation of the spinal meninges or membranes. **S. nerve,** accessory of the par vagum or eighth pair, accessory nerve of Willis, spinal accessory, superior respiratory nerve, eleventh pair of encephalic nerves, arises from the spinal cord, within the vertebral canal, between the anterior and posterior roots of the cervical nerves, at a greater or less distance from the cranium. The roots unite to form the nerve, which ascends into the cranium through the foramen magnum of the occipital bone, and issues by the foramen lacerum posterius, crossing the sternocleidomastoideus, to which it gives filaments, and losing itself entirely on the trapezius muscle. The pneumogastric and spinal accessory nerves together—*nervus vagus cum accessorio*—resemble the spinal nerves; the former, with its ganglion, being the posterior root; the latter the anterior. **S. nerves,** vertebral nerves. **S. neurasthe′nia,** neurasthenia. **S. paral′ysis,** anterior poliomyelitis. **S. point,** tender spot over the spinous process of a vertebra in neuralgia, indicating the nerve affected. **S. prolonga′tion,** spinal cord. **S. re′flex,** a reflex having its course or arc connected with a spinal centre. **S. re′gion,** space on either side of the vertebral spine. **S. stim′ulant,** that which increases the functional activity of the spinal cord. **S. veins,** longitudinal meningorachidian veins. **S. weak′ness,** spinal debility; vaguely used for want of power in the extensor or other muscles of the spine, with tendency to deviation of the vertebral column; it is mostly seen in nervous and delicate women.

**Spina′les col′li mino′res.** Interspinales colli. **S. et transversa′les lumbo′rum,** transversalis dorsi.

**Spina′lis cap′itis.** S. cervicis, s. colli, and s. dorsi. **S. cervi′cis,** semispinalis colli. **S. col′li,** semispinalis colli. **S. dor′si,** name of fleshy fasciculi situated on the lateral surface of the spinous processes, from the third dorsal vertebra to the first or second lumbar, which form part of the transversospinalis of most authors. **S. dor′si ma′jor,** s. dorsi. **S. dor′si mi′nor,** some small, fleshy fibres situated on each side of the interspinal ligament; short, flat, and passing from one spinous process to another; like the preceding, they form part of the transversospinalis; all these fleshy fasciculi strengthen the vertebral column. **S. lumbo′rum,** longissimus dorsi.

**Spi′nants.** Medicines which, by their action on the spinal nervous system, excite muscular contraction, such as strychnine.

**Spi′nate.** Thorn-shaped.

**Spina′ti.** Interspinales colli.

**Spin′dle.** Any anatomical or histological structure of fusiform shape, especially the figure observed in the cell nucleus during karyokinesis. **S. cell,** a fusiform cell seen in certain malignant growths under the microscope; in sarcoma, for example. **S.-c. lay′er,** deep layer of cortical gray matter of brain.

**Neuroten′dinous s.**, Golgi's corpuscle. **Nu′clear s.**, see *Nuclear*. **S. tree**, Euonymus americanus.

**Spin′dle-celled.** Having spindle cells. **S.-c. sarco′ma**, see *Sarcoma*.

**Spine.** Spina; vertebral column. **Civini′ni's s.**, see *Civinini*. **Hæ′mal s.**, sternum. **S. of il′ium**, projections on anterior and posterior borders of the ilium; the *anterior superior* spine and *posterior superior* spine are situated at corresponding ends of the crest of the ilium; the *anterior inferior spine* is above and in front of the acetabulum; the *posterior inferior* spine is above the greater sacrosciatic notch. **S. of is′chium**, eminence about the central part of the posterior edge of the ischium, affording attachment to the lesser sacrosciatic ligament. **Men′tal s.**, projection on the deep surface of the body of the inferior maxillary bone. **Neu′ral s.**, spinous process. **S. of pu′bis**, process at anterior end of iliopectineal line, at the point at which it passes into the crest of the pubis. **Rail′way s.**, see *Railway*. **Revolv′ing s.**, see *Rotatio spinæ*. **S. of scap′ula**, ridge of bone on posterior surface of scapula, affording attachment to the trapezius and deltoid muscles. **S. of sphe′noid**, sharp prolongation extending back into the angle between the petrous and squamous portions of the temporal bone. **S. of Spix**, pointed prominences at the border of the inferior dental foramen for attachment of internal lateral ligament of jaw. **S. of tib′ia**, anterior projection between the condyloid surfaces. **Ty′phoid s.**, see *Typhoid*.

**Spin′gle.** Anethum.

**Spi′ni-axoi′do-occipita′lis.** Rectus capitis posticus major.

**Spini′tis.** Inflammation of spinal cord; myelitis.

**Spinobul′bar** (*spina*, spine, *bulbus*, bulb). Relating to the spinal cord and the medulla oblongata; as the spinobulbar neuroses, which include paralysis agitans, chorea, and tetanus.

**Spinocosta′les.** Superior and inferior posterior serratus muscles.

**Spinodorsi′tis** (*spina*, spine, *dorsum*, back). Myelitis.

**Spinogle′noid lig′ament.** Inferior transverse ligament of the scapula, connecting the base of the spine of that bone with the posterior portion of the margin of the glenoid cavity.

**Spin′ol.** Fluid, saccharine extract of fresh young spinach leaves; suggested for use in anæmia and chlorosis, on account of the iron it contains, and as a mild tonic. In powder, dried, it is called *spinol siccum*.

**Spin′ola** (*spina*, spine). Spina bifida.

**Spinomus′cular seg′ment** of the motor system of the nerves. Motor cells in the medulla oblongata and spinal cord and the nerves arising from them.

**Spinoneu′ral.** Term applied to the spinal cord and nerves immediately associated with it.

**Spino′sus** (*spina*, spine). Spinal.

**Spinotransversa′lis.** Erector spinæ; also splenius. **S. bre′vis**, rotator spinæ.

**Spinotransversa′rii.** Splenius and obliquus capitis, considered as a common mass.

**Spi′no-umbil′ical line.** Monro's line, a line drawn from the anterior superior spine of the ilium to the umbilicus.

**Spi′nous** (*spina*, thorn). Having the shape of a spine or thorn. Relating to a spine. **S. point**, see *Apophysary*. **S. pro′cess of sphe′noid**, spine of the sphenoid. **S. pro′cesses of il′ium**, spines of ilium. **S. pro′cesses** or **apoph′yses of the ver′tebræ**, situated at the posterior part of each vertebra, and affording attachment to the muscles whose office is to extend the spine; see *Vertebra*.

**Spin′therism** (*spintherizo*, to emit sparks). Sensation of sparks flashing before the eyes; synchisis scintillans.

**Spintherom′eter** (*spinther*, spark, *metron*, measure). Instrument for measuring the size, power, and shock of electrical sparks.

**Spinthero′pia** (*spinther*, spark, *ops*, vision). Spintherism.

**Spi′ny clot′bur.** Xanthium spinosum.

**Spirac′ula** (pl. of spiraculum) (*spiro*, to breathe). Respiratory pores of the skin.

**Spiradeni′tis** (*spira*, coil, *aden*, gland). Name given by Unna to hydradenitis destruens suppurativa. Also synonym of necrotic granuloma. See *Granuloma*.

**Spi′ræ cer′ebri** (*speira*, winding). Cerebral convolutions.

**Spiræ′a denuda′ta** (*speira*, coil). S. ulmaria. **S. filipen′dula**, dropwort; ord. *Rosaceæ*. The root is said to possess astringent and lithontripic virtues. **S. loba′ta**, queen of the prairie, American meadowsweet; an oil resembling oleum gaultheriæ is obtained from the roots and stems. **S. oil**, salicylous acid. **S. opulifo′lia**, opulus-leaved spiræa, nine-bark, has similar properties. **S. palma′ta**, S. lobata. **S. prunifo′lia**, ornamental shrub of Japan, cultivated in the United States, bearing white flowers in profusion. **S. tomento′sa**, hardhack, red meadowsweet, steeplebush, rosy bush, whiteleaf; root of this indigenous species, *spiræa*, is abundant in the Northern States; is tonic and astringent; it is usually administered in the form of extract or in decoction. **S. trifolia′ta**, Gillenia trifoliata. **S. ulma′ria**, meadowsweet, queen of the meadows; leaves have been recommended as mild astringents and diuretics—the flowers as antispasmodics and diaphoretics.

**Spi′ral** (*speira*, coil). Winding like a screw. **S. ban′dage**, bandage ascending obliquely around more or less conical portions of the body, each turn being applied smoothly to the surface, the folds being sometimes reversed to attain this object. **S. canal′ of modi′olus**, opening of spiral lamina of cochlea at axial margin, which contains the spiral ganglion. **S. crest**, pointed, indentated border of limbus of spiral lamina turned toward the organ of Corti. **S. fi′bre**, process of any bipolar ganglionic cell that is wound around another. **S. fis′sure**, fissure between two plates of spiral lamina of cochlea, giving exit to filaments of cochlear nerve. **S. grooves**, two in number: internal, situated at periphery of spiral lamina of cochlea; external, on the external wall of the cochlear duct; also musculospiral grooves. **S. lam′ina**, bony lamina dividing scala tympani from the scala vestibuli of the cochlea. **S. lig′ament**, thickened portion of external periosteum of cochlea, corresponding to cochlear duct. **S. line of fe′mur**, intertrochanteric line. **S. nerve**, musculospiral nerve. **S. plate**, lamina spiralis. **S. tract**, depression at bottom of internal auditory meatus by which filaments of cochlear nerve enter the internal ear. **S. tubes of kid′ney**, tubuli uriniferi. **S. tu′bule of Schacho′wa**, spiral portion of uriniferous tubule between the first convoluted tubule and the looped tubule of Henle.

**Spi′rals of Cursch′mann.** See *Curschmann*.

**Spiran′thes.** A genus of orchids, some of which are credited with medicinal virtues.

**Spira′tio** (*spiro*, to breathe). Respiration.

**Spi′rem** or **Spire′ma.** Period of division of the nucleus in which chromatin becomes a long filament wound into a spherical shape, and the nucleoli disappear. See *Karyokinesis*.

**Spiril′lum.** A genus of bacteria. **S. amylif′erum** (van Tieghem), found in water. **S. an′serum** (Sakharoff), causes septicæmia in geese. **S. *α* of Wei′bel**, Spirillum saprophiles *α*. **S. aquat′ilis** (Günther), found in water. **S. of Asiat′ic chol′era**, S. choleræ asiaticæ. **S. attenua′tum** (Warming), in water of the ocean. **S. au′reum** (Weibel), in sewers and the atmosphere. **S. *β* of Wei′bel**, Spirillum saprophiles *β*. **S. berolinen′sis** (Neisser), in water; resembles S. choleræ asiaticæ. **S. bonhof′fii**, found in water. **Cheese s.**, Spirillum tyrogenum. **S. chol′eræ asiat′icæ**, comma bacillus (Koch), having the appearance of curved rods or commas, about half the length of a tubercle bacillus. They are isolated or connected with each other like an S or in larger screw shapes, the latter being like those of relapsing fever. **S. concen′tricum** (Kitasato), in blood undergoing putrefaction. **S. danu′bicum** (Heiden), in water; resembles S. choleræ asiaticæ. **S. of Hen′ecke,** S. tyrogenum. **S. dentic′ola** (Miller), detected under the normal gum. **S. den′tium** (Arnt), S. denticola. **S. desulfu′ricans** (Beyerinck), found in water of pits; causes fermentation. **S. dunbar′ii** (Dunbar and Oergel), found in river water. **S. endoparago′gicum** (Sorokin), obtained from exudation from a poplar. **S. fe′ver,** relapsing fever. **S. of Fink′ler-Pri′or,** comma bacillus of cholera nostras; the curved, comma-like rods are thicker than those of Spirillum choleræ asiaticæ (Koch's comma bacillus). **S. flaves′cens** (Weibel), in sewers; causes yellowish-green pigment. **S. fla′vum** (Weibel), produces yellow pigment; in sewers. **S. gin′dha,** in water; resembles S. choleræ asiaticæ, but not very infectious, except for guinea-pigs. **S. helcog′enes,** in the passages of diarrhœa; resembles S. finkleri. **S. of hos′pital gan′grene** (Vincent), in membranous covering of ulcers; pathogenic. **S. jenen′se** (Ehrenberg), found in water. **S. leucomelæ′num** (Perty), in decaying vegetable infusions. **S. lin′guæ** (Weibel), on the tongue. **S. lis′sabon,** in cholera at Lisbon. **S. litora′le** (Warming); in water of marshes. **S. lu′teum** (Jumella), found in water of marshes; produces yellow pigment. **S. maas′ei** (Van't Hoff), found in river water; pathogenic. **S. mari′num** (Russell), found in sea water. **S. massau′ah,** in sporadic cholera in man; resembles S. choleræ asiaticæ. **S. metchniko′vi** (Gamaleia), in fowl-cholera, in doves infected from them, and in river water; pathogenic to guinea-pigs, rabbits, and chickens. **S. of Mil′ler,** detected in decaying teeth; resembles S. finkleri. **S. nasa′le** (Weibel), in secretions from the nose. **S. obermei′eri,** Spirochæte obermeieri; spirillum of relapsing fever, observed in the blood of that disease, but not in the secretions. **S. phosphores′cens,** in rain water and in the discharges of diarrhœa; almost identical, in every way, with S. choleræ asiaticæ. **S. plicat′ile** (Dujardin), in decaying vegetable infusions. **S. pro′teum** (Finkler-Prior), found in the fæces in cholera nostras. **S. of pseudochol′era** (Renon), in well water; pathogenic. **S. rec′ti physe′teris** (Beauregard), in ambergris; causes fermentation. **S. of relaps′ing fe′ver,** S. obermeieri. **S. rosa′ceum,** in excrementitious matter. **S. rosenberg′ii** (Warming), in water. **S. ro′seum,** found in fæces; causes pigmentation. **S. ro′seum** (Macé), in the purulent discharge of blennorrhagia; causes red pigmentation. **S. ru′brum** (von Esmarch), from animal putrefaction; causes red pigment. **S. ru′fum** (Perty), in water; causes red pigment. **S. ru′gula** (Müller), in water of marshy regions; also in the digestive organs, mouth, fæces, etc.; causes fermentation. **S. sanguin′eum,** Beggiatoa roseopersicina. **S. saproph′iles α** (Weibel), in sewers, etc. **S. saproph′iles β** (Weibel), in decomposing infusions of hay. **S. saproph′iles γ** (Weibel), in sewers. **S. schuylkillien′se** (Abbott), in Schuylkill river water; pathogenic. **S. ser′pens** (Müller), in decomposing vegetable infusions. **S. of Smith,** in the intestines of hogs. **S. sputig′enum** (Lewis), rods resemble comma bacilli of Koch; they are found associated with other bacteria in saliva and in scrapings from decaying teeth. **S. sputig′enum** (Miller), in the healthy mouth. **S. ten′ue** (Ehrenberg), in decomposing vegetable infusions. **S. terrig′enum** (Günther), found in the soil. **S. tyrog′enum** (Deneke), the rods resemble those of the comma bacillus of Koch, but are smaller; they have been isolated from old cheese, but their pathogenic properties are not established. **S. und′ula** (Cohn and Müller), in marsh water. **S. viola′ceum** (Warming), in water; causes violet pigment. **S. volu′tans** (Ehrenberg), in water of marshes; pathogenic. **S. of Wer′nicke,** found in water; pathogenic.

**Spir′it** (*spiro,* to breathe, to exhale). Name formerly given to every liquid product of distillation. Spirits were formerly distinguished into inflammable, acid, and alkaline; consequently a number of substances were crowded together resembling each other in no other property than in being volatile. The term is now confined popularly to alcoholic liquors. In the pharmacopœia the term is applied to an alcoholic solution of a gas or any volatile solid or liquid. For the official spirits, see *Spiritus.* The chief alcoholic liquors or spirits used as beverages are: I. *Arack* or *arrak.* Distilled from coarse palm-sugar, named jaggery; fermented with the bark of the Mimosa leucophlea; also from rice and the fermented juice of the palm, made in India. Its varieties are: Mahwah arrack, made in India from the flowers of the Madhuca tree, Bassia butyracea. II. *Araka.* Distilled by the Tartars from koumis, fermented mare's milk. III. *Ariki.* Distilled from dates by the Egyptians. IV. *Arika.* Variety of koumis distilled from fermented mare's milk in Tartary and Iceland. V. *Brandy.* Distilled from wine, figs, peaches, persimmons, apples, mulberries, and sometimes other fruits, in Europe, Asia, North and South America, wherever wine is made. Brandy is official in the Ph. U. S. and Br. under the name *spiritus vini gallici, spirit of French wine.* Varieties are: *Aguardiente* (S.). In Peru the common brandy obtained from grapes is the aguardiente de Pisco, so called because shipped at the port of Pisco. Another kind, much dearer and of excellent flavor, is made from Muscatel grapes, and is called aguardiente de Italia. It is sometimes seen in the United States. *Lau,* made from rice in Siam. *Rakia,* made in Dalmatia from the husks of grapes mixed with aromatics. *Rossolio,* made at Dantzic from a compound of brandy, rossolis, and other plants. *Troster,* made on the Rhine from the husks of grapes, fermented with barley and rye. *Sekiskaya vodka,* made from the lees of wine and fruit at Scio. VI. *Geneva, Hollands.* Distilled from malted barley and rye, rectified on juniper berries, in Holland. Its variety is: *Gin.* Made in England from malted barley, rye, potatoes, rectified with turpentine. VII. *Goldwasser.* Distilled at Dantzic from wheat, barley, and rye, rectified with aniseed, cinnamon, and other spices. VIII. *Kirschwasser.* Distilled from the Malacheh cherry in Switzerland. IX. *Maraschino, Marasquino.* Distilled from the Macarska or Maraska cherry at the capital of Dalmatia. X. *Rum* (supposed to be derived from the terminal syllable of the word *saccharum*). Distilled in the West Indies and South America from cane-sugar and molasses, and in North America from maple-sugar. Its variety is: *Sakee, saki.* A Japanese beverage distilled from rice. XI. *Slatkaia trava.* Made in Kamtschatka from a sweet grass. XII. *Showchoo.* Distilled in China from the lees of mandarin, a wine made from boiled rice. XIII. *Tuba.* Made from palm wine, in the Philippine Islands. See *Arack.* XIV. *Whiskey* (supposed to be derived from *usque,* the first two syllables of *usquebaugh,* the original name in Ireland—itself from Irish *uisge* and *beatha,* life, *uisge beatha, aquæ vitæ,* water of life). Distilled in Scotland and Ireland from malted and raw barley, rye, oats, and potatoes; and in the South of France from sloes. *Whiskey,* under the name *spiritus frumenti,* is official in the Pharmacopœia of the United States. It is obtained from fermented grain by distillation, and contains from 48 to 56 per cent. by volume of absolute alcohol. For medical use it should not be less than two years old. XV. *Y-wer-a.* Distilled in the Sandwich Islands from the root of the teeroot, baked, pounded, and fermented. To these may be added an intoxicating liquor made by the Afghanistans from ewes' milk; and that made in Kamtschatka, from a species of mushroom, named *muchumer.* **Fu′ming s. of Boyle,** solution of ammonium sulphide. **S. of Ga′rus,** aloes 5, myrrh 2, clove 5, nutmeg 10, cinnamon 20, saffron 5, alcohol (sp. gr. 864) 5000; macerate, filter, and add water 1000; distil 4500. **S. of hydrochlo′ric e′ther,** hydrochloric acid 1, alcohol 3; resembles sweet spirit of nitre in its action. **S. of Mindere′rus,** liquor ammonii acetatis. **Proof s.,** dilute alcohol made by mixing equal parts of rectified spirit and distilled water.

**Pyrox'ylic s.**, acetone. **Rec'tified s.**, a fluid containing 84 per cent. absolute alcohol. **S. of salt,** hydrochloric acid. **Sweet s. of ni'tre,** spiritus ætheris nitrosi. **S. of tur'pentine,** oleum terebinthinæ rectificatum. **S. of vit'riol,** sulphuric acid. **S. of wine,** rectified s. **Wood s.,** wood alcohol, methyl alcohol.

**Spir'ituous** (*spiritus*). Alcoholic.

**Spir'itus** (*spiro*, to breathe). Official name for any pharmacopœial spirit or alcoholic solution of any volatile solid, liquid, or gas; an alcoholic solution of a non-volatile substance is called a *tinctura*, tincture. **S. æ'theris** (Ph. U. S. and Br.), spirit of ether, containing ether 32.5 and alcohol 67.5; dose, ʒj–iij (4.0–12.0); has the therapeutic effects of ether. **S. æ'theris aromat'icus,** sweet elixir of vitriol, aromatic spirit of ether, contains cinnamon, cardamom, pepper, and ginger in s. ætheris; stimulant in nervous affections; dose, ʒss–j (2.0–4.0). **S. æ'theris compos'itus** (Ph. U. S. and Br.), compound spirit of ether, Hoffman's anodyne, contains ether 32.5, alcohol 65, and ethereal oil (see *Oleum æthereum*) 2.5; dose, ʒss-j (2.0–4.0). **S. æ'theris nitro'si** (Ph. U. S. and Br.), sweet spirit of nitre, nitre drops, spirit of nitrous ether, a mixture of ethyl nitrate, 4 per cent., and alcohol; it is refrigerant, diuretic, antispasmodic, and diaphoretic, and largely employed as an ingredient of fever mixtures; dose, ♏xv–ʒj (1.0–4.0). **S. ammo'niæ** (Ph. U. S.), spirit of ammonia, spirit of hartshorn, a solution of ammonia, 10 per cent., in alcohol; stimulant and antispasmodic; dose, ♏x–ʒj (0.65–4.0). **S. ammo'niæ aromat'icus** (Ph. U. S. and Br.), aromatic spirit of ammonia, sal volatile drops, composed of ammonium carbonate, 3.4; oils of lemon, lavender flowers, and nutmeg, each 0.1; water of ammonia, 9.0; alcohol, 70.0; distilled water, 17.3; stimulant; dose, ♏x–ʒj (0.65–4.0). **S. ammo'niæ fœ'tidus** (Ph. Br.), fetid spirit of ammonia, fit drops, contains asafœtida in water of ammonia and alcohol; dose, ♏x–ʒj (0.65–4.0). **S. amyg'dalæ ama'ræ** (Ph. U. S.), spirit or essence of bitter almond, is made by dissolving oil of bitter almond 1 in alcohol 80 and adding distilled water enough to make 100; dose, ♏iij–x (0.2–0.65). **S. ani'si** (Ph. U. S. and Br.), spirit of aniseed, composed of oil of anise 10 and alcohol 90; carminative; dose, ʒss–ij (2.0–8.0). **S. armora'ciæ compos'itus** (Ph. Br.), compound spirit of horseradish, contains horseradish, orange-peel, nutmeg, alcohol, and water; stimulant and antiscorbutic; dose, ʒj–iv (4.0–16.0). **S. auran'tii** (Ph. U. S.), spirit of orange, solution of oil of orange-peel 5 in alcohol 95; dose, ♏x–ʒj; (0.65–4.0). **S. a. compos'itus** (Ph. U. S.), compound spirit of orange, contains oils of orange 20, lemon 5, coriander 2, and anise 0.5, in alcohol to make 100; dose, ♏x–ʒj (0.65–4.0). **S. caju'puti** (Ph. Br.), spirit of cajeput, contains oil of cajeput 10 in alcohol 90; dose, ♏x–xx (0.65–1.3). **S. cam'phoræ** (Ph. U. S. and Br.), spirit of camphor, contains camphor 10 in alcohol 90; stimulant, anodyne, and discutient; dose, ♏v–xxx (0.32–2.0). **S. chlorofor'mi** (Ph. U. S. and Br.), spirit of chloroform, contains chloroform 6 in alcohol 94; dose, ♏x–ʒj (0.65–4.0). **S. cinnamo'mi** (Ph. U. S. and Br.), spirit of cinnamon, strong cinnamon-water, oil of cinnamon 10 in alcohol 90; stimulant and carminative; dose, gtt. xx–ʒj (1.3–4.0). **S. dilu'tus,** diluted alcohol. **S. frumen'ti** (Ph. U. S.), whiskey; see *Spirit*. **S. gaulthe'riæ** (Ph. U. S.), spirit of gaultheria, contains 5 per cent. of oil of wintergreen; dose, ♏x–ʒj (0.65–4.0). **S. glonoin'i** (Ph. U. S.), an alcoholic solution of glonoin, or nitroglycerin, containing 1 per cent. by weight of the substance; dose, ♏j (0.06). **S. jamaicen'sis,** rum. **S. junip'eri** (Ph. U. S. and Br.), spirit of juniper, contains 5 per cent. of oil of juniper; dose, ♏x–ʒj (0.65–4.0). **S. junip'eri compos'itus** (Ph. U. S.), compound spirit of juniper, oils of juniper 0.4, caraway 0.05, fennel 0.05, alcohol 70, water 29.5; stimulant and diuretic; dose, ʒj–iv (4.0–16.0). **S. laur'i cinnamo'mi,** spiritus cinnamomi. **S. lavan'dulæ** (Ph. U. S. and Br.), spirit of lavender, lavender-water, contains 5 per cent. oil of lavender; used as a perfume chiefly; dose, ʒss–j (2.0–4.0). **S. lavan'dulæ compos'itus,** red hartshorn, lavender drops, compound spirit of lavender, contains the oils of lavender, rosemary, cinnamon, cloves, nutmeg, and sandalwood in alcohol and water; stimulant; dose, ʒss–ij (2.0–8.0). **S. limo'nis** (Ph. U. S.), spirit of lemon, essence of lemon, composed of oil of lemon 5, lemon-peel 5, in alcohol to 100; used to give odor and flavor; dose, ʒss–j (2.0–4.0). **S. lumbrico'rum,** liquor ammonii. **S. me'dius,** alcohol, sp. gr. 0.850. **S. men'thæ piperi'tæ** (Ph. U. S. and Br.), spirit of peppermint, essence of peppermint, contains oil of peppermint 10, alcohol 90; dose, ♏v–xx (0.32–1.3), as a carminative. **S. men'thæ sati'væ,** spiritus menthæ viridis. **S. men'thæ vir'idis** (Ph. U. S.), spirit or essence of spearmint, is made like s. menthæ piperitæ, and has the same properties and dose. **S. Mindere'ri,** liquor ammonii acetatis. **S. myr'ciæ** (Ph. U. S.), bay rum, obtained by distilling rum with the leaves of *Myrcia acris*, bayberry tree of the West Indies; used externally. **S. myris'ticæ** (Ph. U. S. and Br.), nutmeg-water, composed of oil of nutmeg 5 and alcohol 95; cordial and carminative; dose, ♏x–xx (0.65–1.3). **S. odora'tus,** perfumed spirit, Cologne water, contains the oils of bergamot, lavender, lemon, rosemary, and orange flowers, and acetic ether, water, and alcohol. **S. phos'phori** (Ph. U. S.), spirit of phosphorus, tincture of phosphorus, made by dissolving phosphorus in absolute alcohol; dose, ♏viij–xv (0.5–1.0); 7½ minims contain about $\frac{1}{100}$ grain of phosphorus. **S. pule'gii,** spirit of pennyroyal, oil of pennyroyal 5 in alcohol 95; same as spirit of spearmint in properties and dose. **S. pyroxyl'icus,** wood spirit, methylic alcohol. When wood is subjected to destructive distillation, about 1 per cent. of an inflammable, volatile liquid, along with other products, passes over, which when separated and purified constitutes pyroxylic spirit. It is given in the same cases and doses as acetone. **S. Raph'ani compos'itus,** s. armoraciæ compositus. **S. rectificatis'simus,** alcohol, sp. gr. 0.830 to 0.828. **S. rectifica'tus** (Ph. Br.), alcohol, spirit of wine; absolute alcohol diluted with 16 per cent. of water; obtained by distillation of fermented saccharine fluids; rectified spirit is much used in pharmacy to dissolve resinous and other substances. **S. rec'tor,** aroma. **S. rorif'erus,** gas sanguinis. **S. rosmari'ni** (Ph. Br.), spirit of rosemary, Hungary water, contains oil of rosemary 10 in alcohol 90; stimulant, perfume, and ingredient in lotions and liniments. **S. sa'lis,** hydrochloric acid. **S. sa'lis ammoni'aci,** spiritus ammoniæ. **S. sa'lis ammoni'aci aquo'sus,** liquor ammoniæ. **S. sa'lis dul'cis,** spirit of hydrochloric ether. **S. sapo'nis,** linimentum saponis. **S. sapo'nis alkali'nus,** linimentum saponis mollis, tincture of green soap. **S. sapo'nis camphora'tus,** linimentum saponis. **S. sul'phuris,** sulphuric acid, sulphurous acid. **S. sul'phuris volat'ilis,** ammonii sulphuretum. **S. sulphuro'sus volat'ilis,** sulphurous acid. **S. tenu'ior,** proof spirit, contains 57 per cent. by volume, 49 per cent. by weight, of absolute alcohol. **S. ten'uis,** alcohol, sp. gr. 0.942 to 0.940. **S. terebin'thinæ,** oil of turpentine. **S. vi'ni gal'lici,** brandy. **S. vi'ni rectificatis'simus,** alcohol, sp. gr. 0.838. **S. vi'ni rectifica'tus,** dilute alcohol. **S. vino'sus tenu'ior,** spiritus tenuior. **S. vitri'oli,** sulphuric acid. **S. volat'ilis aromat'icus,** spiritus ammonii aromaticus.

**Spir'it-weed.** Indian red root, Sachnanthes tinctoria.

**Spirobacte'ria.** Twisted or spiral-celled bacteria. See *Bacteria*.

**Spirochæ'ta** or **Spirochæ'te.** Genus of *Schizomycetes*, spirillum; cells presenting long, thin threads twisted into a spiral; their movements are active. **S. anseri'na** (Sakharoff), Spirillum anserum. **S. bucca'lis,** leptothrix of the mouth. **S. cohn'ii,** noticed on the teeth, resembling S. obermeieri, but not so long. **S. dentic'ola** (Miller), Spirillum dentium. **S.**

**den'tium** (Arnt), Spirillum dentium. **S. obermei'eri,** Spirillum obermeieri, occurs in the blood of patients suffering with relapsing fever. **S. plicat'ilis,** found in stagnant water.

**Spiroco'lon.** Syphiloid affection, endemic in Greece during the war of freedom from 1820 to 1825.

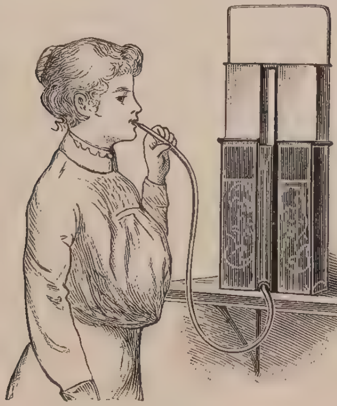
**Spi'rograph** (*spiro,* to breathe, *grapho,* to write). See *Atmograph.*

**Spirographidin'.** Hyalin obtained from spirographin.

**Spirographin'.** Hyalogen from skeletal tissues of spirographis (worm).

**Spi'roid** (*speira,* a winding, *eidos,* resemblance). Resembling a screw or spiral. **S. canal',** aquæductus Fallopii.

**Spirom'eter** (*spiro,* to breathe, *metron,* measure). Any instrument for measuring the quantity of air concerned in respiration, and consequently the capacity of the lungs.



Spirometer.

**Spiromet'ric.** Relating to spirometry.

**Spirom'etry.** Use of the spirometer.

**Spiromo'nas** (*monas,* a monad). A variety of spirillum. **S. cohn'ii** (Warming), a non-pathogenic spiromonad found in water. **S. volu'bilis** (Pertz), found in marshes and decomposing vegetable infusions.

**Spi'rophore** (*spiro,* to breathe, *phero,* to carry). Instrument used in artificial respiration in new-born children.

**Spirop'tera hom'inis** (*speira,* coil, *pteron,* wing). A parasitic worm found in the urinary bladder.

**Spi'roscope** (*spiro,* to breathe, *skopeo,* to examine). A form of spirometer.

**Spiruli'na** (*spirula,* a small coil). A microbe in small, coil-like threads with tangled extremities.

**Spis'sated** (*spisso,* to thicken). Thickened.

**Spis'situde.** State of being thick or dense.

**Spit.** Sputum, saliva. To expectorate.

**Spit'ta's loz'enge.** A troche of licorice with opium.

**Spit'ting.** Exspuition. **S. of blood,** hæmoptysis.

**Spit'tle.** Saliva.

**Spitz'ka's bun'dle.** S.'s tract. **S.'s nu'cleus,** central nucleus of oculomotor group in the gray matter. **S.'s tract,** see *Marginal bundle.*

**Spitz'ka-Lis'sauer tract.** Lissauer's tract.

**Spix's angles.** Angles between alveolonasal line and coronal or nasobasilar line. **S.'s horizon'tal plane,** alveolocondylean plane. **S.'s spine,** bony projection at the internal border of the inferior dental foramen.

**Splanchna,** splank'nah (pl. of splanchnon). Viscera.

**Splanchnapoph'ysis.** In comparative anatomy signifies one of the vertebral processes opposite to those enclosing the nerve-centres, and which, if fully formed, would with its fellow form a bony arch enclosing a visceral cavity.

**Splanchnecto'pia** (*splanchnon,* viscus, *ek,* out of, *topos,* place). Misplacement of a viscus.

**Splanchnelmin'tha** (*helmins,* a worm). Intestinal worms.

**Splanchneurys'ma** (*euryno,* to dilate). Morbid dilatation of the intestines.

**Splanchnic,** splank'nik (*splanchnon,* viscus). Relating or belonging to the viscera. **S. cav'ities** are the three great cavities of the body—cranium, chest, and abdomen. **S. gan'glion,** ganglion on the great splanchnic nerve over the eleventh or twelfth dorsal vertebra. **S. nerves,** two nerves belonging to the great sympathetic: 1. The *great splanchnic nerve;* its roots—four or five in number—come from the 6th, 7th, 8th, 9th, and sometimes the 10th thoracic ganglia; they descend inward on the sides of the vertebral column beneath the pleura, and unite into a single trunk, which enters the abdomen through a separation of the fleshy fibres of the pillars of the diaphragm; passes behind the stomach and divides into several branches which pass into the semilunar ganglion. 2. The *lesser splanchnic nerve, renal nerve,* is composed of two distinct branches proceeding from the 10th and 11th thoracic ganglia, which unite on the 12th dorsal vertebra into a cord that pierces the diaphragm, enters the abdomen, and divides into two branches, one anastomosing with the greater splanchnic nerve, the other sending its filaments to the renal and solar plexuses.

**Splanch'nocele** (*kele,* tumor). Hernia of a viscus.

**Splanch'nocœle** (*koilos,* hollow). One of the visceral cavities, as contrasted with a neurocœle.

**Splanchnodias'tasis** (*diastasis,* displacement). Misplacement of a viscus.

**Splanchnodyn'ia** (*odyne,* pain). Abdominal pain.

**Splanchnograph'ia** or **Splanchnog'raphy** (*graphe,* description). Anatomy of the viscera.

**Splanch'nolith** (*lithos,* stone). Intestinal calculus.

**Splanchnolithi'asis.** Condition in which visceral calculus-formation occurs.

**Splanchnol'ogy.** Science in relation to the anatomy, diseases, etc., of the viscera.

**Splanchnomegal'ia** or **Splanchnomeg'aly** (*megas,* large). Increase in size of any or all of the viscera.

**Splanch'non.** Viscus.

**Splanchnop'athy** (*pathos,* suffering). Visceral disease.

**Splanch'nopleure** (*splanchnon,* viscus, *pleuron,* side). Lower division of mesoblast covered with hypoblast.

**Splanchnopto'sis** (*splanchna,* viscera, *ptosis,* falling). Prolapse of the viscera; Glénard's disease.

**Splanchnosclero'sis.** Induration of a viscus.

**Splanchnos'copy** (*skopeo,* to examine). Examination of the viscera by transillumination.

**Splanchnoskel'eton** (*splanchnon,* viscus+*skeleton*). Bony or cartilaginous formations in the viscera, such as the tracheal rings, teeth, etc.

**Splanchnot'omy** (*splanchna,* viscera, *tome,* section). Dissection or anatomy of the viscera.

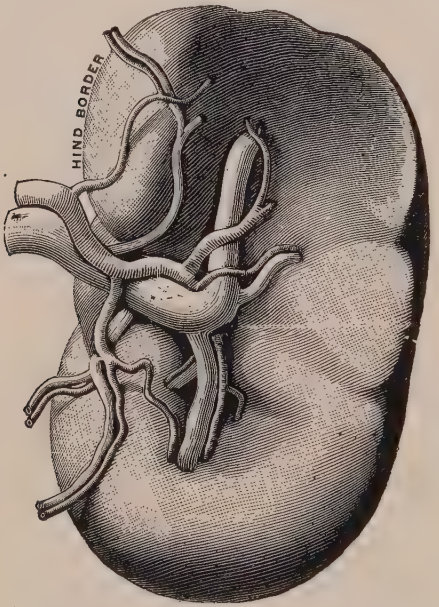
**Splat'foot** or **Splay'foot** (*splay,* spread). Flat foot.

**Spleen** (Gr., *splen*). Soft, spongy, parenchymatous organ, of a more or less deep violet red, situated deeply in the left hypochondrium, below the diaphragm, above the colon, between the stomach and the cartilages of the false ribs, and above and anterior to the kidney. The following measurements have been made of this organ:

| | |
|---|---|
| Weight .... | 176 g. (Blosfeld), 298 g. (Dieberg). |
| Volume.................... | 238 cm. |
| Length.................... | 120–130 |
| Breadth.................... | 70– 80 |
| Thickness.................... | 30 |
| Follicle of spleen........... | 0.35 |

Its parenchyma, which is bathed in blood, constituting the *pulp,* pulpa, substantia pulposa or rubra or vasculosa, contains a multitude of grayish, soft, and semitransparent granulations—*splenic corpus-*

*cles,* Malpighian bodies of the spleen, corpuscula Malpighii or lienis, glandulæ Malpighii, acini lienis, vesiculæ griseæ. It is covered by a serous membrane, the peritoneum, and by a proper coat, of a fibrous nature, *capsule,* membrana propria or albuginea or fibrosa, which is intimately united with it, and transmits into its interior delicate, solid, and very elastic prolongations—trabeculæ. At the inner edge is a fissure—hilus or porta lienis—by which the vessels and nerves enter. The upper extremity is the head or caput lienis; the lower, the tail, or cauda lienis. The exact functions of the spleen are unknown. The best opinion is that it appertains to hæmatosis, and acts also as a diverticulum to the vascular system. In non-medical language the word denotes ill humor, spitefulness. **Acces′sory s.,** a mass of splenic tissue detached from the main organ. **Ba′con s.,** lardaceous spleen. **Cyanot′ic s.,** a passively congested spleen ending in cirrhotic contraction. **Float′ing s.,** wandering s. **Sa′go s.,** amyloid disease of the follicles of Malpighi. **Supernu′merary s.,** lienculus. **Wan′dering s.,** a movable s. out of position, sometimes even sinking into the pelvis. **Wax′y s.,** a spleen which has undergone amyloid degeneration; see *Lardaceous.*



The spleen, showing the gastric and renal surfaces and the blood-vessels. (Gerrish.)

**Spleen′wort.** Asplenium, A. filix fœmina, A. scolopendrium. **S. bush,** Comptonia asplenifolia.

**Splen.** Spleen.

**Splenadeno′ma.** Splenomegaly due to actual increase of splenic tissue.

**Splenæ′mia.** Splenic leukæmia. Congestion of the spleen.

**Splenal′gia** (*splen,* spleen, *algos,* pain). Pain in the spleen. **S. bengalen′sis,** splenic cachexia, pseudoleukæmia. **S. phlegmono′dea,** splenitis. **S. subinflammato′ria chron′ica,** splenoncus.

**Splenatro′phia.** Wasting or atrophy of the spleen.

**Splenaux′e** (*auxe,* increase). Enlargement of the spleen.

**Splen′culus.** Small spleen; lienculus.

**Splenec′tama** (*ektama,* dilatation). Enlargement of the spleen.

**Splenecta′sia** or **Splenec′tasis** (*splen,* spleen, *ektasis,* dilatation). Enlargement of the spleen.

**Splenecto′mia** (*ektome,* excision). Splenectomy.

**Splenec′tomize.** To perform splenectomy.

**Splenec′tomy.** Extirpation of the spleen.

**Splenecto′pia** or **Splenec′topy** (*ektopos,* out of place). Dislocation of the spleen.

**Splenelco′sis** (*splen,* spleen, *helcosis,* ulceration). Ulceration of the spleen.

**Splenemphrax′is** (*emphrasso,* to obstruct). Congestion of the spleen. See *Splenoncus.*

**Splen′es** (pl. of splen). Hypochondriasis; ill humor.

**Splenet′ic.** Relating to the spleen. One laboring under diseased spleen. Hypochondriac; bad tempered.

**Sple′nial.** Relating to the splenius.

**Splen′ic** (*splen*). Relating to the spleen. **S. anæ′mia,** Hodgkin's disease. **S. ap′oplexy,** s. fever, anthrax. **S. ar′tery** arises from the cœliac, and passes from right to left, forming many windings along the upper edge of the pancreas, which lodges it in a special groove. It reaches the fissure of the spleen and divides into several branches that enter the organ. In its course it furnishes the pancreatic, left gastroepiploic, and the vasa brevia. **S. cachex′ia,** anæmia with splenomegaly; pseudoleukæmia. **S. cor′puscles,** lymphatic nodules present in the spleen about the arterioles; Malpighian bodies. **S. fe′ver,** anthrax. **S. flex′ure,** separation of cœliac plexus surrounding splenic plexus. **S. plex′us** is a nervous network proceeding from the cœliac plexus and accompanying the splenic artery, sending secondary plexuses to each division. **S. pouch,** peritoneal pouch for the reception of the spleen, formed by the phrenocolic ligament. **S. vein** arises from the spleen and accompanies the splenic artery, proceeding from left to right to unite with the superior mesenteric vein and to form, with it, the abdominal vena porta. In its course it receives veins corresponding to the vasa brevia, the right and left gastroepiploic, the duodenal, pancreatic, coronaria ventriculi, and inferior mesenteric veins.

**Splen′ica.** Splenalgia. Also medicines affecting the spleen.

**Splenicopancreat′ic ar′teries.** See *Arteries.* **S. glands,** lymphatic glands along the course of the splenic vessels.

**Splenifica′tion** (*splen,* spleen, *fio,* to become). Splenization.

**Splenin′.** Organic extract of the spleen; has been employed in therapeutics.

**Sple′nis tu′mor** (tumor of the spleen). Ague-cake.

**Splen′isis** (*splen,* spleen). Splenization.

**Spleni′tis.** Inflammation of the spleen, characterized by local pain, swelling, and heat, sometimes terminating in suppuration. It generally affects the capsule, then called perisplenitis, and to be treated like other forms of local peritonitis. **Spodog′enous s.,** see *Spodogenous.*

**Sple′nium.** Compress. **S. cor′poris callo′si,** the posterior flexure of the corpus callosum. **S. crucia′tum,** Maltese cross.

**Sple′nius** (*splenion,* a compress). Posterior mastoid muscle. A muscle situated on the posterior part of the neck and upper part of the back; broader above than below, where it terminates in a point; it is attached by its inner edge to the spinous processes of the first five dorsal vertebræ, to that of the seventh cervical, and to the inferior part of the posterior cervical ligament. By its upper extremity it is attached to the transverse processes of the first two cervical vertebræ, to the mastoid process, and to the posterior surface of the occipital bone. Some have considered this muscle to be formed of two portions, which they have called *splenius colli* and *splenius capitis.* The splenius inclines the head and rotates it; if the splenii act together they extend the head. **S. accesso′rius,** rhomboatloideus. **S. cap′itis,** splenius. **S. cervi′cis** or **col′li,** splenius.

**Spleniza′tion.** Splenification. Term applied to the state of the lung in the first or second stage of pneumonia, in which its tissue resembles that of the spleen. To a conversion of the lung into a spleen-like substance in the yellow fever of Gibraltar the term splenisis was given by Louis and others.

**Splen'ocele** (*kele*, tumor). Hernia of the spleen.

**Splenocerato'sis.** Hardness of the spleen.

**Splenocol'ic.** Relating to the spleen and colon. **S. lig'ament,** fold of peritoneum between spleen and mesocolon.

**Splenodyn'ia** (*odyne*, pain). Splenalgia.

**Splenog'raphy** (*splen*, spleen, *graphe*, description). Description of the spleen.

**Splenohæ'mia.** Splenæmia.

**Sple'noid** (*eidos*, resemblance). Spleen-like. Having the appearance of the spleen.

**Splenol'ogy** (*logos*, discourse). Science in relation to the anatomy, diseases, etc., of the spleen.

**Splenolymphat'ic.** Relating to or originating in the spleen and lymphatic glands.

**Spleno'ma.** Tumor of the spleen.

**Splenomala'cia** (*malakia*, softening). Softening of the spleen.

**Splenomed'ullary.** Relating to or originating in the spleen and marrow of bone.

**Splenomega'lia** or **Splenomeg'aly** (*megas*, great). Simple enlargement of the spleen, as in malaria. Also enlargement of the spleen, with progressive anæmia, without general lymphatic inflammation or involvement.

**Splenon'cus** (*onkos*, tumor). Tumefaction of the spleen. See *Ague-cake.*

**Splenoparec'tama** (*parektama*, excessive volume). Excessive enlargement of the spleen.

**Splenoparec'tasis.** Splenoparectama.

**Splenop'athy** (*pathos*, disease). Disease of the spleen.

**Splenopex'is** or **Splen'opexy** (*splen*, spleen, *pexis*, fastening). Fixation of movable spleen by operation.

**Splenophrax'ia** (*splen*, spleen, *phrasso*, to shut up). Obstruction of the spleen.

**Splenophren'ic.** Relating to the spleen and diaphragm. **S. lig'ament,** fold of peritoneum between the spleen and diaphragm.

**Splenophthi'sis.** Atrophy of the spleen.

**Splenopneumo'nia.** Pulmonary congestion from heart disease, in which there is much engorgement leading to a condition called *splenization of the lung.*

**Splenopto'sis** (*ptosis*, falling). Prolapse of the spleen.

**Splenorrha'gia.** Hemorrhage from the spleen.

**Splenoscirrhus,** splen-o-skir'rhus (*skirrhos*, hardness). Scirrhus or hard cancer of the spleen.

**Splenot'omy** (*tome*, incision). Operation upon the spleen, whether it be a simple incision or excision.

**Splenoty'phoid.** Typhoid fever in which the spleen is seriously or prominently affected.

**Splenypertro'phia.** Enlargement of the spleen.

**Splint.** Appliance used in treating fractures to keep the fragments in apposition and to prevent displacement. Splints are made of iron, wood, leather, felt, gutta-percha, paste-board, or flannel or cheese-cloth impregnated with starch, plaster-of-Paris, soluble glass, etc. Splints are generally padded, and are fixed by a roller or by tapes, according to circumstances. **S. bone,** fibula. **Den'tal s.,** appliance used to hold two or more teeth rigidly. **Interden'tal s.,** a double plate covering both upper and lower teeth, used in treatment of fractures of the jaws.

**Splin'ter.** A term applied to a small piece of wood which entering the skin gives rise to much irritation until removed. It is also applied to fragments separating from a fractured or diseased bone. **S. bone,** fibula.

**Split cloth.** Bandage for the head consisting of a central part and six or eight tails. The single split cloth has four tails. A convenient bandage for the head, face, and jaws. **S. pel'vis,** congenital want of union of pubic bones at the symphysis.

**Split'rock.** Heuchera cortusa.

**Spo'dium græco'rum.** Album græcum.

**Spodogenous,** spo-doj'en-us (*spodos*, ashes). Caused by or consisting of waste matter, as *s. splenitis*, caused by the accumulation of broken-down erythrocytes in hæmoglobinæmia.

**Spoen'del's fora'men.** Foramen in base of skull between ethmoid and lesser wings of sphenoid.

**Spo'gel seeds.** Ispaghul seeds.

**Spoke-bone.** Radius.

**Spo'liative** (*spolio*, to take away). Bloodletting for the purpose of diminishing the mass of blood.

**Spon'dles** (*spondylos*). Vertebræ.

**Spondylal'gia** (*spondylos*, vertebra, *algos*, pain). Pain in the vertebræ.

**Spondylarthri'tis** (*spondylos*, vertebra, *arthron*, joint). Gouty or rheumatic inflammation of the spinal column.

**Spondylarthrocace,** spon-dil-ar-throk'as-e (*spondylos*, vertebra, *arthron*, joint, *kakos*, evil). Vertebral disease.

**Spon'dyle.** Vertebra.

**Spondylexarthro'sis** (*spondylos*, vertebra, *exarthrosis*, luxation). Dislocation of the spine.

**Spondylisthe'sis.** Spondylolisthesis.

**Spondyli'tis.** Inflammation of the vertebræ; Pott's disease. **S. defor'mans,** deformity produced by ossification of cartilages occurring in spondylitis.

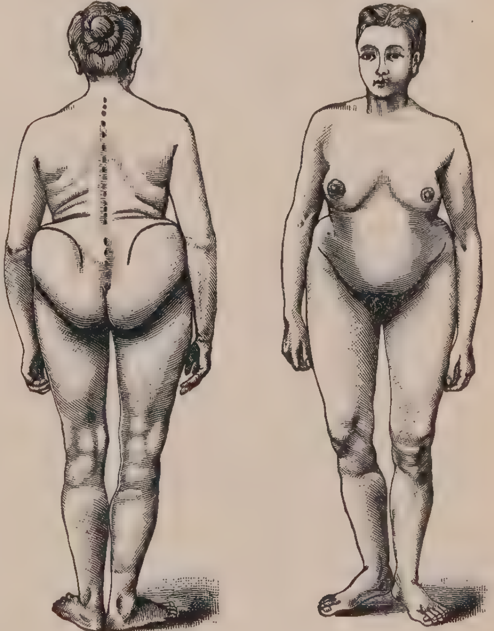
**Spondyl'ium.** Heracleum spondylium.

**Spondylize'ma** (*hizema*, a settling). Settling of a vertebra, so that it is enabled to take the place of another vertebra which has been destroyed or obliterated.

**Spondylocace,** spon-dil-ok'as-e (*kakos*, evil). Vertebral disease.

**Spondylodyn'ia** (*odyne*, pain). Pain in the vertebræ.

**Spondylolisthe'sis** (*spondylos*, vertebra, *olisthano*, to slip). Dislocation of the vertebræ, as of the last lumbar vertebra forward on the sacrum, thus producing pelvic contraction.



A moderate degree of spondylolisthesis. (Winckel.)

**Spondylolisthet'ic.** Relating to or caused by spondylolisthesis or dislocation of a vertebra.

**Spondylopath'ia** or **Spondylop'athy** (*pathos*, disease). Disease of the vertebral column.

**Spondylopyo'sis** (*pyosis*, suppuration). Spinal abscess.

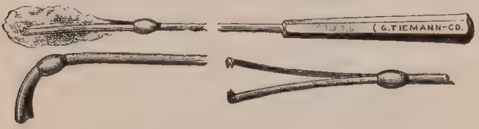
**Spondyloschisis,** spon-dil-os'kis-is (*schisis*, fissure). Fissure of the vertebral arch from imperfect ossification.

**Spondylot′omy** (*tome*, incision). Cutting into the spinal canal.

**Spondylozemat′ic pel′vis.** Deformity of the pelvis occurring in spondylolisthesis.

**Spon′dylus.** A vertebra. Also the vertex.

**Sponge.** Spongia. **Bas′tard s.**, see *Alcyonium*. **Bernay's′ s.**, see *Bernay*. **S. graft′ing**, placing little bits of sponge on the surface of a sluggish wound to stimulate cicatrization; the pieces of sponge thus applied are called *sponge grafts*. **S.-hold′er**, a device for attaching a sponge to one extremity of a shaft, by means of which the sponge may be introduced to the bottom of a cavity. **S. tent**, a cylindrical piece of dried and compressed sponge which when introduced into a canal or fistula absorbs moisture and by swelling dilates the part. **S. test**, application of a hot sponge up and down the spine, to determine, by the pain caused by it, the exact location of inflammation or irritation.



Sponge-holder.

**Spon′gi** (*spongos*). Tumefied glands of the neck.

**Spon′gia.** Sponge. A marine animal, of the class *Porifera*, met with in many seas, but especially in the Mediterranean and Arabian. The organized framework, from which the soft parts and gritty substances have been removed, is supple, elastic, porous, and capable of absorbing fluids in which it may be placed, and of thus increasing in size. Less employed in surgery for cleansing or washing than formerly, its place being taken by bits of absorbent cotton which can be destroyed after use. **S. as′sa**, s. usta. **S. cera′ta**, sponge tent compressed into shape and waxed. **S. cynos′bati**, bedegar. **S. officina′lis**, Levant or common sponge. **S. pres′sa**, compressed sponge, s. tent. **S. us′ta**, burnt sponge, contains carbonate and phosphate of calcium, carbonate of sodium, charcoal, and iodine; used in bronchocele, scrofulous affections, and herpetic eruptions. Its good effects are due to the iodine.

**Spon′giform** (*forma*, form). Spongoid.

**Spongin′.** A corneous nitrogenous substance constituting the basis of sponge.

**Spon′gioblast** (*spongia*, sponge, *blastos*, germ). One of numerous small dots in internal reticular layer of the retina which send thin prolongations into rod and cone layer; amacrine. One of the epithelial cells formed about the neural canal in the embryo. When aggregated a spongy rete is developed, which afterward becomes the neuroglia.

**Spongiopilin′** (*spongia*, sponge, *pilus*, hair). A fabric composed of sponge and wool felted together in three layers, and coated on one surface with caoutchouc, which renders it impermeable. It is used as a substitute for poultices.

**Spon′gioplasm.** Network or plexus of chromatin giving to protoplasm its granular appearance. It contains a nearly fluid, homogeneous material, called the *hyaloplasm*. Granular substance of fibrils of axon. See also *Cytomatome* and *Chromatin*.

**Spon′giose.** Resembling a sponge in being full of pores.

**Spongio′sum** (*os*, bone, understood). Ethmoid bone.

**Spon′goid** (*spongia*, sponge, *eidos*, resemblance). Resembling sponge; of the nature of sponge; spongy. **S. inflamma′tion**, hæmatodes fungus. **S. tis′sue**, an adventitious spongy tissue found in rickets.

**Spon′gos.** Tonsil.

**Spon′gy.** Spongoid. **S. bod′y**, corpus spongiosum. **S. bones**, those having a particularly porous or spongy texture, as the ethmoid, turbinated bones, etc. **S. por′tion of ure′thra**, part surrounded by corpus spongiosum. **S. tis′sue**, see *Bone*.

**Spon′sa so′lis.** Calendula officinalis.

**Sponta′neous.** That which occurs of itself or without any manifest external cause. Evacuations are termed spontaneous which are not produced by medicine. Diseases are called spontaneous which supervene without apparent cause. Spontaneous or intra-uterine amputation is the separation of a limb from the fœtus in utero. It has been found, in such cases, that it is the left arm which is usually wanting. **S. combus′tion**, see *Combustion*. **S. cret′inism**, condition of idiocy in individuals not living or having resided in goitrous districts. **S. evolu′tion**, see *Evolution*. **S. genera′tion**, see *Generation*. **S. ver′sion**, spontaneous evolution.

**Spoon.** In surgery an instrument shaped like a salt spoon, used for removing softened tissue or débris. **S.-saw**, instrument shaped like a spoon with serrated edge; used as a curette. **Sharp s.**, a surgical spoon with sharp edges used for scraping away tissue too firm to be removed with the ordinary spoon.

**Spoon′wood.** Kalmia latifolia; Tilia americana.

**Spoon′wort.** Cochlearia officinalis.

**Spo′ra.** Spore.

**Sporad′ic** (*sporadikos*, scattered). An epithet for diseases supervening independently of epidemic or endemic influence. **S. chol′era**, acute gastroenteric affection with symptoms resembling cholera; not epidemic. **S. gan′glia**, enlargements present along the course of a peripheral nerve.

**Sporadic′ity.** State of being sporadic.

**Sporad′oneure.** A nerve-cell found alone or isolated in other tissue.

**Sporagenous** (spo-raj′en-us) **gran′ules.** Metachromatic bodies.

**Spore** (*sporos*, sowing). The reproductive body in cryptogamous plants, analogous to the seed of phanerogamous plants.

**Sporid′ium** (*sporos*, sowing). The reproductive body in algaceous plants, resembling the spore of other plants.

**Sporif′erous** (*fero*, to carry). Producing spores.

**Sporiso′rium ma′idis.** See *Pellagra*.

**Spo′roblast.** A rudimentary spore.

**Spo′rocyst.** A spore-containing sac. The reproductive stage of a protozoan organism.

**Sporogen′esis** or **Sporogeny**, spor-oj′en-e. Development of spores.

**Sporogen′ic.** Sporiferous.

**Sporogo′nia** or **Sporog′ony** (*gone*, offspring). Reproduction by spore formation.

**Sporon′ema gra′cile.** Bacillus virens.

**Spo′rophore** (*phoreo*, to carry). Portion of vegetable organic matter carrying the spores.

**Sporosper′mia** (*sperma*). Psorospermia.

**Sporot′richa** (*sporos*, seed, *thrix*, hair). A genus of branching, spore-bearing microorganisms.

**Sporozo′a.** Parasites belonging to the lowest division of the protozoa, which reproduce by division into a number of segments. They include the malarial parasites.

**Sporozo′an.** Relating to sporozoa.

**Sporozo′ite.** An embryo sporozoon; an elongated filament containing a minute nucleus. In the case of the malarial parasites this is the form in which the plasmodium enters the blood with the salivary secretion of the anopheles mosquito; it is the form produced by amphigonia or sexual generation.

**Sporozo′itoblast.** Cell from which the sporozoites originate.

**Sporozo′on.** An individual sporozoan organism.

**Spor′ula**, **Spor′ule**, or **Spo′rus.** Spore.

**Sporula′tion.** Formation and development of spores.

**Spot.** Macula. **Blind s.**, point of entrance of the optic nerve at the fundus of the eye. **Cer′ebral s.**, red mark or stain noticed in cases of meningitis when pressure has been made on the skin. **Ger′minal s.**, see *Molecule*. **Meningit′ic s.**, cerebral s. **Red s.**, rose spot, lenticular spot; one of many small red spots appearing in typhoid fever from the eighth to the fifteenth day of the disease. They are most frequently seen on the lower and middle portions of the chest and upper part of the abdomen. **Rose s.**, red s. **S. of Söm′mering**, see *Foramen centrale*. **Sum′mer s.**, ephelis. **Wine s.**, see *Telangiectasia*.

**Spot′ted.** Marked with spots or dots. **S. al′der**, witch-hazel; hamamelis. **S. cow′bane**, Cicuta maculata. **S. fe′ver**, cerebrospinal meningitis; also typhus fever; also a disease discovered and studied in Montana, marked by a bluish spotting of the skin, injected conjunctivæ, and puffiness, without pitting, of the face and extremities; the disease is fatal in the majority of cases; the cause is believed to be an intracorpuscular hæmatozoon, possibly a trypanosoma, communicated to man from the ground squirrel by the agency of ticks. **S. gera′nium**, Geranium maculatum. **S. hem′lock**, Conium maculatum. **S. kid′ney**, see *Kidney*. **S. par′sley**, Conium maculatum. **S. sick′ness**, pinta. **S. spurge**, Euphorbia maculata. **S. wa′ter-hemlock**, Cicuta maculata. **S. win′tergreen**, Chimaphila maculata.

**Sprain.** Wrench. Violent straining or twisting of the soft parts surrounding the joints. According to the degree of the sprain, the fibrous parts of the joint may be simply stretched or ruptured. This affection, which has been regarded as incomplete luxation, occurs, particularly, in the ginglymoid joints, as the foot, wrist, knee, etc. It is accompanied by more or less inflammation with effusion of serum or blood. **S. frac′ture**, separation of a tendon or ligament from its point of insertion, a thin shell of bone being detached.

**Sprat, yel′low-billed.** Clupea thryssa.

**Spray.** See *Pulverization*. **S.-cure**, therapeutic application of water in the form of spray. **S.-produ′cer**, an appliance for throwing liquid in the form of fine spray.

**Spreng′el's deform′ity.** Dislocation upward of the scapula; congenital.

**Sprew.** Thrush. Psilosis.

**Spring catarrh′.** See *Vernal catarrh*. **S. conjunctivi′tis**, inflammation of the conjunctiva, principally in young persons, recurring in the spring or summer, and disappearing with cold weather. **S. fin′ger**, trigger finger. **S. knee**, condition in which extension of the knee is effected with a quick, painful jerk. **S.-nail**, hang-nail. **S.-worm**, Oxyuris vermicularis.

**Spruce.** See *Pinus abies*. **S. fir**, Abies excelsa.

**Sprue.** Thrush.

**Spu′ma argen′ti** (froth of silver). Plumbi oxidum semivitreum. **S. cerevis′iæ**, yeast. **S. tri′um draco′num**, antimonium muriatum.

**Spume** (*spuma*, froth). Froth or serum which rises to the surface of fluids, especially when heat is applied.

**Spumo′sus** (*spuma*, froth). Frothy.

**Spunk.** Boletus igniarius.

**Spur.** Angle at which the arteries leave a cavity or trunk. A projection from any surface. Ergot.

**Spurge.** A plant of the genus *Euphorbia*. **Ca′per s.**, Euphorbia lathyris. **Cy′press s.**, Euphorbia cyprissias. **Flax s.**, Daphne gnidium. **Flow′ering s.**, Euphorbia corollata. **Gar′den s.**, Euphorbia lathyris. **Great′er s.**, Euphorbia palustris. **Ipecacuan′ha s.**, Euphorbia ipecacuanha. **S. laur′el**, Daphne laureola. **Marsh s.**, Euphorbia palustris. **S. ol′ive**, Daphne mezereum, Cneorum tricoccum. **Pet′ty s.**, Euphorbia peplus. **Sea s.**, Euphorbia paralias. **Spot′ted s.**, Euphorbia maculata. **Sun s.**, Euphorbia helioscopia. **Wart′wort s.**, Euphorbia helioscopia.

**Spu′rious.** Simulated, false.

**Spurred rye.** Ergotized rye.

**Spu′ta.** Plural of sputum.

**Sputa′men** (*spuo*, to spit). Saliva; sputum.

**Sputamen′tum.** Saliva; sputum.

**Sputa′tion.** Exspuition.

**Spu′tum** (*spuo*, to spit). Spittle. The secretion ejected from the mouth in the act of spitting, composed of saliva and of the mucus secreted by the mucous membrane of the nasal fossæ and fauces, and often by that of the larynx and bronchia. The sputa are sometimes called eruginous when of a greenish-yellow color; gummy, when resembling a thick solution of gum; frothy, when covered with froth; mucoid, in acute bronchitis, asthma, and early stages of pneumonia; mucopurulent, in chronic pulmonary and bronchial catarrh, phthisis, etc.; purulent, in pulmonary abscess, discharge of empyema into the lung, etc.; prune-juice, in retention of blood in the lung, pulmonary gangrene or cancer, etc.; rusty, in croupous pneumonia; currant-jelly, in pulmonary cancer; nummular, when in masses or rolls like coin (see *Nummular*); rubiginous, when of a reddish-yellow; and streaked, when mixed with lines of blood. It may be fetid in advanced phthisis, abscess, or gangrene of the lung, etc. Pneumonia, gangrene of the lung, acute bronchitis, phthisis, etc., all have characteristic sputa, the properties of which aid in the formation of a diagnosis. **S. concoc′tum**, the expectoration of phthisis as modified by the administration of cod-liver oil, the sputa being flattened and ripened. **S. cruen′tum**, hæmoptysis. **S. dul′ce**, saccharorrhœa pulmonalis. **Hail′stone s.**, round masses expectorated in advanced stages of bronchitis. **S. o′ris**, salivation. **Prune′-juice s.**, see *Prune-juice*. **Rust′y s.**, bloody sputum of the third stage of pneumonia. **S. sacchara′tum**, saccharorrhœa pulmonalis. **S. san′guinis**, hæmoptysis. **S. septicæ′mia**, a form of septicæmia resulting from inoculation with a microbe occurring in the sputum.

**Squall′ing.** Cry of the new-born child.

**Squa′ma.** Squamous portion. Table. Scale. **S. fronta′lis**, vertical portion of the frontal bone. **S. occipita′lis**, supraoccipital bone. **S. os′sis fron′tis**, squama frontalis. **S. os′sis occip′itis**, supraoccipital bone. **S. os′sis tem′porum** or **S. tempora′lis**, thin portion of the squamous part of the temporal bone.

**Squa′mæ** (pl. of squama). Scaly diseases.

**Squama′ria.** Plumbago europæa.

**Squamifor′mis** (*squama*, scale, *forma*, shape). Squamous.

**Squamopari′etal.** Relating to both the squamous portion of the temporal bone and the parietal bone. **S. su′ture**, line of union between these two parts.

**Squamo′sal.** Scale-like. **S. bone**, squamous portion of temporal bone. **S. su′ture**, squamous suture.

**Squamosopari′etal.** Squamoparietal.

**Squamososphenoi′dal.** Relating to the squamous portion of the temporal bone and the great wing of the sphenoid bone. **S. su′ture**, line of union between these two parts.

**Squamosotem′poral.** Relating to the squamous portion of the temporal bone. **S. a′rea**, see *Areas of skull*.

**Squamo′sozygomat′ic.** Relating to the squamous portion of the temporal bone and the zygoma.

**Squa′mous** (*squama*, scale). Scaly. Relating to or resembling a scale. **S. bone**, squamous portion of the temporal bone. **S. epithe′lium**, pavement epithelium. **S. por′tion of tem′poral bone**, upper part of the temporal, so called from a fancied resemblance to a scale; see *Temporal bone*. **S. su′ture**, the suture uniting the squamous portion of the temporal bone to the parietal. Certain scaly, cutaneous affections are also called squamous.

**Squamozygomat′ic.** Squamosozygomatic.

**Squam′ule.** Small scale.

**Squam′ulose** or **Squam′ulous.** Lined with small scales.

**Square lobe.** Lobus quadrangularis or quadratus of the cerebellum; lobus quadratus of the liver. **S. mus′cle**, quadratus lumborum. **S. stalk**, Monarda coccinea.

**Squar′ra** (*squarra*, scurfiness). Rough crusts of tinea. **S. ton′dens**, porrigo decalvans.

**Squar′rous.** Scurfy.

**Squash.** See *Cucurbita*.

**Squat′ting pills.** Pilulæ opiatæ.

**Squaw ber′ry.** Vaccinium stamineum. **S. bush,** Viburnum opulus. **S. huck′leberry,** Vaccinium stamineum. **S. mint,** hedeoma. **S. root,** Actæa racemosa; Caulophyllum thalictroides; Senecio aureus. **S. vine,** Mitchella repens. **S. weed,** Erigeron philadelphicum.

**Squeam′ishness.** Fastidium cibi.

**Squeas′iness.** Nausea.

**Squill.** Scilla.

**Squinan′cy** or **Squinan′thia.** Tonsillitis.

**Squint.** Strabismus.

**Squint′eyed.** Cross-eyed.

**Squint′ing.** Strabismus.

**Squir′rel corn.** Dicentra canadensis.

**Squirt.** Syringe.

**Squirt′ing cu′cumber.** Momordica or Ecballium elaterium; an ordinary European weed. **S. c. fruit,** nearly ripe fruit of squirting cucumber; contains active principle, elaterin.

**Stab cul′ture.** Made by thrusting inoculated wire into a tube containing gelatin or agar; see *Culture.*

**Sta′bile** (*stabilis*). Fixed. Term applied to a mode of application of electricity in which the electrodes are kept in one definite position, no shock or muscular contraction being induced except when the current is interrupted.

**Sta′ble-fly.** Stomoxys calcitrans.

**Stacca′to.** Jerky; interrupted. **S. speech** or **ut′terance,** a jerky form of scanning utterance.

**Stachydrine′.** $C_7H_{13}NO_2$ Alkaloid from Stachys tuberifera.

**Stachys,** stak′is (*stachys,* spike). Surgical bandage to the lower belly. Hypogastrium. A genus of plants, ord. *Labiatæ.* **S. affi′nis,** S. tuberifera. **S. fœ′tida,** galeopsis. **S. tuberif′era,** an edible species from Japan.

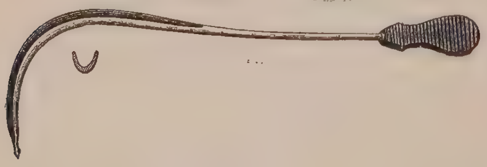
**Stacke's opera′tion.** Tympanomastoid exenteration, removal of the mastoid portion of the temporal bone and the contents of the cavity of the tympanum, making one large cavity of the whole.

**Stac′te** (*stukte,* myrrh in a liquid state). Myrrha.

**Stactom′eter** (*staktos,* dropping, *metron,* measure). Instrument for measuring drops.

**Sta′dium.** Period; stage. **S. ac′mes,** the period of the height of a disease. **S. annihilatio′nis** or **convalescen′tiæ** or **reconvalescen′tiæ,** the period of recovery from disease. **S. augmen′ti** or **incremen′ti mor′bi,** the period or stage of increase of a disease. **S. calo′ris,** hot stage. **S. convalescen′tiæ,** s. annihilationis. **S. decremen′ti,** the period or stage of decrease of a disease. **S. decrustatio′nis** or **S. desquamatio′nis,** period of desquamation. **S. eruptio′nis,** the period of appearance of the eruption in an exanthematous disease. **S. exsiccatio′nis,** the period of drying up of a vesicular or pustular rash. **S. floritio′nis,** s. eruptionis. **S. frig′oris,** cold stage of an intermittent fever. **S. incremen′ti mor′bi,** s. augmenti morbi. **S. laten′tis conta′gii,** prodromal stage. **S. opportunita′tis, S. prodromo′rum,** s. latentis contagii. **S. reconvalescen′tiæ,** s. annihilationis.

**Staff.** Director for the gorget or knife in lithotomy. It is made of steel, and the handle is flat and rough, in order that it may be securely held; the groove is on the convex surface. **S. tree, climb′ing,** Celastrus scandens. **S. vine,** Celastrus scandens.



Staff.

**Staf′fa.** Stapes.

**Staf′fordshire knot.** Tait's knot; used in ovariotomy to tie the pedicle. It is made thus: The pedicle is transfixed by an aneurysmal needle armed with a double thread; into the loop of this thread are passed the ends of the ligature, which has been laid on the abdomen loosely around the pedicle; the needle upon being withdrawn brings with it these two ends of ligature, which now lie above their own loop; one of these ends is passed under this loop and they are firmly tied into a square knot. Free ends are now thrown around the pedicle and again tied.

**Stage.** Stadium. The period or degree of a disease, especially the period of an intermittent—as the cold stage, hot stage, etc. The part of a microscope on which the object glass rests. **Al′gid s.,** period or state of disease in which there is great reduction of temperature, uncertain pulse, etc. **Amphibol′ic s.,** period of disease between its acme and decline. **Apyret′ic s.,** the period of intermission between malarial paroxysms. **Asphyx′ial s.,** period of inception of Asiatic cholera. **Cold s.,** period of chill in malarial fevers. **Erup′tive s.,** period of eruption or external visible appearance of eruptive fever. **Expul′sive s.,** period in labor at which the process of extrusion of the fœtus begins and is effected. **Hot s.,** period of malarial fever in which fever is the leading symptom. **S. of inva′sion,** period when the system generally exhibits the impression of the morbid cause. **S. of la′bor,** see *Parturition.* **La′tent s.,** period of disease anticipatory of the appearance of the symptoms. **S. microm′eter,** a glass slide used under the microscope and ruled for minute measurements. **Pyrogenet′ic s.,** period of appearance of fever in diseases. **Sweat′ing s.,** the third stage of a malarial attack.

**Stag′gerbush.** Andromeda mariana.

**Stag′gergrass.** Amaryllis atamasco; plant supposed to produce "staggers" in cattle.

**Stag′gers.** A disease of sheep caused by the hydatid of Tænia cœnurus.

**Stag′gerweed.** Delphinium.

**Stag′horn su′mach.** Rhus typhina.

**Stag′ma** (*stagma,* a drop). A distilled liquid.

**Stagna′tion** (*stagnum,* a pond). Accumulation and retardation of fluids in any part of the body.

**Stag′num** (pond) **chy′li.** Receptaculum chyli.

**Stahl's ear.** Extension in breadth of the helix, so as to cover the fossa ovalis and scaphoid fossa; a congenital condition.

**Stahl′ian.** Follower of the doctrine of Stahl, a German chemist of the first part of the eighteenth century. See *Animist.*

**Stain′ing.** Use of various dyes to color tissues and bacteria for microscopic purposes. **S. rea′gents,** hæmatoxylin, carmine, and other similar colors used in coloring microscopic specimens.

**Stains, blood.** See *Blood-stains.*

**Stalagmi′tis cambogioi′des** or **S. cambo′gia.** Gamboge was long ascribed to this fancied Ceylonese plant. It is now known that the name was given to specimens of two distinct trees of different genera. See *Cambogia.*

**Stalk.** Stem or main axis of a plant.

**Stal′tica** (*staltikos,* astringent). Astringents.

**Sta′men.** Male organ of flowers, consisting of anthus, or fertilizing part, which is borne on a stem called a filament.

**Stam′ina.** Inherent strength of constitution.

**Stam′mer.** To utter words with hesitation or imperfectly. To articulate imperfectly, to mispronounce certain letters, as in rhotacism, lisping, etc. See *Stutter.*

**Stam′mering.** Halting speech. **S. of the blad′der,** retention of urine caused by want of coordination between the sphincter muscle of the bladder and other muscles of that organ. **S. of the fin′gers,** writers' cramp.

**Stamp.** To bring the feet down forcibly on the ground. To impress with a seal or design. **S. out,** to suppress completely or put an end to.

**Stam′per.** One with stamping gait, as a tabetic.

**Stamp′ing.** Pounding with the foot upon the ground. **S. gait,** ataxic gait; an irregular, jerking gait, in which the foot after a moment of hesitation is brought down forcibly on the ground. **S. mill,** see *Pulverization.*

**Stand.** Body of microscope without the lenses. To maintain the erect position with feet on the ground.

**Stand'ard.** A basis for comparison. **S. solu'tion,** see *Solution.*

**Standardiza'tion.** Act or art of standardizing.

**Stand'ardize.** To make standard, as to strength particularly.

**Stand'ardized solu'tion.** Standard solution.

**Stan'nic.** Relating to tin. **S. acid,** $H_2SnO_3$, white acid from tin. **S. chlo'ride,** $SnCl_4$, white, liquid preparation of tin.

**Stanni'olum** (*stannum*). Tin-foil.

**Stan'nite.** Sulphide of tin. Also frequently called bell-metal ore.

**Stan'num.** Tin. **S. cine'reum,** bismuth. **S. folia'tum,** tin-foil. **S. glacia'le,** bismuth. **S. in'dicum,** zinc.

**Stapedec'tomy** (*ektome,* excision). Operation for removal of the stapes.

**Stape'dial.** Relating to the stapes.

**Stape'diovestib'ular.** Relating to the stapes and vestibule, as *s. joint.*

**Stape'dius.** Muscle of the middle ear which draws the stapes obliquely upward.

**Stape'lia.** Genus of plants, order of *Asclepiadaceæ,* which comprise numerous species of leafless herbs growing about the Cape of Good Hope.

**Sta'pes** (stirrup). Innermost of the small bones of the ear, so called because it resembles a stirrup; situated horizontally in the cavity of the tympanum. Its head, which is directed outward, is articulated with the os orbiculare. The base faces inward, and is applied to the fenestra ovalis, which it closes imperfectly, and to the membrane to which it is united. Its branches are an anterior and a posterior. They are curved, and the space between them is parabolic. Surgeons have given the name stapes to a bandage, used in bleeding from the foot, which forms a figure of 8 around the ankle.

**Staph'is.** Delphinium staphisagria.

**Staphisag'ria.** (Ph. U. S.) Seed of Delphinium staphisagria, or stavesacre. Its chief employment is as an agent for the destruction of pediculi, but it is occasionally employed as a vermifuge in dose of gr. j (0.065). The ointment, *unguen'tum staphisa'griæ,* is official in the Ph. Br.

**Staphisagrine'.** Alkaloid of staphisagria.

**Staphylæmato'ma** (*staphyle,* uvula, *haima,* blood). Tumor formed by effusion of blood beneath the mucous membrane of the uvula.

**Staphylag'ra** (*staphyle,* uvula, *agra,* seizure). Instrument for laying hold of and seizing the uvula.

**Staph'yle** (*staphyle,* grape). Uvula.

**Staphyle'a trifo'lia.** Bladder-nut, ord. *Sapindaceæ.* Native shrub of the United States.

**Staphylinopharynge'us.** Palatopharyngeus.

**Staphyli'nus.** Azygos uvulæ. **S. exter'nus,** tensor tympani. **S. inter'nus,** levator palati. **S. me'dius,** azygos uvulæ.

**Staphyl'ion.** Median point of posterior nasal spine. Nipple.

**Staph'ylis** (*staphyle,* grape). Nipple.

**Staphyli'tis.** Uvulitis.

**Staphyloangi'na.** Angina caused by staphylococci.

**Staphylococcæ'mia.** Condition depending on or indicating the presence of staphylococci in the blood.

**Staphylococ'cus** (*staphyle,* grape, *kokkos,* kernel). A species of bacteria of the genus *Micrococci,* characterized by an arrangement in heaps or irregular masses. Many of the microbes of suppuration belong to this species. **S. al'bus,** found in human milk and in pus of osteomyelitis. **S. al'bus liquefa'ciens** (Escherich), in normal evacuations of very young children. **S. au'reus,** in carcinoma. **S. bisk'ræ,** micrococcus of Heydenreich; found in atmosphere, water, and the lesion of Aleppo boil and Biskra button; pathogenic. **S. ce'reus al'bus** (Passet), found in pus and water. **S. c. au'reus** (Schröter and Winkler), Micrococcus cereus albus; in the nasal secretions of coryza. **S. c. fla'vus** (Passet), in abscesses; causes yellow pigmentation. **S. c. gris'eus,** in pus; causes gray pigment. **S. cit'reus,** Micrococcus citreus. **S. of den'gue** (McLaughlin), Scheutzia laughlini. **S. epiderm'idis al'bus** (Welch), found on the skin very frequently; causes stitch abscesses; Micrococcus pyogenes albus. **S. flaves'cens,** yellowish-white, found in pustules of smallpox. **S. ful'vus,** Micrococcus fulvus. **S. hæmorrhag'icus** (Klein), in vesicular disease of sheep; pathogenic. **S. passe'tii,** S. cereus flavus. **S. of pem'phigus** (De Michele), from the skin and some of the internal organs in a case of pemphigus; Micrococcus cereus flavus. **S. pyog'enes al'bus** (Rosenbach), found in abscess; pathogenic; no pigment. **S. p. au'reus** (Rosenbach), found in atmosphere, soil, water, and pus; pathogenic; causes fermentation, also golden-yellow pigment; most virulently pathogenic of all the Staphylococci pyogenes. **S. p. cit'reus** (Passet), in pus; pathogenic; forms lemon-yellow pigment. **S. p. rosa'ceus,** causes reddish pigment; pathogenic. **S. pyosep'ticus** (Richet), found in carcinoma in a dog; pathogenic; resembles S. pyogenes albus. **S. saliva'rius pyog'enes** (Biondi), found in human saliva; culture yields a whitish appearance on gelatin and orange-yellow on agar; inoculated, it produces suppuration. **S. vir'idis flaves'cens** (Guttmann), found in pustules of varicella; produces yellow pigment.

**Staphylodial'ysis** (*staphyle,* uvula, *dialysis,* dissolution). Elongation and relaxation of the uvula.

**Staphylœde'ma.** Tumefaction of the uvula, which, from inflammation or infiltration, hangs so as to occasion difficult deglutition, cough, etc.

**Staphylohæ'mia.** Condition due to the presence of staphylococci in the blood.

**Staphylo'ma** (*staphyle,* grape). Protrusion of the anterior surface of the eye, usually the cornea and iris or sclerotic and choroid; due to previous ulceration causing local attenuation. **An'nular s.,** see *Staphyloma of the sclerotic.* **Ante'rior s.,** keratoglobus. **Cil'iary s.,** see *Staphyloma of the sclerotic.* **S. con'icum** or **S. c. pellu'cidum,** staphyloma of the cornea. **S. of the cor'nea,** sugarloaf cornea or conical cornea, prolapsus corneæ, is an unequal, embossed, bluish or whitish, round or conical or hyperboloid tumor of variable size, formed by the projection of the transparent cornea, which is sometimes extenuated and distended, at others thickened. **Inter'calary s.,** s. in the narrow edge of the sclerotic coat in front of the insertion of the ciliary body. **S. i'ridis,** hernia iridis. **S. racemo'sum,** form of staphyloma in which the cornea is perforated at several points, through which small portions of iris protrude. **Scle'ral s.** or **S. of the sclerot'ic,** differs from the last in the prominence existing on a part of the eye covered by the sclerotic, which is much thinner; it is generally due to iridochoroiditis. *Posterior staphyloma,* s. posticum, sclerectasia posterior, is a disease whose chief characteristics are posterior elongation of the eyeball and loss of pigment and atrophy of the choroid. *Anterior staphyloma,* ciliary staphyloma, is a staphylomatous projection of the sclerotic in the ciliary region of the eye. When the ciliary region around the cornea is involved it is called *annular staphyloma.* **S. u'veæ,** projection of a part of the uveal tract through an opening in the sclerotic coat.

**Staphylomyco'sis** (*mykes,* fungus). A morbid condition due to the presence of staphylococci.

**Staphylon'cus** (*onkos,* swelling). Staphylœdema.

**Staphyloplas'tic** (*staphyle,* uvula, *plasso,* to form). Epithet applied to the operation for replacing the soft palate when it has been lost.

**Staph'yloplasty.** Uranoplasty, palatoplasty, the operation for closing the palatine vault.

**Staphylopto'sis** (*staphyle,* uvula, *ptosis,* falling). Falling down or abnormal lengthening of the uvula.

**Staphylor'rhaphy** (*staphyle*, uvula, *rhaphe*, suture). Operation for uniting a cleft palate, consisting in paring the edges of the cleft, passing ligatures through them, and uniting them.

**Staphylo'sis.** Staphyloma.

**Staph'ylotome** (*staphyle*, uvula, *tome*, incision). Knife adapted to the operation for staphyloma.

**Staphylot'omy.** Amputation of the uvula. Excision of a staphyloma.

**Star.** An anatomical or histological structure shaped like a star; aster. **S. an'ise,** Illicium anisatum. **S. ap'ple,** Chrysophyllum cainito. **S. of Beth'lehem,** Ornithogallum umbellatum. **Bla'zing s.,** Aletris farinosa. **S. bloom,** Spigelia marilandica. **Daugh'ter s.,** diaster. **S. grass,** starwort, blazing star, colicwort; Aletris farinosa, Hypoxys erecta. **S. knap'weed,** Centaurea calcitrapa. **S. of the North,** Geum urbanum. **S. stroke,** see *Coup-de-soleil*. **S. this'tle,** Centaurea calcitrapa. **Verhey'en's s.,** stellate vein. **Wins'low's s.,** see *Winslow*.

**Starch.** Amylum. **An'imal s.,** corpora amylacea and glycogenic matter. **Blue s.,** smalt. **Can'na s.,** tous-les-mois. **Corn s..** see *Zea mays*. **S. cor'puscles,** corpora amylacea. **I'odide of s.,** prepared by triturating iodine and starch; said to have the eutrophic effects of iodine, but probably inert. **Liv'er s.,** glycogenic matter. **Pota'to s.,** see *Solanum tuberosum*. **S. su'gar,** glucose. **Tac'ca s.,** Tahiti arrowroot.

**Star'tin's ban'dage.** A bandage splint formed of paraffin and stearin.

**Starva'tion.** Deprivation of food; extreme suffering or death from hunger or cold.

**Star'wort.** Aletris farinosa. **Gol'den s.,** bubonium. **Wa'ter s.,** Callitriche verna.

**Stas'imorphy** (*morphe*, shape). Deformity from arrest of development.

**Stasipho'bia** (*phobos*, fear). Morbid fear of being made to stand upright.

**Sta'sis** (*stasis*, standing still). Arrest of the fluids in any part of the body. The word has nearly the same signification as stagnation. Stagnation, however, sometimes includes a morbid condition of the fluids—stasis never. Also station. **S. dermato'ses,** affections of the skin due to passive impairment of blood and lymph channels. **S. phleg'mons,** deep-seated inflammation of the skin, as in phlegmonous erysipelas.

**Stasopho'bia.** Stasiphobia.

**Stas-Ot'to meth'od.** Method of extraction of ptomains and alkaloids from the tissues. The free alkaloids are soluble in ether, while their salts are not, being soluble in water and alcohol.

**State.** In pathology, crisis, stationary point, or height of disease. Condition; status. **S. med'icine,** see *Medicine, state*.

**Stat'ic** or **Stat'ical.** Relating to statics, or the branch of mechanics showing the properties of bodies as respects weight, equilibrium, etc. An epithet applied to the physical phenomena presented by organized bodies—biostatic—in contradistinction to the organic or vital. At rest or in equilibrium. Also, of old, a restraining or astringent remedy. **S. bath,** electric bath. **S. breeze,** current of electrified air generated from a static machine in motion. **S. electric'ity,** electricity at rest in equilibrium. The use of the frictional electric machine is an illustration of this form of electricity. **S. machine',** machine for generating static electricity. **S. re'flex spasm,** saltatory spasm, a reflex clonic spasm of the legs causing springing or jumping when the individual stands in an erect position.

**Stat'ice arme'ria.** Plant, the root of which is reputed to be tonic and astringent. **S. brasilien'sis,** native plant of Brazil, Carolina, and Florida; astringent. **S. carolinia'na,** American or seaside thrift, marsh rosemary, marshroot, inkroot, sea lavender. A variety of Statice limonium. **S. limo'nium,** sea lavender, red behen, marsh rosemary, lavender thrift; roots have been esteemed astringent, tonic, and eminently antiseptic. **S. macrophyl'la,** native plant of Canary Islands, bearing beautiful flowers. **S. marit'imum,** S. limonium. **S. mucrona'ta,** plant used as a nervine; native of Morocco. **S. vulga're,** S limonium.

**Stat'ics.** See *Static*.

**Sta'tion** (*sto*, to stand). Act of standing.

**Sta'tionary.** Name give to certain diseases depending upon a particular state of the atmosphere, and prevailing in a district for a certain number of years, and then giving way to others.

**Statis'tics, med'ical** (*status*, state). Vital statistics. That part of medicine relating to the figures of morbidity, mortality, salubrity, births, etc.

**Statom'eter** (*statos*, standing, *metron*, measure). Apparatus for measuring the extent of exophthalmos.

**Stat'ure.** Height of the human body.

**Stat'us** (*sto*, to stand). State, condition, position. **S. arthrit'icus,** condition of the system previous to or during an attack of gout. **S. bilio'sus,** biliousness, so called. **S. convulsi'vus,** continuous convulsive condition, of very young children especially, producing marked disturbance of respiration, circulation, etc. **S. crudita'tis,** crudity. **S. epilep'ticus,** continuous epileptic condition; series of epileptic attacks, at times persisting for several days, in the intervals of which a comatose and pyretic condition exists. **S. erethrit'icus,** nervous diathesis. **S. gas'tricus,** embarras gastrique; saburra. **S. hyster'icus,** a succession of epileptoid attacks, recurring without normal intervals, in hysteria, differing usually from the s. epilepticus in the absence of fever. **S. infectuo'sus,** condition caused by general infection of the whole system. **S. lymphat'icus,** a pathological state characterized clinically by an unstable equilibrium of the vital forces, so that a slight injury may precipitate a failure of heart and respiration; the condition is associated with enlargement of the thymus gland and a general lymphatic dyscrasia. **S. nas'cens,** nascent state; see *Nascent*. **S. nervo'sus,** nervous diathesis; also s. typhosus. **S. parturien'di,** parturition. **S. præ'sens,** existing condition of the patient or present state of the disease. **S. rap'tus,** ecstasy. **S. sthen'icus,** strength. **S. typho'sus,** see *Typhoid state*. **S. vermino'sus,** helminthiasis.

**Staurople'gia** (*stauros*, cross, *plege*, stroke). Hemiplegia in which an upper extremity on one side is paralyzed, together with the lower limb on the opposite side; crossed hemiplegia.

**Staves'acre.** Staphisagria.

**Stave'wood.** Simaruba medicinalis.

**Stax'is** (*stazo*, to drop). Slight defluxion of any humor, as nasal hemorrhage.

**Steapsin'** (*stear*, fat). Ferment of pancreatin possessing the property of emulsifying fats.

**Ste'ar** (*stear*). See *Fat* and *Sevum*.

**Ste'arates.** Combinations of stearic acid with copper, manganese, zinc, etc., used as dusting-powders or in ointment in some cutaneous affections.

**Stearentin'.** Sebaceous matter of greenish color found in infants' stools.

**Stear'ic acid.** $C_{16}H_{36}O_2$. An acid occurring in the form of white scales, forming stearin with glycerin. It unites with bases to form stearates.

**Stear'iform.** Like fat.

**Stearin'.** A fat consisting of a combination of glycerin and stearic acid. See *Fat*.

**Stearoc'onote** or **Stearocono'tum** (*stear*, fat, *konis*, dust). Peculiar dry fat found in brain-substance, said to contain phosphorus and sulphur.

**Stearoder'mia.** A dermatosis in which the sebaceous glands are affected.

**Stearop'tene** (*stear*, fat, *ptenos*, volatile). Concrete or solid part of a volatile oil.

**Stearoric'inate.** Name applied to stearoricinic acid combined with a base.

**Stearoricin'ic acid.** One of three acids obtained during saponification of castor oil.

**Stearo'sis** (*stear*, fat). Steatosis.

**Stearrhœ′a** (*stear*, fat, *rheo*, to flow). Seborrhœa. Augmentation of secretion from the sebaceous follicles of the skin, *stearrhœa simplex*. The greasy condition of the skin of the face—cutis unctuosa—is a form of stearrhœa. The color of the sebaceous secretion sometimes becomes changed. When yellow it is called stearrhœa flavescens; when blue, stearrhœa cærulea; when black, stearrhœa nigricans. **S. amian′thaca,** seborrhœa amianthaca; seborrhœa having the appearance of scales from a preponderance of the solid constituents of the sebaceous secretion. **S. cæru′lea,** see *Stearrhœa*. **S. flaves′cens,** see *Stearrhœa*. **R. ni′gricans,** black discoloration of the face, observed in young women affected with derangement of the catamenia, due to a dark secretion from the cutaneous sebaceous glands. **S. sim′plex,** see *Stearrhœa*.

**Steatin′** (*stear*, fat). Stearin.

**Ste′atite.** Soapstone; talc.

**Steati′tes** (*stear*, fat). Polysarcia.

**Steati′tis** (*stear*, fat). Inflammation of fatty tissue.

**Steat′ocele** (*stear*, fat, *kele*, tumor). Tumor formed by a collection of steatomatous matter in the scrotum.

**Steatocrypto′sis** (*stear*, fat, *krypto*, to conceal). Disordered function of sebaceous glands.

**Steato′des.** Containing fat or something similar to it.

**Steatolyt′ic** (*lysis*, solution). Decomposing fat into glycerin and one of the fatty acids.

**Steato′ma** (*stear*, fat). An encysted tumor whose contents are similar to fat. **S. Mül′leri,** see *Lipoma*.

**Steatom′atous.** Relating to steatoma.

**Steatopath′ic** (*stear*, fat, *pathos*, affection). Relating to affections of the sebaceous glands.

**Steatopy′ga** or **Steatopy′gia** (*stear*, fat, *pyge*, buttocks). Buttock-hump. Fat buttocks, such as exist in the Hottentot woman.

**Steatop′ygous.** Pertaining to steatopyga.

**Steatorrha′gia** or **Steatorrhœ′a.** Stearrhœa.

**Steato′sis.** Stearosis. Skin disease in which the sebaceous secretion is faulty. Fatty degeneration of a part or unusual deposition and accumulation of fat in its adipose tissue. **S. cor′dis,** fatty heart, fatty degeneration of the heart; unusual deposition of fat on the heart or in its walls. **S. hepat′ica,** see *Adiposis hepatica*.

**Steatozo′on folliculo′rum** (*stear*, fat, *zoon*, animal). Acarus folliculorum.

**Steel.** Chalybs. **S. mix′ture,** mistura ferri composita. **Tinc′ture of s.,** tinctura ferri chloridi. **Wine of s.,** vinum ferri.

**Steep.** Rennet.

**Steep′lebush.** Spiræa tomentosa.

**Steganop′odes** (*steganopous*, webfooted). Planipedes.

**Stegno′sis** (*stegnosis*, constriction). Stenosis; constriction or narrowness of the pores and vessels. Stricture. Constipation; obstipation.

**Stegnot′ic** (*stegnosis*, constriction). Astringent.

**Steiro′sis** (*steiros*, barren). Sterility.

**Stel′la** (star). Bandage compared to a star, because crossed like the letter X; is applied to one or both shoulders. **S. ter′ræ,** Plantago coronopus.

**Stella′ria me′dia.** Alsine media. **S. scil′la,** scilla.

**Stella′ta rupi′na.** Centaurea calcitrapa.

**Stel′late** (*stella*, star). Resembling in form a star. **S. ban′dage,** bandage wound crosswise on the back. **S. lig′ament,** name given to the anterior costovertebral ligament, from its shape. **S. retic′ulum,** see *Reticulum*. **S. veins,** stelliform plexus of veins at the surface of the kidney, giving origin to the interlobular veins.

**Stel′liform** (*stella*, star, *forma*, form). Possessing the form of a star.

**Stel′lula** (little star). See *Stellulæ*.

**Stel′lulæ Verheyen′ii** (*stellula*, a little star). Stellate veins.

**Stel′lulate.** Like a star.

**Stell′wag's symp′tom.** Slight retraction of the upper eyelid in exophthalmic goitre.

**Stelochi′tis.** Osteocolla.

**Stem of hair.** Shaft of hair. **S. pes′sary,** see *Pessary*.

**Ste′ma** (*stema*). Penis (especially the glans).

**Stenag′ma** or **Stenag′mus.** A sigh.

**Stench.** A bad or offensive smell.

**Sten′ion.** Point for craniometry at extremity of smallest transverse diameter in temporal fossa.

**Steno-** (*stenos*). In composition, narrow.

**Ste′no's duct.** Stenson's duct.

**Stenobreg′mate.** Narrow between the temples.

**Stenocar′dia** (*stenos*, narrow, *kardia*, heart). Angina pectoris; cardiostenosis.

**Stenoceph′alous** (*stenos*, narrow, *kephale*, head). Having an elongated or narrowed head.

**Stenoceph′aly.** Condition of elongation or narrowness of the head.

**Stenochas′mus** (*stenos*, narrow, *chasma*, opening). Term applied to skulls having a sector of from 94° to 74° for the nasopharyngeal cavity.

**Stenochoria** (sten-o-ko′re-ah) or **Stenochori′asis** (*stenos*, narrow, *chora*, space). Narrowness, stricture, or contraction.

**Stenocori′asis** (*kore*, pupil). Narrowing of the pupil.

**Sten′odon** (*odous*, tooth). Having narrow teeth.

**Stenomycte′ria** (*stenos*, narrow, *mykter*, nose). Contraction of the nasal passages.

**Ste′non's duct.** Stenson's duct.

**Stenopœ′ic** (*stenos*, narrow, *ope*, hole). Relating to, containing, or consisting of a narrow hole or slit. **S. ap′erture,** disk having a narrow slit or aperture for determining or correcting astigmatism. See *Stenoraic*.

**Stenora′ic** (*stenos*, narrow, *orao*, to see). Applied to a lens having a narrow opening or slit for passage of rays of light.

**Stenosed′.** Narrowed, constricted, or contracted.

**Steno′sis** (*stenos*, narrow). Narrowness or constriction. **Aor′tic s.,** narrowing of the aorta or of the aortic valve. **Car′diac s.,** narrowing of the calibre of the upper anterior angle of the right ventricle of the heart. **Cicatri′cial s.,** narrowness caused by contraction of a cicatrix. **Mi′tral s.,** narrowness of the mitral valve.

**Stenostegno′sis** or **Stenosteno′sis** (*stenosis*, contraction). Narrowness or constriction of the duct of Steno or Stenson.

**Stenosto′mia** or **Stenos′tomy** (*stenos*, narrow, *stoma*, mouth). Contraction of the mouth.

**Stenotho′rax.** Narrow chest.

**Stenot′ic.** Small; contracted in size.

**Sten′son's canal′.** Incisor canal. **S.'s duct,** the parotid duct. **S.'s exper′iment,** ligature of aorta of the dog above the renal arteries, producing stiffness of the muscles of the posterior extremities, which disappears when the obstruction to the circulation is removed. **S.'s foram′ina,** see *Scarpa's foramina*. **S.'s veins,** venæ vorticosæ of choroid. (All named after N. Stenson, of Copenhagen.)

**Stentoroph′onous.** Having a strong voice.

**Step.** Space produced by the separation of the two lower limbs, and including that plus the length of one foot.

**Stephan′ic diam′eter.** Superior frontal diameter of Broca. **S. in′dex,** frontal index.

**Stephan′ion** (*stephane*, crown). Point of crossing of the coronal sutures and temporal lines.

**Stephen′sia elonga′ta.** Matico.

**Step′mother's bless′ing.** Hang-nail.

**Step′page gait.** Gait of chronic multiple neuritis, in which the individual lifts the foot high, turns the toe up, and puts the heel down first.

**Steppe disease′.** Rinderpest. **S. rasp′berry,** ephedra.

**Step′ping gait.** Steppage gait.

**Stercobi′lin** (*stercus*, excrement, *bilis*, bile). A coloring-matter extracted from the feculent contents of the intestines.

**Stercolin′** (*stercus*, excrement). Serolin.

**Stercora′ceous.** Stercoral, fecal. Relating to excrement.

**Stercoræ'mia** (*stercus*, fecal matter, *haima*, blood). Systemic poisoning resulting from the arrest of intestinal excretion, thus causing the absorption of toxic fecal alkaloids.

**Ster'coral.** Relating to or consisting of fæces, as *s. abscess*; or caused by the presence of fæces, as *s. typhlitis*. **S. ul'cer,** ulcer produced by pressure of fecal secretions.

**Stercorin'.** A crystalline substance obtained from fæces.

**Ster'corous.** Stercoral.

**Stercu'lia.** Trees of the order *Sterculiaceæ*, comprising numerous species, distributed in tropical regions of the world. **S. acumina'ta,** kola acuminata; native tree of Soudan, Guinea, etc., producing kola nut, which is chewed in many parts of Africa; used as a stimulant to the nervous system; it contains caffeine. **S. carthaginen'sis,** native tree of Brazil, Mexico, and Colombia, which bears edible fruit. **S. scaphig'era,** native tree of China and Anam, bearing fruit called tambayan, which is recommended in diarrhœa and dysentery. **S. u'reus,** native Indian tree bearing fruit and yielding a gum called kuteera.

**Ster'cus.** Excrement. **S. an'seris,** Fimus anseris. **S. cani'num al'bum,** Album græcum. **S. diab'oli,** asafœtida. **S. e'qui non castra'ta,** Fimus equinus. **S. huma'num,** human excrement.

**Stere.** Kilolitre.

**Sterelmin'tha** (*stereos*, solid, *helmins*, worm). A class of solid parasitic worms having no intestinal canal, such as the flukes and tapeworms.

**Stereoblas'tula.** A blastula containing no cavity.

**Stereochem'istry** (*stereos*, solid). The part of chemistry that has to do with the special relations between molecular atoms.

**Ste'reocyst** (*stereos*, solid, *kystis*, cyst). A hard encysted tumor.

**Ste'reo-elec'tric cur'rent** (*stereos*, solid). Thermoelectric current passed through solid bodies, such as metals, when brought into contact at different temperatures. Liquids are not necessary, as in voltaic electricity.

**Stereogno'sis** (*gnosis*, knowledge). Appreciation of a solid body and its properties by touch.

**Stereognos'tic.** Relating to stereognosis; as *s. sense*, the sense of appreciation of properties of solid bodies.

**Ste'reo-isom'erism.** Isomerism in substances which differ in certain physical properties, although having the same number of radicals and exhibiting the same chemical reactions.

**Stereom'eter** (*stereos*, firm, *metron*, measure). Instrument for determining specific gravity of liquid bodies, porous bodies, and powders, as well as solids.

**Stereom'etry.** Measuring solid bodies or cubic contents, or determining specific gravities.

**Ste'reoplasm** (*stereos*, solid). Solid, insoluble portion of protoplasm.

**Ste'reoscope** (*stereos*, solid, *skopeo*, to view). A physical instrument by which plane pictures of an object are made on each retina, and so blended as to appear as one in relief. Also an instrument for detecting a calculus in the bladder and foreign bodies in the soft parts; it resembles a common catheter, having an expanded free extremity.

**Stereoscop'ic vis'ion.** Binocular vision.

**Stereot'ica.** Deformities affecting the hard parts.

**Ste'resol.** A thick, liquid substance, formed by solution of balsam of tolu, carbolic acid, benzoin, shellac, saccharin, and oil of cinnamon in alcohol; used as an external antiseptic for sores and in skin diseases.

**Ster'ile** (*sterilis*, barren). Barren; not producing fruit; infecund. Aseptic; devoid of microorganisms.

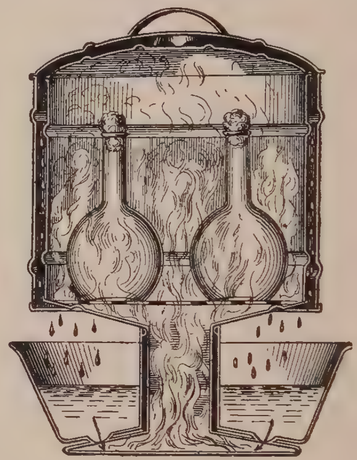
**Steril'ity.** Incapability of reproducing; barrenness; infecundity. Sterility may be absolute or relative. The former depends upon some vicious conformation of the genital organs, apparent or concealed, and occasionally admits of cure. Sterility is relative when a woman does not conceive with one individual, but does with another; but sterility ascribed to the woman may really be caused by defect of power in the male.

**Steriliza'tion** (*sterilis*, barren). The process of rendering a part sterile; that is, of producing in it absolute freedom from living microorganisms. This is generally accomplished by exposure to high heat, the boiling point of water, 212° F., being usually sufficient, although a few of these bodies require a temperature twenty or thirty degrees F. higher. See *Tyndalization* and *Pasteurization*. **Frac'tional s.,** tyndalization.

**Ster'ilizator.** Sterilizer.

**Ster'ilize.** To deprive of microbes; to produce asepsis, particularly through the influence of heat.

**Ster'ilizer.** Apparatus for destruction of microbes by sterilization. See *Sterilization*.



Arnold steam sterilizer.

**Ster'nad.** In the direction of the sternum.

**Ster'nal.** Relating to the sternum or breast-bone. **S. ar'teries,** offsets from the internal mammary to the anterior and posterior surfaces of the sternum and triangularis sterni. **S. as'pect,** the aspect of the body where the sternum is situated. **S. bend,** bend at inner side of the clavicle. **S. fora'men,** an orifice occasionally seen between the third and fourth pieces of the gladiolus or second bone of the sternum, from arrest of development. **S. glands,** a few lymphatic glands along the course of the internal mammary artery. **S. groove,** seen upon the surface of the body over the sternum and between the pectoral muscles. **S. line,** line of reference in examination, drawn through central portion of sternum. **S. nerves,** downward branches of the cervical plexus which pass to the sternal region. **S. ribs,** ribs (seven in number) which articulate with the sternum.

**Sternal'gia** (*algos*, pain). Pain referred to the sternum. Angina pectoris.

**Sterna'lis mus'cle.** Rare muscle running vertically superficial to great pectoral.

**Stern'berg's disease'.** Febrile pseudoleukæmia.

**Sterne'bra.** Segment of the sternum.

**Sterno-.** In composition, the sternum.

**Ster'noabdomina'lis.** Triangularis sterni and transversalis abdominis considered as one muscle.

**Sternocervica'lis.** Supernumerary muscular slip arising from the manubrium and inserted into the fascia of the neck.

**Sternochondroscap'ular mus'cle.** Sternoscapular muscle.

**Sternoclavic'ular.** Relating to the sternum and clavicle. **S. articula'tion,** the union of the inner extremity of the clavicle with a round facette at each side of the superior extremity of the sternum. In this articulation there are, besides the incrusting cartilages, two radiated sternoclavicular cartilages, one anterior and one posterior; an interclavicular ligament extending between the clavicles; and two synovial capsules, separated by an interarticular fibrocartilage. The costoclavicular ligament may also be considered to belong to this articulation.

**Sternoclavicula′ris anti′cus.** Supernumerary muscle sometimes found arising from sternum and inserted upon anterior surface of clavicle. **S. posti′cus,** rare muscular slip passing behind the joint from inner end of manubrium to clavicle. **S. supe′rior,** muscle arising above sternoclavicularis anticus and passing to clavicle.

**Sternoclaviobrachia′lis.** Pectoralis major.

**Sternoclaviohumera′lis.** Pectoralis major.

**Sternoclaviohyoide′us.** Sternohyoid muscle.

**Sternoclaviomastoide′us.** Sternocleidomastoideus.

**Sternocleidomastoide′us** (*kleis,* clavicle). Muscle situated at the anterior and lateral part of the neck. It is long and flattened, simple above and divided below, where it is inserted into the anterior and superior part of the sternum and the inner quarter of the clavicle. Above, it terminates at the mastoid process, which it embraces, at the neighboring part of the temporal bone, and at the outer third of the upper curved line of the occipital bone. It carries the head forward, inclines and rotates it to one side. When both parts of the muscle contract they bend the head directly forward.

**Sternocos′tal.** Relating to sternum and ribs; as the *s. articulations.*

**Sternocostocarot′icus.** Abnormal insertion of sternothyroid muscle upon carotid sheath.

**Sternocostoclavihumera′lis.** Pectoralis major.

**Sternocostocoracoide′us.** Pectoralis minimus.

**Sternocostoepitrochlea′ris.** Muscular strip occasionally attached to lower border of pectoralis major and inserted into epitrochlea.

**Sternocostofascia′lis.** Abnormal insertion of fibres of sternothyroid upon sternal fascia.

**Sternocostoglos′sus.** Sternoglossus.

**Sternocostohyoide′us profun′dus.** Portion of sternothyroid muscle which occasionally passes to great cornu of hyoid bone; also muscle formed by union of sternothyroid and thyrohyoid muscles, the thyroid insertion being lost.

**Sternocostothyroide′us.** Sternothyroid muscle.

**Sternodyn′ia** (*odyne,* pain). Sternalgia. **S. syncopa′lis** or **syncop′tica,** angina pectoris.

**Sternofacia′lis.** Sternoclavicularis.

**Sternoglos′sus.** Stray form of sternohyoid, in which it passes upward and unites with hyoglossus muscle.

**Sternohu′meral.** Pectoralis major.

**Sternohyoide′us.** Sternocleidohyoideus, sternohyoides, hyoides primus. Muscle situated at the anterior part of the neck; inserted above at the inferior edge of the body of the hyoid bone; below, into the upper part of the posterior surface of the sternum—at the posterior part of the sternoclavicular articulation, and sometimes into the cartilage of the first rib. It depresses the hyoid bone.

**Ster′noid.** Resembling the sternum.

**Sternomas′toid.** Relating to both sternum and mastoid process. **S. ar′teries,** branches from external carotid or some of its divisions to sternomastoid muscle. **S. mus′cle,** sternal head of sternocleidomastoid, in contradistinction to clavicular head (cleidomastoid).

**Sternomaxilla′ris.** Occasional slip of sternomastoid inserted upon angle of jaw.

**Ster′no-omoide′us.** Sternoclavicularis superior.

**Ster′no-omphalodym′ia** (*omphalos,* navel, *dyo,* to mingle). See *Somatodymia.*

**Sternopa′gia** (*pagios,* fixed). Monstrous union of fœtuses in which they are attached at the sternum.

**Sternop′agus.** Double monster united by the sternum.

**Sternopericar′diac** or **Sternopericar′dial.** Relating to the sternum and pericardium. **S. lig′aments,** two bands passing to pericardium from manubrium and ensiform process of sternum.

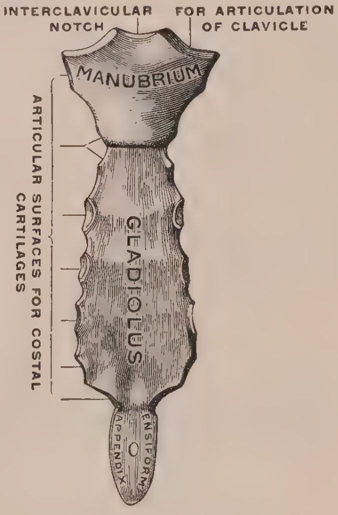
**Sternoscap′ular mus′cle.** Sometimes found in man, extending from the sternum to the superior border of the scapula.

**Sternothyrioide′us** or **Sternothyroide′us.** Bronchius muscle. Muscle situated at the anterior part of the neck. Attached above to the oblique line seen on the outer surface of the thyroid cartilage, and terminating below at the upper part of the posterior surface of the sternum and the cartilage of the second rib. When it contracts it depresses the thyroid cartilage and hyoid bone by the medium of the thyrohyoid membrane.

**Sternotrype′sis** (*trypesis,* perforation). Perforation of the sternum.

**Sternoxi′phoid lig′aments.** Bands which connect the sternum with the xiphoid cartilage.

**Ster′num** (*sternon*). Breast-bone, hæmal spine of Owen. Azygous symmetrical bone situated at the forepart of the chest. It is flat, broad above, narrow in the middle, and terminates below by a pointed cartilage—the xiphoid. It has an anterior or cutaneous surface, a posterior or mediastinal, a superior or clavicular extremity, and an inferior or abdominal; it is articulated with the clavicles and the seven upper ribs on each side by means of their cartilages. In the adult it is in three parts—the manubrium, the body or gladiolus, and the inferior part or point, the ensiform process.



INTERCLAVICULAR NOTCH
FOR ARTICULATION OF CLAVICLE
MANUBRIUM
ARTICULAR SURFACES FOR COSTAL CARTILAGES
GLADIOLUS
ENSIFORM APPENDIX

Sternum.

**Sternutamento′ria.** Achillea ptarmica.

**Sternuta′tio.** Sneezing. **S. convulsi′va,** paroxysmal sneezing, as seen in hay fever.

**Sternuta′tion** (*sternuto,* to sneeze often). Sneezing.

**Sternu′tatory.** Errhine. Substance provoking sneezing. **S. pow′der,** asarabacca leaves, betonica leaves, sweet marjoram leaves, lily-of-the-valley flowers, equal parts, in fine powder; mix.

**Ster′nutory.** Sternutatory.

**Ster′tor** (*sterto,* to snore). Deep snoring inspiration.

**Ster′torous.** Marked by stertor.

**Stethæ′mia** (*stethos,* chest, *haima,* blood). Hyperæmia of the lungs. Congestion or accumulation of blood in the pulmonary vessels.

**Stetho-** (*stethos,* chest). In composition, the chest.

**Stethocathar′sis** (*katharsis,* purging). Expectoration.

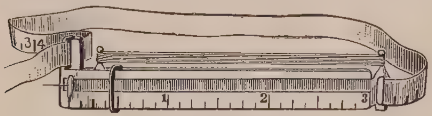
**Stethochysis,** steth-ok′is-is (*chyo,* to pour out). Hydrothorax.

**Stethogoniom′eter** (*stethos*, chest, *gonia*, angle, *metron*, measure). Apparatus for measuring degree of curvature of the chest.

**Steth′ograph.** Instrument for measuring movements of the chest in respiration. Pneumograph.

**Stethokyr′tograph** (*stethos*, chest, *kyrtos*, curved, *grapho*, to write). An apparatus for measuring the curves of the chest and the amount of dilatation at different levels.

**Stethom′eter** (*stethos*, chest, *metron*, measure). An instrument for measuring the extent of movement of the walls of the chest as a means of diagnosis in thoracic diseases.



Stethometer.

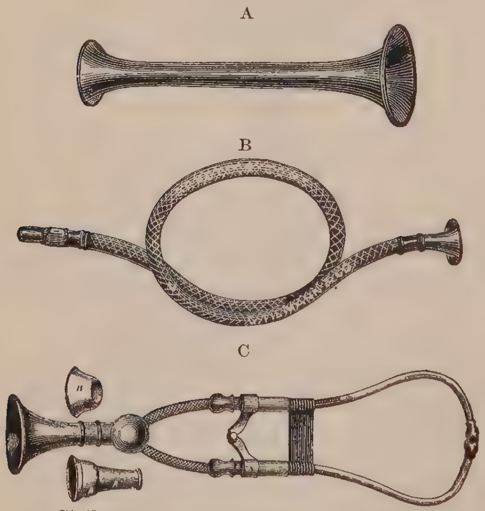
**Stethoparal′ysis.** Palsy of the chest muscles.

**Stethophonom′eter** (*stethos*, chest, *phone*, sound, *metron*, measure). A form of stethoscope with an adjustable slit, by reducing the size of which to the point where a heart sound becomes inaudible, the intensity of the latter can be determined.

**Stethopol′yscope** (*polys*, much, many). Stethoscope with multiple ear-pieces, by means of which several can hear the chest sounds at one time.

**Stethorrheu′ma** (*rheuma*, defluxion). Pleurodynia.

**Steth′oscope** (*stethos*, chest, *skopeo*, to examine). An instrument invented by Laennec for exploring the chest. In its original form it was a cylinder of wood, from four inches to a foot long, pierced by a longitudinal canal about a quarter of an inch in diameter. One end of it is applied to the chest of the patient, the other to the ear of the examining physician. Double or binaural stethoscopes have been invented to enable both ears to be used at the same time.



Stethoscopes: A, cylindrical; B, flexible; C, Cammann's.

Stethoscopes are sometimes flexible, like the flexible ear-trumpet. This mode of examining affections of the chest, *stethoscopy*, is also called *mediate auscultation*. **Binau′ral s.**, a stethoscope with a single bell, or chest-piece, from which emerge two flexible tubes, each armed with a hard-rubber tip, by means of which the sound is conveyed to both ears. **Cam′mann's s.**, a form of binaural s. **Differen′tial s.**, one provided with two bells, by means of which the sounds at two parts may be heard simultaneously or alternately for the sake of comparison. **Doub′le s.**, binaural s.

**Stethoscop′ic.** Relating to stethoscopy.

**Steth′oscopist.** One skilled in stethoscopy.

**Steth′oscopy.** Employment of the stethoscope.

**Sthe′nia** (*sthenos*, strength, power). Strength or excess of strength. Excitement of the organic actions.

**Sthen′ic.** Active, powerful. **S. diseas′es,** diseases the result of inflammatory or increased action. **S. fe′ver,** form of continued fever marked by high temperature and quick pulse.

**Sthenop′yra** (*pyr*, fever). Sthenic fever.

**Sti′an.** Hordeolum.

**Stibia′lis.** Antimonial.

**Stib′ialism** (*stibium*, antimony). Antimonial poisoning.

**Stib′iated.** Containing antimony.

**Stibine′.** Antimoniureted hydrogen.

**Stib′ium.** Antimony.

**Stib′nite.** Native sulphide of antimony, affording much of the market supply of this metal.

**Stib′ogram** (*stibos*, a beaten path, *grapho*, to write). Written record of footsteps.

**Stichas,** stik′as. Lavandula stœchas.

**Stick cul′ture.** A culture made by thrusting a platinum wire, previously dipped into the inoculating material, into the agar or other solid medium; see *Culture*.

**Stick′ing-plas′ter.** Emplastrum resinæ.

**Stick-lac.** Lac in natural state investing twigs.

**Stick′wort.** Agrimony.

**Stic′ta pulmona′cea** or **pulmona′ria.** Lichen pulmonarius.

**Stictac′ne** (*stiktos*, punctated). Form of acne in which the pustule has a red, elevated base with central dark point.

**Stiff.** Rigid, inflexible. **S. joint,** contracture; ankylosis. **S. joints,** milk sickness. **S. neck,** torticollis. **S.-n. fe′ver,** cerebrospinal meningitis.

**Sti′fle bone.** Patella of the horse. **S. joint,** the femorotibial articulation of horses and cattle.

**Stig′ma,** pl. stigmata (*stigma*, small puncture). Cicatricula. Breathing pore of insects. Bleeding point upon the skin, as in purpura and sometimes in hysteria. That part of the style or ovary of a plant which receives the pollen. **S. of degenera′tion,** various physical abnormalities alleged to be associated with moral deterioration or degeneracy. **S. of Graa′fian fol′licle,** place where blood-vessels are absent in the wall surrounding the follicle, and point at which rupture finally occurs. **S. heredita′lis,** marks of heredity. **Hyster′ical s.,** one of numerous small points on the skin or other parts which bleed spontaneously. **S. Malpigh′ii,** small venous openings which appear in large numbers along the course of the larger veins of the spleen. **S. ma′ïdis,** corn-silk; see *Ustilago*. **S. ovario′rum,** cicatrices left in the ovary after the escape of ova.

**Stigmat′ic.** Pertaining to the stigma.

**Stigmat′iform.** Resembling a stigma.

**Stig′matism.** State characterized by the presence of stigmata.

**Stigmatiza′tion.** The formation of ecchymosed spots upon various parts of the body.

**Stigmatoph′orous** (*phoreo*, to bear). Bearing stigmata.

**Stig′matose.** Relating to stigmata.

**Stil′bene.** $C_{14}H_{12}$. A derivative of toluene.

**Stilbo′ma** (*stilboo*, to make shining). Cosmetic.

**Stilette′.** Wire or trocar passed through a tube or cannula.

**Still's disease′.** Chronic polyarthritis in children, associated with general enlargement of the glands and spleen.

**Still layer of Poiseuille′.** Space of Poiseuille; a thin stratum of liquid in contact with the capillary vessels, in which the white corpuscles of the blood seem to be retarded, while the red corpuscles are hurried along in the centre of the current.

**Still′a.** Drop.

**Stilla′tio san′guinis.** Bleeding drop by drop.

**Stilla′tion** (*stilla*, a drop). Dropping of a liquid.

**Still′birth.** Birth of a dead child.

**Still′born.** Born without life.

**Stil′ler's sign.** Increased amount of movement in the tenth rib in neurasthenia and in Glénard's disease.

**Stillicid′ium** (*stilla*, drop, *cado*, to fall). Term often used synonymously with strangury, but meaning the flow of any liquid—particularly the urine—drop by drop. **S. lacryma′rum**, epiphora. **S. na′rium**, coryza. **S. san′guinis**, bleeding. **S. uri′næ**, see *Stillicidium*.

**Stillin′gia.** (Ph. U. S.) Queen's root, queen's delight, yaw root, marcory, cockup hat. Indigenous plant growing in pine barrens from Virginia to Florida. The root is used in syphilis, obstinate cutaneous affections, etc., like sarsaparilla; dose, gr. x–ʒj (0.65–4.0) in decoction. *Extrac′tum stillin′giæ flu′idum* is official; dose, ♏x–ʒj (0.65–4.0). **S. sebif′era**, native tallow tree of China which is grown in the Southern United States; yields a vegetable wax which is said to be nearly pure stearine. **S. sylvat′ica**, see *Stillingia*.

**Stillingin′.** Substance precipitated from tincture of root of Stillingia sylvatica. Stimulant; also employed in syphilis; dose, gr. j–iij (0.065–0.2).

**Stil′ling's bun′dle.** Solitary fasciculus of medulla oblongata. **S.'s canal′**, canal in the vitreous humor through which, in the fœtus, an artery passes to the lens. **S.'s cells**, collections of cells in the posterior horns of the spinal cord, in the cervical and lumbar regions. **S.'s col′umns**, S.'s cells. **S.'s fi′bres**, association fibres of the cerebellum. **S.'s fleece**, plexus of fibres surrounding the dentate nucleus of the cerebellum. **S.'s gelat′inous sub′stance**, situated around the central canal of the spinal cord. **S.'s nu′cleus**, red nucleus; nucleus of hypoglossal nerve; nucleus in the spinal cord in the sacral region. **S.'s rha′phe**, band between the pyramids of the oblongata. **S.'s sa′cral nu′cleus**, see *S.'s nucleus*.

**Stil′ling-Clarke cells.** Collection of ganglion cells in the posterior cornua of the spinal cord in the dorsal and lumbar regions.

**Sti′lus.** Stylus. **S. ante′rior, S. infe′rior, S. inter′nus, S. supe′rior**, see *Peduncles of optic thalamus*.

**Stimato′sis** (*styma*, priapism). Stymatosis.

**Stim′ulant** (*stimulo*, to excite). Excitant. Agent having the power of exciting the organic action of the different systems of the economy. Some stimulants are diffusible, having a prompt but temporary action; others are permanent or persistent. The action of stimulants is called stimulation. Cardiac stimulants increase the heart's action; cerebral stimulants, that of the brain; diffusible stimulants, like ammonia, have a quick but transient effect; spinal stimulants excite the action of the spinal cord. See *Stimulus*.

**Stim′ulate** (*stimulo*, to goad). To produce an exaltation of vital activity in a part or organ.

**Stimula′tion.** Action or effect of stimulants.

**Stim′ulus** (goad). An agent capable of causing demonstrable changes of dynamics in the tissue or organ on which it acts. **Ad′equate s.**, homologous s. **Chem′ical s.**, s. by the action of chemicals, as acids, etc. **S. dif′ference**, difference in activity between two stimuli. **Elec′trical s.**, s. from action of an electrical current. **Heterol′ogous s.**, s. which acts wherever it may be applied. **Homol′ogous s.**, s. which has special action only on special organs, the retina, for example, to produce the impression of luminous effect. **Mechan′ical s.**, s. produced by the action of appliances of various kinds. **S. receptiv′ity**, ability of receiving and appreciating the highest degree of stimulus. **S. scope**, limit between stage of stimulus susceptibility and that of receptivity. **S. susceptibil′ity**, ability of perceiving a stimulus. **Ther′mal s.**, s. by action of heat. **S. thresh′old**, see *Threshold*. **S. val′ue**, term applied in psychophysics to point out sign or formula indicating intensity of stimulus.

**Sting.** Acute and sudden pain, as from a bee. Stimulus.

**Stinge.** Variety of urticaria affecting the mouth and nose of cattle in hot weather.

**Stink bush.** Illicium floridanum. **S. poke**, Dracontium fœtidum. **S. weed**, Chenopodium anthelminticum, Datura stramonium, Polanisia graveolens.

**Stipa′tio** (*stipo*, to stop up). Narrowness or constriction. **S. te′læ cellulo′sæ infan′tum**, sclerema neonatorum.

**Stip′itate.** Possessing stalk or pedicle.

**Stip′ites dulcama′ræ.** Dulcamara. **S. lamina′riæ**, Laminaria cloustoni.

**Stir′piculture** (*stirps*, stock, race). Breeding of particular stocks of animals.

**Stir′rup.** Stapes. **S. bone**, stapes.

**Stitch.** Point. Acute, lancinating pain like the puncture of a sharp needle. To unite with a needle and thread; also the loop of thread so made; suture. **S. ab′scess**, abscess formed in proximity to a stitch or suture in consequence of septic contamination. **Roy′al s.**, see *Suture*. **S. in the side**, pleurodynia; also a symptom in pleurisy or pneumonia. **S. wort**, common chickweed.

**Stizolo′bium.** Dolichos pruriens. **S. pru′riens**, Mucuna pruriens. **S. u′rens**, Mucuna urens.

**Stobæ′a rubricau′lis** (after Dr. Stobæus, of Sweden). South African plant, ord. *Compositæ*. A tincture of the bruised roots is diuretic and of service in gravel.

**Stock's test** for acetone in the urine. Solution of hydroxylamin hydrochlorate, caustic soda, and pyridin are added to the suspected urine; ether is added with sufficient bromine-water to give the latter a distinct yellow color; on adding hydrogen peroxide to the mixture the yellow color of the ether will turn blue in the presence of acetone.

**Stock′ing, elas′tic, gum,** or **laced.** Bandage used by surgeons, consisting of a stocking made of cloth or silk, admitting of tight lacing anteriorly; it is also made of fine elastic gum cloth.

**Stœ′chas arab′ica.** Lavandula stœchas.

**Stœchiology** (ste-ke-ol′o-je) or **Stoichiol′ogy** (*stoicheion*, an element, *logos*, discourse). Treatise on or the theory of elements, hence of the elementary parts of organized substances.

**Stœchiomet′ric** or **Stœchiomet′rical.** Relating to stœchiometry.

**Stœchiom′etry** (*stoicheion*, element). Measurement and examination of chemical elements, as to their physical properties.

**Stoerck's blennorrhœ′a.** Excessive purulent discharge and hypertrophy of the mucous membrane of the nasopharynx and larynx.

**Stoichiol′ogy.** Stœchiology.

**Stoichiom′etry.** Stœchiometry.

**Stokes's amputa′tion.** See *Amputation*. **S.'s disease′**, exophthalmic goitre. **S.'s law**, paralysis affecting underlying inflamed serous or mucous membranes. **S.'s lens**, combination of cylindrical concave and convex lenses, used in the diagnosis of astigmatism. **S.'s lin′iment**, mixture of oil of turpentine, acetic acid, and yolk of egg. **S.'s pulse**, Corrigan's pulse. **S.'s respira′tion**, see *Cheyne-Stokes*. **S.'s sign**, throbbing or pulsatile sensation on the right side of the umbilicus, imparted to the physician in acute enteritis. **S.'s syn′drome**, see *Stokes-Adams disease*.

**Stokes-Ad′ams disease′** or **syn′drome.** A condition of cardiac dyspnœa and gravest symptoms of cardiac inadequacy, often proving fatal; attended with slow pulse, attacks of vertigo, syncope, or epileptiform convulsions, œdema, and ascites. It seems to be due to a slow and general form of myocardial degeneracy capable of advancing to the extreme of cardiac incompetence without any suddenly fatal termination. It occurs in arteriosclerosis, compression of the cord, fatty heart, and other conditions of great moment.

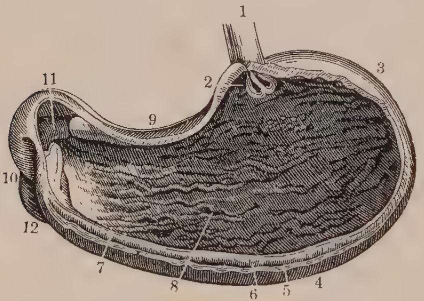
**Stolid′ity.** Stupidity; imbecility; amentia.

**Stoll's pneumo'nia.** A form of pneumonia complicated with derangement of the stomach, liver, and upper part of the intestines.

**Sto'ma** (*stoma*). Mouth. A minute opening in a membrane; pore.

**Stomacace,** sto-mak'as-e (*stoma,* mouth, *kakos,* evil). Noma, canker. Ulcerative stomatitis Scurvy. **S. gangræno'sum,** cancer aquaticus. **S. universa'le,** purpura hæmorrhagica.

**Stom'ach.** One of the principal organs of the digestive apparatus. A musculomembranous reservoir, continuous on the one side with the œsophagus, on the other with the duodenum. It is situated beneath the diaphragm, between the liver and the spleen, and occupies the epigastrium and part of the left hypochondrium. In it the food is formed into chyme. Viewed externally the stomach has: 1. An anterior face, which looks a little upward. 2. An inferior face, directed downward. 3. An inferior or colic margin, which is convex and extensive, and is called the greater curvature; it gives origin to the omentum majus. 4. A superior or diaphragmatic margin, shorter, concave, and called the lesser curvature; the lesser omentum is attached to this. 5. A left or œsophageal orifice, called also the cardia or upper orifice. 6. A right or intestinal or inferior orifice, called the pylorus. 7. A considerable dilatation, situated to the left of the cardia and greater curvature, called the great tuberosity or great cul-de-sac or fundus or splenic portion of the stomach. 8. A less extensive dilatation, situated to the right of the greater curvature—the lesser tuberosity or lesser cul-de-sac, pyloric portion. The inner surface of the stomach is of a reddish-white color, and has a marbled appearance; it is constantly covered by thick mucus, and is lined by a mucous membrane presenting numerous wrinkles or rugæ. The parietes of the stomach consist of three membranes in superposition. The outermost is serous, and is an extension of the peritoneum. The middle coat is muscular—some fibres running longitudinally, others transversely, and others obliquely. The innermost membrane is of a mucous nature, but not exactly a continuation of the membrane that lines the œsophagus. The mucous and muscular membranes form, at the pylorus, a valve called the pyloric valve. These three coats are united by a dense, close, areolar membrane, and between the mucous and muscular coats, along the two curvatures especially, is a quantity of muciparous glands, called glands of Brunner. The matrix is the fibrous network uniting the cylindrical tubes of the stomach, and also surrounding the intestinal tubes. The arteries of the stomach are very numerous, and proceed from the coronary of the stomach, the pyloric, splenic, and right and left gastroepiploic. The veins have the same name and pursue the same course as the arteries. They pour their blood into the trunk of the vena porta. Its lymphatic vessels are very numerous, and pass into ganglia situated along the two curvatures. The nerves of the stomach proceed from the pneumogastric and three divisions of the cœliac plexus.



Interior of stomach, as shown by removal of its anterior wall: 1, œsophagus; 2, cardiac orifice of stomach; 3, cul-de-sac; 4, greater curvature; 5, line of attachment of omentum majus; 6, muscular coat; 7, anterior cut edge of mucous coat; 8, rugæ of mucous coat; 9, lesser curvature; 10, beginning of duodenum; 11, pyloric orifice; 12, first turn of duodenum downward.

The following estimates have been made of the measurements of the stomach:

| | |
|---|---|
| Weight | 202 g. |
| Length from fundus to pylorus | 270–320 mm. |
| Distance from the lesser to greater curvature in the middle part | 90–110 |
| Distance from the lesser to greater curvature at the fundus | 120 |
| Distance from the lesser to greater curvature at the antrum pylori | 40–50 |
| Width of cardia and pylorus | 30 |
| Length of stomach in the new-born | 80 |

**Stom'ach ache,** cardialgia; colic. **S. buck'et,** a minute bucket, which when passed into the stomach will bring up some of the contents of that organ. **S. cells,** honeycomb-like depressions in the lining membrane of the stomach. **S. cough,** reflex cough having its origin in irritation of the stomach. **Hour-glass s.,** a stomach with a constriction dividing it into two more or less equal cavities. **Leath'er-bot'tle s.,** a contracted stomach with thick, rigid walls. **S. pump,** an instrument for conveying fluids to the stomach when deglutition is impracticable, and for pumping out the contents of that organ. It consists of a forcing syringe, to the bottom and nozzle of which flexible tubes can be attached, one to be passed through the œsophagus into the stomach, the other connected with a vessel holding the material to be injected or a receptacle for the fluid removed. This instrument is of great service when poisons have been taken. The stomach-pump was first employed in America by Dr. Physick, in 1812. **Sick s.,** nausea. **S. tooth,** canine tooth, lower jaw, first dentition; so named owing to gastric disturbance frequently ensuing at its eruption. **S. tube,** a hollow, flexible tube passed through the œsophagus into the stomach, used for washing out the stomach, the introduction of liquid food in forced feeding, etc. **S. ver'tigo,** vertigo of gastric origin.

**Stom'achal.** Stomachic. Relating to the stomach. Medicine giving tone to the stomach.

**Stomachal'gia** (*algos,* pain). Cardialgia.

**Stomach'ic** or **Stomach'ical.** Stomachal.

**Stomachos'copy.** Gastroscopy.

**Stom'achus.** Œsophagus; cardiac orifice of the stomach; the stomach itself.

**Stomæmorrha'gia** (*stoma,* mouth, *haima,* blood, *rhegnymi,* to burst forth). Hemorrhage from the mouth.

**Stomal'gia** (*stoma,* mouth, *algos,* pain). Pain in the mouth.

**Stomap'odous** (*stoma,* mouth, *pous,* foot). Having feet near the mouth.

**Stomap'yra** (*stoma,* mouth, *pyr,* fire). Aphthæ.

**Sto'mata** (pl. of stoma). Mouths. Pores.

**Sto'matal.** Relating to a stoma or to stomata.

**Stomatal'gia** (*stoma,* mouth, *algos,* pain). Pain in the mouth.

**Sto'mate.** Having a mouth.

**Stomatel'cia** or **Stomatelco'sis** (*stoma,* mouth, *helkos,* an ulcer). Ulceration of the mouth.

**Stoma'tia** (*stoma,* mouth). Disease of the mouth.

**Stomat'ic** (*stomatikos,* relating to the mouth). Medicine used in diseases of the mouth. Dentifrice, masticatory, etc.

**Stomati'tis.** Inflammation of the mouth. **Aph'thous s.,** follicular or ulcerous or parasitic s.; inflammation of the follicles of the mouth, constituting the aphthæ of the adult, which is generally accompanied by cephalic, gastric, and general disturbance. It may be discrete or confluent, and requires general and local treatment adapted to the case; see *Aphthæ.* **S. catarrha'lis,** catarrhal inflammation of the mucous membrane of the mouth. **S. cremo'sa**, aphthæ. **S. diphtherit'ica**, diphtheritic inflammation of the mouth. **Erythem'atous s.**, simple inflammation of the mouth. **S. exsudati'va**, aphthæ. **S. exul'cerans**, ulcerative s. **Follic'ular s.**, aphthous s. **S. gangræno'sa**, cancer aquaticus. **Herpet'ic s.**, aphthæ. **S. intertrop'ica**, psilosis. **S. mater'na**, stomatitis of nursing women. **S. mercuria'lis**, stomatitis occurring in mercurialism. **Mycot'ic s.**, aphthæ. **S. of nurs'ing women** appears to be a variety of aphthous s. **S. nutri'cum**, stomatitis of nursing women. **Parasit'ic s.**, aphthous s. **Pseudomem'branous s.**, inflammation of the mouth accompanied by the exudation of a false membrane—a disease rarely seen extensively except in large foundling establishments. **Scorbu'tic s.**, s. associated with scurvy. **Ul'cerative** or **ul'cerous s.**, inflammation of the mouth, accompanied with ulceration; frequently described under the vague name of *aphthæ*. **Vesic'ular s.**, aphthæ.

**Stomatocace**, sto-ma-tok'a-se (*stoma*, mouth, *kakos*, evil). Stomacace.

**Stomatocathar'sis** (*kathairo*, to purge). Ptyalism.

**Stomatodyn'ia** (*odyne*, pain). Pain in the mouth.

**Stomatodyso'dia** (*dysodia*, bad smell). Offensive odor from the mouth.

**Stomatogas'tric** (*stoma*, mouth, *gaster*, stomach). Appertaining to the mouth and stomach, as the stomatogastric ganglia of the lower animals.

**Stomatoiat'ria** (*stoma*, mouth, *iatreia*, medical treatment). Treatment of diseases of the mouth.

**Stomatological**, sto-mat-o-loj'ik-al. Relating to stomatology.

**Stomatol'ogist.** One whose practice is confined to treating diseases of the mouth.

**Stomatol'ogy.** The specialty concerned with diseases of the mouth.

**Stomatomala'cia pu'trida.** Cancer aquaticus.

**Stomatome'nia.** Vicarious menstruation by the mouth.

**Stomato'mia** or **Stomat'omy** (*stoma*, mouth, *tome*, incision). Operation on the mouth. Incision of the os uteri.

**Stomatomor'phous** (*stoma*, mouth, *morphe*, form). Mouth-shaped.

**Stomatomyco'sis** (*stoma*, mouth, *myces*, fungus). Disease of the mouth caused by a fungus; as thrush.

**Stomatonecro'sis** (*nekrosis*, death). Noma.

**Stomatono'ma.** Noma.

**Stomatop'athy** (*pathos*, disease). Disease of the mouth.

**Stomatophy'ma** (*phyma*, swelling). Swelling of the mouth. **S. glandulo'sum**, tumefaction of the glands of the mouth.

**Stomatoplas'tic** (*plasso*, to form). Relating to stomatoplasty.

**Sto'matoplasty.** Plastic operation about the mouth or os uteri.

**Stomatorrha'gia** (*rhegnymi*, to break out). Hemorrhage from the mouth. **S. alveolo'rum**, alveolar bleeding. **S. gingiva'rum**, bleeding from the gums.

**Stomatorrhœ'a** (*rheo*, to flow). Salivation; stomatorrhagia.

**Sto'matoscope** (*stoma*, mouth, *skopeo*, to view). Instrument for keeping the mouth open, so as to permit the parts within to be inspected—*speculum oris*. Also an instrument like the laryngoscope, provided with a mirror to reflect light on the interior of the mouth.

**Stomatosep'sis** (*sepsis*, putrefaction). Stomacace.

**Stomato'sis** (*stoma*, mouth). Any disease of the mouth.

**Stomatospas'mus.** Trismus; lockjaw.

**Stomatosyr'inx** (*stoma*, mouth, *syrinx*, tube). Eustachian tube.

**Stomaty'phus.** Pseudomembranous stomatitis.

**Stomenceph'alus** (*stoma*, mouth, *kephale*, head). Monster having two contiguous eyes, or a double eye occupying the median line; the nasal apparatus atrophied and forming a tube; the jaws rudimental; and the mouth imperfect or wanting. A variety of cyclocephalus.

**Sto'mium.** Stoma.

**Stomoceph'alus.** Stomencephalus.

**Stomodæ'um** (*stoma*, mouth, *daio*, to divide). Invagination of epiblast forming mouth of embryo.

**Stomoman'icon** (*manos*, thin). Platysma myoides.

**Stomorrha'gia.** Bleeding from the mouth.

**Stomox'ys** (*stoma*, mouth, *oxys*, sharp) **calci'trans.** Stable-fly; a biting fly resembling the ordinary horse-fly, Musca domestica, but which has a sharp sting.

**Stone bind'er.** Osteocolla. **S. in the blad'der**, vesical calculus. **S. crop**, sedum. **S. mint**, Cunila mariana. **S. moss**, rock lichens of Arctic regions of America, eaten as food. **S. pine**, Pinus cembra; Pinus pinea. **S. pock**, acne. **S. root**, Collinsonia canadensis. **S. sweat**, see *Hyraceum*.

**Stone'cutters' phthi'sis.** Chronic interstitial pneumonia, ultimately becoming tuberculous, due originally to inhalation of fine particles of stone.

**Stool.** Dejection.

**Stop nee'dle.** Needle having a shoulder on it to limit the depth of its penetration. **S. spec'ulum**, speculum for the eye, limited as to the extent to which it may be spread when applied.

**Stop'page.** Cessation of a flow. Obstructive interference with a function. Obstruction of a canal.

**Stop'ping.** Filling; stegnosis.

**Stor'age albu'min.** Albumin remaining in the circulation, and not appropriated by the tissues. **S. bat'tery**, an electrical battery made up of accumulator cells which can be charged with a current of electricity which induces certain chemical changes in the elements of the cell; the chemical action can be then reversed, the stored energy giving rise to a current of electricity.

**Sto'rax** or **Sty'rax.** Gum resin derived from liquidambar and Styrax officinalis. **S. liq'uida**, Liquidambar styraciflua.

**Störck's blennorrhœ'a.** See *Stoerck*.

**Stores'in.** Largest constituent of storax.

**Stork'bill** or **Stork's bill.** Geranium maculatum, Erodium cicutarium.

**Stough'ton's elix'ir.** Tinctura absinthii composita. Gentian, wormwood, rhubarb, germander, bitter orange-peel, each 25; aloes, cascarilla, each 5; alcohol, 1000.

**Strabis'mic.** Relating to or affected with strabismus.

**Strabismom'eter** (*strabismos*, squinting, *metron*, measure). Instrument for measuring the linear deviation of a squinting eye.

**Strabis'mus** (*strabismos*, squinting). Squint; cross-eye. Want of concordance of the optic axes. It may be dependent upon natural or acquired inequality in the action of the motor muscles of the eye, on a convulsive state of one of those muscles, a difference in the sensibility of the two eyes, or a cerebral affection. If the disease be symptomatic of a cerebral affection, attention must, of course, be directed to the latter. Strabismus may be *single*, affecting one eye only, or *double*, affecting both eyes, and it may be *convergent* or *divergent*; that is, with the eyeball turned toward the nose or away from it; other varieties are the upward, downward, periodic, and paralytic forms. Slight deviation is generally called a cast in the eye, and vulgarly cockeye. **Accom'modative s.**, s. due to exaggerated effort at accommodation in hypermetropic cases, or deficient efforts in the myopic. **Al'ternating s.**, s. affecting both eyes alternately. **Bilat'eral s.**, alternating s. **Concom'itant s.**, s. due to faulty insertion of muscles. **Con'stant s.**, continuous and persistent squint. **Conver'gent s.**, s. with convergence of visual axes. **Diver'gent s.**, s. with divergence of visual axes. **Exter'nal s.**, divergent s. **Intermit'tent s.**, s. occurring at intervals. **Inter'nal s.**, convergent s. **Mechan'ical s.**, s. caused by pressure, traction, or other mechanical cause. **Non-concom'itant s.**, s. with deviation varying according to the direction in which the eyes are turned. **Paralyt'ic s.**, s. caused by paralysis of an ocular muscle. **Period′ic s.,** s. occurring only in accommodation. **Spasmod′ic s.,** s. due to muscular spasm. **Spas′tic s.,** spasmodic s. **S. sursumver′gens,** s. with one axis elevated above the other; hypertropia. **Unilat′eral s.,** s. affecting only one eye. **Ver′tical s.,** s. sursumvergens.

**Strabom′eter.** Graduated instrument devised for the purpose of measuring the degree of strabismus.

**Strabo′nes** or **Strabo′ni.** Those affected with strabismus.

**Straboscop′ic** (*strabos,* twisted, *skopeo,* to see). Referring to likeness of objects as seen by a strabismatic person. **S. disk,** form of instrument in which objects appear distorted.

**Strabos′itas.** Strabismus.

**Strabot′omy** (*strabos,* one who squints, *tome,* incision). Operation for the removal of squinting by the division of the muscle or muscles that distort the eyeball. *Strabotomist* is one who practises strabotomy.

**Strad′dling disease′.** Quebrabunda. A disease of tropical regions, similar to beriberi, which affects horses and pigs.

**Straight.** Taking a direct course. **S. si′nus,** runs backward in the base of the falx cerebri, gradually widening as it approaches the torcular Herophili, in which it terminates. Beside the inferior longitudinal sinus, the venæ Galeni and superior veins of the cerebellum open into it. **S. tu′bule,** central stem of uriniferous tubule which urine from collecting tubules enters. **S. tu′bules of tes′tis,** short, straight tubes of the testis, receiving secretion of seminiferous tubules, and discharging it into the rete testis.

**Strain.** Sprain. To pass decoctions, infusions, etc., forcibly through linen. To exert an effort. Greatly increased or excessive effort or exertion. Excessive use of a part or organ; the condition induced by such overaction, as *muscle* or *muscular strain, eye-strain,* etc.

**Strain′er.** Sieve for filtration used in pharmacy.

**Strain′ing.** Muscular effort.

**Strait.** Narrow, confined. One of the openings of the pelvis; see *Pelvis.* **S.-jack′et** or **s.-waist′coat,** jacket made of strong material, having long sleeves which are tied behind, so that the arms cannot be extricated; used for restraining maniacs or those laboring under violent delirum.

**Stramin′eous** (*stramen,* straw). Resembling straw.

**Stramo′nii fo′lia.** (Ph. U. S.) See *Datura stramonium.* **S. se′men** (Ph. U. S.), the seed of *Datura stramonium,* which see. The official preparations are: *Extrac′tum stramo′nii sem′inis* (U. S. and Br.); dose, gr. $\frac{1}{6}$–$\frac{1}{2}$ (0.01–0.032). *E. s. s. flu′idum* (U. S.); dose, ♏j–ij (0.065–0.13). *Tinctu′ra s. s.* (U. S.); dose, ♏x–xx (0.65–1.3). *Unguen′tum s.* (U. S.) contains 10 per cent. of the extract.

**Stramo′nium.** Datura stramonium.

**Stram′ony.** Datura stramonium.

**Strangalæsthe′sia.** Morbid sensation of constriction of a part as by a rope or band.

**Strangal′ides.** Plural of strangalis; tubercles.

**Stran′galis** (*strangalis,* a hard kernel). Tubercle.

**Strangalis′mus.** Strangulation.

**Stran′ger's cold** or **fe′ver.** Murri-murri; a catarrhal affection attacking the inhabitants of certain isolated regions whenever such are visited by outsiders. Acclimating or seasoning fever.

**Stran′gle.** To choke or suffocate.

**Stran′gles.** Distemper of young horses, a form of contagious rhinolaryngitis, with coincident abscesses, due to the Streptococcus coryzæ.

**Stran′gulated.** Constricted tightly. **S. her′nia,** hernia made irreducible by constriction; see *Strangulation.*

**Strangula′tion.** State of a part too closely constricted. Thus there is strangulation of a hernia when the opening that gives passage to the protruded intestine seriously constricts the same. In legal medicine it means the forcible obstruction of the air-passages, by a ligature or by the hand, for criminal purposes.

**Strangu′ria.** Strangury. **S. cruen′ta,** discharge of blood from the vessels of the urinary bladder.

**Strangu′rious.** Relating to strangury.

**Stran′gury** (*strango,* to squeeze, *ouron,* urine). Dysuria. Extreme difficulty in evacuating the urine, which issues only drop by drop, and is accompanied with heat, pain, vesical tenesmus, etc.

**Stranx.** Drop.

**Strap′ping.** The dressing of ulcers by means of straps or strips of adhesive plaster, linen, etc. Also the plaster thus applied. **Wa′ter s.** or **Wet s.,** see *Water-dressing.*

**Strass′burg tur′pentine.** Variety of turpentine obtained from the bark of Abies pectinata.

**Strass′burg's test.** For bile-acid in urine: add cane-sugar to urine, into which dip filter-paper; dry the paper and apply a drop of sulphuric acid; a violet color is soon noticed.

**Strass′burger's cell-plate.** Equatorial plate produced in karyokinesis.

**Stratifica′tion** (*stratum,* a layer). Arrangement in layers.

**Strat′ified** or **Strat′iform.** Arranged in layers.

**Stratio′tes.** Achillea millefolium.

**Stra′tum.** Layer. **S. arysyndes′micum,** syndesmoarytenoideus. **S. bacilla′tum, bacillo′sum,** or **bacillo′rum,** bacillary layer, layer of rods and cones of the retina. **S. Bowman′i,** the anterior elastic lamina of the cornea, between the proper cornea and the conjunctival epithelium, which, according to Bowman, aids the cornea in maintaining its exact curvature. **S. cellula′rum pyramida′lium,** large pyramidal layer. **S. choriocapilla′re,** tunica ruyschiana. **S. cine′reum,** layer of investing gray matter in anterior corpora quadrigemina, beneath superficial stratum zonale; also layer of gray matter on floor of fourth ventricle. **S. convolu′tum,** stratum radiatum and layer of large pyramidal cells taken together. **S. cor′neum,** horny layer of the epidermis. **S. cor′porum nervo′rum arcto′rum,** stratum granulosum. **S. cuta′neum,** dermoid layer of membrane of tympanum. **S. cylindro′rum,** layer of rods and cones; tunica Jacobi. **S. dorsa′le,** dorsal layer. **S. episclera′ta,** part of capsule of Ténon on the sclerotic coat. **S. gelatino′sum,** gelatinous layer. **S. germinati′vum,** germinal spot; proligerous disk. **S. glomerulo′sum,** glomerular layer. **S. granulo′sum,** granular layer of retina; a layer of flat, granular cells in the epidermis between the s. lucidum and s. mucosum; a narrow layer of pyramidal cells in the fascia dentata of the brain corresponding to similar cells on the external surface of the brain; layer of dentine immediately underlying the cementum. **S. horizonta′le,** superficial arcuate fibres over surface of anterior pyramid of the medulla. **S. interme′dium,** layer of fibres in crura cerebri; cells of the enamel organ, directly exterior to the ameloblasts. **S. i. thal′ami,** subthalamic tegmental region. **S. lacuno′sum,** layer of cortical cells in hippocampus major. **S. lemnis′ci,** deepest layer of anterior quadrigemina. **S. lu′cidum,** layer of cells in skin between stratum granulosum and horny layer, consisting of transparent nucleated cells. **S. Malpigh′ii,** corpus mucosum. **S. media′num horizonta′le,** horizontal stratum. **S. medulla′re,** layer of medullated nerve-fibres in olfactory bulb. **S. m. me′dium,** stratum lacunosum. **S. molecula′re,** gelatinoid layer of olfactory bulb; molecular layer of cortex. **S. muco′sum,** rete mucosum of the epidermis. **S. muscula′re lin′guæ,** aberrant collection of muscular fibres running in middle glossoepiglottic fold. **S. ni′grum,** substantia nigra. **S. of Oehl,** stratum lucidum. **S. olfacto′rium,** a layer of the olfactory lobe. **S. op′ticum,** layer of delicate longitudinal nerve-fibres in corpora quadrigemina. **S. o′riens,** delicate layer of cells in cortex of hippocampus major. **S. pigmen′ti,** see *Choroid.* **S. profun′dum pon′tis,** deep layer of transverse fibres of pons Varolii. **S. prolig′erum,** proligerous disk. **S. radia′tum,** cortical layer of hippocampus major. **S. reticula′re,** stratum lacunosum. **S. reticula′tum,** latticed layer. **S. semiluna′re,** spiral ligament. **S. spino′sum,** corpus or rete mucosum. **S. subthalam′icum,** subthalamic tegmental region. **S. superficia′le pon′tis,** outer layer of transverse fibres of pons Varolii. **S. supravascula′re,** external muscular coat of uterus. **S. thy′roaryepiglot′ticum,** thyroaryepiglottic muscle. **S. thyromembrano′sum,** thyroepiglottic muscle. **S. transver′sum,** stratum zonale. **S. vascula′re,** middle muscular coat of uterus. **S. zona′le,** collections of white fibres on the surface of the cerebrospinal axis, the medulla, corpora quadrigemina, optic thalamus, and corpus striatum.

**Straus's sign.** The action of pilocarpine administered hypodermically in facial paralysis differs according to the seat of origin of the paralysis. If the paralysis is peripheral, the perspiratory secretion is much slower on the affected side; if deeper or more central, there is no difference between the two sides in this respect.

**Strauss's sign.** Ingestion of fatty food augments the amount of fat in the chylous form of abdominal dropsy.

**Straw′berry.** Fragaria. **S. bush,** Euonymus americanus. **Shrub′by s.,** Rubus articus. **S. toma′to,** Physalis alkekengi. **S. tongue,** a characteristic appearance of the tongue in scarlatina, in which, after the clearing away of a thick, white fur, the organ becomes preternaturally red and clean. **S. tree,** Euonymus americanus. **Wild s.,** Fragaria virginiana.

**Streak.** A band, color-line, or defined mark. **S. cul′ture,** bacterial culture in lines or streaks; see *Culture.* **Med′ullary s.,** neural or medullary groove. **Meningit′ic s.,** streak, first white, then red, made on the skin by the nail drawn over it; tache cérébrale; noticed in meningitis. **Prim′itive s.,** see *Groove, primitive.*

**Streblo′sis** (*streblos,* twisted). Luxation.

**Strem′ma** (*stremma*). Luxation; sprain.

**Strength′ening plas′ter.** Emplastrum ferri.

**Streph′otome** (*strepho,* to turn, *tome,* incision). Name given to twisted needle used in Spanton's operation for the radical cure of inguinal hernia.

**Strepito′sus mor′bus** or **affec′tus.** A disease, said to be once not uncommon in the Austrian Alps, in which emphysematous tumors form on different parts of the body, accompanied by excessive flatulence.

**Strep′itus** (*strepito,* to make a noise). A sound, especially one heard on auscultation. **S. au′rium,** tinnitus aurium.

**Streptobacil′lus** (*streptos,* twisted). Bacillus which, when aggregated, forms chains, the bacilli being attached end to end. **S. pseudotuberculo′sis roden′tium,** Bacillus pseudotuberculosis.

**Streptobacte′ria** (*streptos,* twisted). Chain bacteria.

**Streptococcæ′mia.** Presence of streptococci in the blood.

**Streptococ′cal.** Relating to or caused by streptococci, as *streptococcal infection.*

**Streptococ′cus.** Genus of *Bacteria,* including cells of spherical or ovoid shape, arranged in wreaths, rings, or strings. **S. ac′idi lac′tici** (Grotenfeldt), in coagulated milk; causes fermentation, precipitating casein. **S. æthe′bius,** Micrococcus ureæ liquefaciens. **S. al′bus** (Maschek), in water. **S. of Alep′po boil** (Nicolle and Noury), found in pus in Aleppo boil; pathogenic. **S. angino′sus,** a form of S. longus. **S. antitoxin′,** antistreptococcus serum; substance possessing antitoxic and bactericidal properties against the poisons produced by the streptococci and the germs themselves; the blood serum of horses which have been subjected to repeated and increasing doses of virulent cultures of streptococci; employed in puerperal and post-traumatic sepsis, when there is well-marked and positive streptococcal infection; also in erysipelas and some cases of pulmonary tuberculosis and in infectious endocarditis; the dose is usually 10 to 20 c.c. every twelve hours, according to the age of the patient and the severity of the infection. **S. aphthic′ola** (Hallier and Schottelius), streptocytus of eczema epizoötica and other vesicular eruptions in animals. **S. articulo′rum** (Löffler), in diphtheritic mucous membranes; a variety of S. longus; produces fatal joint-disease in rabbits (hence its name); pathogenic. **S. bomby′cis** (Bechamp), in silkworm disease; Micrococcus bombycis; pathogenic. **S. of Bono′me,** in cerebrospinal meningitis; pathogenic. **S. bre′vis** (von Lingelsheim), detected in saliva in health, and also in pharyngitis, aphthæ, and stomatitis. **S. cadav′eris** (Sternberg), in yellow fever. **S. charri′ni,** in meat-infusions and in rabbits in fatal cases of contagious or malignant anthrax. **S. cinnabar′eus,** Micrococcus cinnabareus. **S. co′li grac′ilis** (Escherich), in fæces in health. **S. conglomera′tus** (Kurth), in scarlatina, in the tonsils. **S. corona′tus** (Flügge), Micrococcus coronatus. **S. cory′zæ, S. cory′zæ contagio′sæ equo′rum** (Schütz), in glandular affections associated with contagious pneumonia in horses. **S. endocardit′idis,** Micrococcus endocarditidis rugatus. **S. enteri′tis,** a form of enteritis caused by streptococcus infection; it may be acute, like cholera, or chronic, like typhoid fever. **S. e′qui,** S. coryzæ. **S. erysipel′atos,** variety of S. longus; found in the superficial lymph passages in erysipelas; causes erysipelas and other serious infectious conditions; an artificial erysipelas may be induced by the toxin of this microorganism, which often checks the progress of malignant neoplasms. **S. fromen′ti,** in whiskey, wine, and saccharine solutions; causes ropy fermentation; Micrococcus viniperda. **S. gigante′us ure′thræ** (Lustgarten and Manneberg), in the urethra in health. **S. of granulo′ma fungoi′des** (Rindfleisch and Auspetz), s. of mycosis fungoides. **S. havanien′sis** (Sternberg), in the contents of the stomach in yellow fever. **S. hollan′dicus,** in whey in the manufacture of Edam cheese; makes milk sour and ropy. **S. impetig′inis,** found in the vesicles of impetigo contagiosa. **S. in′dicus,** see *S. mesenterioides.* **S. insecto′rum** (Burrill), Micrococcus insectorum. **S. involu′tus,** in foot-and-mouth disease of cattle. **S. koch′ii,** Micrococcus septicæmiæ in rabbits. **S. lanceola′tus, S. lanceola′tus pasteu′ri** (Gamaléia), Micrococcus lanceolatus; Bacillus septicus sputigenus. **S. liquefa′ciens** (Sternberg), in yellow fever. **S. lon′gus** (von Lingelsheim), several varieties are known: S. articulorum, S. erysipelatos, S. pyogenes, S. pyogenes malignus, S. septicus, and S. septopyæmicus; they are identical morphologically, and cause erysipelas, phlegmonous and other forms of abscess, septic infection, inflammation of almost all the important organs and tissues of the body, and mixed infectious conditions in tuberculosis, scarlatina, diphtheria, etc.; see *Micrococcus pyogenes.* **S. lu′cæ,** Micrococcus ulceris mollis; Bacillus ulceris cancrosi. **S. of mammi′tis of milch cows,** s. of mastitis; s. of Nocard. **S. manfred′ii,** Micrococcus manfredii. **S. of Man′neberg,** detected in the urine in nephritis. **S. of Mar′morek,** in erysipelas; pathogenic. **S. of masti′tis in cows,** Micrococcus mastobius. **S. masto′bius, S. meningit′idis,** Micrococcus intercellularis meningitidis; a variety of Micrococcus lanceolatus, found in meningitis and pneumonia. **S. mesenterioi′des,** found in beets and solutions of cane-sugar and glucose; there are two forms, *S. mesenterioides* and *S. indicus;* changes cane-sugar to glucose and then into dextrin, causing a very injurious *dextrin-fermentation.* **S. mirab′ilis** (Roscoe and Lunt), in sewage. **S. monomor′phus** (Bujwid and Heryng), in simple ulcers of the throat. **S. morbillo′sus,** micrococcus of measles. **S. of myco′sis fungoi′des,** in circulating blood in that disease. **S. nocar′di,** in nodular induration following infectious inflammation of the mammary gland of cows; inoculation of cultures into glands of the abdomen cause reappearance of the original disease; causes fermentation in milk, and milkers' hands spread the contagion; see *Micrococcus mastobius.* **S. ochroleu′cus,** Micrococcus ochroleucus. **S. pathog′enes lon′gus,** S. longus. **S.**

**peritonit′idis e′qui** (Hamburg), found in exudations from horses dead from peritonitis; pathogenic. **S. pernicio′sus psittaco′rum** (Eberth and Wolf), Micrococcus psittaci. **S. plica′tilis,** form of s. supposed to cause perlèche. **S. pneumo′niæ** (Weichselbaum), Micrococcus pyogenes. **S. psit′taci** (Eberth and Wolf), in disease of gray parrots; pathogenic. **S. of pus,** Micrococcus septicus. **S. putrefa′ciens,** any micrococcus concerned in putrefactive decomposition. **S. pyog′enes** (Saccardo), form of S. longus; causes slow, erysipelatoid inflammation; Micrococcus septicus. **S. pyog′enes malig′nus** (Krause and Flügge), form of S. longus, found in the spleen in leucocythæmia. **S. pyog′enes ure′æ** (Rörsing), in urinary abscess. **S. radia′tus,** Micrococcus radiatus. **S. rindfleisch′ii,** in minute blood-vessels of mycosis fungoides. **S. rubigino′sus** (Edington), in scarlet fever. **S. san′guinis ca′nis** (Pitfield), in the blood of dogs; pathogenic. **S. seifer′ti,** Micrococcus influenzæ. **S. septicæ′miæ** (Koch), in rabbits inoculated with spoiled meat; pathogenic. **S. sep′ticus** (Flügge), found in soil; pathogenic. **S. sep′ticus liquefa′ciens** (Babès), in septicæmic poisoning after scarlatina. **S. septopyæ′micus** (Biondi), in phlegmonous angina and erysipelas of the throat; pathogenic. **S. of stran′gles,** S. coryzæ. **S. toxica′tus,** Micrococcus toxicatus. **S. tyrog′enes,** found in ripe cheese. **S. ure′æ,** Micrococcus ureæ. **S. ure′æ rugo′sus** (Rörsing), in urine. **S. va′rians** (Ewart), in water; produces a green pigment. **S. vari′olæ,** Micrococcus variolæ et vaccinæ. **S. vermifor′mis** (Maschek), in water. **S. vi′ni per′da,** in spoiled wine; causes fermentation. **S. weiss′ii,** found in the lungs in infectious pneumonia of cattle.

**Streptocy′tus** (*kytos,* cell). Streptococcus. **S. of ec′zema epizoöt′icum** (Schottelius), micrococcus of foot-and-mouth disease. **S. puerpera′lis** (Doléris), Bacillus puerperalis.

**Strep′tothrix** (*streptos,* in rings, *thrix,* hair). A genus of *Schizomycetes* with hair-like filaments. **S. actinomy′ces, S. actinomy′ces bo′vis,** ray fungus; first described by Bollinger (1877), causing in cattle "big jaw;" see *Actinomyces.* **S. actinomy′ces musculo′rum su′is,** found in muscles of the hog. **S. al′ba,** similar to S. actinomyces; said also to produce actinomycosis, but not established as pathogenic. **S. bronchit′idis,** resembles S. actinomyces; causes gangrenous bronchitis. **S. cunic′uli,** in small intestine of hog; causes local necrosis; also infectious necrotic disease of the subcutaneous cellular tissue, pneumonia, etc., of rabbits, diphtheria of calves, and numerous other severe pathological conditions in other animals. **S. eppinger′i,** in cerebral abscess and in the bronchial glands of man, and causes pseudotuberculosis in some of the small animals. **S. farcin′ica,** in pus and organs in farcy of cattle; inoculation produces abscess in cows, sheep, and guinea-pigs. **S. foers′teri** (Cohn), Cladothrix foersteri; found in concretions in lacrymal canaliculi. **S. hoffmann′ii,** in the atmosphere; causes local abscesses (in some small animals). **S. isra′eli,** anaërobic; resembles S. actinomyces; produces actinomycosis in guinea-pigs and rabbits. **S. madu′ræ,** causes Madura foot or mycetoma. **S. rosenbach′ii,** causes erysipeloid.

**Stretch′er.** Litter for transporting the sick.

**Stretch′ing.** Pandiculation.

**Stri′a.** Streak, line, or groove. **S. acus′tica,** portion of the cochlear duct of the internal ear to which are distributed filaments of the auditory nerve. **S. al′ba tu′beris,** occasional white band on the base of the brain, passing from the lateral edge of the corpus mammillare forward, outward, and upward above the optic chiasma to the fornix. **S. cor′nea,** the superficial stratum of the tænia semicircularis. **S. dorsa′lis,** dorsal olfactory root. **S. exter′na,** ligamentum tectum. **S. latera′lis,** external olfactory root. **S. longitudina′lis of cor′pus callo′sum,** whitish anteroposterior stratum on the superior surface of the corpus striatum. **S. media′lis,** internal olfactory root. **S. medulla′ris ascen′dens,** a medullary stria of the fourth ventricle, rising obliquely upward and outward. **S. m. of op′tic thal′amus,** white streaks passing from the pineal gland to the foramen of Munro. **S. pinea′lis,** stria medullaris. **S. termina′lis,** part of the internal capsule separating the optic thalamus from the corpus striatum. **S. vascula′ris,** a vascular strip on the outer wall of the membranous canal of the labyrinth.

**Stri′æ** (pl. of *stria,* a furrow). See *Stria* and *Vibices.* **S. acus′ticæ,** medullary striæ. **S. atroph′icæ,** linear lesions seen in atrophy of the skin. **Aud′itory s.,** s. acusticæ. **S. cilia′res,** ciliary processes. **S. gravida′rum,** lineæ albicantes. **S. Lancis′ii,** s. longitudinales. **S. lib′eræ,** median striæ longitudinales of corpus callosum. **S. longitudina′les cor′dis,** muscular fibres of the heart running in a vertical direction along the posterior longitudinal furrow. **S. longitudina′les Lancis′ii,** see *Corpus callosum.* **S. medulla′res,** see *Processus teretes.* **Meningit′ic s.,** see *Streak, meningitic.* **S. obtec′tæ,** striæ longitudinales of the corpus callosum, covered by the edge of the hemisphere. **S. olfacto′riæ,** olfactory roots. **S. ret′inæ subjec′tæ ligamen′to cilia′ri,** halo signatus. **S. of Ret′zius,** see *Retzius.* **S. of Schri′ger,** irregular pigmented lines crossing the striæ of Retzius and enamel rods. **S. semiluna′res,** tænia semicircularis. **S. tec′tæ,** striæ obtectæ. **S. termina′les,** tænia semicircularis. **S. transversa′les Willis′ii,** see *Corpus callosum.*

**Stri′ate.** Striated. **S. bod′y,** corpus striatum.

**Stri′ated** (*stria,* a channel or groove). Marked with small channels or grooves or with lines of another color. **S. ar′teries,** minute branches from the anterior and middle cerebral arteries entering anterior perforated space and supplying the corpus striatum. **S. bod′ies,** corpora striata. **S. ipecacuan′ha,** Peruvian ipecacuanha. **S. mus′cular fi′bre,** see *Muscular fibre.*

**Stria′tion.** State of being streaked. A streak.

**Stria′tum.** Corpus striatum.

**Stribili′go.** Efflorescence.

**Strictu′ra.** Stricture. **S. œsoph′agi,** stricture of the œsophagus. **S. œsoph′agi spasmod′ica,** œsophagismus. **S. ure′thræ,** urethrostenosis. **S. ventric′uli,** gastrostenosis.

**Strict′ure.** A diminution or contracted condition of some tube or duct, as the œsophagus, intestine, urethra, etc. **An′nular s.,** circular stricture producing ring-like obstruction around the urethral or the intestinal canal. **Bri′dle s.,** fold of membrane forming crescentic obstruction or cord stretched across the canal, attached at either end. **Car′diac s.,** stricture at the cardiac extremity of the stomach; see *Gastrostenosis.* **Cicatri′cial s.,** s. caused by the contraction of cicatricial tissue. **Conges′tive s.,** stricture, result of acute congestion. **Contrac′tile s.,** recurrent s. **False s.,** spasmodic s. **S. fe′ver,** constitutional disturbance following an operation for stricture; urethral rheumatism. **Func′tional s.,** spasmodic s. **Hour′glass s.,** bridle s. **Imper′meable s.,** one which will not admit passage of an instrument. **Ir′ritable s.,** one in which the slightest instrumental interference causes pain and spasm. **Lin′ear s.,** bridle s. **S. of the œsoph′agus,** dysphagia constricta. **Organ′ic s.,** s. due to change of structure in the wall of the affected tube. **Pack′-thread s.,** bridle s. **Per′manent s.,** organic s. **Per′meable s.,** s. admitting passage of an instrument. **S. of the phar′ynx,** dysphagia constricta. **Pylor′ic s.,** narrowing of the pylorus; see *Gastrostenosis.* **S. of the rec′tum** occurs organically, and is usually a serious affection, being generally dependent upon scirrhus. **S. of the rec′tum, spasmod′ic,** an affection occurring in the nervous especially, which subsides spontaneously after a longer or shorter continuance. **Recur′rent s.,** resilient stricture, or one which readily contracts after dilatation. **Spasmod′ic s.,** s. caused by muscular spasm. **S. of the stom′ach,** gastrostenosis. **Tem′porary s.,** spasmodic s. **S. of the ure′thra,** urethrostenosis. **S. of**

**the u′rinary blad′der,** stricture or saccated condition of the urinary bladder. **Val′vular s.,** bridle s. **S. vesi′cæ urina′riæ,** stricture or saccated condition of the urinary bladder.

**Stric′turotome.** Instrument for dividing a stricture.

**Stricturot′omy.** Division of a stricture.

**Stri′dent.** Stridulant.

**Stri′dor.** Grating noise. **S. den′tium,** grinding of the teeth.

**Strid′ulant.** Applied to a harsh, grating sound.

**Strid′ulous.** Applied to respiration, cough, or voice when it possesses a grating character.

**Stri′ga** (furrow) **cartilagino′sa cor′dis.** Isthmus of the fossa ovalis.

**String′halt.** Springhalt. Sudden twitching of the hind leg of a horse, or involuntary or convulsive motion of the muscles that contract the hind leg.

**Stripe.** Streak, stria. Mark attended with change of color.

**Striped dog′wood** or **S. ma′ple.** Acer pennsylvanicum. **S. mus′cular fi′bre,** see *Muscular fibre.*

**Strip′pings.** After-milk; see *Milk.*

**Strobi′la, Stro′bile,** or **Strobi′lus** (*strobile,* twist). Adult tænia. Multiple fruit in the form of a cone or head, as that of the hop or pine.

**Strobila′tion.** Production of disks by budding or splitting.

**Stro′boscope** (*strobos,* whirling, *skopeo,* to see). Zoetrope.

**Stroboscop′ic.** Relating to the stroboscope.

**Stroem′ia** (after H. Stroem, a Norwegian naturalist). Cadaba.

**Stroke.** Sudden attack of disease. A sweeping or gliding movement. Throb or beat. **Apoplec′tic s.,** an apoplectic seizure. **Back s. of the heart,** diastolic impulse. **S. cul′ture,** see *Culture.* **Paralyt′ic s.,** a sudden attack of encephalospinal paralysis. **S. resuscita′tion,** see *Ogata.* **Sun s.,** see *Insolation.* **Wa′ter s.,** see *Hydrocephalus internus.*

**Stro′ma** (*stroma,* bed or couch). The bed or foundation texture of an organ, as the stroma of the ovary. Applied also to the bed or base of any formation, as the amorphous stroma of scrofulous formations. **Fi′brin s.,** s. formed directly from fibrin. **Intertu′bular s.,** see *Kidney.* **S. plex′us,** plexus of axis cylinders formed by the nerves of the cornea.

**Stro′mal.** Relating or appertaining to the stroma of an organ.

**Stro′meyer's cephalæmat′ocele.** Cephalæmatoma under the periosteum, communicating with veins.

**Stron′gle.** A parasitic worm of the genus *Strongylus.* **Lung s.,** Strongylus bronchialis.

**Strongyloi′des.** Small nematoid worm.

**Stron′gylus** (*strongylos,* round). A genus of nematode worms parasitic in man and the lower animals. Hippocrates and others meant the *Ascaris lumbricoides* by this term. **S. arma′tus,** worm which causes verminous aneurysm in the horse. **S. bronchia′lis,** lung strongle, a worm, one-half to one inch in length, occasionally found in the bronchi. **S. duodena′lis,** Uncinaria duodenalis. **S. fila′ria,** causes husk in sheep. **S. gi′gas,** the largest of the genus, being sometimes a foot and even three feet long, and from two lines to half an inch in diameter; it is found occasionally in the human kidney; rarely in other viscera, and still more rarely in the intestinal tube. **S. micru′rus,** causes hoose in calves. **S. quadridenta′tus,** Ankylostoma duodenale.

**Stron′tia.** Oxide of strontium. SrO.

**Stron′tii bro′midum.** (Ph.U.S.,1890.) See *Strontium bromide.* **S. io′didum** (Ph. U. S., 1890), see *Strontium iodide.* **S. lac′tas** (Ph. U. S., 1890), see *Strontium lactate.*

**Stron′tium bro′mide.** In colorless, soluble needles, used in various affections of the stomach, in acid conditions of that organ, in Bright's disease, epilepsy, etc.; dose, gr. x–xxx (0.65–2.0), three times a day, gradually increased in epilepsy. **S. caffeine′ sul′phonate,** employed in nephritis. **S. glycerophos′phate,** white, soluble powder, with properties of the other glycerophosphates. **S. i′odate,** externally astringent to diseased mucous membranes; internally intestinal astringent in doses of gr. $\frac{1}{6}$–$\frac{1}{2}$ (0.01–0.032). **S. i′odide,** prescribed in scrofuloderma, enlarged lymphatic glands, scrofulous otorrhœa, ozæna, lupus vulgaris, etc.; dose, gr. x–xx (0.65–1.3). **S. lac′tate,** white, soluble powder used in some renal affections, as albuminuria, but not when there is a diminished amount of urine or uræmia. **S. phos′phate,** increases powers of nutrition, and is antiseptic and tæniacide. **S. sal′icylate,** white, soluble, crystallized salt, used in gout and rheumatism, and as an intestinal antiseptic in place of salol. **S. sym′phorol,** s. caffeine sulphonate.

**Strophanthidin′.** Principle derived from strophanthin by the action of sulphuric acid.

**Strophanthin′.** Glucoside of strophanthus, $C_{20}H_{34}O_{10}$; white, crystalline powder, soluble in water, sparingly soluble in ether or chloroform; probably the active principle. Action on the heart resembles that of digitalin; dose, gr. $\frac{1}{100}$–$\frac{1}{50}$ (0.0006–0.0013).

**Strophan′thus.** (Ph. U. S. and Br.) The seed of *S. his′pidus.* Kombe arrow-poison, ord. *Apocynaceæ,* native of Africa and Asia; action cardiac, stimulant, and tonic; diuretic similar to digitalis, probably a better diuretic in heart dropsy; dose of the official tincture, ♏iv–viij (0.25–0.5). The *extrac′tum strophan′thi* is official in the Ph. Br.; dose, gr. $\frac{1}{4}$–j (0.016–0.065).

**Strophoceph′alus** (*strophe,* a turning round, *kephale,* head). Monster with distorted head.

**Strophoceph′aly.** Condition of strophocephalus.

**Stroph′ulus.** Red gum, gum rash, red gown, tooth rash. Consists of an eruption of red or sometimes whitish pimples (white gum, milk-spots) occurring in early infancy, chiefly about the face, neck, and arms, surrounded by a reddish halo or interrupted by irregular patches of cutaneous blush. All the varieties under this genus arise in consequence of the extreme vascularity and irritability of the skin at this period of life, when the constitution is liable to be disturbed by irritation in the alimentary canal, gums, or other parts. **S. al′bidus** or **al′bus,** milium. **S. confer′tus,** s. with the lesions closely crowded together. **S. infan′tum,** a dermatosis of infancy resembling urticaria. **S. intertinc′tus,** a discrete form of s. **S. prurigino′sus** is rather an obstinate form of lichen with pruriginous papules, and should therefore be more properly termed *lichen pruriginosus.* **S. sylves′tris,** ignis sylvaticus. **S. volat′icus,** ignis sylvaticus, or wildfire rash.

**Stro′phus** (*strophos,* twisted cord). Tormina.

**Struc′tural.** Of or belonging to structure. **S. diseas′es,** diseases due to or produced by organic tissue changes.

**Struc′ture.** The arrangement of the different tissues or organic elements of which animals and vegetables are composed. See *Tissue.*

**Stru′ma.** Scrofula. Bronchocele. **S. adipo′sa,** fatty neck; prominence of the neck from obesity. **S. cys′tica, S. fibro′sa, S. gelatino′sa, S. hyperplas′tica, S. os′sea, S. parenchymato′sa, S. petro′sa,** are different varieties of goitre, as named from their physical characteristics. **Follic′ular s.,** bronchocele. **S. fungo′sa,** encephaloid. **S. malig′na,** carcinoma of the thyroid gland. **S. suprarena′lis,** peculiar fatty tumor of the suprarenal capsule.

**Strumec′tomy** (*ektome,* excision). Excision of strumous glands. Thyroidectomy for goitre.

**Strumipri′va cachex′ia** (*struma,* goitre, *privus,* deprived of). Loss of the thyroid gland and resulting condition; myxœdema or condition allied to it.

**Strumipri′vous.** Caused by absence of the thyroid gland, or referring to one from whom the gland has been removed.

**Strumi′tis.** Inflammation of a thyroid gland affected with goitre. **S. paral′ysis,** spastic form of paralysis of the spinal cord.

**Strumoder′ma.** Scrofulous affection of the skin and superficial glands; scrofuloderma.

**Strumo′sis cer′ebri.** Tubercles of the brain. **S. pulmo′num,** tubercles of the lungs.

**Stru′mous.** Scrofulous. **S. ab′scess,** cold abscess.

**Strüm′pell's disease′.** Inflammation of the gray matter of the cortex of the brain. Chronic inflammation of the spinal column, resulting in ankylosis.

**Strüm′pell-Leich′tenstern disease′.** Acute encephalitis of very young children.

**Stru′thium** (*strouthion*). Saponaria.

**Strychni′na.** (Ph. U. S. and Br.) Strychnine. An intensely bitter and very toxic alkaloid derived from *Strychnos nux vomica*, *S. colubrina*, *S. tieuté*, *Ignatia amara*, *Cerbera thevetia*, and *C. ahovai*. The action of strychnine is exactly like that of the alcoholic extract of nux vomica. It is, however, more active. An eighth of a grain is sufficient to kill a large dog, and a quarter of a grain produces marked effects on the human body when in health. It has been given in paralysis and in constipation, and as a tonic. The official salts are *strychni′næ hydrochlor′icum* (Br.) and *s. sul′phas* (U. S.). The dose of the alkaloid itself and of its salts is gr. $\frac{1}{60}$–$\frac{1}{40}$ (0.001–0.0016). The Ph. U. S. also contains *fer′ri et s. cit′ras;* dose, gr. ij–iij (0.13–0.2). *Li′quor s. hydrochlor′idi* is official in the Ph. Br.; one drop contains $\frac{1}{100}$ grain of strychnine hydrochloride; dose, ♏ij–iv (0.13–0.26). There is also an official *syr′upus ferri quini′næ et strychni′næ phospha′tum* (U. S.), *syr′upus fer′ri phospha′tis cum quini′na et strychni′na* (Br.); dose, ʒss–j (2.0–4.0). For the non-official salts, see *Strychnine.*

**Strychnine′.** Strychnina. **S. ar′senite,** soluble salt employed in intermittent fever in the minimum dose of the sulphate. **S. bro′mide,** prescribed in syrup, each drachm containing gr. $\frac{1}{32}$ of strychnine. **S. cit′rate** occurs in the proportion of 10 per cent. in the official ferri et strychninæ citras. **S. hy′dride,** produced by the action of sodium on strychnine in boiling alcohol; has not the tetanic action of other preparations of strychnine. **S. hydri′odate** occurs in white scales or needles, and contains 72 per cent. strychnine; soluble in alcohol, slightly so in water. Action and uses the same as the sulphate; dose, gr. $\frac{1}{60}$–$\frac{1}{8}$ (0.001–0.008). **S. hydrobro′mate** forms in prismatic needles, and contains 80 per cent. of strychnine; prepared by adding solution of potassium bromide in water and alcohol to solution of sulphate of strychnine in alcohol and water; uses and dose same as the sulphate. **S. hydrochlo′rate** crystallizes in silky needles; soluble in sixty parts of cold water; prepared by dissolving strychnine in warm dilute muriatic acid; contains 84 per cent. of strychnine; action and uses same as the sulphate. **S. phos′phate,** each teaspoonful of the official syrupus ferri quininæ et strychninæ phosphatum contains gr. $\frac{1}{86}$ of this salt. **Sac′charinated s.,** a mixture of strychnine and saccharin (about 2 parts to 1), whereby the intense bitterness of the former is mitigated.

**Strych′ninism** or **Strych′nism.** Chronic strychnine poisoning. See *Strychnos nux vomica.*

**Strychninoma′nia** or **Strychnoma′nia.** Delirium caused by strychnine, or nux vomica in large doses.

**Strych′nos.** Atropa belladonna; Solanum dulcamara. **S. colubri′na,** Modira caniram, an Indian tree containing strychnine, was formerly considered a specific against the bites of venomous animals, and was recommended in intermittents; the wood is lignum colubrinum. **S. guianen′sis,** see *Curare.* **S. igna′tii,** Ignatia amara. **S. nux vom′ica,** nux vomica, koochla tree; ord. *Loganiaceæ.* A tree of the family *Strychnoides*, growing in India. The seeds were long sold in the shops under the names nux vomica, vomic or poison nut, bachelor's button, etc., and were used only for poisoning rats, but subsequently an extract was prepared from them, which was administered in paralytic affections in small doses. It produces a kind of tetanic convulsion in the paralyzed parts when given to the requisite extent. It has also been administered in chronic diarrhœa and dysentery. When taken to such an extent as to induce toxic phenomena—*strychnism*—it causes greatly augmented excitability of the spinal nervous system, with slight transient paroxysms or spasms of the limbs and hurried respiration. In larger doses the excitability is still more developed, with paroxysms of prolonged general tetanic convulsions, laryngismus or contraction of the glottis, violent efforts of respiration, and asphyxia. The most important principles obtained from it are strychnine and brucine. Igasurine has also been derived from it. See *Strychnine, Brucine, Igasurine,* etc. The bark is the false angustura or false cusparia bark, rohun; see *Brucea antidysenterica.* **S. potato′rum** (strychnos of drinkers), clearing nut; fruit of a large tree of Silhet, which when ripe is sold under the name *nirmullees* or *nirmillies;* well rubbed for a minute or two around the inside of a vessel containing water, it is believed by the natives to purify it by causing the foreign matters which the fluid contains to be deposited. **S. pseudoqui′na,** *quina do campo,* of Brazil, is used by the natives as a substitute for cinchona. **S. tieuté,** see *Upas.* **S. toxica′ria** or **toxif′era,** see *Curare.*

**Stryph′na** (*stryphnos,* acerb). Astringents.

**Stryphnoden′dron barbatima′o.** Cortex adstringens brasiliensis.

**Stu′dium ina′ne** (empty study). Brown study.

**Stud′y, brown.** Listless musing.

**Stuff′ing.** Cynanche trachealis. Filling, as in dentistry.

**Stulti′tia.** Mental imbecility; idiotism; dementia.

**Stump.** Part remaining from which a limb or other part has been amputated or removed in any manner. Also the portion of a tooth remaining in the alveolus after the corona has been removed. **S. of eye′ball,** remainder of globe left after excision of the ball. **Su′gar-loaf s.,** conical stump occasioned by extensive retraction of the muscles following amputation.

**Stump′foot.** Clubfoot.

**Stun.** To render senseless by a physical or moral blow.

**Stunned.** Unconscious as a result of a physical or moral blow.

**Stunt′ed.** Hindered in growth.

**Stu′pa** or **Stupe.** Tow used in certain surgical apparatuses and dressings. Also a flannel or other cloth wrung out of hot water, plain or medicated, applied to a part. The act of applying it is called *stuping.*

**Stupefa′cients** or **Stupefac′tives** (*stupeo,* to be benumbed, *facio,* to make). Narcotics.

**Stupefac′tion.** Narcosis.

**Stupema′nia.** Stuporous insanity.

**Stu′por** (*stupeo,* to be benumbed). Diminished activity of the intellectual faculties, often amounting to lethargy. It occurs in many affections, especially in the neuroses. **Aner′gic s.,** dementia with apathy. **S. ar′tuum,** state of the limbs being asleep. **S. den′tium,** great sensibility of the teeth; tooth-edge. **S. formi′cans,** formication. **S. vig′ilans,** catalepsy.

**Stu′porous.** Affected with or characterized by stupor. **S. insan′ity,** anergic stupor, apathetic dementia.

**Stupra′tion** or **Stu′prum.** Rape. Forcible sexual connection with a woman.

**Stur′dy.** A disease in sheep caused by the cœnurus.

**Sturin′.** Ptomain from the sturgeon.

**Sturm's in′terval.** See *Focal interval.*

**Stut′terer.** One affected with stuttering.

**Stut′tering.** Interrupted and impeded articulation, due to spasm of the muscles of respiration, phonation, and articulation—one or all. As usually employed it is practically synonymous with stammering, but writers have endeavored to establish a distinction between the two words, employing stuttering to denote a hesitating speech dependent upon difficulty in enunciating syllables beginning with a consonant, and stammering to denote the habitual mispronunciation of certain letters; rhotacism and lisping are forms of stammering in this sense.

**Sty** or **Stye.** Hordeolum. **Meibo′mian s.,** s. affecting a Meibomian gland. **Zeis′sian s.,** s. affecting one of the Zeissian glands.

**Style** or **Stylet′.** See *Specillum.* **Lac′rymal s.,** wire passed through the nasal duct in treatment of lacrymal obstruction.

**Sty′li** (pl. of stylus). Styloid processes.

**Sty′liform** (*forma,* shape). Styloid.

**Stylo-** (*stylos,* style). In composition, the styloid process of the temporal bone.

**Styloauricula′ris.** Auriculoglossus.

**Styloceratohyoide′us.** Stylohyoideus.

**Styloceratoi′des.** Stylohyoideus.

**Stylochondrohyoide′us.** Name given to a fleshy fasciculus which the stylohyoid muscle sometimes presents, attached to the lesser cornu of the os hyoides. It is also called stylohyoideus novus, stylohyoideus alter.

**Styloglos′sal nerve.** Facial branch supplying the styloglossus muscle and mucous membrane at the base of the tongue.

**Styloglos′sus.** A muscle situated at the anterior and superior part of the neck. It is narrow behind, much broader before; is attached to the styloid process of the temporal bone and to the stylomaxillary ligament, and is inserted into the side of the tongue. It raises the base of the tongue and carries it backward.

**Stylohy′al bone.** Styloid process.

**Stylohy′oid.** Connecting or relating to styloid process and hyoid bone. **S. arch,** hyoidean arch. **S. lig′ament,** a fibrous, flattened cord passing from the styloid process to the lesser cornu of the os hyoides. **S. nerve,** second branch given off by the facial.

**Stylohyoide′us.** A muscle situated at the superior, anterior, and lateral part of the neck. It is thin and narrow, especially posteriorly; anteriorly, it opens to give passage to the tendon of the digastricus. It is attached to the styloid process of the temporal bone, and to the body of the hyoid bone. It raises the hyoid and carries it backward.

**Sty′loid** (*stylos,* style, peg, *eidos,* shape). Shaped like a peg or pin. **S. bone,** see *Styloid processes.* **S. cor′nua,** see *Hyoid bone.* **S. pro′cesses** are: 1. A long and slender process of the temporal bone, to which are attached the styloglossus, stylopharyngeus, and stylohyoideus muscles and the stylohyoid and stylomaxillary ligaments. This sometimes remains distinct in many animals, and is then called the *styloid bone.* 2. Two slender and pyramidal processes at the inferior extremities of the radius and ulna.

**Stylolarynge′us.** Portion of stylopharyngeus inserted upon the epiglottis and cartilage of the thyroid.

**Stylomandib′ular.** Stylomaxillary.

**Stylomas′toid.** Relating to the styloid and mastoid processes. **S. ar′tery** arises from the posterior auricular, and in some subjects from the occipital; it enters the stylomastoid foramen, passes along the aqueduct of Fallopius, and spreads its ramifications on the mucous membrane of the tympanum and in the mastoid cells and semicircular canals, and terminates by anastomosing with a branch of the middle meningeal artery, which enters by the hiatus Fallopii. The name stylomastoid is also given to the posterior auricular artery itself. **S. fora′men,** foramen situated at the inferior surface of the petrous portion of the temporal bone, between the styloid and mastoid processes. It terminates the aqueduct of Fallopius and gives passage to the facial nerve.

**Stylomax′illary.** Relating to the styloid process and the jaw. **S. lig′ament,** a ligamentous flat cord extending between the styloid process and the angle of the jaw.

**Stylomy′loid** (*myle,* millstone). Relating to or connecting the styloid process and the region of the molar teeth. **S. lig′ament,** stylomaxillary ligament.

**Stylopharynge′us.** Muscle situated at the anterior and lateral part of the neck. It is slender, thin above, attached to the styloid process of the temporal bone, and terminates in the walls of the pharynx, as well as at the posterior margin of the thyroid cartilage. It raises the pharynx and carries it backward.

**Styloph′orum diphyl′lum.** Celandine or horn-poppy, bruiseroot. Indigenous plant, family *Papaveraceæ.* The juice is fetid and narcotic. Infused in wine, it has been given internally in gravel, and has been applied externally to contusions, etc.

**Stylosan′thes.** Herb used for relief of uterine irritability during the progress of gestation.

**Stylostaph′yline.** Pertaining to the velum palati and styloid process.

**Stylosteophy′tum** (*stylos,* peg, *osteon,* bone, *phyton,* growth). Osteophyte resembling a spike.

**Stylostix′is** (*stylos,* style, *stixis,* act of puncturing). Acupuncture.

**Stylotonsilla′res.** Stylopharyngeus fibres passing to the tonsil.

**Sty′lus** (*stylos,* stake). Style; pin; peg; sound. **S. excava′tus,** hollow sound.

**Sty′ma** (*styma,* priapism). Erection; priapism.

**Stymato′sis.** Hemorrhage from the male organ, accompanied by priapism.

**Stym′mata** (pl. of *stymma,* that which constricts or thickens). The most solid ointments.

**Stype.** A cotton tampon.

**Styp′sis.** Astriction; use of a styptic.

**Stypte′ria.** Alumen; styptics.

**Styp′tic** (*styptikos*). Sometimes used synonymously with astringent, but generally applied to a substance employed to arrest hemorrhage. A mechanical styptic is one that arrests the flow of blood by being applied immediately to the mouth of the bleeding vessel, or by inducing a coagulum, mechanically, in it. A chemical styptic is one which coagulates, chemically, the blood around a bleeding orifice. **Binel′li′s s.,** aqua Binellii. **Brocchier′i′s s.,** aqua Brocchierii. **S. collo′dion,** tannic acid, ether, and gun-cotton; employed to control small hemorrhages. **S. col′loid,** s. collodion. **S. cot′ton,** absorbent cotton impregnated with a solution of ferric chloride or ferric sulphate, and dried. **Helve′tius′s s.,** see *Ferrum tartarizatum.* **Pagliar′i′s s.,** see *Pagliari.* **Ruspi′ni′s s.,** a nostrum said to consist of gallic acid, a small quantity of sulphate of zinc and opium, dissolved in a mixture of alcohol and rose-water, which had much reputation as an internal and external astringent. **War′ren′s s.,** a mixture of turpentine, alcohol, and sulphuric acid. **S. weed,** Cassia occidentalis.

**Stypticin′.** Cotarnine hydrochloride, obtained by the oxidation of narcotine; a soluble, crystalline substance, employed as an internal styptic and sedative in doses of gr. ss–j (0.032–0.065).

**Stypticity,** stip-tis′it-e. Possession of styptic power.

**Styracin′.** $C_{18}H_{16}O_2$. Crystalline substance found in storax and other balsams; cinnamyl cinnamate; antiseptic and stimulant.

**Sty′racol.** Cinnamyl-guaiacol; result of action of guaiacol on cinnamyl chloride; antiseptic. Prescribed internally in chronic catarrh of the bladder, gonorrhœa, and catarrh of the stomach and intestines, and as a substitute for guaiacol in the treatment of pulmonary tuberculosis.

**Sty′rax.** (Ph. U. S.) Storax. Balsam or resin obtained from inner bark of Liquidambar orientalis; also from Styrax officinalis and S. calamita. It is the solid storax—official storax. Two kinds of storax are met with: red storax, gum storax, obtained by incision from Styrax officinalis and from Liquidambar orientale; and common styrax, Styrax calamita, that which has been received in reeds or vessels, and has had sawdust added immediately to thicken it. Like the other balsams, it is stimulant and expectorant. Dose, gr. x–xx (0.65–1.3). **S. al′ba,** see *Myroxylon peruiferum.* **S. ben′zoin,** see *Benzoin.* **S. calam′ita,** see *Styrax.* **S. liq′uida,** Liquidambar styraciflua. **S. officina′lis,** see *Styrax.*

**Sty′rol.** Volatile oil derived from styrax. Cinnamene, cinnamol. **S. cin′namate,** styracin.

**Sty′rone.** Cinnamyl alcohol derived from styrax; antiseptic.

**Sty′sis** (*stysis*, erection). Erection; priapism.

**Suakim′ gum.** Product of Acacia stenocarpa and A. senegal; inferior variety of gum acacia.

**Sub-** (Lat.). In composition, beneath or lower degree. Before *c* it becomes *suc;* before *f*, *suf;* before *g*, *sug;* before *p*, *sup;* before *r*, *sur;* and before *s*, *sus*, or some words, *su*, as in suspiro.

**Subac′etate.** Salt of acetic acid containing more than one equivalent of base to one of acid.

**Subacid,** sub-as′id. Only slightly acid, acidulous.

**Subacid′ity.** State of being not sufficiently acid.

**Subacro′mial bur′sa.** Upper portion of deltoid bursa.

**Subacute′.** Acute in moderate degree. **S. myeli′tis,** myelitis in which the affection reaches its height in from two to six weeks. **S. spi′nal at′rophy,** progressive muscular atrophy.

**Subagita′trix** (*agito*, to agitate). One who practises tribadism.

**Subala′ris vena.** Axillary vein.

**Subancone′us.** Muscle passing from the humerus, at the upper edge of the olecranon fossa, to the capsular ligament of the elbow.

**Subaponeurot′ic.** Beneath an aponeurosis.

**Subarach′noid, Subarachnoi′dal,** or **Subarachnoi′dean.** Under the arachnoid membrane. A term applied to various spaces situated between this membrane and different nervous structures, such as the anterior, posterior, superior, and spinal subarachnoidean spaces. The fluid filling these spaces is called the subarachnoidean or cerebrospinal fluid. **S. space of op′tic nerve,** interval between arachnoid sheath and optic nerve.

**Subar′cuate fos′sa.** Fossa on the back and inner surface of petrous bone under the arched eminence for the semicircular canal.

**Subastrag′alar.** Beneath the astragalus.

**Subastrin′gent.** Slightly astringent.

**Subatloide′us.** Situated beneath the atlas or first cervical vertebra. The second pair of cervical nerves.

**Subau′ral** (*auris*, ear). Beneath the ear.

**Subaxoide′us.** Below the axis or vertebra dentata. The third pair of cervical nerves.

**Subbrachycephal′ic.** Having a cephalic index of from 80° to 84°.

**Subcæ′cal fos′sa.** Pouch sometimes found in the peritoneum behind the cæcum, running up into the folds of the mesocolon.

**Subcal′carine.** Beneath the calcarine fissure.

**Subcallo′sal.** Beneath the corpus callosum.

**Subcap′sular.** Beneath a capsule.

**Subcar′bonate.** Combination of carbonic acid with a base, in which the latter is in excess.

**Subcartilagine′um** (*sub*, beneath, *cartilago*, cartilage). Hypochondrium.

**Subcartilaginous,** sub-car-til-aj′in-us. Beneath cartilage. Partially cartilaginous.

**Subcen′tral arch.** Hæmal arch.

**Subcerebel′lar ar′tery.** Anterior inferior cerebellar artery.

**Subchlo′ride.** Of two or more chlorides of the same element, the one containing the smallest amount of chlorine.

**Subchor′dal.** Beneath the vocal cord.

**Subcla′vian** (*sub*, beneath, *clavis*, clavicle). Under the clavicle. **S. ar′teries** are situated at the upper part of the chest and the lateral and lower parts of the neck. The right arises at the corresponding side of the trachea, and comes off from the arteria innominata or brachiocephalic trunk. The left leaves the aorta at the end of the arch. Both extend as far as the superior surface of the first rib, in the space between the scaleni muscles, beyond which they take the name axillary arteries. The subclavian arteries run for some distance without sending off any branch. In the neighborhood of the first rib, however, they give off—upward, the vertebral and inferior thyroideal; downward, the internal mammary and superior intercostal; outward, the transverse cervical or posterior scapular, the superior scapular, and the posterior cervical or profunda. **S. bur′sa,** bursa subclavia. **S. glands,** lymphatic glands beneath the arch of the right subclavian artery. **S. groove,** groove on the first rib for the subclavian artery; groove on the apex of the lung made by the subclavian artery; depression on the clavicle for the subclavius muscle. **S. lymphat′ic,** axillary lymphatic trunk. **S. mus′cle,** subclavius, is situated at the superior and anterior part of the chest. It is attached by its inner extremity to the superior surface of the cartilage of the first rib, and by its superior margin and outer extremity to the inferior surface of the clavicle. This muscle depresses the clavicle and carries it forward. When the shoulder is fixed it can raise the first rib. **S. plex′us of lymphat′ics,** anastomoses of branches of the lymphatic subclavian trunk. **S. tri′angle,** see *Cervical triangles.* **S. veins** are continuations of the axillary, and extend from the inferior extremity of the scalenus anticus, in front of which they pass, to the vena cava superior, which they form by their union. The right subclavian vein is very short, the left longer and broader. These veins receive the mouths of the internal and external jugulars, vertebral, and superior intercostal. The left subclavian receives two veins more than the right—the left internal mammary and the left inferior thyroid. The thoracic duct opens into the left subclavian, the corresponding great lymphatic vessel into the right.

**Subclavic′ula** (*sub*, beneath, *clavicula*, clavicle). The first rib.

**Subclavic′ular.** Beneath the clavicle, as *s. dislocation of the humerus.*

**Subclavicula′ris.** Subclavian.

**Subcla′vius.** Subclavian muscle.

**Subcollat′eral.** Beneath the collateral fissure.

**Subconjuncti′val.** Beneath the conjunctiva.

**Subcontin′uous fe′ver.** Remittent malarial fever.

**Subcor′acoid.** Under the coracoid process; as the subcoracoid dislocation of the humerus.

**Subcor′tical.** Beneath the cortex of the cerebrum, the kidney, or any other organ.

**Subcos′tal.** Beneath a rib. **S. ar′tery,** superior intercostal artery. **S. groove,** sulcus costalis inferior.

**Subcra′nial.** Beneath the cranium, as *s. hemorrhage.*

**Subcrep′itant.** Almost crepitant. See *Râle.*

**Subcruen′tus** (*cruentus*, bloody). Having the color and nature of blood. An epithet given to certain excreted substances mixed with blood or having the appearance of blood.

**Subcruræ′us.** See *Cruralis.*

**Subcrura′lis.** Subcruræus.

**Subcul′ture.** Secondary culture from a primary bacterial culture.

**Subcuta′nea col′li.** Anterior jugular vein.

**Subcuta′neous** (*cutis*, the skin). Immediately under the skin. Hypodermic. **S. injec′tion,** hypodermic injection. **S. tenot′omy,** division of a tendon made by a very small knife, so that the wound in the skin is so minute as practically to be non-existent.

**Subcuta′neus col′li.** Superficialis colli. **S. ma′læ** (nervus), orbital nerve. **S. nu′chæ,** muscle of nuchal fascia.

**Subcutic′ular.** Beneath the cuticle or epidermis.

**Subcu′tis.** Subcutaneous tissue.

**Subdelir′ium.** Mild form of delirium. Delirium with drowsiness. Typhomania.

**Subdiaphragmat′ic.** Below or under the diaphragm.

**Subdicrot′ic.** Partially or obscurely dicrotic.

**Subdolichocephal′ic** (*dolikos*, long, *kephale*, head). Having a cephalic index of 70° to 74°.

**Subduct′.** To draw down or depress.

**Subduc′tion.** Dejection.

**Subdu′ral.** Under the dura mater. **S. space,** the interval between the dura mater and the arachnoid. **S. space of op′tic nerve,** interval between the dural sheath and optic nerve.

**Subectop′ic gesta′tion** (*sub*, beneath, *ektopos*, out of place). Gestation in which the ovum is implanted upon the lower zone of the uterine cavity.

**Subenam′el mem′brane.** A hypothetical structure between the enamel and the dentine.

**Subenceph′alon.** Medulla oblongata, pons Varolii, and corpora quadrigemina.

**Subendocar′dial.** Beneath the endocardium.

**Subendothe′lial.** Situated beneath the endothelium.

**Subendothe′lium.** Débove's membrane, the basement membrane of the mucous membrane of the trachea, bronchial tubes, and intestinal canal.

**Subepider′mal** or **Subepider′mic.** Beneath the epidermis.

**Subepithe′lial.** Beneath the epithelium. **S. lay′er of coch′lea,** layer of cells near the inner rods of the organ of Corti at the exit of the nerve-filaments of the cochlea.

**Su′ber.** Cork, the bark of Quercus suber or cork tree, family *Amentaceæ*. Burnt cork has been applied as a mechanical styptic to bleeding piles, etc.

**Su′berate.** Salt of suberic acid.

**Su′beric acid.** Acid obtained by the action of nitric acid upon cork or upon stearic, oleic, and other fatty acids.

**Suberin′.** Cellulose of cork. Trade name for finely pulverized cork.

**Su′berose** or **Su′berous.** Corky.

**Subfas′cial.** Beneath a fascia.

**Subfe′brile** (*febris*, fever). Slightly feverish.

**Subfla′vous** (*flavus*, yellow). Slightly yellow; yellowish. **S. lig′ament,** yellow ligament between laminæ of vertebræ.

**Subfron′tal.** Under or lower frontal, as *s. region*. **S. su′ture,** suture resulting from the articulation of the os frontis with the nasal process of the superior maxillary bone and the proper bones of the nose.

**Subgal′late.** A basic gallate, as *bismuth gallate*.

**Subgle′noid.** Beneath the glenoid fossa of the scapula, as *s. dislocation of the humerus*.

**Subglenoida′lis.** Accessory subscapular muscle.

**Subglos′sal.** Beneath the tongue.

**Subglossi′tis** (*sub*, beneath, *glossa*, tongue). Inflammatory condition of the lower surface of the tongue and the structures in immediate contact.

**Subglot′tic.** Subglossal.

**Subgrunda′tion.** Pressure of one cranial bone beneath another.

**Subhumera′tio.** Reduction of a dislocation of the shoulder by raising the body by the arm.

**Subhy′aloid.** Beneath the hyaloid membrane.

**Subhy′oid.** Beneath the hyoid bone.

**Subic′ular.** Relating to the uncinate gyrus.

**Subic′ulum** (*subiculum*, a support). Uncinate gyrus. **S. cor′nu ammo′nis,** sigmoid convolution of the cornu. **S. promonto′rii,** ridge of bone on the median wall of tympanum, extending downward from the promontory to the floor between the foramen rotundum and sinus tympani.

**Subinflamma′tion.** Mild degree of inflammation, so slight as hardly to deserve the name.

**Subinflam′matory.** Relating to or accompanied with subacute inflammation.

**Subin′trant** (*sub*, *intro*, to enter). A term applied to fevers primarily intermittent whose paroxysms approximate, so that one paroxysm begins before that which preceded it has gone through its stages.

**Subinvolu′tion.** Condition of retarded or imperfect restoration of the uterus to its original dimensions after delivery.

**Subi′odide.** Of two or more iodides of the same base, the one containing the smallest amount of iodine.

**Sub′ject** (*subjicio*, to place under). A person under observation or treatment. An animal upon which an experiment is being performed. A body for dissection.

**Subjec′tive.** Relating to one's self; having no relation with external objects. **S. sensa′tions,** see *Sensation*. **S. symp′tom,** a symptom known only to the patient himself, from his own consciousness.

**Subjee′.** Cannabis indica.

**Subju′gal.** Beneath the malar bone.

**Subla′tio catarac′tæ.** Operation in which a cataract lens is depressed. **S. ret′inæ,** detachment of the retina.

**Subligac′ulum** or **Sublig′amen** (*sub*, beneath, *ligo*, to bind). Truss.

**Sub′limate.** The product of sublimation. **Corro′sive s.,** mercuric chloride.

**Sublima′tion** (*sublimis*, high). Operation by which dry and solid matters are volatilized and condensed at the upper part of a subliming apparatus. The product of sublimation is a *sublimate*. Cloud suspended in the urine as it cools.

**Sublime′.** To expose to the action of sublimation.

**Sublimed′ sul′phur.** Sulphur prepared from crude sulphur by sublimation.

**Sublim′inal** (*limen*, threshold). Almost, but not quite, appreciable.

**Subli′mis.** Name given to certain muscles situated more superficially than their kindred muscles. These last have been called profundi or deep; the flexor sublimis digitorum is an example of the former.

**Sublin′gual** (*sub*, beneath, *lingua*, tongue). Seated under the tongue. **S. ar′tery,** with some, is the lingual; with others, a branch given off by the lingual opposite the genioglossus muscle, distributed particularly to the sublingual gland, mylohyoid and genioglossus muscles, etc. **S. car′uncle,** papilla behind the lower incisor teeth, at which Wharton's duct opens. **S. cav′ity,** space under the tongue, whose base is the mylohyoid muscle. **S. gan′glion,** ganglionic group of cells scattered among the fibres of the sublingual nerve, near the s. gland. **S. gland** is seated in the substance of the floor of the mouth, beneath the anterior part of the tongue. It is smaller than the submaxillary, of which it frequently seems to be only a prolongation. It is oblong, flattened, amygdaloid, and is covered by the mucous membrane of the mouth, beneath which it projects. This gland has ten or twelve excretory ducts—*ductus riviniani* or *waltheriani*—some of which open beneath the frænum linguæ, joining Wharton's duct, while others pierce the mucous membrane of the mouth separately. It has the same structure as the parotid. **S. nerve,** submaxillary ganglionic branch, which supplies the sublingual glands, the floor of the mouth, and gums. **S. veins** correspond to the ranine artery, emptying into the lingual vein.

**Sublingui′tis.** Inflammation of the sublingual gland.

**Sublob′ular** (*sub*, beneath, *lobulus*, little lobe). Placed under a lobe. **S. veins of the liv′er,** veins in which the intralobular veins terminate. By their union the sublobular veins form the hepatic veins.

**Subluxa′tion.** Imperfect luxation of a bone. A sprain.

**Submam′mary** (*mamma*, breast). Under the mamma or breast; hence submammary inflammation, inflammation of the areolar tissue beneath the mamma.

**Submax′illary** (*sub*, beneath, *maxilla*, jaw). Seated beneath the jaw. **S. ar′tery,** facial branch to the submaxillary gland. **S. fos′sa,** depression on the inferior maxillary bone in which is situated the submaxillary gland. **S. gan′glion,** small nervous ganglion situated opposite the gland. It seems to be formed by the superior branch of the Vidian nerve, and communicates with the lingual nerve of the inferior maxillary. Its filaments form a plexus penetrating the submaxillary gland. **S. gland,** maxillary gland; salivary gland, smaller than the parotid, at the inner side of the ramus and body of the inferior maxillary bone, in the triangular space between the two bellies of the digastricus. Irregularly ovoid, and flattened on three surfaces, it has the same aspect and organization as the other salivary glands. Its excretory duct is called Wharton's duct, ductus whartonianus or submaxillaris, and terminates at the side of the frænum linguæ by a very small orifice called the ductus inferior. **S. re′gion,** space between the hyoid bone and lower jaw. **S. tri′angle,** see *Triangles of the neck.* **S. vein,** one of the tributaries of the facial vein from the submaxillary gland.

**Submaxilli′tis.** Inflammation of the submaxillary gland.

**Submen′tal** (*mentum*, chin). Situated under the chin. **S. artery** is furnished by the facial, near the base of the jaw. It passes forward along the attachment of the mylohyoideus, to which it furnishes branches, crossing it to anastomose with those of the sublingual. Near the median line it bifurcates, to be distributed to the chin and muscles of the infrahyoid region. **S. vein,** which accompanies the artery, opens into the labial.

**Submerge′** (*mergo*, to dip). To place under the surface of a liquid; to immerse.

**Submer′sion.** Act of plunging, or being entirely plunged, in a liquid.

**Submesaticephal′ic.** Having a cephalic index of 75° or 56°.

**Submetal′lic.** Mineralogical term used to imply imperfect metallic lustre.

**Submis′sio** (*mitto*, to send). Remission. **S. cor′dis,** systole.

**Submor′phous** (*morphe*, shape). Having the characteristics of an amorphous and of a crystalline body.

**Submuco′sa.** Connective tissue beneath mucous membrane.

**Submu′cous** (*mucus*). Under a mucous membrane, as the submucous areolar tissue or submucosa.

**Submu′riate.** Combination of hydrochloric acid with a base, in which the latter is in excess.

**Submus′cular.** Seated beneath muscles or a muscular layer.

**Subnarcot′ic.** Slightly narcotic.

**Subna′sal.** Beneath or below the nose. **S. point,** in craniometry applied to the centre of the inferior border of the anterior nasal aperture.

**Subni′trate.** Salt of nitric acid having an excess of base.

**Subnor′mal.** Below the usual; less than normal.

**Subnotochor′dal.** Beneath the notochord.

**Subnu′cleus.** A secondary nerve nucleus formed from the division of a larger nucleus.

**Suboccip′ital.** Situated under the occiput. **S. an′gle,** formed by lines drawn from auricular point to the inion and opisthion. **S. glands,** lymphatic glands near the superior oblique line of the occipital bone. **S. nerve,** occipital nerve.

**Suboccipita′lis.** Transversus nuchæ muscle.

**Suboccipitobregmat′ic diam′eter.** Diameter from a point midway between the occipital protuberance and foramen magnum to the bregma, about 3¾ inches in the fœtus at term.

**Suboper′cular.** Term used to denote one of four opercular bones in the gill-cover of fishes.

**Suboper′culum.** Beneath the *operculum insulæ*, which see.

**Subor′bital.** Infraorbital; seated beneath the orbital cavity. **S. ar′tery** proceeds from the internal maxillary, from which it separates near the anterior and superior part of the zygomatic fossa. It enters the infraorbital canal and passes through it, giving branches to the anterior and superior dental canal; issues by the foramen infraorbitale, and divides, in the fossa canina, into a number of branches, which lose themselves in the neighboring parts. The suborbital vein follows the same course. **S. canal′,** small canal running obliquely through the substance of the inferior walls of the orbit. It begins behind by a simple gutter, and divides anteriorly into two branches, one descending into the anterior paries of the maxillary sinus, while the other passes out in the canine fossa by an orifice called the foramen infraorbitarium. **S. fis′sure,** fissure in the superior maxillary bone; the superior commencement of the suborbital canal. **S. fos′sa,** canine fossa. **S. nerves** seem to terminate the superior maxillary. They issue from the infraorbital canal by the foramen of the same name, and spread out in a radiated manner in the canina fossa, to divide into the superior or palpebral filaments, inferior or labial, internal or nasal, and external or buccal.

**Subordina′tion** (*sub*, beneath, *ordo*, order). Under control of another. Applied to organs controlled by or dependent upon other organs.

**Subox′ide.** The oxide, of several oxides of the same base, which contains the least amount of oxygen.

**Subpap′ular.** Inclined to be papular; not distinctly papular.

**Subpari′etal.** Beneath the parietal bone. Inferior parietal. **S. sul′cus,** shallow furrow sometimes seen on median surface of the brain, continuing backward from the callosomarginal sulcus, following its general direction to the corpus callosum.

**Subpatel′lar.** Beneath the patella.

**Subpedun′cular.** Beneath a peduncle, as *s. lobe of cerebellum*, the flocculus.

**Subpedun′culate.** Having an imperfect peduncle.

**Subpericar′dial.** Beneath the pericardium.

**Subperios′teal.** Beneath the periosteum. **S. opera′tion,** excision of a bone without removing the periosteum.

**Subperitone′al.** Lying beneath the peritoneum. **S. aponeuro′sis** or **fas′cia,** a thin, fibrous membrane upon which the peritoneum rests. **S. gan′glia,** see *Spermatic ganglion.* **S. inflamma′tion,** see *Parametritis.* **S. plex′us,** union of visceral and parietal arteries in lumbar and iliac regions beneath the peritoneum.

**Subpetro′sal.** Beneath the petrous bone; inferior petrosal.

**Subphren′ic** (*phren*, diaphragm). Under or below the diaphragm.

**Subplacen′ta.** Decidua membrana.

**Subpleu′ral.** Beneath the pleura. **S. medias′tinal plex′us,** numerous vessels anastomosing in the mediastinal space; branches of superior phrenic, internal mammary, bronchial, and intercostal arteries.

**Subpon′tine.** Beneath the pons Varolii. **S. ar′teries,** branches from basilar artery to lower edge of pons Varolii on the median line.

**Subpoplitæ′us.** Poplitæus muscle.

**Subprepu′tial.** Beneath the prepuce.

**Subpu′bic.** Beneath the pubes. **S. an′gle,** formed by union of the pubic bones at the arch. **S. arch,** a strong arch of the superior pelvic aponeurosis which completes the posterior orifice of the obturator or subpubic canal. **S. fas′cia,** triangular ligament of urethra. **S. lig′ament,** dense, triangular band which passes beneath the symphysis pubis and arches over the subpubic angle. **S. mem′brane,** obturator membrane.

**Subpubiofemora′lis.** Adductor brevis.

**Subpubioprostat′icus.** Compressor prostatæ.

**Subpul′monary.** Beneath the lung.

**Subret′inal.** Beneath the retina.

**Sub′salt.** Oxysalt containing fewer equivalents of acid than of base, or in which the latter is suboxide.

**Subsarto′rial.** Beneath the sartorius, as *s. plexus of nerves.*

**Subscap′ular.** Beneath the scapula. **S. an′gle,** angle made at deepest part of the subscapular fossa by the ridge at the axillary border. **S. ar′tery,** large axillary branch distributed to the scapular muscles and latissimus dorsi. The posterior branch winds around the axillary border of the scapula and ramifies in the infraspinous fossa; the descending branch runs along the axillary border. **S. fas′cia,** continuous with the lumbodorsal fascia, and covering the anterior surface of the subscapular muscle. **S. fos′sa,** considerable excavation at the anterior surface or venter of the scapula, in which the subscapularis is seated. **S. glands,** lymphatic glands along the subscapular artery. **S. groove,** shallow groove on the costal surface of the scapula, affording attachment to the outer portion of the subscapular muscle. **S. mus′cle,** a muscle situated in the subscapular fossa. It is flat, broad, and triangular, is attached by its base to the subscapular fossa and to the anterior lip of the edge of the spine of the scapula, and is inserted into the lesser tuberosity of the humerus. It carries the arm in rotation inward. It can also depress it and bring it toward the body. **S. nerves,** two in number: one arises from the brachial plexus above the clavicle, the other from the posterior aspect of the plexus within the axilla. They are distributed to the subscapularis muscle.

**Subscapula′ris.** Subscapular muscle.

**Subscapulocapsula′ris.** Accessory subscapular muscle.

**Subscapulohumera′lis.** Accessory subscapular muscle.

**Subscle′ral.** Beneath the sclerotic coat of the eye.

**Subscrip′tion.** Directions for compounding a prescription.

**Subsep′tate** (*septum*). Divided partially.

**Subse′rous.** Under a serous membrane, as the subserous areolar tissue.

**Subser′rate.** Slightly serrate or saw-like.

**Subsi′dence.** Sediment. Gradual disappearance of morbid symptoms.

**Subsiden′tia** (*sedo*, to settle). Sediment. **S. pupil′læ,** closure of the pupil.

**Subsist′ence** (*sisto*, to stand). Sustaining nourishment or food.

**Subspi′nous.** Beneath a spinous process or beneath the spinal column. **S. disloca′tion,** dislocation of head of humerus below the scapula.

**Sub′stage.** Portion of a microscope beneath the stage, adding to the illuminating and other effects.

**Sub′stance.** Material; that of which anything is composed. **Æsthesod′ic s.,** see *Æsthesodic.* **Cor′tical s.,** matter of the cortex; see *Cerebrum, Kidney, Tooth.* **Hy′aline s.,** cytoblastema. **Intercel′lular s.,** cytoblastema. **Interver′tebral s.,** intervertebral cartilage. **S. of Nissl,** see *Nissl's bodies.* **S. of Rolan′do,** substantia gelatinosa. **Rol′lett's sec′ondary s.,** see *Rollett.* **Söm′mering's s.,** substantia nigra. **Ti′groid s.,** Nissl's bodies. **White s. of Schwann,** a hollow cylinder within the nerve-fibre, differing in composition and refracting power from the axis cylinder (see cut under *Nerve*).

**Substand′ard.** Not up to the standard; not meeting the normal requirements. **S. risk,** an insurance obligation assumed in the case of a person whose life expectancy is impaired by reason of actual or threatened disease; the premium in such a case is usually greater than that demanded for an ordinary risk.

**Substan′tia.** Substance. **S. adamanti′na den′tium** (adamantine substance of the teeth), enamel. **S. al′ba,** white substance of brain and spinal cord. **S. cine′rea** or **S. cineri′tia,** gray matter of the brain and spinal cord. **S. compac′ta,** see *Bone.* **S. ebur′nea,** see *Tooth.* **S. ferrugin′ea,** ash-colored substance produced by the existence of well-marked pigmentary matter in the fourth ventricle or rhomboid fossa; locus cæruleus. **S. filamento′sa den′tium,** enamel. **S. fus′ca** (brown substance), a name given to certain spots in the brain, also called substantia nigra, which have a dark color from the presence of ganglion cells. **S. gelatino′sa,** translucent posterior portion of the posterior horns of the gray matter of the spinal cord, the remaining portion being called substantia cinerea vasculosa spongiosa. **S. gelatino′sa centra′lis,** gelatinous tissue around the median canal of the cord. **S. glomerulo′sa** see *Kidney.* **S. gri′sea** s. cinerea. **S. hyali′na,** cytoblastema. **S. ni′gra,** substance dividing the crus into crusta and tegmentum. **S. os′sea den′tium,** see *Tooth.* **S. ostoide′a,** see *Tooth.* **S. perfora′ta ante′rior,** locus perforatus anticus. **S. perfora′ta me′dia,** when the pia mater has been removed from the space between the crura cerebri, termed the intercrural or interpeduncular space, the surface appears cribriform, from the perforations of the numerous minute vessels penetrating it; this is the *substantia perforata media* of Vicq d'Azyr. **S. perfora′ta poste′rior,** see *Tarini pons.* **S. pro′pria,** lamina propria of membrana tympani. **S. pro′pria cor′neæ,** parenchyma of the cornea. **S. pulpo′sa den′tis,** dental pulp. **S. radia′ta,** stellula Verheyenii. **S. reticula′ris,** cellular tissue; also reticular formation. **S. rhomboide′a,** corpus dentatum. **S. spongio′sa,** see *S. gelatinosa* and *Bone.* **S. spongio′sa ure′thræ,** corpus spongiosum urethræ. **S. stella′ta serpenti′na,** stellula Verheyenii. **S. vit′rea,** cytoblastema. **S. vit′rea den′tium,** enamel.

**Sub′stantive** (*sub*, beneath, *sto*, to stand). An epithet applied to aliments which are nutritious, in contradistinction to adjective aliments, which are not possessed of nutritive virtues, but impart to the digestive organs greater energy, so as to enable them to extract more nutriment from the substantive aliments. Meat is a substantive aliment; mustard, eaten with it, an adjective aliment.

**Subster′nal.** Beneath the sternum.

**Substil′lum** (*stilla*, drop). Stillicidium.

**Sub′stitute** (*substituo*, to put in place of another). Standing in lieu of something else.

**Sub′stituted presenta′tion.** See *Presentation.*

**Substitu′tion.** Replacement of an act or a substance by another.

**Sub′stitutive.** That which may be substituted or put in place of another. An agent is said to be substitutive which—as in the case of nitrate of silver applied to inflammation of a mucous membrane—substitutes a temporary irritation for one tending to be more permanent. Such a mode of treatment is termed substitutive medication.

**Substrat′um.** Layer or stratum beneath another.

**Subsul′phate.** Sulphate containing more than one atom of base for one of acid.

**Subsul′tio** (*subsilio*, to make short leaps). Palpitation.

**Subsul′tus ten′dinum.** Twitching communicated to the tendons by the involuntary contraction of the muscular fibres; more observable at the wrist than elsewhere, and an evidence of great cerebral irritability and debility when occurring in febrile diseases, especially in the typhoid state.

**Subsur′ditas** (*surdus*, deaf). Deafness.

**Subsyl′vian.** Beneath the Sylvian fissure. **S. fis′sure,** anterior horizontal branch of fissure of Sylvius.

**Subtar′sal.** Beneath the tarsus, as *s. groove.*

**Subtarsa′lis** (*tarsus*, eyelid). Muscular fibres of orbicularis palpebrarum that pass behind the tarsi and do not reach the outer angle of the eye.

**Subtem′poral.** Under the temporal bone. Inferior temporal. **S. point,** point where the infratemporal crest crosses the sphenotemporal suture.

**Subthal′amic.** Beneath the optic thalamus. **S. tegmen′tal re′gion,** continuation of tegmentum forward under ophthalamic thalami as far as the corpora albicantia.

**Subthal′amus.** Small mass beneath the optic thalamus.

**Subthyroide′us.** Muscle formed by partial union of superior and inferior portions of thyroarytenoid muscle.

**Subtrape'zial.** Beneath the trapezius, as *s. plexus.*

**Subtrochanter'ic.** Beneath the trochanter.

**Subtroph'ic** (*trophe*, nourishment). Relating to defective nourishment or nutrition.

**Subu'ber** (*ubera*, breasts). Sucking child. Infant at the breast, in contradistinction to *exuber*, or one weaned.

**Subumbil'ical.** Beneath the umbilicus.

**Subun'gual** or **Subun'guial** (*unguis*, nail). Beneath the nail, as subunguial exostosis, an exostosis under the nail, of the great toe especially.

**Subure'thral.** Beneath the urethra, as *s. glands.*

**Subvag'inal.** Beneath the vagina. Beneath any sheath. **S. space,** intervaginal space.

**Subver'tebra** or **Subver'tebrum** (*vertebra*). Sacrum.

**Subver'tebral.** Beneath the vertebral column; that is, on the side toward the abdomen.

**Subvir'ile.** Of weak virility.

**Subvit'rinal.** Beneath the vitreous, or between it and the retina.

**Sub'vola** (*vola*, palm of the hand). Hypothenar.

**Subvolu'tion** (*sub*, under, *volvo*, to turn). Operation for pterygium, in which re-adhesion is prevented by placing a mucous surface in contact with a raw one, by turning the triangular flap underneath.

**Subzo'nal.** Beneath the zona radiata or pellucida, as *s. membrane.* **S. lay'er,** cell-layer, in mammalian ovum at close of segmentation, lying next to the zona pellucida.

**Succeda'neous.** Taking the place of, or substituting. **S. teeth,** anomalous teeth which appear instead of the normal ones.

**Succeda'neum** (*succedo*, to go under, to come in place of another). An epithet for medicines that may be substituted for others possessing similar properties. In dentistry, an amalgam for filling teeth. **S. ca'put,** see *Caput.*

**Succentu'riate.** Accessory. See *Succenturiatus.*

**Succenturia'tus** (*succenturio*, to fill a vacancy). Substitute for another, as renes succenturiati, the suprarenal capsules; ventriculus succenturiatus, the duodenum, etc.

**Succin'.** See *Succinum.*

**Suc'cinate.** Combination of succinic acid with a base, as succinate of ammonia or of iron.

**Succinctu'ra** or **Succinc'tus** (*sub*, beneath, *cingo*, to gird). Diaphragm.

**Succin'ic acid.** Acid of succinum; considered antispasmodic and diaphoretic in the dose of gr. v–xx (0.32–1.3). **S. fermenta'tion,** fermentation caused in calcium salts by action of a bacillus, producing succinic and a small quantity of acetic acid.

**Suc'cinum.** Amber, yellow amber. A kind of fossil resin found on the shores of the Baltic, composed of a resinous matter, an essential oil, and an acid. Its essential oil, oleum succini, has stimulant, antispasmodic, diuretic, and rubefacient properties. **S. cine'reum** or **gris'eum,** ambergris.

**Succise'** (*succido*, to cut down). In botany, abruptly broken off or having such an appearance.

**Succis'sa** or **S. praten'sis.** Scabiosa succisa.

**Suc'cuba.** See *Succubus.*

**Suc'cubus** (*sub*, beneath, *cubo*, to lie). Nightmare. Succuba is fancifully, according to some, a female phantom, with which a man in his sleep may believe he has intercourse—as incubus has been applied to the male phantom, with which a woman may dream she is similarly situated.

**Suc'culent.** Juicy, as succulent vegetables.

**Succurrhœ'a** (*rhoia*, flow). Abnormally great secretion of a fluid, usually one of the digestive fluids, such as the gastric juice.

**Suc'cus.** Juice. Fluid obtained by pressing plants, flesh, etc., succus expressus. Succus (Ph. Br.) is the expressed juice of fresh plants with the addition of one-third of its bulk of alcohol. The following are the official succi of the Ph. Br.: *S. acal'yphæ,* from Acalypha indica; expectorant and emetic; dose, ʒj–iv (4.0–16.0). *S. adhato'dæ,* from Adhatoda varica; expectorant and antispasmodic; dose, ʒj–iv (4.0–16.0). *S. belladon'næ;* dose, ♏v–xv (0.32–1.0). *S. coni'i;* dose, ♏v–xv (0.32–1.0). *S. hyoscy'ami;* dose, ʒss–j (2.0–4.0). *S. scopar'ii;* dose, ʒj–ij (4.0–8.0). *S. tarax'aci;* dose, ʒj–ij (4.0–8.0). Succus is also applied to certain animal fluids, as s. gastricus, gastric juice, s. entericus, intestinal juice, etc. **S. cyrena'icus,** laserpitium. **S. enter'icus,** intestinal or enteric juice or fluid; fluid copiously secreted from the lining membrane of the small intestines; see *Intestine.* **S. expres'sus,** expressed juice of plants. **S. gas'tricus,** gastric juice; see *Stomach.* **S. gland'ulæ suprarena'lis,** liquid extract of the suprarenal gland; employed like suprarenal extract. **S. hypocist'idis,** see *Cystinus.* **S. inspissa'tus,** juice of a plant inspissated to the proper consistence to make an extract. **S. intestina'lis,** succus entericus. **S. japon'icus,** catechu. **S. muscula'ris,** muscle juice. **S. ner'veus,** nervous fluid. **S. nutrit'ius,** chyle. **S. pancreat'icus,** pancreatic juice. **S. rena'lis,** liquid extract prepared from the kidneys; used in diseases of the kidney. **S. theba'icus,** opium.

**Succus'sion** (*succutio*, to shake). Mode of ascertaining the existence of a fluid in the thorax—fluctuation by succussion—by giving the body one or more slight shakes. Ballottement.

**Sucholealbu'min** (*sus*, pig, *chole*, bile). Albumin from hog-cholera cultures employed for immunization against that disease.

**Sucholetoxin'** (*sus*, pig, *chole*, bile). A somewhat toxic base found in cases of hog cholera.

**Suck** (*sugo*, to suck). To draw liquid into the mouth by forming a vacuum with the tongue acting as a piston, during inspiration.

**Suck'ing child.** A suckling. **S. cush'ions,** two small, fatty masses on the buccinator muscles in infants.

**Suck'le.** To give suck; to nurse.

**Suck'ling.** Lactation. A sucking child. Lonicera periclymenum.

**Su'crate.** A chemical compound with sucrose.

**Su'crol.** $C_9H_{12}N_2O_2$. Paraphenetol carbamide. A sweetening condiment, produced by adding a solution of potassium cyanate to muriate of amidophenetol. It crystallizes in small, white tablets.

**Su'crose.** See *Saccharum.*

**Suc'tion.** Sucking. A method of extraction of cataract; see *Cataract.* **S. pow'er,** the force presumed to be exerted on the blood in the veins by the active dilatation of the heart. See *Derivation.*

**Sucto'ria** (*sugo*, *suctum*, to suck). Animals provided with organs for sucking. Also the organs for sucking or adhesion.

**Sucto'rial.** Relating to or adapted for sucking.

**Sudam'ina** (pl. of sudamen) (*sudor*, sweat). Small vesicles appearing upon the skin, especially in the summer time, in hot countries, and in diseases attended with much sweating; sweat vesicles. It is a miliary eruption. See *Miliary fever, Lichen tropicus.* **S. al'ba,** form in which the epidermis covering a vesicle is macerated, its contents having a milky appearance. **S. crystal'lina,** form in which vesicular contents are clear. **S. malig'na,** miliaria. **S. ru'bra,** form in which the vesicles have a reddish base.

**Suda'tio** or **Suda'tion.** Sweating.

**Sudatiun'cula** (dim. of sudatio). Sweating.

**Sudato'ria.** Sweating; ephidrosis. **S. malig'na,** see *Sudor anglicus.* **S. milia'ria,** miliary fever.

**Sudato'rium** or **Su'datory.** Hot-air bath room. As an adjective, anything exciting or accompanying sweating.

**Su'dor.** The product of cutaneous transpiration when visible on the surface of the body. It is colorless, of an odor more or less strong and variable, and of a saline taste. It is composed of water, lactic acid, sodium lactate, animal matter, sodium chloride, potassium chloride, earthy phosphate, and oxide of iron. Miliary fever. **S. an'glicus,** sweating sickness, sweating fever; severe epidemic disease, characterized by profuse sweating, which appeared in England in 1486 and recurred at different times until about the middle of the sixteenth century. It was accompanied with coldness, excessive prostration of strength, palpitation, frequency and inequality of the pulse, etc., and terminated, favorably or unfavorably, in the course of twenty-four hours. A form in which the perspiration was of a black color was called *sudor anglicus niger*, black English sweating sickness or fever. **S. colliquati′vus**, s. profusus. **S. cruen′tus**, sweating of blood, bloody sweat; cutaneous perspiration intermixed with blood. **S. dul′cis**, a discharge of saccharine matter by perspiration. **S. lac′teus**, sweating of milk. **S. loca′lis**, meridrosis. **S. milia′ris**, miliary fever; sudor anglicus. **S. partia′lis**, partial perspiration. **S. picar′dicus**, miliaris sudatoria; an epidemic disease which appeared several times in Picardy; the principal symptoms were profuse sweats and miliary eruption. The disease recurred in 1821, and consisted of a simultaneous state of inflammation of various tissues. It was proposed to class it with variola, scarlatina, and measles; but it was probably miliary fever. **S. profu′sus**, profuse or immoderate sweat. **S. sabulo′sus**, condition in which salts contained in the sweat form a powder on the skin; the salts are usually those normally excreted in the urine. **S. sanguin′eus**, sudor cruentus. **S. universa′lis**, sweating over the whole body. **S. urino′sus**, urinous sweating.

**Su′doral.** Relating to sweat. **S. diarrhœ′a,** see *Diarrhœa.* **S. exanthem′ata,** cutaneous eruptions concurrent with profuse perspirations, in young children especially.

**Sudorif′erous** (*sudor*, sweat, *fero*, to carry). Sudoriparous. Sudatory. That which carries sweat, as the sudoriferous ducts or glands.

**Sudorif′ic** (*sudor*, sweat, *facio*, to make). Medicine provoking sweating; see *Diaphoretic.*

**Sudorip′arous** (*sudor*, sweat, *pario*, to produce). Sudoriferous. Secreting sweat. **S. glands,** sweat glands of the skin, consisting of minute coiled tubes situated in the subcutaneous areolar tissue.

**Su′et.** Sevum.

**Suf′fering** (*sub*, under, *fero*, to bear). Any painful feeling produced by a general or local pathological condition.

**Suffimen′tum** (*suffio*, to perfume). Fumigation.

**Suffit′io.** Fumigation.

**Suffi′tus.** Fumigation.

**Suffla′tion** (*sub*, under, *flo*, to blow). Puffiness.

**Suffoca′tio.** Suffocation; orthopnœa. **S. hypochondri′aca,** hypochondriasis. **S. hyster′ica,** globus hystericus. **S. mulie′rum,** hysteria. **S. strid′ula,** cynanche trachealis. **S. uteri′na,** globus hystericus.

**Suffoca′tion** (*suffoco*, to stop the breath). Asphyxia, melanæma. Death, or suspended animation from impeded respiration, whether caused by the inhalation of noxious gases, drowning, hanging, strangling, or smothering. The principal morbid appearances in such cases are: the lungs of a deep blue color, with the blood extravasated in the air cells; right auricle and ventricle, as well as the neighboring veins, more or less filled with dark blood; lividity of the countenance; turgescence and perhaps rupture of the vessels of the brain; left side of the heart containing much less blood. The treatment of suspended animation by suffocation in general is as follows: The patient must be conveyed into a room not too warm; friction must be employed with salt or warm flannels; stimulating fluids, in a dilute state, are to be poured into the stomach by means of a tube, and attempts should be made to inflate the lungs, laryngotomy being performed, if necessary. For modes of resuscitation in cases of drowning, see *Drowning, resuscitation from.* The term suffocation is also used for threatened suffocation. It means the state of dyspnœa and oppression experienced when a sufficient quantity of air does not enter the lungs, or when the chemical phenomena of respiration are imperfectly executed, as in cases of asthma.

**Suf′focative catarrh′.** Capillary bronchitis; asthma.

**Suffra′go.** The ham.

**Suffumiga′tion** (*fumigo*, to produce smoke). Fumigation; perfume.

**Suffu′sio** (*sub*, under, *fundo*, to pour). An old term for perversion of vision. Suffusion. **S. aurigino′sa,** icterus. **S. bi′lis,** icterus. **S. col′orans,** chromopsia. **S. congen′ita,** see *Cataract.* **S. conjuncti′væ,** a blood-shot condition of the eye. **S. dimid′ians,** hemiopia. **S. du′ra,** see *Cataract.* **S. exclar′ans,** oxyopia. **S. fel′lis,** icterus. **S. len′tis crystal′linæ,** cataract. **S. metamorphop′sis,** metamorphopsia. **S. mol′lis,** see *Cataract.* **S. mul′tiplicans,** see *Diplopia.* **S. myo′des,** metamorphopsia. **S. ni′gra,** amaurosis. **S. oc′uli,** cataract; injection of the conjunctiva. **S. oculo′rum,** metamorphopsia. **S. ra′dians,** scotasma. **S. san′guinis,** ecchymoma. **S. ex vul′nere,** see *Cataract.*

**Suffu′sion.** An overspreading with moisture or a fluid. Extravasation of blood. Congestion. See *Suffusio.*

**Su′gar.** Saccharum. **Bar′ley s.,** penidium; saccharum hordeatum. **S. beet,** Beta vulgaris. **Black s.,** extractum glycyrrhizæ. **S. can′dy,** saccharum candidum. **S. cane,** see *Saccharum.* **Diabet′ic s.,** glucose. **Fruit s.,** glucose. **S. fun′gus,** saccharomyces. **S. of gel′atin,** glycosin. **Grape s.,** glucose. **Gum s.,** arabinose. **Hepat′ic s.,** glycogen. **Hon′ey s.,** glucose. **S. of lead,** plumbi superacetas. **Liv′er s.,** glycogen. **Ma′ple s.,** saccharum acernum; see *Acer saccharinum.* **S. of milk,** lactose or lactin, obtained from whey by evaporation and crystallization; it possesses the demulcent properties of the sugars. **Mus′cle s.,** inosite. **S. pine,** see *Arrowroot.* **Starch s.,** glucose. **U′rinary s.,** glucose.

**Sug′arberry.** Celtis occidentalis.

**Sugar-coat′ed.** Covered with a layer of refined sugar. **S.-c. heart,** an affection in which the epicardium becomes changed into a thick, hard, white mass resembling sugar frosting on cake.

**Sug′ar-loaf stump.** A conical shape assumed by the stump after amputation, presenting the appearance described by its name; due to excessive muscular retraction.

**Suggest′** (*suggero*, to convey). To cause a thought or idea to enter the mind.

**Suggestibil′ity.** Susceptibility to hypnotic suggestion.

**Suggest′ible.** Possessing suggestibility.

**Sugges′tion** (*suggero*, to convey). The creation or recall of an idea in the mind of anyone. **Au′to-s.,** the action or condition induced by an idea conceived in one's own mind independently of the influence of another. **Hypnot′ic s.,** an impulse or idea implanted in the mind of one in the hypnotic state, either by word, *verbal s.*, or by gesture of the suggestor, or by placing the subject in a certain attitude, as that of boxing or of prayer. **Neg′ative s.,** s. resulting in a condition of suppressed vital activity, such as insensibility to pain. **Posthypnot′ic s.,** s. made in the hypnotic state which continues, unknown to the subject, and leads to action at a later period. **Traumat′ic s.,** a form of auto-s. induced by an injury, as in a railway accident, leading to hysterical paralyses and the like.

**Sug′gillated.** Pertaining to suggillation.

**Suggilla′tion** (*sugillo*, to beat black and blue). Bruise, ecchymosis, ecchymoma. Also spots or ecchymoses occurring in consequence of intrinsic causes in disease and in incipient putrefaction. It is common in dead bodies. To this last case it is, indeed, restricted by some medicolegal writers.

**Suggrun′dium.** Eave of a house. **S. oc′uli,** superciliary arch. **S. supercilio′rum,** frontal protuberance.

**Suici′dal insan′ity.** Insanity marked by an impulse to self-destruction.

**Su′icide** (*sui*, self, *cædo*, to kill). The act of killing one's self. Also one who commits self-murder.

**Suint.** Wool-fat; peculiar fat found in wool, hair, feathers, etc.

**Sul′cate** or **Sul′cated** (*sulcus*, a furrow or groove). Deeply grooved or furrowed.

**Sul′ci** (pl. of sulcus). Grooves. **S. arterio′si,** sulci for meningeal arteries on the interior surface of the bones of the skull. **S. caroticotympan′ici,** sulci for caroticotympanic nerves on promontory of middle ear. **S. of cerebel′lum,** these include the sulcus horizontalis magnus, sulci vermiculares, sulcus inferior lateralis, and sulcus collateralis inferior (which see) or great horizontal fissure along the lateral edges of the organ. **S. cilia′res,** ciliary sulci. **S. collatera′les medul′læ spina′lis,** see *Grooves, anterolateral* and *posterolateral.* **S. cubita′les,** two grooves on either side of the biceps tendon near the cubital fossa. **S. longitudina′les cor′dis,** longitudinal sulci of the heart. **S. meninge′i,** sulci for meningeal arteries on inner surface of the skull, especially upon the parietal bone. **S. occipita′les,** occipital sulci. **S. poplite′i,** sulci at the three principal angles of the popliteal space. **S. supraorbita′les longitudina′les,** small, longitudinal sulci on the orbital surface of the hemispheres. **S. tempora′les,** temporosphenoidal grooves. **S. tempora′les transver′si,** transverse temporal grooves. **S. vermicula′res,** sulci separating the vermis from either hemisphere, including the superior, anterior, and posterior sulci, being laterally directed on the superior surface; these are the inferior, anterior (sulcus of the flocculus), middle (also called anterior), and posterior. **S. vertebra′les,** vertebral grooves or sulci.

**Sul′culus** (dim. of sulcus) **la′bii superior′is.** Lacuna labii superioris.

**Sul′cus.** Furrow; groove; groove on the surface of a bone or on other organs; also the vulva. In the cerebral hemispheres the term is limited by some to those furrows which concern only the gray matter of the cortex; see *Fissure* and *Sulci.* **S. ala′ris,** sulcus between the movable and more fixed parts of the side of the nose. **S. alveolobucca′lis,** sulcus in mucous membrane of the mouth between the cheek and the gums. **S. alveololingua′lis,** sulcus in mucous membrane of mouth between gums and tongue. **S. anterotempora′lis,** median temporal sulcus. **S. antibra′chii radia′lis,** delicate groove in the skin on outer side of a muscular forearm, showing interval between the pronator and flexor muscles and the supinator longus. **S. antibra′chii ulna′ris,** similar groove on internal side of a muscular forearm, showing interval between flexor sublimis digitorum and flexor ulnaris. **S. aor′ticus,** impression of aorta on surface of left lung. **S. ad aquæduc′tum vestib′uli,** fossula sulciformis; see *Crista vestibuli.* **S. arcua′tus præcu′nei,** groove on middle surface of hemispheres between superior parietal convolution and posterior extremity of gyrus cinguli. **S. arte′riæ occipita′lis,** occipital groove. **S. arte′riæ subcla′viæ,** subclavian groove or sulcus subclaviæ. **S. atrioventricula′ris cor′dis,** sulcus between auricle and ventricle. **S. au′ris ante′rior,** sulcus in outer ear between helix and tragus; incisura auris. **S. au′ris poste′rior,** slight depression in outer ear at junction of antihelix and antitragus. **S. basila′ris,** basilar groove. **S. bicipita′lis bra′chii,** bicipital groove. **S. bicipita′lis exter′nus,** external bicipital groove. **S. bicipita′lis inter′nus,** internal bicipital groove. **S. basa′lis,** basal groove of the medulla oblongata. **S. cæ′cus,** deep sulcus between olivary body and posterior border of pons Varolii. **S. calca′nei,** interarticular groove. **S. calcari′nus,** calcarine sulcus. **S. callosomargina′lis,** callosomarginal sulcus. **S. callo′sus,** sulcus between corpus callosum and gyrus cinguli. **S. carot′icus,** carotid groove. **S. carotide′us,** sulcus anterior to sternomastoid muscle, under which is the carotid artery. **S. centra′lis,** central sulcus. **S. centra′lis modi′oli,** central canal of modiolus of cochlea, continued as a slight groove on the lamina of the modiolus. **S. cerebel′li supe′rior ante′rior,** sulcus between anterior and median lobes of the upper portions of the cerebellum. **S. chias′matis,** optic groove. **S. choroide′us,** choroid sulcus. **S. cin′guli,** groove between the corpus callosum and gyrus cinguli. **S. circula′ris cor′dis,** auriculoventricular groove. **S. circula′ris Reil′ii,** s. between the island of Reil and adjacent lobes. **S. collatera′lis ante′rior medul′læ spina′lis,** anterolateral groove. **S. collatera′lis cer′ebri,** occipitotemporal sulcus. **S. collatera′lis infe′rior,** groove between the two portions of the digastric lobe. **S. collatera′lis poste′rior,** posterolateral groove. **S. collatera′lis postremus,** paramedian sulcus. **S. condyloide′us,** slight sulcus between condyle of occipital bone and jugular notch. **S. corona′lis cor′dis** or **corona′rius,** auriculoventricular furrow. **S. cor′porum quadrigemino′rum,** median sulcus between the separating corpora quadrigemina. **S. cor′porum quadrigemino′rum transver′sus,** transverse groove or sulcus between the anterior and posterior corpora quadrigemina. **S. of cor′pus callo′sum,** defined sulcus on middle surface of the hemispheres, between corpus callosum and gyrus fornicatus. **S. crucia′tus** or **crucifor′mis,** triradiate sulcus. **S. cru′ris hel′icis** sulcus in middle surface of external ear. **S. deltoideopectora′lis,** slight groove on skin showing space between deltoid and pectoralis major muscles. **S. denta′tus,** sulcus hippocampi. **S. digita′lis poste′rior,** groove caused by flexion of fingers, from radial to ulnar border of the hand, showing where the deep palmar arch crosses the third metacarpal bone. **S. digita′tus,** groove on floor of descending cornu of lateral ventricle of brain, between the collateral eminence and hippocampus major. **S. digita′tus ante′rior,** groove for flexion of three outer fingers, on palm of hand, from root of index finger outward to ulnar portion. **S. dorsa′lis,** posterior median fissure of spinal cord. **S. dorsolatera′lis,** posterolateral fissure of spinal cord. **S. ethmoida′lis,** sulcus for nasal nerve on posterior surface of nasal bone. **S. extre′mus,** vertical groove on middle surface of hemispheres near occipital end of calcarine fissure. **S. floc′culi,** sulcus of flocculus. **S. fornica′tus infe′rior,** sulcus cinguli and s. hippocampi united. **S. fornica′tus supe′rior,** callosomarginal sulcus. **S. fronta′lis,** frontal sulcus on cerebral surface of temporal lobe. **S. frontolatera′lis,** frontolateral sulcus. **S. frontomargina′lis,** frontomarginal sulcus. **S. frontoparieta′lis inter′nus,** callosomarginal sulcus. **S. grac′ilis,** sulcus between the slender lobe and part of posterior lobe of cerebellum. **S. grac′ilis cerebel′li,** sulcus inferior posterior; see *Sulci of cerebellum.* **S. ham′uli pterygoide′i,** hamular groove. **S. hippocam′pi,** sulcus between hippocampal gyrus and fascia dentata. **S. horizonta′lis tib′iæ,** sulcus on the head of the tibia for insertion of semimembranosus muscle. **S. ili′acus,** iliac groove. **S. infe′rior ante′rior,** groove between flocculus and digastric lobe and amygdala. **S. i. latera′lis,** groove between posterior and inferior lobes of cerebellum. **S. i. media′lis,** groove between digastric lobe of cerebellum and amygdala. **S. infrainsula′ris,** groove between island of Reil and temporosphenoidal bone. **S. infrana′tes,** gluteal fold. **S. infraorbita′lis,** infraorbital groove. **S. infrapalpebra′lis,** oculozygomatic line. **S. inguina′lis,** inguinal furrow. **S. interarticula′ris calca′nei accesso′rius** or **ta′li accesso′rius,** groove between median articular face of the calcaneum and astragalus. **S. interbrachia′lis,** groove between anterior and posterior brachia of the corpora quadrigemina. **S. interhel′icus et anthel′icus,** navicular fossa. **S. interinsula′ris,** median sulcus seen in the island of Reil. **S. interme′dius,** intermediate groove. **S. i. poste′rior** or **posti′cus,** paramedian sulcus. **S. intertubercula′ris,** bicipital groove. **S. intraparieta′lis,** intraparietal sulcus. **S. Jacobson′ii,** sulcus for tympanic nerve on promontory of middle ear. **S. jugula′ris,** sulcus for lateral sinus on internal portion of jugular notch, on the cerebral surface of the occipital bone. **S. la′bii superio′ris,** lacuna labii superioris. **S. lacryma′lis,** lacrymal groove on external wall of inferior nasal meatus. **Laryngopharyn′geal s.,** pyramidal sinus. **Lat′eral pharyn′geal s.,** pyramidal sinus. **Lat′eral poste′rior s. of the spi′nal cord** corresponds with the attachment of the posterior roots of the spinal nerves. **S. latera′lis,** sulcus for lateral sinus along transverse ridge on inner surface of occipital bone.

**S. . ante′rior**, anterolateral groove; mere trace on the spinal marrow, marked only by attachment of filaments of anterior roots of spinal nerves. **S. l. dorsa′lis**, posterolateral sulcus of the spinal cord and medulla oblongata. **S. l. mesenceph′ali**, see *Peduncular sulci.* **S. l. poste′rior**, posterolateral groove. **S. l. postre′mus**, paramedian sulcus. **S. l. ventra′lis**, anterolateral groove of spinal cord and medulla oblongata. **S. ligamen′ti spira′lis**, external spiral groove. **S. lo′bi olfacto′rii**, olfactory sulcus. **S. longitudina′lis**, groove for longitudinal sinus on internal surface of occipital, parietal, and frontal bones. **S. l. fronta′lis**, groove or sulcus on the frontal bone to receive the longitudinal sinus. **S. l. infe′rior**, inferior vermiform groove of cerebellum. **S. l. supe′rior**, superior vermiform groove of cerebellum. **S. mag′nus cerebel′li** or **horizonta′lis**, great horizontal fissure; see *Sulci of cerebellum.* **S. malleola′ris** or **malle′oli**, slight sulcus for long process of malleus on tympanic portion of temporal bone. **S. m. exter′nus** or **latera′lis**, sulcus for peroneal tendons back of external malleolus. **S. m. inter′nus** or **media′lis**, sulcus for tendon of tibialis posticus back of internal malleolus. **S. media′lis frontoparieta′lis**, callosomarginal sulcus. **S. media′nus**, narrow groove on median line of lower jaw. **S. m. fos′sæ rhomboide′æ** or **m. si′nus rhomboida′lis**, longitudinal groove of fourth ventricle. **S. me′dius substan′tiæ perfora′tæ anterio′ris**, slight groove between anterior perforated space and rostrum of corpus callosum. **S. medul′læ oblonga′tæ**, basilar groove of occipital bone. **S. meninge′us**, meningeal groove. **S. menta′lis** or **mentolabia′lis**, mentolabial furrow. **S. of Monro′**, shallow groove on side of third ventricle of brain, between anterior opening of aqueduct of Sylvius and foramen of Monro, separating optic thalamus from the infundibulum. **S. muscula′ris flexo′ris lon′gi hallu′cis**, incisura calcanei. **S. m. tym′pani**, canal of the tensor tympani. **S. mus′culi perone′i lon′gi**, peroneal groove. **S. musculo′sus**, canal of the tensor tympani. **S. mylohyoide′us of low′er jaw**, mylohyoid groove. **S. nasolabia′lis**, the nasal line; nasolabial line. **S. nasopalati′nus**, nasopalatine groove. **S. navicula′ris**, groove on anterior part of the scaphoid bone of the wrist; navicular fossa. **S. obturato′rius**, obturator groove. **S. occipita′lis ante′rior**, anterior occipital sulcus. **S. o. infe′rior** or **o. latera′lis** or **o. longitudina′lis infe′rior**, inferior occipital sulcus. **S. o. me′dius**, middle occipital sulcus. **S. o. transver′sus**, transverse occipital sulcus. **S. occipitotempora′lis** or **o. infe′rior** or **o. inter′nus**, collateral fissure. **S. oculomoto′rii**, median sulcus of the peduncle. **S. olfacto′rius**, olfactory sulcus. **S. oli′væ**, olivary sulcus. **S. op′ticus**, optic groove. **S. orbita′lis**, triradiate sulcus. **S. o. intermedia′lis**, intermediate orbital sulcus. **S. o. latera′lis**, lateral orbital sulcus. **S. o. media′lis**, olfactory sulcus. **S. orbitopalpebra′lis infe′rior** and **supe′rior**, grooves between the eyelids and orbit at the borders. **S. os′sis carpa′lis pri′mi**, groove for flexor carpi radialis on the palmar surface of the trapezium. **S. o. cuboide′i**, peroneal groove. **S. o. multan′guli**, groove for flexor carpi radialis, on palmar surface of the trapezium. **S. o. navicula′ris**, groove on the tarsal navicular bone. **S. o. tarsa′lis quar′ti**, peroneal groove. **S. palati′nus media′nus**, sulcus in the hard palate corresponding to median palatal suture. **S. palma′ris longitudina′lis**, line on the palm of the hand from the middle of the wrist to near space between the third and fourth digits. **S. palpebromala′ris**, oculozygomatic line. **S. paracentra′lis**, paracentral sulcus. **S. paramedia′nus dorsa′lis**, paramedian sulcus. **S. parapyramida′lis**, parapyramidal sulcus. **S. parieta′lis**, intraparietal sulcus. **S. parietofronta′lis**, præcentral sulcus. **S. peduncula′ris**, great horizontal fissure of cerebellum; see *Sulci of cerebellum.* **S. pedun′culi latera′lis**, **S. p. media′lis**, see *Peduncular sulci.* **S. perone′i**, peroneal groove. **S. perpendicula′ris exter′nus**, superior occipital sulcus. **S. petrosquamo′sus**, petrosquamosal suture. **S. petro′sus infe′rior os′sis tem′porum**, inferior petrosal sulcus. **S. p. supe′rior**, sulcus for superior petrosal sinus on the upper edge of the petrous portion of the temporal bone. **S. pharynge′us latera′lis**, sinus pyriformis. **S. pinna′lis**, sulcus alaris. **S. pol′licis**, line on the palm limiting the thenar eminence, indicating movements of flexion and opposition of the thumb. **S. postcentra′lis**, postcentral sulcus. **S. postoliva′ris**, sulcus olivæ lateralis; see *Olivary sulci.* **S. præauricula′ris**, sulcus anterior to the auricular surface of the ilium, for the anterior sacro-iliac ligament. **S. præcentra′lis**, præcentral sulcus. **S. p. infe′rior**, portion of præcentral sulcus below the middle frontal convolution. **S. p. supe′rior**, portion of the præcentral sulcus above the middle frontal convolution. **S. præcunea′tus**, transverse occipital sulcus. **S. præinsula′ris**, s. between the island of Reil and frontal lobe. **S. præoccipita′lis**, anterior occipital sulcus. **S. prærolan′dicus**, præcentral sulcus. **S. præsyl′vius**, præsylvian sulcus. **S. pro tu′bâ eustachia′na**, navicular fossa. **S. pterygoi′des**, pterygopalatine groove. **S. pterygopalati′nus**, pterygopalatine groove. **S. pulmona′lis**, pulmonary groove. **S. pylor′icus**, sulcus on outer surface of the alimentary tube between the stomach and duodenum. **S. radia′lis hu′meri**, musculospiral groove. **S. ra′dio-ulna′ris**, upper line of carpal bones. **S. ra′mi auricula′ris va′gi**, auricular sulcus. **S. rec′tus**, olfactory sulcus. **S. retroglandula′ris**, cervix of the glans; see *Glans.* **S. rolan′dicus**, fissure of Rolando. **S. r. ante′rior**, præcentral sulcus. **S. sagitta′lis**, sulcus longitudinalis. **S. scle′ræ**, depression on the eyeball at the junction of the cornea and sclerotica. **S. s. inter′nus**, sulcus formed by the external wall of Schlemm's canal. **Sig′moid s.**, lateral portion of the lateral sulcus. **S. si′nus latera′lis**, fossa sigmoidea. **S. s. transver′si**, sigmoid fossa. **S. sphenoethmoida′lis**, recessus sphenoethmoidalis. **S. spira′lis**, musculospiral groove; sulcus or groove in the cochlea, separating the margin of the denticulate lamina from that to which the basilar membrane is attached. **S. sta′pedis**, groove on the concave surface of the stapes. **S. subcla′viæ** or **S. subcla′vius**, subclavian groove. **S. subparieta′lis**, subparietal sulcus. **S. subscapula′ris**, subscapular groove. **S. substan′tiæ perfora′tæ posterio′ris**, median groove on posterior perforated space. **S. supe′rior ante′rior**, groove between lobulus centralis and monticulus and anterior lobe of the cerebellum. **S. s. cerebel′li**, superior median groove of the cerebellum. **S. s. poste′rior**, groove between the anterior and posterior lobes of the cerebellum. **S. supracallo′sus**, callosomarginal sulcus. **S. suprainsula′ris**, groove between island of Reil and frontal and parietal lobes. **S. supraorbita′lis**, supraorbital sulcus. **S. s. transver′sus**, groove on the orbital surface of the frontal lobe of the hemispheres. **S. Syl′vii**, fissure of Sylvius. **S. ta′li**, interarticular groove. **S. tempora′lis interme′dius**, intermediate temporal sulcus. **S. trac′tûs olfacto′rii**, olfactory sulcus. **S. transversa′lis**, see *Liver.* **S. transver′sus**, furrow on the ampulla of a semicircular canal where the ampullar branch of the auditory nerve enters; sulcus lateralis of the occipital bone. **S. triradia′tus**, triradiate sulcus. **S. tu′bæ Eusta′chii** or **S. tuba′rius**, slight depression for the cartilaginous part of the Eustachian tube on the petrous portion of the temporal bone. **S. tympan′icus**, groove on the concave surface of the tympanic plate for attachment of the membrana tympani. **S. ulna′ris**, ulnar groove. **S. umbilica′lis**, see *Liver.* **S. ve′næ cav′æ**, groove for the vena cava on superior portion of the right lung. **S. veno′sus**, furrow for a sinus of the dura mater on the inner surface of the bones of the skull. **S. ventra′lis**, anterior median fissure of the spinal cord. **S. vertebra′lis atlan′tis**, sulcus for vertebral and suboccipital nerve on the superior surface of the posterior arch of atlas. **S. v. latera′lis atlan′tis**, sinus atlantis. **Ver′tical s.**, s. præcentralis.

**Sul′fonal.** Sulphonal.

**Sul′fur.** Sulphur.

**Sulphal′dehyde.** Thialdehyde. Oil of offensive odor, produced by the action of sulphureted hydrogen on ethylic aldehyde in aqueous solution. Hypnotic.

**Sulpham′inol.** Thioxydiphenylamine. Yellow, odorless, tasteless powder. Antiseptic, resembling iodoform in its applications. In diseases of the nose, in wounds, ulcers, etc., it is employed externally; and internally in inflammation of the bladder. It is used as an application to lesions attended with an offensive odor. With menthol, creosote, eucalyptol, and guaiacol it forms sulphaminol menthol, s. creosote, s. eucalyptol, and s. guaiacol, remedies employed in diseases of the nose and larynx.

**Sulphanil′ic acid.** Para-amidobenzene sulphonic acid. Used in acute catarrh, acute laryngitis, and otitis; also to prevent iodism.

**Sul′phas.** Sulphate.

**Sul′phate.** Combination of sulphuric acid with a base.

**Sulphethyl′ic acid.** Sulphovinic acid.

**Sul′phide.** Combination of sulphur with another element or basic radical.

**Sul′phidum.** Sulphide.

**Sulphindigot′ic acid.** Resultant product of the admixture of indigo and sulphuric acid.

**Sul′phinide.** Saccharin.

**Sul′phion.** Hypothetical body consisting of one equivalent of sulphur and four equivalents of oxygen; so called in reference to the binary theory of salts.

**Sul′phis.** Sulphite.

**Sul′phite.** Combination of sulphurous acid with a base; see *Sulphurous acid*. **S. laps,** a form of wood pulp prepared by treating small blocks of wood with sulphuric acid; used in the manufacture of paper, and also as an absorbent surgical dressing.

**Sulphoacid.** Acid in which oxygen is replaced by sulphur.

**Sul′phoaz′otized.** Containing sulphur and nitrogen.

**Sulphobacte′ria.** Microorganisms containing sulphur.

**Sulphocar′bol.** Sulphocarbolic acid.

**Sulphocar′bolate.** Sulphophenate, phenylsulphate. A salt prepared by heating together pure carbolic and sulphuric acids, diluting with water, and saturating with the base, as soda, zinc, etc. The sulphocarbolates are employed in diseases of parasitic origin, as intestinal disinfectants, by injection in gonorrhœa and vaginitis, and as a dressing for wounds.

**Sulphocarbol′ic acid.** Sulphophenic acid, phenylsulphuric acid. A compound soluble, crystalline acid resulting from the union of hydrated sulphuric acid and pure carbolic acid. Its odor is similar to that of carbolic acid, and its action as a disinfectant and antiseptic is considered by some to be more potent than carbolic acid alone.

**Sulphocar′bonated.** Containing sulphur and carbonic acid.

**Sulphocon′jugate acids.** Compound sulphuric acids found in urine after ingestion of phenol, cresol, etc.

**Sulphocy′anate** or **Sulphocy′anide.** Thiocyanate.

**Sulpho-ichthyol′ic acid.** Bibasic acid obtained by treating ichthyol with strong sulphuric acid and washing with a strong solution of sodium chloride.

**Sulphomethyl′ic acid.** Acid produced by action of sulphuric acid upon methylic alcohol.

**Sul′phon.** A radical, $SO_2$, which exists in sulphonic acid.

**Sul′phonal.** (Ph. Br.) Diethyl-sulphon-dimethylmethane. Prepared by mutual action of anhydrous mercaptan and anhydrous acetone. Occurs in heavy, prismatic, colorless crystals, soluble in 20 parts of cold water, more soluble in alcohol. Action hypnotic, producing natural sleep; neither depressing nor anæsthetic in character. Dose, gr. x–xxx (0.65–2.0).

**Sul′phonalism.** Acute or chronic sulphonal poisoning; the sulphonal habit.

**Sul′phonate.** A salt of sulphonic acid.

**Sulphon′ic acid.** Sulphoacid; any acid containing the radical $SO_2OH$.

**Sulphophe′nate.** Sulphocarbolate.

**Sulphophe′nol.** Sulphocarbolic acid.

**Sulphophen′ylate.** Sulphocarbolate.

**Sul′phophone.** A combination of zinc sulphide and calcium sulphate.

**Sulphopic′ric acid.** Add 4 cc. pure sulphuric acid to 200 cc. saturated solution of picric acid; after an hour filter, and dilute the filtrate with 600 cc. of distilled water.

**Sulphoric′inate.** A salt of sulphoricinic acid.

**Sulphoricinic** (sul-fo-ris′in-ik) **acid.** Derivative of oleum ricini or castor-oil, used topically in the form of a sulphoricinate, as of sodium, in ozæna, tuberculosis of the larynx, diphtheria, etc.

**Sulphosalicyl′ic acid.** White, soluble substance, in crystals, obtained by action of sulphuric anhydride on salicylic acid; employed as a delicate and exact test for proteids, albumins, peptones, fibrin, albuminous urine, etc.

**Sul′phosalt.** Sulphonate.

**Sulphosinapisin.′** A peculiar ingredient of Sinapis alba; a white, bitter, soluble neutral substance.

**Sulphosul′phate.** Thiosulphate.

**Sulphosulphu′ric acid.** Thiosulphuric acid.

**Sulphovi′nate.** A salt of sulphovinic acid. **So′dium s.,** a crystalline salt prepared by the action of sulphuric acid on alcohol at a specific temperature, carbonate of baryta being added, the resulting sulphovinate of baryta being neutralized by carbonate of sodium. Purgative in the dose of ʒv–vj (20.0–24.0).

**Sulphovi′nic acid.** Sulphethylic or ethylsulphuric acid. An acid of syrupy consistence resulting from the action of sulphuric acid upon alcohol. Used as a solvent for iodoform, sulphur, naphthalin, camphor, chrysarobin, etc., and as a vehicle for these substances in cutaneous affections.

**Sul′phur.** (Ph. U. S. and Br.) Brimstone. An element, symbol S, occurring in great abundance in volcanic regions. Native sulphur is called rock and black sulphur. Sulphur, as we meet with it, is in rolls, impure sulphur melted and run into moulds. Sulphur combined with a simple body or a compound radical forms a sulphuret or sulphide. Sulphur is laxative and diaphoretic; it is an ingredient of the official compound licorice powder, and is employed internally and externally in the treatment of certain skin diseases; it has also been used in rheumatism. It is official under three forms: *S. lo′tum* (U. S.), washed sulphur, sublimed sulphur washed with water and ammonia to remove any acid it may contain; *S. præcipita′tum* (U. S. and Br.), milk of s., precipitated s., and *s. sublima′tum* (U. S. and Br.), flowers of sulphur, sublimed sulphur. All these are fine yellow powders, and are given in doses of ʒss–ii (2.0–8.0). The ointment is official, and other official sulphur compounds are calx sulphurata and potassa sulphurata (Ph. U. S. and Br.), and sulphuris iodidum (Ph. U. S.). **S. al′cohol,** mercaptan. **Car′buret of s.,** carbonis sulphuretum. **Chlo′ride of s.,** bisulphide of chlorine; has been used in lepra, psoriasis, and other chronic cutaneous diseases. **S. diox′ide,** sulphurous acid. **Dregs of s.,** horse-brimstone, the dregs left after the purification or sublimation of sulphur. **Flow′ers of s.,** s. sublimatum. **S. hy′dride,** sulphureted hydrogen. **S. ioda′tum** or **i′odide of s.,** sulphuris iodidum. **Liv′er of s.,** potassa sulphurata. **S. lo′tum,** washed sulphur, see *Sulphur*. **Milk of s.,** s. præcipitatum. **S. ni′grum,** native sulphur. **S. præcipita′tum,** see *Sulphur*. **S. sublima′tum,** see *Sulphur*. **S. triox′ide,** $SO_3$; with $H_2O$ added it forms sulphuric acid. **Veg′etable s.,** lycopodium. **Washed s.,** s. lotum. **S. wa′ters,** mineral waters containing sulphur salts. **S. wort,** peucedanum.

**Sul′phurated.** Containing sulphur in composition or impregnated with sulphur. **S. cal′cium,** calx sulphurata. **S. potas′sa,** potassa sulphurata.

**Sulphu′reous.** Sulphureted, sulphurous. Possessing the properties of, relating to, or containing sulphur.

**Sul′phuret.** Sulphide.

**Sul′phureted.** Sulphureous, sulphurated. **S. hy′drogen,** see *Hydrogen, sulphureted.*

**Sulphu′ric.** Relating to or obtained from sulphur. **S. acid,** $H_2SO_4$, oil of vitriol, spirit of vitriol, vitriolic acid; see *Acidum sulphuricum.* **S.-a. lemonade′** is made by mixing together sulphuric acid, water, and syrup. **S.-a. paste,** a mixture of equal parts of sulphuric acid and saffron, employed locally as a caustic. **S. e′ther,** see *Ether, sulphuric.*

**Sulphurin′.** Combination of sulphur and sodium and potassium sulphides.

**Sul′phuris.** Gen. of sulphur. **S. iod′idum** (Ph. U. S.), s. ioduretum, ioduret or iodide of sulphur. Occurs in brittle, dark-yellowish masses. Employed externally in cutaneous affections; internally, in syrup, with potassium iodide in the same diseases, in scrofula, etc. Dose, gr. ¼–j (0.016–0.065).

**Sul′phurize.** To produce a combination with sulphur.

**Sul′phurous.** Relating to or containing sulphur. Sulphureous. **S. acid,** see *Acidum sulphurosum.* With bases it forms sulphites, which have been employed in the cases for which sulphurous acid is indicated. Sulphites of sodium, potassium, ammonium, magnesium, and calcium have been used, and some of them are official. Bisulphites are also resorted to, especially that of lime, which is said to preserve oleaginous or fatty substances against spontaneous changes. Hyposulphites are used for the same purposes and in the same doses as the sulphites. **S. anhy′dride,** $SO_2$, gaseous sulphur dioxide.

**Sul′phuryl.** $SO_2$. Radical of sulphuric acid.

**Sulphy′drate.** Compound of base with the radical, sulphydryl, SH.

**Sulphy′dric acid.** Sulphureted hydrogen is sometimes so called.

**Sulphy′dryl.** The univalent radical, SH.

**Su′mach.** Rhus coriaria. **Chinese′ s.,** Ailanthus glandulosa. **Fra′grant s.,** Rhus aromatica. **Moun′tain s.,** Rhus copallina. **Myr′tle-leaved s.,** Coriaria myrtifolia. **Poi′son s.,** Rhus venenata. **Stag′s horn s.,** Rhus typhina. **Sweet s.,** Rhus aromatica.

**Suma′tra cam′phor.** Camphor.

**Sum′bul.** (Ph. U. S.) The root of Ferula sumbul; it contains a strongly odorous principle like musk, and is regarded as an antispasmodic, used in hysteria and neurasthenia; dose, ʒss–j (2.0–4.0) in infusion. The *tinctu′ra sum′bul* is official; dose, ʒss–j (2.0–4.0).

**Su′men** (*sugimen,* the breast). Hypogastrium.

**Summa′tion.** Repeated local stimulation applied to a muscle, producing tetanic contraction.

**Sum′mer.** The warm season in temperate climates, the period between the summer solstice, June 20th, and the autumn equinox, September 20th. **S.-au′tumn fe′ver,** estivoautumnal fever, a form of malarial fever, often pernicious. **S. catarrh′,** hay fever. **S. complaint′,** popular name in the United States for diarrhœa occurring in summer; often also made to include dysentery and cholera infantum; with some it means cholera infantum only. **S. chol′era,** s. complaint; cholera morbus. **S. diarrhœ′a,** s. complaint. **S. diseas′es,** estival diseases, those occurring especially in the summer and due directly or indirectly to the meteorological conditions then prevailing. **S. fe′ver,** hay fever. **S. plant,** winter worm, Sphæria sinensis. **S. rash,** lichen tropicus. **S. sa′vory,** Satureia hortensis; aromatic herb used for culinary purposes. **S. spots,** ephelides.

**Sum′mitas cu′tis.** Epidermis.

**Sum′mus hu′merus.** Acromion.
